Clothing (including shoes)	23.31 tons
Miscellaneous (including soap and seeds)	<u>1.32 tons</u>
Total	104.63 tons

Medical Social Work

In order to meet the growing need for medical social workers in Health Centers and various hospitals, the Japan Social Work Association is planning a special short term course in medical social work to be held at the Japan School of Social Work in Tokyo. It is anticipated that the course will be held every day from 1 to 5 p.m. but the dates have not been definitely determined. Fifty students at least 25 years of age will be admitted at a fee of 500 yen each and will include:

- a. Students of universities and technical schools who are interested in medical social work.
- b. Those who have had two years or more experience in social work and are interested in medical social work.
- c. Others who are approved by the school authorities as good material. A certificate will be given to each student upon completion of the course and it is expected that positions will be available in medical institutions.

Health Centers and hospitals which are looking for medical social workers or which have the possibility of establishing social service departments are to be informed of the course and are asked to select and send promising persons for this training. Inquiries should be sent to the Japan School of Social Work.

SECTION VIII SOCIAL SECURITY DIVISION

National Health Insurance

Observation in the field of current efforts to revive and reorganize National Health Insurance has yielded the following findings:

1. Meetings are being held in the Prefectures by representatives of cities, towns and villages of existing National Health Insurance associations, doctors, and other interested parties to determine the future course of National Health Insurance. Reportedly, large numbers of cities, towns and villages have expressed interest, through their representatives, in administering National Health Insurance on a municipal basis, as provided by the revised National Health Insurance Law. Likewise, a number of associations are reported to have indicated the intention of continuing in business in localities in which the municipality will not take over the administration of National Health Insurance.

2. Little appears to have been done, so far, to implement these professed intentions. The steps required are as follows:

- a. In those instances in which the city, town or villages intends to administer National Health Insurance, a resolution to this effect must be passed by the local assembly. If the local assembly does not favor municipal operation, any National Health Insurance Association or other juridical person administering National Health Insurance, existing or to be created, may administer National Health Insurance in the locality concerned. To effect this it must call a general meeting to obtain the consent of the membership.

3. The Prefectural Insurance Section, in particular the Subsection for National Health Insurances, has charge of the publicity required to acquaint the parties concerned and the population at large with these amendments to the National Health Insurance Law which became effective 1 July.

It was found that in some prefectures little has been done with respect to this. In other prefectures the reorganization has been misrepresented as compulsory. According to the Law as amended, no locality or association or other juridical person is to operate a National Health Insurance program unless a majority of the local residents eligible to belong, or of their elected representatives in the city, town or villages assemblies so desires. In this case, but only in this case, all eligible residents will be covered. While this is being encouraged, care must be taken not to give the appearance of compulsion.

SECTION X MEMORANDA TO JAPANESE GOVERNMENT

None.

CRAWFORD F.SAMS

SECTION I GENERAL

Declassification of Public Health and Welfare Weekly Bulletins

All Public Health and Welfare Weekly Bulletins beginning with the one issued for the period 9 - 15 December 1945 and including Weekly Bulletin No.93 for the period 4 - 10 September 1948 have been declassified from "Restricted" to "Unclassified".

Beginning with this issue of the Bulletin, the main body will be "Unclassified". A "Restricted" Annex will be prepared for information of Military Government Teams which will contain data regarding contemplated programs and other information of interest only to Military Government Teams.

SECTION II PREVENTIVE MEDICINE DIVISION

Improvement in Sanitation

Reference Weekly Bulletin No.87 for 23 - 29 August in which comparison was made between certain prefecture morbidity rates for July 1948 with those for July 1947.

The August 1948 dysentery rate for all of Japan was only 28% as high as the August 1947 rate. The greatest improvement, when comparing the prefecture dysentery rates for August 1948 with those for August 1947, was shown by Yamanashi with 8% of the previous year's August rate. Others in order were Ishikawa (9%), Nagano (11%), Tochigi (13%), Nagasaki (14%), Fukushima (14%), Yamagata (15%), Tokushima (17%), Nara (19%), and Hyogo (19%).

The August 1948 typhoid fever rate for Japan was 3% of the August 1947 rate. When reviewed by prefectures, it is found that the greatest reduction in rates was shown by Kumamoto (no typhoid reported in August of this year), Yamanashi (8%), Ishikawa (12%), Wakayama (12%), Kagawa (16%), Gumma (18%), Shimane (18%), Yamagata (19%), Hiroshima (19%), and Ibaraki (20%).

During July 1948, the four prefectures of Tokushima, Ishikawa, Yamanashi and Kagoshima did not report any paratyphoid. During August 1948 there was no paratyphoid reported in Yamanashi, Nagasaki, Kagoshima and Okayama. However, paratyphoid fever rates are not considered as a reliable indicator of improvement in sanitation. Of the three intestinal infections here reported, reduction in dysentery is probably the best indication an effective sanitation program.

When the September rates are available, a review will be presented in this Bulletin summarizing the seasonal prefecture experience with dysentery, typhoid and paratyphoid fever.

Port Quarantine

A new quarantine station at the port of Shimizu, Shizuoka Prefecture, was formally commissioned and dedicated on 13 October.

During the period from 1 October through 7 October, 7835 persons were repatriated to Japan: 121 from China, 1815 from Karafuto and 5899 from Siberia.

SECTION III VETERINARY AFFAIRS

Equine Encephalomyelitis

The only new cases of equine encephalomyelitis reported for period 9 - 16 October by the Animal Hygiene Section, Ministry of Agriculture and Forestry, were six cases in Yamagata Prefecture. It should be noted that no new cases were reported from Hokkaido, which has been the last prefecture reporting cases in considerable numbers.

Animal Diseases:

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Yamagata	Equine Encephalomyelitis	6
Hokkaido	Swine Cholera	156

Note: Submitted by Animal Hygiene Section, Ministry of Agriculture and Forestry on Weekly Report of 9 - 15 October 1948.

SECTION IV NURSING AFFAIRS DIVISION

Model Demonstration School

The capping ceremony for the first year students was held 13 October at which 41 students received their caps. The nursery plans are developing very well and plans for a very practical formula room are underway. The graduate nurses are assuming much more responsibility in the school and in the supervision program on the wards.

Public Health Nurses Course

The sixth course for Public Health Nurses will open in December at the Institute of Public Health. The application blanks have been sent to all prefectures. This is the regular four-months course for Public Health Nurses.

A two day meeting was held by Japanese Nursing Affairs Section of the Ministry of Welfare on 12 and 13 October. All prefectures were represented and the program for the coming year and responsibility of the sub-sections in the prefectures was discussed.

The first Regional Institute for Public Health Nurses to be held in Hokkaido opened 4 October, sponsored by the Ministry of Welfare and the Nurses Association. There were about 150 in attendance for the seven days. Representative from SCAP attended and spoke on the various phases of public health work.

SECTION V SUPPLY DIVISION

Production

A total of 5440 pieces of the various types of DDT dusting and spraying equipment for insect control programs was produced during the period 3 - 9 October. Adequate inventory stocks are on hand to meet all requirements.

The following companies were selected by the Ministry of Welfare to manufacture DDT dusting and spraying equipment for the 1948 production program:

a. Shikutani Seisakusho Co., 1, Yamahamajima-cho, Taito-ku, Tokyo, Phone Shitaya (83) 1556, 2449; Odawara Factory, 470, Renshoji, Phone Odawara 870; Obata Factory, Obata-machi, Kita-Kanbugun, Gumma Ken, Phone Obata 9.

b. Shibazaki Seisakusho Co., 1, 1-chome, Kanda-Nishiki-cho, Chiyoda-ku, Tokyo, Phone Kanda (25) 1781; Factory 324, Shibazaki, Jindaimura, Kitatamagun, Tokyo, Phone Musashi Chofu 326.

c. Ushida Funmuki Kojo Co., 157, Shirokane-Sanko-cho, Minato-ku, Tokyo, Phone Mita (45) 1023; Factory and factory phone, same.

d. Maruyama Sesakusho Co., 1, 2-chome, Kanda-Kaji-cho, Choyoda-ku, Tokyo, Phone Kanda (25) 4331, 4333; Factory 1304, Inage-machi, Chiba; Phone, same.

e. Hatsuda Kogyo Co., Ltd., 1,3-chome, Edobashi, Chuo-ku, Tokyo, Phone Nihonbashi (24) 2023; Factory 1441, Owada-cho, Nishiyodogawa-ku, Osaka, Phone Yodogawa 1716, 1819.

Present schedule of prices of the various types of equipment manufactured by the five companies is listed below in yen:

Name of company	Hand Duster		Sprayer Knapsack type 3 gal. cap.		Sprayer Pump type semi-automatic		Sprayer Hand Type ½ gal. cap.		Power Duster	
	Mfgr's Price	Consu mer's Price	Mfgr's Price	Consu mer's Price	Mfgr's Price	Consu mer's Price	Mfgr's Price	Consu mer's Price	Mfgr's Price	Consu mer's Price
Shikutani	290	335	1,224	1,414	2,627	3,036	610	705	25,704	29,698
Hatsuda	290	335	1,224	1,414	2,530	2,923	610	705	25,704	29,698
Shiba-zaki	290	335	1,273	1,470	2,530	2,923	500	578		
Ushida			1,224	1,414	2,627	3,036				
Maruyama			1,273	1,470	2,530	2,923			25,704	29,698

The knapsack type, 3 gal. capacity sprayer produced by the Maruyama and Shibazaki Companies carries a consumer price 49 yen higher than the three other producers. This additional cost, the manufacturers claim, is to cover the additional production cost in the use of the metallic piston in this sprayer. For the same reason the semi-automatic pump type sprayer manufactured by the Shikutani and Ushida Companies carries a consumer price 97 yen higher than the three other producers listed.

The prices quoted above are exempted from the transaction tax. The packing and crating charges are taken care of by the manufacturer while the consumer pays the transportation fees.

During the period 3 - 9 October, 99,921 lbs. of 10% DDT dust and 24,597 gallons of 5% DDT residual effect spray were distributed. At the same time, 128,327 lbs. of 10% DDT dust, 16,850 gallons of 5% DDT spray, and 2,690 vials of typhus vaccine were received, leaving inventory stocks on hand in regional warehouses of the Ministry of Welfare of 1,372,318 lbs. of 10% DDT dust, 403,580 gallons of 5% DDT spray and 54,736 vials of typhus vaccine.

Distribution of DDT products and typhus vaccine during September totaled 478,638 lbs. of 10% DDT dust, 179,165 gallons of 5% DDT residual effect spray, and 5,870 vials of typhus vaccine. During the month, 932,401 lbs. of 10% DDT dust, 210,700 gallons of 5% DDT spray and 2,000 vials of typhus vaccine were received. A breakdown of distribution to prefectures and government agencies follows:

Distribution

During the first and second quarters of the Japanese Fiscal Year 1948 (April-September), textile sanitary material allocations were made which included quantities originally scheduled for allocation during the third quarter (October-December). This was done because the weaving mills had withheld their production for several months in anticipation of price increases. The price increases were made early in the first quarter. The weavers then shipped large stocks of gauze and bandage to the finishing mills where they were bleached and packaged for distribution. The amounts actually purchased and total quantities allocated are shown in the tables below:

QUANTITIES PURCHASED

Period	Absorbent Cotton Kg.	Gauze meter	Bandage		
			Staple Fiber roll	Triangular piece	Lint piece
January	149,567				
February	64,110	513,714			
March	86,590	655,679			
April	86,975	1,159,454	3,132	55	
May	202,243	5,359,855	336,547	8,498	333
June	188,791	5,248,341	359,744	8,881	1,124
July	148,284	5,120,994	326,458	13,581	950
August	174,162	6,305,388	384,643	16,590	1,342

QUANTITIES ALLOCATED BY QUARTERS

Period	Absorbent Cotton Kg.	Gauze meter	Bandage		
			Staple Fiber roll	Triangular piece	Lint piece
Jan-Mar	700,195	3,731,929			
Apr-Jun	*600,000	*32,508,800	*1,400,000	*30,000	*16,540
Jul-Sep	430,625	17,022,000	600,000		14,742
Oct-Dec	460,375	7,500,000			

*It will be noted that the allocations marked with an asterisk are substantial quantities, the result of the large releases made at the increased prices. The quantities actually purchased are smaller than the amounts allocated. This is because the ration tickets that were issued against the Apr-June and Jul-Sep quarterly allocations are valid for six months. Many purchasers wait until the end of the valid period before making purchases. This results in an overlap of ration periods and sizable stocks for which ration tickets are outstanding.

The absence of an allocation of bandage for the 3rd quarter Japanese Fiscal Year, October, November, December is because unclaimed rations are adequate to meet the requirements for the period, and the ration tickets outstanding are valid during the period. The raw materials which would go into bandage production during this period will be used to make gauze which is in shorter supply.

<u>Prefecture</u>	<u>Absorbent Cotton</u>	<u>Gauze</u>
Hokkaido	25,364 kgs.	394,777 meters

Total	3538	1361	522	310	2

SECTION VI NARCOTIC CONTROL DIVISION

Local Wholesalers

In some prefectures local wholesalers have advised narcotic practitioners to personally inscribe their signatures on order forms in addition to the regular stamp of identification used by Japanese, as an added precaution against the activities of traffickers who are attempting to procure and forge narcotic order forms. This precaution, in addition to requiring the person to whom narcotics are delivered to be personally identified, will probably thwart some of the sort of identification from representatives of local wholesalers who personally appear to receive the narcotics.

Narcotic Thefts

The Narcotic Section, Ministry of Welfare has limited the amounts of narcotics which can be purchased by certain hospital who have experienced loss of narcotics through thefts. The hospitals affected are those who lost narcotics through negligence or insecurity such as having narcotics stored in an ordinary room or cabinet locked only with ordinary door keys.

The restriction on the amounts of narcotics which can be purchased will not be removed until the hospital has produced evidence that remedial measures have been taken and have been subjected to an inspection by Narcotic Agents who recommend removal of the restriction to the Ministry of Welfare. Some prefectures have reported that physicians themselves are procuring steel cabinets relatively inexpensive in which to store narcotics. The cabinets are bolted to the shelf or wall and have combination locks. The proportion which thefts have reached has required that the above steps be taken to safeguard narcotics.

Partially Used Narcotics

The Narcotic Section, Ministry of Welfare is advising all Narcotic Agents to inform local wholesalers that it is a violation of the Narcotic Law for any wholesaler to receive narcotics with damaged or broken seals or narcotics that have been partially used. In the future, narcotics belonging to a registrant who has had his license cancelled or to a deceased registrant will not be returned to local wholesalers if the narcotics are old, deteriorated, damaged or partially used or if the seal has been damaged or broken. Such narcotics may be disposed of to other practitioners or hospitals who desire to buy them. In case there is no such registered person desiring to receive them, the narcotics are to be dispatched to the Drug Disposal Committee for salvage. In no case will any monetary restitution be made for narcotics which are to be salvaged.

SECTION VII
WELFARE DIVISION

Licensed Agencies for Relief in Asia (LARA)

LARA shipments, numbers 97 through 100, of relief supplies for Japan, have arrived in Yokohama. These shipments contained 62.16 tons of the following supplies:

- a. 97th Shipment: Arrived aboard the S.S. Pioneer Lake on 9 September and contained 10.12 tons (clothing, 9.73 tons; miscellaneous, .39 tons).
- b. 98th Shipment: Arrived aboard the S.S. Marina Snapper on 15 September and contained 21.1 tons (food, 20.3 tons; miscellaneous, .8 tons).
- c. 99th Shipment: Arrived aboard the S.S. Oregon on 29 September and contained 29.95 tons (clothing).
- d. 100th Shipment: Arrived aboard the S.S. Marine Flyer on 1 October and contained .99 tons (food, .9 tons; clothing, .83 tons; miscellaneous, .07 tons).

The total LARA relief supply shipments to Japan now amounts to 6,909.38 tons, consisting of the following:

	Tons
Food	5302.43
Clothing (including shoes)	1238.83
Medicines	59.37
Cotton (raw)	207.62
Miscellaneous (including soap and seeds)	101.13
Total	6909.38

Cooperative for American Remittances to Europe and to the East (CARE)

The first shipment of CARE food packages (oriental pack) arrived in Japan in July. The shipment totalled 9,982 packages and the following information covers status of distribution as of 30 September.

Total packages received	9982	
Total packages damaged	203	
Total packages delivered	2569	
Total packages in process of delivery	1869	4641
Total packages on hand and not consigned		5341

Community Chest - Japanese Red Cross Joint Fund Campaign

Reports received to date indicate that the "Joint -Fund Drive" has been well organized in each of Japan's 46 prefectures and that the campaign is well under way.

Prefectural progress reports, covering the campaign, are expected this week and will be reported, as officially received, in subsequent Public Health and Welfare Weekly Bulletins. Only the following five prefectural preliminary progress reports have been received to date and cover collections up to 6 October.

Ibaraki	Yen		7,700
Tokyo			4,000,000
Gifu			851,590
Toyama			1,558,297
Kochi			108,614
Total	Yen		6,526,201

The following information pertaining to the Joint-Fund Campaign is given to illustrate the varied activities carried on in support of the endeavor.

- a. Military Government representative, Chiba Prefecture, addressed the volunteer workers and solicitors in a campaign rally held in Chiba City on 1 October.

b. Military Government officials in Gumma Prefecture assisted campaign officials in dropping 100,000 campaign leaflets from the air.

c. Tochigi Prefectural campaign officials dropped 100,000 leaflets from the air with the assistance of Military Government officials.

d. In Tokyo on 6 October, 500 Buddhists marched from Ueno to Kudan via Asakusa to assist in the campaign solicitation.

e. On 7 October, a member of the Imperial Family made a tour of the City of Tokyo, for the purpose of visiting and encouraging the volunteer street solicitors.

f. Nation-wide broadcasts are being held in support of the campaign with the broadcast originating at different stations. One such broadcast was originated in Kofu City, Yamanashi Prefecture.

g. The "red feathers" which are given to each contributor are much in demand - Tokyo, Kanagawa, Shizuoka, Yamaguchi, Ibaraki, Kyoto and Akita have found it necessary to re-order in large quantities.

Japanese Red Cross Society

Volunteer Service:

Two important Volunteer Service meetings held in Tokyo on 8 October and are briefly outlined below:

- a. Approximately 120 teachers from 87 Tokyo Junior High Schools gathered at the National Headquarters to learn about the Volunteer Service projects. They have decided to participate in the production (sewing) program and will be responsible for the completion of several thousands of garments.
- b. Three hundred representatives of the Tokyo Chapter's Volunteers were encouraged to continue their endeavors and were also praised for their present volunteer activities by the Emperor 3rd Empress.

SECTION VIII SOCIAL SECURITY DIVISION

National Health Insurance

A number of National Health Insurance Associations have expressed interest in obtaining medical facilities owned by organizations or companies being dissolved. Information on possible alternatives may be of assistance.

The local association may enter into direct negotiations with the organization or company concerned, or may pool resources with other associations and complete such negotiations and fiscal arrangements on a joint basis. In either instance, it may be possible to obtain financial assistance from the Ministry of Welfare. Where there is not a sufficient number of associations or their combined resources are inadequate, it is possible, as authorized by Section III, Local Autonomy Law, for two or more city, town or village governments to federate for a specific purpose, such as the establishment and operation of a medical facility.

SECTION IX MEMORANDA TO JAPANESE GOVERNMENT

<u>PHMJG</u>	<u>DATE</u>	<u>SUBJECT</u>	<u>SURVEILLANCE</u>	<u>DISTRIBUTION</u>
77	10/7/48	Request for Approval for Incorporation of the Japanese Bereaved Families Welfare Federation	No	MG 8th Army

Note: Memoranda to Ministry of Welfare, Japanese Government disapproving application (subject as above) and advising such incorporation as suggested would develop a program of special and preferential treatment for selected groups contrary to the purpose and intent of SCAPIN 775 dated 27 February 1946.

11-17 October
1948
No.94**

SECTION I - Preventive Medicine
SECTION II - Veterinary Affairs
SECTION III - Welfare

SECTION I
PREVENTIVE MEDICINE DIVISION

Survey of Beds for Tuberculosis Patients

The survey concerning availability of beds for tuberculosis treatment is nearing completion. Beds now available are:

Governmental:	National Sanitoria	32,646
	National Hospitals	6,749
Private:	Non-national Sanitoria	10,115
	Non-national Hospitals	<u>11,998</u>
	Total	61,508

Percentage occupancy of national sanitoria as of 31 July was about 81.5 %. Occupancy figures for the other institutions are not yet available.

There were 147,411 deaths from tuberculosis in 1947. The ration of beds available to deaths per year is .42.

This is far below the ration necessary for control of tuberculosis. A ratio of two beds per death is considered necessary. (It is actually 1.4 in the United States).

Plans are being drawn up to reactivate 12,352 beds by effecting the minor repairs necessary and an additional 14,507 by major repairs. All these beds will be those of national hospitals or sanatoria. This will give a bed death ratio of .546.

In addition, new construction is contemplated to bring the bed death ration in each prefecture up to .5. This will require 11,399 beds and will bring the national ration up to .695.

It is planned to have all repairs and new construction completed by March 1950. Action is now under way to secure the necessary funds.

Public Health Education

The prefectural health departments throughout Japan are conducting public health information-education programs, some of which are very good. In many instances, however, subject material is not carefully checked for factual accuracy and as a result a great deal of misinformation is being passed on to the Japanese public. A similar situation exists at the National level.

In order to remedy this situation at the National level, a "Screening Board" is in the process of organization within the Ministry of Welfare. This "Screening Board" is to be composed of persons qualified to judge the quality and accuracy of public health material included in all scripts, (radio, slide-film, motion pictures, press releases, exhibits, posters, etc.). The Board members are to be selected from among persons within the Ministry of Welfare and various other organizations interested in the furtherance of public health.

When this Board is properly functioning the quality of public health information-education, programs should show a definite improvement. A "Screening Board" would be of great value in the prefectural health department programs.

SECTION II
VETERINARY AFFAIRS DIVISION

Veterinary Education

A survey of the majority of the 16 listed Veterinary colleges in Japan has been completed, and the results summarized for submission to the Japanese Council on Veterinary Education on 22 October. Lack of instructors both in number and training, scarcity of text-books and technical knowledge and properly equipped clinics appear

to be the outstanding deficiencies. Generally speaking, most Veterinary colleges are beginning to realize their sub-standard condition and their attitude bespeaks progress in the forthcoming year.

SECTION III WELFARE DIVISION

Japanese Red Cross Society

Disaster Relief and Preparedness, Disaster Relief letter (DR No. 4) subject: "Administrative Organization for Disaster Relief" has been prepared and is being forwarded to all Red Cross Chapters (prefectural). A copy of this letter is inclosed with this issue of the Public Health and Welfare Weekly Bulletin, for the information and guidance of Military Government personnel (Inclosure 1).

SECTION IV SOCIAL SECURITY DIVISION

Japanese Nationals Employed for Occupation Forces

Recent legislation in the field of public health and welfare by the Japanese Government and necessity of controlling expenditures from funds established to meet Occupation Force requirements has resulted in a review and formulation of revised policies with regard to Japanese Nationals employed for the Occupation Forces.

A proposed SCAPIN and Command instructions have been drafted to assure that the Japanese Nationals employed for the Occupation Forces will have the full protection provided by the Labor Standards Law, the Preventive Vaccination Law, the Food Sanitation Act, the Venereal Disease Prevention Law, the Law for Prevention of Infectious diseases and the health insurance programs.

Further these documents prescribe procurement instruments to cover expenses for services involving discretionary determination under the Labor Standards Law and for requirements beyond the intent and scope of the other aforementioned laws.

SECTION I GENERAL

Attached hereto as Inclosure #1 are Ministerial Instructions to Prefectural Governments for period 30 September - 9 October 1948.

SECTION II PREVENTIVE MEDICINE DIVISION

Personnel Changes

Dr. Melville D. Dickinson, who recently arrived in Japan, has assumed the duties of Tuberculosis Control Consultant of Public Health and Welfare Section, GHQ, SCAP. Dr. Dickinson will replace Dr. A. P. Knight who recently returned to the United States.

Press Releases Concerning Reorganization of the Health Center System

Reference Section II, Weekly Bulletin 92. Inclosed with this Bulletin are Nos. 3 and 4 (Inclosures 2 and 3) in a series of Press Releases on the Reorganization of the Health Center System in Japan. Subject inclosures concern the Nutrition Service and the Tuberculosis Control Service of the Health Center.

This material was released to the Press at press conference in Tokyo on 7 and 25 October. The material has been prepared in semi-journalistic style and may be utilized for Press Releases to the local press.

Typhus Fever Control

The Ministry of Welfare reports that the typhus fever control program this year will be carried out in essentially the same manner as in past years. The program will stress early reporting of all suspect cases; serological examination of blood samples of all suspect cases; immunization and dusting of inmates of orphanages, old peoples' homes, vagrant camps, vagrant homes, labor camps, mental hospitals and other public institutions. Commuters in large centers of population will also be immunized.

The program also provides for the continuation of the rickettsiacidal spray program at 30 day intervals using 2% cresolis content in 5% DDT residual effect spray; continuation of dusting of all civilians (other than Allied personnel) using the Hakodate-Aomori Ferry; dusting and spraying techniques against fleas previous to rat control programs in the control of murine typhus. The need for early and sustained information-education programs is emphasized.

The Ministry of Welfare plans to investigate the possibility of manufacture and use of wettable DDT dust for use in future spray programs.

Bacterial Rat Poison

While investigating outbreaks of dysentery last spring, it was learned that bacterial cultures of salmonella organisms were being used as the active ingredient of a "so-called" rat poison. It was also learned that subject rat poison was being prepared and distributed throughout Japan under the sponsorship of the Ministry of Agriculture and Forestry. At that time investigations showed that:

1. Material being distributed was ineffective as a rat poison.
2. Some of the organisms contained in the preparation were pathogenic for man.
3. Adequate quantities of effective chemical rodenticides were available.
4. The use of bacterial rat poison was both dangerous and unwarranted.

Action was taken in that time to prohibit the manufacture and distribution of the "so-called" rat poison made from bacterial cultures. Recently, however, it has come to the attention of this headquarters that bacterial rat poison is again being distributed in some prefectures. The Ministry of Agriculture and Forestry has again been advised that the use of this material is both dangerous and ineffective and that they should prohibit its use.

Military Government Health Officers should determine whether or not subject preparation is being used in their respective prefectures and if so, should take the necessary action to see that production, distribution and/or use of this preparation is promptly discontinued. Provisions should also be made to prohibit its use in the future.

Venereal Disease Prevention Law

The new Venereal Disease Prevention Law represents a great forward step in public health administration and involves much more than is evident at first reading. The intention of the Law is to place venereal disease control on a sound public health basis and to provide adequate safeguards against infringement upon personal liberties and human rights. It will be necessary to go into considerable detail in explaining to Japanese health officials, certain principles of public health practice which must be followed in the application of this Law. Such principles in fact apply to the enforcement of all public health laws.

Public health activities have been removed from police control by appropriate changes in Japanese law. The responsibility for the implementation of health laws and their enforcement is now in the hands of public health officials. When properly supported by an enlightened public health officials will seldom have to call upon law enforcement agencies for assistance in the enforcement of health measures. Even when it becomes necessary to request assistance of other branches of government in the enforcement of a health law, it is important to follow the correct legal procedure. This does not include the use of police except as a last resort when there is sufficient danger to the public health to warrant such an extreme action.

The starting point for a sound venereal disease control program is the patient. The physician who makes the diagnosis sends a report to the local health authorities, and instructs the patient as to treatment and correct measures to be taken for the protection of others. If the patient is unable to pay for necessary treatment, he may obtain a certificate to that effect from the local Health Center, preferably after his inability to pay has been determined by investigation of the case. If the patient should refuse treatment or discontinue treatment, this fact should be reported by the physician to the Health Center. Reasonable effort should be made by both physicians and Health Officers to obtain voluntary compliance with the requirements of the Law.

Health officials may, if necessary, obtain an order from the governor of the prefecture for the patient to report for treatment, or an order for the patient to take treatment, or an order for the patient to enter a hospital for the period of infectiousness. However, this procedure should be resorted to only when the cooperation of the patient cannot be secured otherwise, and when it is determined that treatment is necessary for the protection of the public health. If the patient disobeys any of the above orders he becomes liable to a fine of not over 3000 yen, and, if he should "reject, hinder, or avoid" the investigation by competent health officials he becomes liable to a fine of not over 5000 yen.

It must be noted here that there is no provision in the Law for physical restraint of diagnosed venereal disease patients. No police action is indicated unless all other means at the disposal of Public Health Officers have failed and a definite charge can be made of violation of the Law. Refusal to take treatment or an attempt to evade treatment carries only the legal restraint of prosecution in the courts and the imposition of a fine.

After the patient is diagnosed and under treatment, the next step is an investigation of contacts, or persons in close association with the patient. The identity of the contact must be established, as well as the likelihood that he or she may have venereal disease. Efforts should be directed toward obtaining voluntary medical examination of contacts and an order for compulsory examination should be issued only when the Health Officer is possessed of definite facts that give him reasonable grounds to suspect the existence of the disease, and then only when in his judgment such an examination is actually necessary for protection of the public health, and the contact cannot be persuaded to submit voluntarily.

Any person ordered to take a medical examination to determine the presence of venereal disease must be notified that he or she has a right of appeal prior to the examination of he or she should claim there is not reasonable evidence to suspect that he or she has venereal disease. In case of appeal, no examination may be performed while awaiting court decision.

The compulsory examinations for which provision is made in Articles 10, 11 and 12 of the Law are compulsory only to the extent that the individual becomes subject to a 3000 yen fine if he fails to obey a properly executed order for such an examination. There is no provision for physical restraint to be used in the performance of these examinations. Not until an individual has broken the Law may he be arrested by the police.

In the application of Articles 26, 27 and 28 of the Law it must be remembered that this is a health law and not an anti-prostitution law. Unless there were recognizable symptoms, a person could hardly be expected to know that he or she was infected unless a physician had made a diagnosis and had so informed him or her. Article 26 provides a maximum penalty of two years imprisonment or 10,000 yen fine for anyone performing prostitution while knowing she has venereal disease in an infectious form. Article 27 provides a maximum of three years imprisonment or 20,000 yen fine for soliciting, pimping or providing a place for prostitution either knowing of venereal disease likely to infect others, or being negligently unaware of the presence of venereal disease when reason would have indicated this. Article 28 provides a maximum of one year's imprisonment or 5000 yen fine if one knows he (or she) has venereal disease in an infectious stage and has intercourse, nurses a baby or has intimate physical contact likely to infect a second person, whether or not the second person becomes infected. The imposition of penalties for such violations of the Law are, of course, a matter for determination by the Japanese courts.

Public Health Officers must keep in mind basic principles of public health when applying health laws to particular situations. One of these principles is that the presence of disease is not a criminal offense. One of the primary purposes of public health law is to establish suitable control measures which will insure that the presence of disease will not endanger the public health. The enforcement of these control measures is a responsibility of health officials and it is the duty of every individual citizen to comply with the measures which are required for the protection of the public health.

SECTION III MEDICAL SERVICES DIVISION

Results of the August 1948 Nutrition Survey are enclosed with this Bulletin (Inclosure No.4). They are given for Tokyo, Eleven Cities and Forty-Six Prefectures in Consumption Studies and Physical Examinations conducted during the Survey. The nutritive value of the Survey will be submitted with an analysis in next week's issue of this Bulletin.

SECTION IV VETERINARY AFFAIRS DIVISION

Equine Encephalomyelitis

Sporadic outbreaks of new cases of equine encephalomyelitis still are appearing in Hokkaido. During the period 16-22 October, a total of 37 new cases were reported although each one was classified as a suspect. This brings the total number of cases since the initial outbreak to 3,647 of which 1,292 are classified as suspects. The fatality rate has decreased due to the mildness of the cases now being reported.

Food Inspection

A recent visit to Nara Prefecture disclosed conditions very favorable from the standpoint of sanitary methods employed by the processors and handlers of food and food-products. Of particular note is the adoption of standards by the prefecture in controlling sanitary measures. Compliance with these standards has been carried out with very good results and the liaison between the Nara Military Government Team and the Prefectural Officials is maintained on a cooperative and constructive basis.

Veterinary Education Council

A conference was held at the monthly meeting of the Veterinary Educational Council in which proposed changes were submitted to those in attendance for consideration in the initial step toward creating a veterinary education curriculum comparable to those now being utilized in veterinary schools of other countries.

Animal Diseases

The following diseases were reported by the Animal Hygiene Section, Ministry of Agriculture and Forestry for the period 16-22 October.

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Hokkaido	Equine encephalomyelitis	37
Iwate	Swine erysipelas	5
Miyagi	Swine cholera	1

Note: The cases of equine encephalomyelitis as reported were all classified as suspects.

SECTION V
NURSING AFFAIRS DIVISION

Public Health Nursing Education

Regional Public Health Nurse refresher courses of 10 days duration will be held in all eight regions. The funds for the program have been given to the Nursing Affairs Division of the Ministry and each prefecture will receive its allotment. The committee has planned the curriculum and arrangements have been made with all regions. Three of the courses have been held to date in the Hokkaido, Shikoku and Chugoku Regions.

The next four-month's Public Health Nurse course will open 4 December at the Institute of Public Health. This will be the sixth course since the beginning of the program.

Midwifery Education

The National Midwifery program was explained to Midwives at the Institute held in Niigata from 10-14 October at which there were 600 midwives present. Many who attended the Regional meeting in June accepted teaching responsibility in this course.

SECTION VI
SUPPLY DIVISION

Production

A total of 5,070 pieces of the various types of DDT dusting and spraying equipment for insect control programs was produced during the period 10-16 October. Adequate inventory stocks are on hand to meet all requirements.

During the period 10-16 October 42,603 lbs. of 10% DDT dust, 11,173 gallons of 5% DDT Residual Effect Spray and 1,150 vials of typhus vaccine were distributed. At the same time 42,800 gallons of 5% DDT spray were received, leaving inventory stocks on hand at regional warehouses of the Ministry of Welfare of 1,485,315 lbs. of 10% DDT dust, 405,757 gallons of 5% DDT spray, and 53,586 vials of typhus vaccine.

Distribution

During the quarter Jul - Sep, 64 dark field microscopes were distributed to 14 prefectures as follows:

<u>Prefecture</u>	<u>Quantity</u>
Iwate	1
Kanagawa	3
Saitama	1
Osaka	16
Niigata	12
Ibaraki	3
Shiga	5
Kochi	2
Fukushima	6
Ishikawa	5
Aichi	5
Tokushima	1
Kagawa	1
Gifu	3
Total	64

In addition to previously scheduled allocations of absorbent cotton and gauze the following released U.S. Army stocks of cotton sanitary materials were allocated for distribution during October, November and December.

Prefecture	Gauze Bandage 3" by 10 yds. (12's)	Absorbent Cotton 1 oz.	Gauze Bandage 3" by 6 yds. (72's)	Gauze Bandage 4" by 10 yds. (12's)

SECTION VII NARCOTIC CONTROL DIVISION

Disposal of Certain Narcotics

The Narcotic Section, Ministry of Welfare, on 15 October issued Pharmaceutical and Supply Bureau Instruction Yaku-Hatsu No.512, to all prefectural governors. The letter sets forth the manner in which certain excess narcotics and narcotics of deceased or former narcotic dealers shall be disposed of. The Yaku-Hatsu which is attached lists the narcotic preparations concerned (See Inclosure No.5)

Yaku-Hatsu No.511, issued by the Narcotic Section, Ministry of Welfare, on the same date, states that the list of narcotic preparations listed in the letter which have been confiscated and no longer needed as evidence shall be destroyed in the presence of two narcotic agents and a report thereof forwarded to the Minister of Welfare. Narcotics which are included in the list and which have been surrendered to narcotic agents for disposition shall be destroyed in like manner. A copy of this Yaku-Hatsu is also inclosed. (Incl. #6)

It is emphasized that only those preparations listed in the Yaku-Hatsu may be thus destroyed. These narcotics are not considered salvageable. No narcotics or narcotic preparations other than those listed will be destroyed.

The instructions will enable all narcotic dealers to clear their stocks of many preparations, which were manufactured prior to the enactment of the Narcotic Control Law. Most of the preparations contain a small percentage of Keshigara (poppy-shell) extract, have practically no medicinal value, and have simply been held as dead stock since 19 June 1946. The instructions when completely complied with will simplify monthly reports.

In the future exempt narcotic preparations will receive close scrutiny and clinical study by the Narcotic Section, and National Board of Pharmacy before authorization is granted for their manufacture.

SECTION VIII WELFARE DIVISION

Community Chest-Japanese Red Cross Joint Fund Campaign

A change has been made in the goal for Saga Prefecture as reported in the Public Health and Welfare Weekly Bulletin No.93 (for period 4-10 October). The goal for Saga has been changed from 15,000,000 yen to 12,500,000 yen (10,000,000 yen Community Chest and 2,500,000 yen Japanese Red Cross).

Japanese Red Cross Society

The 10th Home Nursing Instructor's Course is being held at Japanese Red Cross Headquarters. The course started on 15 October and will finish on 28 October. The hours of instruction are from 8:30 AM until 4 PM.

The students taking the course are two from Osaka Chapter and one each from Gumma, Tochigi, Nara, Mie, Nagano, Tokushima, Oita and Miyazaki Chapters - total of 10 students.

According to reports received to date, 3,300 lay people have taken Home Nursing Courses sponsored by 36 Red Cross Chapters.

Those Chapters which have not conducted Home Nursing Courses are Chiba, Okayama, Kochi, Yamanashi, Niigata, Tochigi, Hiroshima, Tokushima, Shimane, and Kagawa. However, plans are underway to start the courses shortly.

Child Welfare

Inclosed in this Weekly Bulletin is an official interpretation of Ji-Hatsu #50 issued 1 October 1948, subject: "Functioning of Family Care", (Inclosure No.7). This important regulation deals with foster family care and adoptions and sets up procedures for applications, approval and disapproval and defines responsibility.

Public Assistance Report - August

The Ministry of Welfare has submitted the following figures for the month of August. Figures for July 1948 and August 1947 are for purposes of comparison.

	August 1948	July 1948	August 1947
Persons-Institutional	144,613	142,198	146,885
Persons-Non-Institutional	1,758,926	1,813,371	2,542,006
	1,903,539	1,955,569	2,688,891
In Cash*	420,431,334	399,900,645	293,209,803
In Kind	58,633,714	109,881,659	22,127,937
Total	479,065,048	509,782,304	31,537,740

*Before deductions for repayment.

Total	144,613	1,758,926	58,633,714	420,272,611

*After deductions for repayment.

SECTION IX SOCIAL SECURITY DIVISION

Social Insurance Statistics

A summary of Japanese social insurance statistics for the fiscal years 1944/45-1946/47 covering the last phase of the war and the first part of the second year of the Occupation was released for the first time in July as an appendix to the Report of the United States Social Security Mission to Japan. Selected coverage and financial data for the fiscal year 1947/48 will be found in Summation of Non-military Activities in Japan, No.35, August 1948 and selected benefit statistics for that year in the forthcoming statistical supplement to the Summation.

With this background material available and a more comprehensive review of the Japanese social insurances in preparation, monthly benefit statistics will be published in this Bulletin beginning with the current issue. Complementary monthly data on coverage and finances are scheduled to appear soon in ESS Section, SCAP's Monthly Bulletin, "Japanese Economic Statistics".

Each issue of the Public Health and Welfare Weekly Bulletin will carry the latest available benefit data for one social insurance program. This issue is given over to the government-managed part of Health Insurance.

Health Insurance (Kenko hoken) has been in operation since 1 January 1927. Broadly speaking, it covers workers in establishments employing five or more of all major lines of industry and commerce. According to the latest available figure (July 1948) 5,179,235 persons were insured under this program. In addition, their dependents, estimated to number approximately 11,900,000 were protected to the extent of receiving medical and related benefits at half cost.

Roughly one half of the insured, as of July 1948 exactly 2,379,972, and their dependents belong to the government-managed part (Seifu Kansho) of the program. The management of this part is entirely in the hands of the government on both the national and local levels. It is financed from equal contributions by employers and employees, adding up to 3.6 percent of the first 8,000 yen of monthly wages, and reserves a small subsidy from the national government defraying a part of the administrative cost.

Benefits are granted under this program only for sickness and injury arising from other than occupational causes. They are given partly in kind and partly in cash. During the first four months of the current fiscal year (April through July 1948) benefits were granted as indicated in Inclosure No.8.

SECTION I PREVENTIVE MEDICINE

Refresher Training Course for Nutritionists

The third two-month refresher training course for Nutritionists at the Institute of Public Health in Tokyo will be from 22 November to 29 January. Only qualified Nutritionists are eligible to attend. A special effort should be made to see that prefectures which failed to send students to the first two courses are represented in this next course. It is highly desirable that Nutritionists working in Health Center receive this training, a major portion of which consists of practical experience in the laboratory and in the field.

The course has been scheduled so as to allow students time for the New Year holiday and still not interfere with the quarterly National Nutrition Surveys. An official notice concerning the course has already been sent to prefectural governors by the Ministry of Welfare.

Venereal Disease Prevention Law - Cabinet Ordinance

A Cabinet Ordinance implementing the Venereal Disease Prevention Law was passed on 26 October. This ordinance authorizes expenditure of funds from the National Treasury for venereal disease prevention as provided for in the Law. The State, (National Treasury) bears 50% of the net expense of the prefectural government for health examinations of contacts and others examined under Article 10, 11 and 12 of Law.

The State bears not over 50% of public health education expenses relating to venereal disease prevention as provided for in the annual budget. For budget planning purposes, each prefecture is to submit applications for funds required for this purpose with an outline of projected work.

The prefectural governor is authorized, according to the Cabinet Ordinance, to collect from patients able to pay, the actual cost of physical examinations and materials or supplies used in performing serological tests or microscopic examinations; for those treated, the actual cost of drugs and supplies used in treatment; the cost of procedures and operations necessary for treatment, and the routine hospital or clinic charges for those who are in-patients.

Special Training Courses for Model Health Center Personnel

Three one-week courses of special instructions for key personnel from each Model Health Center are scheduled at the Institute of Public Health in Tokyo as follows: (1) Medical Officers in charge of tuberculosis control, 6 - 11 December; (2) Medical Officers in charge of venereal disease control, 6 - 11 December; and (3) Medical Officers in charge of maternity and child hygiene, 13 - 18 December.

The purpose of these courses is to give detailed instruction concerning the carrying out of the above mentioned functions in the Health Centers, particularly in relation to the national programs being developed in accordance with recently enacted laws. Since the Model Health Centers furnish the pattern for the functioning of all the other Health Centers, it is highly important that their work be done in conformity with present policies. Military Government Health Officers should exert their influence to insure that the proper individuals from all Model Health Centers, whether yet formally opened or not, attend these courses. Official notices concerning the courses have been sent by the Ministry of Welfare to all prefectural governors.

Publicity Concerning Public Health Programs

Reference Section II Weekly Bulletin No.92. Enclosed with this Bulletin is one copy of The Sun Photo Times (Inclosure No.1) and an English translation of the photo titles (Inclosure No.2) for information of each Military Government Health Officer. On pages 2 and 3 of this newspaper are a series of photographs concerning activities of the Health Center. The article and photographs in this particular edition entitled "The Growing Public Health Nurse" concerns the public health nursing service in particular although three photographs more directly concern the nutrition service, the medical social service and the laboratory service.

This paper and translation is forwarded for the information of Military Government Public Health personnel, as an example of effective publicity concerning the public health program. Good publicity is of great value in the health information-education program and should be utilized to the greatest extent possible at the local board. It is suggested that this paper be displayed for a period of time in each Model Health Center.

SECTION II
VETERINARY AFFAIRS DIVISION

Equine Encephalomyelitis

Sporadic outbreaks of new cases of equine encephalomyelitis still are appearing in Hokkaido. During the period 23-29 October, a total of 19 new cases were suspected of being equine encephalomyelitis although not confirmed. The total number of cases since the start of the epidemic now is 3,666 of which 1,311 were classed as suspects.

Food Inspection

Conference was held during this period with Ministry of Welfare Officials in order to project a plan adaptable to the newly formed Japan Food Association.

Rabies Control and Humane Handling of Dogs

Prefectural Public Health Sections have been notified by the Ministry of Welfare as to the proper handling and disposition of dogs placed in pounds during the periods of rounding up stray dogs. The clubbing of dogs to death in hereafter forbidden and death will be instrumented by the injection of Nux Vomica or a saturated solution of Magnesium sulphate directly into the heart. This work is to be carried out under the guidance of Prefectural veterinarians.

Animal Diseases

The following diseases were reported by the Animal Hygiene Section, Ministry of Agriculture and Forestry for the period 23-29 October.

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Hiroshima	Blackleg	2
Chiba	Filariasis (horse)	1
Fukui	Swine Erysipelas	12
Kochi	Swine Erysipelas	1
Niigata	Swine Erysipelas	1
	Piroplasmonis	1
Hokkaido	Equine Encephalomyelitis	19

Note: All equine encephalomyelitis cases were reported as suspects.

SECTION III
NURSING AFFAIRS DIVISION

National Association

A two day meeting was held in Tokyo 29-30 October for all the Prefecture Branch Association presidents and the Board members of the National Association. Plans were discussed and formulated.

Publications

The third edition of the Nursing Procedure Manual is now available at the price of 120.00 yen. Send orders direct to Medical Friend, Dr. C. Ohta, Tokyo, Japan.

SECTION IV
SUPPLY DIVISION

General

The first convention of the Japan Pharmaceutical Association was held in Kyoto 22 - 25 October. The newly elected officers of the Association were installed, and talks and papers presented by members.

On 24 October, the Chief, Public Health and Welfare Section addressed the convention stressing the importance of cooperation among the various members of the team composed of the professions concerned with public health and welfare in Japan, of which team the profession of pharmacy is a key member. He stated that "there is a new era in Japan, and there is a new era in pharmacy beginning right now". As example of a failure of the pharmaceutical profession, he cited the poor results from the recently distributed hexylresorcinol manufactured in Japan, which destroyed the faith of the public and of the doctors, nurses and nutritionists in this very important anthelmintic drug. "The day of dispensing non-potent drugs under fraudulent claims is over", he stated. He reminded the audience that the capabilities are here in Japan to carry out the obligation to procedure only first class drugs: the facilities for manufacture, the materials, either indigenous or imported, and the knowledge necessary.

In a talk at the opening session of the convention, the Chief, Supply Division, Public Health and Welfare Section, discussed the new Pharmaceutical Affairs Law and the responsibility of the profession of pharmacy in the enforcement of the provisions of this Law so that the status of pharmacy in the country can be raised.

Production

A breakdown of fuel allocation (standard coal and lignite) by prefectures, for use in those hospitals attached to Universities, Medical Colleges, and other educational institutions under the jurisdiction of the Ministry of Education, is included in Inclosure No.3. This allocation covers the period October, November, December, the 3rd Quarter, Japanese Fiscal Year 1948. (Unit: Metric Tons).

A similar breakdown is furnished in Inclosure No.4 of solid fuel allocation (standard coal and lignite) by districts and prefectures, for October, November, December, the 3rd Quarter, Japanese Fiscal Year 1948, for use in National Hospitals and Sanatoria and for use in Public and Private Hospitals and Sanatoria. (Unit: Metric Ton). As in the case of Ministry of Education officials in the preceding paragraph, Ministry of Welfare officials have likewise mailed allocation tickets directly to the hospitals concerned.

A similar breakdown is furnished in Inclosure No.5 of solid fuel allocation (standard coal, substandard coal, and lignite) by districts and prefectures, for use in Public Bathhouses, for October, November, and December (Unit: Metric Ton). Allocation tickets are mailed direct to the consumers while the Ministry of Welfare, at the same time, notifies by mail each prefectural health office of its detailed prefectural allocation breakdown.

A breakdown of the plan of allocation of liquid chlorine for chlorination of water by the water treatment plants and by the prefectures, for the period October, November, December is included in Inclosure No.6. Allocation tickets were mailed on 24 October by the Ministry of Welfare direct to the cities and towns concerned. At the same time, the Ministry of Welfare notified each prefectural health office of the breakdown of allocations to the cities and towns within the given prefecture.

The total quantity allocated for this period, October - December, is a reduction below the quantities allocated for the previous two quarters of the Japanese Fiscal Year 1948. This reduction was necessitated by the critical shortage of fuel and power adversely effecting the production of liquid chlorine. Corresponding reductions, therefore, in prefectural and water treatment plants allocations, have become necessary.

A total of 3,940 pieces of the various types of DDT dusting and spraying equipment for insect control programs was produced during the period 17 - 23 October. Adequate inventory stocks are on hand to meet all requirements.

During the period 17 - 23 October, 65,642 lbs. of 10% DDT dust and 27,899 gallons of 5% DDT Residual Effect Spray were distributed. At the same time, 9,600 lbs. of 10% DDT dust and 55,800 gallons of 5% DDT spray were received, leaving inventory stocks on hand at regional warehouses of the Ministry of Welfare of 1,384,273 lbs. of 10% DDT dust, 432,608 gallons of 5% DDT spray, and 53,586 vials of typhus vaccine. Additional available stocks of typhus vaccine, already produced and passed national assay tests, in the hands of the biological manufacturing laboratories and factories, as of 1 October, totaled 620,460 cc.

Distributions

During the period 17 - 23 October a total of 1908 pieces of dusting and spraying equipment was distributed to 17 prefectures as follows:

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsack Sprayer</u>	<u>Semiautomatic Sprayer</u>	<u>Hand Sprayer</u>
Iwate	504			50
Akita		12		
Yamagata	48			
Ibaraki				120
Saitama		1		
Tokyo	120	1		
Kanagawa			22	72
Toyama	96			
Fukui				100
Nagano	96			
Shizuoka		20		
Wakayama	224	56	6	
Shimane	100		20	
Yamaguchi				30
Tokushima				100
Fukuoka			40	
Saga		70		
Total	1,188	160	83	472

SECTION IV NARCOTIC CONTROL DIVISION

Narcotic Training School

The Third Training School for Narcotic Agents opened in Tokyo 26 October and will continue through 2 November. Sixty-three agents were scheduled to attend but only 61 agents registered for the school since, without prior notice, one prefecture failed to dispatch two agents who were engaged in an important investigation. The Narcotic Section, Ministry of Welfare, has notified the prefecture concerned that approval is not given to the action taken since the basic training is considered of primary importance.

Information Relative Investigations

Any information relative to a narcotic violation received by Military Government Teams should be passed immediately to narcotic agents in the prefecture. No special instructions need be given since all the narcotic agents have received instruction and training in the proper procedure. The information, when it reaches the Narcotic Control Division, Public Health and Welfare Section, will be passed with instructions to the narcotic agents through the Ministry of Welfare. However, there is a considerable loss of time occasionally through the latter procedure and the investigation will be speeded through prompt action on the part of Military Government Teams.

Penalties

One prefecture reported that eight defendants, adjudged guilty, were fined from 1500 yen to 2500 yen. Such minimum penalties will not act as deterrents to willful violators of the law. In those cases in which fines are indicated as sufficient punishment, maximum or near-maximum amounts for willful violators should be demanded by procurators.

SECTION V WELFARE DIVISION

Helen Keller Tour

Upon completion of a two-month schedule of public appearance which included appeals in behalf of the deaf and dumb and the blind, Miss Helen Keller and her companion, Miss Polly Thomson, departed for the United States aboard the U. S. A. T. David T. Shanks from Yokohama, 28 October.

During her tour in Japan, Miss Keller made visits in 15 urban centers, including the six largest cities and addressed more than 25 public assemblies and 30 press conferences as well as innumerable impromptu platform appearances at cities not included in the tour schedule. As an outgrowth of Miss Keller's second visit in Japan - her first visit being in 1937 - associations and societies for the deaf, dumb and blind have concurred in a plan to unite in

an informational organization to preclude duplication of services and to assure coverage of fields not now included within the scope of any current public or private rehabilitative activity.

The interest in the physically handicapped re-kindled by Miss Keller's visit will require local husbanding to maintain steady, forward progress, to obviate tangential movements or misplacement of long range objective.

Child Welfare

Attached to this Bulletin is a copy of informational material sent to prefectures by the Ministry of Welfare concerning the functions of the Child Welfare Official and the Child Welfare Worker. (See Inclosure No.7).

Cooperative for American Remittance to Europe and to the East (CARE)

The second shipment of CARE food packages (oriental pack) arrived in Yokohama aboard the S.S. Pioneer Tide on 16 October. This shipment totaled 9,997 packages.

CARE, Inc. has received import licenses to cover the import into Japan, through August 1949 of the following types of packages:

<u>Type</u>	<u>Quantity</u>
Food (oriental pack)	100,000
Cotton goods	20,000
Woolen goods	20,000
Blanket pack	20,000
Knitting wool	20,000

SECTION VI SOCIAL SECURITY DIVISION

National Health Insurance

A copy has been received of the English Edition of Official Gazette, dated 15 August, 1948, which contains Ministry of Welfare Ordinance No.38 of Revised Enforcement Regulation to the National Health Insurance Law. This release, of special interest to Public Welfare Officers of Military Government Teams, can be obtained from the Government and Legal Offices of each Team. An English translation of the National Health Insurance Law, basic to the above-mentioned enforcement regulation, has been completed and is being released to each Military Government Teams.

Social Insurance Statistics

In continuation of the current publication of benefit statistics begun in the preceding issue of the Public Health and Welfare Weekly Bulletin, available data on the society-managed part of Health Insurance (Kumiai Kansho Kenko Hoken) are published in this issue (Inclosure No.8). For a brief summary of the Health Insurance program, particularly its government-managed part, reference is made to the preceding issue.

The society-managed part of the Health Insurance system is base on the national law and is supervised by the national and the prefectural governments. However, each of the Health Insurance Societies, (totaling 710, as of the end of July, established in enterprises employing not less than 300 workers,) administers its program independently. While all Health Insurance Societies must grant the statutory benefits, some of them grant more liberal benefits and most grant additional benefits over and above those prescribed by law. Their more liberal benefit policy is made possible chiefly by direct as well as indirect subsidization by employers over and above their contributions to match the employees' contributions as required by law. Thus total contributions often exceed 3.6% of the taxable wage (the first 8,000 yen per month). A small subsidy is received from the national government covering a part of the administrative cost.

As under government-managed Health Insurance, benefits are granted only for sickness and injuries of other than occupational origin. On 31 July, the number of primary insured under society-managed Health Insurance was 2,379,972. (In the last issue of the Bulletin this figure was given by mistake for the government-managed part of the program. This should have been 2,799,263).

Although monthly operational reports are received from all societies, it has proved impossible to prepare complete summations each month. Hence, a sample has been selected, with due regard to the industrial and size distribution among the Health Insurance societies, representing between one-eighth and one-ninth of the total number of societies and roughly 10% of the total number of insured. The figures shown here are based on this sample with minor variations due to delayed reporting.

GENERAL

The following Public Health and Welfare Technical Bulletin is inclosed (Inclosure No.1) with this Weekly Bulletin:

Title: Social Insurance Benefits
Short Title: TB-PH-SS-2

SECTION II
PREVENTIVE MEDICINE DIVISION

Smallpox

During the current week, 19 additional cases of smallpox were reported from the village of Utashinai, Sorachi district, Hokkaido, the same village in which four cases were reported last week. This brings the total number of reported cases to 23 for the present outbreak.

All the cases are mild and though the patients are alleged to show evidence of successful prior vaccination, this instance serves to emphasize the fact that occurrences of outbreaks of smallpox are still a possibility. Constant vigilance is still necessary to keep smallpox under control and eventually to stamp it out entirely.

In order to be successful, all phases of the program must be kept up to the mark: potency of the vaccine, technique of the vaccination, coverage of the population, the reading of the vaccination, etc. Physicians and Health Officers must remain on the alert for mild or atypical cases so proper measures for prevention and control may be taken promptly before the disease has gained a foothold.

SECTION III
VETERINARY AFFAIRS DIVISION

Equine Encephalomyelitis

Sporadic cases of equine encephalomyelitis are still being suspected in Hokkaido. Laboratory investigation is now under way to determine the possibilities of a strain of virus existing that may have different laboratory quality not characteristic of the already identified Chiba and Gifu strains.

Food Sanitation Association

On 1 November, the Japan Food Association became a juridical body and formally convened to hear the readings of the Articles of the Association and to announce publicly the names of the members elected by popular vote to serve on the board of directors.

The President of the Association is Mr. Ryutaro Takahashi. All Prefectural Government Headquarters will be contacted for the purpose of establishing a Prefectural Food Association under the guidance of the Association just formed.

Animal Diseases

The following diseases were reported by the Animal Hygiene Section, Ministry of Agriculture and Forestry for the period 31 October to 5 November:

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>

SECTION IV SUPPLY DIVISION

Production

The yen value of production of medical supplies (medicines, biologicals, dental instruments, dental materials, rubber sanitary goods, medical instruments and surgical dressings) for September totaled 1,819,501,167 yen. This total was comparable to the August production; but, at the same time, it was an increase of approximately 1,675,000,000 yen above the monthly production average attained in 1946 and it was approximately 1,350,000,000 yen above the 1947 monthly production average.

Controlled medicine production during September decreased approximately 60,000,000 yen compared to the August production. Controlled medicine production in general during September remained adequate to provide sufficient quantities of essential medicines to meet domestic requirements.

Non-controlled medicine production during September increased approximately 53,000,000 yen above the production during August. This production represents the largest single monthly production attained in any month so far of 1948.

Patent medicine production during September increased approximately 48,000,000 yen above the July production. There have been no shortages reported in the availability of adequate supplies of patent or home remedy medicines.

Production of miscellaneous drugs (pure mapharsen, bismuth subsalicylate injection and sulfathiazole) during September showed a substantial decrease below August production. This decrease was attributed to the regulating of production quotas by the various manufacturers according to the quantities of finished drugs accumulating in their warehouses as inventory stocks awaiting distribution. A slight decrease in allocation of fuel and power to their factories was reflected by the decreased production during September as compared to the two previous months of the quarter. Adequate inventory stocks are available, however, for immediate distribution to proper consumers.

Biological production during September was sufficient to meet present requirements. Production activities are being expanded at the present time to provide the necessary quantities of biologicals to implement scheduled immunization programs complying with the new vaccination and immunization laws. An increase during September of approximately 8,300,000 yen above August production was made. Further efforts are being made to

increase the efficiency of production techniques so that a greater portion of all the vaccines produced will pass assay standards.

Production of penicillin during September reached a new high with a total of 317,171 vials of 100,000 oxford units each or a total of 31,717,100,000 oxford units being produced. Of this total, 86,955 vials were produced by the surface method and 230,216 by the submerged method. This total represented further the largest amount of penicillin produced during any month since the initiation of indigenous commercial scale production of this drug.

Medical instrument production during September totaled 2,091,284 pieces valued at 33,110,170 yen. This production was a slight increase over the production accomplished during August and the largest monthly ever reported.

Dental instrument production during September increased above the August production by an amount of approximately 5,500,000 yen, despite the fact that the number of pieces produced was markedly less. This seemingly contradictory report is explained by the fact that a larger production of the more expensive pieces such as electric motors, dental chairs, electric lathes, and complete equipment units was effected during September, as compared to August. Dental materials production during September represented an increase of approximately 1,000,000 yen above the August production and an increase over the first, second and third quarterly 1948 monthly production averages.

Production during September of glass syringes for domestic use totaled 350,000 pieces of the various types and sizes of syringes. This total represented a negligible decrease below the production reported during previous months. Adequate stocks were on hand to meet all domestic requirements.

Production of laboratory animals during September evidenced a decrease of approximately 5,000 animals below the August production. However, available supplies of animals were still sufficient to meet the needs of all laboratories.

Production of x-ray and electrotherapy equipment during September decreased substantially below the previous months of 1948. While the September production represented an increase over the 1946 and 1947 monthly production averages, it represented, at the same time, a figure comparable to the 1948 first and second quarter monthly production averages. This decrease was attributed to the suspension of production during September of luminous and intensifying screens since inventory stocks were sufficient to meet all requirements.

Rubber sanitary goods produced during September decreased approximately 3,300 kilos and approximately 4,000,000 yen below the August reported production. September production compared favorably, however, with the second quarter and first half of 1948 monthly production averages.

Production of gauze, bandage cloth, and absorbent cotton from stocks of imported raw cotton during September totaled 55,819,050 yen. This total was approximately only one-third the yen value of production in the previous four months of 1948. This tremendous decrease was attributed primarily to the negotiations within the Japanese Government agencies toward the establishment of new wholesaler and retailer prices for all types of textile materials. During the period of negotiation, practically no deliveries of thread were made by the spinning factories to the weaving mills who, in turn, were able to make only token deliveries of woven cloth to the textile sanitary material finishing mills. With the recent establishment of the new price schedule on all textile materials, an acceleration of deliveries of the raw materials through the various steps in the manufacturing process of sanitary materials can be expected.

Production of x-ray film during September totaled 32,468 square meters. This is an increase of approximately 6,000 square meters above the 1946 and 1947 monthly production averages and, at the same time, an increase of approximately 6,000 square meters above the first quarter 1948 and second quarter 1948 monthly production averages. Adequate supplies of x-ray film in all sizes and types are available.

Production of hexylresorcinol during September continued with final efforts being made to establish minimum standards for assay of the drug, both in the crystalline form and in the finished coated pill form. No pills or tablets were produced during September since the various manufacturers were instructed to concentrate their production efforts on the manufacture of the drug in powder form and to hold up on the finishing in pill form until these standards were established and made known to them. These standards will be completed and published for the information of the industry in the very near future.

During September, a total of 381.40 kgs. of hexylresorcinol was produced. This total compares very favorably with the amounts produced in previous months of 1948 and further increases may be expected in the remaining months of 1948.

Production of x-ray tubes, both the Coolidge and the Kenotron types, during August, totaled 1198 pieces, this total representing a substantial increase over the previous months of 1948 and the largest monthly production accomplished during any month so far in 1948.

Production of insect and rodent control supplies and equipment continued during September according to plan. Adequate quantities of all items of insecticides and rodenticides and equipment are available to meet all normal requirements.

The following tablets indicate production of medical, dental and sanitary supplies and equipment:

Distribution

Wherever discrepancies or complaints are reported regarding supply procedures it is of definite value that all pertinent data such as dates, quantities of specific items, dates and file numbers of communications, etc., relative to the problem, be included. With facts and figures available, investigation and correction can be more readily effected.

Various prefectures have reported that actual procurement of many medical supply items, though allocations are adequate, is almost impossible in many instances. It has been suggested that possibly the supplies are being hoarded by wholesalers in anticipation of higher prices. This can very likely be the case and, if true, constitutes a violation of Ministry of Welfare Ordinance No. 30, which implements the Temporary Demand and Supply Adjustment Act.

All such complaints should be investigated locally and instances which indicate that a local wholesaler is withholding stocks should be prosecuted by the prefectural government, and registrations be forfeited where advisable. Investigations of local matters may reveal that central wholesalers or manufacturers are withholding supplies, or in other ways violating that Act mentioned above. The details of these violations should be reported by prefectural health authorities to the Pharmaceutical Affairs Section of the Pharmaceutical and Supply Bureau, Ministry of Welfare, as well as through normal Military Government channels.

During the period 24 - 30 October, 2,191 pieces of dusting and spraying equipment were distributed to 17 prefectures as follows:

SECTION V NARCOTIC CONTROL DIVISION

Transportation Aid

A Regional Military Government Public Health Officer has suggested, as a means of aiding prefectural narcotic agents in making investigations, especially when investigations outside of the prefectural capital city are limited by lack of a sufficient budget, that members of the Military Government Teams going on field trips take a

Narcotic Agent with them who has business at some place on the route they will cover. The Agent can be dropped off enroute and possibly picked up on the return journey.

It is to be hoped that the Public Health Officers and other members of Military Government Teams will promote this form of aid to Narcotic Agents in the efforts of better narcotic control enforcement activities.

Narcotic Training School

The Third Training School for Narcotic Agents ended 2 November and completes the general training for all Narcotic Agents throughout Japan. After completion of each training school program, improvement has been noted in the enforcement of narcotic control and methods used in obtaining such results. This third class of Narcotic Agents shows great promise of future activities towards betterment in Narcotic Control in Japan. They brought many questions to the school to be answered by officials of the Narcotic Section of the Ministry of Welfare and the Attorney General's Office which indicated interest and thought in their work.

An increase in the number of successful investigations is to be expected in the near future as these agents put their newly acquired knowledge into practical application.

SECTION VI WELFARE DIVISION

Housing

Current report received from the Construction Board indicates that from 16 August 1945 to 30 September 1948 inclusive, 1,075,560 new dwellings have been built in Japan totaling 13,273,015 tsubo of floor space. Other than dwellings 294,761, buildings have been built in the same period totaling 7,002,865 tsubo. These figures do not include dwellings or buildings constructed "in the black market" for which no figures are available.

Public Assistance - Recertification Program

The Ministry of Welfare has announced its second consecutive yearly recertification plan for all public assistance recipients. Governors are authorized to start between 20 November 1948 and 10 February 1949, and are requested to complete the prefectural operation and submit reports by 20 March 1949.

Military Government Team Welfare Officers have reported varying success in the 1947-48 plan. Nationally, statistics indicated that there was a material reduction in prefecture case loads. Training benefits apparently varied greatly, depending generally on the interest shown by prefecture and local officials. Weaknesses in 1947-48 operations, as pointed out by Military Government Welfare Officers, have been discussed with Ministry of Welfare Officials.

Public Health and Welfare Section made the following recommendations to the Ministry of Welfare after reviewing the material submitted:

- a. Prefectural officials should be cautioned that the prime objective is not to reduce case loads, but to review all cases to re-determine eligibility and to determine that the amount of assistance given the recipient assured him, with his income and resources, a minimum standard of living.
- b. Local officials should determine that children under legally employable ages are in school.
- c. Each member of the family available for employment should be registered at the local employment office.
- d. Local officials should be cautioned that families should not be forced to sell all their belongings before becoming eligible for public assistance. Distinction should be made as to which articles might be considered as investments and which are ordinary household goods.
- e. Local welfare officials should not attempt to determine employ-ability in the event of apparent weakness or illness or lack of desire to work, but should request a physical examination by the local medical practitioner and follow his recommendation for medical treatment of it is requested.

Japanese Red Cross Society

Disaster Relief:

The Saitama Chapter reported that a fire broke out in the Saitama Prefectural Office Building, Urawa City, Saitama, after midnight on 25 October and the greater part of the building was destroyed. Forty persons were reported injured. The Red Cross Chapter and the Omiya Red Cross Hospital immediately dispatched three emergency medical aid teams to the scene of the fire and established medical aid centers in the Prefectural Assembly and the Red Cross Chapter where medical aid was administered to all injured persons.

Community Chest-Japanese Red Cross Joint Fund Campaign

The reports from the prefectures covering the actual returns from the Community Chest-Japanese Red Cross Joint Fund Campaign are extremely slow coming in and are not complete. However, the returns received as of 1 November are listed below to give some indication of prefectural progress. Subsequent reports, when they are more complete, will be published in this Bulletin.

*Total Amount not yet Received by Prefectures			35,973,000		

*Total include amounts in Table I and Table II.

SECTION VII SOCIAL SECURITY DIVISION

Social Insurance Statistics

Social Insurance benefit statistics published in this issue of the Public Health and Welfare Bulletin refer to Welfare Pension Insurance (Kosei Nenkin Hoken). 1/

This program went into effect on 1 June 1942. It was originally called Workers' Pension Insurance (Rodosha Nenkin Hoken) and covered at first only the male laborers in industrial establishments employing ten or more workers. Other workers, including women, could be insured on a voluntary basis. Effective 1 October 1944, the Law was amended to cover male and female workers employed in industrial and commercial enterprises of five or more. At that time the system was renamed Welfare Pension Insurance.

In its present form, the system is designed to cover the same categories of workers and virtually the same numbers as are protected under Health Insurance (Kenko Hoken), if both the government-managed and the society-managed parts of that program are added up. 2/ According to the latest available report (July 1948), 5,177,635 persons are insured under Welfare Pension Insurance, 20,209 of them on a voluntary basis - 1,291,850 of whom are women.

The system is financed by equal contributions from employers and employees totalling, at present, 3.5% of taxable wages for underground miners and 3% for all other categories of insured. 3/ Taxable wages are the first 8,100 yen per month. 4/

Benefits payable under this program provide for the long-term risks and are complementary to the short-term protection provided under Health Insurance. They include pensions and lump-sum allowances for the disabled and for survivors. Old-age benefits have not become payable as yet since a 20-year qualifying period (15 years for underground miners) is required. However, so-called retirement (or withdrawal) allowances are paid to selected groups of insured who withdraw from the system after a minimum period of employment but short of the period entitling them to receive old-age pensions.

The same long qualifying periods are required for survivor's pensions except for those payable for deaths from occupational causes occurring prior to 1 September 1947 (the date on which the Workmen's Accident

Compensation Insurance Law became effective). Such survivors' pensions based on occupational diseases and injuries occurring prior to 1 September 1947 have been and continue to be paid under Welfare Pension Insurance.

The statistics given in Inclosure No.2 on benefits granted under the Welfare Pension Insurance program refer to cases and amounts certified in a given month. Actual disbursement may be larger or smaller depending on the total carried over from previous months and to subsequent months respectively.

1/ For benefit data on Health Insurance (Kenko Hoken), see the preceding two issues of the Bulletin, Nos.95 and 96.

2/ Minor divergencies is coverage between the Welfare Pension Insurance and the combined Health Insurance programs are due to special cases, e.g. exemption from Health Insurance coverage - but not from Welfare Pension Insurance - of employees of the larger National Health Insurance Associations by reason of their participation in the Association's benefit scheme.

3/ The low rates are explained by the fact that old-age pensions, which will not be payable until several years from now, are computed, for the time being, on the basis of a maximum wage of 300 yen per month and the contribution rates adjusted accordingly.

4/ This cut-off is the same as under Health Insurance. The figure of 8,000 yen given in the preceding two issues of this Bulletin was rounded off; to be exact it should have been 8,100 yen.

PREVENTIVE MEDICINE DIVISION

Smallpox Vaccinations

SCAPIN 1939, subject "Vaccination against Smallpox" dtd 1 Nov 48 rescinds SCAPIN 921 dtd 4 May 46, subject: "Vaccination Against Smallpox" and SCAPIN 1013 dtd 11 June 46, "Report on Revaccination Against Smallpox".

By the rescission of SCAPIN 921, the prohibition of the use of alcohol for disinfecting the skin in preparation for vaccinations has been removed. Present Ministry of Welfare instructions, Ministry Order No.36, August 10, 1948, permit the use of alcohol provided the skin is permitted to dry prior to the application of the vaccine.

Health Department Budgets for 1949

The importance of obtaining a sufficient budget to support essential Public Health Programs is recognized. However, the necessity for making budget demands known early is not always fully appreciated. It is probable that many prefectures are already preparing preliminary budgets for the next fiscal year and some may even be preparing detailed budgets at this time. The earlier suitable budgets are prepared and submitted together with a strong justification therefore, the more likely the Health Department is to receive a fair share of the total prefectural budget.

It is suggested that Military Government Health Officers become fully informed and work closely with Health Department officials in the preparation and submission of their budget in order to ascertain that allocations for health programs are adequate or at least a fair share of the total prefectural budget.

Special Training Courses for Model Health Center Personnel

Medical Social Workers

Very few of the people who are now employed as medical social workers in the Model Health Centers have had any previous training or experience in this work. For this reason it is very important that they receive the minimum amount of training necessary to enable them to perform their duties.

Up to the present time it has not been possible to schedule a special short training course for these personnel because there have not been a sufficient number of full time permanently employed workers assigned to the Model Health Centers to justify the holding of such a course. However, the Ministry of Welfare reports that the number of full time medical social workers is increasing and they expect that by the end of December most of the Model Health Centers will have full time workers employed.

The Ministry of Welfare (by Ho-Hatsu No.32, 9 Nov 48) has announced to the chief of each prefectural Health Department that a special short training course, of approximately 10 days duration, for medical social workers will be held at the Institute of Public Health in Tokyo sometime in February 1949. The exact date will be announced later.

The importance of this course is recognized by all and a full attendance is expected. Military Government Health Officers in each prefecture should immediately check to see whether or not a suitable full time medical social worker has been engaged by the Model Health Center and if not, he should immediately take steps to insure that such a person is employed by the Model Health Center at the earliest possible date and not later than 1 January 1949. This action is necessary in order that he or she may have time to get acquainted with organization and operation of the Health Center before attending the special course in Tokyo in February. It is important that every prefecture (Model Health Center) send a representative.

Health Education

Reference Section I, Weekly Bulletin No.96, above subject. In addition to the three one-week courses announced in Weekly Bulletin #96, a fourth one-week course of instruction in Health Education will be held at the Institute of Public Health in Tokyo from 13 to 18 December. This is another in the series of special short courses being given for key personnel from each Model Health Center.

Health Education is one of the most important functions of the Health Center, but as yet it has not received sufficient attention. Consequently, it is highly important that the person in charge of Health Education in each Model Health Center attend this course. In some instances, this may be the Health Center Director himself.

Detailed instruction will be given concerning the ways in which the Health Center should conduct Health Education activities and information supplied regarding educational aids which are available. An official announcement concerning the course has been sent by the Ministry of Welfare to all prefectural governors.

Trachoma Control

Trachoma is an important public health problem in Japan and once that has not received sufficient attention in the past. Now that the pressure from public health emergencies has been greatly relieved and Health Departments are able to carry on normal activities, it will be possible for them to devote more time and effort to trachoma control.

Public Health and Welfare Section will continue, as in the past, to stress trachoma control at the national level and Military Government Health Officers should lend all possible assistance and encouragement to prefectural and local health authorities in planning and executing local trachoma control programs. Excellent work is already being done under the supervision of Military Government Health Officers in some prefectures.

Inclosed with this bulletin (Incl.1) is an article entitled "A Discussion of Trachoma" prepared by Captain William C. Caccamiso, Military Government Health Officer, Chiba Military Government Team. Subject article was published in the FEC Surgeon's Letter, Vol. III, No. 11, dated 1 November 1948 and is being reproduced herein for the benefit of Military Government Health Officials. This excellent article should be of considerable interest to all Military Government Health Officials and will serve as a valuable source of information for those unfamiliar with the disease.

With reference to sulfonamide therapy subject article is primarily concerned with sulfadiazine. It will be noted however, that sulfadiazine is not readily available in Japan at this time. Both sulfanilamide and sulfathiazole are effective and are available in Japan.

SECTION II VETERINARY AFFAIRS DIVISION

Food Sanitation

Representatives of the newly formed Japan Food Association will make calls on Public Health Officers of Military Government Teams for the purpose of arranging contacts with appropriate Food Sanitation Officials of the Prefectural Government. The purpose of these visits will be to establish a Prefectural Food Association with a mission of increasing the sanitation and quality of food and the establishments handling or processing food in the Prefecture. Articles on sanitary procedures in the handling and processing of food will be disseminated to these Food Associations by the Japan Food Association in Tokyo.

Animal Diseases

The following animal diseases were reported by the Animal Hygiene Section, Ministry of Agriculture and Forestry for the period 6 - 12 November:

<u>Prefecture</u>	<u>Disease</u>	Number of Cases
Hiroshima	Blackleg	1
Aichi	Swine Erysipelas	2
Nagano	Swine Erysipelas	2

Veterinary Laboratory

Approval was given to finalized plans for the consolidation of the Nishigahara Laboratory with the Kodaira Animal Hygiene Laboratory located at Kodaira, Tokyo-To. This move is in the interest of efficiency and economy in the production of animal biologics.

SECTION III

NURSING AFFAIRS DIVISION

Nursing Education

Curricula for Class A and B Nursing Schools and Public Health and Midwifery post graduate courses of one year duration have been formulated. These have been planned in credit hours in order to make it possible for college credit of the nurse wishes to pursue her studies. This will also aid in evolution of credits for those who study aboard.

Publications

The Ministry of Welfare has prepared a small pamphlet on "Facts About Nursing" to be used in the recruitment program in the high schools. Articles will be printed in newspapers and information disseminated over the radio.

A small illustrated pamphlet regarding tuberculosis is now ready for distribution at 35 yen per copy. First half of the book on Communicable Disease Nursing by T. Lynch is also ready, price 200 yen. It has been necessary to put this book into two parts. Please send your orders to Dr. C. Ohta, Medical Friend, Tokyo, Japan.

SECTION IV SUPPLY DIVISION

Production

A total of 3,740 pieces of the various types of DDT dusting and spraying equipment for insect control programs was produced during the period 24 - 30 October.

A total of 4,410 pieces of the various types of DDT dusting and spraying equipment for insect control programs was produced during the period 31 October 6 November. Adequate inventory stocks are on hand to meet all requirements.

During the period 24 - 30 October, 6,048 lbs. of 10% DDT dust, 899 gallons of 5% DDT residual effect spray, and 21,341 vials of typhus vaccine were distributed. At the same time, 187,600 lbs. of 10% DDT dust, 7,250 gallons of 5% DDT spray, and 31,486 vials of typhus vaccine were received, leaving inventory stocks on hand at regional warehouses of the Ministry of Welfare of 1,496,225 lbs. of 10% DDT dust, 513,766 gallons of 5% DDT spray, and 63,731 vials of typhus vaccine. Additional available stocks of typhus vaccine, already produced and passed national assay tests, in the hands of the biological manufacturing laboratories and factories, as of 1 October totaled 509, 860 cc.

Allocations of cement received by the Ministry of Welfare for October, November, and December included the following four categories in the specified amounts:

<u>Category</u>	<u>Amount of Allocation</u>
Welfare Institutions	3,000 metric tons
Government Demand	5 " "
Waterworks Repairs	1,500 " "
Medical Supply	1,000 " "
Total	<u>5,505 metric tons</u>

Breakdown of the allocations, according to general categories, is included in Inclosure 2. Further detailed prefectural breakdown is included in Inclosure 3 for the category "Waterworks Repairs."

A breakdown of the plan of allocation of bleaching powder for water purification and water treatment plants, by prefectures, for the period October - December, the 3rd Quarter, Japanese FY 1948, is included in Inclosure 4. Allocation tickets were mailed by the Ministry of Welfare direct to the cities, towns, and villages concerned. At the same time, Ministry of Welfare notified each prefectural office of the breakdown of the allocations to the cities, towns and villages within the given prefecture. Prefectural health officials should assist in expediting deliveries of the material in accordance with the allocations made.

Distribution

Distribution of dusting and spraying equipment during the period 31 October to 6 November totaled 3,425 pieces to 17 prefectures as follows:

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsack Sprayer</u>	<u>Semi-automatic Sprayer</u>	<u>Hand Sprayer</u>
Miyagi			100	
Niigata			162	
Toyama	720	42		
Ishikawa		62		12
Fukui			130	48
Nagano		66		
Gifu	200			
Aichi		42	18	
Osaka		3	2	
Hyogo		30		
Shimane			20	
Tokushima				100
Hiroshima	200			
Fukuoka	400	50	150	
Saga			260	
Kumamoto			200	
Oita	400			
Total	1920	295	1050	160

Distribution of medical supplies and equipment during the month of September shows a decrease in non-controlled medicines, patent medicines, dental materials, rubber sanitary goods, surgical dressings and former Japanese Army and Navy medical supplies. There was an increased distribution of controlled medicines, dental instruments, medical instruments, medical instruments and former Japanese Army and Navy surgical instruments. Distribution of medical supplies and equipment for the 3rd quarter varied considerably from distribution for the first half. See Table I, Incl.#5.

Miscellaneous drugs distributed during September showed increases in mapharsen, bismuth subsalicylate injection ampoules and sulfadiazine tablets. Distribution of sulfathiazole tablets decreased nearly a million tablets from August sales. Third quarter average sales show an increase in mapharsen ampoules and sulfathiazole tablets over 1st half average sales, slight decrease in sale of bismuth subsalicylate ampoules and a decrease of nearly one million sulfadiazine tablets from August sales. See Table II, Incl. #5.

During the month of September biologicals distributed were as follows:

Cholera vaccine	347,000 cc
Typhus vaccine	70,000 cc
Triple typhoid vaccine	1,006,300 cc
Diphtheria toxoid	890,330 cc
Diphtheria antitoxin	78,637 cc
Smallpox	255,475 doses
Anti-rabies	74 doses
Anti-rabies (canine)	76,500 cc

As compared with August distribution, these figures represent a decrease in typhus vaccine, triple typhoid vaccine and anti-rabies (canine) only. All the others listed showed substantial increases in distribution.

Penicillin distribution during September totaled 17,591 vials of American penicillin (200,000 oxford units each) and 296,742 vials of Japanese made penicillin (100,000 oxford units each). A final distribution of 809 vials of (100,000 oxford units each) American penicillin was made. This is a decrease of 5,626 bottles of 200,000 oxford unit penicillin and an increase of 77,263 bottles of Japanese penicillin 100,000 oxford units each. Third quarter

averages for both American 200,000 oxford unit, and Japanese 100,000 oxford units are two to five times greater than the highest quarterly average figures. See Table III, Incl. #5.

Value of medical instruments distributed in September increased by about 800,000 yen over the medical instruments distributed in August. Third quarter monthly averages are the greatest thus far. See Table IV, Incl. #5.

The number of pieces of dental instruments distributed in September dropped more than 300,000 pieces from the August distribution. The value for these items, however, increased nearly 4,500,000 yen. This is because a number of the pieces sold were large expensive units. The value of the dental materials sold in September dropped nearly 3,500,000 yen from August sales. Third quarter averages increased slightly in value over the first half averages in dental instruments, and nearly 2,000,000 yen over first half average in dental instruments. See Table V, Incl. #5.

A total of 1,019 pieces of x-ray and electrotherapy equipment was distributed in September. This represents a decrease of 51 pieces from the August distribution. The third quarter average for the total pieces sold is the highest average figure, being more than double the monthly average for 1947 and substantially above other 1948 averages. Detailed breakdown by type is given in Table VI, Incl. #5.

Distribution of rubber sanitary goods for the month of September totaled 42,605 kgs., valued at 12,808,701 yen. This represents decreases of about 31,000 kgs. and over 7,000,000 yen from August distribution. Third quarter averages of both kilograms and yen sales are markedly increased over monthly averages for any other period. See Table VII, Incl. #5.

Textile sanitary materials distribution increased in staple fiber bandage cloth only. Absorbent cotton, gauze, triangular bandage and lint all showed decreases. Monthly average for the third quarter show increases in the distribution of all types of textile sanitary materials. For detailed breakdown, see Table VIII and IX, Incl. #5.

X-ray film distribution in September showed a decrease in all sizes of film except 8×10, 11×14, dental sizes, 120 and 35mm. Monthly averages for the third quarter show increases over other periods in all but two sizes. For detailed breakdown, see Table X, Incl. #5.

A total of 4,299,335 santonin tablets was distributed during September. This represents a decrease of nearly 1,000,000 tablets compared to the month of August. The average for the third quarter is substantially above average figures for any other period. See Table XI, Incl. #5.

SECTION V NARCOTIC CONTROL DIVISION

Narcotic Control Activities Report - September

The September report of narcotic control activities from the Ministry of Welfare contained the following information:

Total registrants	90,273
Arrests- Registered Persons	21
Unregistered Persons	41
Convictions-Registered Persons	15
Unregistered Persons	40
Thefts of narcotics (including two hospitals)	24
Losses by fire	5

Penalties for registrants varied from 1,000 yen fine to one year, six months penal servitude including one suspended sentence. Penalties for non-registrants varied from 300 yen fine to two years penal servitude including eight suspended sentences. Twenty-four registrants were admonished for minor violations.

The report also summarized the activities of Narcotic Agents as follows:

Inspection of registrants	1,681
Investigations originated	202

Investigations concluded	176
Investigations not concluded	305

Arrests were made of 77 violators of the Marihuana Control Law in five prefectures, all non-registrants.

SECTION VI WELFARE DIVISION

Japanese Red Cross-Community Chest Joint Fund Campaign

The latest available official figures, as compiled from prefectural reports, covering the progress of the Japanese Red Cross - Community Chest Joint Fund Campaign reflect a total of 461,488,153.16 yen raised (collected) towards the established goal of 1,175,450,000.00 yen or 39.2% of quota. (Note: The National Quota has been lowered in an amount of 5,000,000 yen due to Yamagata Prefecture lowering its quota in this amount.)

Six prefectures (Fukushima, Saitama, Toyama, Gifu, Saga, and Miyazaki) have now reached or over-subscribed their quotas. The progress of each prefecture in the “Joint Fund Campaign”, setting forth the latest date of each prefectural report is given below:

Prefecture	Goal	Amount Collected	Date Reported	Percent
Hokkaido	70000000.00	33,915,538.00	29-Oct	48.4
Aomori	11,000,000.00	1,560,894.00	15-Oct	14.0
Iwate	17,000,000.00	13,896,528.00	31-Oct	81.8
Miyagi	16,000,000.00	256,220.00	20-Oct	1.6
Akita	10,000,000.00	8,183,230.00	25-Oct	81.8
Yamagata	20,000,000.00	1,551,278.37	30-Oct	7.7
Fukushima	20,000,000.00	20,000,000.00	4-Nov	100.0
Ibaraki	15,000,000.00	4,584,269.00	26-Oct	21.8
Tochigi	21,000,000.00	2,940,000.00	25-Oct	14.0
Gumma	12,000,000.00	3,305,000.00	23-Oct	27.5
Saitama	16,000,000.00	16,125,125.00	4-Nov	100.9
Chiba	25,000,000.00	2,302,697.64	31-Oct	9.2
Tokyo	80,000,000.00	32,829,561.73	9-Nov	41.1
Kanagawa	70,000,000.00	21,663,776.00	30-Oct	30.1
Niigata	29,000,000.00	10,550,000.00	31-Oct	36.4
Toyama	13,000,000.00	13,061,361.98	3-Nov	100.5
Ishikawa	13,000,000.00	4,077,167.00	20-Oct	31.3
Fukui	13,000,000.00	7,695,773.00	31-Oct	59.2
Yamanashi	9,450,000.00	7,778,958.65	31-Oct	82.3
Nagano	30,000,000.00	23,500,000.00	2-Nov	78.4
Gifu	20,000,000.00	20,000,000.00	31-Oct	100.0
Shizuoka	20,000,000.00	15,132,784.00	5-Nov	75.7
Aichi	66,000,000.00	49,323,240.08	31-Oct	74.7
Mie	20,000,000.00	12,353,050.00	4-Nov	61.7
Shiga	11,000,000.00	6,371,217.00	27-Oct	57.9
Kyoto	50,000,000.00	4,536,731.00	4-Nov	9.1
Osaka	85,000,000.00	4,228,594.76	27-Oct	5.0
Hyogo	60,000,000.00	2,079,992.73	28-Oct	3.5
Nara	12,000,000.00	9,100,000.00	1-Nov	75.9
Wakayama	9,500,000.00	7,580,138.00	1-Nov	79.8
Tottori	9,000,000.00	2,510,274.00	28-Oct	27.9
Shimane	10,000,000.00	4,429,115.00	30-Oct	44.3
Okayama	21,000,000.00	16,731,354.00	31-Oct	79.7
Hiroshima	30,000,000.00	16,294,946.00	31-Oct	54.3

Yamaguchi	26,000,000.00	1,248,000.00	5-Nov	4.8
Tokushima	15,000,000.00	5,331,000.00	31-Oct	35.5
Kagawa	14,000,000.00	11,917,324.00	31-Oct	85.1
Ehime	25,000,000.00	1,431,310.00	22-Oct	5.7
Kochi	13,000,000.00	920,984.00	27-Oct	7.1

Miyazaki	10,000,000.00	11,000,000.00	31-Oct	110.0
Kagoshima	17,000,000.00	1,660,242.22	2-Nov	9.8
Total	1,175,450,000.00	461,488,153.16		39.2

Licensed Agencies for Relief in Asia (LARA)

Overseas shipments, number 101 through 104, of relief supplies for distribution in Japan have arrived in Yokohama. These shipments contained 47.78 tons of the following relief supplies:

- a. 101st Shipment: Arrived aboard the S.S. Swathmore Victory on 11 October and contained 1.9 tons of Clothing (including shoes)
- b. 102nd Shipment: Arrived aboard the S.S. China Transport on 12 October and contained .16 tons of miscellaneous items (candles)
- c. 103rd Shipment: Arrived aboard the S.S. Fairland on 14 October and contained 44.65 tons (food, 43.63 tons - clothing including shoes, 1.02 tons)
- d. 104th Shipment: Arrived aboard the S.S. Pioneer Tide on 18 October and contained 1.07 tons (clothing)

The total LARA relief supply shipments to Japan, as reported, now totals 6,957.16 tons, consisting of the following:

Food	5346.06 tons
Clothing	1242.82 "
Medicines	59.37 "
Cotton (raw)	207.62 "
Miscellaneous (including soap, seeds candles, etc.)	101.29 "
Total	6,957.16 tons

Cooperative for American Remittances to Europe and to the East (CARE)

CARE has received two shipments of packages (oriental food pack only) since the beginning of their distribution operations in Japan in July 1948. The following report covers the status of "CARE package for Japan" as of 31 October:

Total packages received	19,979
Total packages damaged	373
Total packages delivered	4,031
Total packages in process of delivery	<u>2,534</u> 6,938
Total packages on hand and not consigned	13,041

Child Welfare - Wondering Children

Ministry of Welfare Children's Bureau Instruction (Ji-Hatsu) #53, dated 5 November, subject, "Enforcement of the Drafted Urgency Program to Clear Out the Wondering Children", which is directed to Prefecture Governors for attention of police, Labor, welfare and railroad officials, concerns the coming drive to pick up and attempt to hold those children still not under the control of their own families nor in institutions.

The order directs that a special committee be set up within the local Child Welfare Board to act as a liaison committee and directs cooperation of all concerned. It is not limited to pick-up of children, but directs that

provisions of the Child Welfare Law and Child Labor Laws be enforced against those who are found to be violating these laws or other applicable laws and regulations.

The order provides for certain treatment of children in children's homes in order to attempt to definitely hold such children permanently, and suggests that methods of control should be discussed with Military Government Officials. It further suggests that children in Homes for Juvenile Training and Education (Kyogo-in) who are not now in need of the services offered by these institutions be removed to ordinary children's homes, foster homes, or be released in order that said facilities will be available for those children apprehended during the drive.

Public Assistance Report - September

The Ministry of Welfare has submitted the following report for the month of September. Figures for August 1948 and for September 1947 are furnished for the purpose of comparison with the September report:

	September 1948	August 1948	September 1947
Persons-Institutional	144,882	144,613	223,742
Persons-Non-institutional	1,773,108	1,758,926	2,987,123
Total	1,917,990	1,903,539	3,210,865
In Cash*	519,237,688	420,431,334	339,282,546
In Kind	23,266,546	58,633,714	70,371,751
Total	Yen 542,504,234	479,065,048	409,654,297

*Before deductions for repayment

In-Service Training

The Ministry of Welfare in cooperation with the Japan Social Work Association and local prefectures has set up “one week training classes” for Social Workers in various areas. Students qualified to participate are those who are employed in the administration of social work or who are approved by the Governor, such as members of the Welfare Committee. The number in each course is not to exceed 50. The program is as follows:

Outline of Social Work	Lecture sent from Central Organization
Welfare Committee Work (Minsei-iin work)	“ “ “ “ “
Livelihood Protection & Disaster Relief	“ “ “ “ “
Children's Welfare Work	“ “ “ “ “
Methods of Social Work	“ “ “ “ “
Social Survey Statistics	“ “ “ “ “
Extra Lecture	
Special Lecture	Lecturer sent from Military Government
Special research including group study meetings, discussion sessions and round table conferences	

All of the students shall live together with the full-time lecturers as a means of practicing self-government. Part of the expenses for food and the traveling expenses to the place of meeting and return will be borne by the students themselves and the other expenses by the sponsor.

The program for the Training Class for Social Workers in the Kinki area is given below:

a. Place: Shitennoji-Honbo, Moto-machi, Tennoji-ku, Osaka City

b. Prefectures taking part (including representation):

Kyoto (8)	Shiga (5)	Nara (6)	Shizuoka (5)	Mie (5)	Osaka (10)
Wakayama (6)	Hyogo (5)				

c. Schedule:

Date (Nov)	9 a.m. - 12 a.m.	1 p.m. - 4 p.m.	Lecturers
18	(Opening Address) “Minsei-iin”		Matsumoto, Secretary, Ministry of Welfare

		Outline of Social Work	Kohashi, Professor Osaka Social Work School
19	Outline of Social Work		Kohashi, Professor Osaka Social Work School
		Child Welfare Work	Secretary, Ministry of Welfare
20	Daily Life Security Law & Disaster Relief Law	Child Welfare Work	Secretary, Ministry of Welfare
21	Recent International Conditions (2 hrs.)		Itakura, "Osaka Mainichi"
	Rural Social Work (1 hr.)		Shinomiya, Principal, Osaka Social Work School

22	Method of Social Work	Inspection Tour	Takeuchi, Lecturer, Osaka Social Work School
23	Special Lecture		Military Government
Member,		Social Survey & Statistics	Hayasaki, Research Ministry of Welfare
24	Social Survey & Statistics (Clothing Exercise)		Hayasaki, Research Member, Ministry of Welfare

SECTION VII SOCIAL SECURITY DIVISION

Social Insurance Statistics

In further continuation of the publication of social insurance benefit statistics begun in issue No.95 of the Public Health and Welfare Weekly Bulletin, there are listed in Inclosure #6 benefits granted in the first four months of the current fiscal year under Seamen's Insurance (Senin Hoken). 1/

Seamen's Insurance has been in operation since 1 June 1940. The Law has been subject to several amendments which have broadened its coverage. Since 1 December 1947, the crews and masters of fishing vessels of 30 gross tons or over and all other vessels of 5 gross tons or over have been compulsorily covered. As of the end of July 1948, their number was 91,619. 2/ The last of the amendments which became effective on 1 September 1948, added an estimated 200,000 dependents. Prior to that date, the Law did not provide for dependents' benefits.

Given this latest revision, the Seamen's Insurance system, in all important respects, amounts to a combined Health and Welfare Pension Insurance system for seamen. Actually its scope is broader than that. Since 1 December 1947 the Seamen's Insurance system has provided unemployment benefits roughly equivalent to those provided for land workers under a separate Unemployment Insurance system. Also benefits for compensable sickness, injury and death due to occupational causes - the equivalent of Workmen's Accident Compensation Insurance benefits to landworkers - are paid by the Seamen's Insurance system. Thus it is apparent that this program constitutes a virtually complete and integrated social insurance plan for those covered by it.

In the same way as government-managed Health Insurance and Welfare Pension Insurance, the system is financed from contributions by employers and employees totaling 11.5% of taxable wages (the first 8,000 yen of monthly earnings.) 3/ Of this total the shipowner pays 7.5%; the employee, 4%. 4/ The national government pays the administrative cost and a share of the benefit cost. 5/ On the benefit side, likewise, this similarity holds true. Short-term benefits are substantially those offered under Health Insurance; long-term benefits, by and large,

correspond to those offered under Welfare Pension Insurance. Since a 15-year qualifying period is required for old-age pensions, none have become payable to date.

Short-term, including unemployment, benefit data given below refer to cases and amounts paid or the cash value of services rendered in the given month. Long-term benefit data refer to cases and amounts certified in that month. Actual disbursements, especially of pensions, may be larger or smaller, depending on the load carried over from previous months and to subsequent months respectively.

Establishment of New Sections in The Insurance Bureau

The Insurance Bureau, Ministry of Welfare, submitted proposed amendments to the Regulations of Sections of the Ministry for the purpose of establishing two new sections in the Bureau and a realignment of functions in the other Sections. The two new Sections established were the Medical Section and the Actuarial and Statistical Section. There were no objections by PH&W, to the amendments.

The establishment of the Medical Section provides for consolidating the supervision of medical affairs as they apply to the various social insurance programs, such as, the rendering of medical care in accordance with the provisions of the social insurance laws, the appointment and dismissal of insurance doctors and maintaining liaison with the Medical Fee Calculating Committee, the Medical Care Advisory Council, the Medical Fee Payment Fund and other organizations concerned with medical affairs.

The Actuarial and Statistical Section is charged with working out the actuarial and statistical bases of the Health, Welfare Pension, Seamen's and National Health Insurance programs and assuring coordination on these matters by maintaining liaison thereon with other government agencies in charge of related programs.

-
- 1/ For benefit data on Health Insurance (Kenko Hoken), see issues Nos.95 and 96 of this Bulletin. Benefit data on Welfare Pension Insurance (Kosei Nenkin Hoken) were published in the issue, No.97.
 - 2/ Due to somewhat more limited coverage under the provisions of the Law pertaining to unemployment compensation, those insured against job loss numbered only 87,844.
 - 3/ The cut-off of 8,000 yen rather than 8,100 yen as in the other schemes follows the standard set in the Mariners' Law.
 - 4/ The total rate is comparatively low because old-age benefits for the time being, are computed on the basis of a maximum wage of 500 yen per month. The higher rate payable by the employer is due to his exclusive financial responsibility for benefits payable on account of duty-connected accident, sickness and death.
 - 5/ The same is true of Welfare Pension Insurance, a fact which should have been mentioned in the summary which appeared in the last issue.

SECTION I PREVENTIVE MEDICINE DIVISION

Meetings of Health Center Directors

In a number of prefectures Military Government Health Officers have initiated and arranged meetings of all Health Center Directors. In some cases these meetings have been held irregularly, while in other prefectures conferences have been held regularly, once a month.

Regular conferences of Health Center Directors offer an excellent opportunity for exchanging ideas and improving Health Center administration. Such meetings have proven highly successful in certain prefectures but, in general, the degree of success has been directly proportional to the interest and efforts demonstrated by the Military Government Health Officers concerned. Experience has shown that the Japanese are willing and anxious to improve public health administration but more often than not they do not know what to do or how to do it.

Through the medium of these informal conferences Military Government Health Officers are offered an opportunity to explain the purpose, functions, and operations of Health Centers as well as the over-all public health program.

Building Plans for Health Centers

When the present program for "expansion and improvement of Health Centers" was inaugurated, careful consideration was given to the required amount of floor space. At that time it was decided that a minimum of 300 tsubo (approximately 10,800 sq. ft.) of floor space would be needed in each Health Center throughout Japan in order to provide sufficient space for necessary clinical and administrative functions.

Prefectural health officials who attended the Model Health Center demonstration in Tokyo in April 1948 were informed of this decision. The Ministry of Welfare also sent an official notification (Koho-Hatsu 548 dated 15 May 48) to each prefecture.

In the meantime, the Ministry of Welfare with assistance from the Public Health and Welfare Section made a study of Health Center designs in an effort to offer all prefectures suitable building plans for their guidance in planning and constructing Health Centers in the various prefectures.

As a result of this study, the Ministry of Welfare prepared several different sets of Health Center building plans with a view to providing a choice of plans which would satisfy the local needs in every prefecture, use of any one of which would result in suitable Health Center facilities. A Ministry of Welfare notification Yo-Hatsu No.1254, dated 21 September, subject: Planning on Construction of Health Centers, was sent to all Prefectural Governors, and the mayors of the principal cities. This notification included an information sheet entitled "Basic Plan for Health Center Construction" and blueprints (1 sheet) consisting of three sets of floor plans.

These plans represent an attempt on the part of the Ministry of Welfare to provide a choice of suitable Health Center building plans for the guidance of prefectural health authorities. The three building plans which were sent to the prefectures are basically a single building plan with minor changes in the interior arrangement.

The Ministry of Welfare is now preparing additional plans which, when completed, will also be sent to each prefecture. When this has been accomplished, every prefecture will have at its disposal several alternative sets of floor plans for Health Center buildings, at least one of which will be adaptable in every Health Center District, and any one of which will result in a building suitable and adequate for current needs and adaptable to future requirements.

It is important that every Health Center District throughout Japan have adequate facilities to carry on a full scale public health program. A single building design is not essential, but sufficient space suitable to the needs of such a program is essential and must be provided in every Health Center District if the needs of the public health program are to be met. Experience has shown that existing facilities throughout Japan are, more often than not, unsuitable. It is suggested that the Military Government Health Officers exercise surveillance to insure that the plans prepared by the Ministry of Welfare are followed or, if other plans are substituted, that substitute plans result in facilities equal or superior to those suggested by the Ministry.

SECTION II

VETERINARY AFFAIRS DIVISION

Equine Encephalomyelitis

The final summary of equine encephalomyelitis disclosed that between the period 30 May to 8 November, a total number of 3,697 cases were reported of which 151 were classified as suspects but never confirmed. Fatalities amounted to 1,367 deaths and 100 deaths by destruction. The overall fatality rate was 39.67%. Aichi, Mie, Osaka, Hyogo and Nara were the only prefectures that did not have equine encephalomyelitis reported during both the 1947 and 1948 outbreaks. Isolation of a virus may have been responsible for the recent outbreak in that area.

Horses to Korea

Twelve (12) head of young horses were examined in the Moji Quarantine station by representatives of Public Health and Welfare Section and Chugoku Region Military Government Team. These horses are to be utilized as serum animals by the Korean Public Health Laboratory. Shipment will be on the 29 Nov after a quarantine period of eight days.

Inspection Trips

Hiroshima and Yamaguchi Prefectures were visited by a representative of Public Health and Welfare. Improvement in the utilization of Japanese veterinarians engaged in the inspection of meat, milk and sea-foods was noted.

Animal Diseases

The following outbreaks of animal diseases occurred during the period 13-19 November.

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Aichi	Swine erysipelas	4
Saitama	Swine cholera	1

Cold Storage Plant

The Tokyo Metropolitan Central Fish Market Cold Storage Plant has just been renovated under the supervision of Tokyo Military Government Team Veterinary personnel. This plant will be utilized as a training center for Prefectural Veterinarians attending the Public Health Institute Veterinary Course for it very ably demonstrates the facilities necessary in carrying out good sanitary procedures in the handling of sea-food. This plant will serve as a model for other prefectures to follow in stressing efficiency and economy in the preservation and handling of sea-foods.

SECTION III NURSING AFFAIRS DIVISION

The training program in Tuberculosis Nursing sponsored by the Anti-Tuberculosis Association will open 10 January 1949. This is a five-month course for Public Health Nurses, and includes the medical and nursing aspects of Tuberculosis Control and Prevention. Notices of the course will be sent to Prefectural Health Authorities with each prefecture to be allocated at least one representative.

It is desired that Military Government Health Officers encourage the Prefectural Health Departments to select qualified applications for this Tuberculosis Nursing course.

SECTION IV SUPPLY DIVISION

Distribution

Due to the acute shortage of anthelmintics in Japan certain unscrupulous opportunists have been adulterating santonin with acetanilid which could be mistaken for santonin. Several cases have come to the attention of the police and one case in particular has been brought to prosecution. In view of these activities, it is

recommended that public information facilities be used to acquaint the people with the fact and to warn against purchasing santonin on the blackmarket.

Several robberies of gold and platinum from licensed dealers of dental precious metals have occurred indicating laxity on the part of handlers. It would be practical to inform dealers of the incidence of thievery and of their responsibilities to safeguard these rationed items. The licenses of those who do not maintain adequate security should be considered for suspension.

During the period 7 - 13 November, 3,302 pieces of dusting and spraying equipment were sent to eight prefectures as follows:

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsack Sprayer</u>	<u>Semi-Automatic Sprayer</u>	<u>Hand Sprayer</u>
Saitama		5		
Gifu	96			
Shizuoka	1152	612	18	710
Shimane	250			
Tokushima				100
Fukuoka			90	
Saga		95		
Kumamoto	48	96		30
Total	1,546	808	108	840

Production

A total of 4,290 pieces of the various types of DDT dusting and spraying equipment for insect control programs was produced during the period 7 - 13 November.

Distribution of DDT products and typhus vaccine during October totaled 257,214 lbs. of 10% DDT dust, 59,950 gallons of 5% DDT residual effect spray, and 22,491 vials of typhus vaccine. During the month, 246,800 lbs. of 10% DDT dust, 127,975 gallons of 5% DDT spray and 3,156 vials of typhus vaccine were received. A breakdown of distribution to prefectures and government agencies follows:

<u>Prefecture of Department</u>	<u>10% DDT Dust</u> lbs.	<u>5% DDT Residual Effect Spray</u> gals.	<u>Typhus Vaccine</u> vials
Iwate	10,000	3,000	
Yamagata	4,400		
Fukushima	7,800	8,000	100
Saga	5,000	1,000	
Nagasaki	46,000	1,800	
Kumamoto	5,000		
Oita	20,000		
Wakayama	10,000		
Gifu	23,000

Hakodate	3,000		500
Miike		100	
Ministry of Transportation			

Main Office	300		
Sapporo Railway Dept.		3,000	
Sendai	"	2,000	
Nagoya	"	3,000	
Niigata	"	2,000	
Hiroshima	"	2,000	
Moji	"	3,000	
Shikoku	"	750	
Ministry of Welfare:			
(Spray equipment study)	25	25	
(National sanatoria)	2,000		
Ministry of Justice:			
(Prisons, Houses of Dentention, Juvenile Prisons and Reformatories)	77,964	30,235	
(Predinct & Ward Stations)	2,040		
Ministry of Agric. & Forestry		40	
Losses Intransit	220		
Total	257,214	59,950	22,491

During the period 31 October - 6 November, 47,928 lbs. of 10% DDT dust, 8,717 gallons of 5% DDT residual effect spray, and 15,270 vials of typhus vaccine were distributed. At the same time, 182,000 lbs. of 10% DDT dust, 32,250 gallons of 5% DDT spray, and 55,782 vials of typhus vaccine were received, leaving inventory stocks on hand at regional warehouses of the Ministry of Welfare of 1,732,697 lbs. of 10% DDT dust, 520,649 gallons of 5% DDT spray, and 104,243 vials of typhus vaccine. Additional available stocks of typhus vaccine, already produced and passed national assay tests, in the hands of the biological manufacturing laboratories and factories, as of 6 November, totaled 385,364 cc.

SECTION V NARCOTIC CONTROL DIVISION

Investigations

Two outstanding investigations initiated in Kobe and Tokyo and which are being presently continued, show the following results to date:

Kobe - This investigation developed from a single lead originating in Osaka, which lead to Kobe then spread to Nara, Kyoto and Kumamoto Prefectures; and has resulted in the apprehension of 15 defendants, with three persons listed as fugitives. This list of 18 persons represents two physicians, one dentist, two pharmacists, six brokers and seven clerks of various categories.

Tokyo - This investigation developed from information concerning a meeting place of addicts where they secured injections of narcotics. Several weeks efforts of observations and surveillance of suspects led to the apprehension of 15 defendants, only two of whom were not narcotic addicts, and seven other addicts who will be apprehended when six leads to further sources of supply in Tokyo, Yokohama and Fukushima are investigated.

The examples above are indicative of the two general types of narcotic enforcement investigations to be found in all of the larger populated cities throughout Japan, and are classified as narcotic blackmarket trafficking and narcotic addict groups. Special efforts are being made by all Narcotic Agents to develop all leads to completion, and to find and eliminate all such violators of Narcotic Control Regulations in Japan.

SECTION VI WELFARE DIVISION

Foreign Nationals Ration

Reference to SCAPIN 1841 dated 9 January 1948, subject: Ration for United Nations' Neutral and Enemy Nationals and Stateless Persons. Paragraph 3 provides, in the "A" ration, 5 lbs. of canned goods, and in the "B" ration, 7 lbs. of canned goods. To date the canned goods issued have been heavy in animal protein in the form of beef stews, hash and similar canned meats.

In view of the fact that canned goods are no longer being imported, and as a consequence of the recent substantial increase in the basic ration, the "A" and "B" ration lists, effective immediately, are as follows:

Revised List of Supplementary Ration

Rice Dietary "A"

	<u>Amount Per Month</u>	<u>Calorie</u>	<u>Protein</u>
Rice	3.0 k.g.	10,530	225 g.
Sheyu	2 go	124	...
Oil	3 go	4,603	...
Sugar	1 kin	2,238	...
Wheat flour	500 momme	6,694	247.5
Eggs	10 pcs.	780	61
Fish	100 momme	401	49.3
Total		25,370	582.8 g.

Non-Rice Dietary "B"

Oil	2 go	3,068	...
Sugar	1 kin	2,238	...
Wheat flour	500 momme	6,694	247.5
Eggs	15 pcs.	1,170	91.5
Butter	1 lb.	3,635	...
Beef	300 momme	1,271	202.5
Potato (white or sweet)	2 kan	6,750	90
Total	24,827		631.5 g.

Community Chest - Japanese Red Cross Joint Fund Campaign

Prefectural reports covering the progress of the Community Chest - Japanese Red Cross Joint Fund Campaign reflect a total of 638,097,603.44 yen raised (collected) towards the established goal of 1,175,450,000.00 yen or 62.8% of quota.

It is estimated that the final reports covering the campaign will be completed by all prefectures on or about 18 December.

The progress of each prefecture in the "Joint Fund Campaign" including the date of their latest report, is given below:

<u>Prefecture</u>	<u>Goal</u>	<u>Amount Collected</u>	<u>Date Reported</u>	<u>Per Cent</u>
Hokkaido	70,000,000.00	50,873,158.00	12 Nov	72.7%
Aomori	11,000,000.00	10,421,507.74	6 Nov	94.7
Iwate	17,000,000.00	14,952,753.00	5 Nov	88
Miyagi	16,000,000.00	256,220.00	20 Oct	1.6
Akita	10,000,000.00	8,183,230.00	25 Oct	81.8
Yamagata	20,000,000.00	5,747,865.39	10 Nov	28.7
Fukushima	20,000,000.00	20,000,000.00	4 Nov	100.0
Ibaraki	15,000,000.00	13,072,001.00	13 Nov	87.1
Tochigi	21,000,000.00	12,680,000.00	10 Nov	60.4
Gumma	12,000,000.00	7,030,000.00	12 Nov	58.6
Saitama	16,000,000.00	16,849,503.00	10 Nov	100.5
Chiba	25,000,000.00	2,302,697.64	31 Oct	9.2
Tokyo	80,000,000.00	42,896,924.12	15 Nov	53.6
Kanagawa	70,000,000.00	21,663,776.00	30 Oct	30.1
Niigata	29,000,000.00	10,550,000.00	31 Oct	26.4
Toyama	13,000,000.00	13,065,841.98	15 Nov	100.5
Ishikawa	13,000,000.00	10,728,184.00	6 Nov	83.4
Fukui	13,000,000.00	8,621,553.65	8 Nov	66.4
Yamanashi	9,450,000.00	8,966,529.00	10 Nov	94.9
Nagano	30,000,000.00	23,500,000.00	2 Nov	78.4
Gifu	20,000,000.00	20,000,000.00	31 Oct	100.0
Shizuoka	20,000,000.00	18,284,458.00	10 Nov	91.4
Aichi	66,000,000.00	61,138,182.06	10 Nov	92.6
Mie	20,000,000.00	14,757,924.00	10 Nov	73.8
Shiga	11,000,000.00	9,409,100.00	10 Nov	85.6
Kyoto	50,000,000.00	8,267,840.00	9 Nov	16.5
Osaka	85,000,000.00	21,719,878.00	8 Nov	25.6
Hyogo	60,000,000.00	13,707,627.74	15 Nov	22.9
Nara	12,000,000.00	11,195,568.00	13 Nov	93.2
Wakayama	9,500,000.00	7,580,138.00	1 Nov	79.6

Cooperative for American Remittances to Europe and to the East (CARE)

It has been necessary for Allied personnel in Japan desirous of making remittances to CARE, Inc., (\$10.00 for each CARE package) to send their remittances to the CARE offices in New York City, N.Y. or Honolulu, T.H. Effective 18 November it is permissible, by a recent amendment to CARE, Inc., "License to Engage in Business in Japan" reference AG 095 (21 Aug 47) ESS/FIN dated 18 November 1948, subject, "Amendment to License to Engages in Business in Japan(FI-20)", for Allied personnel to make remittances for CARE packages direct to the CARE office in Japan, address: CARE, Inc., APO #503, Yokohama, Japan. Note: Remittances may be made (\$10.00 per CARE package) in Military Payment Certificates, Personal Checks or Post Office Money Orders.

The only CARE packages available, at present, for distribution in Japan are "Food Packages" (oriental pack). It is expected that three other types of CARE packages (Woolen Suiting, Blanket and Knitting Wool) will be available for distribution the latter part of December 1948. Official announcement regarding the distribution of these three additional CARE packages will be made by CARE, Inc., through Stars and Stripes.

SECTION VII
SOCIAL SECURITY DIVISION

Social Insurance Statistics

In addition to Health Insurance, Welfare Pension Insurance and Seamen's Insurance, the following two social insurance programs covering land workers in private employment are in operation: Workmen's Accident Compensation Insurance and Unemployment Insurance. 1/

Both programs operating since 1947 with an approximate coverage in excess of 5,000,000 workers are administered by the Ministry of Labor rather than the Ministry of Welfare which administers the programs summarized so far. Publication of selected monthly statistics is contemplated at an early date in collaboration with Labor Division, Economic and Scientific Section, SCAP.

The only remaining social insurance program for persons other than government employees is National Health Insurance. It is a medical care program manly for the self-employed and their families. Based on the National Health Insurance Act of 1938 as last amended in 1948, and operating under the general supervision of the Ministry of Welfare, it consists at present of roughly 7000 individual units established in the towns and villages. They may take the form of an association operating the program for the residents of that local community or since July 1948, communities may elect to have the program municipally operated.

Pending the present stage of reorganization of the program, monthly reports are not received in sufficient numbers and with sufficient regularity to warrant publication of monthly benefit statistics at this time. Publication thereof is contemplated as soon as reliable reporting is assured.

1/ Both accident compensation benefits and unemployment benefits for seamen are payable under the Seamen's Insurance Law, see PH&W Weekly Bulletin No.98.

SECTION I
PREVENTIVE MEDICINE DIVISION

Public Health and Welfare Information and Education Program

The Public Health and Welfare Information and Education Program as visualized at the National Level (Ministry of Welfare and Ministry of Education) embraces two principal fields of work:

1. Public Health and Welfare Information
2. Health Education
 - a. In the School System
 - (1). School Instructional Service
 - (2). School Health Service
 - b. For Professional Groups in the field of public health.
 - c. For School Groups.

1. Public Health and Welfare Information - is that part of the program which deals with the general public and operates through the facilities of the newly established Information Unit of the Ministry of Welfare at the National Level, through a counterpart organization within the Prefectural Health Departments (to be organized) at the Prefectural Level and through the Health Centers at the Local Level.

Public Health and Welfare Information is transmitted to the general public through the MASS USE OF ALL MEDIA OF TRANSMISSION:

- a. Radio
- b. Press (Newspapers, Magazines)
- c. Special Publications (Leaflets, Pamphlets, etc.)
- d. Visual Aids (Motion Pictures, Slice Films, Lantern Slides, Kamishibai, Baloptican Productions, Posters, Exhibits, etc.)
- e. Public Relations - lectures, demonstrations, etc. for various organizations.

The purpose of the Public Health and Welfare Information Program is to present to the people of Japan, factual, accurate and up-to-date information pertaining to health and welfare designed to:

- a. Promote sensible health habits, attitudes and understanding among the people.
- b. Improve individual, family and community life.
- c. Develop a standard of health and sanitation comparable to that of other modern nations.

2. Health Education
 - a. In the School System

Health Education in the school system (exclusive of Medical Education) is that part of the program which deals with schools (student) and the school teachers and school nurses.

(1) School Instructional Service

The Health Education Program in the school will

- (a). By a sound, progressive (step by step) directional, health education curriculum:
 - (1). Instruct children and youth so that they may improve and conserve their own health.
 - (2). Establish in them (the children and youth) the habits and principles of hygienic living which throughout their school life and in later years will aid in providing that abundant vigor and vitality which are a foundation for the greatest possible happiness and service in personal, family and community life.
- (b). By well-planned courses of instruction
 - (1). Train new prospective teachers in the fundamentals of health in all of its phases.
 - (2). Bring present school teachers and school nurses up to date on the modern trends in health education.

The Health Education Program in the school system is a function of the Ministry of Education and the Ministry of Welfare. The Ministry of Education is responsible for the general administration and supervision of the entire program and for a close working liaison with the Ministry of Welfare and Prefectural School Boards of

Education. The Ministry of Welfare is responsible for advice, consultations and guidance in "what should be taught," for furnishing current factual health material to be incorporated in the health education curriculum and for maintenance of liaison with prefectural health departments, city health departments and health centers.

(2). School Health Service

School Health Service in the general health education program of the school system is a distinct and important field of endeavor, the activities of which are coordinated primarily through the efforts of the School Nurse. The health service in the school is responsible for the provision of a healthful school environment, health examinations and follow-up procedures, special classes and aids for handicapped children, health records, communicable disease control, first aid and certain legal aspects. The health service is closely associated with the instructional service and furnishes working examples of good health practices.

b. For Professional Groups

Health Education for Professional Groups deals with persons employed in the field of Public Health such as: - Public Health Officers, Public Health Nurses and Midwives, Sanitary Inspectors, Sanitary Engineers, Nutritionists and others.

The Health Education Program for Professional Groups is the responsibility of the Ministry of Welfare and is conducted through and/or under the auspices of the Institute of Public Health, the National Institute of Nutrition and the National Institute of Health, and will.

(1). By well-planned refresher courses

- (a) Bring Professional Groups of public health officials and workers up to date on the modern aspects of, and developments in, the field of public health

c. For Special Groups

Health Education for Special Groups previous for planned short courses for members of Parent-Teachers Associations, Mothers' Club and similar groups. This program is the responsibility of the Ministry of Welfare and is conducted through and/or under the auspices of the principal Health Center of the Health Center District.

Details concerning the organization and activities of the Information Unit will appear in a subsequent issue of this Weekly Bulletin.

Sanitary Team Program for Winter Season

The Ministry of Welfare's plans regarding sanitary teams call for a reduction of team personnel during the months of October to March inclusive, from six men per team to two men per team, the purpose being to effect economy by reduction of personnel during the season when insect problems are lightest.

In making the above reduction it is important that the permanent structure of the sanitary team organization be maintained. The Assistant Inspectors and the sanitary team foremen should be retained, together with sufficient laborers to perform all necessary typhus and rodent control measures. In this way a nucleus of trained personnel will be maintained throughout the year and expansion for the summer insect control season can be made more smoothly.

Winter activities should include periodic spraying and dusting operations in hospitals, bathhouses, jail and other public institutions and public places frequented by large numbers of people. Special attention must be given to these activities in endemic typhus areas. Each health center should keep at least one sanitary team (6-man) on active duty in addition to the two-man nucleus of all remaining teams throughout the winter. Plans for the sanitary team program for next year are expected to be essentially the same as these for the current year although some adjustments in the allocations of national subsidies are anticipated. Complete details concerning the plans will be published in this Bulletin as soon as they are available.

SECTION II
NURSING AFFAIRS DIVISION

Refresher Courses

Closing exercises were held on 26 November for the four-month Refresher Course for Clinical Nursing Instructors at the Red Cross Central Hospital, which 48 students completed. During this period they were taught these aspects of nursing education which will help prepare them for their responsibilities as instructors in their own schools of nursing.

On 27 November the fifth refresher course for Public Health Nurses at the Institute of Public Health was completed. Fifty-six students attended this course. During this course increased emphasis was placed on field experience. Therefore it is expected that these students will be well prepared to use their new knowledge for better public health nursing service in their own Health Centers.

SECTION III VETERINARY AFFAIRS

Publications

A new book titled "Milk Technology" has just been completed by Dr. S. Kawashima of the Meiji Dairy Research Institute. This book is quite complete and is available as a text in Dairying Science now being in the Veterinary Colleges.

Food Sanitation

The monthly report from the Food Sanitation Section, Ministry of Welfare discloses that many Prefectural Food Sanitation Sections are not devoting enough time to field inspections and the collection of samples of food and beverages for laboratory analysis, particularly of food commodities being supplied the populace by rationing centers. Several recent reports of serious food poisoning cases have been found to have originated in the rationing and distribution of restricted items.

It is requested that Military Government Public Health Officers exercise closer surveillance over the prefectural officials in charge of food inspection to assure that a more complete coverage of establishments preparing, processing or handling food and beverages can be maintained from an inspectional level.

Japan Food Association

Ten Prefectures have established Food Associations which will operate under the observation of the parent association in Tokyo. Arrangements have been completed to publish a small newspaper which will be utilized in disseminating information on all foods which the methods of preparing, processing, packaging and serving along with the sanitary principles necessary in the correct handling of all food and beverages will be discussed. All members of the Associations will benefit through receiving editions of this newspaper. Later, it is hoped to establish a Food Institute where standardizing of food and beverage formulas can be accomplished.

Weekly Diseases

No animal diseases were reported for the week of 20-26 November.

ANIMAL DISEASES October 1948

The following outbreak of animal diseases occurred during the month of October as reported by the Animal Hygiene Section, Ministry of Agriculture and Forestry.

<u>Diseases</u>	<u>September</u>	<u>October</u>
Blackleg	1	2
Filariasis	0	3 (horses)
Swine Erysipelas	51	27
Swine Cholera	9	20
Swin Plague	4	15
Piroplasmosis	4	1
Rabies	1 (dog)	1 (horse)
Scabies	0	1 (horse)
Strangles	13	30
Equine Infectious Anemia	119	137
Infectious Abortion Cattle		
Trichomonas	72	86
Brucella	14	7
Equine Paratyphus	1	5
Pullorum Disease (fowls)	2361	3720
Equine Encephalomyelitis	719	362
Bovine Tuberculosis	35 Positive 10 Suspects	50

Rinderpest Immunization

The immunization of all cattle in Hyogo against Rinderpest will begin at once. It is estimated that approximately 110,000 head of draft and dairy cattle will be completely immunized by January 1949.

SECTION IV SUPPLY

Production

A total of 3,290 pieces of the various types of DDT dusting and spraying equipment for insect control programs was produced during the period 14-20 November.

During the period 7-13 November, 14,570 lbs. of 10% DDT dust, 2,545 gallons of 5% DDT residual effect spray, and 2,713 vials of typhus vaccine were distributed. At the same time, 78,826 lbs. of 10% DDT dust, 21,100 gallons of 5% DDT spray and 8,388 vials of typhus vaccine were received, leaving inventory stocks on hand at regional warehouses of the Ministry of Welfare of 2,016,011 lbs. of 10% DDT dust, 544,797 gallons of 5% DDT spray and 109,918 vials of typhus vaccine. Additional available stocks of typhus vaccine, already produced and passed national assay tests, in the hands of the biological manufacturing laboratories and factories, as of 13 November, totaled 385.364 cc.

During the period 14-20 November, 105,000 lbs. of 10% DDT dust, 25,575 gallons of 5% DDT residual effect spray and 52,680 vials of typhus vaccine were distributed. At the same time, 372,827 lbs. of 10% DDT dust, and 40,500 gallons of 5% DDT spray were received, leaving inventory stocks on hand at regional warehouses of the Ministry of Welfare of 2,031,580 lbs. of 10% DDT dust, 526,472 gallons of 5% DDT spray and 57,238 vials of typhus vaccine. Additional available stocks of typhus vaccine, already produced and passed national assay tests, in the hands of the biological manufacturing laboratories and factories, as of 20 November, totaled 119,364 cc.

Distribution

Attempts are being made to introduce the use of homeopathic medicines to Japan. Before the war these remedies were produced on a small scale and had a very limited sale. The production has been revived and advertising campaigns and distribution methods of various kinds are under way to spread the sale and use of these preparations. In the techniques used by the various distributing agencies it has been learned that false claims and false advertising as well as improper information as to use and dosage are being disseminated.

In the instances where this has occurred thus far, the distributing companies have been ordered to cease distribution and will be prosecuted under the new Pharmaceutical Affairs Law. Distribution agencies have been introducing their product through large groups and associations, labor unions, schools, etc. This widespread distribution should be discouraged, and instances, where the Law is being evaded or directly violated, should be

brought to immediate and full prosecution. It would be advisable to make reports to Supply Division, PHW through channels when instances such as those mentioned above take place.

Formulation of final plans for production and distribution for various programs in the past have been hampered by the length of time taken by prefectural authorities in answering requirements requests made by the Ministry of Welfare. It is advisable that prefectural officials be encouraged to make all reports promptly, permitting more rapid formulation and dissemination of information, plans and policies by the Ministry of Welfare. This laxity is the basis for the delay being experienced at present in the presentation of a plan for allocation of diphtheria toxoid.

During the month of October distribution of diphtheria toxoid was made based on incomplete requirement figures. All prefectures will be required to submit their requirements, taking into account the amounts of toxoid received, the amount to be received based on present allocations and the overall needs. October distribution was as follows:

<u>Prefecture</u>	<u>Quantity</u>
Hokkaido	200,000 cc
Akita	200,000 cc
Yamagata	96,000 cc
Gumma	102,000 cc
Chiba	360 cc
Tokyo	407,960 cc
Kanagawa	24,680 cc
Ishikawa	108,000 cc
Nagano	2,000 cc
Shizuoka	61,000 cc
Aichi	340,000 cc
Kyoto	210,000 cc
Osaka	100,000 cc
Hyogo	350,000 cc
Okayama	108,000 cc
Hiroshima	150,430 cc
Fukuoka	1,660 cc
Kagoshima	70,000 cc
	2,532,090 cc

During the period 14-20 November 2,474 pieces of dusting and spraying equipment were distributed in 14 prefectures as follows:

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsack Sprayer</u>	<u>Semi Automatic Sprayer</u>	<u>Hand Sprayer</u>
Akita			50	
Ibaraki		100		
Chiba		1	1	
Tokyo		4		
Shizuoka		80		
Aichi	720	207	52	36
Kyoto	240	12		
Osaka	240	72		
Wakayama	200			
Shimane	100		20	
Yamaguchi				30
Kagawa			5	
Saga		160	50	
Tokushima				100
	1260	804	250	166

SECTION V
NARCOTIC CONTROL

Special Information Required

Information as to the source of all seizures of crude and prepared opium, heroin, cocaine and morphine should be forwarded through regular channels to the Narcotic Central Division, PHW Section. Detailed information is required of all types of containers, label information and of the wrapping of the seizures. In cases where there are indications of the seized goods having been smuggled into the country, complete details relative to the registry of the vessel, nationality of crew members and previous ports of entry on that trip are desired, as well as photographs of the seizure (if possible), showing labels and data thereon, the container and the wrappings.

Prefectural Narcotic Agents have been instructed to telegraph information of seizures of smuggled narcotics to the Narcotic Section of the Ministry of Welfare immediately, and to forward more detailed information in the regular monthly report.

Smoking of Heroin

The monthly reports of the Japanese Government Narcotic Section have recently shown the smoking of Heroin by narcotic addicts to be on the increase. This practice, which has been prevalent in Korea, has been brought to the attention of the Narcotic Agents for inclusion in their enforcement activities.

Opium Poppy Cultivation Violations

Reports covering the first nine months of 1948 list 11 violations of the prohibition of the cultivation of the opium poppy, resulting to date in the sentencing of seven defendants as follows: - Two - Admonished, three - 500 yen fine, one - six months penal servitude, one - 10 months penal servitude. Narcotic Agents have been instructed to be alert during the flowering season of 1949 for violations of this regulation.

SECTION VI WELFARE DIVISION

Community Chest - Japanese Red Cross Joint Fund Campaign

The latest consolidated report covering the progress of the "Joint Fund Campaign" reflects a total of 770,659,739.80 yen raised (collected) towards the established goal of 1,175,450,000.00 yen or 65.6% of quota.

The following 10 prefectures have reached or exceeded their quotas:

	<u>Amount Raised</u>	<u>Per Cent of Quota</u>
Akita	10,100,000.00	101
Fukushima	21,421,461.47	107.1
Saitama	17,314,204.00	108.2
Toyama	13,065,841.98	100.5
Yamanashi	9,451,958.00	100
Gifu	20,000,000.00	100
Shizuoka	20,108,405.00	100
Aichi	66,237,244.34	100
Saga	12,500,000.00	100
Miyazaki	11,000,000.00	110

Licensed Agencies for Relief in Asia (LARA)

LARA shipments, numbers 105 through 108, of relief supplies for Japan, have arrived Yokohama. These shipments contained 94.79 tons of the following supplies:

- a. 105th Shipment: Arrived aboard the S.S. President Pierce on 20 October and contained 26.9 tons (food, 2.2 tons: clothing 24.7 tons).
- b. 106th Shipment: Arrived aboard the S.S. Tillie Lykes on 5 November and contained 3.35 tons (clothing including shoes).

- c. 107th Shipment: Arrived aboard the S.S. Cardinal O'Connell on 6 November and contained 3.04 tons (clothing).
- d. 108th Shipment: Arrived aboard the S.S. Cotton States on 9 November and contained 61.5 tons (food, 57 tons: clothing, 4.5 tons).

LARA relief supply shipments to Japan, as reported, now total 7,051.95 tons, consisting of the follows:

	<u>Tons</u>
Food	5405.26
Clothing (including shoes)	1278.41
Medicine	59.37
Cotton (raw)	207.62
Miscellaneous (soap, seeds, canoles, etc.)	<u>101.29</u>
Total	7051.95

Army to Pay Relief Shipment costs to Japan, Korea and Ryukyus

Approved relief agencies (those registered with and recommended by the Advisory Committee on Voluntary Foreign Aid) may make application for reimbursement for ocean freight charges from United States ports to Japan, Korea and Ryukyus to the Chief, Fiscal and Statistical Group, Office of the Food Administrator for Occupied Areas, Department of the Army, Washington, D.C., in accordance with radio, file WCL 21928, dated 13 November 1948, from CS PID to CINCFE (PIC), CG USAFIK, CG, RYCOM, subject, "Army to Pay Relief Shipment Costs to Japan, Korea and Ryukyus". This program is effective immediately and included the following other provisions:

- a. Approved relief agencies must assume responsibility for non-commercial distribution of supplies, free of cost, to the recipient.
- b. Supplies (relief) are to be free of custom duties of any kind.
- c. Reimbursement applications for shipments made between 1 July 1948 and 10 November 1948, must be submitted to Department of the Army on or before 5 December 1948.
- d. For shipments made after 10 December 1948, application for reimbursement must be made within thirty (30) days of shipment, together with supporting invoices and bills of lading showing that charges are limited to actual cost of transportation.

Japanese Red Cross Society

Home Nursing

Thirty-four Japanese Red Cross Chapters (prefectures) have conducted Home Nursing Courses this year with a total of 4,226 persons successfully completing the courses of instruction.

The Chapters (prefectures) not participating in this program, although they all have qualified instructors are: Niigata, Chiba, Tochigi, Nara, Yamanashi, Okayama, Wakayama, Tokushima, Kagawa, Ehime, Kochi and Saga.

Disaster Relief Operations:

For the period May through October the Japanese Red Cross has given Disaster Relief Service in 21 disasters (including fires, floods, earthquake and bridge collapse). This service included temporary emergency shelter, food and medical aid and was made available to 46,493 sufferers.

It is recommended by the Japanese Red Cross that each of their Chapters continually keep their Disaster Relief Organization alerted and to stage demonstrations. One such mock disaster demonstration was staged by the Yamagata Prefectural Chapter in Yamagata City on 29 September with officials of the Yamagata Military Government Team cooperating.

All Chapter "Disaster Relief Plans of Operation" have not been officially approved by the National Headquarters, Japanese Red Cross Society. As of November, only 13 Chapter Relief Plans have been so approved and every effort is being made to satisfactorily complete the 33 Chapters' plans on or before 1 January 1949. The Japanese Red Cross "Disaster Relief Plans of Operation" envisions 274 Medical Aid teams and to date 244 (88%) of these teams have been organized.

Volunteer Services

A general meeting of Hodogaya (Kanagawa Prefecture) Volunteers was held on 19 November. Approximately 100 Volunteer Service Members attended the meeting and were encouraged to expand their activities by officials of the National Headquarters, Prefectural and City Offices.

Junior Red Cross

A "Safety Exhibition" sponsored by the Juniors of Kanagawa Prefecture was held in all wards of Yokohama during the period 13-24 November. On 15 November a "Child Culture Exhibition" was held in the Todai Primary School (Yokohama). One room in the school was reserved for a Junior Red Cross Exhibit.

Four hundred teacher sponsors of the Junior Red Cross program in the Yokohama area gathered together at the Honmachi Primary School on 13 November to view the American Red Cross and the Japanese Red Cross "Youth Training Center" films. The Japanese Red Cross film covered the activities of the Junior Red Cross "Youth Leadership Training Camps" which were held during the summer 1948. (Note: This film is exceedingly well once and all Prefectural Chapters should make arrangements, through the National Headquarters, for its showing at teachers' meetings, PTA's business clubs, etc.).

Training Course for Child Welfare Officials

During the period 9-11 December, 73 child welfare officials will attend a special training course at the Institute of Public Health, Tokyo, covering the following subjects: Duties of the Child Welfare Official; Children in Need of Special Care (i.e. foundlings, blind, deaf and dumb, children with complicated problems, feeble-minded); Infant Care; Expectant and Nursing Mother; Week and Crippled Children; Care of a Girl who is a Sex Delinquent; Child Welfare Agencies and Social Welfare Organizations; Foster Parent; Labor Standard Law and Juvenile Court; Case Work; Police and Municipal Organizations; Problems of Nursery Care and Mothers with Dependent Children; Maternity and Child Hygiene; Child Welfare and the School.

Expected representation of child welfare officials from the prefectures is as follows: Tokyo - 20; Hokkaido, Kanagawa, Aichi, Kyoto, Osaka, Hyogo, Hiroshima and Yamaguchi - 2 each; all other prefectures - 1 each.

Medical Social Work

Reference Section I, subsection 3, "Special Training Courses for Model Health Center Personnel" in weekly PHW Bulletin No.98, dated 8-14 November 1948. Military Government Welfare Officers should consult with Military Government Health Officers regarding functioning of Medical Social Workers in the Model Health Centers referring to PHW Technical Bulletin 14, dated August 1948 and the Handbook for Health Centers, Hoken Sho Unei Shishin, in order to assure maximum use of the services of the Medical Social Worker.

SECTION VII SOCIAL SECURITY DIVISION

Social Insurance Statistics

Information published in the preceding issues of the PHW Weekly Bulletin 1/ referred to social insurance programs covering persons in private employment and one program - National Health Insurance - covering chiefly the self-employed in the rural areas of Japan.

The remaining two social insurance programs currently in operation, the Government Pension System and the National Public Service Mutual Aid Associations, are for government workers.

The Government Pension System, to which the benefit statistics published in this Bulletin pertain, has been in operation in its present form since 1923. It is designed to protect public servants of career status (so-called "officials" - Honkan) against the hazard of occupational invalidity, to assure them of a retirement income geared to the length of their service and, finally, to provide an income for their survivors.

For public officials paid entirely from national government funds the benefits are given by the national government which bears virtually the entire cost except for small contributions by the insured amounting at present to 2% (formerly 0.5%) of his basic salary. At the end of 1947, the number of those currently protected was 584,408.

2/

For those public officials paid primarily from prefectural funds similar programs with comparable benefits are in existence. However, benefit payments under these prefectural schemes are not reported to the national government. At the end of 1947, the number of officials in the prefectures closely equalled that of national public officials.

The benefit statistics given in Inclosure Number 1 do not include cases taken care of, and benefits defrayed by, the prefectural governments. Furthermore, the figures are in need of adjustment if they are to be used for purpose of comparison. In the form presented they show the number of cases and total amount of payments handled by all the postoffices in a given month. 3/

1/ See Nos.95-99.

2/ This figure is below the number of government workers by reason of the fact that the majority are of lesser than "official" status and hence not eligible for coverage.

3/ The postoffices are entrusted with the payment of benefits as certified by the Pension Bureau of the Prime Minister's Office.

The Pension Bureau of the Prime Minister's Office which is charged with the administration of the system and, in particular, the award of benefits, does not keep monthly statistics on the number certified and/or paid. Hence data pertaining to actual payments by the postoffices are the only available ones on any but an annual basis.

The lump-sum grants are payable only once. The pensions are payable in quarterly installments but are frequently left to accumulate at the postoffice until more than one installment has become due. Therefore, the monthly case-load and total disbursement vary greatly and are not reliable indicators of benefits currently certified. Moreover, in order to arrive the annual pension it is necessary to multiply the amount received each time the benefit was claimed at the postoffice by the number of times it was claimed. The proper multiplication factor is estimated to be 2.5, as most people are reported to call for their benefits only 2-3 times each year. 4/

An explanation of the benefits provided and the qualifying conditions therefore is given in the footnotes on the table shown in Inclosure Number 1.

SECTION VIII MEMORANDA TO JAPANESE GOVERNMENT

<u>PHMJG</u>	<u>Date</u>	<u>Subject</u>	<u>Surveillance</u>	<u>Distribution</u>
78	11/3/48	Ministerial Ordinance and Cabinet Order for Enforcement of Medical Practitioners Law	No	MG 8th A

SECTION I
GENERAL

Attached hereto as Inclosure #1 are Ministerial Instructions to Prefectural Governments for period 11-23 October.

SECTION II
PREVENTIVE MEDICINE DIVISION

Typhus Fever Control

Reference: Public Health and Welfare Technical Bulletin #3
Rickettsial Diseases in Japan and Korea - February 1947.

Reports of the occurrence of typhus fever now being received from the various prefectures in Japan reflect the anticipated seasonal increase of this disease. The following are points which should be emphasized in connection with the typhus control program.

Louse-borne (Epidemic Typhus)

Before cases occur

1. Protective Immunization - Persons in crowded areas of the larger cities, jails, orphanages, mental hospitals, old peoples homes, vagrants, intercity commuters, if practical, in larger cities.
2. Louse Population Surveys - Cursory Louse surveys of persons in places mentioned above.
3. Louse Control in places where louse population is high (vagrants in particular) using 10% DDT dust.

When cases occur

1. Immediate reporting of any suspect or proven case - a suspect being "any person with elevated temperature and headache of sudden or gradual onset" - unless the person is suffering from some other definitely recognizable disease. Suspect cases should be reported within two hours after discovery.
2. Delousing of patient with 10% DDT dust only.
3. Isolation and hospitalization of patient within eight hours after discovery.
4. Delousing and immunization of immediate contacts within the household, institution, camp, etc., within eight hours after discovery of patient.
5. Contact-tracing - Delousing and immunization of any contacts, (relative or visitors of the patient) and repeat in 7 - 10 days.
6. "Focal" delousing and immunization in vicinity of suspect cases or proven cases. (Repeat in 7 - 10 days).
7. Rickettsicidal-residual - effect sprays, (5% DDT spray plus cresolis - 2% in final solution) apply to railway stations, theaters, jails, railway coaches, streetcars, etc., at 30 day intervals.

Murine (Flea-borne) Typhus

1. Follow same procedures as for Epidemic (louse-borne) typhus.
2. In addition
 - a. Control of Fleas.
Pre-dusting of houses, sheds, stores, other buildings infested with rats. Preceding rat control campaigns, 10% DDT dust should be applied along rat run-ways, rat harborages, around

entrances to rat burrows, around and under buildings, in attics, and other places frequented by rats.

- b. Rodent control operation: Using recommended methods of control.
- c. Use of DDT or Pyrethrum emulsion sprays (containing 2% cresolis in final content) will tend to control rat mite infestations of homes. In additions such sprays have a killing effect on lice, fleas and miscellaneous household insects, as well as rickettsiae of typhus fever which may be present in fecal droppings of lice, fleas and certain mites.

In order to accurately determine the type of typhus fever which may be present in any given area it is important that proper serological studies be made. During the past three typhus seasons, blood serum samples have been tested from the great majority of cases (suspect and proven). From the results of these tests a picture of the distribution of the typhus fevers in Japan is gradually developing. It is urged that serum samples from every suspect or clinically diagnosed case of typhus fever be obtained for subsequent study. Three serum samples are highly desirable:

1st sample - at date of onset or as near this date as possible.

2nd sample - during the latter part of the 2nd week of illness - following date of onset.

3rd sample - during the latter part of the 3rd week or early part of the 4th week of illness, following date of onset.

Blood (at least 10cc) should be drawn in sufficient quantity to be of value in serological studies. The usual aseptic precautions should be observed. Samples should be sent to the 406th Medical General Laboratory in Tokyo using facilities of the 3rd Military Railway Service.

Tuberculosis Control

From the public health standpoint case finding and case supervision are two of the most important techniques in tuberculosis control. So much thought, time and effort are devoted to the former that the matter of supervision is often neglected or completely forgotten. We are at a stage in Japan where case finding is relatively highly developed, but case supervision is badly neglected.

Proper case supervision means that public health authorities keep track of and aid each case of tuberculosis from time of diagnosis. Even in the instance of arrested cases they should be contacted at regular intervals every few years.

Practically, this means that each Health Center should keep a tickler file of all diagnosed cases in its district regardless of whether the case is under public or private treatment. The file should indicate when the next event (visit to doctor, visit of nurse, possible entrance to or discharge from sanatoriums, etc.) is to take place. At that time it is the duty of the register clerk to check with the patient or other concerned to see if the scheduled event has taken place and if not why.

Such a register has great potential value as an aid to health authorities in showing where special aid is needed. It also serves as a necessary reminder to insure that no case is overlooked. As an example such aid may involve aiding the patient to gain entrance to a sanatorium or in obtaining necessary benefits from the Daily Life Security Law, insurance benefits, etc. Many times patients do not know what aids are available or how to obtain them.

The importance of this type of effort becomes apparent when one remembers that tuberculosis is a disease of long time duration and that the patient cannot satisfactorily take "the cure" if he is unduly worried about his family.

Human beings are prone to be forgetful and neglectful. That is where the alarm clock idea of the tickler file comes in - to remind the public health officials of their duty.

Public Health Information and Education

Press Releases Concerning Reorganization of the Health Center System in Japan.

Reference Section II, Weekly Bulletin Nos. 92 and 95. Inclosed with this Bulletin, are Nos.5 and 6, (Incls. 2 and 3) in a series of press releases on Reorganization of the Health Center System in Japan. Subject inclosures are basic information released at press conferences on the above subject in Tokyo on 8 November and 1 December 1948 respectively. Subject press conferences concerned (1) venereal disease control and (2) communicable disease control programs under the new health center system.

Training of Public Health Personnel

The National Public Service Authority is establishing job qualifications which will require certain training requirements for eligibility to take the examinations for promotion for Civil Service positions under the National Public Service Law. These positions will require completion of courses in training at the Institute of Public Health in the various specialties. It is anticipated that within the near future Civil Service will be established at the prefecture and health center level. Qualifications for eligibility to take competitive examinations for promotions in prefecture health departments and health centers will also require successful completion of courses in the various specialties, such as are given in the Institute of Public Health.

These facts should be brought to the attention of the prefecture health department chiefs and health center chiefs, in order that they themselves and the key personnel within their organizations may take advantage of the present courses and thereby establish their qualifications for eligibility to take competitive examinations for promotions in the future. If they defer indefinitely taking these courses until such laws are placed into effect, they will probably find themselves unable to take the courses at the last moment, due to limited capacity at the schools.

Refresher Courses

The following refresher courses for public health personnel will begin on 10 January 1949 at the Institute of Public Health in Tokyo.

Public Health Officers (Medical)	Duration	3 Months
Sanitarians	"	10 Weeks
Public Health Pharmacists	"	2 Months
Public Health Veterinarians	"	2 Months

These courses are the principal means for training the personnel needed to administer the rapidly expanding public health program. In the past comparatively few persons in responsible positions have been sent to the Institute to receive the benefit of this training as indicated in the table below. It is essential that the leaders in the various sections of the public health organizations be acquainted with modern developments and the program for their application. Hence, every effort should be made to see that such persons are sent to courses at the Institute even though it may cause temporary inconvenience to the local public health organization.

The next courses for Sanitarians is designed principally for the chiefs of the sanitation sections in Health Centers and will emphasize environmental sanitation and the administration of local programs and organizations.

The chiefs of sanitation sections have the responsibility of carrying out insect and rodent control programs which involves the expenditure of large sums of money. It is essential that they be able to direct such work intelligently. The Sanitarians course will end about the middle of March so that those in attendance can return home in time to institute the summer program for environmental sanitation.

It is again emphasized that all categories of personnel selected to attend courses at the Institute of Public Health must be selected on the basis of leadership and the improvement of the local health organization. It is a waste of time, effort and money to send individuals with inferior qualifications or those who do not have permanent interest in public health programs. Military Government Health Officers are urged to use their influence to see that properly qualified persons are sent for training. An official announcement of the courses is being sent to prefectural Governors by the Ministry of Welfare.

SECTION III
VETERINARY AFFAIRS DIVISION

Food Sanitation:

The monthly report as consolidated by the Ministry of Welfare discloses information that many prefectures are not inspecting as many food establishments as they should according to the number of inspectors available. Every effort possible should be concentrated on regular inspections so as to provide an adequate inspection coverage of all food establishments. There are some prefectures that are not collecting food samples for laboratory analysis and are not submitting complete report data for the information of the Ministry of Welfare.

Sea-Food Inspection:

Materials for correction and improvement of sanitary facilities in ration and distribution markets are given a high priority and many critical items necessary in repairing of cold storage plants utilized for preservation of sea-food has been removed from the restricted list. Among these items are ammonia, cement, insulating material and lumber. Inspectors should bring this to the attention of the owners of such establishments.

The prefectures in which sea-food is processed as an item for export, should be inspected frequently and sanitary deficiencies corrected as early as possible.

Weekly Animal Disease Report

The Animal Hygiene Section, Ministry of Agriculture and Forestry reported the following outbreak of diseases for the period 27 November - 3 December.

<u>Prefecture</u>	<u>Disease</u>	<u>Number of Cases</u>
Niigata	Swine Erysipelas	2
Nagano	" "	1
Fukuoka	Anthrax	1 (horse)

SECTION IV NURSING AFFAIRS DIVISION

Education

The Model Demonstration School of Nursing in Tokyo in making steady progress. The incinerator near the Tuberculosis Ward has been completed and is ready for use. The former barber shop is ready to be converted into a formula room with the present formula room to be utilized as a special diet kitchen. The construction of the new nursery has been completed and will be ready for occupancy when the electricity and plumbing is installed.

Conferences were held in an endeavor to improve the nurses' curriculum. Revisions were made in the hours and subjects. Japanese doctors and nurses from other hospitals have been constantly observing the program in operation which has stimulated interest among other prefectures as well as Tokyo-to.

The rotation plan for nurses on night duty, both graduates and students, is progressing satisfactorily.

Public Health in the Undergraduate Course at the Model Demonstration School.

Eleven students are currently receiving their field training. In order to strengthen other health agencies, arrangements were made for the Tokyo-to Department of Health to send a nurse to work with this program for one month in order that she might see how the program functions. The nurse from the institute of Public Health requested that she be allowed to go into the course and observe the home visiting and teaching program. The help rendered these other agencies will provide a better coordinated program.

Home Care for Tuberculosis Patients

A program has been set up for a more complete job of teaching in the tuberculosis patients' home. Because of the inadequate facilities for hospitalization of tuberculosis patients there are many active cases living at home. These patients are cared for by the family under the supervision of the Public Health Nurse. Thus far the nurse has taught care chiefly through verbal instructions. In an effort to improve the skills of the nurse and to better teach the family, a unit of classes has been outlined.

The plan is to have classes at the hospital where a family member who is responsible for the care of the patient can come and observe demonstrations of nursing care after which a practice period will be provided for the student. By teaching groups, one nurse can accomplish much more than by trying to do all of her teaching to individuals in the home. These classes will be held once a week and the nurse will follow each class with home visits to see how well the student applies the nursing knowledge gained in the class in relation to the home situation.

The First National Hospital

The teaching program is progressing with the nurses now supervising the students on the wards. Classes in Ward Administration have been completed. The nurses are now applying this teaching in their daily activities.

Another group of graduates are being given in-service training beginning this week.

Publications

The pamphlet entitled "Mr. Tuberculosis Patient and You" is now available for 30 yen.

Orders may be placed with Dr. Chizuto Ohta, Medical Friend, Tokyo, Japan.

SECTION V SUPPLY DIVISION

General

It is encouraging to read various comments in the Military Government Monthly Activities Reports for October. Despite the fact that these reports contain more complaints than has been the case in past months, the deficiencies are those which require local action for correction or are those which are due to general shortages throughout Japan of the items specified.

In this latter group are the cotton sanitary materials. Reference is made to comments in previous issues of the Public Health and Welfare Weekly Bulletin on this subject, in particular to reports of production and distribution data in Bulletin No.97 (1-7 November) and Bulletin No.98 (8-14 November), in which the cause of the limited availability of these materials was explained, i.e., the withholding of supplies in all echelons of production and distribution awaiting the establishment of new higher official prices. Following the publication of these prices early in October, a marked improvement of production and distribution is evident in recent reports received from the Ministry of Welfare. Continued improvement should develop in the coming months.

The shortage of anthelmintic drugs is another widespread condition due to overall critical supply. However, the adoption in the very near future of the new minimum standards for hexylresorcinol and its subsequent release for distribution will materially alleviate this shortage. More information on this release will be published shortly in the Public Health and Welfare Weekly Bulletin.

The complaints referred to above as those requiring local corrective action, are such problems as those of poor planning by prefectural government supply officials or by local Health Center supply officials. The importance of pre-planning in public health supply cannot be over-emphasized. Health Centers and prefectural Health Officers must maintain adequate records on stock control, including receipts, issues and stock levels based on actual consumption figures. Requests for supplies must be planned in advance and forwarded to the appropriate agency in sufficient time to allow for possible transportation difficulties. Close coordination is essential with other public health agencies at the local level to assure that supplies are requested to fulfill the needs of the many public health programs to be carried out, such as insect and rodent control, VD control, environmental sanitation, immunization programs, etc. In addition, reserves for emergency are to be considered in the planning.

Prefectural officials must maintain detailed records upon which to base the allocation of controlled items of supply to assure a just and equitable distribution. It is their responsibility to expeditiously disseminate supply information to all concerned, and to process ration credentials for those individuals authorized to enable them to advantageously use to limited supplies of controlled items available. Constant vigilance and adequate training of supply officials is of prime importance.

It is encouraging, too, to find evidence in the Monthly Activities Reports that the Military Government Health Officers are giving such close attention to supply activities and supply conditions. Their expressed views on such matters is assured of detailed perusal and close study by the Supply Division of Public Health and Welfare Section. Their comments and suggestions are helpful in evaluating the effects on the local operating level of policies put into operation at the national level. It is hoped that such interest and communication of information via the Monthly Reports will continue.

Distribution

During the period 21-27 November, 5,049 pieces of dusting and spraying equipment were distributed to 14 prefectures as follows:

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsack Sprayer</u>	<u>Semi-automatic Sprayer</u>	<u>Hand Sprayer</u>	<u>Engine Sprayer</u>
Akita		206			
Yamagata		1	2		
Chiba		3	2

Hiroshima	1,200	720			
Yamaguchi	1,320	156	18		
Fukuoka	100				
Nagasaki		5			
Oita			200		
TOTAL	3,220	1,390	352	80	7

On 19 and 24 November two shipments of smallpox vaccine of 1,300 and 125,000 doses respectively were made to Korea. These were emergency shipments of Japanese-made vaccine supplied to USAFIK Liaison representatives in Japan to be used to check spread of an outbreak of a smallpox epidemic.

Ministry of Welfare officials have requested permission to make a redistribution of released vehicles necessitated by changes in conditions which have taken place since original allocation was made. This redistribution plan has been studied carefully with Ministry officials and adequate justification has been presented for making the changes as listed.

<u>Location Prefecture</u>	<u>Present User</u>	<u>Type of Vehicle</u>	<u>Reason for Change</u>	<u>New User</u>	<u>Location</u>
Tokyo	Quarantine Section, Min. of Welfare	Weapons Carrier	Change in location only being made. Use will be the same as in old location.	Sasebo Quarantine Station	Nagasaki
Tokyo	Liaison Sect. Welfare Ministers Secretariat	Command Car	Japanese Government vehicle has become available. 200 bed hospital with no vehicle.	Hirasuka Kyosai Hospital	Kanagawa
Osaka	Acute Infect. Disease Prev. Sect., Osaka fu Sanitation Division	1-ton trailer & water trailer	Not being utilized at present location and a need for this equipment at new location.	Kinki Br. Office, Med. Affairs Bur. Min. of Welfare	Osaka

Tokyo	Metropolitan Toyotama Hospital	Ambulance	Not being fully utilized.	Disease Prev. Sect., Sanit. Bureau Tokyo Metropolis	Tokyo

Production

A total of 4,631 pieces of the various types of DDT dusting and spraying equipment for insect control programs was produced during the period 21 - 27 November.

During the period 21 - 27 November, 106,000 pounds of 10% DDT dust, 3,655 gallons of 5% DDT residual effect spray, and 250 vials of typhus vaccine were distributed. At the same time, 266,000 pounds of 10% DDT dust, 32,050 gallons of 5% DDT spray, and 13,300 vials of typhus vaccine were received, leaving inventory stocks on hand at regional warehouses of the Ministry of Welfare of 2,199,780 pounds of 10% DDT dust, 544,067 gallons of 5% DDT spray and 56,988 vials of typhus vaccine.

Additional available stocks of typhus vaccine, already produced and passed national assay tests, in the hands of the biological manufacturing laboratories and factories, as of 27 November, totaled 119,364 cc.

The substandard coal allocation by the Ministry of Commerce and Industry for the Ministry of Welfare's category "Medicine Production" under the major category "Chemical Industry", for October - December, totaled 9,650 tons. This amount was broken down as follows:

<u>District</u>	<u>Allocation</u>
Hokkaido	900 tons
Kanto-Shinetsu	2,200 tons
Tokai	300 tons
Kinki	4,000 tons
Chugoku	500 tons
Shikoku	250 tons
Kyushu	<u>1,500 tons</u>
TOTAL	9,650 tons

The calorie content of this substandard coal is listed as 3,000 - 4,000. Detailed breakdown of the district allocations is furnished Ministry of Commerce and Industry by the Ministry of Welfare. The local coal bureaus were then instructed to make the substandard coal allocation, as furnished in the following table: (Unit: Metric tons).

<u>District</u>	<u>Name of Company</u>	<u>Factory</u>	<u>Location</u>	<u>Allocated Amount of Substandard Coal</u>

	Sub-total	<u>100</u>
	Grand Total	2,000

The yen value of production of medical supplies (medicines, biologicals, dental instruments, dental materials, rubber sanitary goods, medical instruments, and surgical of dressings) for October, totaled 1,732,143,492 yen. This total represents a decrease of approximately 87,000,000 yen below September production, a decrease of approximately 220,000,000 yen below the monthly production average for 3rd Quarter, CY 1948, an increase of approximately 300,000,000 yen above the production average 1st Half, CY1948, and a decrease of approximately 100,000,000 yen below the 2nd Quarter, CY 1948, monthly production average. This overall decrease in October production was a reflection of the decreased allocations of coal available to the medical supply industry.

Controlled medicine production during October decreased approximately 14,000,000 yen compared to the September production. Controlled medicine production, however, remained adequate to provide sufficient quantities of essential medicines to meet domestic requirements.

Non-controlled medicine production during October decreased approximately 190,000,000 yen below the September production, but, at the same time, October production represented an increase above the monthly production averages of the 2nd Quarter and 1st Half, 1948.

Patent medicine production during October decreased approximately 82,000 yen, below the September production. No shortages have been reported in the availability of adequate supplies of patent or home remedy medicines.

Production of miscellaneous drugs (pure mapharsen, bismuth subsalicylate injection and sulfathiazole) during October showed a substantial increase for bismuth subsalicylate and mapharsen but a slight decrease for sulfathiazole, when compared to the September production. Adequate inventory stocks are available for immediate distribution to proper consumers. Sulfadiazine production totaled 22 kgs. for October.

Production during October of the various sulfa drugs manufactured by a total of 50 producers totaled the following: sulfanilamide 11,969 kgs., at acetylsulfonamide 3,589 kgs., sulfathiazole 5,614 kgs., sulfamethylthiazole 839 kgs., sulfapyridine 93 kgs., sulfaguanidine 1,398 kgs., sulfamerazine 423 kgs., homosulfamine 409 kgs., sulfadiazine 22 kgs.

Biological production during October was approximately doubled over the September production in yen value. Production activities are being expanded provide the necessary quantities of biologicals to implement scheduled immunization programs complying with the new vaccination and immunization laws.

Production of penicillin during October totaled 295,019 vials of 100,000 oxford units each of a total of 29,501,900,000 oxford units. Actually, 40,969 additional vials were produced during October by the Meiji Seika Co., the consistent leader in penicillin. However, this production cannot be included as finished stock, since the assay had not been completed by the end of October. When the assay has been completed, the finished production will be more properly included in the November report.

Many manufacturers are now changing over from the calcium and sodium salt of penicillin to the penicillin G variety, as well as conducting experiments with a view toward future production of penicillin in wax.

Medical instrument production during October totaled 2,419,536 pieces valued at 35,521,480 yen. This production was an increase of approximately 300,000 pieces and 2,400,000 yen. At the same time this October production represented the largest monthly production over reported.

Dental instrument production during October increased, in the number of pieces produced, above the September production by approximately 307,000 pieces, but decreased, in yen value, approximately 1,240,000 yen. This can be explained by the relative increase in production of the smaller types of instruments such as nerve broaches and burrs for which the unit price does not compare with the more expensive pieces such as dental chairs, electric lathes, etc. Dental material production decreased 2,900,000 yen approximately below the September production. Adequate stocks of all dental instruments and materials are on hand to meet requirements.

Production during October of glass syringes for domestic use totaled 361,900 pieces of the various types and sizes of syringes. This total was comparable to the production of the previous two months of the year and to the 1948 quarterly averages of production. Adequate stocks are on hand to meet requirements.

Production of laboratory animals during October increased approximately 1,900 animals above the September production. Available supplies of animals are sufficient to meet the needs of all laboratories. Efforts are being made to obtain increased allocations of food for the animals.

Production of x-ray and electrotherapy equipment during October increased substantially above all previous months of 1948 and the monthly production averages for 1946 and 1947. An unusually large number of luminous and intensifying screens were manufactured. Inventory stocks of all x-ray and electro-therapy equipment are sufficient to meet domestic requirements.

Rubber sanitary goods production during October totaled 40,338.82 kgs., valued at 24,022,497 yen. The yen value was comparable to that reported for September production; but, the actual production was reduced by half in the same comparison. This was attributed to lack of delivery of full allocations for October.

Production of gauze, bandage cloth, and absorbent cotton from stocks of imported raw cotton during October totaled 234,360,906 yen. This total was approximately four times the yen value of September production. Absorbent cotton production was doubled; gauze production, doubled; bandage production, quadrupled.

This production increase was attributed to the recent settlement and final establishment of new wholesaler and retailer prices for all types of textile materials. With the recent establishment of the new price schedule on all textile materials, the expected acceleration of deliveries of the raw materials from the spinning factories to the weaving mills to the textile sanitary material finishing mills took place.

Production of x-ray film during October totaled 36,162 square meters. This is an increase of approximately 12,000 square meters above the 1946 and 1947 monthly production averages and, at the same time, an increase of approximately 6,000 square meters above the 1st Quarter and 2nd Quarter 1948 monthly production averages, and an increase of 4,000 square meters over the 3rd Quarter 1948 monthly production average. October production represents the largest amount of x-ray film manufactured during any month since the initiation of the indigenous x-ray film production program.

Production of hexylresorcinol during October continued with a total production of 732.37 kgs. This is the largest amount produced during any month since the initiation of indigenous hexylresorcinol production. Further increases may be expected in future months.

Minimum standards for assay of the drug both in the crystalline form and in the finished coated will form, have been completed. Approval of these standards will be forthcoming at which time the industry will receive official information from the Ministry of Welfare and instructions to produce the hexylresorcinol gelatin-coated pill.

Production of insect and rodent control supplies and equipment continued during October according to plan. Large inventory stocks are on hand of all types of dusting and spraying equipment sufficient to meet all requirements. An inventory stock of approximately 30 tons of Antu rat poison is on hand. Schedules for production of DDT products have been stepped up considerably to provide adequate supplies to meet requirements for the coming typhus fever season.

The attached tables (Incl. #4) indicate production of medical, dental and sanitary supplies and equipment.

SECTION VI
NARCOTIC CONTROL DIVISION

Narcotic Control Activities Report - October

The October report of narcotic control activities from the Ministry of Welfare contained the following information:

Total registrants	92,186
Arrests - Registered persons	19
Unregistered persons	70
Convictions - Registered persons	15
Unregistered persons	45
Thefts of narcotics (including one hospital)	25
Losses by fire and flood	20

Penalties for registrants varied from 100 yen fine to two years penal servitude including one suspended sentence. Penalties for non-registrants varied from 500 yen fine to two years penal servitude including 11 suspended sentences. Fourteen registrants were admonished for minor violations.

The report also summarized the activities of Narcotic Agents as follows:

Inspection of registrants	1,232
Investigations originated	140
Investigations concluded	145
Investigations not concluded	314

Prosecution of ten non-registrant violators of the Marihuana Control Law resulted in the following:

Nine defendants	5,000 yen fine each
One defendants	10,000 yen fine

Community Chest - Japanese Red Cross Joint Fund Campaign

The compilation of reports from all prefectures covering the progress of the "Joint Fund Campaign" reflects, as of 3 December, a total of 849,915,319.63 yen raised towards the established goal of 1,175,450,000.00 yen or 72.3% of quota.

Listed below are the progress reports of each prefecture, giving the date covering their last report. (Note: Many prefectures, as will be noted below, are not keeping their reports reasonably current and it is requested that they be encouraged to submit their reports weekly).

Prefecture	Goal	Amount Collected	Date Reported	Per Cent
Hokkaido	70,000,000.00	55,656,500.00	30 Nov	79.5
Aomori	11,000,000.00	11,000,000.00	25 Nov	100.0

Child Welfare

Funds have been secured by means of a supplementary budget to place into effect during December the Ordinance concerning minimum Standards for Children's Institutions. Increases in allowance for care children will be authorized concurrently. Copies of the Ordinance will be supplied as quickly as they become available.

SECTION VIII SOCIAL SECURITY DIVISION

Social Insurance Statistics

The National Public Service Mutual Aid Associations (Kyosai Kumiai) constitute the more comprehensive of the two compulsory social insurance schemes for public workers. ^{1/} As of June 1948, the program consisted of 23 associations, one in each ministry and major government enterprise, which were established separately and at different times beginning with the Railway Mutual Aid Association established in 1907. Only this year they were

brought under a Diet Law, the National Public Service Mutual Aid Association Law, establishing standard provisions and common requirements, which become effective on 1 July 1948.

As of June 1948, the total membership reported was 2,213,219 public workers (1,065,745 "officials" and 1,146,974 others) plus an estimated total of 3,800,000 dependents. (This estimate is very likely to be low). The associations are of two types. The so-called Ministerial associations are established in the Prime Minister's Office, the Government Ministries, and for police and prison workers and national public school teachers. They account for a little less than one-half the total number covered but roughly three-fourths of all the "officials" covered. The Government Enterprise Associations are those established in the national government's monopoly and other industrial enterprises. They account for the remaining portion of the insured.

Associations for either type - with only a few exceptions - cover both career public servants called "officials" and other public workers not so classified but simply referred to as employees. However, the two types of association differ as to the scope of protection given to their members.

Government Enterprise Mutual Aid Associations offer both short-term and long-term protection, roughly the equivalent of that given under Health Insurance (plus a few additional benefits, see Table) and the Welfare Pension Insurance combined. Ministerial Mutual Aid Associations offer merely short-term protection approximately equivalent to that of Health Insurance.

The complementary long-term protection is afforded to "officials" under the Government Pension System. However, public workers employed in the Ministries and not classified as "officials" are not covered by the Government Pension System. They are left, to this date, without long-term protection. On the other hand, "officials" working in any of the government Monopolies or other industrial enterprises are members of the association established therein and as such receive their short-term protection from the association, but not their long-term benefits. These they obtain under the Government Pension System.

Until 1 July 1948, Government Enterprise Mutual Aid Associations also paid benefits due for job-connected accidents, sickness, invalidity and death to their "employee" members. "Officials" and "employees" working in the Ministries received their accident compensation under a variety of laws and ordinances not administered by the Mutual Aid Associations except in a few social instances. Legally, all such benefits were taken out from the Mutual Aid System beginning 1 July 1948. They will be paid under the National Public Service Accident Compensation now before the Diet. Pending enactment of this Law however, occupational benefits continue to be made in fact by some Government Enterprise Mutual Aid Association, presumably on a reimbursement basis, others use different make-shift devices.

The Mutual Aid system is financed from contributions by the insured and a government subsidy. The rates at which contributions are levied by the individual associations vary. They are proportionately higher for those protected against all risks than for those insured only against temporary disability, etc. (short-term risks.) In regard to the former, most associations levy a total of 7% and in regard to the latter a total of 2.2% of their base pay, excluding allowances. The government pays the total administrative cost, one-half of the short-term and 55% of the long-term benefit cost.

The publication of consolidated Mutual Aid statistics is a new venture, as monthly figures have never before been assembled for all the associations, hence the time-lag, the need for estimating certain data (number of dependents) and the absence of data on the duration of benefits. It is expected that these shortcomings will be overcome in the next few months. Such information on benefit awards as is currently available is given in Inclosure #5.

1/ For a summary of the Government Pension System (Onkyu) and its benefit disbursements see Public Health and Welfare Weekly Bulletin No.100.

Japanese Nationals with Occupation Forces

The Insurance Bureau, Ministry of Welfare, has issued Hohatsu No.92, dated 1 December 1948, subject: "With regard to the Application of Health Insurance Law and Welfare Pension Law to Japanese Personnel with Occupation Forces", to all Prefectural Governors. It makes these laws applicable to such workers in accordance with Article 13 Item 2 of the Health Insurance Law and Article 16 Item 2 of the Welfare Pension Law and will become effective 1 January 1949.

The Insurance Section, Welfare Department of each Prefectural Government will be the local agency responsible for the operational procedures.

On and after the effective date, all Japanese Nationals on duty with the Occupational Forces will be eligible for non-occupational sickness and injury benefits and will begin to establish pension rights.

The Insurance Bureau, Ministry of Welfare, is to disseminate necessary information, through the prefectural offices, to each employee informing him as to contributions, benefits, and rights.

SECTION IX
MEMORANDA TO JAPANESE GOVERNMENT

None.

CRAWFORD F. SAMS

SECTION I GENERAL

The following Public Health and Welfare Technical Bulletin is inclosed (Inclosure #1) with this Weekly Bulletin.

Title: Glossary of Japanese Welfare Terms
Short Title: TB-PH-WEL 5

SECTION II PREVENTIVE MEDICINE DIVISION

Repatriation from Soviet Held Areas

Repatriation from Soviet held areas has been suspended for the winter months. Facilities will be in readiness for reopening on 1 April 49 or on 30 days notice.

One case of typhus fever was discovered aboard the repatriation ship, TOKOJU MARU arriving Hakodate 2 December from Maoka, Karafuto. The patient was hospitalized and the Tokuju Maru Placed in quarantine until 18 December. One thousand four hundred fifty-seven contacts, passengers and crew members, remain in quarantine aboard the ship.

Smallpox in Korea and in the Philippines

Because of the recent outbreak of smallpox in U. S. occupied Korea, all individuals departing for Japan will be required to show evidence of successful vaccination within the preceding 60 days. The same restrictions apply to individuals arriving from the Port of Manila and the Island of Midora, which have been declared infected with smallpox.

Primary Function of Health Centers

Observations and information gleaned from staff visits and from Military Government Monthly Activities Reports indicates that some individuals still consider the Health Center merely a clinic. It is true that the clinical activities are a prominent feature of the Health Center and they are of the utmost importance in the accomplishment of its mission. However, it is emphasized that everyone concerned thoroughly understands that the primary function of the Health Center is overall public health administration and not merely the operation of clinical facilities.

Meetings of Health Center Directors

Reference Section I Weekly Bulletin No.99. As a mean of improving public health administration regular conferences of Health Center Directors, together with key prefectural health officials and Military Government Health Officers will prove beneficial to all concerned. It is recommended that conferences be held in the Health Centers. Insofar as possible it would be well to rotate the meetings among the various Health Centers within the prefecture so as to hold at least one meeting in each health center once a year. In this way every key prefectural health official and every Health Center Director will have an opportunity to see every other Health Center in the prefecture at least once a year. This should stimulate the improving of some sub-standard Health Centers in both administration and facilities.

BCG Programs

Military Government Health Officers, active in the BCG program in Japan, will be interested in the status of BCG studies in the United States. An article by Dr. Sol Roy Rosenthal of the Tice Laboratory, University of Illinois College of Medicine, in the January 10, 1948 issue of the J.A.M.A. gives an excellent account of his work in Chicago. Another enlightening article by Dr. Joseph Aronson appeared in the September 1948 issue of the American Review of Tuberculosis. The latter describes the experience of the U.S. Department of the Interior with BCG among the American Indians.

Both of these papers are the leading articles of the named issue and reflect the great interest which is now being manifested in BCG in the United States.

The small number of individuals (under 2,000) involved in each of these prominent studies gives some indication of the rare opportunity which exists for studying the results of BCG in Japan where several million BCG inoculations are given every year.

The Ministry of Welfare will, in the near future, institute a comprehensive system of recording BCG data. When this system is inaugurated, all Military Government Health Officers should ascertain that the instructions are followed implicitly.

SECTION III VETERINARY AFFAIRS DIVISION

Rabies Control

The Prefectures of Tokyo, Saitama, Kanagawa and Chiba have initiated a plan to consolidate a round-up of stray dogs as a control measure in reducing the number of cases of Rabies in dogs. The original plan submitted by Tokyo-to has been adopted with the exception of a few minor changes. The Veterinary Affairs Section, Ministry of Welfare took an active part in arranging this drive.

Niigata Prefecture Inspection

An inspection of veterinary activities in this prefecture disclosed that extensive work has been done in establishing the food inspection program. In many cases improvements in all phases of inspection were noted especially in the utilization of screening material, construction of new plants and the adoption of good sanitary measures in retail shops handling various food commodities. Recommendations were made at the time of inspection to correct or facilitate the improvement of food inspection as a whole when deficiencies were encountered. The overall food sanitation program is definitely showing improvement.

Animal Diseases

The Animal Hygiene Section, Ministry of Agriculture and Forestry, submitted a negative report for the period 6 - 10 December.

Animal Disease Control

The Animal Hygiene Section, Ministry of Agriculture and Forestry, has submitted a plan for approval of a program in which horses will be immunized against Equine Encephalomyelitis for the year 1949.

SECTION IV NURSING AFFAIRS DIVISION

Publications

“History of Nursing” by Sellew and Neusse, in Japanese will be available the end of December and can be ordered from:

Mr. Katsu Suzuki
Far Eastern Literary Public Co.,
Branch Bldg. Finance Ministry
2-1 chome, Uchisaiwai-cho, Chiyoda-ku Tokyo
Price 250.00 yen

SECTION V SUPPLY DIVISION

Distribution

During the period 28 Nov - 4 Dec, 955 pieces of dusting and spraying equipment were distributed to 14 prefectures as follows:

Knapsack	Semi-automatic	Hand	Engine
----------	----------------	------	--------

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Sprayer</u>	<u>Sprayer</u>	<u>Sprayer</u>	<u>Sprayer</u>
Akita				1	
Hokkaido				5	
Saitama		50			
Ishikawa		5			
Hyogo	50				50

Shimane		50			
Yamaguchi		12	12	12	
Kagawa	48				
Kochi	216				
Fukuoka	50	144	74		
Oita		12	6		
Miyazaki	48	12		12	
Ehime					1
Total	412	345	123	74	1

On 7 December nine surplus U.S. army weapons carriers were released to the Ministry of Welfare. The distribution of these vehicles has been scheduled as follows:

<u>Prefecture</u>	<u>Using Agency</u>
Fukushima	Fukushima Health Center
Kochi	Kochi Health Center
Tottori	Yonago Health Center
Shimane	Hikawa Health Center
Saga	Saga Health Center
Osaka	Toyonaka Health Center
Yamagata	Yamagata Health Center
Hokkaido	Engaru Health Center
Osaka	Protection Section, Public Welfare Bureau, Osaka Prefecture

Allocation and distribution of Ephedrine HC1 is not made during the summer months in order to conserve the supplies for the winter months when the need for this drug is at its highest. A special allocation of ephedrine HC1 tablets, the first of the winter season, is being made at this time.

Tickets are enroute to prefectures for the following quantities.

<u>Distribution of Ephedrine</u>			
<u>Prefecture</u>	<u>Ephedrine Hydrochloride (Tabs)</u>	<u>Prefecture</u>	<u>Ephedrine Hydrochloride</u>
Hokkaido	752,000	Kanagawa	545,000
Aomori	233,000	Niigata	527,000
Iwate	258,000	Toyama	207,000
Miyagi	340,000	Ishikawa	232,000

Shimane	202,000	Nagasaki	317,000
Okayama	386,000	Kumamoto	433,000
Hiroshima	495,000	Oita	292,000
Yamaguchi	364,000	Miyazaki	202,000
Tokushima	170,000	Kagoshima	<u>435,000</u>
		Total	17,700,000 tabs.

Production

Attention is invited to Inclosure No.4 to Public Health and Welfare Weekly Bulletin, No.101, 29 November - 5 December, which was inadvertently listed as “Distribution of Medical and Sanitary Supplies and Equipment”. It should read correctly as “Tables of Production of Medical and Sanitary Supplies and Equipment - October 1948”.

A total of 4,146 pieces of the various types of DDT dusting and spraying equipment for insect control programs was produced during the period 28 Nov - 4 Dec.

During the period 28 November - 4 December, 50,900 pounds of 10% DDT dust, 225 gallons of 5% DDT residual effect spray, and 10,800 vials of typhus vaccine were distributed. At the same time, 139,400 pounds of 10% DDT dust, 20,600 gallons of 5% DDT spray, and 5,225 vials of typhus vaccine were received, leaving inventory stocks on hand at regional warehouses of the Ministry of Welfare of 2,331,880 pounds of 10% DDT dust, 583,361 gallons of 5% DDT spray.

As of 6 December, it was learned that a total of 16,234 vials of typhus vaccine, produced indigenously, now out-of-date, upon reassay, failed to pass potency tests of minimum standards. This stock consequently has been destroyed. At the same time, a total of 11,880 vials of U.S. produced imported vaccine, now out-of date, upon reassay, failed to pass. This, too, must be discounted from present stocks available for distribution, so that, as of 6 December, total stocks on hand in regional warehouses of the Ministry of Welfare are 29,920 vials. A complete stock on hand, in both regional warehouses and in biological-producing plants, reads, as of 6 December, 32,611 vials of U.S.-produced vaccine and 34,199 vials of Japanese-produced vaccine.

The distribution of standard coal and lignite to the medical supply industry during July, August and September, the second quarter, JFY 48, in comparison to the proposed allocations during the period, is indicated as follows:

Below tabulation indicates percentage of deliveries against the allocated amounts for subject period.

Allocated amount of coal	30,000 tons
Received amount of coal	22,931.9
Percentage	76.4%
Allocated amount of lignite	22,330 tons
Received amount of lignite	14,805.60
Percentage	66%

SECTION VI NARCOTIC CONTROL DIVISION

Narcotic Agent Power of Arrest

The Narcotic Control Law (Law No.123 of 1948) which became effective 10 July 1948, has been amended so that the police power given Narcotic Agents by Diet Law No.112 will be continued. This amendment was necessary as Diet Law No.112 was based upon Imperial Ordinance No.528 which will become ineffective 1 January 1949. The new amendment will be promulgated 10 December and become effective 1 January 1949.

Steel Cabinets for Narcotic Storage

The Ministry of Welfare October Report of Narcotic Control Activities lists 25 thefts of narcotic stocks, one of a hospital and 24 being of individual physicians. It is recommended that all physicians reporting such thefts have their future narcotic purchases limited to a one month supply until better narcotic storage is provided. This storage may be a regulation steel safe or the much more economical steel cabinet recommended by the Narcotic Section of the Ministry of Welfare, purchase of which may be arranged through the Narcotic Agents or a narcotic local wholesaler.

SECTION VII WELFARE DIVISION

Licensed Agencies for Relief in Asia (LARA)

LARA shipment, number 109, of relief supplies for Japan, arrived in Yokohama on 26 November aboard the S.S. Staghound and contained 9.45 tons of clothing.

LARA relief supply shipments to Japan, as reported, now total 7,061.40 tons, consisting of the following:

	<u>Tons</u>
Food	5,414.71
Clothing (including shoes)	1,278.41
Medicines	59.37
Cotton (raw)	207.62
Miscellaneous (soaps, seeds, candles, etc.)	101.29
Total	7,061.40

Cooperative for American Remittances to Europe and to the East (CARE)

CARE has received two shipments of packages (oriental food pack only) since the beginning of their distribution operations in Japan in July. The following report covers the status of "CARE packages for Japan" as of 30 Nov:

Total Packages received		19,979
Total Packages damaged	1,933	
*Total Packages delivered	6,065	
Total Packages in process of delivery	2,143	<u>10,141</u>
Total Packages (food only) on hand & not consigned		9,838

*(Includes 150 packages sent to Okinawa)

Japanese Red Cross Society

National Conference:

A meeting of all prefectural (chapter) executives will be held at the National Headquarters (Tokyo between the dates 16 - 17 December. The purpose of this conference is to discuss and review the following programs: Membership Campaign, Disaster Relief, Volunteer Services, Chapter Administration and Junior Red Cross.

Disaster Relief Operations:

A vessel owned and operated by the Kochi Prefectural Government sailing from the port of Shimoda to the port of Suzaki, was caught in the typhoon "Agnes" on 19 November at 0600 and was washed ashore at Kamikawaguchi at 0730 on the same date.

The Japanese Red Cross sent a medical aid and rescue team immediately to the scene of the marine disaster. Emergency medical aid and treatment was administered to nine persons with three of them who were seriously injured being hospitalized. Several members of the Red Cross Volunteer Service Group in the village of Shirotakawa, near the scene of the disaster, assisted in the rescue work and gave emergency assistance (clothing and food) to the many victims.

Community Chest-Japanese Red Cross Joint Fund Campaign

Prefectural Reports covering the progress of the Community Chest-Japanese Red Cross Joint Fund Campaign reflect a total of 879,631,985.05 yen raised (collected) towards the established goal of 1,175,450,000.00 yen or 74.9% of quota. (Note: 13 prefectures have reached or exceeded their goal).

Many prefectures are not making prompt reports covering their collections and they are to be encouraged to keep the Central Committee currently informed regarding the progress of their prefectural campaign.

The progress of each prefectures in the "Joint Fund Campaign", including the date of their latest report, is given below:

<u>Prefecture</u>	<u>Goal</u>	<u>Amount Collected</u>	<u>Date Reported</u>	<u>Percent</u>

National Survey of Physically Handicapped Persons

The Ministry of Welfare has been sending out questionnaires to all prefectures in an attempt to make an accurate survey of all physically handicapped persons in Japan. In view of the fact that an unsatisfactory survey was made in April 1948 and that the compilation of these figures are urgently needed in the Rehabilitation Program for the Physically Handicapped, it is recommended that all Military Government Welfare Officers assist in expediting this survey on a local level as a target date of 1 February 1949 has been set by the Ministry of Welfare for compilation.

SECTION VIII SOCIAL SECURITY DIVISION

Social Insurance Statistics

Reference Public Health and Welfare Weekly Bulletin No.95, 18 - 24 Oct, regarding a summary of the Health Insurance Program, notably that part of it which is under government management.

On 1 August a revision to the Law became effective which increased certain flat-rate benefits provided in the Law. However, in the benefit statistics for August shown in Inclosure No.2 these increases are not yet fully reflected due to the fact that benefit payments made in August were largely in respect to claims which arose prior to that month.

Medical Fee Payment Fund

Reference is made to Hohatsu Nos.87, 88, and 90, issued by the Insurance Bureau, Ministry of Welfare, to the Prefectural Governors between November 18 and 29. Hohatsu No.87 calls attention to the number of associations delinquent in making their deposits to the Medical Fee Payment Fund. To fulfill the purpose of the Fund which is to make prompt payment of medical care claims it is essential that the deposits be kept currently up-to-date.

Hohatsu No.88 refers to the fact that a number of the medical care claims were incorrect owing to insufficient instructions given to insurance doctors. Also employer-owned hospitals or clinics serving a Health Insurance Society established within the same employer's business enterprise are not required to use the Fund, but are permitted to make direct settlement with the Health Insurance Society concerning payment for services rendered to members of that Society.

Hohatsu No.90 calls attention to the delay in payment of medical care claims due to inefficiency in the processing thereof. Although some delay was to be expected in the first few months in preauditing the bills, this lag should be reduced with each succeeding month, until payments can be made promptly within ten days after presentation of the bill.

Health Insurance

Reference is made to Hohatsu No.43 dated 23 August 1948 subject: "With Respect to the Insured Certificate of Health Insurance" issued by the Insurance Bureau, Ministry of Welfare to the Prefectural Governor. This notice calls attention to several important factors affecting the functioning of the Health Insurance program, such as, the proper use of the insured's certificates, which is not transferable, a checking of certificates during the month of October, coordination of insurance doctors and dentists in giving medical care to dependents and the reports by employers which are to include the number of dependants of the employee.

SECTION I
GENERAL

The following list of Division and Branch Chiefs of Public Health and Welfare Section is published for the information of Military Government Teams:

<u>Titled</u>	<u>Name</u>	<u>Tel. No.</u>
Chiefs of Section	Brig. Gen. Crawford F. Sams, MC	26-6992
Deputy Chief of Section	Col. Cecil S. Mollohan, MC	26-6993
Executive	Gordon E. DeVille	26-6993
Chief, Preventive Medicine Division	Lt. Col. Lucius G. Thomas, MC	26-6987
Assistant Chief	Dr. Ira Hirschy	26-6987
VD Control Branch	Dr. Isamu Nieda	26-8211
Laboratory Branch	Dr. Samuel R. Bozeman	26-6987
Epidemiology Branch)	Maj. F.E.M. Bourland, MC	26-8211
Port Quarantine Branch)		
Sanitary Engineering Branch	Mr. Edmond A. Turner	26-8211
Virus & Rickettsial Diseases Control Branch	Dr. Charles M. Wheeler	26-8211
Chief, Social Security Division	Mr. Leonard R. Anton	26-8642
Deputy Chief	Mr. George F. Pollack	26-8642
Social Insurance Branch	Mr. Peter M. Sullivan	26-7057
Social Insurance Analyst	Mr. Dale L. Rose	26-7057
Economic Analysis Branch	Mr. George F. Rohrlich	26-8642
Health Insurance Branch	Mr. Harold Knoy	26-7057
Chief, Medical Services Division	Col. Harry G. Johnson, MC	26-6995
Assistance Chief	Dr. Milton C. Morton	26-6995
Nutrition Branch	Miss Agnes O'Donnell	26-6990
Chief, Health Statistics Division	Mr. Leonard V. Phelps	26-6717
Assistant Chief	Miss Esther M. Wright	26-6717
Chief, Veterinary Affairs Division	Maj. Marion W. Scothorn, VC	26-6149
Assistant Chief	Dr. C. T. Beechwood	26-6149
Chief, Welfare Division	Mr. Nelson B. Neff	26-6988
Welfare Administration Branch	Mr. Milton J. Evans	26-6988
Public Assistance Branch	Mr. Irvin Markuson	26-8425
Social Work Training Branch	Miss Florence Brugger	26-8425
Welfare Organization & Rehabilitation Branch	Mr. Ferdinand Micklantz	26-8425
Chief, Nursing Affairs Division	Miss Grance E. Alt	26-6986
Area Director	Miss Elizabeth Pickens	26-6986
Senior F. H. Nurse, Nursing Consultants Branch	Miss Josephine Kaser	29-2021-45
Director, Nursing Education Branch	Miss Elenore Carlson	33-1186-88
Assistant Director	Miss Dorothy Toom	26-6986
Instructor, Nursing Education Branch	Miss Billie Harter	33-1186-88
Instructor, Nursing Education Branch	Miss Mary Kanagamitsu	49-4945-55
Nursing Education Consultant	Miss Enid Mathison	26-6386
Nursing Education Consultant	Miss Louise Kincaid	48-0688
Nursing Education Consultant	Miss Verginia Ohlson	26-6986
Chief, Supply Division	Mr. Charles V. Band	26-6913
Production Branch	Mr. Sidney F. Ascher	26-6913
Production Control Officer	Mr. Edwin Payne	26-6913
Stock Control & Distribution Branch	Mr. Eugene Coppola	26-8712
Chief, Narcotic Control Division	Mr. Wayland L. Speer	26-6989

SECTION II
PREVENTIVE MEDICINE DIVISION

Typhus Fever Control

Observations and reports from the field indicate that many members of insect and rodent control teams lack proper instruction in the technique of applying 10% DDT dust to the hair and clothing of individuals in louse control operations. Attention is called to printed instructions which may be found in:

TB-PH-Preventive Medicine	3	Feb.1947 (PH&W, GHQ, SCAP)
TB-MEDICAL 194	17	Aug. 1945
TB-MEDICAL 218	17	April 1946

It is suggested that the Chief of the Sanitation Section of Health Centers be urged to conduct periodic training periods on this technique at regular intervals throughout the typhus season.

Improvement in Sanitation

Reference Weekly Bulletin No.87 for 23 - 29 August and Weekly Bulletin No.94 for 11 - 17 October in which comparisons were made between certain prefecture monthly morbidity rates for July and August 1948 with those for 1947.

This article, the third and last of a series under the subject of "Improvement in Sanitation", makes comparisons of morbidity rates by prefectures for intestinal diseases occurring in the "intestinal disease season", -the period from 1 July to 30 September. For the information of all prefectures, case rates for the "intestinal disease season" are included in table form for both 1948 and 1947 for dysentery, typhoid fever, and paratyphoid fever. The rates for the entire year will be much lower than those given for the three-month period, since the majority of the year's cases occur during the period under consideration.

The dysentery rate for all of Japan was one-third as high during the summer of 1948 as during the same period of 1947 (July - September). Rates for individual prefectures ranged from 10 to 82 percent of the previous years' summer rates. Prefectures showing greatest improvement are chiefly in central Honshu and Shikoku. Outstanding improvement was shown by Yamanashi (10% of the rate for the 1947 season), Ishikawa (13%), Nagano (13%), Yamagata (13%), Tokushima (18%), Kagawa (19%), Tochigi (20%), Fukushima (20%), and Nara (22%). Some showing the greatest improvement still have rates considerably in excess of the national rate.

The typhoid fever case rate for the three month period July to September 1948 for all Japan was 45 percent as high as for the same period in 1947. Only two prefectures failed to show improvement, is one of which the presence of an epidemic gave a case rate of 71. (The National case rate was 19.2 for July - September 1948). Outstanding improvement was shown by Kumamoto (6% of the 1947 season's rate), Yamanashi (12%), Wakayama (12%), Yamagata (15%), Miyazaki (16%), Kagawa (20%).

The paratyphoid case rate for July-September 1948 for Japan was 52 percent of the rate for the corresponding period of 1947. Five prefectures failed to show improvement.

The over-all reduction in dysentery is encouraging. Although a number of factors may account for this reduction, improvement of general sanitation may be given a fair share of credit.

The reduction of typhoid and paratyphoid fevers, however, is further assisted by immunization programs. That the results were less favorable than in the case of dysentery may be partly attributed to a reservoir of infection existing in typhoid carriers. Mass immunizations against typhoid and paratyphoid fevers are a seasonal affair, but the discovery of carriers and their management is an important part of the health program that must remain active throughout the year.

Registers of typhoid carriers should be maintained and adequate control measures instituted to prevent carriers from being a source for disease among others. Due to the "carrier factor", the typhoid control program

requires and should receive the extra attention and effort required to bring all intestinal diseases to still lower levels in the coming year.

Cases Rates for Dysentery, Typhoid, and Paratyphoid for Three Months' Periods (July, August, September)
by Prefecture, 1947 and 1948. (Rates per 100,000 population Per Annum)

Special Training Course for Sanitarians and Sanitary Engineers

Reference Section II - Weekly Bulletin No.101

Special courses for sanitarians and sanitary engineers will begin in January 1949 at the Institute of Public Health in Tokyo.

The Sanitarians Course which will begin on 10 January is designed for Chiefs of Health Center Sanitation Sections and is open to doctors, engineers, veterinarians or others with necessary technical training and background in public health work. This special course will emphasize organization, administration, and personnel training.

The Sanitary Engineers Course which is expected to begin on or about 24 January is for graduate engineers only, and is designed to train personnel for key positions in the prefectural health departments. Students may be sent from the civil engineering sections of the prefectures, but they should be used in connection with public health work after being returned to the prefecture.

Health Information and Education Film Libraries

The following is the latest list of film libraries furnished by Civil Information & Education Section. Information concerning loan of educational films may be secured by contacting one of the libraries in your region.

REGION	PREFECTURE	BUILDING	ADDRESS
Hokkaido	Hokkaido	Pref. Library	Nishi-5-chome Kitaichijo Sapporo-shi
Tohoku	Aomori	Pref. Government	Ono Aomori-shi

SECTION III
 VETERINARY AFFAIRS DIVISION

Inspection Trip

During the past week a visit was made to Aichi Prefecture and Gifu Prefecture. In Aichi Prefecture, two small but modern milk plants are being constructed and equipped to pasteurize milk at low temperature. It is planned to have the plants in operation by 1 February 1949. Milk processing plants producing prepared baby food are operating on a full scale and under good sanitary conditions. Food sanitation inspection is not receiving sufficient coverage due to the small number of inspectors in relation to the food establishments registered in Prefecture. Food inspectors assigned as a budget requirement are being misdirected by Health Center directors and are not devoting full time to the inspection of food due to assignment to other types of duty.

In Gifu City, Gifu Prefecture, The Veterinary School of the Prefectural Agriculture College was visited. This school is continuing to show improvement in following the proposed high standards of Veterinary education.

Animal Diseases

The Animal Hygiene Section, Ministry of Agriculture and Forestry reported the following outbreak of diseases for the period 11 - 17 December.

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Yamanashi	Swine Erysipelas	1
Chiba	Swine Erysipelas	1

SECTION IV
 SUPPLY DIVISION

Distribution

During the period 5 - 11 December, 809 pieces of DDT Dusting and spraying equipment were distributed to seven prefectures as follows:

Knapsack Semi-Automatic

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Sprayer</u>	<u>Sprayer</u>	<u>Hand Sprayer</u>
Ibaraki		72		160
Tokyo	240	2		
Osaka	100			
Wakayama		60	25	
Tokushima				50
Fukuoka		50		
Hyogo			50	
Total	340	184	75	210

The allocation of cotton sanitary materials (absorbent cotton, gauze and bandage) for the quarter, January, February and March 1949, was sent to all prefectural governors by the Ministry of Welfare, Japanese Government, Pharmaceutical & Supply Bureau directive dated 14 December 1948 (YAKU-HATSU #860). A detailed breakdown of this allocation is inclosed. (Incl. No.1).

The allocation of controlled medicines for the quarter, January, February, and March 1949, was sent to all prefectural governors by the Ministry of Welfare, Japanese Government, Pharmaceutical & Supply Bureau directive dated 9 December 1948 (YAKU-HATSU #817). A detailed breakdown of this allocation is inclosed (Incl. No. 2).

Production

A total of 3,605 pieces of the various types of DDT dusting and spraying equipment for insect control programs was produced during the period 5 - 11 December.

During the period 5 - 11 December, 10,000 lbs. of 10% DDT dust, and 23,330 vials of typhus vaccine were distributed. At the same time, 258,985 lbs. of 10% DDT dust and 51,600 gallons of 5% DDT spray were received, leaving inventory stocks on hand at regional warehouse of the Ministry of Welfare of 2,518,865 lbs. of 10% DDT dust, 639,149 gallons of 5% DDT spray, and 23,299 vials of typhus vaccine.

SECTION V
NARCOTIC CONTROL DIVISION

Outstanding Investigations

The Narcotic Section of the Ministry of Welfare has recently adopted a program whereby the details of outstanding narcotic investigations will be disseminated in the form of technical letters to each prefectural narcotic section. The object of this procedure is to furnish all narcotic agents now ideas on how to conduct investigations, using methods which have proven successful in previous investigations by other agents, and to stimulate the investigations of narcotic suspects and the obtaining of information that will result in successful completed cases.

The first such investigation to be so distributed concerns a director of a hospital in Tokyo. The receipt of an anonymous letter, upon investigation, disclosed that this director had withheld a tremendous stock of narcotics from the hospital inventory at the time the Narcotic Law became effective on 19 June 1946, and recently tried to sell these narcotics through intermediate accomplices, on the black-market. The director and six other defendants have been apprehended to date, and a very large quantity of narcotics seized. Another considerable quantity of narcotics was stolen from the original quantity by one of the accomplices during black-market transactions and is presently being traced and has produced leads in two adjoining prefectures.

This investigation and many smaller investigations, successfully completed, have been the result of intelligent checking of anonymous information which should be thoroughly investigated and not considered as worthless or a waste of time, by the Agents concerned.

The names of the Narcotic Agents successfully conducting such outstanding investigations will be published as a form of "Commendation" for their efforts and as an incentive for other Agents to increase their investigation efforts.

SECTION VI

WELFARE DIVISION

Community Chest-Japanese Red Cross Joint Fund Campaign

Prefectural reports received up to 15 December covering the progress of the Community Chest-Japanese Red Cross Joint Fund Campaign reflect a total of 919,920,964.11 yen raised (collections including pledges) towards the established goal of 1,175,450,000.00 yen or 78.3% of quota.

Sixteen prefectures have reached or over-subscribed their quotas, namely: Aomori, Iwate, Akita, Yamagata, Fukushima, Saitama, Niigata, Toyama, Yamanashi, Gifu, Shizuoka, Aichi, Mie, Nara, Saga and Miyazaki. The progress of each prefecture in the “Joint Fund Campaign”, setting forth the latest date of each prefectural report is given below:

Prefecture	Goal	Amount Collected	Date Reported	Per Cent
Hokkaido	70,000,000.00	60,491,577.00	10 Dec	86.5
Aomori	11,000,000.00	11,000,000.00	25 Nov	100.0

Japanese Red Cross Society

Disaster Relief Operations:

On 8 December at 0525 hours a fire, caused from chimney sparks, broke out in Iwamatsu-mura, Fuji-gun, Shizuoka Prefecture. Thirty-eight dwellings were completely destroyed, with several damaged, leaving 252 persons homeless. Forty-five persons were slightly injured. One Red Cross Medical Aid and Relief Team (1 doctor, 2 nurses and 3 staff assistants) was dispatched to the area and gave emergency medical aid and assistance to the sufferers.

Junior Red Cross:

Four outstanding Junior Red Cross meetings have recently been held (three in the Niigata Chapter area and one in the Saitama Chapter area). The following information briefly summarizes the meetings:

Niigata Chapter:

27 November in Chapter Headquarters auditorium. Approximately 50 Junior Red Cross representatives from Niigata City attended accompanied by their teachers. The main speaker was a Junior whose topic was "The Meaning of Being a Member of the Junior Red Cross".

30 November in the Niigata Girls' High School. Three hundred representatives attended. The meeting was addressed by two members of the Niigata Military Government Teams.

30 November in the Niigata First Normal School. This meeting was held for the purpose of acquainting prospective teachers with the Junior Red Cross program.

11 December in the Kawagoye Girls' High School (Saitama). Junior representatives from 47 Primary and Middle Schools (and their teacher-sponsors) attended. A total of 370 persons were present for the conference. The Junior speaker addressed the conference on the subject, "The Spirit of the Junior Red Cross".

Volunteer Services:

The National Headquarters, Japanese Red Cross Society, is currently devising ways and means of building and expanding their Volunteer Services program and is considering many fields of endeavor including the field of health and sanitation.

In considering activity by their Volunteer Services in matters related to health and/or sanitation, representatives of the Japanese Red Cross have conferred with the Public Health and Welfare Section, SCAP, and they are familiar with the content and meaning of PHMJG(69), dated 16 August 1948, subject, "Dissolution of Sanitary Associations and Other Similar Organizations". It has been agreed that the Volunteer Services program could serve a useful purpose in the field of health and sanitation through a project of "environmental sanitation". This project would include such activities as "clean-up campaigns", "swat the fly campaigns" and information and publicity endeavors directed towards individuals and/or families for the purpose of making them cognizant of certain health hazards existent in and about their homes and recommend remedial measures.

Any and all Volunteer Service programs that are or may be officially conducted by a Red Cross Chapter (prefectural) are only those established and approved by the National Headquarters, Japanese Red Cross Society.

Official Volunteer Services activity in the health and sanitation field will not be finalized until it has been coordinated with and approved by the Public Health and Welfare Section, SCAP.

Public Assistance

Mimeographed copies (translated) of Hatsu-sha #129, dealing with the new public assistance program, will be attached to Public Health and Welfare Section Weekly Bulletin No.104 (for period 19 - 25 December).

Public Assistance Report - October

The Ministry of Welfare has submitted the following figures for the month of October 1948. Totals for September 1948 and October 1947 are furnished for purpose of comparison with the October report:

	<u>October 1948</u>	<u>September 1948</u>	<u>October 1947</u>
Persons-Institutional	143,806	144,882	147,734
Persons-Non-Institutional	<u>1,720,106</u>	<u>1,773,108</u>	<u>2,799,561</u>

SECTION VII SOCIAL SECURITY DIVISION

Japanese Nationals Employed for the Occupation Forces.

SCAPIN 1949 dated 13 December 1948 has been released pertaining to physical examination, immunization, medical care, hospitalization and other benefits for Japanese Nationals working for the Occupation Forces. It was issued to meet the need of further controlling expenditures from funds chargeable to occupation costs and to make modifications necessary because of recent legislation by the Japanese Diet. The issuance and control of procurement instruments and budgeting for such costs are increased responsibilities for Military Government Teams.

In general it subjects to procurement instruments procedures expenditures for the medical services and cash payments required of the Japanese Government with respect to such workers under the Labor Standard Law, the National Public Service Law, as amended, and the Health Insurance Law. Protection required by such laws conform in large part with those previously prescribed by SCAPIN's and PHMJG's in the absence of Japanese legislation.

Fixed costs prescribed by such laws as to amount or percentage of payroll which are the responsibility of the Japanese Government as the employer can be included in the procurement instruments now being issued covering the employment of these workers. Expenditures for services covering physical examinations, immunization and control of communicable diseases specifically prescribed by SCAPIN 1949 where special facilities are not required can be handled by procurement instruments to cover an extended period to minimize detail paper work. However, separate and specific procurement instruments and receipts are required where the construction, equipping, operation and maintenance at government expense of any special or exclusive facility is involved.

The cost of services provided these workers as prescribed by the Preventive Vaccination Law, the Food Sanitation Act, the Venereal Disease Prevention Law and the Tuberculosis Preventive Law are not chargeable to Occupation Force requirements and therefore not subject to procurement instruments. The immunization requirements were particularly affected due to the comprehensive nature of the Preventive Vaccination Law.

The Special Procurement Board of the Japanese Government has notified this Section that instructions have been forwarded to their offices authorizing the payment of salaries and expenses covering these services until 31 December but such payments will have to cease at that date without procurement instrument authorization.

The Advisory Council on Social Security

The National Diet on 13 December 1948, passed a law providing for an Advisory Council on Social Security in the Prime Minister's office for the purpose of investigating and making recommendations relative to a social security program. The Council will have the responsibility of studying and making recommendations to the Prime Minister for submittal to the Diet. It will provide written advice to the Prime Minister, and other Ministers concerned, as to the most effective methods of providing economic security through social insurances, and as to legislation and administrative policies concerning social insurances and related subjects.

The Council will have a membership of 40 persons drawn from the following groups: members of the Diet, officials of Government Offices concerned, persons of learning and experience, and employers, employees, physicians, dentists, pharmacists and others similarly participating in the operations of the social insurance programs. The appointments will be made by the Prime Minister. Twelve additional temporary members may be appointed if and when considered necessary.

The establishment of this Council is the outgrowth of recommendations made by the Social Security Mission from the United States which made a study of the social security program in Japan during the latter part of 1947. The basis of the recommendation for establishing a National Advisory Council on Social Security was stated in the Mission's report as: "The Social Security program affects so many people and is the concern of so many interested groups that it is desirable to have, for some years to come, the assurance of representation and participation at a high level of all those interested. The council should have independent character to permit freedom of expression and research. It would bring to the government the consensus of national opinion with reference to social security matters and constitute a channel to assure communication between the public groups and their government."

The Advisory Council on Social Security supersedes the Social Insurance Investigating Committee which was established by Imperial Ordinance in March 1946 as the result of a request of the Minister of Welfare than an investigation of the various social insurance programs be made with a view toward coordinating their functions for the benefit of the people. The Minister of Welfare realized that the purposes and functions of social insurances were neglected during the war. The investigating Committee was established on a ministerial level to function primarily for the Ministry of Welfare and was concerned only with the social insurances. As social insurances are only a part of a social security program which is vitally important in the economic recovery of the Japanese people, it was the opinion of the Social Security Mission that a council should be established on a higher level to be responsible for advising and making recommendations to governmental organs.

Social Insurance Statistics

Reference is made to Public Health and Welfare Weekly Bulletins Nos.95 and 96 for a summary of the Health Insurance program and monthly benefit data of the months of April through July 1948.

The tabulation (Incl.No.3) lists the benefits paid under society-managed Health Insurance during the month of August 1948. To some extent the figures reflect increases in certain flat-rate benefits which became effective on 1 August 1948. For the first time, nursing allowance paid in respect of dependents of insured have been separated from those paid to primary insured women workers.

SECTION VIII MEMORANDA TO THE JAPANESE GOVERNMENT

None.

SECTION I
GENERAL

The following Public Health and Welfare Technical Bulletins are inclosed with this Weekly Bulletin.

Title: Duties of the Military Government Public Health Nurse. (Incl. #1).
Short Title: TB-PH-ADM-4

Title: National Health Insurance (Incl. #2).
Short Title: TB-PH-SS-3

SECTION II
PREVENTIVE MEDICINE DIVISION

Personnel Changes

Announcement is made of the arrival in Japan and assignment of Dr. Samuel R. Bozeman as Chief, Laboratory Branch, Preventive Medicine Division, Public Health and Welfare Section, SCAP, replacing Dr. H. Hamlin who has returned to the United States. Dr. Bozeman is highly qualified and experienced in biologic laboratory methods and is currently on leave from the Michigan State Department of Health, Lansing, Michigan, where he was Assistant Director of the Bureau of Laboratories, Biologic Products Division.

Suspension of Immunizations

Recently a number of severe reactions and deaths have resulted from the administration of a faulty lot of Japanese produced diphtheria toxoid. Reports have also been received from several other sections of the country relative to reactions of varying degrees of severity following the administration of other types of vaccine.

These incidents should not have, and would not have occurred had established minimum standards been followed implicitly. Nevertheless, these reactions and the adverse publicity resulting therefrom may cause the general public to lose faith in the immunization program and place the entire program in jeopardy.

In view of these facts a decision was made to suspend the use of all Japanese produced vaccines for preventive immunization until such time as Public Health & Welfare Section can be assured that only safe, potent, and effective vaccines are available for use in the general immunization program.

Necessary instructions have been issued by the Ministry of Welfare contained in Yo-Hatsu #104, subject: "Re-Assay of Japanese Produced Vaccines for Preventive Vaccinations," dated 25 December 1948, from the Vice Minister to the Governors of all prefectures. For the information of all concerned, these instructions are quoted below:

"We are very sorry to see the unfortunate cases have happened at Kyoto and Shimane recently from diphtheria vaccination, in spite of the fact that the good results have been shown by the enforcement of the Preventive Vaccination Law for which you have always given great efforts. The Ministry of Welfare has given serious consideration for the bad influence of these cases on the future enforcement of the Law and consequent hinderance for the promotion of the health of the people. Therefore, we have done the extensive investigation of the facts. Our findings are, as announced previously, the fault in the process of manufacturing diphtheria vaccine.

Because of this fact, we decided to re-assay all the vaccines under the Preventive Vaccination Law according to the followings, in order to prevent the repetition of the same in the future and, at the same time, to protect the health of the people. You are expected to exert utmost effort in putting this plan into operation.

1. The use of the Japanese produced vaccines for the preventive vaccination against any and all diseases are suspended hereby immediately and until further notice.

2. These vaccines shall immediately be collected for re-assay, and the laboratories producing these vaccines shall be reinvestigated thoroughly. The procedure for all these investigations shall be instructed later.

3. The vaccines suspended for use shall be kept in the refrigerators at the Health Department of the prefectural office according to the method already instructed.

4. The vaccines which are re-assayed according to the procedure described above and are proved to be safe and potent shall be notified for use by later instruction.

5. Suspension of use and the collection of vaccines shall be given full publicity so that there will no such cases happen during the course of the execution of this instruction.”

SECTION III VETERINARY AFFAIRS DIVISION

Animal Diseases

The Animal Hygiene Section, Ministry of Agriculture and Forestry reported the following outbreak of diseases for the period 18 - 24 December.

<u>Prefecture</u>	<u>Diseases</u>	<u>No. of Cases</u>
Oita	Swine Plague	2
Okayama	Filariasis	1

Monthly Animal Disease Report

<u>Diseases</u>	<u>October</u>	<u>November</u>
Anthrax	0	1 (horse)
Blackleg	2	3
Filariasis	3 (horse)	1
Swine Erysipelas	27	7
Swine Cholera	20	1
Swine Plague	15	0
Piroplasmosis	1	0
Rabies	1 (horse)	1 (goat)
Scabies	1 (horse)	0
Strangles	30	19
Equine Infectious Anemia	137	68
Infectious Abortion Cattle		
Trichomonas	86	94
Burucella	7	6
Equine Paratyphus	5	5
Pullorum Disease (fowls)	3,720	7,483
Bovine Tuberculosis	50	163

Monthly Livestock Slaughtering Report

The Veterinary Affairs Section, Ministry of Welfare, reports the following number of livestock slaughtered during the month of October:

	<u>Cattle</u>	<u>Calves</u>	<u>Horses</u>
Number of slaughtered	21,657	1,007	5,773
Live Wt. (kgs)	8,683,382	90,267	1,834,449
Dressed Wt. (kgs)	4,359,116	43,591	921,690
Condemned Ante-mortem	1	0	7
Condemned Post-mortem			
Total	19	3	10
Partial	1,063	23	461
Viscera	3,733	61	813
	<u>Swine</u>	<u>Sheep</u>	<u>Goats</u>
Number of slaughtered	18,764	25	299
Live Wt. (kgs)	1,643,723	883	8,948

Dressed Wt. (kgs)	957,789	399	4,013
Condemned Ante-mortem	2	0	0
Condemned Post-mortem			
Total	2	0	0
Partial	2,330	2	3
Viscera	5,004	1	4

MILK INSPECTION

The Veterinary Affairs Section, Ministry of Welfare, reported the following milk inspection figures for the month of October.

Special Milk

Dairy Farms Inspected	5
Number of samples	13
Over bacterial standards (50,000 per cc)	3
Under butterfat standards (3.3 percent)	1
Plant Inspections	13
Over bacterial standards (50,000 per cc)	3
Under butterfat standards (3.3 percent)	1

Ordinary Milk

Dairy Farms Inspected	10,962
Number of samples	13,249
Over bacterial standards (2,000,000 per cc)	904
Under butterfat standards (3.0 percent)	903
Plant Inspections	6,158
Over bacterial standards (2,000,000 per cc)	512
Under butterfat standards (3.0 percent)	365

Goat Milk

Dairy Farms Inspected	41
Number of samples	42
Over bacterial standards (2,000,000 per cc)	8
Under butterfat standards (3.0 percent)	6

MILK PRODUCTION

The following amounts of milk was produced during the month of October:

	<u>No. of Farms</u>	<u>No. of Milk Animals</u>	<u>Amount Produced</u>
Special Milk	8	138	32,081 Lit.
Ordinary Milk	53,365	100,242	18,044,685 Lit.
Goat Milk	3,256	6,563	366,294 Lit.

SEAFOOD INSPECTION

The Veterinary Affairs Section, Ministry of Welfare, submitted the following inspection report for October on sea-food.

Wholesale Sea-food Markets

Nubmer of establishments	1,368
Number of establishments inspected	918
Sanitary condition	Good 133

	Fair	614
	Poor	172
Total number of inspections		2,584
Amount of sea-food examined		141,432,117 kgs
Amount of sea-food condemned		1,183,350 kgs
Cause for condemnation	Peutrefaction	
Disposition	Fertilizer	

Retail Sea-food Shops

Number of establishments		41,668
Number of establishments inspected		16,018
Sanitary condition	Good	2,062
	Fair	9,895
	Poor	4,117
Total number of inspections		19,183
Amount of sea-food examined		5,033,726 kgs
Amount of sea-food condemned		1,362 kgs
Cause for condemnation	Uncleanliness	
	Staleness	
	Peutrefaction	
Disposition	Fertilizer	

Sea-food Processing Shops

Number of establishments		9,142
Number of establishments inspected		2,737
Sanitary condition	Good	410
	Fair	1,660
	Poor	644
Total number of inspections		4,502
Amount of sea-food examined		1,942,813 kgs
Amount of sea-food condemned		1,817 kgs
Cause for condemnation	Staleness	
	Peutrefaction	
Disposition	Fertilizer	

MEAT PROCESSING

Meat Processing Plants

Number of establishments		1,270
Number of establishments inspected		605
Sanitary condition	Good	56
	Fair	514
	Poor	35
Number of inspections		2,648
Amount of meat examined		243,684
Amount of meat condemned		4 kgs
Cause for condemnation	Peutrefaction	
Disposition	Incinerated	

Meat Retail Shop

Number of establishments		13,125
Number of establishments inspected		8,174
Sanitary condition	Good	2,290
	Fair	4,814
	Poor	1,070

Number of inspections	10,068
Amount of meat	1,077,036 kgs
Amount of meat condemned	164 kgs
Cause of condemnation	Peutrefaction
Disposition	Fertilizer

Note: One establishment in Saitama Prefecture was suspended from business for misrepresentation of business.

FOOD SANITATION

The Food Sanitation Section, Ministry of Welfare, submitted the following monthly report on Food Sanitation for September.

Food Establishments

Number of instructing cases	82,759
Number of inspections	470,608
Number unqualified	70,405
Number of samples collected for examination	4,857
Total samples examined and found satisfactory	3,631

Note: A total of 1,287 food inspectors are engaged in the sanitary inspection of food of other than animal origin.

SECTION IV SUPPLY DIVISION

Production

A total of 4,291 pieces of the various types of DDT dusting and spraying equipment for insect control programs was produced during the period 12 - 18 December.

Distribution of DDT products and typhus vaccine during November totaled 251,398 lbs. of 10% DDT dust, 40,717 gallons of 5% DDT residual effect spray, and 23,913 vials of typhus vaccine. During the month 942,553 lbs. of 10% DDT dust, 142,400 gallons of 5% DDT spray, and 18,970 vials of typhus vaccine were received. Following is breakdown of distribution to prefectures and government agencies:

<u>Prefecture of Department</u>	<u>10% DDT Dust (lbs)</u>	<u>5% DDT Residual Effect Spray (gallons)</u>	<u>Typhus Vaccine (vials)</u>
SAITAMA	50,000	1,120	
ISHIKAWA	4,000	500	
SHIGA	5,000	500	
OSAKA	100,000	25,000	10,000
TOTTORI	2,840		
YAMAGATA			1,070
FUKUSHIMA			250
IBARAKI			500
TOCHIGI			50
GUMMA			113
KANAGAWA			1,300
MIE			10
HYOGO			5,000
YAMAGUCHI			500
Quarantine Stations:			
OTARU			100
HAKODATE			1,250
YOKOHAMA			100
MAIZURU		100	2,500
NAGASAKI			50
MINISTRY OF EDUCATION	500	5	

MINISTRY OF JUSTICE (Prisons, Houses of Detention, Juvenile Prisons, and Reformatories)	48,058	14,112	
TOKYO JUVENILE COURT	1,000	500	
HOKKAIDO AOMORI FERRYBOAT:			
HOKKAIDO	20,000		
AOMORI	20,000		
TOTAL	251,398 lbs.	40,717 gallons	23,913 vials

Distribution

The distribution of medical supplies and equipment during the month of October shows an increase over September distribution in non-controlled medicines, patent medicines, dental instruments, rubber sanitary goods, sanitary materials and medical instruments. Distribution of controlled medicines, dental materials, Japanese Army-Navy surgical instruments and medical supplies decreased from September distribution.

During the month of November, distribution of medical supplies and equipment showed slight increases in some items, such as, controlled medicines, non-controlled medicines and medical instruments; marked increases in patent medicines and dental materials, and decreases in dental instruments, rubber sanitary goods, and sanitary materials. There was no distribution of Japanese Army-Navy surgical instruments or medical supplies during November. (See Table I of Inclosure #3.)

Miscellaneous drugs distributed during October showed marked decreases in all items, except sulfadiazine, which showed a slight increase. November distribution increased over October distribution in both sizes of mapharsen ampoules and bismuth subsalicylate ampoules. The distribution of sulfathiazole tablets in November dropped to less than half of October's distribution. Sulfadiazine tablets have shown a slight decrease. (See Table II, Inclosure #3).

During the month of October biologicals distributed were as follows:

<u>Biological</u>	<u>Quantity Distributed</u>	<u>October</u>	<u>Stock on Hand</u>
Cholera vaccine	1,361,700 cc		33,150 cc
Typhus vaccine	449,830 cc		504,654 cc
Triple Typhoid vaccine	891,350 cc		16,263,500 cc
Diphtheria Toxoid	2,532,090 cc		2,104,200 cc
Diphtheria Antitoxin	57,707 cc		631,020 cc
Smallpox	797,705 doses		—
Anti-rabies	26 doses		—
Anti-rabies (canine)	61,000 cc		10,000 cc

As compared with September distribution, all vaccines showed an increase with the exception of diphtheria antitoxin and the rabies vaccines.

Penicillin distribution during October totaled 15,260 vials of 200,000 oxford units American-made penicillin and 338,211 vials of 100,000 oxford units of Japanese-made penicillin. During November, distribution of American-made penicillin (200,000 oxford units per vial) totaled 9,390 vials and 284,259 vials of 100,000 oxford unit of Japanese-made penicillin. (See Table III, Inclosure #3).

The yen value of distribution of medical instruments for the months of October and November totaled over 35,000,000 yen for each month, with November slightly higher than October. Over 2,000,000 pieces of medical instruments were distributed during each month. (See Table IV, Inclosure #3).

The number of pieces of dental instruments distributed in October increased over September's by more than 300,000 pieces and increased nearly 2,000,000 yen in value. The yen value for dental materials during October remained at 8,000,000 yen. The number of pieces of dental instruments distributed during November decreased by a little more than 100,000 pieces from October with a corresponding decrease in yen value of more than 1,000,000 yen. The yen value of dental materials distributed during November were double that of September and/or October. (See Table V, Inclosure #3).

During October the theft of 300 grams of gold plate and 4 grams of gold plate alloy was reported in Hokkaido.

Distribution of dental precious metals during October totaled over 11,000 grams of gold and 275,864 grams of silver preparations.

The x-ray and electro-therapy equipment distributed during October totaled 1,591 pieces, which is the highest amount distributed in any one month during 1948. Distribution for the month of November totaled 1,374 pieces which is a slight decrease from the month of October. (See Table VI, Inclosure #3).

Distribution of rubber sanitary goods for the month of October totaled 65,854 kgs. and for November totaled 38,736 kgs. Yen value for this distribution totaled more than 37,000,000 yen for October and over 20,000,000 yen for November. These figures, through a fluctuation from other months, constitutes no great difference from the average. (See Table VII, Inclosure #3).

Distribution of textile sanitary materials during the month of October increased for absorbent cotton, gauze, triangular and abdominal bandages and lint over the distribution for September. November distribution shows a decrease from October distribution in all items except lint, which showed a distribution of 2,298 pieces. The yen value of distribution of textile sanitary materials shows an increase of over 100,000,000 yen from September distribution figures and a decrease during the month of November of nearly 100,000,000 yen from October distribution. November distribution was 42,000,000 yen above September distribution. (See Table VIII and IX, Inclosure #3).

Distribution of x-ray film in October increased in all sizes of film except 8×10, 10×12, 11×14, dental film and 35mm rolls. Distribution during the month of November increased in all sizes except 6-1/2 × 8-1/2, 10×12, 11 ×14, 14×17 and 120 rolls from October distribution. (See Table X, Inclosure #3).

During the month of October total of 2,303,015 tablets of santonin was distributed, which is the smallest amount distributed for any month since April 1948. During the month of November, a total of 3,250,280 tablets were distributed, making a marked increase over October distribution. (See Table XI, Inclosure #3).

During the period 12 - 18 December, 2,536 pieces of dusting and spraying equipment were distributed to 14 prefectures as follows:

<u>Prefecture</u>	<u>DDT Dusters</u>	<u>Knapsack Sprayer</u>	<u>Semi-Automatic Sprayer</u>	<u>Hand Sprayer</u>	<u>Engine Sprayer</u>	
Iwate						5

TOTAL	1,784	542		80	124	6

SECTION V
NARCOTIC CONTROL DIVISION

Lecture Program

A new four hour lecture program to commence in January 1949 and covering all applicable points of the Narcotic and Taima (Marihuana) Control Laws will be given the graduating classes at all Medical, Dental, Pharmaceutical, Veterinary-Surgeon and Nursing Schools and Colleges throughout Japan.

Lectures will be given annually to all graduating classes by the personnel of the Narcotic Section, Ministry of Welfare and by the Narcotic Agents and Pharmaceutical Section Chiefs in the Prefectures. They are scheduled to start in January so as not to interfere with student examinations beginning in February.

This program is expected to materially reduce future violations by narcotic handlers of these professional classes.

SECTION VI WELFARE DIVISION

Licensed Agencies for Relief in Asia (LARA)

LARA shipments numbers 111 through 114, of relief supplies for Japan, have arrived in Yokohama. (Note: Shipment Number 110 has arrived but has not been inventoried). These shipments contained 54.27 tons of the following supplies:

- 111th Shipment: Arrived aboard the S.S. Kyska on 15 December and contained 20.25 tons (clothing).
- 112th Shipment: Arrived aboard the S.S. Matt Luckenbach on 16 December and contained 18.33 tons (food, 14.18 tons - clothing, 1.5 tons - medical supplies, including medicines, 2.15 tons - miscellaneous, .5 tons).
- 113th Shipment: Arrived aboard the S.S. Gertrude Maersk on 16 December and contained 10.25 tons (clothing).
- 114th Shipment: Arrived aboard the S.S. Tjiboda on 16 December and contained 5.44 tons (food).

The total LARA relief supply shipments to Japan, as reported, now totals 7,115.67 tons, consisting of the following:

	<u>Tons</u>
Food	5434.33
Clothing	1310.41
Medical Supplies (including medicines)	61.52
Cotton (raw)	207.62
Miscellaneous (soaps, seeds, candles, etc.)	<u>101.79</u>
TOTAL	7115.67

Community Chest - Japanese Red Cross Joint Fund Campaign

Prefectural reports covering the progress of the Community Chest - Japanese Red Cross Joint Fund Campaign reflect a total of 967,250,846.96 yen raised (including pledges) towards the established goal of 1,175,450,000.00 yen or 82.3% of quota raised. (Note: 18 prefectures have reached or exceeded their goal).

The progress of each prefecture in the "Joint Fund Campaign", including the date of their latest report, is given below:

<u>Prefecture</u>	<u>Goal</u>	<u>Amount Collected</u>	<u>Date Reported</u>	<u>Per Cent</u>
Hokkaido	70,000,000.00	60,491,577.00	10 December	86.5
Aomori	11,000,000.00	11,000,000.00	25 November	100.0

Community Chest Funds and Year-End Gifts

There was a rather general practice in December 1947 and January 1948 for many prefectural Community Chest Committees to make available Community Chest funds for “year-end gifts”. These gifts (usually in yen) were distributed to all persons receiving public assistance (under the provisions of the Daily Life Security Law) and varied in different locales from 50 yen to 100 yen per person.

This practice was discouraged since such distribution served no real relief or rehabilitation purpose and dissipated funds that might well have been utilized for a more constructive purpose. It is estimated that approximately 8% of the Community Chest funds were distributed on this basis last New Year Season.

The officials of the Central Community Chest Committee and the Social Affairs Bureau, Ministry of Welfare, have made a careful study of the past practice of using a part of the Community Chest Funds for year-end distribution and since these funds so allocated were distributed through Welfare Commissioners and Minsei-iin, it

was their decision to curb this practice by issuing an official government notification to all prefectural governors, on the subject. This notification sets forth the views of the government and is tangible evidence of the government's interest in the use of private welfare funds as well as their cognizance of government's responsibility in meeting basic needs, with supplemental aid through private welfare enterprise being given when upon proper investigation the supplemental aid is necessary and is not otherwise available.

The content of the official government notification mentioned above is given below for the information and guidance of Military Government Welfare Officers.

SHA-OTSU-HATSU No.230

25 December 1948

TO: The Prefectural Governors

FROM: Director, Social Affairs Bureau, Ministry of Welfare

SUBJECT: Distribution of Year-end Gifts to the Destitutes out of Community Chest Fund.

Information has reached this office that the local Community Chest Committees are planning to make year-end gifts to the destitutes who are receiving institutional or outdoor care through public assistance or who are otherwise in need of such gifts.

It should be cautioned that none of the Community Chest fund, in the form of year-end gift or in any other form, will be expended to meet the deficit in the public assistance program or distributed on a basis of a uniform grants in cash or in kind without due consideration of the individual need for such gifts.

However, this does not prohibit the Community Chest fund to be used by the member agencies in the Chest to give supplementary assistance to the needy persons, provided this is done after careful investigation of the needs of these persons and when such assistance is found to be necessary in the absence of any other means.

Such assistance beyond the public assistance grants may include gifts of special kinds of eye-glasses, if a persons needs them over and above what may be provided for by the public assistance. They may also include magazines, books on items of recreational nature.

While the program of this kind will be directed by the Central and the Local Community Chest Committees, you are requested to supervise the handling of these gifts as cautioned above.

/s/ C. Kimura

Japanese Red Cross Society

Chapter Director's Conference:

A meeting of Chapter Directors and one paid worker each of the 46 prefectural Chapters was held at the National Headquarters (Tokyo) on 16 and 17 December. The following subjects were given consideration and full discussion:

- a. Speeding up organization of Volunteer Services.
- b. Completion Disaster Relief program.
- c. Child Welfare activities.
- d. Home Nursing.
- e. Junior Red Cross programs.
- f. 1948-49 Budgets.
- g. 1949-50 Campaign plans.

Volunteer Special Services:

Steady progress is being made by many Chapters (prefectural) in the development of their Volunteer Special Service program. The following table reflects the development of the Volunteer Service units, as of 15 November:

<u>Prefectural Chapter</u>	<u>Number of Units</u>	<u>Number of Volunteers</u>
----------------------------	------------------------	-----------------------------

Miyagi	13	13,000
Ibaraki	126	3,260
Miyazaki	682	19,681
Nagasaki	46	288
Tokushima	6	136
Mie	11	2,397
Nara	4	4,965
Aomori	2	(not reported)
Wakayama	6	539
Shizuoka	177	20,055
Kumamoto	2	(not reported)
Tochigi	11	5,771
Kochi	34	16,833
Shimane	(not reported)	8,341
Akita	177	30,548
Iwate	13	1,618
Osaka	427	246,506
Fukuoka	114	135,557
Okayama	65	3,518
Oita	214	39,600
Tokyo	101	15,320
TOTAL	2,231	567,933

Disaster Relief Operations:

On 19 December a boarding house located in Akasaka (Tokyo) was completely destroyed by fire and 35 families were rendered homeless. Tokyo Chapter assisted by National Headquarters gave emergency relief (temporary shelter, food and clothing).

Home Nursing Instructor's Course:

Five nurses were enrolled in a Home Nursing Instructor's Course conducted at the National Headquarters (Tokyo) from 29 November through 11 December. Three of the nurses successfully completed the course (2 from Tokyo Chapter and one from Shizuoka Chapter).

Restriction of Population Movement

The present "Law for the Control of Population inflow into Urban Areas" expires on 31 December 1948. During the year 1948 it applied only to the following urban areas: Yokohama, Kawasaki, Yokosuka, Kyoto, Osaka, Sakai, Huse, Kobe, Amagasaki, Wakayama, Shimonoseki, Fukuoka and Yawata.

The Ministry of Construction, by communication dated 9 November 1948, requested approval by this General Headquarters in not continuing restrictions on population movements after 1 January 1949. The communication set forth that all Ministries concerned had deliberated upon the matter and had reached this unanimous conclusion.

The request to not continue restrictions on population movements was approved by PHMJG 84, dated 9 December 1948, for the reason that conditions in general had improved sufficiently (housing, food supply, rationing procedures, transportation, etc.) to not continue these regulations which hinder the return to normalcy as it relates to the free movement of people.

Public Assistance - New Program

With the release of Hatsu-Sha #129, dated 7 December 1948, (partial copy, Part I, attached Inclosure #4) the Ministry of Welfare has inaugurated several important changes in the program presently in use as well as increases in individual grants which are the result of the ration and price increases of 1 November 1948. Welfare Officers will note that the mimeographed material attached is not complete. Due to the bulk and composition of the unattached portion, part II of the ordinance it was not possible to translate and mimeograph it for release this time. It will be forwarded at a later date. Some of the more important changes are:

1. Single persons in or out institutions who are over 60 years of age and other distinctly unemployable single persons may be allowed their full budgetary requirements upon authorization of head of city, town or village. Other single persons and families may be allowed up to 60% of the standard upon local authorization and the additional 40% (or the percentage required) upon authorization by the prefecture. Special authorization for grants over the standard (including special diets) must still be authorized by the Ministry of Welfare. It is believed that complete local authority may be authorized within the next few months.

2. There is no longer a set scale in use based on the “typically” composed family. The present plan allows for the determination of family needs based on the makeup of each family.

3. The plan requires the evaluation of resources and income and determines the method by which this shall be accomplished.

4. Governors, at the request of cities, towns and villages, may decrease the scale on an area basis. Increases over the scale may be authorized for individual cases or for areas by approval of the Ministry of Welfare on presentation of factual information.

5. Artificial feeding expenses, school lunch and school expenses have been included in the standard amount.

The Ministry of Welfare is requesting that the amount of tax allotted locally be increased to assist local communities to meet their obligations.

Correction

TB-PH-WEL-5 dated November 1948, “Glossary of Japanese Welfare Terms”, Section 2, paragraph N, “National Insurance Section, Kokumin Kenko Hoken Ka” should read “Insurance Section, Hoken Ka”. Also refer to TB-PH-ADM-3 dated February 1948, “Administration of Health, Welfare and Social Insurance in Japan”, Section 1, paragraph 7, sub-paragraph a (6) and (7) for translation of insurance terms concerning administrative organization of the prefectural (social) insurance sections.

SECTION VII SOCIAL SECURITY DIVISION

Health Insurance

Notification was received from the Insurance Section of the Welfare Ministry that Article 3 of the Health Insurance Law was amended by the Diet on 23 December. This Article concerns the rates of standard remuneration of insured members for the purpose of contribution assessment and the amendment increased the maximum subject to contribution from 8,000 yen monthly to 13,500 yen monthly. Benefit payments predicated on standard remuneration are likewise proportionately increased.

National Health Insurance

Prefectural National Health Insurance Federations have recently organized a National Health Insurance Central Society as a successor to the former National Health Insurance Reform League. Membership in the society by a Federation is voluntary, and the function of the society is to represent collectively the Federations and their components on issues of national scope vital to the success of the National Health Insurance program.

Accident Compensation for Government Employees

The last Diet adopted legislation which general excluded government workers from coverage under the Labor Standard Law. However, an amendment was made to the National Public Service Law which continued workmen’s compensation protection provided by the Labor Standard Law for government employees until replaced by new legislation of a comprehensive nature. A bill providing complete workmen’s compensation for government workers has been drafted by the Finance Ministry but there is lack of agreement as to jurisdiction and administration procedures.

Undemobilized Persons’ Compensation Law (Law No.182, 1947)

On 13 December the Diet passed amendments to the Undemobilized Persons' Compensation Law which increased the amount of compensation payable to an ex-serviceman or former civilian employee of the army or navy department (gunzoku) upon his repatriation, as well as the amount of family allowance payable to his dependents and the amount of allowance for traveling and burial expense.

These amendments also provide for furnishing medical care to such a repatriated person in need thereof because of illness or injury resulting from a cause arising prior to his repatriation which is not the result of his own fault. A burial expense allowance is also provided for those repatriated persons who die while receiving medical care under this law. There are also provisions for lump sums for physical disabilities in accordance with the degree of disability for those not entitled to compensation for disability under the (Government) Pension Law. Since gunzokus of official rank and all ex-servicemen are covered by the Pension Law the provisions for lump sums will be applicable to only the gunzokus of lower than official rank.

The provisions regarding medical care are effective upon promulgation of the amendments for all such persons repatriated since 2 September 1945, who qualify therefor but do not provide for any reimbursement for medical care obtained prior to the promulgation of the amendments. The lump sum payments for disabilities are provided for all qualified persons who have been repatriated since 2 September 1945. The amounts of the lump sum payments correspond to the amounts provided for comparable disabilities under the Pension Law. Thus, those repatriated after 31 August 1948 will receive larger amounts than those repatriated prior thereto because of the increase in the amounts of benefits under the Pension Law effective on 1 September 1948.

SECTION I GENERAL

Attached hereto as Inclosure #1 are Ministerial Instructions to Prefectural Governments for period 25 October - 4 December.

The following Public Health and Welfare Technical Bulletin is attached (Inclosure #2).

Title: Nursing Affairs

Short Title: TB-PH-Nursing 2

SECTION II PREVENTIVE MEDICINE DIVISION

Availability of Vaccine

A limited quantity of United States produced smallpox and typhus vaccines have been made available to the Ministry of Welfare to meet immediate quarantine requirements and for emergency use in the immunization of contacts throughout Japan. The use of this vaccine does not come under the prohibition of PHMJG 86 or Ministry of Welfare instructions (Yo-hatsu #104 dated 25 December 1948, subject: Re-assay of Japanese Produced Vaccine for Preventive Vaccinations). Distribution is being made by the Ministry of Welfare.

Smallpox vaccine will be available at quarantine ports, particularly Yokohama, Kobe, and Fukuoka (Hakata). It will also be available through the Ministry of Welfare (Koseisho) offices in Osaka (Dr. Morita) and in Tokyo (Dr. Ishibashi).

Typhus vaccine will be available through the Ministry of Welfare (Koseisho) office in Tokyo (Dr. Ishibashi), Osaka (Dr. Morita), Fukuoka (Dr. Sakaguchi), Hiroshima (Dr. Fujii), Nagoya (Dr. Furukata), and Sendai (Dr. Matsui), and at the prefectural health offices in Hokkaido (Sapporo - Dr. Nishino), Fukushima (Dr. Hashi), and in Nara (Dr. Fujii).

These vaccines have been properly refrigerated up to the date of their release to the Ministry of Welfare, and are considered of satisfactory potency. If refrigeration at the proper temperature is continued (below 0° centigrade for smallpox vaccine and 2° to 5° centigrade for typhus vaccine) their potency will be acceptable for the interim period until fresh stocks of approved Japanese vaccines are released.

Tuberculosis Control - Movie Film Recommended

An excellent short film has been prepared showing the health center as the focal spot of tuberculosis control. Tuberculin testing, x-ray examinations, and BCG administration are shown. Graphs showing recent changes in age distribution of tuberculosis deaths are included. The most marked changes are in the BCG inoculated age groups.

It is recommended that Military Government Health Officers encourage the prefectural health department to contact the nearest film library as listed in the Weekly Bulletin No.103 (13 - 19 December) and have them secure this film for showing to the public.

The title is "Myonichi e no Kenko BCG" (Your Health of Tomorrow with BCG). It is produced by Eigan Sha, Ltd., 9 - 8 Nishi Ginza, Chuo Ku, Tokyo, The Civil Information and Education reference number is 447.

This is an excellent educational film suitable for showing both to professional and lay groups including public and private schools and various other organizations.

Orientation Course for Medical Social Workers

A two week orientation course for personnel employed as medical social workers in the model health centers will be held at the Institute of Public Health, Tokyo, from 12 - 26 February 1949. Every effort is being made for this course to be of practical value and thus help the medical social workers to function more effectively in the health centers. Therefore those attending the course are requested to be prepared to report on the number of cases handled during January 1949, the major medical problems of these cases and the principal social problems either

resulting from or relating to the medical problems. Besides lectures giving essential information, the course will include discussions, demonstration and field trips. An official announcement of the course is being sent to the Governors of Prefectures by the Ministry of Welfare.

Sanitation

Insect and Rodent Control

An Insect and Rodent Control supplemental budget has been approved by the Ministry of Finance. The following plan of subsidies have been sent to the prefectures. This money must be matched on a 50-50 basis by the prefectures and is to cover the cost of insect and rodent control during January, February and March 1949.

Water Supplies

The following plan of allocation of the cement quota for the fourth quarter (Japanese FY 1948) for maintenance and repair of water works has been made by the Ministry of Welfare. The original quota of 1500 tons was reduced 35% due to demands from the Japanese export program. This reduction has been prorated on a sliding scale basis whereby the larger requests are cut proportionately more than the smaller ones.

In addition to this allotment of cement, the Ministry of Construction has an allotment of 4500 tons for the fourth quarter for new construction. This allotment is not made through Public Health Department channels but is made through the Ministry of Construction to Prefecture Public Works Department (Civil Engineering Section).

SECTION III SUPPLY DIVISION

Designation of Sulfa Drugs, Penicillin and Streptomycin

The Minister of Welfare, Japanese Government, has designated sulfanilamide and its derivatives, penicillin and streptomycin, and all preparations containing these drugs under Article 41 (g) of the Pharmaceutical Affairs Law, Law No.197, 29 July 1948, by notification published in the Official Gazette dated 27 December 1948.

This designation puts Article 41 (g) and Article 44 (g) of the Pharmaceutical Affairs Law into full operation. These articles are quoted below:

“Art. 41. A drug . . . shall be deemed to be misbranded:

.

g. If it consists of sulfanilamide and its derivatives, penicillin, streptomycin, or any other preparation which the Minister of Welfare shall designate unless its label bears the statement “To be used only pursuant to the prescription or by the direction of a doctor, dentist or a veterinary surgeon.”

“Art. 44. The following acts are hereby prohibited:

.

g. The sale or other distribution of drugs mentioned in (g) of Art. 41 other than to dealers licensed under this Law and to doctors, dentists or veterinary surgeons except pursuant to the prescription or by the directions of a doctor, dentist or a veterinary surgeon; and failure to maintain written record of such sale or other distribution as provided in Ministerial regulation.”

The Enforcement Regulation of the Pharmaceutical Affairs Law (Ministry of Welfare Ordinance No.37, 15 August 1948) states:

“Art. 31. When a proprietor of a pharmacy or a seller of drugs delivers, for the purpose of sale or other distribution, such a drug as mentioned in item. . . (g) of Art. 41 of Law, in accordance with item (g) of Art. 44 of the Law, he shall keep the record in which is written the name of such drugs, quantity and date of delivery, name and address of the doctor, dentist or veterinary surgeon who has issued a prescription or who has directed its use, and the name and address of the transferee.

“The record as provided in the preceding paragraph shall be kept for two years as from the date of delivery.”

According to provision of Art. 56 of the Law any person who has violated the provisions of Art. 44 of the Law shall be subject to a penal servitude not exceeding three years or a fine not exceeding 30,000 yen, or both.

Attention is invited to Article 71 of the law which states:

“Labels and labeling of drugs, devices or cosmetics which are printed as of the date of promulgation of this Law may be used for period of 6 months in spite of provisions of this Law.”

The effective date of the Law is 29 July 1948.

Distribution

A revised distribution system for dextro-maltose (nutrient sugar), malt extract, and rice powder for babies has been established by the Ministry of Welfare and will become effective for the 1st quarter April, May, June (Japanese FY 1949).

The “Mothers and Infants Purchasing Book”, which is presented to a mother at the birth of a child, will be used to distribute these items. The purchase book will, upon presentation at the local pharmacy, be valid for purchase of the total amount allocated for the period, or any fraction thereof. An exchange of name seals will be made to record the transaction in much the same way as controlled medicine sales are recorded.

During the period 19 - 25 December, 1,494 pieces of dusting and spraying equipment were distributed to 12 prefectures as follows:

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsack Sprayer</u>	<u>Semi-automatic Sprayer</u>	<u>Hand Sprayer</u>
Iwate		50	50	
Akita		200		
Ibaraki				130
Tochigi		2		
Chiba		3	3	
Tokyo		2	2	
Kanagawa				200
Osaka	200	50		
Shimane			50	
Fukuoka				50
Oita	500			
Gifu			2	
Totals	700	307	107	380

Production

A total of 5,325 pieces of the various types of DDT dusting and spraying equipment for insect control programs was produced during the period 19 - 25 December.

Ministry of Welfare, Japanese Government, was notified on 18 December, by PHMJG 85, that no objection was offered by this Section to the proposed Minimum Standards for Hexylresorcinol and Its Preparations, submitted for approval by the Pharmaceutical and Supply Bureau, Ministry of Welfare, Japanese Government, (Yaku-hatsu No. 603), under date of 6 November 1948, subject to the following provisions to insure control over the hexylresorcinol already in finished form, manufactured prior to the establishment of these approved minimum standards:

a. Ministry of Welfare will issue instructions to have all stocks at both the central and local sellers returned to the respective manufacturers.

b. Ministry of Welfare will issue instructions to notify all dealers including practitioners, hospitals, and clinics, that any stocks on hand and manufactured before the date of adoption of the new minimum standards may be unsatisfactory and unsafe for use; that these stocks can be returned through the proper channels to the manufacturer for due credit.

c. Any of these products which the manufacturers deem satisfactory, meeting all specifications of the new minimum requirements except for the gelatin coating, will be submitted to the Ministry of Welfare for approval, and will not be permitted distribution without assay and approval by the Ministry of Welfare.

d. The instructions will include all alkyl resorcinol preparations, which means the hexylresorcinol, normal amylresorcinol and iso-amylresorcinol already in distribution. However, in the preceding paragraph (c above), only hexylresorcinol will be considered, since the efficacy and toxicity of the amyl resorcinols have as yet not been determined.

e. Ministry of Welfare will publish these approved minimum standards.

f. Ministry of Welfare will establish hexylresorcinol as a powerful drug.

g. Ministry of Welfare will initiate a wide publicity campaign to inform the professional and the lay public on all phases of this program.

h. Ministry of Welfare will maintain close supervision over the manufacture, assay, and distribution activities, in accordance with the provisions of the PHMJG 85, to insure compliance with the provisions of the Pharmaceutical Affairs Law, Law No.197, 29 July 1948.

The minimum standards describe the physical and chemical properties of hexylresorcinol, outline standards, tests, and assay procedures for the crude drug and for the finished pill, and stipulate the packaging and labeling requirements.

The Ministry of Welfare is responsible to insure that nonebut a satisfactory hexylresorcinol preparation be permitted distribution upon approval of the minimum standards and the subsequent release of hexylresorcinol for distribution.

It is suggested that necessary supervision be exercised over the disposition of the existing stocks which were manufactured prior to the adoption of minimum standards.

The yen value of production of medical supplies (medicines, biologicals, dental instruments, dental materials, rubber sanitary goods, medical instruments and surgical dressings) for November, totaled 2,139,726,723 yen. This total represents an increase of 431,605,729 yen above October production figures for medical supplies and an increase of 188,500,995 yen above the 3rd Quarter, CY 1948 monthly production averages.

Controlled medicine production for November increased approximately 197,030,123 yen. Increases in yen value production for both non-controlled and patent medicines were also noted. Non-controlled items exceeded October yen value by 201,459,206 yen, and patent medicines for November reached 403,485,762 yen, an increase of 85,042,553 yen. The above commodities were visibly effected by the new price schedule established at the beginning of November. However, controlled medicine production remained adequate to provide sufficient quantities of essential medicines for domestic needs.

Production of miscellaneous (pure mapharsen, bismuth subsalicylate injection and sulfathiazole) during November showed a substantial increase for mapharsen and sulfathiazole but a substantial decrease for bismuth subsalicylate injection. Production of bismuth subsalicylate has been far in excess of demand or consumption with the result that inventory stocks have piled up in the hands of the manufacturers who then regulate production schedules according to needs.

November sulfathiazole production is the second largest monthly production reported to date since the initiation of indigenous production. Sulfadiazine production for November totaled 33 kgs. as compared to the 22 kgs. reported for October production.

Production during November of the various sulfa drugs manufactured by a total of 50 producers totaled the following: sulfanilamide 9,140 kgs., acetylsufonamide 3,953 kgs., sulfathiazole 8,519 kgs., sulfamethylthiazole 943 kgs., sulfapyridine 55 kgs., sulfaguanidine 630 kgs., sulfamerazine 571 kgs., homosulfamine, 409 kgs., sulfadiazine 33 kgs.

Biological production during November decreased in yen value approximately 8,852,000 yen below October production. Production activities are being expended to provide the necessary quantities of biologicals to implement scheduled immunization programs complying with the new vaccination and immunization laws.

Production of penicillin during November totaled 406,290 vials of 100,000 oxford units each or a total of 40,629,000,000 oxford units. Of this total, 351,730 vials were of the calcium or sodium salt of penicillin variety and 54,560 vials were the crystalline G type. Of the total of 351,730 vials, 88,712 vials were produced by the surface method and 263,018 vials by the submerged process. Of the total of 54,560 vials, 360 vials were produced by the surface method and 54,200 vials by the submerged process.

While the minimum standards have not yet been established for penicillin in wax, many manufacturers are conducting experiments with a view toward future production of the penicillin in wax.

November production reached a new high, representing a nine billion oxford unit increase over the September production of approximately 31 billion oxford units which up to November had represented the largest monthly indigenous production of penicillin to date.

Medical instrument production during November totaled 2,729,572 pcs. valued at 36,172,450 yen. This production was an increase of approximately 310,000 pcs. and 650,000 yen above the October production. November production represented the largest monthly production ever reported. Concerted efforts are now being made by the medical instrument manufacturers to improve the quality of their products.

Dental instrument production during November decreased approximately 311,000 pcs. although the yen value remained comparable to that of the October production. Dental material production approximately doubled the October production in yen value. In both cases, the November production was in reality a decrease below October production; but, due to the recently increased price schedule, the yen value would make it appear possibly as increased production.

Production during November of glass syringes for domestic use totaled 434,400 pieces of the various types and sizes of syringes. This total represented the largest monthly production ever reported for any month of 1948 to date and represented an increase of approximately 45,000 syringes over the 1947 monthly production average.

Production of laboratory animals during November increased 6,744 animals above the October production. Receipt of increased deliveries of animal feed against scheduled allocations is the reason for this substantially increased production. Available supplies of animals are sufficient to meet the needs of all laboratories.

Production of x-ray film during November totaled 30,222 square meters. This is a decrease of approximately 6,000 square meters below the October production, but still an increase of 6,000 square meters above the 1946 and 1947 monthly production averages. Monthly production quota has been set at 30,000 square meters. Adequate supplies of all types and sizes are on hand to meet all requirements.

Production of x-ray and electrotherapy equipment during November decreased 118 units below the October production. However, inventory stocks of all x-ray and electrotherapy equipment are adequate to meet domestic requirements.

Production of x-ray tubes, both the Coolidge and the Kenotron types, during the period September - November 1948, continued at a satisfactory level to meet domestic requirements. Production is accelerated or decreased according to existing inventory stock levels and consumer demands.

Rubber sanitary goods production for November totaled 32,337.96 kgs, valued at 25,410,134.80 yen, as compared to October production averages of 40,338.82 kgs. valued at 24,022,497 yen. The fact that more of the expensive pieces were produced accounts for the differences from the previous months reported production.

Production of gauze, bandage cloth, and absorbent cotton, during November, from stocks of imported raw cotton totaled 183,365,913 yen. This total represents an approximate decrease, when compared to October production, of 51,000,000 yen. This is a result of the decrease in production, comparing the two months of approximately 66,000 lbs. of gauze, 10,000 lbs. of bandage cloth, and 60,000 lbs. of absorbent cotton.

November production of gauze was 121,187 lbs; October, 187,255 lbs; November production of bandage cloth was 102,605 lbs; October 112,460 lbs; November production of absorbent cotton was 450,863 lbs; October, 510,180 lbs.

Production of hexylresorcinol during November totaled 325.25 kgs. This amount is comparable to the average production for the 3rd quarter 1948, but indicates a decrease of more than 50% of the October production figures.

The production of hexylresorcinol will be substantially increased in the very near future now that minimum standards for assay of the drug in both crystalline and finished coated pill form have been established by the Ministry of Welfare and approved by Public Health and Welfare Section.

Production of all types of insect and rodent control supplies and equipment during November continued satisfactorily. Adequate stocks of all types are on hand to meet all requirements. Production of 10% DDT dust (from Japanese concentrate) totaled 309,100 lbs., an increase of approximately 39,000 lbs., over October production figures, and represented the largest monthly indigenous production of 10% DDT dust from Japanese concentrate for the calendar year. November production of DDT concentrate totaled 40,203 kgs. as compared to 35,585 kgs. for October and 31,792 kgs. for September. This is the largest concentrate production to date, and further increases may be expected in future months.

The attached tables (inclosure #3) indicate production of medical, dental and sanitary supplies and equipment.

SECTION IV NARCOTIC CONTROL DIVISION

Investigations

An investigation was initiated upon receipt of two anonymous letters from Kamakura City in Kanagawa Prefecture. The only identifying information available was "an addict widow living with an old woman." An intelligent narcotic agent succeeded in compiling a list of eighty such "widows living with an old woman" in Kamakura City and by the process of elimination succeeded in identifying the addict widow mentioned in the anonymous letters.

In concentrating on the addicts source of supply, this agent succeeded in meeting the addict in the guise of a "broker", and learned of several sources of illicit narcotics which resulted in the apprehension of nine defendants, the clearing of suspicion of one person, the elimination of one person due to his demise in September 1948, and with one person a fugitive due to lack of identification.

The intelligence, initiative and ability displayed by the narcotic agent in successfully completing this investigation deserves the "Commendation" of having the details of his investigation disseminated to all other narcotic agents as an aid to them in similar circumstances. This will be disseminated through Japanese channels.

Check of "Not Guilty" Defendants

The Weekly Bulletin of 11 October 1948 mentioned in "Narcotic Control Activities Report - August", that for the first time since June 1946 (effective date of Narcotic Control Regulations in Japan), two defendants charged with narcotic violations were found "not guilty" by the courts.

A check of these two cases disclosed that one defendant should not have been prosecuted, as the evidence seized was determined upon analysis to be "acetanilid", a medical drug, and not a narcotic. The second defendant was apprehended with possession of Opistan (Demerol) shortly after this medicine was directed by Ministerial Order, to be handled under the narcotic control system, and could not be prosecuted under such conditions. The Narcotic Control Law of 10 July 1948 effectively covers Opistan and all brands of Demerol and similar products.

SECTION V WELFARE DIVISION

Community Chest-Japanese Red Cross "Joint Fund" Campaign

The "Joint Fund" campaign of the Community Chest and the Japanese Red Cross Society has now exceeded one billion yen. The latest consolidation of prefectural reports covering the progress of the campaign reflects a total of 1,005,968,747.93 yen raised (collections including pledges) toward the established goal of 1,175,450,000.00 yen or 85.5% of quota.

Twenty-one prefectures have, according to reports received up to 30 December 1948, reached or exceeded their quotas. The progress of the campaign, by prefectures, setting forth goals, amounts collected (including pledges) and last reporting date, is given in the table below:

<u>Prefecture</u>	<u>Goal</u>	<u>Amount Collected</u>	<u>Date As of:</u>	<u>Per Cent</u>
Hokkaido	70,000,000.00	64,496,489.00	27 Dec.	92.1
Aomori	11,000,000.00	11,000,000.00	25 Nov.	100.0
Iwate	17,000,000.00	17,023,964.00	1 Dec.	100.2

Total	1,175,450,000.00	1,005,968,748.93		85.5 %

Licensed Agencies for Relief in Asia (LARA)

Reference, Public Health and Welfare Weekly Bulletin, No.104 (for the period 20 - 26 December 1948).

Overseas shipment, number 110, which was not reported in the previous report, reference above, has now been inventoried and is as follows:

110th Shipment: Arrived aboard the S.S. City of Alma on 15 December and contained 44.42 tons (food, 21 tons - clothing, 22.24 tons - miscellaneous, 1.18 tons)

The total LARA relief supply shipments to Japan, as reported, now totals 7,160.09 tons, consisting of the following items:

	<u>Tons</u>
Food	5,455.33
Clothing	1,332.65
Medical Supplies (including medicines)	61.52
Cotton (raw)	207.62
Miscellaneous (soaps, seeds, candles, etc.)	<u>102.97</u>
Total	7,160.09

The 7th Coal Output Increase Encouragement Entertainers Group (Hokkaido District), under the sponsorship of the Coal Mine Culture Development Association and with the endorsement of the Information Division of the Economic Stabilization Bureau, engaged Mr. Otsuji, an outstanding Japanese comedian to entertain their members.

Mr. Otsuji, at the close of each of his performances, before groups of miners in the Hokkaido area, made an appeal for contributions to be used through LARA, for the care of orphans. The response to Mr. Otsuji's appeals were spontaneous and the contributions (varying in amounts from 50 sen to 1 yen) from the several thousands attending the performances totaled 98,202.02 yen, which amount was transmitted to LARA on 27 December 1948.

The instance of voluntary group participation by Japanese to assist with and contribute to the LARA program is praiseworthy however it is recommended that such contributions, when collected, be collected for the purpose of supporting an indigenous recognized private charity enterprise such as the Community Chest or Japanese Red Cross. LARA was not organized to accept money contributions from the Japanese people. To further and strengthen indigenous private welfare agencies every encouragement should be given these agencies through increased public support. (Note: Contributions in money, for Japanese Nationals, from Allied personnel and their dependants, individually or as groups (clubs, organizations, etc.), is to be forwarded to LARA through Public Health and Welfare Section, SCAP. This is in conformity with the current SCAP policy of non-participation by Allied personnel, unless authorized by SCAP, in the administration and operation of indigenous welfare and relief activities.

Japanese Red Cross Society

First Aid (18 hours instruction)

Miyagi Chapter: First aid course held between the dates 24 November - 3 December. Eighty-one persons were enrolled in the course with 56 (28 men and 28 women) successfully completing. The classes were held in the Red Cross Hospital (Sendai).

Tochigi Chapter: First aid course held between 5 - 10 December. Thirty-one persons were enrolled with 24 persons satisfactorily completing the course.

Shiga Chapter: First aid course held between 13 - 22 December. Complete report not received.

(Note: These First Aid Courses were attended by representatives from hospitals, police departments, fire departments and public schools).

Junior Red Cross

The Akashi Middle School, (Tokyo) is the first school to attempt a new and novel method in International Correspondence. This school, in which all students are enrolled in the Junior Red Cross, have received an album (International Correspondence) from the American Junior Red Cross. In reply, the Akashi Juniors have recently completed their album and before transmitting it to the American Junior Red Cross they decided to add "recorded greetings". On 14 December, at the Nippon Kokan Studio, a Japanese Junior Red Cross song was recorded on one side of the record and on the other side their greetings were expressed (in Japanese by a girl and in English by a boy). The text of the greeting given in English is as follows:

"Our Dear American Friends: Thank you ever so much for the lovely albums you sent across the west Pacific. We're sending you our hearty thanks.

“The album of your warm friendship made us feel as if it had been a bright sunshine pouring over us who had been suffering from many kinds of difficulties after the war.

“In order to repay your kindness we have made an album. We wonder if it is good enough, but we made our best effort to answer you, the pupils of the country of science. We do hope you would appreciate our effort and like it.

“We’ll be so happy, if this will make a start for the friendship between you and us, through International School Correspondence, the most charming activity of Junior Red Cross.

“As Spring comes after Winter, soon we’ll have pleasant spring in the heart of all the people in the world. We know it needs the effort of our Junior Red Cross members. Isn’t it a big job? Let’s do our duty, helping all together, hand in hand, Good-bye and good luck”.

Medical Social Work

Reference paragraph in Preventive Medicine Section of this Bulletin announcing an Orientation Course for Medical Social Workers of the Model Health Centers which is to be held during the period 14 - 26 February inclusive at the Institute of Public Health, Tokyo.

A three-months course in medical social work for those who wish to train for positions in this field is to be offered by the Japan School of Social Work, Tokyo. This course to begin 1 April. Requests for information and/or applications should be forwarded to the Japan School of Social Work, 266-3 Harajuku, Shibuya-ku, Tokyo.

Social Group Work Training Courses

Miss Dorothea Sullivan, professor of group work at the School of Social Work, Catholic University, Washington, D.C. will conduct two courses, each of two weeks duration, in group work (one at the Osaka School of Social Work and one at the Japan School of Social Work, Tokyo).

The course at Osaka will be from 24 January through 5 February. Requests for additional information relative to this course may be obtained from the Osaka School of Social Work, 2 Tajima Machi, Minami Ku, Osaka.

In Tokyo, the course will be held between 14 - 25 March inclusive. Requests for further information should be sent to the Japan School of Social Work, 266-3 Harajuku Shibuya Ku, Tokyo.

Each course is limited to 35 students and it is mandatory that students who do not commute provide their own board and room. Final selection of students will be made from among the applicants by a committee from each school. The Tokyo Committee has set up the following rules and qualifications for applicants:

- a. Applications must be submitted on or before 15 February.
- b. Registration fee - 200 yen.
- c. Minimum age - 22
- d. Minimum education - Middle school graduate
- e. Minimum experience - 2 years full-time position in a public or private social agency or in the field of education.

Each applicant is requested to submit a statement as to their previous experience with groups either as a member or a leader and to include in the statement their reasons for desiring to attend these course and the expected value these courses will bring to them in their future work. This course will be of special benefit to personnel now employed in institutions handling children in age groups from 7 to 18 years of age.

SECTION VI SOCIAL SECURITY DIVISION

Coverage of Local Government Employees

The Allowance Bureau of the Ministry of Finance and the Insurance Bureau of the Ministry of Welfare have provided the following clarification of the social insurance coverage of local government employees:

1. Government employees, national and local, are covered by the Health Insurance and Welfare Pension Insurance Law, except those who are members of Mutual Aid Associations.

2. Included in Mutual Aid Associations are:

- a. Generally, all national employees.
- b. Prefectural employees and city library employees - Local Public Bodies Mutual Aid Association.
- c. Teachers in public schools, regardless of status of national or local employee - Public Schools Mutual Aid Association.
- d. Teachers in national schools. National School Mutual Aid Association.
- e. Police and firemen - Police and Firemen's Mutual Aid Association.

3. In the event the employees of a city, town or village government are members of the National Health Insurance program, they may be exempt from participating in Health Insurance.

SECTION VII
MEMORANDA TO THE JAPANESE GOVERNMENT

<u>PHMJG</u>	<u>DATE</u>	<u>SUBJECT</u>	<u>SURVEILLANCE</u>	<u>DISTRIBUTION</u>
86	12/28/48	Suspension of Use of Japanese Product Vaccines for Preventive Vaccinations	Yes	MG 8th Army

Note: Directive to Ministry of Welfare approving plan for temporary suspension of all vaccines until certain deficiencies are corrected.

87	12/27/48	Supplementary Food Ration to Foreign Nationals	No	MG 8th Army
----	----------	--	----	-------------

Note: Directive to Ministry of Welfare approving plan to supply certain supplementary foods to Foreign Nationals as replacement for imported canned goods not delivered in October.

CRAWFORD F. SAMS
Brigadier General, Medical Corps
Chief

5 Inclosures:

1. Ministerial Instructions to Prefectural Governments, period 25 Oct - 4 December.
2. TB-PH-Nursing 2.
3. Tables of Distribution of Medical Supplies and Equipment, January - November 1948.
4. Monthly Summary of Vital Statistics in Japan - October 1948.
5. Weekly Report of Communicable and Venereal Diseases in Japan for week ending 25 December 1948. (No Restricted Annex included in this Issue).

SECTION I
GENERAL

Streptomycin and Tuberculosis Control

With the initiation this month of plans for a commercial production program for streptomycin another important milestone in pharmaceutical affairs in Japan has been passed. Already penicillin, sulfathiazole, bismuth subsalicylate, mapharsen and DDT production programs introduced into Japan by Public Health and Welfare Section have reached proportions where minimum needs for public health use are being supplied from indigenous manufacture.

The value of streptomycin in the treatment of certain types of tuberculosis is recognized by Ministry of Welfare officials. Several laboratories in Japan have been engaged in streptomycin research for approximately two years, but they have been unable to produce a strain that will yield streptomycin in suitable quantities for commercial production.

The Japanese Government submitted a request to SCAP for a supply of American strains. Subsequently Public Health and Welfare Section, through the Office of the Surgeon General, succeeded in having shipped to Japan cultures of *Streptomyces Griseus*, which cultures are the basis for commercial production throughout the world. This strain was isolated at Rutgers University by Dr. Selman Waksman, and the Rutgers Foundation holds the United States patent rights.

The cultures were released to the Japanese Government by SCAPIN 6265-A, dated 28 December 1948, subject: Patent Property of Rutgers Foundation (United States). This directive states:

“The Japanese Government is directed to accept on behalf of the Ministry of Welfare release of American strains of streptomycin from General Headquarters, Supreme Commander for the Allied Powers under the following conditions:

“a. These strains of *streptomyces griseus* are for use in the National Institute of Health of Ministry of Welfare, Japanese Government, and in other laboratories engaged in streptomycin research and production under auspices of the National Institute of Health.

“b. These strains are to be accepted subject to further conditions of use to be issued at a later date to be incorporated in a license agreement governing said use, as stipulated by Rutgers Foundation, the patent owner.”

Plans are now being formulated and studied to enable the expeditious initiation of commercial production. It is expected that by the end of 1949 commercial production will have reached a volume to satisfy minimum needs in Japan.

In order to have a supply of streptomycin available for use until commercial production of indigenous streptomycin is available, a quantity of the finished medicine, sufficient to satisfy needs for selective treatment of indicated cases, has been requested for import from the United States on the regular import program. This request was approved in Washington. The shipment is scheduled to arrive in Japan within the next month to six weeks.

Technical information concerning the use of this drug is being made available to the medical profession through the Japanese medical periodicals.

It is expected that Military Government Health Officers will shortly receive many inquiries concerning the use of this drug for the treatment of tuberculosis. An excellent article on the subject which appeared in a recent issue of the Medical News Letter (U.S. Navy) Volume 12, No.3, is quoted below for the information of Military Health Officers.

“Streptomycin in Tuberculosis: Shortly after it was shown that streptomycin inhibited the growth of *Mycobacterium tuberculosis*, Feldman and Hinshaw applied the drug to tuberculous guinea-pigs with favorable results and were able to report its salutary effects on certain types of tuberculosis in human beings. A few individual investigators, the Veterans Administration and the Army and Navy, the United States Public Health Service, and the Therapy Committee of the American Trudeau Society have, altogether, studied the effects of the drug in about 2,000 patients, with results which suggest the following deductions:

(1) Streptomycin should be tried in all cases of military tuberculosis, for more than half of such patients will be alive, and a substantial number of them will be free from clinical, x-ray, or laboratory signs of disease from 6 to 12 months after discontinuation of the drug.

(2) The use of the drug in tuberculous meningitis is mandatory, for about one fourth of all patients have survived for from 6 to 12 months after treatment, and the majority of these are free from detectable signs of tuberculosis.

(3) Acute tuberculosis pneumonia or exudative (fresh) tuberculous disease of the lungs will usually show recession, with notable clearing of the lungs demonstrable roentgenographically within a few weeks. Tubercle bacilli disappear from the sputum in about half of these cases. Such patients, however, need still further sanatorium care.

(4) Extra pulmonary tuberculosis is under detailed study, but already it appears that tuberculous laryngitis and bronchitis are benefited by the use of streptomycin in about 85 percent of cases, even through the parent lesion in the lunge may show no improvement. Tuberculous enteritis and cystitis likewise tend to improve. In fact, in areas in which the disease affects the epithelial surfaces, results are generally good; cutaneous sinuses are benefited. However, tuberculosis of the osseous and genito-urinary systems needs further study.

(5) Streptomycin is used profitably at times to enhance the patient's chances from collapse therapy and as a prophylactic in surgical treatment, particularly pulmonary resection.

In the face of these relatively good results, however, the average case of fibrocavernous tuberculosis has been found as yet to respond poorly to streptomycin, this type represents three fourths of all cases of the disease. It is still under intensive study. Moreover, the toxicity of the drug and the development of streptomycin-fastness by M. tuberculosis are disturbing factors.

In the early experience with this drug, with large doses of 2, 3, or even 5gm a day, toxic symptoms were very common even with a standard dose of 1.8gm, vertigo developed in approximately 92 percent of one large series of patients. McDermott, among others, has pointed out the common indices of toxicity. Vestibular dysfunction predominates, characterized by vertigo, dizziness, headache, and nausea, some of which are present to some degree in almost all patients who take large doses. Vertigo occurs in 20 percent or more of those receiving 1.0gm. per day, which is now the prevailing dose. It may be permanent. Deafness, partial or complete, has been observed. It occurs rarely except when the drug is applied intrathecally for tuberculous meningitis or (less often) in persons with impaired renal function who receive large doses. Further damage to the kidneys may occur in this latter group, a fact which indicates the propriety of determining the condition of the urinary tract prior to administration of the drug. In patients with already lowered renal function, blood levels may become high and various toxic symptoms ensue. Other indications of toxicity are anaphylactic manifestations - fever, itching, dermatitis and eosinophilia - and agranulocytosis. The latter appears in less than 1 percent of cases and is usually an indication for prompt discontinuation of treatment.

The development of streptomycin resistance by M. tuberculosis occurring rather regularly, presents a serious obstacle in use of the drug. Whether this represents biological adjustment to a new environment or the survival and increasing preponderance of natively resistant bacilli in the diseased body is not known. Once it becomes manifest, however, it appears to persist, and resistant strains have been maintained in culture for considerably over a year and have passed through animals without reverting.

The production of resistant strains should be a serious consideration in the therapeutic use of streptomycin in patients manifestly unlikely to recover because the spread of such strains could conceivably become a grave public health hazard. To obviate this, careful selection of case and frequent in vitro examination after the first 6 weeks of treatment are indicated, but continuation of the drug beyond 6 weeks is to be discouraged.

In general, streptomycin should be withheld in cases of minimal tuberculosis and in those in which conventional treatment offers reasonable prospect of good result. It provides an excellent medium of treatment for certain types of tuberculosis, but it should be used in association with accepted therapeutic measures and not as a substitute for them. A tendency is at present developing to use the drug only as an adjunct rather than as a definitive treatment in all types of tuberculosis except the military and meningitic forms, and to apply it briefly for 3, 4, or 6 weeks at the most opportune time with other appropriate therapy. (Editorial, Radiology, June '48-H. S. Willis).

At a press conference on 28 December, the Japanese public was informed regarding the streptomycin program as well as the following additional facts on the tuberculosis control program.

“Tuberculosis is the most important public health problem in Japan, since it is the greatest killer of people in this country.

A tuberculosis control program has been placed into effect and certain phases of this program have been in operation for several years since the termination of the war:

First: Active cases of tuberculosis which had left hospitals because of the food shortage have been induced to come back into the hospitals for treatment, by obtaining the proper supplementary rations essential in the treatment of tuberculosis patients.

Second: Mass x-rays of children and industrial groups have been undertaken to locate active cases tuberculosis who are spreading the disease to others, and who for their own benefit also should be placed in hospitals for treatment.

Third: In an effort to build up body resistance of Japanese children to all diseases, particularly tuberculosis, a School Lunch Program was inaugurated to provide for these children the type of food, principally protein and calcium, in which their normal are deficient.

Fourth: An extensive BCG program is being carried out. Individuals from infancy to thirty years are tested with tuberculin to determine whether or not they have already been infected with a human tubercle bacillus. If they have not already been infected, they are immunized with BCG, which will prevent most of the cases of tuberculosis occurring in the future.

These steps are all important steps in reducing deaths from tuberculosis in Japan, but we are still faced with the hundreds of thousands of Japanese who are already infected with human tubercle bacillus, many of whom can be saved from death from this disease, if properly treated.

Within the last few years, streptomycin has been developed in the United States and has been found, after extensive tests, to be very effective in early tuberculosis cases before cavities have been formed in the lungs, in the cases of pulmonary, or lung tuberculosis. It is also effective in generalized tuberculosis; that is cases in which tubercle bacilli have spread throughout the body, to other organs than the lungs. It is effective in tuberculosis meningitis, which is fairly common in Japan. Streptomycin reaches the infected tissues through the blood stream. In tuberculosis cases of long standing, such as those cases in which large cavities in the lungs have been formed, we find that these cavities are thick-walled. Streptomycin is not effective in these cases because the streptomycin being carried by the blood stream cannot reach the tubercle bacilli who are protected by those thick-walled cavities.

Cases of tuberculosis which are treated with streptomycin must be in hospitals under the constant observation of their doctors, because the drug and its effects must be watched very carefully. If given in too large doses or in certain types of cases, it will be harmful, rather than beneficial. Experience has shown that streptomycin treatment is effective within 40 to 60 days. Cases which do not respond within this time usually do not benefit by longer treatment with streptomycin. In order to take full advantage of the beneficial effect of streptomycin in cases which are benefited, it is necessary for the patient to continue the usual methods of bed rest and the high caloric diet to assist his body in overcoming the ravages of his disease.

As a result of the steps taken in the tuberculosis control program outlined above in discovering active tuberculosis cases and inducing them to enter hospitals for treatment, tuberculosis beds in Japan, which were only one-fourth occupied at the termination of the war are now filled. If the Japanese people are to have the full benefit from the action of the Supreme Commander in obtaining streptomycin for treatment of tuberculosis cases, more tuberculosis beds must be made available within the next one to two years, to provide facilities for treatment of these active cases who are awaiting admission to tuberculosis sanatoria where they will receive the benefit of proper treatment, including streptomycin. This is important in the economic recovery of Japan. The economic loss to industry of skilled workers through prolonged absenteeism and chronic invalidism or death, when converted into yen, is tremendous. True economy is to avoid this loss by the preventive measures and by the early detection and treatment of individuals who have already become infected.

The introduction of streptomycin into Japan is an important landmark in the tuberculosis control program being sponsored by the Supreme Commander for the Allied Powers.”

SECTION II
PREVENTIVE MEDICINE DIVISION

Availability of Vaccine

Reference Section II, Weekly Bulletin No.105 for period 27 December 1948 - 2 January 1949.

In correction of the reference item, above subject, smallpox vaccine for local government use in the immunization of contacts may be obtained from the following Koseisho offices:

Tokyo -----	Dr. Ishibashi
Osaka -----	Dr. Morita
Fukuoka -----	Dr. Sugino

Typhus vaccine for the same purpose may be obtained from the following Koseisho offices:

Sapporo -----	Dr. Nishino
Sendai -----	Dr. Matsui
Tokyo -----	Dr. Ishibashi
Nagoya -----	Dr. Sakaguchi
Osaka -----	Dr. Morita
Hiroshima -----	Dr. Fujii
Takamatsu -----	Dr. Omori
Fukuoka -----	Dr. Sugino

Smallpox vaccine for quarantine use was distributed to quarantine stations at Yokohama, Kobe, Moji, Hakata, Nagasaki, Sasebo, Miike and Kagoshima. Typhus vaccine for repatriates was sent to Sasebo only.

Typhus Fever Control

Several cases of typhus fever have been reported from various prefectures among persons recently repatriated from the island of Karafuto near Hokkaido. These persons, according to reports from the Ministry of Welfare, were passengers on board the ship SHINKO MARU, which docked in Hakodate on or about the 27th of November. The passenger list included 1,520 persons.

Since 3 December these persons have traveled to at least 27 prefectures including Aichi, Akita, Aomori, Chiba, Ehime, Fukushima, Hokkaido, Hyogo, Ibaraki, Ishikawa, Iwate, Kanagawa, Kagawa, Kagoshima, Kochi, Kyoto, Miyagi, Miyazaki, Nara, Niigata, Saga, Saitama, Shizuoka, Tochigi, Tokyo, Yamagata and Yamanashi.

According to reports from the Ministry of Welfare and from the Hokkaido Military Government District, all persons on this ship were given complete immunization (two- 1 cc doses typhus vaccine) and were thoroughly dusted with 10% DDT dust, so that the danger of spreading typhus from these people has been minimized.

Since it is known that typhus may occur in previously immunized persons following a prolonged period of incubation, a careful check of these and other recently repatriated persons is recommended, particularly those from northern islands or from Manchuria, Siberia, and China.

Suspension of Vaccinations and Re-assay of Vaccines

Reference Section II Weekly Bulletin Number 104, 20 - 26 December 1948, PHMJG #86, dated 28 December 1948, subject, "Suspension of Use of Japanese Produced Vaccines for Preventive Vaccination," and Yo-Hatsu Number 104, dated 25 December 1948 subject, "Re-assay of Japanese produced Vaccines for Preventive Vaccinations."

Detailed plans have been worked out for the re-evaluation of all laboratories producing biologic products in Japan, as well as the re-assay of all current stocks of Japanese produced vaccines. Two separate methods of approach are being utilized for the re-evaluation procedures.

First, the Ministry of Welfare is conducting an extensive and thorough survey in order to accurately determine the ability of each manufacturing laboratory to produce satisfactory biologic products. This survey when completed will contain complete and detailed information pertaining to the facilities of each laboratory producing

biologic products for human use. It will also contain biographical data including technical training and experience of each person actually engaged in, or responsible for, the production of biologic products in those laboratories. An evaluation will be made of the procedures and techniques employed for the manufacture of each specific biologic product by each manufacturer. Only those laboratories which are able to meet established minimum standards will be re-certified and even then they will be certified for the production of specific products only.

Second, the facilities, procedures and techniques of the government assay laboratory (NIH) are being carefully checked in order to ascertain that the most effective techniques are in use. The assay procedure for each and every product is being studied in the greatest detail. Improved techniques will be substituted for those now in use wherever indicated.

Evaluation of the methods used for the assay of smallpox, typhus and triple typhoid (TAB) vaccines have been completed and re-assay of these products is now underway. Re-assay of other biologic products will begin as soon as the specific assay procedures concerned have been evaluated and actual arrangements for re-assay of these products have been completed.

SECTION III NUTRITION BRANCH

Nutrition Survey

Complete data on nutrition survey for the "Rice Year 1947-1948" (November 1947 through August 1948) are given in the following tables (Incl. No.1) and include:

1. Sources of staple and supplemental foods in total for Tokyo and 11 cities as well as for the farmers and non-farmers groups in these urban areas.
2. The grams of various classes of food consumed with the complete nutritional analysis for all urban and rural areas surveyed.
3. Physical data of the national nutrition survey on deficiency symptoms and weight deviations for Tokyo, 11 Cities and 46 prefectures for the First Year 1947-1948.

SECTION IV NURSING AFFAIRS DIVISION

Education

Another four-month refresher course for clinical nurses will open 1 February at the Red Cross Hospital in Tokyo. This course will provide the training to enable instructors and supervisors to teach in the schools of nursing.

This will be the last refresher course that will be sponsored by the Nursing Affairs Division. Subsequent courses will be given by the Nursing Affairs Section of the Ministry of Welfare.

Notification, dated 5 January, was sent to the Prefectural Departments of Health giving the names of the nurses who are to attend this course. It is recommended that the nurse attends whose name is listed as she has been selected as the person most capable of teaching and carrying on the program. All other letters and announcements are void. Six nurses from each region have been chosen.

Public Health

There are 56 public health nurses attending the four-month refresher course at the Institute of Public Health. Forty-four Prefectures are represented this term which consist of:

Lectures	350 hours
Field work	120 "
Field trip	10 "
Discussion	<u>10</u> "
	490 "

Tuberculosis for Public Health Nurses

The five-month course on Tuberculosis for public health nurses opened 10 January in Tokyo. This course is sponsored by Anti-Tuberculosis Association.

Clinical Nurse Curriculum for Class "A" Schools

A curriculum, divided into quarters for the three years, has been sent to all Military Government Nurses for guidance in the clinical nursing course.

SECTION V VETERINARY AFFAIRS DIVISION

Veterinary Conference

A Conference for English Army Military Government Veterinarians held in Yokohama was attended on 4, 5, 6 January by Public Health and Welfare representatives. Papers on veterinary subjects as related to Japan were given by each member present. Open discussions were held on those problems current to the maintenance and improvement of Japanese veterinary programs both as to the existing as well as the proposed new programs. As a result of this conference, liaison between the men in the field, Eighth Army Military Government Headquarters and SCAP will be improved.

Veterinary Education Text Books

A conference was held with a temporary committee appointed by the Veterinary Affairs Council for the purpose of considering the revision of current Japanese Veterinary Text Books, by their respective authors, in an effort to replace obsolete text books now in use.

Animal Diseases

The Animal Hygiene Section, Ministry of Agriculture and Forestry, reported the following outbreak of animal diseases:

<u>Prefecture</u>	<u>25 - 31 December</u> <u>Disease</u>	<u>No. of Cases</u>
Aichi	Swine Erysipelas	1
	<u>1 - 7 January 1949</u> Negative	

SECTION VI SUPPLY DIVISION

Contraband

SCAP Circular 23, dated 7 July 1948, subject: "Contraband", provides for seizure and disposition on contraband by Occupation Forces authorities. Procedure has been established whereby disposition of confiscated medicines, food, clothing and tobacco items, which are not from Army sources, is the responsibility of Public Health and Welfare Section. These items are to be turned over to the designated agency of the Ministry of Welfare by the Deputy Contraband Administrator and used for relief purposes. Instructions now in preparation will require the Ministry of Welfare to designate agencies for receipt of this contraband, make proper distribution for relief use, maintain adequate records and submit necessary reports. More information on this subject will be published in future Weekly Bulletins.

Production

A total of 1,202 pieces of the various types of DDT dusting and spraying equipment for insect control programs was produced during the period 26 December - 1 January.

During the period 12 - 18 December, 25,000 lbs. of 10% DDT dust, 5,000 gallons of 5% DDT residual effect spray, and 6,943 vials of typhus vaccine were distributed. At the same time, 230,000 lbs. of 10% DDT dust, 20,000 gallons of 5% DDT spray, and 370 vials of typhus vaccine were received leaving inventory stocks on hand at regional warehouses of the Ministry of Welfare of 2,570,065 lbs. of 10% DDT dust, 643,081 gallons of 5% DDT spray, and 13,476 vials of typhus vaccine.

During this period an additional total of 2,880 vials of typhus vaccine (United States produced imported vaccine now out-of-date) upon reassay failed to pass potency tests of minimum standards. This amount has been discounted from inventory stocks and destroyed.

During the period 19 - 25 December, 5,000 gallons of 5% spray were distributed and 193,000 lbs. of 10% DDT dust were received leaving stocks on hand in regional warehouses of the Ministry of Welfare and factories of 2,748,065 lbs. of 10% DDT dust, 617,081 gallons of 5% DDT spray, and 34,027 vials of typhus vaccine.

During the period 26 December - 1 January, 15,000 lbs. of 10% DDT dust was received. No.5% DDT residual effect spray was received or distributed. Stock inventories in regional warehouses of the Ministry of Welfare and manufacturers total 2,743,065 lbs. of 10% DDT dust, 595,131.5 gallons of 5% DDT spray, and 34,027 vials of typhus vaccine.

A breakdown of solid fuel allocations (standard coal and lignite) by districts and prefectures for January, February, March, the 4th Quarter, Japanese Fiscal Year 1948, for use in national hospitals and sanatoria and for use in public and private hospitals and sanatoria is included in Inclosure No.2. Ministry of Welfare officials have mailed allocation tickets directly to the hospitals concerned, and have likewise notified prefectural health officials of the final coal allocations to those installations. (Unit: Metric ton).

A similar breakdown is furnished in Inclosure No.3 of solid fuel allocation (Standard Coal, sub-standard coal, and lignite) by districts and prefectures for use in public bath houses for January, February and March (Unit: Metric ton). Allocation tickets were mailed direct to the consumers while the Ministry of Welfare at the same time, notified each prefectural health office by mail of its detailed prefectural allocation breakdown.

Distribution

During the period 26 December 1948 - 1 January 1949, 248 pieces of DDT dusting and spray equipment were distributed to three prefectures as follows:

Prefecture	DDT Duster	Knapsack Sprayer	Engine Sprayer
Tokyo	120		
Yamagata		126	
Nagano			2
Total	120	126	2

SECTION VII NARCOTIC CONTROL DIVISION

Narcotic Control Activities Report - November

The November report on narcotic control activities from the Ministry of Welfare contained the following information:

Total Registrants	93,561
Arrests- Registered persons	14
Unregistered persons	68
Convictions - Registered persons	14
Unregistered persons	41
Thefts of narcotics (including one hospital)	20
Losses by fire and flood	1

Penalties for registrants varied from ¥ 500 fine to ¥ 15,000 fine and three months penal servitude to ten months penal servitude, all penal servitude being abrogated by suspension of the sentences covering from two years to four years. Penalties for non-registrants varied from ¥ 500 fine to ¥10,000 fine and three months penal servitude

to two years penal servitude, including nine suspended sentences covering from two years to three years. Ten registrants and two non-registrants were admonished for minor violations.

The report also summarized the activities of narcotic agents as follows:

Inspection of registrants	925
Investigations originated	187
Investigations concluded	144
Investigations not concluded	284

Prosecution of five non-registrant violators of the Marihuana Control Law resulted in the following:

Four defendants ---- three months penal servitude each.
 One defendant ----- ¥ 300 fine.

SECTION VIII
WELFARE DIVISION

Licensed Agencies for Relief in Asia (LARA)

Overseas shipments, numbers 115 and 116, have arrived in Yokohama and contained 14.08 tons. These shipments included the following relief items:

115th Shipment: Arrived aboard the USAT Republic on 23 December 1948 and contained 8.07 tons (food, 4.65 tons clothing, 3.42 tons).

116th Shipment: Arrived aboard the USAT Ogelthorpe Victory on 27 December 1948 and contained 6.05 tons (clothing, including shoes, 6.01 tons miscellaneous, .04tons).

The total LARA relief supply shipments to Japan, as reported, now totals 7,174.21 tons, consisting of the following items:

	<u>Tons</u>
Food	5,459.98
Clothing (including shoes)	1,342.08
Medical Supplies (including medicines)	61.52
Cotton (raw)	207.62
Miscellaneous (soaps, seeds, candles, etc.)	<u>103.01</u>
Total	7,174.21

Cooperative for American Remittances to Europe, Inc. (CARE)

The following report covers "CARE Operations in Japan" (July through December 1948) since the arrival of their first shipment of "gift" packages.

Food: Total packages received		19,979
Packages damaged	2,733	
Packages delivered	8,301	
Packages in process of delivery	<u>2,768</u>	<u>13,802</u>
Total packages on hand (available for delivery)		6,177
 *Woolen: Total packages received		 2,004
Packages damaged	2	
Packages delivered	1,669	
Packages in process of delivery	<u> </u>	<u>1,671</u>
Total packages on hand (consigned but not delivery)		333
 *Blanket: Total packages received		 1,144
Packages damaged	10	
Packages delivered	226	
Packages in process of delivery	<u>312</u>	<u>548</u>

*Woolen and Blanket packages arrived, in Yokohama, aboard the S.S. Matthew Luckenback on 4 December 1948.

Community Chest-Japanese Red Cross "Joint Fund Campaign"

The most recent consolidated report from the forty-six prefectures covering their progress in the Community Chest - Japanese Red Cross "Joint Fund Campaign" reflects a total of twenty-two prefectures having reached or exceeded their established quotas. A total of ¥ 1,020,572,248.85 has been raised (collections and pledges) towards the national goal of ¥1,175,450,000.00 or 86.8% of quota.

The following table sets forth a breakdown of the progress of the "Joint Fund Campaign" on a prefectural basis and gives quotas, amount raised, per centums and latest dates of reporting:

<u>Prefecture</u>	<u>Goal</u>	<u>Amount Collected</u>	<u>Date Reported</u>	<u>Per Cent</u>
Hokkaido	70,000,000.00	64,496,489.00	27 December	92.1
Aomori	11,000,000.00	11,000,000.00	25 December	100.0
Iwate	17,000,000.00	17,023,964.00	1 December	100.2
Miyagi	16,000,000.00	12,000,000.00	15 November	75.0
Akita	10,000,000.00	10,346,656.20	27 December	103.5
Yamagata	20,000,000.00	20,152,174.27	2 December	100.7
Fukushima	20,000,000.00	21,535,570.93	25 December	107.7
Ibaraki	15,000,000.00	14,658,909.87	13 December	97.7
Tochigi	21,000,000.00	21,003,000.00	28 December	100.0
Gumma	12,000,000.00	10,668,939.68	11 December	88.9
Saitama	16,000,000.00	17,731,694.00	22 December	110.9
Chiba	25,000,000.00	17,549,807.56	31 December	70.2
Tokyo	80,000,000.00	56,569,266.32	22 December	70.8
Kanagawa	70,000,000.00	48,402,962.08	27 December	69.1
Niigata	29,000,000.00	29,274,627.00	14 December	100.9
Toyama	13,000,000.00	13,074,745.68	21 December	100.7
Ishikawa	13,000,000.00	11,485,360.00	22 December	88.3
Fukui	13,000,000.00	14,008,000.00	23 December	107.9
Yamanashi	9,450,000.00	9,451,958.00	15 November	100.0
Nagano	30,000,000.00	28,639,661.00	4 December	95.5
Gifu	20,000,000.00	20,566,563.31	15 November	102.9
Shizuoka	20,000,000.00	20,816,002.41	27 December	104.1
Aichi	66,000,000.00	68,206,507.03	25 December	103.3
Mie	20,000,000.00	20,282,137.84	25 December	101.4
Shiga	11,000,000.00	11,013,437.04	18 December	100.1
Kyoto	50,000,000.00	26,349,960.26	21 December	52.7
Osaka	85,000,000.00	73,388,648.00	31 December	86.3
Hyogo	60,000,000.00	36,486,885.00	20 December	60.8

Conferences on Rehabilitation of Physically Handicapped

A series of conferences on the rehabilitation of the physically handicapped are being held between the Public Health and Welfare Section and the National Council for the Rehabilitation of the Physically Handicapped. The object of these conference is to:

1. Develop a comprehensive Rehabilitation Program.
2. Draft any proposed legislation which may be necessary to further develop a progressive rehabilitation program.

In attempting to reach the objectives outlined above, emphasis is being placed on the utilization of existing legislation and services. It is anticipated that the basic objectives will be established within a few months and that the program will be accelerated through developing several model institutions.

Public Assistance

Attached to this Weekly Bulletin is a copy of the remaining portion of Hatsu-sha #129, dated 7 December 1948 (Incl. #4). The initial portion was attached to Weekly Bulletin #104, dated 20 - 26 December 1948.

SECTION IX SOCIAL SECURITY DIVISION

Health Insurance

A recent prefectural survey revealed that coal miners were not obtaining the medical care they were entitled to under the Health Insurance program. Because of the vital nature of coal production to the national economy and attainment of the objectives of the Occupation, the health of the miners is of major consideration and the prefectural governments should exert full effort to assure adequate medical care for such workers. Funds for such purpose are being raised on a systematic basis through contributions by the workers and the employers and are available for such use.

The Ministry of Welfare is being asked to give special consideration to this matter and to enlist the cooperation of interested prefectures.

Welfare Pension Insurance Benefits:

Reference is made to Public Health and Welfare Weekly Bulletin No.97 (1 - 7 November 1948) for a summary of the above-named social insurance program (Kosei Nenkin Hoken) and monthly benefit data for the first three months of the current fiscal year, April through June 1948. 1/

Comparable benefit data for the months July through September 1948 are tabulated in Inclosure No.5. On 1 August 1948 a revision of the law took effect entailing, among other things, an upward revision of invalidity and survivors' pension rates to five times their former amounts and the payment of two new types of survivors' benefits, a widow(er)'s pension and a surviving child's pension. Although recomputation of existing benefits and certification of pending benefits of the new types has not yet been completed, the increase from August 1948 in the average pension is clearly reflected in the attached table. The decrease in September 1948 of the number of pension cases certified is apparent rather than real, being due to delays in the certification of pensions undergoing recomputation.

Social Insurance Contributions

On 8 January the Insurance Bureau, Ministry of Welfare held a conference of chiefs of the Insurance Sections from 13 prefectures relative to the collection of social insurance contributions. The conference was prompted by the continued high percentage of employers delinquent in remitting the contributions. Under the several laws the employer is required to make deductions from the payroll, contribute himself and equal amount and promptly forward the total to the Insurance Section or Branch Office which deposits the money in the account of the national government. The national government as the insurer makes allocations from the funds thus collected for the payment of current benefits certified under the Law. To avoid shortages it is important that contributions be collected in full and on time.

1/ Data for July 1948 published at the same time were partly in error. Rather than showing the total number of pensions certified for payment through July, the pension benefits listed were merely those certified for the first time during that month.

Epidemiological Information and Quarantine Notifications

Distribution of copies of the Weekly Fasciculus, a publication of the World Health Organization Epidemiological Intelligence Station, Singapore, to supplement radio broadcasts of epidemiologic information has been made in the past to certain selected quarantine stations of Japan. More extensive distribution is now possible due to the receipt of additional copies. The Weekly Fasciculus is now being enclosed with the Weekly Bulletin mailed to the Military Government team having jurisdiction over the port or mailed direct to port quarantine officers at the following locations:

Maizuru Repatriation Center Kyoto Military Government Team	APO	301
*Haneda Army Air Base	"	337
Hario Detachment, 34th Infantry Regiment	"	24
*Nagasaki Military Government Team	"	929
Saga Military Government Team	"	929
*Hiroshima Military Government Team	"	317
*Aichi Military Government Team	"	710
Kanagawa Military Government Team	"	503
Fukuoka Military Government Team	"	929
*Hokkaido Military Government District	"	468
Hakodate Detachment, Hokkaido Military Government District	"	468
*Hyogo Military Government Team	"	317
*Kagoshima Military Government Team	"	970
Shizuoka Military Government Team	"	1007
Yokosuka Naval Base	Navy No.	3923
*Kyushu Military Government Region	APO	24-5

And to:

*Public Health Branch, Military Government		
Headquarters, Eighth Army	"	343
*Dept. of Public Health and Welfare, RYKOM Military Government	"	331, Unit7

Numbers 44, 45 and 47 of Volume XXI of the Weekly Fasciculus were enclosed with Weekly Bulletin No.106. Numbers 48, 49, 51 and 52 enclosed with this issue. Failure to receive the above copies should be investigated locally and any necessary corrections in mailing address reported.

*These teams are being furnished copies of Numbers 40, 41 and 43 in addition to the indicated distribution. Not sufficient copies received for each port quarantine officer.

Ministerial Instructions

The following is a list of instructions issued by the various Bureaus of the Ministry of Welfare to the prefectural governments for the period indicated:

6 - 11 December

<u>Date</u>	<u>File No.</u>	<u>Subject</u>	<u>To:</u>	<u>From:</u>
<u>Accounts Section</u>				
Dec. 10	Kai-Hatsu No.1119	All directors of ministerial departments and bureaus.		Chief, Accounts Section
		Re: Control of Fire		

Medical Affairs Bureau

Dec. 6	I-hatsu No.629	All Prefectural Governors		Director Medical Affairs Bureau
		Re: Control of the so-called locum-tenens (substitute clinicians)

		Re: Carrying out the repatriation relief campaign of love.	

SECTION II
PREVENTIVE MEDICINE DIVISION

Reactions Subsequent to Inoculations

Among 156 inoculations with diphtheria toxoid given by one doctor on 20 November in Mibu-machi, Tochigi prefecture, there were a total of 41 reactions, with onset noted three to six days following inoculation. The reactions consisted of abscess formation at the site of inoculation. Incision and drainage of the abscesses resulted in eventful recovery. The physician placed the blame on bacterial contamination of the toxoid but admitted using needles and syringes repeatedly without sterilization between inoculations. The measures taken in this case by the Military Government Health Officer and by prefectural health authorities are of sufficient interest to quote in full:

“a. true cause of the reactions was revealed to the public through excerpts released for publication by both the Military Government and the prefectural public health sections. Simultaneous publicity was given to the general success of the diphtheria inoculation program in reducing both the morbidity and mortality of this disease.

“b. All physicians engaged in the immunization program were notified by the prefectural public health department to read letter #95 (issued by the Welfare Ministry and dated 11 November 1948) which explained proper inoculation technique.

“c. A meeting of all physicians engaged in the program was held by the prefectural public health department for the purpose of demonstrating good inoculation technique. A lecture was delivered to the group by Dr. Takizi Numata, director of the Kitasato Virus Research Institute, on the preparation of biological materials and the immunologic theories underlying their use.

“d. The doctor responsible for the infections was visited by a member of the Military Government Public Health Section, without prior warning, during his subsequent series of diphtheria inoculations. It was found that he was employing accepted technique, as previously instructed.

“e. An increased concern on the part of the parents of children being immunized was noted, following the publicity given to the Mibu-machi incident, during spot checks of immunization centers; they closely observed the physicians technique for possible flaws.

“f. The chief of the prefectural public health department feels that the physicians concerned would exercise more care in their work were they paid for their services. At present they are doing immunization work on a voluntary basis. He hopes to be able to provide payment in the future out of funds to be obtained from the village, prefectural and national government.”

Similar measures taken in other prefectures during the present interim period would assist in developing proper aseptic techniques of administration when preventive inoculations are resumed.

Epidemic Influenza

An influenza epidemic is now present in Europe and may spread to other parts of the world. In mid-December the epidemic area included all of Italy and Sardinia. Reports from Italy to United Nations Health Organization indicate that the disease ran a mild clinical course: fever with neuralgia for 2-3 days; total duration 4-5 days, with a few fatal complications observed among the aged. In Sardinia, laboratory identification of influenza virus B was made.

The Epidemiological Intelligence Station, Singapore, informed this Headquarters by radio 15 January that widespread incidence of influenza had been reported from Italy, Switzerland and parts of Austria, with epidemic conditions in southern Holland and France. In France half of the cases are reported caused by influenza virus A, while virus A has also been identified in southern Holland.

Alertness in the prompt reporting of either suspect or confirmed influenza cases among Japanese, particularly in the larger cities and port areas, may provide the medical intelligence data necessary in preventing a possible epidemic in Japan.

Typhus Fever

A summary of the occurrence and distribution of typhus fever in Japan over the period 1 January to 31 December 1948 has been compiled from data furnished by the Ministry of Welfare and the 406th Medical General Laboratory (Inclosure No.1). That part of the summary dealing with the serological determination of types of typhus fever is based on the results of complement fixation tests performed by the 406th Medical General Laboratory. All negative sera are now being re-tested which may result in some minor changes in the “confirmed typhus” tabulations. These changes when completed will be reported in a subsequent issue of the Bulletin.

SECTION III MEDICAL SERVICES DIVISION

Some misunderstanding has developed in connection with Trade Services Memorandum No.11 regarding physicians authorized to treat foreign nationals. The following information is presented to clarify this matter.

Trade Services Memorandum No.11 states that the physicians indicated on the accompanying list are approved by the American Consular Service, Yokohama, for the performance of physical examinations required by the American Consulate. The physicians listed represent only those who are accredited by the American Consul for the purpose of performing medical service in connection with visas for travel to the United States or other countries outside of Japan, and does not intend to qualify these doctors or disqualify other physicians to care for allied nationals or other individuals for whom medical service outside of United States Army facilities is required.

SECTION IV VETERINARY AFFAIRS DIVISION

Prefectural Veterinary Functions - Tuberculin Testing of Cattle

Recently there has been some attempt on the part of the veterinarians in the health centers to assume the responsibility for the Tuberculosis eradication program. In 1946 it was decided by SCAP that the tuberculin testing of cattle would be under the competence of the Animal Hygiene Section, Ministry of Agriculture and Forestry and their counterparts in each prefecture. No change is being contemplated in transferring this function to the public health veterinarians.

Public Health Veterinarians are concerned with the inspection of meat, food, milk, seafood and rabies control in dogs. Animal disease control is under the competence of veterinarians in the agriculture Department. In one Prefecture, public health veterinary activities has been absorbed by the Animal Husbandry Section, Agriculture Department and indications are that other prefectures may plan the same course of action. Any attempt to create one veterinary section, by combining the two services, would result in the performance of duties being seriously curtailed. Changes of this nature would also create new problems in budget and administration. Command instructions are being issued to clarify this matter.

Animal Diseases

The Animal Hygiene Section, Ministry of Agriculture and Forestry reported the following outbreak of animal diseases for the period 8-14 January:

<u>Prefecture</u>	<u>Disease</u>	<u>Number of Cases</u>
Nara	Swine Cholera	6
Nagano	Swine Erysipelas	3
Gifu	" "	2

SECTION V SUPPLY DIVISION

Distribution

In view of the present unavailability of Japanese produced biologicals, 8,750 vials of typhus vaccine and 1,663 tubes (10 doses per tube) of smallpox vaccine have been obtained from Army sources. They are to be used for emergencies and have been distributed to strategic areas in various parts of the country for ready access as follows:

<u>Location</u>		<u>Typhus Vaccine</u>	<u>Smallpox Vaccine</u>
Hokkaido	Sanitation Department	180 vials	-
Miyagi	" "	540 "	-
Aichi	" "	1,440 "	-
Tokyo	" "	1,980 "	200

Moji	" "	-	300
Hakata	" "	-	123
Nagasaki	" "	-	100
Sasebo	" "	110	200
Miike	" "	-	20
Kagoshima	" "	-	<u>20</u>
TOTALS		8,750 vials	1,663

Effective 4 November new ceiling prices were established for many commodities. Inclosure Number 2 of this Bulletin lists the manufacturer's new selling prices for many medical items used in public health programs. Consumers prices can be estimated as being approximately 40% more than the manufacturer's selling price.

During the period 2 - 8 January, 353 pieces of dusting and spraying equipment were distributed to seven prefectures as follows:

<u>Prefecture</u>	<u>DDT Dusters</u>	<u>Knapsack Sprayer</u>	<u>Semi Automatic Sprayer</u>	<u>Hand Sprayer</u>	<u>Engine Sprayer</u>
Yamagata					1
Saitama					1
Tokyo			1		
Kyoto	200				
Osaka				50	
Ehime		50			
Fukuoka					
TOTALS	200	50	1	50	2

Production

A breakdown of fuel allocations (Standard Coal and Low-Calorie Standard Coal) by prefectures, for use in those hospitals attached to universities, medical colleges and other educational institutions under the jurisdiction of the Ministry of Education is included in Inclosure No.3. This allocation covers the period January, February, March, the 4th Quarter, Japanese Fiscal Year 1948/49. (Unit: Metric Tons).

A total of 3,799 pieces of the various types of DDT dusting and spraying equipment for insect control programs was produced during the period 2-8 January.

During the period 2-8 January, 46,900 lbs. of 10% DDT dust and 21,675 gallons of 5% DDT residual effect spray were distributed. At the same time, 265,800 lbs. of 10% DDT dust and 61,550 gallons of 5% DDT spray were received, leaving inventory stocks on hand in regional warehouses of the Ministry of Welfare and manufacturers of 3,031,965 lbs. of 10% DDT dust and 618,556 gallons of 5% DDT spray.

SECTION VI
NARCOTIC CONTROL DIVISION

Smuggling and Illicit Manufacture of Heroin

With commendable cooperation American and Japanese law enforcement agencies in Osaka, Japan recently located and seized a clandestine chemical laboratory engaged in the conversion of crude morphine, smuggled into Japan from South Korea, into "Heroin".

The facts of the investigation indicate that the laboratory was in operation for six months during which time 7,670 grams of crude morphine were smuggled from South Korea to Japan on five occasions, 2,880 grams of Heroin were manufactured from this crude morphine and 1,314.8 grams of crude morphine and 2,119.4 grams of Heroin were seized. Four defendants were arrested, all Koreans, one Korean is a fugitive and several other persons under investigation.

Of the 764 grams of Heroin manufactured and sold prior to the apprehension of the laboratory operator and seizure of crude and finished narcotic stocks, 564 grams were sold in Japan to persons in Osaka, Kobe, Kyoto and Tokyo, and 200 grams were smuggled back to South Korea and sold.

The successful completion of this investigation represents an important step in the elimination of a basic "source of supply" of illicit Heroin in Japan as is attested by the fact that this one source partially supplied two of the four heaviest narcotic violation areas of Japan, namely the Kobe, Osaka and Kyoto area and the Tokyo, Yokohama area.

SECTION VII
WELFARE DIVISION

Licensed Agencies for Relief in Asia (LARA)

The tabulation given below was recently completed to ascertain the distribution of LARA relief goods (food, 5,414 tons - clothing, 1,485 tons) allocated during the years 1946-48:

<u>Where Distributed</u>	<u>Food</u>	<u>Clothing</u>
<u>Welfare Institutions</u> , including baby clinics, day nurseries and milk stations	47.4%	46.1%
<u>Sanatoria</u> (Tuberculosis and Leper)	7.5%	1.0%
<u>School Programs</u> , including supplementing school lunch and college feeding projects	37.7%	8.9%
<u>Disaster Relief</u>	6.6%	7.4%
<u>Special Projects</u>	0.8%	3.4%
Repatriates, including needy persons under care of Minsei-iin		33.2%

Community Chest - Japanese Red Cross Joint-Fund Campaign

As of 14 January twenty-four prefectures have reached or exceeded their established goals for the Community Chest - Japanese Red Cross Joint Fund Campaign. Collections for all prefectures now total ¥ 1,031,999,593.27 or 87.8% of the national quota of ¥ 1,175,450,000.00.

The Community Chest - Japanese Red Cross "Joint Fund" Campaign's progress is given below, on a prefectural basis, and sets forth goals, amounts raised (collections, including pledges), percentums and last reporting dates:

Prefecture	Goal	Amount Collected	Date Reported	Per Cent
Hokkaido	70,000,000.00	68,475,122.00	10 January	97.9
Aomori	11,000,000.00	11,000,000.00	25 November	100.0
Iwate	17,000,000.00	17,023,964.00	1 December	100.2
Miyagi	16,000,000.00	12,000,000.00	25 November	75.0

Public Assistance - New Program

Attention is called to the fact that portions of the previous program are still in effect under change authorized by Hatsu-Sha #129, dated 7 December 1948. Those parts of the previous program dealing with school expenses, burial costs and medical costs are still in effect according to the Protection Section of the Ministry of Welfare.

Child Welfare - Minimum Standards

Attached here with (Inclosure No.4) is a complete to translated copy of Kosei-Sho-Rei #64 released 29 December 1948. The translation is in three parts: The general instructions - a copy of the standards - and last minute amendments thereto.

It is desirable that those entrusted with the actual supervision of the institutions and who will evaluate the institutions by the established standards, recognize that they are entrusted by the government to protect the interests of the inmates and that they must of necessary be objective in their approach to institutional management. These supervisors will need backing and encouragement, if not supervision, from child welfare boards and prefectural welfare officials. Prefectural Welfare Departments must recognize the need for supervisory personnel who are strong enough and have authority enough to relegate the ceremonial (and superficial) to its proper place in all contacts with the individual institution.

Child Welfare - Institutional Allowance

Attached herewith (Inclosure No.5) is a copy of Ji-Hatsu #64, dated 29 December 1948 which concerns changes in allowance paid to institutions for the care of children. The new figures have been based on increased costs as well as on expected increases resulting from adherence to minimum standards.

It is recognized that the whole problem of "costs of care" and "administrative costs" needs additional study. It is expected that this problem will be a matter for special attention during the early months of this year. Further information concerning this subject will be forthcoming at an early date.

Public Assistance Report - November

The Ministry of Welfare reports the following totals for the month of November. Totals for November 1947 and for October 1948 are given for purpose of comparison.

	November 1948	November 1947	October 1948
Persons - Institutional	143,940	138,596	143,806
Persons - Non-Institutional	1,690,576	2,582,720	1,720,106
Totals	1,834,516	2,721,316	1,863,912
Assistance in Kind	18,906,809	50,782,811	25,126,018
Assistance in Cash	579,688,317	365,818,494	565,029,472
Totals	598,595,126	416,601,305	590,155,490

Correction in Ji-Hatsu #50 (Foster Care)

The mimeographed of Ji-Hatsu #50 which was attached to Weekly Bulletin #95 dated 18 - 24 October should be corrected in Chapter 1, paragraph I (1) to read: "those under 18 years of age."

Change in Recertification Program Deadline

Due to confliction with the coming elections, all governors were notified by the Ministry of Welfare, additional time, as necessary, could be allotted to the public assistance recertification program. It is expected, however, that the reports will be made to the Ministry during March. The original target date was 20 January.

Child Welfare - "Slavery" and Child-Selling

Recent newspaper publicity concerning "slavery" and "child-selling" in Tochigi Prefecture has resulted in a conference in that prefecture among Corps, Region and local Military Government officials as well as a representative of Public Health and Welfare Section. Children's Bureau officials and local Japanese officials, representing all interested parties, took part in the conference from which certain conclusion were derived and a line of action planned. It was also determined that procedures which may be used nationally will first be tested in the Tochigi prefecture, since there are indications that the problem is national in scope. Welfare officers may wish to

estimate the scope of the problem in each prefecture in the near future, however, it is advisable that no definite action be taken before results are obtained and weighed in the Tochigi experiment.

Conclusions reached at Tochigi were:

1. All concerned believed that all families having unrelated children, not legally adopted, should register and that a report should be made on each family by an outside agency.
2. Continued supervision should be exercised after the initial review.
3. Appropriate action should be taken in those cases in which abuses or exploitation were evident.
4. Conclusions should be reached during the review as to future policy concerning the problem, with recommendations concerning necessary amendments to present laws or regulations in order that future placements could be made through the proper authorities and that supervision could be regularized.
5. It was apparent that all concerned were against a "brokerage" system and that the placement of children for monetary considerations to any person including the child's own family was not an acceptable practice.
6. It was recognized that the practice was one of long standing and that the cause was economic, since most of the children came from rice deficit areas to the rice surplus areas, especially during times of drought flood or crop failures.
7. It was possible that children under 13 years of age should be treated as a separate problem since the newly inaugurated foster home program was most effective for this group and because their placement could hardly be considered as economically advantageous to the family which had the child.
8. The treatment of the problem should be used as an educational device for the enlightenment of the general population in order that all persons might become familiar with existing laws dealing with children.
9. Care should be used in handling the problem so that the hundreds of children and families concerned would not become unduly apprehensive since it was known that many of the children preferred their present situation to their former and were content and well cared for.

Doho Engo Kai

Reference Public Health and Welfare Weekly Bulletin No.59, Section I (for the period 9 February - 14 February 1948).

The Ministry of Welfare on 17 January 1949 directed the Prefectural Governors and the National Relief Association (Doho Engo Kai) to carry out to the sub-branch, city, town and village level, the instructions issued in Sha-Hatsu No.19 dated 7 February 1948, which, through misinterpretation, were only carried out to the prefectural level.

The instructions directed that:

1. All public officials resign from their positions in Doho Engo Kai.
2. All Doho Engo Kai office space held by them in prefectural buildings will be vacated immediately.

Law for Allowances to Special Non-Repatriates

The 1948 session of the Japanese Diet on 29 December passed Law No.279 known as the "Law for Allowances to Special Non-Repatriates". By "special non-repatriates is meant those civilians not members of the armed forces, who were impressed into forced labor in prisoner of war camps in Siberia and Manchuria. (The Japanese government still continues to pay compensation to undemobilized soldiers and sailors and undemobilized civilian personnel (gunzoku) who were with the armed forces of the Japanese government as civilian employees thereof). The intent of the new law is to give the same protection, as far as insurance and other payments are concerned, to civilians impressed into forced labor in exactly the same manner as Japanese soldiers and sailors and gunzoku.

Appropriate ministerial ordinances and regulations have just been issued to prefectural welfare departments outlining procedures whereby personnel covered by this act may make application to receive reimbursement or if undemobilized, procedures whereby their family, mother or elder children, may make such application. It is estimated that approximately 10,000 Japanese already repatriated might have been included in this group of impressed civilians although not more than ten percent of such group will be eligible for benefits under the provisions of the law. Of those to be repatriated it is estimated that approximately 9,000 may be benefited under this act. A summary of the law, ordinance and regulations, together with copies of the basic law itself will be attached to a subsequent Public Health and Welfare Bulletin.

SECTION VIII SOCIAL SECURITY DIVISION

Health Insurances and Welfare Pension

The coverage of Japanese employees of Occupation Forces under the Health Insurance and Welfare Pension Insurance Laws has been temporarily delayed because of budget restrictions. Notification of such delay was issued on or about 12 January to each prefectural insurance section by the Health Insurance Section of the Insurance Bureau of the Ministry of Welfare.

Seamen's Insurance

The following documents of the Ministry of Welfare relating to the Seamen's Insurance Law were published in the 23 December 1948 issue of the Official Gazette:

(1) Ministerial Ordinance No.58 of 1948, prescribing procedure for increasing the amounts of invalidity and survivors pensions in accordance with the amendments (Law 128 of 1948) effective 1 September 1948. (See Public Health and Welfare Weekly Bulletin No.80, 5 July 1948).

(2) Ministerial Notification No.103 of 1948, defining "transportation expenses" and fixing rates therefor under Article 33-(14) of the Seamen's Insurance Law which provides for allowances to defray transportation expense incurred by an unemployed seamen in accepting employment at a place other than in the vicinity of his current residence.

Seamen's Insurance Benefits

Reference is made to Public Health and Welfare Weekly Bulletin No.98 (8 - 14 November 1948) for a summary of the Seamen's Insurance system (Senin Hoken) and the benefit data for the first four months the fiscal year, April through June 1948.

The recent revision in the law effective 1 September 1948 provided, among many other things (see Public Health and Welfare Weekly Bulletin No.98), a five-fold raise of occupational invalidity and survivors' pensions certified for payment prior to 1 December 1947. This was done in order to equalize the older occupational pensions with those newly certified since that date on which an earlier amendment took effect incorporating into the Seamen's Insurance Law improved and liberalized workmen's accident compensation features comparable to those provided for land-workers in the Workmen's Accident Compensation Insurance Law of 5 April 1947. Pensions subject to this increase were recomputed and paid at the new rates for the first time in November retroactive to September 1948. Therefore, the increases are not yet apparent from the September figures shown in the enclosure. Whatever rises in per-capita amounts appear are due mostly to recent rises in wage levels.

Dependents' and other additional benefits likewise payable for the first time as of 1 September 1948 will also be paid retroactively (on a cash reimbursement basis) upon completion of all the necessary arrangements. Thereafter, dependents' medical, dental and nursing benefits will be supplied in kind as well as on a cash reimbursement basis. None are shown in the September benefit statistics.

1/ Attention is drawn to the fact that report under this program differ from those under Welfare Pension Insurance in the method of reporting pension cases. The numbers of Seamen's pension cases listed each month are those newly certified during the month. Welfare Pension Insurance reports, on the other hand, show the aggregate of

welfare pensions currently certified for payment prior to and during the month under review (See Public Health and Welfare Weekly Bulletin No.106).

SECTION I
PREVENTIVE MEDICINE DIVISION

Preventive Vaccination

The Ministry of Welfare published "Rules for the Execution of Inoculations" in YO-HATSU No.1355, dated 15 October 1948. These rules were also published in English as BO (Preventive Section, Prevention Bureau) No.56, dated 26 October 1948, and were sent to chiefs of sanitation sections (health departments) of all prefectures. Instructions are given therein for vaccinations and inoculations against the following: smallpox, diphtheria, typhoid and paratyphoid, typhus and cholera.

An English translation of the above "rules" has been reproduced for the benefit of Military Government Public Health Officers and is attached to this Bulletin. (Inclosure No.1).

The following is offered in explanation of the information and instructions contained in the Rules for the Execution of Inoculations.

The irregularity in designating the date for which the vaccines are valid is due to differences in the minimum requirements which have been adopted but which are under revisions. According to previous requirements, the periods of validity for typhoid and cholera vaccines begin from their date of manufacture, while that for typhus vaccine begins from the date of sale. The periods of validity for smallpox and diphtheria vaccines begin from the date of passing official test or assay. The temperature for storage during the period of validity is below freezing (below 0° C) for smallpox vaccine and between 2° C and 5° C for the others. According to minimum requirements the storage of finished smallpox vaccine in the hands of manufacturers is to be at temperatures below minus 10° C. Provisions should be made in advance for temporary storage by prefectural health departments and for distribution within the prefectures at the required temperatures. The use of vacuum jugs with dry ice or salted wet ice as an adjunct to mechanical refrigeration is suggested.

Disinfection of the "fingers" is required of the vaccinator. Preferably this should be accomplished by washing the hands with soap and water. Phenol solution for hand disinfection should be used if better facilities cannot be provided.

Disinfection of the part to be vaccinated (or inoculated) must, in the case of smallpox vaccination, be an agent which has no residual action deleterious to the virus in the vaccine. For smallpox vaccination, complete dryness of the skin after its disinfection, whether by acetone, alcohol, ether, or soap and water, is essential. For other inoculations given intradermally or subcutaneously tincture of iodine is ordinarily required as a skin disinfectant, but caution should be used to remove the excess iodine with alcohol to prevent chemical burns, and to use only fresh iodine solutions which have not been concentrated by evaporation.

Every opportunity should be taken by Military Government Health Officers to demonstrate the multiple puncture or, preferably, the multiple pressure method of smallpox vaccination to Japanese health officers and physicians. Sewing needles are obtainable and means for aseptically depositing vaccine onto the skin can be improvised. The advantages of this single-site bloodless method will be apparent to the more progressive and the younger physicians. For those who cannot be convinced, the "cut" method is described as an alternative, but the number of sites must be reduced.

For the protection of the general public against smallpox, two attempts at vaccination should result in a sufficient number of successful immunizations to prevent epidemics. In cases where it is especially important that a particular individual acquire immunity vaccination against smallpox should be repeated until a satisfactory response is obtained.

Although the use of phenol solutions for disinfection of hypodermic needles and syringes is mentioned in the "rules", such a method is permissible only when it is not possible to use boiling water. Since charcoal and vessels to hold water are universally available in Japan, there should be no occasion for any other method of sterilization than by boiling.

Care in the disinfection of hands and skin, and aseptic technique in handling the vaccine and instruments should be eliminate infections due to contamination.

Public Health Information and Education

Press Releases Concerning Reorganization of the Health Center System in Japan

Reference is made to Section II, Weekly Bulletin Nos. 92, 95 and 101. Inclosed with this Bulletin are numbers 7 and 8 (Inclosures No.2 and 3) in a series of press releases on Reorganization of the Health Center System in Japan. Subject inclosures are basic information on the subjects of "Mother and Child Health Services under the New Health Center System" and "Medical Social Service in the Health Center".

Sanitation

Certain phases of mosquito control must not be neglected during the winter season. Several species of mosquitoes, including *Culex tritaeniorhynchus*, an important vector of Jap B encephalitis, lay their eggs in streambeds and in ditches where they remain viable in a dry state, ready to hatch immediately upon the arrival of the spring rains. The eggs of other mosquitoes are stranded on the edges of subsiding streams and drains where they remain until rising water makes their continued development possible. For this reason the cleaning of ditches and drains, together with the killing of adult mosquitoes should be continued throughout the winter months. Unless control of mosquito breeding is established early in the season by means of such winter activities, the mosquito population will increase rapidly with the return of warm, wet weather. Unless rigid control measures are exercised throughout, the presence of mosquitoes may become an important factor in the expected return of Jap B encephalitis next summer.

Quarantine Regulations

Discrepancies have been noted in the information supplied from various sources regarding immunization requirements for persons departing Japan. This results in uncertainty and confusion both for the individual himself and for the physician who administers the inoculations.

There are at present two sets of immunization requirements applying to international travel: one for occupation personnel and all passengers of vessels or aircraft under military jurisdiction, and another for non-occupation passengers of commercial vessels or aircraft. The references for these two sets of requirements are, respectively, FEC Circular #8, Immunization, dated 2 March 1948, and SCAP Circular #9, Foreign Quarantine Regulations for Japan, dated 29 March 1948.

The provisions of FEC Circular #8 apply to all occupation personnel or others traveling under military jurisdiction and require immunization within one year against smallpox, typhoid-paratyphoid and typhus for all persons over one year of age, and either immunization against diphtheria or Shick negative test for those between 1 year and 15 years of age.

The provisions of SCAP Circular #9 apply to all non-occupation personnel traveling by commercial vessels or aircraft and require that immunization be in conformity with the requirements of countries of transit and destination.

According to latest notifications received by this headquarters, travelers arriving directly from Japan are requested by the following nearby countries or ports to have certificates of immunization as indicated:

Korea	Smallpox
Tsingtao	Smallpox, cholera, typhoid and paratyphoid
Shanghai	Smallpox
Taiwan	Smallpox, cholera, typhoid and paratyphoid
Foochow	None
Swatow	Smallpox and cholera
(Immunization Recuirements (Cont'd).	
Amoy	None
Singapore	None
Philippines	Smallpox and typhus
United States (Continental)	Smallpox
Hawaii, Alaska & Puerto Rico	Smallpox
Australia	Smallpox
New Zealand	Smallpox

Passengers passing through several countries will be required by each country to comply with quarantine measures currently in force in that country against all countries which the traveler has passed.

Certificates of immunization are now required on the international form by most countries. For smallpox this form requires entries on type of reaction, and lot number and manufacturer of the vaccine. Authentication by an official of the national health authority is usually required for all certificates. The duration of validity laid down by the International Sanitary Conventions apply in most cases. These are three years for smallpox, one year for typhus, typhoid-paratyphoid and 6 months for cholera.

SECTION II NURSING AFFAIRS DIVISION

Nursing Students

In answer to questions concerning the status of the student under the Labor Law there is being prepared a special instruction sheet which will define the student nurse as one studying a required curriculum and receiving her practical experience under supervision. She will not be considered in the Labor Law as a laborer. English copies will be forwarded to all Military Government Public Health Nurses.

Some confusion still exists relative to a 200-hour "teacher training course" which was originally included in the curriculum in Schools of Nursing by direction of the Ministry of Education. Under the Nursing Law the inclusion of the above-mentioned course interfered with the required hours of subjects necessary to permit Schools of Nursing to attain Class A status. Article 82, of Ministry of Education Ordinance No.11 of 23 May 1947, implementing the School Education Law (No.26 of 29 Mar 1947) abolishes this 200-hour teacher training course and no further instructions are deemed necessary by the Ministry of Education.

The above information should eliminate any further conflict on this point.

Nursing Law and Ordinance

The final draft of the new nursing Ordinance, now being prepared will furnish detailed requirements of the Class A schools of nursing. Copies will be distributed as soon as available.

Model Demonstration School of Nursing

The first in a series of regular monthly staff meetings to discuss hospital problems was held between the nurses, doctors and pharmacists. Mutual problems including the following topics were discussed:

1. X-ray department routine.
2. The need for a PRN nurse on night duty.
3. The limited working hours of the maids and orderlies.
4. Laundry problems.
5. Expanding the TB ward by taking over the "West Dormitory".
6. Nurses requested that all doctors sign their orders.
7. The nurses requested that all doctors make rounds at a regular convenient time.
8. The pharmacy requested that all emergency drug orders be written on a prescription blank.
9. The nurses requested the doctors to give all new patients a thorough examination to eliminate TB patients being placed on any but the TB ward.
10. The nurses requested a provision be established so patients would not have to carry their own charts to clinics.

Nursing School Improvements

The new nursery has been completed and in use; a new formula room has created much interest. Another TB wing is being opened, to meet the demand for additional beds.

Red Cross Volunteer Service is opening a day nursery from 2 - 5 p.m. daily to care for the younger children of women visitors to the hospital.

SECTION III MEDICAL SERVICES DIVISION

The regular quarterly National Nutrition Survey for 1949 will begin 1 February. The prefectures, with few exceptions, have scheduled the Nutrition studies to be completed before the second week of month. Tokyo-to Nutritionists have planned physical examinations from the first to the third of February and consumption studies from the third to the seventh.

SECTION IV VETERINARY AFFAIRS DIVISION

Veterinary Biologics

Close attention is being given to those laboratories, both national, prefectural and commercial who are engaged in the production of biologics for animal use. Art. 54, of the Pharmaceutical Affairs Law (No.197) gives competence to the Ministry of Agriculture and Forestry for the control and administration of biologics intended only for animal use. The Biological Branch, Animal Hygiene Section in the Ministry of Agriculture and Forestry is now initiating a program whereby all manufacturers will receive periodical inspection. An assay laboratory has been established in the Nishigahara Laboratory in Tokyo. The Minister of Agriculture and Forestry has given authorization to Prefectural Governors to appoint inspectors either on a full or part time basis to supervise the enforcement of this Law.

Seafood Inspection

Plans are now being correlated with the Bureau of Fisheries, Natural Resources and the Ministry of Welfare to establish a seafood inspector in each Class A port. Final plans will be published upon completion.

Publication of a News Weekly

The Animal Hygiene Section, Ministry of Agriculture and Forestry is now publishing a news weekly covering interpretations of laws, general information and brief discussions on new diseases in animals as an aid to veterinary control activities.

Milk Inspection

The Veterinary Affairs Section, Ministry of Welfare, conducted sanitary inspections on the following dairy farms and milk plants during the month of November 1948.

Special Milk

Number of farms inspected	5
Samples examined	11
Over bacterial standards (50,000 per cc)	3
Under butterfat standards (3.3 percent)	0
Plant Inspections	16
Over bacterial standards (50,000 per cc)	4
Under butterfat standards (3.3 percent)	2

Ordinary Milk

Number of farms inspected	9,647
Samples examined	25,974
Over bacterial standards (2,000,000 per cc)	710
Under butterfat standards (3.0 percent)	888
Number of plant inspections	4,728
Over bacterial standards (2,000,000 per cc)	306
Under butterfat standards (3.0 percent)	419

Goat Milk

Number of farms inspected	43
Samples examined	45
Over bacterial standards (2,000,000 per cc)	8
Under butterfat standards (3.0 percent)	5

Milk Production

Milk produced on daily farms during the month of November.

<u>Type of Milk</u>	<u>No. of Farms</u>	<u>No. of Cows & Goats</u>	<u>Amount Produced</u>
Special	8	130	26,271 lit.
Ordinary	54,525	102,367	16,762,782 lit.
Goat	4,208	6,053	343,442 lit.

Amount of milk bottled in milk plants during November.

<u>Type of Milk</u>	<u>No. of Plants</u>	<u>Raw Milk</u>	<u>Pasteurized</u>	<u>Sterilized</u>
Special	6	18,715	10,000	0
Ordinary	2,919	0	1,956,682	4,300,421 lit.
Total	2,925	18,715	1,966,682	4,300,421 lit.

All milk is bottled in bottles of 1 go representing 180cc. A total of 34,865,555 bottles of milk was produced in November.

Meat Inspection November 1948

The following table represents the number of livestock slaughtered and meat and meat products inspected during the month of November 1948, submitted by the Veterinary Affairs Section, Ministry of Welfare.

	<u>Cattle</u>	<u>Calves</u>	<u>Horses</u>
Number slaughtered	22,611	1,054	6,410
Body Wt. (kgs)	8,001,196	104,155	1,956,156
Dressed Wt. (kgs)	3,900,027	51,092	993,884
Condemned Ante-mortem	2	0	1
Condemned Post-mortem			
Total	6	3	11
Partial	1,135	24	378
Viscera	3,822	85	777

	<u>Swine</u>	<u>Sheep</u>	<u>Goat</u>
Number slaughtered	22,160	29	268
Body Wt. (kgs)	1,883,143	1,396	7,772
Dressed Wt. (kgs)	1,130,737	642	3,521
Condemned Ante-mortem	1	0	0
Condemned Post-mortem			
Total	3	0	0
Partial	2,495	36	2
Viscera	6,409	5	7

Meat Processing Plants

Number of establishments		1,289
Number of establishments inspected		619
Sanitary condition	Good	83
	Fair	466
	Poor	70
Total number of inspections		2,952
Amount of meat & meat products examined		68,024 kgs
Amount of meat & meat products condemned		39 kgs
Cause for condemnation		Uncleanliness
Disposition		Animal feed

Retail Meat Shops

Number of establishments	14,591
Number of establishments inspected	8,413

Sanitary condition	Good	2,298
	Fair	4,843
	Poor	1,246
Total number of inspections		10,397
Amount of meat & meat products examined		3,886,584 kgs
Amount of meat & meat products condemned		1,065 kgs
Cause for condemnation		Putrefaction & uncleanness
Disposition		Animal feeds & fertilizers

Seafood Inspection

The Veterinary Affairs Section, Ministry of Welfare, conducted sanitary inspections on seafood establishments during the month of November 1948.

Wholesale Seafood Markets

Number of establishments		1,413
Number of establishments inspected		968
Sanitary condition	Good	165
	Fair	627
	Poor	178
Total number of inspections		2,890
Amount of meat & meat products examined		30,604,926 kgs
Amount of meat & meat products condemned		165,711 kgs
Cause for condemnation		Putrefaction-staleness
Disposition		Fertilizer

Seafood Processing shops

Number of establishments		8,867
Number of establishments inspected		2,919
Sanitary condition	Good	410
	Fair	1,756
	Poor	753
Total number of inspections		4,528
Amount of meat & meat products examined		186,409 kgs
Amount of meat & meat products condemned		83 kgs
Cause for condemnation		Uncleanliness & staleness
Disposition		Animal Feed

Retail Seafood Shops

Number of establishments		43,378
Number of establishments inspected		17,016
Sanitary condition	Good	2,583
	Fair	10,834
	Poor	3,599
Total number of inspections		18,640
Amount of meat & meat products examined		1,125,046 kgs
Amount of meat & meat products condemned		2,882 kgs
Cause for condemnation		Putrefaction, staleness, uncleanness
Disposition		Fertilizer-dried fish-animal feed

Food Sanitation

The Food Sanitation Section, Ministry of Welfare, reports the following sanitary inspection of food establishments during the month of November 1948.

Number of inspections	481,648
-----------------------	---------

Establishments to improved	59,687
Establishments making improvements	84,554
Number of samples collected for analysis	3,954
Number of administrative punishments	2,122

Animal Disease

The Animal Hygiene Section, Ministry of Agriculture and Forestry, submitted the following report on the outbreak of animal diseases for the period 15-21 January, and for December 1948.

<u>Prefecture</u>	<u>Diseases</u>	<u>No. of Cases</u>
Miyagi	Swine Cholera	3
Shizuoka	Swine Erysipelas	1

The following outbreak of animal diseases occurred during the month of December 1948.

<u>Diseases</u>	<u>November</u>	<u>December</u>
Anthrax	1	0
Blackleg	3	0
Swine cholera	1	2
Swine erysipelas	7	15
Swine plague	0	2
Rabies	1	4
Brucellosis	6	24
Trichomonas	94	106
Equine Infectious Abortion	5	2
Equine Infectious Anemia	68	37
Pllorum Disease, Fowl	7483	11779
Strangles	19	20
Texas Fever	0	1
Filariasis	1	0
Bovine Tuberculosis	163	124

SECTION V SUPPLY DIVISION

Distribution

The first allocation of hexylresorcinol manufactured according to the recently adopted minimum standards is being made to all prefectures. This allocation is based on the anticipated production during the allocation period, January/February/March. Since this is the first time this item is being distributed, firm figures are difficult to establish. The "allowable quantity" column below is the amount for which tickets will be cut and then, should production permit, prefectures may make additional allocations totaling the quantities in the "allocation quantity" column. The Ministry of Welfare will notify prefectures if the additional quantities are available for distribution.

HEXYLESORCINOL ALLOCATED FOR JAN / FEB / MAR

<u>Prefecture</u>	<u>Allocation Quantity</u>	<u>Allowable Quantity</u>
Hokkaido	700,000	700,000
Aomori	210,000	210,000
Iwate	240,000	240,000
Miyagi	330,000	330,000
Akita	230,000	230,000
Yamagata	240,000	240,000
Fukushima	380,000	380,000
Ibaraki	410,000	270,000
Tochigi	300,000	200,000
Gumma	310,000	210,000

Saitama	400,000	200,000
Chiba	450,000	230,000
Tokyo	1,660,000	830,000
Kanagawa	530,000	270,000
Niigata	490,000	330,000
Toyama	200,000	130,000
Ishikawa	230,000	150,000
Fukui	150,000	100,000
Yamanashi	170,000	110,000
Nagano	430,000	290,000
Gifu	330,000	220,000
Shizuoka	480,000	320,000
Aichi	860,000	570,000
Mie	340,000	230,000
Shiga	170,000	110,000
Kyoto	490,000	250,000
Osaka	1,170,000	590,000
Hyogo	710,000	360,000
Nara	230,000	120,000
Wakayama	210,000	140,000
Tottori	120,000	80,000
Shimane	190,000	130,000
Okayama	390,000	260,000
Hiroshima	490,000	330,000
Yamaguchi	330,000	220,000
Tokushima	190,000	190,000
Kagawa	170,000	170,000
Ehime	300,000	300,000
Kochi	180,000	180,000
Fukuoka	760,000	510,000
Saga	210,000	210,000
Nagasaki	290,000	290,000
Kumamoto	400,000	400,000
Oita	280,000	280,000
Miyazaki	190,000	190,000
Kagoshima	410,000	410,000
Total	18,000,000 Pills	12,710,000 Pills

During the period 9-15 January, 655 dusters and sprayers were distributed to ten prefectures as follows:

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsack Sprayer</u>	<u>Semi Auto- matic Sprayer</u>	<u>Hand Sprayer</u>	<u>Engine Sprayer</u>
Gifu		20			
Aichi				200	
Mie		100			
Kyoto				50	
Osaka		70			
Wakayama					5
Ehime	50				
Fukuoka			50		
Kagoshima		100			
Nagoya		10			

Total	50	300	50	250	5
-------	----	-----	----	-----	---

Production

A total of 3,572 pieces of the various types of DDT dusting and spraying equipment for insect control programs was produced during the period 9 - 15 January.

During the period 9 - 15 January, 100 lbs. of 10% DDT dust were distributed. At the same time, 65,000 lbs. of 10% DDT dust and 12,500 gallons of 5% DDT residual effect spray were received, leaving inventory stocks on hand in regional warehouses of the Ministry of Welfare and manufactures of 3,166,865 lbs. of 10% DDT dust and 614,406 gallons of 5% DDT spray.

A special allocation of 3,000 metric tons of cement for the repair of public wells and drainage ditches was approved in January for the Ministry of Welfare. Allocation tickets have been mailed to prefectural sanitation departments. Inclosure No.4 furnishes detailed breakdown of prefectural requirements and prefectural allocations of the cement. Further special allocations for this purpose will be announced in future issues of this Weekly Bulletin.

Inclosure No.5 furnishes detailed breakdown, by districts and prefectures, of allocations of cement, for January, February and March, for use in expansion, repair and rehabilitation of the medical and pharmaceutical supply factories.

SECTION VI NARCOTIC CONTROL DIVISION

Inadequate Sentences

A recent Military Government Team Monthly Activity Report commented on the inadequate sentence of a small fine relative to a narcotic law violator. Reports indicate that throughout Japan there are many instance where the punishment does not fit the crime. Improvements can be made by educating procurators to demand and the judges to impose sentences commensurate with the violations committed.

Public Health and Welfare Section is endeavoring to solve this problem through the Attorney General's Office of the Japanese Government and suggests the Military Government personnel take advantage of available opportunities to bring to the attention of prefectural procurators and judges the following facts:

a. In many instances the punishment is not adequate to the crime committed in that the penal servitude meted the defendant is abrogated by a suspension of the sentence or the fine imposed is too small.

b. In a number of instances the violators have retained a profit accrued from the violation even after payment of a fine.

c. When a defendant warrants a sentence of "guilty" he should be given either penal servitude, a fine comparable to a term of penal servitude, or both. (Ex. If a violation warrants a sentence of three months penal servitude and it is abrogated by extenuating circumstances to a fine, the amount of the fine imposed should not justly be less than 50% of the amount of money the defendant would be able to earn during that three month period).

d. In no instance should the violator be able to show a monetary profit from his violation after being "fined".

e. Violators and prospective violators will not be forced to follow the "straight and narrow" until adequate sentences for such violations are imposed by the Courts.

f. The Japanese Government can well use all "fines" imposed upon law violators to help budget problems and at the same time decrease law enforcement costs by thus decreasing the number of violations.

SECTION VII WELFARE DIVISION

Community Chest - Japanese Red Cross Joint Fund Campaign

The most recent report covering the progress of the Community Chest - Japanese Red Cross “Joint Fund” Campaign reflects a total of ¥ 1,036,079,666.34 raised (collections and pledges) towards the national goal of ¥ 1,175,450,000.00 or 88.2% of quota.

Prefectural reports are current, except for 15 prefectures, with a total of 24 prefectures having reached or exceeded their goals. The statistics given below, sets forth the prefectural progress of the “Joint Fund” campaign, as of 20 January.

<u>Prefecture</u>	<u>Goal</u>	<u>Amount Collected</u>	<u>Date Reported</u>	<u>Per Cent</u>
Hokkaido	70,000,000.00	68,475,122.00	10 Jan.	97.9%
Aomori	11,000,000.00	11,000,000.00	25 Nov	100.0
Iwate	17,000,000.00	17,023,964.00	1 Dec.	100.2
Miyagi	16,000,000.00	12,000,000.00	15 Nov.	75.0
Akita	10,000,000.00	10,346,656.20	27-Dec.	103.5
Yamagata	20,000,000.00	20,250,361.81	31 Dec.	101.3
Fukushima	20,000,000.00	21,535,590.93	25 Dec.	107.7
Ibaraki	15,000,000.00	14,658,909.87	13 Dec.	97.7
Tochigi	21,000,000.00	21,078,040.68	10 Jan.	100.4
Gumma	12,000,000.00	10,104,876.00	10 Jan.	90.7
Saitama	16,000,000.00	17,740,608.00	31 Dec.	110.9
Chiba	25,000,000.00	18,102,470.61	31 Dec.	72.4
Tokyo	80,000,000.00	56,569,266.32	31 Dec.	70.8
Kanagawa	70,000,000.00	48,605,061.43	31 Dec.	69.4
Niigata	29,000,000.00	29,546,478.58	20 Dec.	101.9
Toyama	13,000,000.00	13,074,745.68	21 Dec.	100.7
Ishikawa	13,000,000.00	11,485,360.00	22 Dec.	88.3
Fukui	13,000,000.00	14,562,236.21	11 Jan.	112.0
Yamanashi	9,450,000.00	9,451,958.00	15 Nov.	100.0
Nagano	30,000,000.00	28,476,771.87	31 Dec.	95.0
Gifu	20,000,000.00	20,566,563.31	15 Nov	102.9
Shizuoka	20,000,000.00	20,819,871.41	31 Dec.	104.1
Aichi	66,000,000.00	68,603,260.42	15 Jan.	104.0
Mie	20,000,000.00	20,282,137.84	25 Dec.	101.4
Shiga	11,000,000.00	11,013,437.04	18 Dec.	100.1
Kyoto	50,000,000.00	27,308,313.00	12 Jan.	54.6
Osaka	85,000,000.00	74,307,394.00	13 Jan.	87.4
Hyogo	60,000,000.00	47,136,451.00	10 Jan.	78.5
Nara	12,000,000.00	12,000,128.69	5 Dec.	100.0

Child Welfare - Minimum Standards

Weekly Bulletin #107 refers to Kosei-sho-rei #64 as being in three parts. Kosei-sho-rei #64 consists of the standards and amendments thereto. The general instructions which were included are "The Enforcement of Minimum Standards of Child Welfare Agencies", Hatsu-ji #67, dated 29 December 1948.

Foster Day-Care

The attached instructions (Inclosure No.6) concerning foster day-care, Ji-hatsu #2 dated 20 January 1949, are a continuation of Ji-hatsu #50, "Functioning of Family Care", which was attached to Weekly Bulletin #95.

SECTION VIII SOCIAL SECURITY DIVISION

Appeals Reporting

Prefectural social insurance referees and National Health Insurance Appeals Boards are required to make monthly reports of the decisions they have rendered. The Ministry of Welfare summarizes the reports each month for SCAP. The National Health Insurance Appeals Boards have made no reports and the reports of the prefectural referees have been tardy and grossly inadequate. Frequently it is difficult to determine definitely, from a report, even the exact question raised by the appeal.

Prefectural officials should report not only the subject of the appeal but the reasoning advanced by both the claimant and the insurance office, the specific decision of the referee or Appeals Board and the justification upon which such decision is based. It is suggested that Welfare Officers supplement the efforts of Ministry of Welfare officials in educating prefectural referees and Appeals Board officials as to the elements essential to a report which will permit an intelligent analysis.

One basic factor which would contribute greatly to the proper functioning of an appeals system would be a recognition by the referees of the true importance of adequate and efficient procedures for appeals and fair hearings.

It has been almost uniformly demonstrated by the referees that they consider their responsibilities as referee secondary to their assumed position as "first assistant" to the chief of the prefectural insurance section. As a consequence, the appeals activities are given only such attention as the official can "spare" from his other activities. Great emphasis should be placed on the need for correcting this attitude.

Proper application of the referee to his duties in conducting hearings and, particularly at this time, in publicizing the existence of appeals facilities will leave him no time to engage in other pursuits.

Above all, failure of the referee to divorce himself from the general administration of the social insurances is a complete contradiction of the fundamental principle that the referee cannot conduct a fair hearing on an appeal from an original demonstration with which he was in any degree identified.

The concept of a fair hearing in connection with the social insurance program in Japan existed only on paper prior to the Occupation. The efforts to make such an institution a reality will be fruitless so long as the officials responsible for its operation continue to give only lip service and lack an appreciation of the objectives contemplated.

Social Insurance Statistics

Government Pension Benefits:

Reference is made to Public Health and Welfare Weekly Bulletin No.100 for a summary of the Government Pension System (Onkyu) and benefit data for the first eight months of the calendar year 1948.

Inclosure No.7 shows comparable data for the month of September 1948. The average per-case amounts of “additional”, invalidity, and survivors pensions show a marked increase in that month, in part, reflecting for the first time a recent liberalization in the benefit provisions which became effective in July 1948. 1/

1/ The delay is due to the quarterly, rather than monthly, certification of pension due and payable.

SECTION II PREVENTIVE MEDICINE DIVISION

Typhus Fever

Reference Section II, Public Health and Welfare Weekly Bulletin No.107, and Inclosure No.1. Attention is called to an error in subject inclosure entitled "Tabular Summary - Typhus Fever in Japan, 1948". Under the column "Cases reported M/W", Shizuoka should read 0 instead of 9. No. cases of typhus were reported from this prefecture during 1948.

Scrub Typhus

A plan is being formulated by the Niigata Prefectural Health Department and the Ministry of Welfare designed to reduce the incidence of scrub typhus in Niigata prefecture. This plan will go into effect during May of this year and will be under the general supervision of the Niigata Military Government Team.

Bacterial Rat Poison

Reference Section II, Weekly Bulletin No.95, above subject. The long-standing practice by the Ministry of Agriculture and Forestry of distributing bacilli cultures of salmonella organisms for use in the preparation of rat baits has been officially discontinued by instructions dated 18 December 1948 to the Prefectural Governors. The instructions state in part "You are, therefore, requested to notify the prefectural agricultural experiment stations, which have been charged to distribute the said bacilli for the purpose of destroying wild rats, to suspend immediately such distribution until otherwise notified henceforth."

Reference is also made to page 6, Natural Resources Section Weekly Summary No.169 for the period 2-8 January 1949, item 1, subject, "Use of Bacteria for Rat Control Discontinued." Subject reference explains the action taken to prohibit the use of bacterial cultures for rat poison, and quotes the instructions sent out by the Ministry of Agriculture and Forestry.

Since the practice of using bacterial rat poison is one of long-standing it is suggested that Military Government Health Officers be on the alert for violations of those instructions.

Quarantine Regulation

Due to the presence of epidemic smallpox in South Korea and in Mindoro Island, Philippines and to the seasonal recurrence of smallpox in the port cities of China, the provisions of SCAP Circular #9, dated 29 March 1948 applicable to epidemic smallpox areas have been invoked.

Until further notice all persons arriving in Japan from China, South Korea or Mindoro Island are to have in their possession certificates showing successful vaccination against smallpox within the preceding sixty days.

Persons entering Japan from all other countries are required, as heretofore, to have evidence of successful smallpox vaccination and inoculation against typhoid-paratyphoid within the preceding twelve months.

SECTION III NURSING AFFAIRS DIVISION

Salaries of Nurses - Health Centers

The number of nurses whose salaries are subsidized by the Ministry of Welfare is determined by the number and classification of health centers in each prefecture (A, B, or C health centers). Inclosure No.1, lists the actual number of nurses and midwives working in each prefecture as against the actual number of nurses and midwives that could be employed based on the Ministry of Welfare budget allocations. On 17 January 1948, Public Health Bureau instruction (Koseisho Hatsu Ken) No.3, Subject, "Concerning the Establishment of Staff Following the Enlargement of Health Center Setup", was sent out to all prefectural governors and at the same time furnished the information as contained in referenced inclosure.

This Koseisho Hatsu Ken No.3 does not limit the number of nurses who may be employed in each prefecture but limits the number of nurses employed in each prefecture for which grant-in-aid are made by the Ministry of Welfare. Any prefecture may employ more nurses than are indicated on the attached inclosure but to do so it must pay their salaries from prefectural funds. All nurses are classified in different categories with the Ministry determining the number of persons whose salaries they will supplement in each category.

A third class technician rating is the highest rate of salary a public health nurse on the prefectural level can hold at the present time.

Publications

A catalog of price lists and textbooks has been forwarded to each prefecture, listing the publishers named below, for those Japanese nurses who wish to obtain reference material. All books and pamphlets should be ordered direct from the publisher, remittances to be in Japanese money order and it is recommended that a duplicate list of the order be retained and used for checking, following receipt. Remittances should also include postage.

Ministry of Welfare
(Midwifery Manual Only)

National Nurses Association

The annual meeting of Japanese midwives, clinical nurses and public health nurses association will be held in Tokyo on the 7th, 8th and 9th of April. It is suggested that during the next three months the prefectural branch nurses association be encouraged to increase their membership to permit the coming national meeting to be more representative of all the nurses and midwives in Japan. Officers of the prefectural associations should be urged to plan a definite campaign to have all eligible members join the Association. To be an active member, all dues must be paid prior to the beginning of the fiscal year, 1 April 1949.

SECTION IV NUTRITION BRANCH

The Graduation ceremonies for 38 students completing the 3rd refresher course for nutritionists took place at the Institute of Public Health 31 January. All prefectures were represented except Ehime, Tottori, Wakayama, Aomori, Nara, Kyoto, Fukui and Toyama. The opening of the next nutritionists refresher class will be announced when firm.

Nutrition Surveys

Results of the November 1948 Nutrition Survey for Tokyo, 11 Cities, Other Cities and 46 Prefectures are given in the attached tables. (Incl, #2).

SECTION V SUPPLY DIVISION

Distribution

Weekly Bulletin #107 for the period 10 - 16 January, Inclosure 2, lists manufacturer's prices in effect since 4 November 1948. This list did not include the unit for which these prices have been established. Inclosure No.3 this bulletin includes the complete information.

Consumers prices can be estimated as being approximately 40% more than the manufacturer's selling price.

During the period 16 - 22 January, 1,014 pieces of dusting and spraying equipment were distributed to seven prefectures as follows:

<u>Prefecture</u>	<u>DDT Dusters</u>	<u>Knapsack Sprayers</u>	<u>Semi-automatic Sprayers</u>	<u>Hand Sprayers</u>
Tokyo	200	2		
Osaka	200			50
Wakayama		100	90	
Shimane		102		
Ehime			50	
Fukuoka		70	100	
Saga		50		
TOTALS	400	324	240	50

SECTION VI NARCOTIC CONTROL DIVISION

Trial Delays

One fact which detrimentally effects the lesson which should be learned by narcotic law violators given a quick trial, sentenced, and then immediate serving of any penal servitude so awarded, is the long delay between the

time of apprehension and the date of trial. Instances are presently on record of an 18 month delay and a considerable number of delays have averaged 12 months or more.

Investigation of such delays discloses that in some instances the case reports were not given procurators by the prefectural narcotic officials and in others the procurators had not forwarded the cases report, after their investigation or perusal, to the courts for inclusion on the trial calendar. In other instances the courts have delayed placing narcotic violation cases upon the trial calendar considering other types of violations as being of more importance.

Another delay is caused when the defendant appeals the courts decision to a higher court. Delays of from one to two years have occurred due to this procedure. During these long delays the defendant is generally free to continue his violations in efforts to amass enough money to pay for defense attorneys and for the possible assessment of fines, and to gain and use outside influences toward lenient court decisions.

Military Government Team personnel could immeasurably aid Narcotic Control if they directed the attention of prefectural court officials to any such cases as come to their notice in an effort to expedite the trial and sentencing of narcotic violators.

SECTION VII WELFARE DIVISION

Community Chest - Japanese Red Cross Joint Fund Campaign

The latest information received from prefectural reports and compiled on 27 January reflects a total of ¥ 1,046,747,659.15 raised (including pledges) towards the national goal of ¥ 1,175,450,000.00 or 89.1% of quota.

The following twenty-five prefectures have reached or exceeded their quotas:

Aomori	Shizuoka
Iwate	Aichi
Akita	Mie
Yamagata	Shiga
Fukushima	Nara
Tochigi	Hiroshima
Saitama	Kagawa
Niigata	Fukuoka
Toyama	Saga
Ishikawa	Kumamoto
Fukui	Oita
Yamanashi	Miyazaki
Gifu	

Licensed Agencies for Relief in Asia (LARA)

Overseas shipments of relief supplies for Japan, numbers 117 through 120, have arrived in Yokohama. Also shipment designation 91-B originally intended for Korea was unloaded by error at Yokohama and will not be trans-shipped. These shipments included the following items:

- 117 Shipment: Arrived aboard the S.S. Resolute on 8 January and contained 21.47 tons (food, 14.95 tons - clothing, 6.52 tons).
- 118 Shipment: Arrived aboard the S.S. Tjmenteng on 8 January and contained 61.8 tons (clothing).
- 119 Shipment: Arrived aboard the S.S. Courser on 13 January and contained 25.98 tons (food, 11.76 tons - clothing, 13.98 tons - miso. .24 tons).
- 120 Shipment: Arrived aboard the S.S. Train Maersk on 20 January and contained 9.35 tons (clothing, 9.2 tons - medical supplies, .15 tons).
- 121 Shipment: Arrived aboard the S.S. Andrew Jackson on 26 January and contained 105.98 tons (food,

98.82 tons - clothing, 7.16 tons).

Shipment 91-B: Arrived aboard the S.S. P&T Explorer on 20 January for Korea (will not be trans-shipped) and contained 1.83 tons (clothing).

The total LARA relief supply shipments to Japan, as reported, now totals 7,400.62 tons, consisting of the following items:

	<u>Tons</u>
Food	5,585.51
Clothing (Including shoes)	1,442.57
Medical Supplies	61.67
Cotton (raw)	207.62
Miscellaneous (soaps, seeds, candles, etc).	<u>103.25</u>
TOTAL	7,400.62

Heifers for Relief Committee Shipments

This Committee, with headquarters at 30 North Marion Avenue, Pasadena 4, California, approved a project to ship 2,000 goats to Japan for use in welfare, education and rehabilitation projects, reference Public Health and Welfare Weekly Bulletin No.68 (for the period 12 - 18 April 1948).

To date a total of 1,629 goats have arrived in Japan (shipments number 1 through 7). The final shipment (No.8) is due to arrive in Japan during February.

Shipment No.7 arrived in Japan aboard the S.S. Republic on 16 January and totaled 294 goats. These goats were allocated as follows:

	<u>Goats</u>
Ministry of Welfare (for welfare institutions)	115
Ministry of Agriculture (for goat villages)	121
Ministry of Education (for agricultural colleges)	<u>58</u>
TOTAL	294

The distribution of the 115 goats allotted to the Ministry of Welfare has been approved and they will be distributed, beginning on 25 January, in accordance with the following schedule:

<u>Prefecture</u>	<u>Institution</u>	<u>Number of Goats</u>
Fukui	Jikoen Yoshie Bunen	5
	Wakoryo	5
	Mikuni Ryo	4
Shiga	Omi Gakuen	3
	Kusatu Ryoyosyo	5
	Omi Sanatorium	3
	Syonan Gakuen	3
Ehime	Katei Gakko	5
	Kaizenji Takkujisho	5
Yamanashi	Rissy Koseien	5
	Koyo Gakkuen	5
	Kohu Sunpu Ryo	5
	Siesen Ryo	3
Nagasaki	Junshin En	3
	St.Francisco	4
	Seihuen	3
Kagawa	Sakaide Aiiikuen	4
	Ro Gakko	3
	Chisyma Heikuesono	4
Tokushima	Shinsei Ryo	3
	Fujin Mome	4

	Awayoroin	4
	Tokushima Gakuin	3
	Heiwa Jutaku	5
Miyazaki	Karitasuno Sono	5
	Ishiikinen Yuaisya	5
	Shinsyu Gakko	4
	Saise Sya	5
	TOTAL	115

Japanese Red Cross Society

Medical Social Work:

An orientation Course on Medical Social Work for representatives of the Japanese Red Cross was held at the National Headquarters (Tokyo) for the period 24 - 29 January. This course was sponsored by the Japanese Red Cross Society and its conduct was made possible through assistance given by the Public Health and Welfare Section, SCAP.

The course was planned by the Acting Director, Japanese Red Cross Central Hospital and Chief, Medical Section, Japanese Red Cross. Forty-six representatives of the Japanese Red Cross attended the course. (Note: 36 hospitals in 33 prefectures, 3 Prefectural Chapters and 1 Maternity Hospital were represented).

The course consisted of; field visits to the St. Luke's Hospital, Red Cross Central Hospital and Suginami Health Center and lectures on the following subjects:

1. History of Medical Social Work Abroad and in Japan.
2. Purpose and Functions of Medical Social Workers.
3. Medical Social Work in a Hospital with Case Examples.
4. Relation of Public Health Nursing to Medical Social Work.
5. Medical Social Work in Model Health Center.
6. Education and Training of Medical Social Workers.
7. Information Regarding Medical Social Work Courses to be given, over a period of 3 months, at Japan School of Social Work, beginning 1 April 1948.

First Aid:

First Aid Training Course was held 18-19 January in Ashikaga City for the Hygiene Administrators of those factories within the city employing more than 50 persons.

Professional Training for Social Work

Welfare Officers being consulted regarding graduate training for social work may obtain catalogues from the following schools of Social Work which belong to the American Association of Schools of Social Work.

Atlanta University School of Social Work, 247 Henry Street, S.K., Atlanta, Georgia.
Forrester B. Washington, Director. (1928) (G)

Boston College, School of Social Work, 126 Neowbury Street, Boston 16, Massachusetts.
Dorothy Book, Dean. (1938) (M)

Boston University, School of Social Work, 84 Exeter Street, Boston, 16, Massachusetts.
Richard K. Conant, Dean, (1939) (P, G, M)

University of British Columbia, Department of Social Work, Vancouver, British Columbia, Canada.
Marjorie J. Smith, Head. (1945) (G)

Bryn Mawr College, Carola Woerishoffer Graduate Department of Social Economy and Social Research,
Bryn Mawr, Pennsylvania. Florence Peterson, Director. (1919) (M)

University of Buffalo, School of Social Work, 25 Niagara Square, Buffalo 2, New York,
Niles Carpenter, Dean. (1934)

University of California, School of Social Welfare, Berkeley 4, California.
Milton Chernin, Dean. (1928) (M, P)

Carnegie Institute of Technology, Department of Social Work, Pittsburgh, 13, Pennsylvania.

College of William and Mary, Richmond School of Social Work, 901 West Franklin Street, Richmond 20,
George T. Kaif, Director. (1919) (G). Virginia.

University of Wisconsin, Department of Social Work, Madison 6, Wisconsin.
Arthur P. Miles, Chairman of Department. (1922; withdrew 1937; readmitted 1947).

Refer to TB-PH-Wel 13, July 1948 for details regarding "Social Welfare Education in Japan".

SECTION VIII SOCIAL SECURITY DIVISION

Medical Profession and Social Insurance

Because of the vital role of the medical profession in the operations of the social insurance, it is necessary that a good working relationship between that profession and every level of administration of social insurances be maintained. Such relationship is being developed through the medium of the Japanese Medical Association and full encouragement of its development is being given.

The Japan Medical Association has been reestablished as a private, democratically-governed organization with prefectural and local chapters. Each of the chapters has appointed committees to handle social insurance matters. They are represented on all prefectural and local advisory councils established by the various social insurance laws to assure that their viewpoint is considered. They are expected to assume the customary responsibility that such organizations exercise with reference to their members.

To indicate the nature of questions and discussions that have arisen in this interest of the J.M.A., the following is a summary of the general question and answer phase of recent conference held with officials of that organization.

1. The prompt payment of service fees to insurance doctors, with recognition of the fact that doctors are required to operate their own affairs on a cash basis, but must in many cases, wait unreasonable period for payment of services rendered to insured patients. In this connection the establishment and functions of the Medical Fee Payment Fund, favored by insurance doctors was discussed. The Fund promises to remedy or alleviate the payment situation but it was noted that experience with the Fund, to date, has been discouraging and will require more initiative and follow-up action on the part of government officials and insurance administrative units.

2. The importance and scope of the National Health Insurance program and the possibility of a prefectural-National Health Insurance administrative organization rather than municipal administration in prefectures that cannot support municipal administrative units.

3. The lack of provisions in the Japanese social insurance laws designating and giving due considerations to the differences in skills and training of doctors. This was believed a major irregularity in the laws which, in the past, has contributed to poor service and indifference on the part of doctors and can only cause similar troubles in the future.

4. The over-utilization of the programs by the insured members with useless calls for treatment, postponed and night calls without good cause, and a general unrealistic attitude with respect to entitlement to service and attention beyond the limits of insurance resources. This is causing marked difficulties in several areas. In discouraging this over-utilization tendency and its abuse to the program thought is being given to sponsoring a change in the laws which would require partial payments in each, in addition to insurance benefits, from each insured member on each call. It is believed that such restriction or requirements would retard over-utilization practices and permit better services to those in actual need.

5. The possibility of using a combined fee-for-service and capitation system in certain areas where medical service could not satisfactorily be used under the preferred fee-for-service system.

6. A scheme, without sound actuarial or insurance planning, being given some attention in certain medical quarters to promote the removal of stimulated medical care fees from all social insurance laws. As a substitute the plan would provide the insured member with rights to obtain funds that could be used to secure medical service directly from a private doctor. This would dispense with all control provisions in the insurance laws over insurance doctors.

7. The problem of standardizing medical care especially the limits of "minimum medical care." Such is believed to embrace a high standard in services and supplies yet remain within the resources of the insurance system. This determination is proving to be a difficult one and it was emphasized that more conferences were needed by the Medical Care Advisory Council and the Medical Fee Calculating Committee. It was recognized that certain delays have been encountered in the formation of these guiding bodies but that such were cleared in December 1948 and immediate action is now expected.

The discussions throughout the conference were marked by a sharp interest in the social insurance problems and administration and a sincere desire of the members of JMA to make the Japanese program successful. The Medical Fee Payment Fund Law was declared an attainment which had long been sought by the doctors and that in spite of the present difficulties stemming from initial administration it was believed to be a solution to a great number of program difficulties. There was willing and purposeful intent expressed by the members to do everything within their power to promote, advise, and urge administrative personnel and medical practitioners to give full support and attention to the solution of problems and the encouragement of a successful program of social security in Japan.

SECTION II PREVENTIVE MEDICINE

Availability of Vaccine

Reference Weekly Bulletins Nos.105 and 106, above subject.

One lot of Smallpox vaccine has been released upon passing reassy and distribution has been made to Koseisho offices at the following selected points; Sapporo, Sendai, Tokyo, Nagoya, Osaka, Hiroshima, Takamatsu, and Fukuoka.

Typhoid-paratyphoid vaccine which has passed reassy is in process of distribution to the same eight Koseisho offices. A detailed list of the origin and lot numbers of the released typhoid-paratyphoid vaccine and the location to which distributed will be published in the following number of the Bulletin.

A small amount of anti-diphtheria serum and of anti-tetanus serum has passed reassy and is available through Dr. Ishibashi, Disease Prevention Bureau, Ministry of Welfare.

Release of Biologics; Tuberculin

A single lot of tuberculin which passed special assay was released 5 February for use in conjunction with a survey on histoplasmosis in Japan. This lot No.2-2 (NIH) will be used by National Institute of Health special investigators in certain localities in Shinetsu, Kanto, Tokyo, Kansai and Tohoku. No other tuberculin has yet been released for use.

SECTION III NUTRITION BRANCH

Course for Nutritionists

The fourth 2-month training course for nutritionists in prefectural health departments and health centers will open at the Institute of Public Health in Tokyo on 28 February. Prefectures with a back-log of untrained personnel may send more than one student to the course. The best qualified candidates should be selected. An official announcement concerning the course was sent to prefectural Governors by the Ministry of Welfare on 31 January.

SECTION IV NURSING AFFAIRS

Refresher Course

The Nursing Affairs Section, Ministry of Welfare and the National Nurses Association are sponsoring a 1-month course to open 1 March in the First National Hospital, Tokyo for nurses who have been designated as instructors in the prefectural 5-months public school of nursing that will open soon in each prefecture.

Medical Bureau Instructions (I-hatsu) No.83, dated 27 January 1949, subject: Regarding Amendment of the PHN Regulation, and Ministry of Welfare Ordinance No.4, dated 29 January 1949, mailed to all prefectural governors, contain instructions and information on the course and schools. I-hatsu No.83 also states that prefectural examinations for public health nurses will be discontinued until the prefecture establishes a 5-month school and, in the future (until 1951), only those nurses who have completed this school will be eligible to take the prefectural examinations for public health nurse.

It is recommended that the Ministry Government public health nurse or public health officer assist Japanese prefectural officials in selecting the most qualified nurse for this 1-month course and if possible the selection be an individual who has successfully completed the 4-month public health nurses refresher course at the Institute of Public Health in Tokyo.

It is not recommended that the prefectural chief nurse, or the chief nurse of the model health center, or the nurse in charge of the prefectural public health school be selected.

Approved Curriculum for 1-year post Graduate Course in Public Health Nursing

Pre-Requisite: Two months field work in a health center offering the 12 basic services as outlined in Health Center Law No.101.

1. Public Health and Preventive Medicine ---- 120 hours - by a Dr. of PH One public health doctor should be responsible for these 120 hours part of which may be taught by special lectures.
This will include:
 - Public Health Organization
 - Public Health Laws
 - Vital Statistics
 - Environmental Sanitation
 - Communicable Disease Control (including acute CD, TB, VD, parasitic disease etc.)
 - Child Health
 - Adult Health
 - Health Education
2. Public Health Nurse, Principles & Practices ---- 105 hours - PHN
3. Special Fields in Public Health Nursing ---- 105 hours - PHN
 - Maternity
 - Infant and Preschool
 - School Health
 - Industrial Health
 - Tuberculosis
 - Venereal Diseases
 - Communicable Diseases
 - Non-communicable DiseasesIn both of these nursing courses part of the hours could be given to special lecturers by public health nurses but one PHN should be responsible for each of the courses.
4. Nutrition ---- 30 hours - Nutritionist
5. Mental Hygiene ---- 30 hours - a doctor of Mental Hygiene
6. Educational Psychology ---- 45 hours - a teacher of Psychology
7. Sociology ---- 75 hours - a teacher of Sociology
8. Social Welfare (including Social Case Work) --- 30 hours - a Social Welfare Worker
9. Principles and Methods of Health Teaching ---- 45 hours - by a PHN (including individual & group teaching and practice)
10. Three months field work two of which shall be in a Health Center, offering the 12 basic services as outlined in Health Center Law No.101.

SECTION V VETERINARY AFFAIRS

Veterinary Education

A committee of veterinarians representing each veterinary college in Japan met and prepared a set of final examination questions that will be utilized by all veterinary colleges at the end of the current college year. Members of this committee were selected by the Council on Veterinary Affairs. Graduation from college will be based upon the results obtained by each senior student.

The use of this uniform final examination procedure is a temporary measure for two years (1949-1950) until the promulgation of the new Veterinary License Law. The subjects to be covered will be anatomy, physiology, bacteriology, internal medicine, surgery, and veterinary public health and animal disease and their control.

Veterinary Assay Laboratory

The Animal Hygiene Section, Ministry of Agriculture and Forestry is establishing a separate section in the Animal Hygiene Laboratory at Kodaira for the purpose of controlling all biologics intended for animal use by assaying them prior to their utilization in the field. Personnel have been selected to administer this assay laboratory and operation will be started in the very near future. Announcement will be made publicly when operation is to begin. Even though laboratories producing animal biologicals may assay their own products, they must have, however, a certificate from the new assay laboratory before the product can be placed on the market.

Hokkaido Research & Veterinary Laboratory

An inspection was made of the Hokkaido Agriculture Experimental Station at Noboribetsu, Hokkaido. This experimental station will come under the administration of the Animal Hygiene Section, Ministry of Agriculture and Forestry and will engage in the manufacture of serums, vaccines and diagnostics for those diseases indigenous to Hokkaido. Also, research will be conducted on animal diseases indigenous to Hokkaido.

The laboratory has excellent facilities and will greatly facilitate the increase of necessary biologicals so essential to the maintenance of economy in the livestock industry. The location of a laboratory of this nature in Hokkaido will overcome inadequacies of biologicals as well as the delay due to poor transportation facilities.

Seafood Inspection

The Veterinary Affairs Section, Ministry of Welfare, has been instructed to contact Boeki-Cho (Board of Trade) and arrange with them to suspend from distribution or sale the canned tuna being returned to Japan from the United States. It must undergo additional laboratory examinations to determine its safety for human consumption before release for domestic consumption will be authorized.

Animal Diseases

The Animal Hygiene Section, Ministry of Agriculture and Forestry reports no cases of animal diseases for the period 22-28 January. For the period 29 Jan - 4 Feb the following report is submitted:

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Chiba	Swine Plague	1

SECTION VI SUPPLY DIVISION

Production

A total of 4,295 pieces of the various types of DDT dusting and spraying equipment for insect control programs was produced during the period 16-22 January and a total of 4,375 pieces was produced during the period 23-29 Jan.

Distribution

During the period 16 - 22 January, no distribution of 10% DDT dust or 5% DDT residual effect spray was made. At the same time, however, 200,000 lbs. of 10% DDT dust and 16,550 gallons of 5% DDT spray were received, leaving inventory stocks on hand in regional warehouses of Ministry of Welfare and manufacturers of 3,286,865 lbs. of 10% DDT dust and 636,056 gallons of 5% DDT spray.

During the period 23 - 29 January, 68,000 lbs of 10% DDT dust were distributed. At the same time, 128,000 lbs. of 10% DDT dust and 50,235 gallons of 5% DDT residual effect spray were received, leaving inventory stocks on hand in regional warehouses of the Ministry of Welfare and manufacturers of 3,347,065 lbs. of 10% DDT dust and 662,241 gallons of 5% DDT spray.

Smallpox vaccine consisting of 64,000 doses, Lot. No.36, produced by the Kitasato Laboratory, has been reassayed in accordance with PHMJG 86 dated 28 December 1948 and found to meet the minimum standards. This

has been distributed for storage to 8 strategic points throughout Japan for use in emergencies in the surrounding areas as follows:

<u>Prefecture</u>	<u>Quantity</u>
Hokkaido	2,000 doses
Miyagi	8,000
Tokyyo	24,000
Osaka	10,000
Aichi	5,000
Hiroshima	5,000
Fukuoka	5,000
Kagawa	5,000
	<hr/> 64,000 doses

During the period 23 - 29 January, 775 pieces of DDT dusting and spraying equipment were distributed to 11 prefectures as follows:

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsack Sprayers</u>	<u>Semi-automatic Sprayers</u>	<u>Hand Sprayers</u>	<u>Engine Sprayers</u>
Ibaraki		300			
Tochigi		26	40		
Tokyo		3			
Gifu		4			
Kyoto	200				
Osaka				50	
Mie					1
Wakayama		20	25		6
Fukuoka			50		
Saga		50			
Kagoshima				10	
TOTAL	200	403	115	60	7

SECTION VII NARCOTIC CONTROL DIVISION

Narcotic Control Activities Report - December

The December report on narcotic control activities from the Ministry of Welfare contained the following information:

Total registrants	92,932
Arrests - registered persons	22
unregistered persons	94
Convictions - registered persons	17
unregistered persons	50
Thefts of narcotics (including one hospital)	17
Losses by fire and flood	1

Penalties for registrants varied from ¥ 1,000 fine to ¥ 20,000 fine and three months to two years penal servitude with five defendants having sentences of penal servitude abrogated to suspended sentences varying from two to five years duration. Penalties for non-registrants varied ¥ 500 to ¥ 13,500 fine and four months to three years penal servitude with 16 suspended sentences of from one to four years duration. Nine registrants received administrative disposition (loss of license) and four non-registrants were admonished for minor violations.

The report also summarized the activities of narcotic agents as follows:

Inspections of registrants	1,257
Investigations originated	157
Investigations concluded	166
Investigations not concluded	259

Prosecution of five non-registrant violators of the Marihuana Control Law resulted in five sentences of penal servitude ranging from two to four months each.

SECTION VIII
WELFARE DIVISION

Licensed Agencies for Relief in Asia (LARA)

Overseas shipments for LARA, numbers 122 through 125, have arrived in Yokohama and contained 21.47 tons. These shipments included the following relief items:

122nd Shipment: Arrived aboard the S. S. President Wilson on 28 January and contained 2.42 tons (clothing, 2.21tons - miscellaneous, .21tons)

123rd Shipment: Arrived aboard the S. S. Makadet on 29 January and contained 12.49tons (food)

124th Shipment: Arrived aboard the S. S. Pacific Transport on 1 February and contained 3.42 tons (food, 2.22tons - clothing, 1.2tons)

125th Shipment: Arrived aboard the S. S. American Mail on 1 February and contained 3.14tons (clothing)

The total LARA relief supply shipments to Japan, as reported, now totals 7,422.09 tons, consisting of the following items:

	<u>Tons</u>
Food	5,600.22
Clothing (including shoes and bedding)	1,449.12
Medical Supplies	61.67
Cotton (raw)	207.62
Miscellaneous (soaps, seeds, candles, etc.)	<u>103.46</u>
TOTAL	7,422.09

Japanese Red Cross Society

Water Safety:

Tokyo Metropolitan Police, responsible for policing bathing areas (pools and beaches), are to be given a complete course in Life Saving and Water Safety by qualified instructors of the Japanese Red Cross. Approximately 40 policemen are to receive this training.

Volunteer Services:

A Day Nursery project was undertaken at the Red Cross Central Hospital (Tokyo) and its operation began officially on 29 January. Two volunteers serve as nursery assistants every afternoon between 1400 - 1700.

Hospital Service:

The Directors of all hospitals operated by the Japanese Red Cross will meet in conference at the National Headquarters (Tokyo) on 8 - 9 March. The agenda will include the following:

- Revision of Regulations for Chapter Hospitals
- Hospital Administration
- Revision of Medical Treatment and Doctor's Laws
- Nurses Training
- Designation of Model Hospitals

Disaster Relief and Preparedness:

Niigata Chapter on 11 January dispatched one medical aid team to the scene of a passenger bus accident. The bus rolled off the highway and plunged into the Kuroki River. One passenger was killed and several were injured.

A fire occurred in Takamatsu City on 19 January. Several small buildings and homes were damaged. Nine persons were seriously injured and 13 received minor injuries. A Red Cross Medical Aid Team gave emergency treatment at the scene of the fire and 13 victims were admitted to the Takamatsu Red Cross Hospital for further treatment.

Child Welfare - Private Reformatories (Shonen Hogo Shisetsu or Shonen Hogo Dantai)

Private reformatories, which are to go out of existence by 31 March, are, in many cases, applying for licenses as children's institutions under the Child Welfare Law. Many of the higher type institutions will be purchased by the Attorney General's Office and will become national reformatories. Some of the residual group are good and some are extremely bad, or may be considered so in light of the services they perform.

Instructions are being sent out from the Children's Bureau that applications from such institutions shall be reviewed with extreme caution and that all such institutions must qualify under the Minimum Standards for Children's Institutions. It would appear that the only one for which they might conceivably qualify would be Homes for Dependent, Neglected and abused Children.

Since this will be the first opportunity for most prefectures to accept or reject such applications, it is suggested that Welfare Officers surveil Children's Sections operations concerning this problem. It is probable that considerable pressure will be placed on some officials in order to gain a license.

Consideration should be given to:

- a. Need for additional children's institutions in the area.
- b. Quality of staff.
- c. Whether the institution is a workshop. If so, the benefits to be derived from it as a children's institution might be seriously questioned.
- d. Physical plant and location.
- e. Suggestion that the institution be used for vocational training under the education or labor laws, or be used to house and train apprentices under the labor laws.

There is considerable evidence that many such reformatories have been in business only to secure cheap labor and tax-free operation. There are suspected instances of collusion between operators and officials in securing these benefits.

Social Work Courses in Colleges and Universities

The following information will be helpful to Welfare Officers consulted regarding social work education (the new school term begins 1 April under the new education law).

The Ministry of Education, Dai Ki Kyo I Sha 4 No.1, dated 21 Nov 47, covers the standard for a Social Work Department in a University. It includes the following curriculum presented by the committee of the schools concerned with social work education.

I. Liberal Arts will be composed of the following subjects:

- | | |
|-----------------------|---|
| 1. Natural Sciences - | Mathematics, Physics, Chemistry, Biology, History of Science |
| 2. Humanities - | History, Philosophy, Psychology, Comparative Religion, National Language, Foreign Language. |
| 3. Social Science - | Sociology, Political Science, Economics, Law, Statistics. |

II. Specialized Courses:

- | | |
|----------------|--|
| 1. Treatment - | Medical Information, Mental Hygiene, Child Welfare, Social Hygiene, Special Children, Case Work, Group Work, Guidance on Daily Living (16 units in all). |
|----------------|--|

- | | |
|---------------------|--|
| 2. Administration - | Outline of Social Work, Social Legislation, Social Work Organization, Labor Problems (10 units in all). |
| 3. Research - | Social Survey (including field work), Social Statistics (6 units in all). |
| 4. Field Work - | Minimum of 7 units of field work conducted at various social work agencies are required in the last school year. Subjects of field work include family protection, child protection, medical protection, leadership in case work, leadership in group work, social administration. |

Elective subjects in specialized course include:

History of Social Thoughts, History of Economics, Child Psychology, Youth Psychology (psychology of adolescent) Social Psychology, Social Education, Criminology, Family, Rural and Urban Sociology, Women's Problems, Population Problems, Vocational Guidance, Community Organization, etc.

Refer to PHW Technical Bulletin #13, Social Welfare Education in Japan, July 1948, for further details regarding social work courses now available in Japan. Japanese students desiring social work education in the United States may find it easier to be admitted to the schools of social work on the undergraduate rather than the graduate level. These schools are organized into the National Association of Schools of Social Administration, Ernest B. Harper, Chairman of Membership Committee, Michigan State College, East Lansing, Michigan. The schools belonging to this association are as follows:

- | | | |
|-----|------------------------------|-------------------------------|
| 1. | University of Alabama | - University, Alabama |
| 2. | University of Arkansas | - Fayetteville, Arkansas |
| 3. | University of Arizona | - Tucson, Arizona |
| 4. | University of Colorado | - Boulder, Colorado |
| 5. | University of Connecticut | - Storrs, Connecticut |
| 6. | University of Florida | - Gainesville, Florida |
| 7. | Florida State University | - Tallahassee, Florida |
| 8. | George Williams College | - Chicago 15, Illinois |
| 9. | University of Georgia | - Athens, Georgia |
| 10. | University of Idaho | - Moscow, Idaho |
| 11. | Kalamazoo College | - Kalamazoo 49, Michigan |
| 12. | University of Kentucky | - Lexington 29, Kentucky |
| 13. | Loyola University | - New Orleans 15, Louisiana |
| 14. | University of Maine | - Orono, Maine |
| 15. | Michigan State College | - East Lansing, Michigan |
| 16. | Montana State University | - Missoula, Montana |
| 17. | University of New Hampshire | - Durham, New Hampshire |
| 18. | University of New Mexico | - Albuquerque, New Mexico |
| 19. | Northwestern University | - Evanston, Illinois |
| 20. | University of North Dakota | - Grand Forks, North Dakota |
| 21. | Ohio University | - Athens, Ohio |
| 22. | University of Oklahoma | - Norman, Oklahoma |
| 23. | University of Oregon | - Eugene, Oregon |
| 24. | University of South Carolina | - Columbia 19, South Carolina |
| 25. | University of South Dakota | - Vermillion, South Dakota |
| 26. | University of Tennessee | - Knoxville, Tennessee |
| 27. | Utah State University | - Salt Lake City 1, Utah |
| 28. | University of Wyoming | - Laramie Wyoming |
| 29. | Texas Christian University | - Fort Worth, Texas |
| 30. | University of West Virginia | - Morgantown, West Virginia |

Catalogues from the above universities and college have been requested and their receipt by Public Health and Welfare Section will be published in a subsequent bulletin.

SECTION IX
SOCIAL SECURITY DIVISION

Medical Facilities

The Medical Service Law enacted by the Diet last year has for its basic purpose the development of standards for all medical care facilities and the program for establishment of public medical care facilities (reference Public Health and Welfare Weekly Bulletin No.82, July 1948, Section II, Medical Services). Inasmuch as several of the social insurance programs in providing medical care benefits now have plans for additional medical care facilities, managed locally by insurer and insured, this law is of direct interest to the administrators of the social insurance programs.

In accordance with the Medical Service Law, Article 32, "The Committee for the arrangement of medical facilities under the jurisdiction of the Minister of Welfare or the prefectural governor shall be set up in the Ministry of Welfare or a prefecture to investigate and deliberate important matters concerning the arrangement (location and needs) of medical facilities in response to the inquiry of the said Minister or the Governor", a cabinet order has been issued establishing the Committee for the Arrangement of Medical Facilities. There will be a Central Committee located in the Ministry of Welfare and a Local Committee located in each prefecture. The Prime Minister will appoint the members upon the recommendations of the Minister of Welfare for the Central Committee and the prefectural governor will appoint the members for the Local Committee.

Members for the Committee shall be drawn from among government or public officials of offices concerned, medical practitioners, dentists, those who are to receive medical treatment and man of leaning and experience.

Inasmuch as these committees will be concerned with investigating and deliberating on matters with regard to medical care facilities (both public and private) many of which are or will be locally managed by insured and insurer, it is considered advisable that social insurance officials at all levels show interest in the committees and their functions.

In addition, close liaison for coordination of functions between the Social Insurance Medical Care Advisory Councils, central and local, established in accordance with Art. 43-5 of the Health Insurance Law and the mentioned committees established in accordance with the Medical Service Law should exist. The Medical Care Advisory Council's basic function is to advise insurance doctors and those in charge of medical care facilities on perfecting methods in providing medical benefits for members of social insurances. As the common goals of the Medical Service Law and the Social Insurance Laws are to provide adequate and improved medical care, coordination between the administration of these laws, is essential.

SECTION X
MEMORANDA TO JAPANESE GOVERNMENT

None.

CRAWFORD F. SAMS
Brigadier General, Medical Corps
Chief

1 Inclosure:
Weekly Report of Communicable and Venereal Disease in Japan for the week ended 29 January 1949.

SECTION I
GENERAL

Ministerial Instructions

The following is a list of English translated instructions issued by the various Bureaus of the Ministry of Welfare to the prefectural governments for the period indicated:

10 - 15 January

<u>Date</u>	<u>File No.</u>	<u>Subject</u>	<u>To:</u>	<u>From:</u>
<u>Accounts Section</u>				
Jan 10	Kai-hatsu No.15		Governors, Yamanashi & Hiroshima Prefs.	Chief Accounts Section.
		Re: Field-examination of accounting.		
Jan 12	Kai-hatsu No.25		Governor, Chiba Pref.	"
		Re: Disbursement after expira- of the fiscal year.		
<u>Medical Affairs Bureau</u>				
Jan 11	I-hatsu No.29		All directors, branch offices of Medical Affairs Bureau national hospitals and national sanatoria.	Director, Medical Affairs Bureau.
		Re: Duty hours of the Government personnel.		
Jan 11	I-hatsu No.30		All directors, branch offices of Medical Affairs Bureau national hospitals.	"
		Re: Expenses under Article 15, paragraph 3 of the Venereal Disease Prevention Law.		
Jan 11	I-hatsu No.34		All directors, national hospitals and national sanatoria.	"
		Re: Survey and report on dental fixtures being actually kept by the national hospitals and the national sanatoria and report on conditions on receipt of distribution and use of precious metal for dentists.		
<u>Disease Prevention Bureau</u>				
Jan 12	Yo-hatsu No.38		All prefectural governors.	"
		Re: Record of preparations on preventive inoculation against tuberculosis.		
Jan 12	Yo-hatsu No.39		"	"
		Re: Record on preventive inoculation.		
Jan 13	Yo-hatsu No.40		Director, Health Department, Okayama Pref.	Director, Disease Prevention Bureau
		Re: Investigation into skin test on the clonorchis patients.		
<u>Public Sanitation Bureau</u>				
Jan 10	Ei-hatsu No.28		All prefectural governors.	Director, Public Sanitation Bureau
		Re: Execution of survey on national nutrition condition for the fiscal year 1949-50.		
Jan 10	Ei-hatsu No.31		"	"
		Re: Grant-in-aid for expense on collection of commodities necessary of license for business and on destruction of illegal commodities.		

Jan 12	Ei-hatsu No.39	All prefectural governors.	Director, Public Sanitation Bureau
		Re: Suspension of use mouse-typhoid germ for extermination of wood-mice.	
Jan 12	Ei-hatsu No.41	"	"
		Re: Allotment of cement for repairing and improvement of public wells and drains.	
Jan 12	Ei-hatsu No.42	"	"
		Re: Special distribution of candies for laborers in clean-up work for the fiscal year 1948-49.	
Jan 12	Ei-hatsu No.44	All governors of prefectures (except Tottori, Ehime & Miyazaki Prefs.)	"
		Re: Keeping of tire and tube for the trucks for clean-up work.	
Jan 13	Ei-hatsu No.51	All prefectural governors.	"
		Re: National grant-in-aid for expenses on restoration of water-works damaged by flood.	
Jan 13	Ei-hatsu No.53	Governor, Tottori Pref.	"
		Re: Designation of the hot-spring area.	
Jan 14	Ei-hatsu No.54	All prefectural governors.	"
		Re: Public works in connection with water works and sewerage for the fiscal year 1948-49.	

Pharmaceutical and Supply Bureau

Jan 12	Yaku-shu No.17	All prefectural governors.	Director, Pharmaceutical and Supply Bureau
		Re: Amendment of the Temporary Regulations on Restriction of Construction, etc.	
Jan 10	Yaku-hatsu No.28	"	"
		Re: Allotment of acetic acid for the demanders for the fourth quarter in the fiscal year 1948-49.	
Jan 11	Yaku-hatsu No.33	"	"
		Re: Investigation into quantity of gas damaged for industry.	
Jan 12	Yaku-hatsu No.41	"	"
		Re: Designation of sulfanylamide, etc.	
Jan 12	Yaku-hatsu No.47	"	"
		Re: Investigation into finance and accounting of business enterprises.	
Jan 13	Yaku-hatsu No.51	"	"
		Re: Determination of allotment of sugar as a medical article by demander for the latter half of the fiscal year 1948-49.	
Jan 14	Yaku-hatsu No.57	"	"
		Re: Collection of preventive inoculation liquor and its quantity for re-examination.	

Social Affairs Bureau

Jan 11	Sha-hatsu No.26	Governor, Tottori Pref.	Director, Social Affairs Bureau
		Re: Excessive payment beyond the regular amount of expends to be disbursed for living aid under the Daily Life Security Law.	
Jan 11	Sha-hatsu No.27	"	"
		Re: Excessive payment beyond the standard amount of living aid and excessive payment beyond the regular amount of expenses to be disbursed for living aid under the Daily Life Security Law.	
Jan 11	Sha-hatsu No.28	Governor, Yamaguchi Pref.	"
		Re: Excessive payment beyond the regular amount to be disbursed for living aid under the Daily Live Security Law.	
Jan 11	Sha-hatsu No.29	"	"
	Re:	"	
Jan 11	Sha-hatsu No.30	Governor, Miyagi Pref.	"
		Re: National grant-in-aid for expenses on guidance for operation of the social work agencies.	
Jan 11	Sha-hatsu No.32	Governor, Tokyo Metropolis	"
		Re: National grant-in-aid for expenses on equipments of the protective institutions under the Daily Life Security Law for the fiscal year 1948-49.	
Jan 12	Sha-hatsu No.34	Governors, Gumma & 2 other prefs.	"
		Re: Field examination of business affairs on relief of disaster-damages by wind and flood in Kanto and Tohoku Districts.	
Jan 13	Sha-hatsu No.35	Governor, Tottori Pref.	"
		Re: Question on the Consumer's Livelihood Co-operative Association Law.	
Jan 13	Sha-hatsu No.36	Governor, Nara Pref.	"
		Re: Application for excessive payment beyond the regular payment on expenses to be disbursed for living aid under the Daily Life Security Law.	
Jan 13	Sha-hatsu No.37	Governor, Shimane Pref.	"
		Re: Application for excessive payment beyond the regular payment on expenses to be disbursed for living aid under the Daily Life Security Law.	
Jan 13	Sha-hatsu No.38	Governor, Hyogo Pref.	"
		Re: Excessive payment beyond the standard amount of living aid under the Daily Life Security Law.	

Jan 13	Sha-hatsu No.39	Governor, Chiba Pref.	Director, Social Affairs Bureau
		Re: Application for excessive payment beyond the regular payment on expenses to be disbursed for living aid under the Daily Life Security Law.	
Jan 13	Sha-hatsu No.40	Governor, Saga Pref.	"
		Re: Allotment of a number of point on clothing for relief of the sufferers from a flood.	
Jan 13	Sha-hatsu No.41	Governors, Iwate & 4 other prefs.	"
		Re: Allotment of india-rubber tube for operation of the work providing agencies.	
Jan 13	Sha-hatsu No.43	Governors, Hyogo & another prefs.	"
		Re: Allotment of coke for the fourth quarter in the fiscal year 1948-49.	
Jan 13	Sha-hatsu No.49	Governors, Aomori & 6 other prefs.	"
		Re: Special allocation of LARA relief commodities.	
Jan 13	Sha-hatsu No.51	Governor, Hokkaido	"
	Re:	"	
Jan 14	Sha-hatsu No.54	Governors, Shimane & 2 other prefs.	"
		Re: Allocation of LARA relief commodities	
Jan 14	Sha-hatsu No.55	Governors, Shizuoka & another prefs.	"
	Re:	"	
Jan 14	Sha-hatsu No.56	Governor, Ishikawa Pref.	"
		Re: Excessive payment beyond the standard amount of aid for calling under the Daily Life Security Law.	
Jan 10	Sha-otsu-hatsu No.6	All prefectural governors.	"
		Re: Providing LARA milk.	
Jan 11	Sha-otsu-hatsu No.7	"	"
		Re: Allotment of timer under No.13 of the outline on coordination of demand and supply of timber.	
Jan 13	Sha-otsu-hatsu No.8	"	"
		Re: Special distribution of clothings for winter to the persons requiring relief.	
Jan 13	Sha-otsu-hatsu No.9	All governors of prefectures (except Tottori Pref.)	Director, Social Affairs Bureau
		Re: Questions on the Consumer's Livelihood Co-operative Association Law.	

Children's Bureau

Jan 10	Ji-hatsu No.6	All prefectural governors.	Director, Children's Bureau
		Re: Partial amendment of the minimum standards on the child welfare agencies.	
Jan 10	Ji-otsu-hatsu No.61	"	"
		Re: Application for national grant-in-aid on expenses to be disbursed for measures under the Child Welfare Law (for the fourth quarter) in the fiscal year 1948-49).	
Jan 12	Ji-hatsu No.16	Governor, Saitama Pref.	"
		Re: National grant-in-aid for expenses on equipments of the child welfare agencies for the fiscal year 1948-49.	
Jan 12	Ji-hatsu No.17	Governor, Wakayama Pref.	"
		Re: National grant-in-aid for expenses on equipments of a child welfare agency (the home for juvenile training and education) for the fiscal year 1948-49.	
Jan 12	Ji-hatsu No.18	Governors, Fukui & Ishikawa Prefs.	"
		Re: Special allotment of cement for the third quarter in the fiscal year 1948-49.	
Jan 14	Ji-otsu-hatsu No.5	All prefectural governors	"
		Re: Investigation into the present situations of the welfare centers.	
Jan 14	Ji-otsu-hatsu No.6	"	"
		Re: Presentation of the list on the actual numbers and the actual allowances of both the personnel of local government to engage in child protection and the child welfare officials.	

Insurance Bureau

Jan 10	Ho-hatsu No.3	"	Director, Insurance Bureau
		Re: Change of insurance rate of the health insurance administered by the Government	
Jan 13	Ho-hatsu No.4	"	"
		Re: Operation of health insurance, welfare pension insurance and seamen's insurance business, and re-organization of national health insurance business.	

Repatriation Relief Agency

Jan 10	En-go No.15	Governor, Aichi Pref.	Director, Repatriation Relief Bureau
		Re: The baggages to be carried back by JO-SOSHUN.	
Jan 10	En-butsum No.24	Governors, Tokyo & 3 other prefs.	"
		Re: Sale of necessities kept by Repatriation Relief Agency.	
Jan 11	En-shi No.25	All prefectural governors.	"
		Re: National grant-in-aid for expenditure necessary for the nation-wide simultaneous investigation in connection with business fund loan.	

Jan 12	Engo No.33	All prefectural governors.	Director, Repatriation Relief Bureau
		Re: The third investigation into the assets left by Lochooans.	
Jan 12	Ichi-fuku No.2620	All chiefs, Service Sect., prefectural governments.	Director, Demobilization Bureau
		Re: Forwarding the copy of notice to every governor on registration of the undemobilized.	
Jan 14	Ichi-fuku No.2625	"	"
		Re: Disposition of the bodies sent back from the Philippine Islands, (No.2).	
Jan 10	Hatsu-so No.16	All prefectural governors.	President Repatriation Relief Agency
		Re: Registration of the undermobilized etc.	
Jan 11	Hatsu-so No.17	"	Vice-President Repatriation Relief Agency
		Re: Spread of procedure of business affairs pursuant to enforcement of the Specific Unrepatriated Personnel Allowance Law.	

SECTION II PREVENTIVE MEDICINE DIVISION

Suspension of Immunizations

Reference Section II, Weekly Bulletin Nos. 104, 106, 110, Yohatsu 104 dated 25 December 1948 subject, "Re-assay of Japanese Produced Vaccines for Preventive Vaccinations," and PHMJG 86 dated 28 December 1948, subject, "Suspension of Use of Japanese Produced Vaccines for Preventive Vaccinations".

Every effort has been made to re-assay all vaccines and other biologic products and to release them for use at the earliest possible date. Certain lots of vaccines and sera have been re-assayed and officially released by the Ministry of Welfare (see Incl #4). The products which have been officially released may be utilized in the prevention, control and treatment of communicable disease. It will be noted however, that the number of different products and quantities thereof are at present small and are, with few exceptions, for emergency use only. The ban on the use of vaccines and sera, until re-assayed, is still in effect and full scale resumption of the immunization program is not yet anticipated.

Vaccines and other biologic products which have passed assay or re-assay by the National Institute of Health and officially released by the Ministry of Welfare since 1 January 1949 may be used, however, it is emphasized that the provisions of PHMJG 86 and Yo-Hatsu 104 are still in effect and will remain in effect until the program for investigation of biologic laboratories, correction of deficiencies and re-assay of all vaccines and biologic products has been completed. It is therefore necessary that Military Government Health Officers maintain vigilant surveillance over this program in order to insure that no Japanese produced biologic products are used unless they have been assayed or re-assayed by the National Institute of Health and officially released by the Ministry of Welfare since 1 January 1949.

Normally the Ministry of Welfare will notify the prefectural health departments (Governors) as the various lots of the different products are released.

As the amount of vaccines and biologic products released is still small, it is suggested that publicity concerning the resumption of immunizations be kept to a minimum for the time being. When the program has been completed, Military Government teams will be notified and wide publicity will be given to the full scale resumption of the immunization program at that time.

Availability of Vaccine

Reference Weekly Bulletin Nos.105, 106 and 110, above subject.

The typhoid-paratyphoid vaccine for which distribution was previously reported as being made to eight regional offices is, instead, being distributed to all prefectural health departments. The quantities are proportionate to the populations of the respective prefectures. Following this initial distribution of typhoid-paratyphoid vaccine, additional vaccine passing re-assay will be held by the Ministry of Welfare for filling requisitions from prefectures where special needs arise. Until further notice, typhoid-paratyphoid vaccine will be used only for immunizations of community contacts where typhoid occurs, and will not be used for routine immunizations as called for in Article 12 of Preventive Vaccination Law #68, 1948. The source and lot numbers of re-assayed subject vaccines permitted for use and the distribution plan are listed in the Supply Section of this bulletin. (see Incl #5).

Training Courses for Model Health Center Personnel

The last three of the special one-week training courses for key personnel from the Model Health Centers will be held at the Institute of Public Health in Tokyo during the month of March, as follows:

Dental Hygiene	March 14 through 19
Communicable Disease Control and Laboratory	March 22 through 28

The individuals in charge of these activities in the prefectural Model Health Centers should attend in order to be brought up to date concerning policies and procedures in carrying out these functions in the health center program. Since the course for laboratory workers will deal with techniques to be employed, the principal person who actually does such work should be sent rather than the person who may have nominal charge of the laboratory. Official announcements concerning these courses are being sent to Prefectural Governors by the Ministry of Welfare.

Health Center Administration

The purpose of having a model health center in each prefecture is twofold, (1) To serve as a model for guidance in the organization and operation of other health center districts within the prefecture and to train personnel for other health center district; (2) As the first properly organized health center district in each prefecture it should efficiently service the public health needs of the health center district in which it is located. All other health center districts should be similarly organized and operated as rapidly as available funds and personnel will permit.

It is quite logical that a model health center must maintain the high standards upon which it was originally organized and operated if it is to fulfill its mission. It is regrettable that some of the model health centers have already slipped back into the old way and are consequently not meeting the objectives outlined above. It has been noted that the state of tidiness and cleanliness is not up to standard in some cases. In others, too much attention is paid to the clinical aspects of the program and not sufficient attention is given to field work. In still other cases the model health center has not established regular work or clinic schedules which has resulted in an unbalanced program and inefficiency. Only feeble attempts to improve the public health program are being made by some health centers.

Cleanliness, tidiness and orderliness and business-like methods are a must in every model health center. One certainly cannot expect the personnel from other health centers to gain the proper conception of what a model health center should be and do unless the model health center sets a good example. In view of the above, Military Government Health Officers should exercise vigilant surveillance over the model health centers with a view to maintaining them as true models for, (1) Service to the health center district; (2) Demonstration of how a model health center should be organized and operated.

SECTION III NURSING AFFAIRS DIVISION

Post Graduate Courses

The attached curriculum (Incl #1) outlines the content of the one-year Public Health Nurses' Post Graduate Course. This is to be used as a planning guide.

Inclosure No.2 outlines the content of the one-year Midwifery Post Graduate Course. This is also to be used as a planning guide.

SECTION IV SUPPLY DIVISION

Production

A total of 3,932 pieces of the various types of DDT dusting and spraying equipment for insect control programs was produced during the period 30 January - 5 February.

During the period 30 January - 5 February, 48,372 lbs. of 10% DDT and 11,000 gals of 5% DDT residual effect spray were distributed. At the same time, 128,200 lbs of 10% DDT dust and 50,235 gals of 5% DDT spray were received, leaving inventory stocks on hand at regional warehouses of the Ministry of Welfare and factories of 3,317,293 lbs. of 10% DDT dust and 676,741 gals. of 5% DDT spray.

A breakdown of the plan of allocation of liquid chlorine for chlorination of water by the water treatment plants and by the prefectures, for the period January, February and March, is included in Inclosure No.3. Allocation tickets were mailed on 27 January by the Ministry of Welfare direct to the cities and towns concerned. At the same time, the Ministry of Welfare notified each prefectural health office of the breakdown of allocations to the cities and towns within the given prefecture.

The total quantity allocated for this period, January - March, is a reduction below the quantities for the previous quarters of the Japanese Fiscal Year 1948. This reduction was necessitated by the critical shortage of fuel and power adversely affecting the production of liquid chlorine. Corresponding reductions, therefore, in prefectural and water treatment plants allocations, were necessary.

Distribution

At the present time distribution procedures encourage prefectural allocation of the full quantity of controlled medical items which are allotted to the prefectures by the Ministry of Welfare. Some prefectures may find it practical to maintain a small reserve of allocated medicines to meet emergencies; there is no objection to this procedure. Other than for this emergency reserve, allocation certificates should be issued to cover the total amount allocated by the Ministry in order to maintain a rapid flow of the finished goods from manufacturers to consumers, with no stock piling along the way. It is considered most desirable to have all the goods available purchased by consumers rather than stocks of goods unsold because tickets have not been issued.

Re-assay of Biologics

Reference is made to Preventive Medicine Section of this bulletin which discusses the various aspects of the re-assay of biologics program that is under way. As stated therein, various vaccines have been re-assayed and found to meet minimum standards. Inclosure No.4 "Released Re-assayed Biologics" lists those vaccines which have passed re-assay, by lot numbers, manufacturers' names and quantities. Of these biologics which have passed re-assay, distribution of TAB vaccine is being made as shown in Inclosure No.5. The other biologics are being kept for issue by the Ministry of Welfare according to requests received from the prefectures in keeping with the quantities available.

This practice will be followed in the future and prefectures will be notified by the Ministry of Welfare as to releases of biologics.

Distribution

During the period 30 January - 5 February 8,160 pieces of dusting and spraying equipment were distributed to 12 prefectures as follows:

<u>Prefecture</u>	<u>DDT Dusters</u>	<u>Knapsack Sprayers</u>	<u>Semi-Auto Sprayers</u>	<u>Hand Sprayers</u>
Iwate		130	14	
Yamagata		250

SECTION V
NARCOTIC CONTROL DIVISION

Firearm Authorization for Narcotic Agents

To clarify inquiries regarding the authorization of Japanese Narcotic Agents, with power of arrest, to carry small arms, Law No.328, passed by the Diet 10 December 1948 is quoted:

“The following Article shall be added next to Article 52 (Law No.123 of 1948).

“Article 52-2. The Minister of Welfare shall designate narcotic agents from among the Narcotic Control Officers of Tokyo-To, Hokkaido and each prefecture, within the limit of 250 persons in total.

“2. Under the direction and supervision of the Minister of Welfare, narcotic agents shall take charge of entering, inspecting and removing as authorized by this Law as well as the Taima Control Law (Law No.124 of 1948) and other matters concerning the enforcement of these laws, and be authorized, as judicial police officers prescribed in the Code of Criminal Procedure, to perform their duties in respect to the offences concerning narcotic or taima and also the offences prescribed in Chapter 14 of the Penal Code (Law No.45 of 1907).

“3. Narcotic agents may perform their duties outside the area of their prefecture.

“4. Narcotic agents shall be authorized to carry with them small arms in the exercise of their duties.

“In Article 53, “Narcotic Agent” (Mayakutosei-shuji) shall read “Narcotic Agents” (Nayakutorishimari-in).

Supplementary Provisions

“The present Law shall come into force as from the day (January 1, 1949) when the Law for Amendment of the Code of Criminal Procedure (Law No.131 of 1948) is enforced.”

Instructions issued by the Ministry of Welfare, 21 January 1949, regarding the carrying of small arms include the following:

- a. Narcotic agents are responsible for the custody of the pistol and ammunition.
- b. The pistol shall be carried in a holster.
- c. The pistol shall not be loaded except when required in the performance of duty.
- d. The pistol shall be used only when necessary, principally for self-defense.
- e. When the pistol is discharged in the performance of duty, the Ministry of Welfare shall be notified immediately.
- f. Pistols and ammunition shall be kept in a locked cabinet when not carried in the performance of duty.
- g. Loss of arms shall be reported immediately to the Ministry of Welfare.

Illicit Narcotic Trafficking

Increase in the illicit traffic in heroin, morphine and cocaine in Japan during the past three to four months, with two cases of smuggling to the United States resulting in the arrests of several defendants, has been called to the attention of the Narcotic Section, Ministry of Welfare. Instructions regarding better enforcement have been given and all information among enforcement agencies coordinated in order to smash mushrooming gangs of peddlers and couriers who smuggle the narcotics into Japan.

SECTION VI WELFARE DIVISION

Community Chest - Japanese Red Cross "Joint Fund" Campaign

It is estimated that final results of the Community Chest - Japanese Red Cross "Joint Fund" campaign will be available on or about 4 March.

The most recent report, compiled as of 10 February, reflects a total of ¥ 1,071,877,947.64 raised (collections, including pledges) towards the national goal of ¥ 1,175,450,000.00 or 91.2% of quota.

The progress of the "Joint Fund" campaign on a prefectural level, reflecting goals, amounts raised, last date of reporting, completed drives and fund distribution status, is given below:

<u>Prefecture</u>	<u>Goal</u>	<u>Amount Received</u>	<u>Date Reported</u>	<u>%</u>	<u>Remark</u>
Hokkaido	70,000,000.00	74,489,254.00	27-Jan	106.4	(1) (2)
Aomori	11,000,000.00	11,244,438.77	20-Jan	102.2	(1) (2)

Community Chest Conferences

A two-day conference (3-4 February) of Community Chest prefectural officials (volunteer chairman and paid executive directors) was held at the Japan School of Social Work, Harajuku, Tokyo.

The conference was given over to a review of the recent (1948-1949) "Joint Fund" campaign (Community Chest - JAPCROSS) and making preliminary plans for the 1949-1950 fund campaign.

The selection of the Directors of the Central Committee, Community Chest, was also announced. The representatives selected to serve for the next 12 months are as follows:

Nation-wide

<u>Name</u>	<u>Prefecture</u>	<u>Occupation</u>
Bunjiro Kotake	Hokkaido	Auditor, Chamber of Commerce
Kiyomasa Sakurada	Aomori	Speaker, Prefectural Assembly
Masabumi Ube	Iwate	Pres, Morioka Chamber of Commerce
Kiyoshi Takahashi	Miyagi	Speaker, Prefectural Assembly
Konosuke Kyono	Akita	Speaker, Prefectural Assembly
Sendaji Shirota	Yamagata	Speaker, Prefectural Assembly
Tokuzo Yui	Fukushima	Merchant
Gentaro Arai	Ibaraki	Merchant, Speaker, Prefectural Assembly
Shiko Sekiguchi	Gumma	Mayor, Maebashi
Kuraji Matsumoto	Saitama	Speaker, Prefectural Assembly
Nobuyoshi Takahashi, M.D.	Chiba	Director, Narita Red Cross Hospital
Ryutaro Takahashi	Tokyo	Pres., Chamber of Commerce
Yoshinobu Soyeda	Kanagawa	Businessman
Saburo Murata	Niigata	Mayor, Niigata
Shotaro Yauchi	Toyama	Chairman, Mayor's Council
Yoji Naoyama	Ishikawa	Director, Chamber of Commerce
Eitaro Nomura	Fukui	Member, Prefectural Assembly
Genichi Ikeya	Yamanashi	Member, Prefectural Assembly
Kyuzaemon Matsushashi	Nagano	Businessman
Jinkichi Watanabe	Gifu	Member, House of Councillors
Yahachi Kawai	Shizuoka	Member, House of Councillors
Tsunejiro Miwa	Aichi	Pres., Chamber of Commerce
Tesshin Shibata	Mie	Chairman, Prefectural Buddhist Association

Kakuzaemon Takeuchi	Shiga	Lawyer
Kozo Tsubota	Kyoto	Businessman
Michisuke Sugi	Osaka	Pres., Chamber of Commerce

Yoshisuke Kasai	Government (National)
Chujiro Kimura	Government (National)
Tokuo Kojima	Government (National)
Masao Kambe	Government (Prefectural)
Jintaro Yoshizawa	Government (Prefectural)
Yasunori Yamaguchi	General
Shunzo Yoshizaka	General
Soichi Saito	General
Tamaki Uemura	General
Yoko Matsuoka	General

Cooperative for American Remittances to Europe, Inc., (CARE)

The following report covers "CARE Operations in Japan" since the arrival of their first shipment of "gift" packages in July 1948 through 31 January 1949:

a. <u>Food</u>		
Total packages received		19,979
Packages damaged	2,733	
Packages delivered	10,430	
Packages in process of delivery	<u>4,273</u>	<u>17,436</u>
Total packages on hand available for delivery		2,543

b. <u>Woolen</u>		
Total packages received		3,012
Packages damaged	9	
Packages delivered	2,269	
Packages in process of delivery	<u>734</u>	<u>3,012</u>
Total packages on hand available for delivery		xxxxx

(Note: Standing orders for 763 packages)

c. <u>Blanket</u>		
Total packages received		1,144
Packages damaged	10	
Packages delivered	521	
Packages in process of delivery	<u>318</u>	<u>849</u>
Total packages on hand available for delivery		295

d. <u>Knitting</u>		
Total packages received		1,008
Packages damaged	5	
Packages delivered	252	
Packages in process of delivery	<u>460</u>	<u>717</u>
Total packages on hand available for delivery		291

Japanese Red Cross Society

Volunteer Services:

The Volunteer Service's (production) final report covering disposition made of the 176,852 "Ditty Bags" received from the American Red Cross is given below:

a. Ditty Bags received		176,852
Ditty Bags ripped (for garment making)		<u>174,485</u>
Ditty Bags in stock		2,367

b. Ripped Ditty Bags (cloths)		174,485
Sent to Iwate Chapter (Disaster Relief)	5,000	
*Made Into garments	<u>139,105</u>	<u>144,105</u>
Ripped Ditty Bags in stock		30,380

*Garments, reference sub-paragraph c, below.

c. Garments (children's) made		24,465
Sent to Chapters	<u>23,027</u>	<u>23,027</u>
Garments in stock		1,438

None: The following garments other than the children's listed above, were also made:

Skirts	6	Tabi covers	320 prs.	Pants	146	Sandai bags	7	Drawers	127
Clog thongs	230 prs.	Jackets	30	Shopping bags	15	Hoods			239

The 23,027 children's garments produced by the Volunteer Services (production corps -Tokyo), reference sub-paragraph b, above, have been distributed to the prefectures listed below:

Prefecture	Children's Garments	Prefecture	Children's Garments
Iwate	3,500	Ibaraki	350
Miyazaki	500	Kanagawa	300
Saga	800	Shizuoka	150
Nagasaki	800	Yamaguchi	200
Ishikawa	2,000	Ehime	400
Fukui	12,000	Tokyo	27
Chiba	2,000		
Total garments: 23,027			

Medical Social Work Course

Final arrangements have been made regarding the three-month medical social work course to be given at the Japan School of Social Work, 266, 3 chome Harajuku, Shibuya-ku, Tokyo. This course is sponsored by the Japan Social Work Association in cooperation with the Social Affairs, Medical Affairs and Disease Prevention Bureaus of the Ministry of Welfare. The course begins 10 April 1949 with the tuition set at ¥ 200 a month. The deadline for applications is 20 March 1949.

Health Centers, national hospitals and other public agencies requiring the services of medical social workers are encouraged to recommend to the Governor, for possible scholarship assistance, personnel now employed or who may be employed. Applications are encouraged from individuals interested and final selection of candidates will be made on basis of qualifications and references.

Group Work Course

Applications for the group work course to be given by Miss Sullivan at the Japan School of Social Work, Tokyo, 14 through 25 March 1949 will be accepted until 25 February 1949. They should be sent to the Selection Committee, Group Work Course, c/o Central Social Work Hall, No.266, Harajuku 3 chome, Shibuya Ward, Tokyo Metropolis, Tel. Akasaka 1318. The following information is required with the application: Age, sex, education, statement regarding group experience either as a member or a leader, (including age of children in the group and circumstances) and a statement regarding the use which the applicant intends to make of training provided by this course. Application is to be accompanied by a letter of recommendation from the government office, school or institution to which the applicant is associated and if not employed, by a responsible person who can give a reference. The tuition fee is ¥ 200 and those who are not within commuting distance will have to make their own arrangements regarding board and room.

Public Assistance Report - December

The Ministry of Welfare has submitted the following totals for the month of December. Figures for November 1948 and December 1947 are shown for purpose of comparison.

	December 1948	November 1948	December 1947
Persons - Institutional	140,284	143,940	138,623
Persons - Non-Institutional	1,703,941	1,690,576	2,702,650

* After deductions for repayment.

SECTION VII SOCIAL SECURITY DIVISION

General

The projected program for issuing Technical Bulletins incorporating guide sheets was a subject of discussion at the recent conference of IX Corp Welfare Officers. The desirability of such an approach was

confirmed in the experience gained in utilizing the bulletin on National Health Insurance, issued in December 1948. The material has served effectively as a training aid and an operating medium. Future releases are planned to include copies of Cabinet and Ministerial Ordinances incorporating enforcement regulations, procedures and forms. They will also include indexes where feasible.

An index to the National Health Insurance Law is now being prepared for issuance and efforts are being directed to obtain sufficient copies for distribution of the National Health Insurance Enforcement Regulations which were released in the Official Gazette of 15 August 1948.

GENERAL

Ministerial Instructions

The following is a list of English translated instructions issued by the various Bureaus of the Ministry of Welfare to the prefectural governments for the period indicated:

17 - 22 January

<u>Date</u>	<u>File No.</u>	<u>Subject</u>	<u>To:</u>	<u>From:</u>
<u>Accounts Section</u>				
Jan 17	Kai-hatsu No.33	Re: Amendment on departments and bureaus stated in the report on amounts paid up.	Governors, Yamaguchi & 11 other prefs.	Chief, Accounts Section.
Jan 17	Kai-hatsu No.34	Re: Field examination of accounting.	Governors. Chiba & 4 other prefs.	"
Jan 20	Kai-hatsu No.44	Re: Disbursement of budget for fiscal year 1948-49 on payment of allowances for December 1948 and January 1949.	All officials in charge of disbursements	"
<u>Public Sanitation Bureau</u>				
Jan 17	Ei-hatsu No.59	Re: Establishment of the local commissions for national parks.	Governors. Akita & 10 other prefs.	Director Public Sanitation Bureau.
Jan 17	Ei-hatsu No.60	Re: Establishment of the prefectural hot-springs deliberation committees.	Governors. Ibaraki & 30 other prefs.	"
Jan 18	Ei-hatsu No.62	Re: Allotment of rubber foot-gears for workers in the rodent and insect extermination program for the first quarter in the fiscal year, 1948-49.	Governors. Hokkaido & 5 other prefs.	"
Jan 19	Ei-hatsu No.64	Re: A member of the hot-springs deliberation	Governor, Fukushima Pref.	"
Jan 21	Ei-hatsu No.68	Re: Use for food of unsound cattles which have used to produce anti-cattle-plague serum.	Governor, Hyogo Pref.	"
Jan 21	Ei-hatsu No.69	Re: Transferring to the mayor competency on examination of fish and shells at the central market.	Governor, Osaka Pref.	"
Jan 21	Ei-hatsu No.70	Re: The environmental sanitation inspectors.	All prefectural governors.	"
Jan 21	Ei-hatsu No.71	Re: National grant-in-aid for the expenses on investigation into conditions of destruction by the war of the parks and the public gardens.	"	"

Jan 21	Ei-hatsu No.72	Re: Business affairs on control of hydrophobia of dogs.	All prefectural governors.	Director Public Sanitation Bureau.
Jan 21	Ei-hatsu No.73	Re: Suspension of rationing of the imported pulse	"	"
Jan 21	Ei-hatsu No.74	Re: Notice on conference on examination of products under the provision of the Food Sanitation Law.	"	"
Jan 21	Ei-hatsu No.75	Re: Delegation of disbursement of the expenses on simple equipments of the national parks.	Governors, Hokkaido & 24 other prefs.	"
Jan 22	Ei-hatsu No.78	Re: Report on settlement of national grant-in-aid for the expenses on appointment of the food inspectors for the fiscal year 1947-1948.	Governors, Tokyo Metro & 8 other prefs.	"
Jan 22	Ei-hatsu No.80	Re: Investigation on designation of area of the Ise-Shima National Park.	Governor, Mie Pref.	"

Medical Affairs Bureau

Jan 17	I-hatsu No.45	Re: Notice on council of directors of the nursing training institutions.	All prefectural governors.	Director, Medical Affairs Bureau
Jan 18	I-hatsu No.47	Re: Measures on medical facilities in general on the Japan Medical Treatment Corporation after transferred.	"	"
Jan 21	I-hatsu No.61	Re: The province on medical science under Article 17 of the Medical Practitioners Law.	"	"
Jan 21	I-hatsu No.64	Re: The regulations of criminal procedure on the medical certificate for legal procedure.	"	"

Disease Prevention Bureau

Jan 17	Yo-hatsu No.43	Re: Forwarding solatia for the patients caused secondary effect according to accidents by inoculations against diphtheria.	Governors, Kyoto & Shimane Prefs.	Director, Disease Prevention Bureau
Jan 18	Yo-hatsu No.52	Re: Personnel of local governments (2nd class technical officials being dentists) conducting functions of health center.	All prefectural governors.	"
Jan 19	Yo-hatsu No.57	Re: Full number of personnel being objects of national grant-in-aid, such as expenses on health centers and expenses on control of communicable diseases, etc.	All prefectural governors.	Director, Disease Prevention Bureau

Pharmaceutical and Supply Bureau

Jan 19	Yaku-hatsu No.66	Re: Standards of registration	"	Director, Pharmaceutical and Supply Bureau.
--------	---------------------	-------------------------------	---	---

Jan 20	Yaku-hatsu No.69	Re: Distribution of fertilizer to be used in the spring for cultivation of medical plants for the fiscal year 1949-50.	All prefectural governors. (except Akita & 4 prefs.)	Director, Pharmaceutical and Supply Bureau.
Jan 20	Yaku-hatsu No.71	Re: Transfer of morphine hydrochloride.	"	"
Jan 22	Yaku-hatsu No.74	Re: Outline of report on opium and twice powder of opium.	"	"
Jan 22	Yaku-hatsu No.75	Re: Investigation into the demanded quantity of the specified material necessary for production of medicine in the fiscal year 1949-1950.	"	"
<u>Social Affairs Bureau</u>				
Jan 17	Sha-hatsu No.59	Re: Area where the standard amount of living aid under the Daily Life Security Law shall be applicable with modifications.	Governor, Osaka Pref.	Director, Social Affairs Bureau
Jan 17	Sha-hatsu No.60	Re: Execution of guidance and inspection on business affairs in connection with the Daily Life Security Law.	Governor, Shiga Pref.	"
Jan 17	Sha-hatsu No.61	Re: Excessive payment beyond the standard amount of living aid and excessive payment beyond the standard of expenses to be disbursed for living aid under the Daily Life Security Law.	Governor, Yamaguchi Pref.	"
Jan 17	Sha-hatsu No.62	Re: Allotment of tents sold by the U. S. Forces	Governors, Iwate & Kanagawa Pref.	"
Jan 17	Sha-hatsu No.67	Re: Notice on the training course for social workers in Hokkaido District.	Governor, Hokkaido	"
Jan 17	Sha-hatsu No.68	Re: Allocation of LARA relief commodity (goats)	Governors, Fukui & 7 other prefs.	"
Jan 18	Sha-hatsu No.70	Re: Allotment of trucks for disaster relief.	Governor, Gumma Pref.	"
Jan 19	Sha-hatsu No.73	Re: Allocation of the budget of national grant-in-aid for expenses on protection under the Daily Life Security Law for the fiscal year 1948-49.	Governor, Tokyo Metropolis	Director, Social Affairs Bureau
Jan 19	Sha-hatsu No.74	Re: Establishment of the protective institutions and the accommodation facilities for the repatriates and other needy persons under the Daily Life Security Law for the fiscal year 1948-49, and national grant-in-aid therefor.	Governor, Kyoto Pref.	"

Jan 19	Sha-hatsu No.75	Re: Payment of national grant-in-aid for guidance and spread on local consumer's livelihood cooperative associations for the fiscal year 1948-49.	Governor, Ehime Pref.	Director, Social Affairs Bureau
Jan 20	Sha-hatsu No.76	Re: Establishment of the protective institutions under the Daily Life Security Law, and national grant-in-aid therefor.	Governor, Fukui Pref.	"
Jan 21	Sha-hatsu No.79	Re: Excessive payment beyond the standard amount of living aid under the Daily Life Security Law.	Governor, Aichi Pref.	"
Jan 21	Sha-hatsu No.80	Re: Excessive payment beyond the standard amount of living aid and excessive payment beyond the regular amount of expenses to be disbursed for living aid under the Daily Life Security Law.	Governor, Hokkaido	"
Jan 21	Sha-hatsu No.81	Re: Excessive payment beyond the standard of expenses to be disbursed for living aid under the Daily Life Security Law.	Governor, Osaka Pref.	"
Jan 21	Sha-hatsu No.82	Re: Excessive payment beyond the standard amount of aid for calling under the Daily Life Security Law.	Governor, Shiga Pref.	"
Jan 21	Sha-hatsu No.83	Re: "	Governor, Aichi Pref.	"
Jan 21	Sha-hatsu No.84	Re: Excessive payment beyond the standard of expenses to be disbursed for living aid under the Daily Life Security Law.	Governor, Hokkaido	"
Jan 21	Sha-hatsu No.85	Re: "	Governor, Ehime Pref.	"
Jan 21	Sha-hatsu No.86	Re: Excessive payment beyond the standard amount of living aid under the Daily Life Security Law.	Governor, Hokkaido	"
Jan 21	Sha-hatsu No.87	Re: Excessive payment beyond the standard amount of living aid under Daily Life Security Law.	Governor, Hokkaido	"
Jan 21	Sha-hatsu No.88	Re: Excessive payment beyond the standard amount of temporary payment on provisional aid of living aid under the Daily Life Security Law.	Governor, Osaka Pref.	"
Jan 21	Sha-hatsu No.89	Re: Excessive payment beyond the standard amount of living aid and excessive payment beyond the standard of expenses to be disbursed	Governor, Hokkaido	"

for living aid under the Daily Life Security Law.

Jan 21	Sha-hatsu No.90	Re: Excessive payment beyond the standard amount of living aid and excessive payment beyond the standard of expenses to be disbursed for living aid under the Daily Life Security Law.	Governor, Shiga Pref.	Director, Social Affairs Bureau

hatsu No.19 limbs for the fourth quarter in the fiscal year 1948-49

Children's Bureau

Jan 20	Ji-otsu-hatsu No.3	Re: Application for national grant-in-aid for the expenses on personnel to engage in guidance for the fiscal year 1948-49.	All prefectural governors.	Director, Children's Bureau
Jan 21	Ji-hatsu No.37	Re: Expenses on clerical work of the mother's home.	Governor, Nara Pref.	"
Jan 21	Ji-hatsu No.38	Re: Limit of expenses on clerical work and on service of the mother's home.	All prefectural governors.	"
Jan 21	Ji-hatsu No.39	Re: Change of the plan on equipments of the child welfare center.	Governor, Mie Pref.	"
Jan 21	Ji-hatsu No.42	Re: Report on conditions of accounting of expenses on the training institutions for day-nursery teachers.	Governors, Tokyo & 2 other prefs.	"
Jan 21	Ji-hatsu No.43	Re: Consultation on appointment of child welfare officials.	Governor, Tottori Pref.	"
Jan 21	Ji-hatsu No.44	Re: Forwarding the minimum standards of child welfare agencies in English version and "on enforcement of the minimum standards of child welfare agencies" in English version.	All prefectural governors.	"

Insurance Bureau

Jan 21	Ho-hatsu No.5	Re: Application of the Health Insurance Law and the Welfare Pension Insurance Law to the Workers employed by the Occupation Forces.	"	Director, Insurance Bureau
Jan 21	Ho-hatsu No.6	Re: Repairing the budget of national health insurance for the fiscal year 1949-50.	All prefectural governors.	Director, Insurance Bureau

Repatriation Relief Agency

Jan 18	En-go No.54	Re: Forwarding the roster of Korean nationals whose repatriation has been permitted by GHQ, SCAP.	Governors, Tokyo & 2 other prefs.	Director, Repatriation Relief Bureau
Jan 19	En-shi No.59	Re: National grant-in-aid for expenditures on the rehabilitation industry exhibition.	Governor, Tokyo Metropolis	"
Jan 19	En-go No.64	Re: Korean nationals whose repatriation has been permitted by GHQ, SCAP.	Governor, Yamaguchi Pref.	"

SECTION II
PREVENTIVE MEDICINE DIVISION

Availability of Re-Assayed Vaccine

Reference Section II Weekly Bulletin Number 104, 105, 106 and 110.

Authority for the use of vaccines which have passed re-assay has been given to prefectures and to quarantine stations through the publication of Yo-hatsu No.159, subject: Use of Preventive Vaccine Passed Re-Assay, dated 18 February 1949. This Yo-hatsu which was issued jointly by the Disease Prevention Bureau and the Pharmaceutical Affairs Bureau, Ministry of Welfare, reads as follows:

“The use of preventive vaccine has been in temporary suspension since the issuance of Vice Minister of Welfare’s Notification, Yo-Hatsu No.104 dated December 24 last year. With re-assay of products now being conducted, results are being made known successively.

“Those products passing re-assay and concerning which you will be notified concerning source and lot number may now be used.

“Notification will be sent to prefectural Governors by Chief, Prevention Bureau and Chief, Pharmaceutical Affairs Bureau, Ministry of Welfare. Only products concerning which you have received official notification may be used.”

Announcements of vaccines approved for use will be made periodically in the Supply Section of this Bulletin.

Streptomycin and Tuberculosis Control

Reference Section I, Weekly Bulletin No.106, wherein was quoted a summary of the experience with streptomycin in the United States.

In many important instances the indications for the use of the drug are vague. This is necessarily so because not enough time has elapsed since the discovery of the drug for a definitive evaluation of its effectiveness in all types of tuberculosis.

It will be noted, however, that in general its maximum benefit is associated with early lesions which have developed little or no fibrosis. It is further to be noted that early is a term describing the age of the lesion and has no relation to the extent of the disease.

The tuberculosis problem is so large in Japan that it is felt that all cases except those associated with considerable fibrotic changes should be given the benefit of streptomycin therapy as soon as the diagnosis is properly established and the patient is in an adequate institution.

The recommended standard dosage of one gram a day for forty days produces very few serious reactions and there is very little danger of developing a streptomycin resistant strain in this period.

Quarantine Regulations

Reference Section I, Weekly Bulletin No.108 and Section II, Weekly Bulletin No. 109.

Due to the presence of epidemic smallpox in Batavia, and increased incidence in the port cities of India and Burma, as reported by the Epidemiological Intelligence Station, Singapore, all persons entering Japan from Batavia, India or Burma will be required to have in their possession certificates showing successful vaccination against smallpox within the preceding sixty days.

Due to the presence of cholera in Calcutta, all persons entering Japan by air from Calcutta will be required to have in their possession valid certificate showing inoculation against cholera from seven days to six months prior to the date of their arrival.

Other current immunization requirements for entry into Japan consist of vaccination against smallpox within sixty days for arrivals from South Korea, Chiba, and Mindoro Island, Philippines, and within twelve months from all other countries; inoculation against typhoid-paratyphoid within twelve months from all countries.

A correction is made in the immunization requirement listed in Weekly Bulletin No.108. Korea requires vaccination against smallpox of entrants from all countries, and, in addition, all persons arriving from Japan are to have certificates of immunization against typhoid-paratyphoid, typhus, and Japanese B encephalitis.

SECTION III
NURSING AFFAIRS DIVISION

Information Regarding Public Health Nurses License

Public Health Nurses License may be obtained in the following way:

- By finishing 2 years Course (or more) given to High School graduates.
- By passing the prefectural Public Health Nurses examination.

Who may take examination?

Only those who have completed the PHN training course of 5 months or more.

Who may take the 5 months course?

- Anyone with a clinical nurses licenses or,
- Anyone who meets the qualifications under the old regulations to take the PHN examination (until 31 December 1949).

Old regulation to take PHN examination:

Anyone who has a total of 1 year experience in study or practical work (under a doctor's certification) in PHN, Clinical Nursing or Midwifery.

However, anyone who has met the requirements to take the examination under the old regulations and passed this examination, but has not yet received their PHN certificate, may get this certificate through fulfilling the old requirement for 3 months field work in Public Health Nursing (1-month of which must be in a Health Center).

Regional Committees for Accreditation of Schools

Plans are now being made for the investigation and grading of schools under the Nursing and Midwifery Law. This will be done by regional committees appointed by the Minister of Welfare. The members of these committees will be selected from a list of candidates submitted by the Prefectural Branches of Japanese Midwives, Clinical Nurses and Public Health Nurses Association, Japanese Medical Association, Prefectural Health Departments and Prefectural Board of Education. The first organization will present three names, a nurse, midwife and public health nurse; the second one a doctor and the Health Department and Board of Education will each submit the name of an individual nurse, midwife, public health nurse, educator or any individual prepared to serve on this committee. Of the names submitted by the prefectures, six persons will be chosen to serve on each regional committee. It is hoped that the Military Government Public Health Officer or Public Health Nurse will guide and advise these local organizations, so that the candidates selected will be active, capable, informed persons who are interested in professional education. (See Inclosure 1 - Chart showing committees and functions).

These are the 15 members of the National Council and the Chairman.

Dr. Azuma (Chairman)	-	Chief, Medical Bureau, Welfare Ministry
Kakuichi Ando	-	Professor of Keio University
Kyoshi Saito	-	Vice-Chief of Public Health Institute
Kanbin Hashimoto	-	Director, St. Lukes Women's Academy
Minoru Yonehara	-	Education Ministry
Seki Hora	-	Chief, Nursing Section, Ministry of Welfare
Midori Hirano	-	Chief, Nursing Section, Tokyo-to Office
Iku Kawamura	-	First Vice-President of Japanese Midwives, Clinical Nurses and PHN Association
Shoko Hayashi	-	Japan Red Cross
Masae Hirai	-	Chief Nurse, Central Health Center, Tokyo
Kikue Shimizu	-	Institute of Public Health -acting Chief, Nursing Section
Sho Tani	-	Midwife
Mine Sugawara	-	Midwife
Kimi Yumoto	-	St. Lukes Hospital
Haru Shinozaki	-	Midwife
Ko Ogoshi	-	Midwife

Film Releases

The Lady of Science, 16 mm motion picture, will be ready for distribution 4 March. Defeat Tuberculosis was distributed 7 January. This picture is American produced with Japanese sound track.

These films are available from your prefecture Japanese Film Library.

National Nurses Association

The National Nurses Association meeting will be held in Tokyo 6-7-8 April instead of 7-8-9 as previously announced.

SECTION IV VETERINARY AFFAIRS DIVISION

Inspection Trip

A Public Health and Welfare representative inspected veterinary activities in Yamagata Prefecture. It was found that the meat, milk and seafood and animal disease control divisions of the prefectural government are not maintaining sufficient liaison in order to coordinate their activities in relation to public health and animal welfare, from a disease control angle. The food sanitation program is showing progress, but inspectors should collect more samples from newly activated food processing establishments as well as from establishments automatically granted a permit for operation when the Food Sanitation Law came into force. The Meiji Milk Corporation of Tokyo was contacted for the purpose of making improvements on their equipment in the Kaminoyama plant.

National Assay Laboratory

The National Assay Laboratory has been transferred to Kodaira and will begin operation during the month of March. Extensive improvements are now being completed under the administration of the Animal Hygiene Section, Ministry of Agriculture and Forestry. All biologicals intended for animal use will be assayed at this laboratory.

Veterinary Examinations

The Veterinary Examination Committee have completed two sets of examination questions known as A and B which will be utilized by all Veterinary Schools as final examinations at the completion of the school year in March. The Veterinary Schools will hold the examinations, grade the papers and then submit them to the Veterinary Examination Committee for final grading. In the event a student fails to make the required grade on the first examination in which questions listed on the A set have been used, a re-examination will be allowed within a months time and the B set of questions will then be used. All examination questions have been submitted to the Deans of the Veterinary Schools and are being held under their supervision until the time of their use.

Animal Diseases

The following reports of animal diseases were submitted by the Animal Hygiene Section, Ministry of Agriculture and Forestry:

For the period 5-11 February - negative report.

For the period 12-18 February:

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Fukuoka	Swine cholera	3
Nagasaki	Swine erysipelas	1
Chiba	Swine plague	2
Hokkaido	Equine encephalomyelitis	1

Note: The case of equine encephalomyelitis was suspected but it is believed not to be of virus origin, but is a case known as winter encephalomyelitis resulting from food poisoning. Investigation is now underway.

SECTION V

SUPPLY DIVISION

Distribution

Reports from Military Government teams have been received indicating that doctors associations are functioning as distribution agencies. Under existing regulations no allocations to doctors associations are permitted. These associations are not operating agencies. There is no objection if prefecture governors seek advice from these associations. However, the responsibility for maintaining adequate records on which to base equitable allocations, and the designation of these allocations is solely that of the governor. Actual distribution of the items is required from the local seller to the doctor, hospital, etc. directly with no intermediary such as a professional association.

Final distribution figures for 1948 have been tabulated and the following comparisons with 1947 are made to give some indication of changes which have been made during the past year. Comparisons are based on the monthly averages for each year. It should be pointed out that the overall cost of commodities in 1948 increased approximately 2.7 times over 1947. See distribution tables Inclosure No.2.

<u>Item</u>	<u>1948 Ratio of Change (1947 equals 1.00)</u>
Total for Medical Supplies & Equipment Reported (Yen)	1.46
Controlled Medicine (Yen)	2.67
Non-controlled Medicine (Yen)	1.70
Ratent Medicine (Yen)	1.99
Dental Instruments (Yen)	1.01
Dental Materials (Yen)	1.67
Rubber Sanitary Goods (Yen)	2.80
Cotton Sanitary Materials (Yen)	15.76
Medical Instruments (Yen)	2.11
Japanese Army Navy Surgical Instruments (Yen)	0.37
Japanese Army Navy Medical Supplies (Yen)	0.12
X-ray & Electrotherapy Equipment (Pieces)	1.91
Rubber Sanitary Goods (kg)	1.32
Absorbent Cotton (kg)	2.32
Gauze (matters)	6.67
Staple Fiber Bandage Cloth (rolls)	1.62
Triangular Abdominal Bandage (Pieces)	0.31
Lint (Pieces)	0.16
X-ray film, 4-3/4 × 6 • 1/2 (Doz)	5.13
X-ray film, 6 • 1/2 × 8 • 1/2 (Doz)	2.68
X-ray film, 8×10 (Doz)	1.57
X-ray film, 10×12 (Doz)	1.28
X-ray film, 11×14 (Doz)	1.69
X-ray film, 5×7 (Doz)	0.72
X-ray film, 35mm (rolls)	0.60
X-ray film, Dental (Doz)	4.83
X-ray film, size 120 (rolls)	1.60
Santonin (tablets)	1.19

During the period 6 - 12 February, 1,954 pieces of dusting and spraying equipment were distributed to 17 prefectures as follows:

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsack Sprayer</u>	<u>Semi-Automatic Sprayer</u>	<u>Hand Sprayer</u>	<u>Engine Sprayer</u>
Hokkaido					2
Yamagata		96			
Fukushima		50			
Saitama			30		
Tokyo	48	1			
Niigata	200				
Toyama	10				
Gifu		50			1
Shiga		50			
Osaka					1
Wakayama	200				
Shimane			50		
Ehime		20			
Fukuoka		35			
Miyazaki	1,000				
Kagoshima		20	40		
Nara				50	
Total	1,458	322	120	50	4

Production

Final production figures for 1948 have been received, tabulated, and evaluated. The comparisons furnished below are based on the monthly averages for each of the years 1946, 1947 and 1948. In order to evaluate comparisons of yen values, it must be remembered that using the period 1934 - 1936 as the base, the 1946 average cost of commodities increased 15.2 times, the 1947 increased 48.6 times and 1948 increased 132.2 times. Thus 1948 costs are 9 times 1946 and 2.7 times 1947 costs. The following table indicates the ratios of change for items of medical and sanitary supplies and equipment in the units as stated. Inclosure No.3 furnishes detailed monthly production tables of the medical, dental and sanitary supplies and equipment reported in 1948.

<u>Item</u>	<u>1948 Ratio of Change</u>	
	<u>1947 : 1.00</u>	<u>1946 : 1.00</u>
Controlled Medicines (Yen)	2.45	173.20
Non-controlled Medicines (Yen)	5.77	14.15
Ratent (Yen)	2.42	5.48
Biologicals (Yen)	0.90	2.55
Dental Instruments (Yen)	1.71	5.66
Dental Materials (Yen)	2.31	9.23
Rubber Sanitary Goods (Yen)	3.08	No record
Sanitary Materials (Yen)	18.25	47.46
Medical Instruments (Yen)	2.56	2.77
Total for Medical Supplies & Equipment Reported (Yen)	3.60	11.50
Penicillin (O.U.)	20.98	10,761.92
Penicillin (vials)	20.98	10,761.92
Medical Instruments (Yen)	1.52	1.87
Dental Instruments (Yen)	1.47	5.22

SECTION VI NARCOTIC CONTROL DIVISION

Purchase of Order Forms

In some prefectures the percentage of physician registrants who send an employee to the prefectural narcotic office to obtain purchase order forms for narcotic averages as much as 50%. This has created a hazard of diversion since unauthorized persons are attempting to obtain the order forms. Advice has been given the Narcotic Section, Ministry of Welfare, to require registrants at time of application for registration to designate the person, if any who is authorized purchase of order forms for the registrant. If this person is subsequently discharged it is the responsibility of the registrant to notify the narcotic office in the prefecture. No one other than the registrant himself or such designated person will be permitted to obtain order forms for the registrant.

Sale of Morphine

Yaku Hatsu Number 71, 21 January, issued by the Narcotic Section, Pharmaceutical & Supply Bureau, Ministry of Welfare, prohibiting the purchase of morphine hydrochloride powder by doctors other than those operating hospitals was rescinded by Yaku Hatsu Number 252, 12 February.

Marihuana

Area allocations for the planting of Taima (Marihuana) were decided by the Ministry of Welfare and the Ministry of Agriculture and Forestry. All of the 23 prefectures concerned have been notified of the approved allocation.

Narcotic Agents

The number of narcotic agents with power of arrest will be increased from the present level to 154 of 196 by 30 June 1949.

Transportation of Seized Narcotics

The Narcotic Section, Ministry of Welfare, has been advised that monthly auditing and reporting of all narcotics held by prefectural narcotic offices will continue. Narcotics which are no longer needed as evidence will be forwarded to the Drug Disposal Committee in accordance with previous instructions. Groups of prefectures should designate one agent from the group to accompany the narcotics to Tokyo.

SECTION VII
WELFARE DIVISION

Licensed Agencies for Relief in Asia (LARA)

Overseas shipments for LARA, numbers 126 through 131, have arrived in Yokohama and contained 72.66 tons. These shipments included the following relief items:

- a. 126th Shipment: Arrived aboard the S. S. Pioneer Lake on 27 January and contained 12.89 tons (clothing, 10.07 tons and miscellaneous, 2.82tons).
- b. 127th Shipment: Arrived aboard the S. S. Pioneer Wave on 1 February and contained 7.60 tons (clothing, 6.05 tons and medical supplies, 1.55tons).
- c. 128th Shipment: Arrived aboard the S. S. Ocean Mail on 10 February and contained 45.56 tons (food).
- d. 129th Shipment: Arrived aboard the S. S. Philippine Transport on 7 February and contained 1.5tons (food).
- e. 130th Shipment: Arrived aboard the S. S. Kenneth Mckay on 8 February and contained 4.97 tons (clothing).
- f. 131st Shipment: Arrived aboard the S. S. Kyska on 8 February and contained 0.14 tons (clothing).

The total LARA relief supply shipments to Japan, as reported, now totals 7,494.75 tons, consisting of the following items:

	<u>Tons</u>
Food	5,647.28
Clothing (including bedding & shoes)	1,470.35
Medical Supplies	63.22
Cotton (raw)	207.62
Miscellaneous (soaps, seeds, etc.)	106.28
Total	7,494.75

Cooperative for American Remittances to Europe. Inc (CARE)

A reduction in the cost of the CARE “Blanket Package” from \$10.00 to \$7.75 has been announced by CARE Headquarters, New York City, N.Y. This new price is effective immediately (15 February).

The CARE “Blanket Package” contains two all wool blankets, needles, thread and other sewing accessories, two sets of soles and heels and two cakes of soap,.

The other CARE packages, being distributed in Japan, (prices remain \$10.00 are Food, Woolen and Knitting Wool.

Orders for CARE packages, by personnel in Japan, for delivery in Japan, may be sent (P.O. money order or check made payable to CARE, Inc.) to CARE, APO 503 (Yokohama).

Community Chest - Japanese Red Cross “Joint Fund” Campaign

The progress of the Community Chest - Japanese Red Cross “Joint Fund” Campaign, compiled as of 17 February, reflects a total of ¥ 1,078,431,048.59 raised toward the established national goal of ¥ 1,175,450,000.00 or 91.7% of quota.

Twenty-seven prefectures have reached or exceeded their quotas and of the 19 remaining prefectures who have not attained their goals 6 have completed their campaigns. The 13 prefectures still attempting to complete their campaign are listed below:

<u>Prefecture</u>	<u>Per Cent Raised</u>	<u>Prefecture</u>	<u>Per Cent Raised</u>
Gumma	90.7	Okayama	96.4
Kyoto	55.6	Yamaguchi	82.0
Osaka	95.0	Tokushima	73.0
Hyogo	81.0	Ehime	92.3
Wakayama	95.3	Kochi	87.6
Tottori	69.8	Nagasaki	51.3
Kagoshima	88.5		

Japanese Red Cross Society

Disaster Relief:

Yamanashi Prefecture: Fire disaster occurred during early morning of 17 February at Kodachi-mura, Minami Tsuru-gun, Yamanashi-ken. The damage, as least reported, consisted of the following:

Houses destroyed	284
Families homeless	420 (1,557 persons)
Number persons killed	1
Number persons injured	136 (2 seriously)

The Japanese Red Cross dispatched 5 Medical Aid Teams to the scene of the disaster and also sent the following emergency relief supplies: 60 layettes, 400 children's garments and 1,100 pieces of woolen garments for adults.

Hokkaido: Fire occurred at Suttsu-machi, Suttsu-gun, Hokkaido on 8 February at 1335. Eighty dwellings destroyed and approximately 465 persons made homeless. Hokkaido Red Cross Chapter immediately dispatched on Medical Aid Team to the area. No casualties reported.

Home Nursing:

The following report reflects the activity in Home Nursing courses during the year 1948 (Jan - Dec).

Note: Home Nursing Course consists of 12 hours instructions with each class usually limited to 10 persons.

Child Welfare - Kyogo Case Worker (Hodo-in)

Attached to each Kyogo-in (Home for Juvenile Training and Education) are case workers known as Hodo-in who do follow-up work with children who are released from the Home. These workers are for the purpose of assisting children to read-just to their homes and communities.

The Hodo-in classed as a prefectural official. His office, as a rule, is at the Kyogo-in, but he may be at the Child Welfare Center, a local office, or at some other convenient location. The majority of his time is spent in the field. One half of the cost of this service is borne by the central government.

Welfare Officers may wish to review the duties and accomplishments of these case workers.

Junior Minsei-iin

Several reports indicate that associations of Junior Minsei-iin have been organized throughout the country. While the activities of these groups have not as yet been thoroughly explored it should be borne in mind that no one except legally qualified and authorized persons can have access to public records concerning public assistance families, nor should these children assist Minsei-iin in any way in carrying out their duties of a public welfare nature. There should be no contacts between the Junior Minsei-iin and any public assistance or child welfare cases as such. Welfare programs of a private nature might naturally include many public assistance or child welfare cases.

There is no objection to a children's association which instills within that age group a recognition of the needs of others and a desire to meet those needs through appropriate activities. The Ministry of Welfare will issue orders to this effect.

Further information concerning Minsei-iin is contained in the restricted portion of this Bulletin.

SECTION VIII

SOCIAL SECURITY DIVISION

Medical Fee Calculations

The method used by medical practitioners in calculating medical fees under the social insurance laws of Japan, known as a "fee for service basis", is predicated upon the product of a pre-determined number of points for each item of medical care or treatment and an established over-all point value in yen. For example: and initial examination is rated at 4 points and with a yen value per point of 10 yen the charge for an initial examination amounts to 40 yen.

The number of points per item of medical care or treatment has been set by the Ministry of Welfare in conjunction with the Japanese Medical Association and a comprehensive schedule of items and their individual point ratings has been issued to all insurance doctors, prefectural insurance sections, and other interested local public bodies.

The yen value per point may vary slightly indifferent regions and may be subject to further change to meet economic conditions but at present it is usually near 10 yen. The yen value per point is recommended by Medical Fee Calculating Committees. These committees, two in number, are prescribed by the Health Insurance Law, the Seamen's Insurance Law, and the National Health Insurance Law. The members of the committees are appointed as representatives of the insurers, the insured persons, the medical profession, and the public interest. One of the committees makes recommendations to the Ministry of Welfare for the point value to be used for charges under Health Insurance and Seamen's Insurance. The other committee makes recommendations to the Ministry of Welfare for rate standards to be followed by the municipalities, association, and corporate juridical persons in administering National Health Insurance and in their agreements with insurance doctors and medical facilities.

All insurance doctors are required to use the point schedule and the determined rate per point effective in their area in calculating their charges for services rendered to insurance patients. These charges are to be paid monthly by the insurers. In the event that an insured person finds it necessary to use a private doctor because the services of an insurance doctor cannot be obtained or are not readily available such patient is required to pay the private doctor and then file a claim with his insurer for reimbursement. The amount allowed on the claim for reimbursement by the insuree, however, will be determined by the authorized point value and the standard number of points determined for the particular service or services, and the patient will not be repaid any additional charges.

SECTION IX MEMORANDA TO JAPANESE GOVERNMENT

None.

CRAWFORD F. SAMS
Brigadier General, Medical Corps
Chief

4 Inclosures:

1. Chart of Regional Committees for Accreditation of Schools.
2. Tables of Distribution of Medical Supplies and Equipment for 1948.
3. Tables of Production of Medical Supplies and Equipment for 1948.
4. Weekly Report of Communicable and Venereal Disease for the week ended 12 February.

SECTION II
PREVENTIVE MEDICINE DIVISION

Public Health Information and Education

Reference is made to Section II, Weekly Bulletin Nos. 92, 95 and 101, and Section I, No. 108. Inclosed with this Bulletin are numbers 9 and 10 (Inclosures Nos.1 and 2) in a series of press releases on Reorganization of the Health Center System in Japan. Subject inclosures are basic information on the subjects of "Health Information and Education Service in the Health Center" and "Sanitation Program Under the Health Center Supervision".

Sanitation

Recent inspections of sanitary team activities indicate that adequate training is not being given the sanitary team members with reference to the use of insecticides and methods of application. Often the inspectors and sanitarians in charge of the actual work are either untrained or inadequately trained.

To correct this situation, the present class of sanitarians (mostly chiefs of the model health center sanitation selections) at the Institute of Public Health in Tokyo are being given special training designed to prepare them for the task of establishing and operating training courses for sanitary inspectors and assistant sanitary inspectors, of the health center, city, town and village sanitation sections. Information and reference material will be supplied for training courses in environmental sanitation with emphasis on insect and rodent control as well as on the organization and operation of sanitary teams.

Immediately upon his return to the prefecture (26 March) of the official now attending the Institute of Public Health course; training courses should be started in each of the model health centers. The course should be at least one week in duration, or longer if necessary.

Military government health officials should ascertain that these training courses are established properly organized and operated in order to give as through and comprehensive training possible.

SECTION III
VETERINARY AFFAIRS DIVISION

Veterinary Examination

The Board of Examiners for the simultaneous examination for graduating Veterinary Students met on 31 January and established the following dates on which the examination will be held. Approximately 1200 students are qualifying for this examination.

The first examination will be given on 1 March between the hours of 0900 and 1500. If in the event a student fails to pass the first examination a second one will be given, in which a different set of questions will be asked, on 24 March 1949.

The examination will cover questions on anatomy, histology, pathology, physiology, bacteriology and immunology, surgery (both practical and general) and obstetrics, internal medicine, diagnostics, therapeutics and pharmacology, hygiene and zootechnics, disease control, meat and milk hygiene, and feeding and breeding problems.

Milk Inspection

The Veterinary Affairs Section, Ministry of Welfare, conducted sanitary inspections on the following dairy farms and milk plants during the month of December 1948.

Special Milk

Number of farms inspected	5
Samples examined	13
Over bacterial standards (50,000 per cc)	2
Under butterfat standards (3.3 percent)	1

<u>Plant Inspection</u>	14
Over bacterial standards (50,000 per cc)	2
Under butterfat standards (3.3 percent)	1

Ordinary Milk

Number of farms inspected	10,035
Samples examined	23,650
Over bacterial standards (2,000,000 per cc)	549
Under butterfat standards (3.03 percent)	680
Number of plant Inspection	3,708
Over bacterial standards (2,000,000 per cc)	219
Under butterfat standards (3.03 percent)	256

Goat Milk

Number of farms inspected	41
Samples examined	43
Over bacterial standards (2,000,000 per cc)	5
Under butterfat standards (3.03 percent)	6

Milk Production

Milk produced on daily farms during the month of December 1948.

<u>Type of Milk</u>	<u>No. of Farms</u>	<u>No. of Cows & Goats</u>	<u>Amount Produces</u>
Special	8	130	31,292 lit.
Ordinary	54,691	102,905	15,015,485 lit.
Goat	4,437	5,841	358,362 lit.

Quantity of Milk Bottled during December 1948

<u>Type of Milk</u>	<u>No. of Plants</u>	<u>Raw Milk</u>	<u>Pasteurized</u>	<u>Sterilized</u>	
Special	8	21,343	2,818		lit.
Ordinary	2,916		2,085,251	4,643,933	
Total	2,924	21,343	2,088,069	4,643,933	

All milk is bottled in bottles of 1 go representing 180 cc. A total of 37,518,555 bottles of milk was processed in December 1948.

Meat Inspection

The following tables, submitted by the Veterinary Affairs Section, Ministry of Welfare, indicate the numbers of livestock slaughtered, and meat and meat products establishments inspected, during the month of December 1948.

	<u>Cattle</u>	<u>Calves</u>	<u>Horses</u>

Meat Processing Establishments

Number of establishments		282
Number of establishments inspected		202
Sanitary condition	Good	50
	Fair	137
	Poor	17
Total number of inspections		433
Amount of meat and meat products examined		74,031 kgs.
Amount of meat and meat products condemned		60 kgs.
Cause of condemnation	----- Uncleanliness	
Disposition	----- Animal Feed	

Retail Meat Shops

Number of establishments		13,612
Number of establishments inspected		8,119
Sanitary condition	Good	2,118
	Fair	5,144
	Poor	881
Total number of inspections		9,977
Amount of meat and meat products examined		812,174 kgs.
Amount of meat and meat products condemned		185 kgs.
Cause of condemnation	---- Staleness & peutfraction	
Disposition	---- Fertilizer	

Seafood Inspection

The Veterinary Affairs Section, Ministry of Welfare, conducted the following sanitary inspections on seafood establishments during the month of December 1948.

Wholesale Seafood Markets

Number of establishments		1,464
Number of establishments inspected		982
Sanitary condition	Good	191
	Fair	656
	Poor	155
Total number of inspections		7,389
Amount of seafood examined		243,569,047 kgs.
Amount of seafood condemned		297,717 kgs.
Cause of condemnation	---- Peutfraction and staleness	
Disposition	---- Fertilizer and animal feed	

Seafood Processing Establishments

Number of establishments		9,227
Number of establishments inspected		2,765
Sanitary condition	Good	455
	Fair	1,777
	Poor	533
Total number of inspections		3,674

Amount of seafood examined	353,049 kgs.
Amount of seafood condemned	101 kgs.
Cause of condemnation -----	staleness
Disposition -----	animal feed

Seafood Retail Shops

Number of establishments	43,765
Number of establishments inspected	16,449
Sanitary condition	
Good	2,128
Fair	10,627
Poor	3,694
Total number of inspections	18,823
Amount of seafood examined	1,788,893
Amount of seafood condemned	2,574
Cause of condemnation ----	staleness & putrefaction
Disposition ----	animal feed and fertilizer

Food Sanitation

The Food Sanitation Section, Ministry of Welfare, reports the following sanitary inspections of food and beverage establishments during the month of December.

Number of inspections	486,075
Establishments to be improved	68,411
Establishments completing improvements	84,554
Number of food samples collected for analysis	4,646
Number of administrative punishments	2,030

Animal Diseases

The Animal Hygiene Section, Ministry of Agriculture and Forestry reported the following outbreak of animal diseases for the period 19 February 1949.

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Aomori	Equine encephalitis	1 (suspect)
Iwate	Swine erysipelas	4
Aichi	Swine erysipelas	1
Kochi	Swine cholera	4
Nagasaki	Black leg	2

The following outbreak of animal diseases occurred during the month of January 1949 as submitted by the Animal Hygiene Section, Ministry of Agriculture and Forestry.

<u>Disease</u>	<u>December 1948</u>	<u>January 1949</u>
Swine erysipelas	15	19
Swine cholera	2	19
Swine plague	2	2
Rabies	4	9 dogs 1 cow
Equine Infection Anemia	37	48
Brucellosis	24	11
Trichomonas	106	71
Equine Infection Abortion	2	14
Pullorum Disease (Fowl)	11,779	2,648
Bovine Tuberculosis	124	80
Equine Encephalomyelitis	0	1

Note: The case of equine encephalomyelitis was classified as a suspect. The prevalence of winter encephalitis in horses possibly may be confused with this case as the etiological factors are different. Confirmation has not been made as yet.

Typhus Vaccine	Kitasato Institute	21	4,000

Licensing

Ministry of Welfare Notification 21, dated 9 February, establishes new eligibility requirements for issuance of licenses to central and local wholesalers. These requirements establish three categories of central wholesalers and three categories of local wholesalers.

Central Wholesalers

Licensing of central wholesalers is based on: number of points (explained below), location, assets, number of employees, warehouse floor space and type of items handled.

Points may be acquired by central wholesalers in two ways:

1. Each local wholesaler is allowed three points to designate as a sign of confidence in or the reliability of central wholesalers of their choice. Thus, a central wholesaler acquires points based on his previous association with local wholesalers and the extent to which he has served them.

2. Past sales records of the central wholesalers are considered by comparing their total yearly sales with the average yearly sales for all central wholesalers in Japan. Points are earned on a percentage basis which evolves from the comparison as mentioned above (see table headed "Point Rating Scale").

The following table establishes the three categories mentioned above and the requirements necessary for central wholesalers to qualify in each category.

<u>Category</u>	<u>Point</u>	<u>Area</u>	<u>Assets</u>	<u>No.of Empl</u>	<u>Warehouses</u>
Sellers of drugs	50	*6 main cities other	¥ 1,000,000	above 20	50 tsubo
Sellers of drugs	50	cities, villages, towns	600,000	20	50 tsubo
Infant & Child Med. Supply Dealers	20	All Japan	300,000	10	25 tsubo
Med. Equip. Dealers	20	6 main cities	600,000	10	50
Med. Equip. Dealers	20	towns & villages	400,000	10	50

*6 main cities are Tokyo, Kyoto, Osaka, Yokohama, Kobe and Nagoya.

POINT RATING SCALE

Category	Comparison of year's sales with average sales for all wholesale dealers in Japan	points
Medicine dealers	200 %	50
"	150 %	40
"	100 %	30
"	80 %	15
"	50 %	5
Infant & Child Medical Supply Dealers & Medical Equip. Dealers	200 %	20
	100 %	15
	80 %	10
	80 %	10
	50 %	5

Local Wholesalers

Licensing of local wholesalers is based in each category (according to location) on points, assets, and number of employees. Points are computed on past records of sales and "votes of confidence" from clinics, veterinary clinics, pharmacies retailers, (one point each) and hospitals (one point per each 10 beds). Categories of local wholesalers are established on areas in which located rather than by class of items sold. (See following table for requirements necessary to qualify in each category).

<u>Category</u>	<u>Points</u>	<u>Assets</u>	<u>No. of Employees</u>
6 main cities	70	above 300,000	above 5
other cities	50	above 200,000	above 3
towns & villages	30	above 100,000	above 2

Points are based on past sales and are computed as follows:

(Unit - number of points)

<u>6 main cities</u>	<u>other</u>	<u>Towns & Villages</u>	<u>Comparison of local wholesalers sales for year with average sales for all local wholesalers in Japan</u>
70	50	30	200
50	30	20	100
20	15	10	80
10	6	4	50

Ministry of Welfare Notification No.22 dated 10 February 1949 informs all concerned that applications for licenses as local wholesalers are due at the Ministry of Welfare during the period 20-28 February and that applications for licenses as central wholesalers are due at the Ministry of Welfare during the period 12 - 25 March 1949.

Ministry of Welfare Ordinance No.60 dated 28 December 1948 amends Ministry of Welfare Ordinance No.30, Article 9, 1st paragraph, last sentence to read as follows: "In case they wish to be manufacturers, importers, or sellers of medicines, however, they shall be registered as manufacturers or sellers of medicines or shall renew their registration according to the provisions of paragraph 1 or paragraph 2 of Article 26 of the Pharmaceutical Affairs Law or paragraph 1 or 2 of Article 29 of the same law. (This includes importers of medicines as provided in Articles 28 of the same Law).

Cotton Sanitary Materials

Ministry of Welfare letter, YAKU HATSU No.78, dated 23 February, addressed to all prefecture governors carries precise instructions with regard to method of distribution of bandage materials, buttons, bathrobes, aprons, etc. Inclosure No.3 gives the breakdown by prefectures of this distribution.

During the period 13 - 19 February, 1,887 pieces of dusting and spraying equipment were distributed to 18 prefectures as follows:

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsack Sprayer</u>	<u>Semi-automatic Sprayer</u>	<u>Hand Sprayer</u>	<u>Engine Sprayer</u>
Iwate		10			
Yamagata	24		30		
Fukushima	48				
Ibaraki		21	1		
Tochigi	1,008				
Saitama		35			
Tokyo	96	7			
Shizuoka		1			
Kyoto	200				
Osaka		50			
Nara				50	
Wakayama		50			
Hiroshima			50		
Kagawa	100				
Ehime		15	30		
Fukuoka		20			
Kagoshima			40		
Gifu					1
TOTAL	1,476	209	151	50	1

Production

The plan of standard coal and lignite allocation for the category "Medicines" for the period January - March, as formulated by Production Material Section, Ministry of Welfare, is furnished in Inclosure No.4.

The revised allocation of substandard coal for the category "Medicines" for the period January - March, was planned as follows: (Unit: Metric Ton)

<u>City</u>	<u>Allocation of Substandard Coal</u>
Sapporo	900
Sendai	200
Tokyo	2,200
Hiroshima	500
Shikoku	200
Fukuoka	1,500
Osaka	4,000
Nagoya	500
	10,000 metric tons

Distribution of DDT products during January totaled 127,272 lbs. of 10% DDT dust and 25,400 gallons of 5% DDT residual spray, denoting a 5% increase in DDT dust distribution over December 1948, and 68% increase in DDT spray distribution over the same period.

A breakdown of distribution to prefectures and governmental agencies follows:

<u>Prefecture or Dept</u>	<u>10% DDT Dust (Unit: Lbs)</u>	<u>5% DDT Spray (Unit: Lbs)</u>
Aomori	68,372	
Akita	10,000	
Yamagata	38,000	
Nagano	5,600	
Okayama	3,000	
Kochi	2,000	400
Kyoto	-	15,000
Osaka	-	10,000
Ministry of Welfare	300	-
TOTAL	127,272 lbs.	25,400 gals.

SECTION V NARCOTIC CONTROL DIVISION

Reported and Investigations

Card indices, for registrants and narcotic violators, have become increasingly difficult to maintain because of the several different Romaji spellings which various reporting agencies give a Kanji character. To rectify the confusion resulting there from, the Narcotic Section, Ministry of Welfare, on 20 February issued instructions (Yakuma #501) to all narcotic agents to write both the Kanji character and Kata-Kana (phonetic spelling) for any name mentioned in an investigation or report. The same system will be followed in furnishing reports to procurators.

Beginning in 1950 the names of all registrants will be written in both Kanji and Kata-Kana in prefectural and Narcotic Section records. In the meantime prefectural records will be brought up to date by inserting the Kata-Kana in the record for any new registrant or other registrant with whom contact is made either in issuing purchase forms or in the course of making inspections or investigations.

SECTION VI WELFARE DIVISION

Child Welfare - Bookkeeping System for Children's Institutions

The Children's Bureau has issued Ji Hatsu No.128 dated 23 February 1949, subject, "Management of the Financial Affairs of the Child Welfare Agencies". The order includes a complete accounting system for use of institutions and the suggestion that the system be put into effect. The proposed system is the result of the work of a committee composed partly of institution managers.

Public Assistance - Grants to Employed Persons

Coercive action has been attempted in some prefectures by certain unions or groups against individual Minsei-iin or Welfare Department to secure public assistance for persons or groups of person who are not eligible.

In one instance the employers were unable or unwilling to pay the salaries of the employees who were working every day. Subsidization of such industries by giving public assistance to such employees is not within the scope of the present law.

In all cases application for public assistance must be made by the person concerned unless prevented by unavailable circumstances such as illness. The practice of "representatives" of such persons or groups of persons impeding the work of individual Minsei-iin or Welfare Officers by continuous occupation of premises should be prevented through use of proper legal methods on the basis that such applications are not legal and the persistent occupation of public premises the normal legal function of the public office or officials concerned. Individual applications from any persons should receive the normal services provided by that office or individual.

The Ministry of Welfare will clarify the above situation by order.

Community Chest - Japanese Red Cross "Joint Fund" Campaign

Collections (including pledges) as of 24 February, for the "Joint Fund" Campaign, now total ¥ 1,081,547,410.53 or 92.0% of the established national goal of ¥ 1,175,450,000.00.

A total of 27 prefectures out of the 32 prefectures that have closed their campaigns have reached or exceeded their quotas. The remaining 14 prefectures listed below are endeavoring to bring their campaigns to a close:

Gumma	Tottori	Chiba	Okayama	Kyoto	Yamaguchi
Osaka	Tokushima	Hyogo	Ehime	Wakayama	Kochi
Nagasaki	Kagoshima				

SECTION VII SOCIAL SECURITY DIVISION

Japanese Nationals Working for the Occupation Forces

Plans are being completed by the Special Procurement Board and the Ministry of Welfare for the establishment of a Health Insurance Society for the administration of health insurance for Japanese Nationals working for the Occupation Forces. Representatives of the workers have been consulted by the government officials in formulating policies and procedures. Preparations should be completed for the beginning of operations on 1 April. A notice of such development is being forwarded to each employee and a number of meetings for explaining the program is being scheduled throughout Japan.

SECTION VIII MEMORANDA TO JAPANESE GOVERNMENT

None.

CRAWFORD F. SAMS
Brigadier General, Medical Corps
Chief

6 Inclosures:

1. Press Conference #9 - Health Information and Education Service in the Health Center.
 2. Press Conference #10 - Sanitation Programs Now Under Health Center Supervision.

-------	-------------------	--	--	---

SECTION II
PREVENTIVE MEDICINE DIVISION

Public Health Information

In order to coordinate, as nearly as possible, the health information programs at national, prefectural and local levels, it is recommended that some phase of the following six major public health problems be presented each month: - (1) Communicable Diseases (seasonal, current intestinal parasites), (2) Venereal Disease, (3) Tuberculosis, (4) Mother and Child Health, (5) Nutrition (6) Environmental Sanitation (beginning Mosquito and Fly Control). Supporting material, including Public Health Nursing, Legal aspects, and History of Public Health, etc., can be woven into and combined with the six major subjects. All media of transmission should be used. The programs should be flexible enough to allow for special campaigns and/or emergencies.

Information Unit - Ministry of Welfare

Plans include an improved and direct liaison between the Information Unit and prefectural health information officials in all matters pertaining to the basic public health program; distribution of pamphlets, leaflets, posters, etc., which will bring to the prefectures the latest information on public health subjects; purchase and distribution of a limited number of motion picture films and film strips; and distribution of prepared script materials for radio programs, etc.

Training Courses at the Institute of Public Health

The next refresher courses for public health (1) medical officers, (2) sanitarians and (3) veterinarians will open on 7 April at the Institute of Public Health in Tokyo. The courses for medical offices and sanitarians will last for three months while that for public health veterinarians will be for two months. It is recommended that well-qualified individuals and particularly those holding responsible positions in the public health organization be sent for training. Candidates for the sanitarians course should be "college" (Semmon Gakko) graduates. Special effort should be made to see that section and division chiefs in prefectural health departments attend the courses for medical officers and veterinarians. Official announcements concerning these courses have been sent to each prefectural governor by the Ministry of Welfare.

Streptomycin - Recommended Reading

The January 15 issue of the Saturday Evening Post carries an excellent article on the story of Streptomycin entitled "Are we Winning The War Against Tuberculosis". The article was written for the layman and although it cannot be considered as a guide to be followed by the physician it is, nevertheless, an excellent, vivid, factual review of the story of streptomycin. It is highly recommended that every public health officer read this article.

SECTION III
NURSING AFFAIRS DIVISION

Refresher Courses

The sixth Public Health Nurse Refresher Course (4 months) will open 2 April at the Institute of Public Health.

The Public Health Nurses leaders course (one month) opened 1 March at the First National Hospital in Tokyo with 46 nurses present.

Nursing Education

The following changes have been made in the curriculum of the 1-year course for Public Health Nurses (Reference Weekly Bulletins Nos - 110 and 111), (1) The pre-requisite of 2-months field work in a health center previous to taking the theory has been dropped and (2) Child Health, a sub-topic under the course in Public Health and Preventive Medicine, has been changed to Material and Child Health.

Public health schools of nursing of one and two year duration have not been discontinued. These schools may continue to function in the same prefecture with the new five month public health school.

SECTION IV SUPPLY DIVISION

Production

A total of 252,643 pieces of the various types DDT spraying and dusting equipment was manufactured during the calendar year 1948. This figure includes 81,170 DDT Dusters, 87,045 Knapsack Type Sprayers, 43,138 Pump-type Semi-automatic Sprayer 41,170 Hand-type, and 120 Engine Sprayers.

The monthly average production for the year totaled 21,054 pieces. Following is the detailed breakdown:

<u>No. Average</u>	<u>DDT Dusters</u>	<u>Sprayers, Knapsack Type, 3 gal. Capacity</u>	<u>Sprayers, Pump-type Semi-auto- matic</u>	<u>Sprayers, Hand-type 1/2 gallon Capacity</u>	<u>Engine Sprayers</u>	<u>Total</u>
19448	6,764	7,254	3,595	3,431	10	21,054
Jan.	4,770	-	-	-	-	4,770
Feb.	9,000	7,326	3,160	3,400	27	22,913
Mar.	7,000	10,360	4,150	3,500	24	25,034
Apr.	6,800	13,720	5,810	3,800	10	30,140
May	7,400	6,320	3,900	3,450	7	21,077
Jun	6,300	6,205	3,935	4,800	1	21,241
Jul	6,100	10,290	4,020	5,270	22	25,702
Aug.	5,700	9,680	2,040	5,000	10	22,430
Se-t	5,400	8,094	5,418	4,650	-	23,562
Oct	6,800	5,140	4,250	2,000	-	18,190
Nov	6,400	3,100	3,115	2,000	6	14,621
Dec	9,500	6,810	3,340	2,700	13	22,363
Total	81,170	87,045	43,138	41,170	120	252,643

The following authorized manufactures are credited with the entire 1948 production of dusters and sprayers.

<u>Name</u>	<u>Address</u>	<u>Factory</u>
Asukutani Seisakusho	1, Yanakamajima-cho Taito-ku, Tokyo	Odawara Factory 470, Renshoji, Odawara Obata Factory Obata-machi, Kita-Kanbugun Gumma-ken
Shibazaki Seisakusho	1, 1-chome, Kanda Nishiki-cho, Chiyodaku, Tokyo	324, Shibasaki, Jindai-mura Kitatama-gun, Tokyo
Ushida Seisakusho	157, Shirokane-Sanko-cho, Minato-ku, Tokyo	157, Shirokane-Sanko-cho, Minato-ku, Tokyo.
Maruyama Seisakusho	1, 2-chome, Kanda-kaiji-cho Chiyoda-ku, Tokyo	1304, Inage-machi, Chiba-ken

Hatsuta Seisakusho

1, 3-chome, Edobashi,
Chuo-ku, Tokyo

1441, Owada-cho,
Nishiyodogawa-ku, Osaka

An additional manufacturing concern, the Tokyo Rika-kogyo Company, 150 Komagome-Saka-Shita-cho, Bunkyo-ku, Tokyo, has been approved by the Ministry of Welfare and should produce 4,800 hand-type sprayers in 1949.

The Ministry of Welfare has recommended the production of 300,000 pieces of the various types of dusting and spraying equipment for 1949, an increase of 47,357 pieces over 1948 production figures. This proposed manufacturing program has been approved by the Ministry of Commerce and Industry, Japanese Government. Production schedules of five of the six equipment manufacturers have been confirmed. The detailed breakdown for 1949 estimated production follows:

<u>Factory</u>	<u>DDT Dusters</u>	<u>Sprayers, Knapsack Type, 3 gal. Cap</u>	<u>Sprayers, Pump-type Semi-Automatic</u>	<u>Sprayers, Hand-type 1/2 gallon Capacity</u>	<u>Engine Sprayers</u>	<u>Total</u>
Shikutani	43,200	35,800	15,300	8,600	1,400	104,300
Shibazaki	24,500	20,300	6,800	5,000	100	56,700
Hatsuda	33,000	31,000	11,700	10,000	500	86,200
Maruyama	17,700	15,700	4,100	5,000	500	43,000
Ushida	-	-	5,000	-	-	5,000
Tokyo Rika	-	-	-	4,800	-	4,800

Distribution

Approximately 4,000,000 2-oz. cans DDT powder are being distributed to the seven largest cities in Japan: Tokyo, Osaka, Kyoto, Yokohama, Kobe, Nagoya and Fukuoka. These are to be used by individuals living in areas of those cities where there have been typhus outbreaks. Sales will be made through the drug departments of department stores and reputable drug retailers at ¥ 23.38 per can. Dealers will have signs posted stating: "Distribution Depot for Imported DDT Products". Domestic materials purchasing passbooks will be used as the ration certificate. Prefectural officials in coordination with health centers will decide on distribution localities and the quantities to be distributed in each locality. Children's nurseries, vagrant camps, penitentiaries, etc. should receive top consideration in distribution plans.

Sales must be completed in fifteen days beginning on or about 20 March. Allocations are to be based on household members permitting two cans for 1 - 3 members; three cans up to five members and one can for every two additional members. All cans will bear labels stating contents, use, directions and dealers' names.

The Yamanouchi Pharmaceutical Company and Takeda Pharmaceutical Company are the two national dealers through whom distribution is being made. Detailed information is contained in Ministry of Welfare letter, Yakuhatu No.297, dated 22 February, which has been sent to the Governors of the seven prefectures concerned and the directors of the Yamanouchi and Takeda Pharmaceutical companies.

Distribution

A total of 13,820 vials (50cc) of triple typhoid vaccine has been found to meet minimum standards on reassay and has been distributed according to inclosed plan (Incl. 1). A stock of 9,160 vials remains to meet emergency requirements.

During the period 20 - 26 February, 1,922 pieces of dusting and spraying equipment were distributed to 16 prefectures as follows:

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsack Sprayer</u>	<u>Semiautomatic Sprayer</u>	<u>Hand Sprayer</u>

SECTION V
NARCOTIC CONTROL DIVISION

Arrests

Investigations which culminated in raids in three large cities have resulted in the arrest of 20 foreign nationals who were trafficking in heroin. The arrests cover a period of approximately four weeks during which time numerous Japanese, acting as salesmen in dance halls and tea rooms, were also arrested.

One of the foreign nationals was in possession of a diary which listed the Japanese middlemen selling narcotics for him. The foreign national was netting at least ¥ 2000 per day through his illicit dealings. He purchased the heroin for ¥ 3000 per gram (the price has increased to ¥ 8000 per gram since the arrest), and obtained ¥ 500 per one-tenth gram from the middlemen.

Importation, manufacture, possession, use or sale of heroin is prohibited under the Japanese narcotic law. Violators are subject to a penalty of five years penal servitude or ¥ 50,000 fine or both.

SECTION VI
WELFARE DIVISION

Licensed Agencies for Relief in Asia (LARA)

Overseas shipments to LARA, numbers 132 through 138, have arrived in Yokohama and contained 131.06 tons. These shipments included the following relief items:

- a. 132nd Shipment: Arrived aboard the S.S. Mr. Davis on 12 February and contained 13.45 tons (clothing).
- b. 133rd Shipment: Arrived aboard the S.S. Joplin Victory on 14 February and contained 3 tons (clothing).
- c. 134th Shipment: Arrived aboard the S.S. General Meigs on 15 February and contained 14.18 tons (food, 2.62tons - clothing 3.96tons - miscellaneous, 7.6 tons).
- d. 135th Shipment: Arrived aboard the S.S. Pioneer Cove on 16 February and contained 74.26 tons (food, 43.06tons - medicine, 22.5tons - miscellaneous, 8.7 tons).
- e. 136th Shipment: Arrived aboard the S.S. Trade Wind on 18 February and contained 3.8 tons (clothing).
- f. 137th Shipment: Arrived aboard the S.S. President Pierce on 21 February and contained 15.17 tons (clothing, 14.92tons - miscellaneous, .25tons).
- g. 138th Shipment: Arrived aboard the S.S. P. & T. Forester on 24 February and contained 7.2 tons (clothing).

The total LARA relief supply shipments to Japan, as reported, now totals 7,625.81 tons, consisting of the following items:

	Tons
Food	5,692.96
Clothing (including bedding and shoes)	1,516.68
Medical Supplies	85.72
Cotton (raw)	207.62
Miscellaneous (soaps, seeds, etc.)	<u>122.83</u>
TOTAL	7,625.81

Miss Esther B. Rhoads, who has served as a LARA representative in Japan since June 1946 resigned effective 1 March 1949 for the purpose of returning to her prewar position of principal of the Friends Mission School, Mita, Minato-ku, Tokyo.

Mr. Thomas A. Foulke, American Friends Service Committee man, Ambler, Pennsylvania, has arrived in Tokyo and will succeed Miss Rhoads as resident LARA representative. Dr. G. E. Bott and Rev. H. Felsecker will also continue to serve as resident LARA representatives.

Japanese Red Cross Society

Volunteer Service:

A program has been arranged in Yamanashi Prefecture to further develop volunteer service activities. This program will include nine meetings on volunteer services, with representatives from all parts of the prefecture attending. The meetings will be held during the period 15 - 19 March and will be conducted personnel from the Yamanashi Red Cross (prefectural) Chapter and the Yamanashi Military Government Team.

Community Chest Japanese Red Cross "Joint Fund" Campaign

The final results, for reporting purposes, of the Community Chest-Japanese Red Cross "Joint Fund" campaign were submitted on 3 March.

The "Joint Fund" goal (1948-49) was set at ¥ 1,175,450,000.00 and the final tabulation, for reporting purposes, reflects a total of ¥ 1,084,334,871.12 raised or 92.3% of quota.

The final results of the "Joint Fund" campaign, on a prefectural level, reflecting established goals and amounts raised (collections, including pledges), are given below:

Prefecture	<u>Goal</u>	<u>Amount Received</u>	<u>Per Cent</u>
Hokkaido	70,000,000	74,489,254.00	106.4
Aomori	11,000,000	11,244,438.77	102.2

TOTAL	1,175,450,000	1,084,334,871.12	92.3%

SECTION VII
SOCIAL SECURITY DIVISION

Health Insurance

In accordance with Article 71-4 of the Health Insurance Law, the Ministry of Welfare is empowered with the authority to change the contribution rate within a limited scale. Any change, however, must be reported to the Diet for confirmation.

The cost of operation is the governing factor upon which the change would be made. As a result of the increased use and cost of medical care, the contribution rate was increased from 3.8% to 4.4%, to be shared equally by the employer and the employee, effective last January. This is the maximum limit to which the Minister of Welfare can go, providing such action represents the opinion of the Health Insurance Advisory Council.

The upward trend in benefit costs, as revealed by comparison of recent reports with reports for the same period last year, shows that an additional increase the Ministry of Welfare to the new Diet to increase the maximum feasible contribution rate to 5.2%. A change in the taxable wage level may preclude the necessity for this increase.

SECTION II PREVENTIVE MEDICINE DIVISION

Training Course in Drug Inspection

A one-week course in drug inspection will be held 11 to 16 April at the Institute of Public Health in Tokyo for the chiefs of the pharmaceutical affairs sections in Prefectural health departments. The course will be concerned principally with the regulations established by the Pharmaceutical Affairs Law in August 1948 and their implementation by a new system of drug inspection. An official announcement concerning the course is being sent to prefectural Governors by the Ministry of Welfare.

Flea Control

Fleas not only are general nuisances and inhibitors of sound restful sleep, but are efficient vectors of many disease organisms pathogenic to man and animals, i. e., plague, murine typhus, tularaemia, rat-bite fever, dog tapeworms rat tapeworms. Some species serve as the direct causative agent of certain pathological conditions i. e., the "tunga" or "chigoe" flea (a burrowing flea) and the "stick tight" flea.

The most common species include the so-called human flea - Pulex irritans (also common on skunks and hogs), the cat flea, (Ctenocephalides felis), the dog flea (Ctenocephalides canis), the various rat fleas, (Xenopsylla cheopis) (Nosopsyllus fasciatus) and the "stic tight" flea found on poultry (Echidnophaga gallinacea). These species are not host specific and may attack a variety animals in their search for a blood meal in the absence of their preferred host.

Fleas are omnipresent creatures and may be found practically all year round. Usually the fleas are most predominant in the late spring and early summer months when climatic conditions are most favorable for their development. A second peak of population density may occur in the fall of the year, particularly if the humidity remains rather high. High temperature and low humidity are detrimental to the well-being of these insects.

Fortunately plague is not known to be present in Japan. Xenopsylla cheopis and other species of Xenopsylla are the most important vectors of this disease. The cat, dog and human fleas may also transmit the plague bacilli - the "stick-tight" flea has also been shown to harbor the bacillus of plague.

Murine typhus is transmitted from rat to man by the rat fleas. The cat and dog fleas are also important vectors of the rickettsii of this disease.

The tapeworm of the dog, Dipylidium caninum is transmitted by the dog flea especially to children who accidentally may swallow infected fleas while playing with infested dogs or cats.

While fleas are found in a household it generally indicates that infested dogs cats or rats have free access to the place. The adult fleas deposit their eggs either on the host, or in the nests or sleeping quarters of their host (pets, rats) etc. Fleas also deposit eggs in seams of clothing and in beds and bedding. Larvae feed on particles of dry blood and organic materials in cracks and crevices under mats, carpets and tatami. Old piles of rags, bedding material of dogs, cats, domestic animals, rats, wherever they may be - in houses, sheds, or barns, form excellent flea breeding areas. Under houses open to wanderings of small animals is a favored place for breeding. The life cycle of fleas may vary from 2 to 4 weeks depending upon climatic conditions, shelter and availability of food. Control is comparatively simple as the developmental and adult stages of fleas are susceptible to many control measures.

Sanitation of premises is the key note of flea control, but it must be a persistent effort on the part of every individual concerned. The following suggested control measures, combinations and/or modifications of these measures will be beneficial in flea control:

1. Exclusion or proper management of household pets (cats, dogs, rabbits, etc)
2. Exclusion and control of rodents.
3. Destruction of flea breeding foci -
 - a. Burning of bedding, nesting material, etc., used by pets, rats, etc.
 - b. Cleaning debris from areas around nests or beds of animals and burning of this debris.
4. Frequent cleaning of houses (sweeping out from under tatami, etc.)
5. Chemical control - mopping of exposed floors with strong cresolis or soap solutions.
 - a. Cresolis solution (5% in water) - sprayed sufficient to wet floors (under tatami particularly) paying attention to cracks and crevices.
 - b. Pyrethrum dust or DDT powders dusted under tatami, etc, will kill adult fleas.
 - c. DDT pre-dusting or spraying of rat runways, harborage, etc., six or seven days before rodent control operations in localities where murine typhus occurs or when its presence is suspected.
 - d. Pyrethrum dust or DDT powder dusted in fur of cats and dogs kills adult fleas.
 - e. Under houses -
 - (1) Coarse salt scattered on the ground under houses and then thoroughly wet down. (Prevents development of larvae).
 - (2) Cresote oil if available may be sprayed (kills all stages on contact).
 - (3) Frequent soaking with salt water taken from the ocean may be used under houses seaside villages.
 - (4) Waste soap water from kitchen or laundry operations is useful.
 - (5) Nicotine sulphate (dilute 1:400 parts water) is effective.

SECTION III VETERINARY AFFAIRS DIVISION

Immunization of Horses Attached to Special Services Hotels

Plans have been finalized with the Animal Hygiene Section, Ministry of Agriculture and Forestry for the immunization of all horses against Equine Encephalomyelitis that are attached to Special Services Hotels. This work will be carried out under the supervision of Prefectural Government Veterinarians and should be completed by 1 April. Horses that are on Procurement Demand or otherwise attached to United States Army units for operational

purposes will also be immunized by Japanese Veterinarians. Medical Officers and Veterinarians of Military Government Teams should notify Special Service Hotels in their areas of the contemplated action.

Equine Encephalomyelitis

An outbreak of equine encephalomyelitis has been reported from Aomori Prefecture in the Nishitsugaru district with two cases in Nurusawa and one each in Morita and Shibata. These cases are classed as suspects but in order to accurately diagnose the disease, laboratory inspectors have been dispatched by the Animal Hygiene Section, Ministry of Agriculture and Forestry.

Animal Diseases

The Animal Hygiene Section, Ministry of Agriculture and Forestry reported the following outbreaks of animal diseases for the periods:

<u>Prefecture</u>	<u>26 February - 4 March</u> <u>Disease</u>	<u>Number of Cases</u>
Chiba	Swine erysipelas	1
	<u>4 March - 11 March</u>	
Kagawa	Swine cholera	41
Miyazaki	Anthrax	1
Aomori	Equine Encephalomyelitis	4 (suspect)

Note: Investigation is under way in Kagawa Prefecture to determine the possibility of the Swine cholera outbreak being due to the feeding of raw garbage from United States Army installations.

SECTION IV SUPPLY DIVISION

National Pharmacist Examination

Ministry of Welfare Notification No.24 published in the Official Gazette, 12 February, sets forth the conditions, date and locale of the National Pharmacist Examination. The theoretical examination is scheduled to be conducted 15 May at 0900 hours in fourteen locations in Japan: Miyagi, Tokyo, Chiba, Toyama, Ishikawa, Gifu, Shizuoka, Aichi, Kyoto, Osaka, Hyogo, Tokushima, Nagasaki and Kumamoto. Qualified persons may apply to the National Board of Pharmacy between 15 March and 15 April. The date of the practical examination will be published at a later date.

This is a noteworthy event. It marks the first time in Japan that pharmacists are required to qualify to practice their profession by successfully passing a state examination.

The Pharmaceutical Affairs Law, Law No.197, dated 29 July 1948, provides for a National Pharmacist Examination to be conducted by the National Board of Pharmacy. Article 73 states: "A National Pharmacist Examination shall be held in 1949 and each year after." Article 12 states: "The Minister of Welfare shall decide the place and date of the examination, the time limit for presentation of a written application to qualify for the Examination and shall give public notice of the information at least three months prior to the date for the Examination."

Short Course on Drug Inspection

Attention is invited to the notification of a course on drug inspection in the Preventive Medicine Section of this issue of the Weekly Bulletin.

Distribution

During the period 27 February - 5 March, 1,081 pieces of DDT dusting and spraying equipment were distributed to 15 prefectures as follows:

<u>Prefecture</u>	<u>DDT Dusters</u>	<u>Knapsack Sprayers</u>	<u>Semiautomatic Sprayers</u>	<u>Hand Sprayers</u>
Akita	80			
Yamagata			100	
Fukushima	100			80
Saitama	50			
Chiba			2	
Tokyo			20	
Toyama	24			
Fukui				30
Nagano			30	
Kyoto			50	
Osaka				50
Wakayama		35		
Kagawa				100
Fukuoka		50	60	
Saga	200	20		
TOTAL	454	105	262	260

Controlled Medicines

Ministry of Welfare Ordinance No.37, dated 12 March 1949, lists 22 items to be removed from control and four items to be placed under control. The items affected are listed below.

Items to be removed from Control

Acetophenetidin	Fluid Extract of Nux Vomica
Acetophenetidin Tablets	Mercurochrome
Acetylsalicylic Acid	Potassium Iodide
Albumin Tannte	Silver nitrate
Atropine Sulfate	Soluble Saccharine
Bismuth Subnitrate	Solution of Formaldehyde
Bromural	Solution of Potassium Acetate
Bromural Tablets	Weak Tincture of Iodide
Calcium Lactate	Zinc Oxide
Caffeine Sodium Benzoate	Zinc Sulfate
Compound Tincture of Gentian	Tincture of Iodide

Items to be placed under Control

Synthetic Ephedrine Hydrochloride
Powdered Extract of Nux Vomica
Rice Polishing Oil
Soy Bean Oil

The following quantities of vaccines have been reassayed and found to meet minimum standards:

<u>Product</u>	<u>Name of Manufacturer</u>	<u>Lot No.</u>	<u>Amount</u>
Typhoid & Paratyphoid	Sankyo Co.	77	30,150 cc
		84	38,600
		31	20,000

Production

The CY 1948 production program for pyrethrum emulsion was completed on 10 August 1948 with a total of 7,565 fifty-gallon drums or 382,800 gallons being produced. In addition to this figure, some manufacturers had left on hand quantities of the dried flowers and extracts of pyrethrum. This total of 9,375 kg of dried flowers and 899 kg of pyrethrum extracts, it is anticipated, will account for an additional 611 drums, each 50 gallons, or a total of 30,550 gallons of finished, now that additional allocations of 5.6 kg of gasoline and 82 kl of gas-oil, necessary for processing the extracts and diluting of the extracts, have been assured.

The CY 1949 production program for pyrethrum emulsion has been planned for a total of 8,075 drums, 50 gallons each, or 403,750 gallons of finished pyrethrum emulsion. This figure, plus the additional 30,550 gallons to be made available, (according to the preceding paragraph), will provide a total of 8,686 drums, 50 gallons each, or a grand total of 434,300 gallons of finished pyrethrum emulsion for scheduled public health insect control activities during 1949.

Inclosure No.1 furnishes a list of the scheduled pyrethrum emulsion manufacturers for the 1949 program with the locations of the main offices and factories and nearest railway station to be used for the future distribution of the insecticide.

SECTION V NARCOTIC CONTROL DIVISION

Enforcement

The Narcotic Division, Hokkaido, established a branch office in Hakodate 1 March in order to more effectively combat narcotic traffic in the area. Results obtained will be used as a criterion for establishing branch offices for narcotic agents in areas where the center of illicit traffic is removed from prefectural capitals.

Narcotic Control Activities Report - January

The January report on narcotic control activities from the Ministry of Welfare contained the following information:

Total registrants	90,851
Arrests - Registered persons	11
Unregistered persons	56
Convictions - Registered persons	8
Unregistered persons	55
Thefts of narcotic (including four hospitals)	19
Losses by fire (including one hospital)	2

Penalties for registrants varied from ¥ 3,000 to ¥ 10,000 fines and from eight months to one year six months penal servitude with two defendants having sentences of penal servitude abrogated to suspended sentences varying from two to four years duration. Penalties for non-registrants varied from ¥ 300 to ¥ 54,000 fines and three months to two years penal servitude with 18 suspended sentences varying from three months to three years duration. Seven registrants received administrative disposition (suspension of license) and ten registrants were admonished for minor violations.

The report also summarized the activities of narcotic agents as follows:

Inspection of registrants	1,446
Investigations originated	124
Investigations concluded	95
Investigations not concluded	245

SECTION VI WELFARE DIVISION

Cooperative for American Remittances to Europe, Inc., (CARE)

The following report covers “CARE Operations in Japan” since the arrival of their first shipment of “gift” packages in July 1948 through 28 February 1949:

a. Food

Total packages received		19,979
Packages damaged	2,813	
Packages delivered	12,037	
Packages in process of delivery	<u>3,503</u>	<u>18,353</u>
Total packages on hand <u>available</u> for delivery		1,626

b. Woolen

Total packages received		3,012
Packages damaged	9	
Packages delivered	2,707	
Packages in process of delivery	296	
Standing orders for packages	<u>1,507</u>	<u>4,519</u>
Number of packages <u>not available</u> to cover standing orders		1,507

c. Blanket

Total packages received		1,644
Packages damaged	10	
Packages delivered	782	
Packages in process of delivery	<u>198</u>	<u>990</u>
Total packages on hand available for delivery		654

d. Knitting

Total packages received		1,008
Packages damaged	5	
Packages delivered	745	
Packages in process of delivery	258	
Standing orders for packages	<u>63</u>	<u>1,071</u>
Number of packages not available to cover standing orders		63

Heifers for Relief Committee Shipments

The “Heifers for Relief Committee” (30 North Marion Avenue, Pasadena 4, California) established a goat shipment project to Japan. This project was to ship approximately 2,000 goats to Japan for use in welfare, education and rehabilitation projects, reference Public Health and Welfare Weekly Bulletin, No.68 (for the period 12-18 April 1948).

The eighth and final shipment of the above mentioned “goat shipment project” arrived in Japan (Yokohama) aboard the S.S. Flying Scud on 3 March 1949 and included 309 goats (245 adults - 64 kids). Including this shipment a total of 1,945 go as have been received.

The 245 adult goats (kids will accompany same adults) received in the above shipment have been allocated as follows:

	<u>Goats</u>
Ministry of Welfare (for welfare institutions)	121
Ministry of Agriculture and Forestry (for agricultural colleges)	<u>124</u>
TOTAL	245

The distribution of the 121 adult goats allotted to the Ministry of Welfare has been approved and they are now being distributed in accordance with the following schedule:

<u>Prefecture</u>	<u>Name of Institution</u>	<u>Number of Goats</u>
Tokyo	Kokusai Seibo Byoin	3
	Japan Christian Rural Service & Training Center	3

	Sendagi Christian Service Fellowship	2
	Tosei Gakuen	5
	Nazaretto-no-Ie	3
	Itsukaichi Hoikuen	5
	Fujin Kyofukai	2
	Seimei Gakuen	3
	Seishin Ryoyoen	3
	Keisen Jogakuen Hoikujo	5
	Kurume Kinrohodo Gakuen	3
	Seijo Nyujiin	3
Saitama	Saitama Gakuen	3
	Musashino Gakuen	3
	Kohokai Tamayodoen	3
	Yoshimi Gakuen	3
Chiba	Kujukuri Home	5
	Ichinomiya Gakuen	5
Hyogo	Rural Center	3
	Inagawa Rural Center and Summer Camps	5
Nagano	Kyoin Hoyojo	3
	Shinsei Ryohojo	5
	Tokyo Byoin Komoro Bunin	3
Kanagawa	Monastery of the Precious Blood	5
	Shirayuri Noen	3
	Nakasato Gakuen	3
	Kokufu Jisshu Gakko	3
	Seibo-no-Sono Yoroin	3
Shizuoka	Bukkyo Yogoin	3
	Udo Junanayta Hoikuen	3
	Kodomo-no-Ie Fukuin-ryo	3
	Bentenjima Dobo-ryo	3
	Osaka-mura Hoikuen	3
Hiroshima	Hiroshima-ken Kinen Byoin	5

Child Welfare - Release of Technical Bulletin

Attached to this Weekly Bulletin (Incl. #2) is a copy of Technical Bulletin #18 dated March 1949, subject, "Some Aspects of Child Care". The material presented therein has been released to the Ministry of Welfare and will be available in Japanese at an early date.

SECTION VII SOCIAL SECURITY DIVISION

General

The interest being taken by the professional organizations in the social insurance program has been further emphasized by the Japanese Dental Association. The Social Insurance Committee established within that Association held an open meeting on 13 February in Tokyo with approximately 600 dentists, doctors and interested people attending.

Addresses were given by representatives of the Insurance Bureau, Ministry of Welfare, those insured by these programs, the Dental Association and the public at large. The lectures gave information as to the nature of the interest which the groups or organs they represented have in the social insurance programs.

According to the report made by a representative of the Committee, comments and questions following the lectures were directed particularly to the schedule of fees-for-service, the type of dental care to be included in benefits, and whether any form of such care would be excluded. Several doctors were of the opinion that the fees should be the same for insured and non-insured persons, at the rate established by the Ministry of Welfare based upon the recommendations of a fee calculating committee, and that all dentists should adhere to these fees for adequate dental care. No conclusions or resolutions were passed at this meeting.

A member of the Committee, in commenting on the meeting, said that many of the other comments and questions indicated to him that the dentists as a whole know but very little about the social insurances. Plans are now being made to disseminate information regarding the social insurances to members of the Dental Association and to conduct similar meetings more frequently. There was exhibited a willingness on the part of the dentists to do everything within their power to promote, advise, and urge full support of the social insurances in order to make the Japanese programs successful.

SECTION VIII
MEMORANDA TO JAPANESE GOVERNMENT

<u>PHMJG</u>	<u>DATE</u>	<u>SUBJECT</u>	<u>SURVEILLANCE</u>	<u>DISTRIBUTION</u>
94	3/8/49	Application for Release of American Trucks for Disaster Relief Measures.	No	MG 8th Army

Note: Ministry of Welfare, Japanese Government, request, above subject, not favorably considered due to non-availability of American vehicles.

Feb 25	Ichi-fuku No.2705	All chief, Service Section prefectural governments.	"
		Re: Dealing with the bodies sent back from the Philippine Islands.	

SECTION II PREVENTIVE MEDICINE DIVISION

Venereal Disease Control

Inspection trips to the various prefectures reveal that contact tracing is not being carried out in many places. If the venereal disease control program is to be effective, the contacts of infected patients must be investigated. Although the usual excuses of lack of public health nurses, transportation or money are offered, the following minimum procedures can be followed in every health center:

1. The examination of the marital partner if the patient is married;
2. The examination of the sex partner if other than a prostitute;
3. The examination of children born to syphilitic mothers;
4. The examination of all other members of the family in the case of juvenile vaginitis or congenital syphilis.

Priority should be given to tracing the contacts of patients who have primary and secondary syphilis since it is these contacts who are likely to have syphilis in an infectious stage.

Although home visits by the public health nurse for the purpose of investigating contacts should form the backbone of contact tracing, oftentimes in cases where the contact is not prostitute, the patient may be persuaded to cooperate in this procedure by asking the contact to visit the health center venereal disease clinic or private physician for an examination.

In all cases and time must be taken to make sure that the patient understands that the purpose of contact tracing is not to reprimand or punish anyone in any way, but rather to locate other infected persons to protect them against further ravages of the disease and to prevent them from spreading the disease to others.

In health centers which are staffed by an adequate number of public health nurses, contact tracing should not be limited to contacts of clinic patients but should include contacts who are reported by other clinics, hospitals and private physicians in accordance with provision of the Venereal Disease Prevention Law (Reference Weekly Bulletin No.95, 1948).

All Military Government Public Health officers should impress upon the prefectural public health officials the necessity of contact tracing.

Head Lice in Children

Numerous reports from various sources indicate that a rather high percentage of school children, particularly the girls, are infested with head Lice. This ranges from 6 percent to as high as 30% in some instances. It is well to remember that: (1) head lice are as important in the spread of typhus fever as are body lice, (2) if the child is infested, the child's family is infested in the majority of instance, (3) if the louse population is permitted to build up, danger of a sudden outbreak of typhus may be anticipated.

The Ministry of Welfare and the Ministry of Education plan to launch a program in an attempt to combat this condition in the schools. This program is to be divided into two parts: - (1) elementary school children in the six major cities (Tokyo, Osaka, Nagoya, Kobe, Yokohama, Kyoto) (2) elementary school children in the remainder of the country. The program is to be initiated on or as near 1 April as possible. It is suggested that the Public Health Nurses of the Health Centers take a leading role in this program in cooperation with the school teachers and school nurses.

SECTION III VETERINARY AFFAIRS DIVISION

Veterinary Extension Education

Through the facilities of the Institute of Public Health an opportunity is now offered to disseminate pertinent technical information in Japanese by means of extension bulletins. Although the recipients of these bulletins are limited to present and past students of the Institute classes, it is hoped that the prefectures will re-copy

and distribute to all their Public Health Veterinarians. The initial issue, which has been mailed, is entitled "Sanitation on Small Dairy Farms".

Dairy Farm Inspections

Recent limited surveys concerning dairy farm sanitation indicate the need for increased attention and supervision over this phase of the milk sanitation program. The frequency of inspections appear to be too irregular and the results and improvements attained below minimum expectations, especially when compared with the progress noticeable in milk plants. Also, the inspection and improvement of rural milk collecting stations need immediate stimulation before the advent of warm weather.

Bovine Brucellosis Survey

A preliminary sampling survey was conducted by the Animal Hygiene Section during the period August - October 1948 in eight prefectures in order to gain some idea of the incidence of Bovine Brucellosis (Bang's Disease). The prefectures were Hokkaido, Tokyo, Chiba, Ishikawa, Shizuoka, Mie, Hiroshima and Saga. A total number of 4755 head were tested including both dairy and work cattle. The rapid agglutination and the complement-fixation methods were both employed, but not comparatively. The number of positive reactions were 37 (0.67%); suspects were 43 (0.90%) and negatives were 4680 (98.43%). The result of this work has been the stimulation of a more complete, fact-finding survey planned for the present year (1949), for use as a basis in formulating a Bang's Disease Control program.

Japanese Veterinary Medical Association

Announcement has been made through Japanese channels of the forth coming annual "General Meeting" of the Association scheduled for Tuesday, 29 March 1949 at 13:30 at the University of Tokyo. Representation from every prefecture is urged.

Animal Diseases:

The Animal Hygiene Section, Ministry of Agriculture and Forestry reported the following outbreaks of animal diseases for the period 11 March - 18 March:

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Tokyo	Swine cholera	6

SECTION IV NURSING AFFAIRS DIVISION

Demonstration Schools of Nursing

The Model Demonstration School of Nursing at the Red Cross Hospital in Tokyo is holding graduation exercises for 99 students on 24 March. Entrance examinations have been completed for the new class. The census of nursing students in the School now totals 473, the largest total enrollment to date.

The outpatient department continues its progressive improvement and is currently averaging 800 patients daily.

Successful application for entrance into the First National Hospital School of Nursing total 50 out of 152 who took the test, represented entirely by high school graduates. Fifteen prefectures have representation in this class. Hospital improvements are progressing favorably with a central dining room for nurses and doctors having been completed and a new work hour schedule for nurses having been adopted.

Publications

The Health Center Guidebook for Nurses and the second half of the publication on communicable diseases will be ready for distribution before 31 March.

Class "A" Schools of Nursing

The procedure for application and inspection by the Regional Committee for Grading to determine those schools of nursing that can be graded Class "A" has resulted in some confusion among the nursing schools. Although the Ministry of Welfare has designated 24 schools of nursing as attaining a Class "A" status, this does not prohibit any other school of nursing from applying for the necessary inspection and re-grading of Class "A" provided that the school being inspected passes all the necessary requirements. However, only the 24 schools designated by the Ministry of Welfare will receive financial support from the Ministry, and all other schools of nursing which attain Class "A" status must depend on prefectural and local support.

Many schools of nursing have felt that only those schools being given financial support by the Ministry of Welfare were permitted to attain a Class "A" rating. This is an erroneous assumption, and it is suggested that Military Government, Public Health Nurses and Public Health Officers clarify this point if the matter is brought to their attention.

SECTION V SUPPLY DIVISION

Distribution

During the period 6 - 12 March, 822 pieces of DDT dusting and spraying equipment were distributed to ten prefectures as follows:

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsack Sprayers</u>	<u>Semiautomatic Sprayers</u>	<u>Hand Sprayers</u>
Akita		1	1	
Tokyo	15	2	1	
Niigata	100			
Osaka				50
Kyoto	200			
Wakayama		30	30	
Shimane		1	51	
Kagawa	50			100
Oita				100
Fukuoka		50	40	
TOTALS	365	84	123	250

Ministry of Welfare Letter, Yaku Hatsu No.180, dated 7 March 1949 informs all prefecture governments of the new prices for dusting and spraying equipment as revised by the Japanese Price Board. This revision brings prices into line with prices which were established on 1 December 1948 for similar equipment used for agricultural purposes. The new prices are listed below: (Unit -Yen)

<u>Manufacture</u>	<u>Shukutani</u>	<u>Hatsuda</u>	<u>Shibazaki</u>	<u>Maruyama</u>	<u>Ushida</u>
DDT Duster:					
Producer Price	290	350	350	300	
Retailer Price	335	404	404	404	
Knapsack Sprayers:					
Producer Price	1420	1420	1476	1476	1420
Retailer Price	1640	1640	1706	1706	1640
Semi-Auto Sprayers:					
Producer Price	3022	2810	2910	2910	3022
Retailer Price	3491	3363	3363	3361	3491
Hand Sprayer:					
Producer Price #1	810	610	500	500	-
Producer Price #2	610	-	-	-	-

Retailer Price #1	936	705	578	578	-
Retailer Price #2	705	-	-	-	-
Engine Sprayer:					
Producer Price	30,736	29,600	-	29,600	-
Retailer Price	35,512	34,200	-	34,200	-

Different prices for the same item have been permitted to allow for differences in quality and other variations in the equipment. The sales tax is not included in these prices.

Pest Control

The distribution of Pyrethrum emulsion concentrate is expected to begin on approximately 1 April 1949. Each fifty gallon drum of concentrate, when properly diluted with water (30 parts), yields 1,500 gallons of finished emulsion.

Allocation plan is listed below:

<u>Prefecture</u>	<u>Drums (50gals.)</u>	<u>Prefecture</u>	<u>Drums (50gals.)</u>
Hokkaido	312	Mie	112
Aomori	65	Shiga	45
Iwate	46	Kyoto	359
Miyagi	112	Osaka	645
Akita	42	Hyogo	338
Yamagata	75	Nara	20
Fukushima	59	Wakayama	71
Ibaraki	41	Tottori	29
Tochigi	66	Shimane	38
Gumma	86	Okayama	75
Saitama	200	Hiroshima	154
Chiba	326	Yamaguchi	195
Tokyo	2,181	Tokushima	31
Kanagawa	445	Kagawa	42
Niigata	107	Ehime	96
Toyama	67	Kochi	35
Ishikawa	100	Fukuoka	366
Fukui	21	Saga	30
Yamanashi	25	Nagasaki	150
Nagano	95	Kumamoto	95
Gifu	89	Oita	81
Shizuoka	506	Miyazaki	59
Aichi	383	Kagoshima	71
		TOTAL	<u>8,686</u>

SECTION VI NARCOTIC CONTROL DIVISION

Transportation

Sixty bicycles have been received by narcotic agents in various prefectures, and should aid materially in narcotic enforcement work. Nine-two bicycles will be supplied the remaining narcotic agents in two additional allotments. The next assignment will be supplied before the ended of March.

Narcotic Agents

Yaku Hatsu No.369, dated 4 March 1949, requests prefectural governments to designate 22 additional narcotic enforcement officials to be given power of arrest. The greatest increase is four for Kanagawa, other prefectures concerned having the number increased by one, two or three.

Considerable difficulty has been encountered by the Narcotic Section, Ministry of Welfare, in increasing the number of narcotic agents since prefectures have been slow in recommending particular officials for the Ministry of Welfare to designate.

SECTION VII WELFARE DIVISION

Licensed Agencies for Relief in Asia (LARA)

Overseas shipments of relief supplies to LARA, numbers 139 through 143 have arrived in Yokohama and contained 195.39 tons. These shipments included the following relief items:

- a. 139th Shipment: Arrived aboard the S.S. Mount Mansfield on 2 March and contained 21.73 tons (food, 2.43 tons - clothing, 19.3 tons).
- b. 140th Shipment: Arrived aboard the S.S. Pioneer Tide on 3 March and contained 14.06 tons (clothing).
- c. 141st Shipment: Arrived aboard the S.S. Java Mail on 5 March and contained 20.2 tons (food).
- d. 142nd Shipment: Arrived aboard the S.S. City of Alma on 7 March and contained 113.08 tons (food, 112.18 tons - clothing .9 tons).
- e. 143rd Shipment: Arrived aboard the S.S. Ocean Mail on 10 March and contained 19.02 tons (food, 1.1 tons - clothing, 17.92 tons).

The total LARA relief supply shipments to Japan, as reported, now totals 7,813.90 tons, consisting of the following items:

	<u>Tons</u>
Food	5,828.87
Clothing (including bedding and shoes)	1,568.86
Medical Supplies	85.72
Cotton (raw)	207.62
Miscellaneous (soaps, seeds, etc.)	<u>122.83</u>
TOTAL	7,813.90

Japanese Red Cross Society

Home Nursing:

The 11th Home Nursing Training Course was held at the National Headquarters (Tokyo) between the hours 0800 - 1600 each day for the period 1 through 11 March. Twelve nurses, one each from the following 12 Chapters, (prefectural) attended and successfully completed the course:

Hokkaido	Tokyo
Okayama	Osaka
Nara	Kochi
Kumamoto	Gifu
Kanagawa	Miyagi
Nagano	Tochigi

The first Home Nursing Instructors' Study Conference was held at the National Headquarters (Tokyo) for a 4 day period (11 - 15 March) and 57 authorized home nursing instructors from 37 Chapters (prefectural) attended. Three days were spent on demonstration of model home nursing teaching and the fourth and last day was given over to discussions on problems presented by the instructors.

SECTION VIII SOCIAL SECURITY DIVISION

Social Insurance Medical Care Advisory Council

The insurance Bureau, Ministry of Welfare, has announced the appointment of members and establishment of the Social Insurance Medical Care Advisory Council, at the national level, in accordance with Article 43-5 of the Health Insurance Law and Cabinet Order of February 1948. Membership is appointed by the Minister of Welfare, based upon the recommendations of the organizations concerned, and is composed of representatives of the insurer, the insured, employers, the Medical Profession and public interest. The organization meeting of the national council was held at the Japan Medical Association headquarters in Tokyo. There are a total of 10 doctors on the council in various capacities.

At the organization meeting three sub-committees were established for consideration and study of the following: (a) the medical care fees, (b) the supervision and guidance of persons and establishments rendering medical care to members of social insurance, (c) the informational and educational programs for employers and insured persons on medical care.

In addition, the law provides for a local Social Insurance Medical Care Advisory Council in each prefecture the membership of which is appointed by the Governor comprising the same category of representatives as the National Council. It has been informally reported that many prefectures have organized these Councils, some currently functioning.

The primary purpose of these councils is to advise and cooperate with the Ministry of Welfare at the national level and with the prefectural governor at the local level on the appointment, dismissal, guidance, and supervision of the insurance doctors. The councils have the right, on their own initiative, to make investigations and studies concerning medical care and the social insurance programs. The prefectural councils will work in cooperation with the national council on matters of national scope and convey information as to local conditions.

Short Title: TB-PH-PREV MED.6

SECTION II PREVENTIVE MEDICINE DIVISION

Quarantine Regulations

Reference is made to Section I, Weekly Bulletin No.108, 17 - 23 January and to Section II, Weekly Bulletin No.112, 14-20 February.

Current immunization requirements for seventy-five different countries have been compiled during the past three months. In order to make this information usable, only the requirements applicable to travelers from Japan were considered. In summary the following is applicable.

Smallpox vaccination is so commonly required that no attempt will be made to list those countries requiring certificates of vaccination for entry. Where not required, it is usually strongly advised. The period of validity ordinarily acceptable is 14 days to 3 years except for Liberia which accepts certificates 14 days to 1 year after vaccination. Periods of validity for certificates of immunization against cholera and yellow fever are ordinarily those designated in International Sanitary Conventions and recommended by the World Health Organization. These are for Cholera, 7 days to 6 months; and for Yellow Fever, 10 days to 4 years. Certificates of immunization against typhus, plague, and typhoid-paratyphoid are valid for 12 months where required.

Cholera immunization is required by Afghanistan, Haikow, Tsingtao, Taiwan, French Establishments in India, Indo-China, Lebanon, and Fiji,

Typhus immunization is required by Korea (south of 38 degree parallel) and the Philippines.

Plague immunization is required by Jamaica.

Yellow fever immunization is required by French Equatorial Africa, French West Africa, Belgian Congo, Gold Coast, Sierra Leone, and French Somaliland. The last three require such immunizations only for passengers arriving by air.

Typhoid-paratyphoid immunization is required by Somalia, Afghanistan, Tsingtao, Taiwan, India and Korea.

Jap B encephalitis immunization is required by Korea (south of 38 degree parallel).

The above requirements apply to all persons from Japan arriving in the listed countries except Koreans returning to Korea. If travelers from Japan pass through or stop over in another country enroute, which is infected with a quarantinable disease, additional restrictions may be applied by other countries of transit or destination to such persons.

Due to the presence of epidemic disease such as cholera, typhus, and plague in India and other south Asiatic countries, these countries recommend immunization against such diseases for the personal protection of the individual.

Since many countries have adopted regulations during the past six months which require certificates of immunization to be on the International Form, as recommended by World Health Organization, and to have the authentication of the national health authority of the country of origin, steps have been initiated to obtain certificates of the International type and seals for authentication by quarantine officers who may be required to certify immunizations for commercial travelers. Further information concerning the issue of the certificates and use of the seals will be published in a later issue of this Bulletin.

Spray Treatment of Railway Cars, Etc.

Reference is made to Memorandum to Japanese Government (PHMJG-3), dated 13 December 1946, subject: "Rickettsicidal (Typhus Control) Spray Program", particularly to the last sentence of paragraph 7:

"If the typhus situation warrants a change in tactics, this spray program may be modified to meet the changing conditions".

In view of the comparatively low incidence of typhus fever in Japan at the present time, it is suggested that the spray program be modified to a program best suited to meet local conditions. Residual effect DDT spray should be applied at intervals not exceeding 30 days, at least, to railway coaches, stations and other public conveyances.

SECTION III NURSING AFFAIRS DIVISION

Model Demonstration School of Nursing

In Weekly Bulletin No.116 for the period 14 to 20 March, Section IV, "Nursing Affairs Division," a statement was made reference the census of nursing students at the model demonstration school. This is incorrect and should read, "The census in the Red Cross Hospital where the Model Demonstration School of Nursing is located, totals 473, the largest number of patients to date".

The graduates of the Model Demonstration School of Nursing, numbering 98 (not 99 as previously reported) have all been interviewed and placed. Many have accepted positions with either the Red Cross Hospital or St. Lukes Hospital, while others have been attracted by such types of services as staff nurses in branch and prefectural hospitals, health center nurses, public health nursing, school nursing and industrial nursing.

Public Health Nursing

Fifty-six nurses, representing 44 prefectures, received certificates at the completion of the recurring four-month Public Health Nurses Course at the Institute of Public Health in Tokyo.

Forty-six nurses, representing 45 prefectures, on 26 March completed the one-month Public Health Nursing Instructors Course held at the First National Hospital in Tokyo.

Class (A) Schools of Nursing

In order to further clarify the application and inspection of schools of nursing in their efforts to attain Class "A" status (reference Weekly Bulletin No.116, Section IV) the 24 nursing schools designated by the Hospital Section, Ministry of Welfare are schools operated in National Hospitals only. Other National Hospital Schools of Nursing, Red Cross Hospital Schools of Nursing as well as independent and private hospitals operating schools of nursing, are all eligible to make application for attainment of a Class "A" rating subject to passing the inspection requirements of the Regional Committee for Grading. However, it is again reiterated that outside of the 24 National Hospital Schools of Nursing, designated by the Ministry of Welfare, no additional or other schools will receive financial assistance from the national level.

SECTION IV VETERINARY AFFAIRS DIVISION

Animal Disease Report

The Animal Hygiene Section, Ministry of Agriculture and Forestry, reported the following outbreak of animal diseases for the period 19-25 March.

<u>Prefecture</u>	<u>Disease</u>	<u>Number of Cases</u>
Kagoshima	Swine Erysipelas	4
Nagano	Swine Erysipelas	1
Tokyo	Swine Cholera	2
Ehime	Swine Cholera	8

SECTION V SUPPLY DIVISION

National Pharmacist Examination

Article 5 of the Enforcement Regulations (Ministry of Welfare Ordinance No.37, 1948) implementing the Pharmaceutical Affairs Law has been amended by Ministry of Welfare Ordinance No.13, dated 9 March 1949. This

amendment provides for increases in the examination fees for both the theoretical and the practical examinations. Such increase is necessary because of the inflationary devaluation of the yen since the Enforcement Regulations were published in August 1948. The examination fees charged should in principle cover the cost of the examinations. However, such full fees would be prohibitive to many applicants. The increases provided in Ordinance No.13 are aimed to only compensate for inflation in the interim since August. The fees are raised to ¥ 1,500 total for both examinations: ¥ 500 for the theoretical, ¥ 1,000 for the practical.

Reference is made to Weekly Bulletin No.115 (6 - 12 March) on the subject of this examination.

SECTION VI NARCOTIC CONTROL DIVISION

Seized Narcotics

The Narcotic Section, Ministry of Welfare, has been advised to instruct all prefectural narcotic agents that seized narcotic must be accurately weighed or measured, with proper description securely attached, before shipment to the Drug Disposal Committee for salvage. Inaccuracies on the part of agents have resulted in discrepancies between reported amounts seized and actual amounts received in Tokyo.

Advice has also been given that such qualitative and quantitative analyses of seized narcotics should be included in all case reports particularly when there is evidence the narcotics have been #####. This information together with the illicit price of the narcotics is essential for statistical and enforcement purposes.

SECTION VII WELFARE DIVISION

Social Work Content in Public Health Nurse Courses

Ten hours of instruction in social work will be given in the 5-months course conducted in each prefecture for public health nurses. On 26 March the instructors for these courses completed a month's course on the curriculum during which time it was suggested that these instructors recruit social workers in their prefectures to give the following content:

1. Public welfare programs.
2. Voluntary social agency programs.
3. Social and health insurance programs.
4. Case work techniques with examples
5. Relationships between public health nurses and social workers, with definition of functions.

It was emphasized that the purpose of this social work content was to orient the nurses to the fields of social work so that they would know the social work resources of their communities and to whom to refer their patients for needed services. It was also suggested that the informational material be given in no more than an hour lecture with the second hour of each of the five 2-hour periods given to questions and discussions using examples from their own experience.

Dobo Engo Kai

Reference Public Health and Welfare Weekly Bulletin No.59 Section I, (for the period 9 - 14 February 1948) Weekly Bulletin No.107, Section VII(for the period 10 - 16 January 1949) and Social Affairs Bureau Instructions. (Hatsu Sha No.19) dated 7 February 1948.

The January Military Government Public Welfare Activities Reports indicate that private welfare agencies including city branches of the Prefectural Dobo Engo Kai are occupying public office space in violation of reference instructions. The intent of the reference instructions was to include not only Dobo Engo Kai but all private welfare agencies at any government level.

Repatriation Camps and Housing Projects

Recent reports and investigations indicate that the Ministry of Welfare's transfer of responsibility for the operation of amny repatriation camps and housing projects to private organizations has resulted in mismanagement of certain camps and projects.

To correct these conditions and to further implement SCAPIN 775, PHMJG 97, dated 22 March 1949, subject, "Operation of Repatriation Camps and Housing Projects by Private Organizations" has been issued.

Ministry of Welfare Instructions (En Shi No.286) dated 17 March 1949, provide for the removal of the administrative and operational responsibility of all repatriation camps and repatriate housing projects in Japan from private organizations and vesting this responsibility in a suitable agency of the Government.

Referenced Memorandum and Instructions further provide for effective steps to be taken by the Government to place these camps and /or hosing projects on an efficient basis of operation and the residents of these camps and/or housing projects be required to support their maintenance through a system of realistic rentals.

These instructions will be carried out by the Ministry of Welfare within 90 days from the date of receipt of the Memorandum.

Attached (Incl. No.3) is a list of the names and locations of the camps and/or housing projects that will become the responsibility of the government.

Three Month Medical Social Work Course

The three-month medical social work course to be given at the Japan School of Social Work will begin on 25 April instead of 10 April as previously announced. The final date for applications is 15 April. Since this course is to be as practical as possible it is planned to have lectures and class discussion three days a week and field work the other three days of the week. The students will be assigned to social agencies where they will each spend a month actually participation in the work of the agency. Because of these field work placements the class will be limited to 35 students.

Medical Social Workers in Model Health Centers

Medical social workers in model health centers who attended the course held at the Institute of Public Health in Tokyo 14 - 24 February should now be participating in social work programs in their communities. All prefectures except Yamanashi were represented, with three from Kyoto. Statistics on the group are as follows:

<u>Age range</u>	20-29	10	
	30-39	18	
	40-49	11	
	50-59	7	
	61	1	
	unknown	<u>1</u>	
	GRAND TOTAL	48	The youngest was 24 and the closet 61.

Educational background

Primary school	1
2 years beyond primary school	5
Part of high school	2
High school graduate	17
Part of semmon gakko	2
Graduate of semmon gakko	15
Part of college	1
College graduate	5

Experience in Social Work or related fields

(Several had experience in more than one field).

Social work	18
Public health	15
None	16
Unknown	3

Those holding a license

(Several had more than one license).

Without license	31
With license	15
Of which there are:	3 doctors
	3 public health nurses
	2 nurses
	1 midwife
	2 health administrator
	6 primary school teachers
	5 high school teachers

Those having other duties besides being the medical social worker in the Health Center
(18 out of 48)

Minsei-iin	2
Relief of windows	1
Health statistics	2 (in the Health Center)

Chief of Mother & Child Section	1
Requested by Military Government to attend for supervisory purposes	1

Supplemental Ration for Foreign Nationals

Effective 1 May 1949 the Japanese Government is no longer required to make available for purchase a supplemental "A" or "B" ration to foreign nationals resident in Japan, although the basic ration will continue to be made available through regular ration channels.

Improvements in the ration and availability of unrationed foods in the free market are such that foreign nationals can be expected to meet their food requirements as they did before the war. Indigent foreign nationals will be cared for through the medium of the Daily Life Security Law until other arrangements can be made by the appropriate Mission or Government of nationality.

Count of Foreign Nationals Receiving Assistance (Daily Life Security)

The Ministry of Welfare has issued Instructions (Sha-Hatsu No.63) dated 10 March in which a count of all foreign nationals on public assistance has been ordered, including Koreans.

Information requested includes: Nationality, name of family head, family members, public assistance granted in December 1948 (in cash and in kind), all public assistance granted to 31 December 1948 (in cash and in kind), dated assistance started and under "remarks" the types of assistance granted such as living aid, medical aid etc. Foreign nationals receiving relief of countries with Missions or representatives in Japan will be reported to their respective representatives for appropriate action to relieve the Japanese economy of all unnecessary demands. Assumption of responsibility for assistance or repatriation will be requested. Stateless persons will continue to be a responsibility of the local prefectural governments.

SECTION VIII
SOCIAL SECURITY DIVISION

National Health Insurance

Reference is made to Ministry of Welfare Notification (Hei) No.263 and Insurance Bureau Instructions (Ho-Hatsu) No.20 dated 25 February 1949. These notices informed the prefectural Governors that the establishment of a National Health Insurance Section in the Welfare Department of each prefecture, separate from

the Social Insurance Section, is within the jurisdiction of the prefectural government and that the Ministry would not have any objection to such action.

This information was given in reply to inquiries from a few prefectures expressing a desire to establish a National Health Insurance Section separate from the Social Insurance Section which now, in addition to National Health Insurance, handle Health, Welfare Pension and Seamen's Insurance. Actually the Ministry would have no basis for objecting as the local Autonomy Law gives to the prefectures the right of determining the organization structure within each department.

Informal information received from a number of prefectures indicated they were not interested in making any change unless it would mean a considerable increase in the number of prefectural administration personnel. At the present time, that is not considered possible. The notification should not be interpreted as meaning that it is mandatory to establish a separate National Health Insurance Section.

SECTION IX
MEMO TO JAPANESE GOVERNMENT

PHMJG DATE	SUBJECT	SURVELLANCE	DISTRIBUTION
96 3/22/49	Application for Approval of Proposed Amendments to Ministry of Welfare Notification No.70, dated 11 November 1947.	No	MG 8th Army

Note: Memorandum to Ministry of Welfare Japanese Government, approving the plan for removing 22 medicines from the Controlled List and placing four new items on the Controlled List. Reference is made to Weekly Bulletin No.115, Section IV.

97 3/22/49	Operation of Rehabilitation Camps and Housing Projects by Private Organizations.	Yes	MG 8th Army
------------	--	-----	-------------

Note: Memorandum to Ministry of Welfare Japanese Government, offering no objection to the plan for removing the operation and administration of subject camps and projects from private organizations to a suitable Government agency. Command instructions have been forwarded through command channels.

SECTION I GENERAL

The following Public Health and Welfare Section Technical Bulletin is attached as Inclosure No.1.

Title: Health Insurance
Short Title: TB-PH-SS 4.

SECTION II PREVENTIVE MEDICINE DIVISION

Japanese B Encephalitis Control

Mosquito surveys and collections made in Okayama prefecture during the period 25 July to 15 September 1948 disclosed Culex tritaeniorhynchus to be the predominant species (approximately 75% of the mosquitoes collected were of this species). The great majority of these mosquitoes were collected in cow barns where they occurred in abundance.

Some of the mosquito collections made between 5 and 9 August 1948 were shown to be positive for the virus of Japanese B Encephalitis in neutralization and complement fixation tests. These results coupled with proof of the ability of these mosquitoes to transmit the disease to laboratory animals indicates this species to be an especially dangerous mosquito in the spread of this disease. It is of interest to note that the first clinically recognized case and the first proven case of Japanese B Encephalitis in Okayama prefecture had their onsets on the 15 and 17 day of August 1948 - ten-twelve days after the positive mosquito collections were made.

The overwintering habits of C. tritaeniorhynchus are unknown, but presumably overwintering is accomplished in the egg stage. No record of adults ever having been found during the winter months in houses, barns, caves, etc., after repeated and exhaustive search. Adult mosquitoes seem to prefer hiding out in cow barns, possibly stables of horses and similar types of shelter for other domestic animals. They may also be found in and under houses during the active breeding season (May-October). These mosquitoes apparently prefer bovine blood, at least in the early spring and summer generations. During the peak of mosquito population density the adult feed readily on humans, domestic animals and birds.

Early vigorous control measures against C. tritaeniorhynchus is indicated in an attempt to unbalance the breeding of first and around generations of mosquitoes which may forestall an outbreak of Japanese B Encephalitis. It is urged that control measures be instituted as early in April as possible, to include (1) all possible mosquito control measures, (2) emphasis on larviciding in known breeding places of this species and (3) intensive DDT residual spray in cow barns, stables, etc.

A general plan for early mosquito control is now being formulated by the Ministry of Welfare and will be forwarded to the prefectures for implementation.

Smallpox Vaccine: Limited Resumption of Immunization Program

The release of 6.6 liters of smallpox vaccine this past week (see Section V, Supply Division for distribution details) provides more than is immediately necessary for the vaccination of case contacts. Experience so far this year indicates that 3.5 liters will be a sufficient reserve for vaccination of contacts, and this amount is being distributed to the eight regional offices of the Ministry of Welfare from which it should be requisitioned when required for emergency immunizations in any area.

A total amount of 2.5 liters of smallpox vaccine will be available for the routine immunization program in Japan. Due to the frequency of contacts in those prefectures most accessible to maritime coastal traffic with South Korea, priority has been assigned to five prefectures located on the western portions of Kyushu, Honshu and Shikoku. For the present season there is insufficient vaccine to consider routine immunization of pre-school children and elementary school children about to graduate. Accordingly Ministry of Welfare instructions are being sent to the five prefectures of Yamaguchi, Ehime, Fukuoka, Saga, and Nagasaki to which vaccine is being supplied, to confine routine immunization this season to infants or children not previously immunized.

For purpose of computation, one milliliter of vaccine is considered equivalent to about 180 doses.

Cholera Suspects Reported

A report of three suspected cases of cholera was received from Ibaraki prefecture on 28 March. Subsequent investigation indicated that these were severe cases of diarrhea as there were no clinical or laboratory findings to substantiate the diagnosis of cholera. Information indicates that the Japanese doctor reported the cases as cholera suspects because of the death of a former patient with similar symptoms.

SECTION III VETERINARY AFFAIRS DIVISION

Veterinary License Law:

Final approval has been given to the draft of the new Veterinary license law, and it will be presented to the Diet now in session. The purpose of the new law is to attain high professional standards through more strict education, examination by a national council on veterinary licenses and annual renewal of license. The proposed date of enforcement is 1 October 1949. Only those veterinarians qualifying and receiving licenses under the new law will be permitted the title SHINSEI (new order) veterinarians.

Weekly Animal Disease Report:

The Animal Hygiene Section, Ministry of Agriculture and Forestry reports the following outbreak of animal diseases for the period of 26 March - 1 April.

<u>Prefecture</u>	<u>Disease</u>	<u>Number of Cases</u>
Hyogo	Anthrax (cattle)	1
Iwate	Swine plague	12
Hokkaido	Suspicious equine encephalomyelitis	1
Ehime	Swine cholera	9
Miyagi	Swine cholera	14

Milk Inspection

The Veterinary Affairs Section, Ministry of Welfare, conducted sanitary inspections on the following dairy farms and milk plants during the month of January 1949.

Special Milk

Number of farms inspected	5
Samples examined	13
Over bacterial standars (50,000 per cc)	1
Under butterfat standards (3.3 percent)	-

Plant Inspections	8
Over bacterial standars (50,000 per cc)	1
Under butterfat standards (3.3 percent)	-

Ordinary Milk

Number of farms inspected	9,529
Samples examined	30,046
Over bacterial standars (2,000,000 per cc)	430
Under butterfat standards (3.0 percent)	589

Plant Inspections	3,197
Over bacterial standars (2,000,000 per cc)	199
Under butterfat standards (3.0 percent)	245

Goat Milk

Number of farms inspected	56
Samples examined	55
Over bacterial standars (2,000,000 per cc)	5

Under butterfat standards (3.0 percent)

Strangles	0	26
Texas fever	0	0
Filariasis	1	0
Bovine Tuberculosis	80	76
Equine Encephalomyelitis (suspects)	1	5

SECTION IV SUPPLY DIVISION

Laboratory Animal

Efforts are now being made to resume normal production and distribution of all biological products. Acceleration of assay activities to provide adequate quantities of safe, sterile and potent vaccines to carry out immunization programs is mandatory. There are immediate needs for laboratory animals to remove the blackleg of biologics awaiting assay therefore, the Ministry of Welfare has sent telegrams to all prefectural health offices requesting surveys be made within each prefecture to determine the immediate availability of fresh, unused guinea pigs for sale to the National Institute of Health, Ministry of Welfare. It is suggested that the Military Government Team Public Health Officers aid in this endeavor in whatever way possible.

Distribution of DDT and Typhus Vaccine, 1948

Final tabulation of Calendar Year 1948 distribution activities pertaining to DDT products and typhus vaccine indicates that 5,670,926 lbs. of 10% DDT dust, 1,605,698 gallons of 5% DDT residual effect spray, and 817,946 vials of typhus vaccine were distributed to the various government agencies of prefectures and ministries. Detailed breakdowns of these distributions are furnished had with this Bulletin. Incls. 2,3,4 respectively).

Biologics Released by Re-assay

In the period 22 - 28 March the vaccines that have been ressayed and found to meet minimum standards are listed below:

<u>Item</u>	<u>Manufacture</u>	<u>Lot No.</u>	<u>Quantity</u>
Diphtheria Antitoxin	Hayashi Seiyaku Co.	24	9,915 cc
		25	3,405

		26	6,480	
Smallpox	Kitasato Inst.	38	119,000	dose
		39	96,300	
	Infectious Diseases Inst.	21,831	175,200	
		21,832	271,800	
Typhus Vaccine	Kitasato Inst.	71	27,220	cc
		69	11,880	
Triple Typhoid	Kitasato Inst.	601	39,300	cc
	Nitto Pharm. Co.	36	71,650	
	Sankyo Pharm. Co.	113	38,700	
		115	38,700	
	Chiba Pref. Lab.	26	5,050	
		47	17,300	
		48	7,650	
		75	4,450	
	Takeda Pharm Co.	21	61,450	
		46	73,350	
		49	70,950	
		51	71,950	
		52	70,450	
		53	69,050	
		54	69,400	
		55	71,600	
		56	69,500	
		57	70,900	
		58	69,200	

Distribution of Biologics

Distribution of smallpox and triple typhoid vaccines to quarantine and repatriation stations is being made during April as follows:

<u>Quarantine Station</u>	<u>Smallpox</u>	<u>Triple Typhoid</u>
Yokohama	1,500 doses	4,500 cc
Kobe	1,500	4,500
Moji	2,000	6,000
Nagasaki	1,000	3,000
Nagoya	750	2,000
Hiroshima	750	2,000
Otaru	750	2,000
Shimizu	500	1,500
Miike	500	1,500
Hakata	750	2,000
Kagoshima	500	1,500
<u>Repatriation Stations:</u>	<u>Smallpox</u>	<u>Triple Typhoid</u>
Hakodate	20,000	30,000
Maizuru	30,000	45,000
Sasebo	4,000	6,000
TOTAL	64,500 doses	111,500 cc

A one-time distribution of smallpox vaccine is being made during April to strategic points in Japan as follows:

<u>Location</u>	<u>Quantity</u>
Regional office at Hokkaido	15,000 doses
" " " Miyagi	30,000
" " " Tokyo	80,000
" " " Aichi	30,000
" " " Osaka	40,000
" " " Hiroshima	20,000
" " " Kagawa	15,000
" " " Fukuoka	15,000
Yamaguchi Prefecture	60,000
Ehime "	60,000
Fukuoka "	70,000
Saga "	30,000
Nagasaki "	50,000

Quarterly Allocations of Controlled Items

The allocation plan for controlled medicines for April, May and June was sent to all prefectural governors by Ministry of Welfare Instruction, Yaku-hatsu No.399, dated 8 March 1949. Seventeen of the medicines whose

distribution is controlled by Ministry of Welfare Ordinance No.30, dated 11 November 1947, are quinine derivatives and are allocated separately each year. The next allocation period will begin in June and the plan will be published when it has been formulated.

Date for the allocation of pilocarpine HCL, ergot powdered extract of nux vomica, rice polishing oil, soy bean oil, and theobromine with sodium salicylate was not sufficient to permit inclusion of these items with the present allocation plan. A separate plan will be formulated when this data has been compiled.

Crystalline phenol is the only form of phenol that has been allocated, since both liquefied phenol and disinfectant phenol can easily be made from this form. Most castor oil is manufactured into the aromatic preparation since the largest demand is for that form. The present stocks and production plans for plain castor oil, emetine HCL, phenobarbital tablets, sulfadiazine powder and tablets, and hydrous lanolin are too small to permit an allocation at the present time. When sufficient stocks have been built up, a special allocation of these items will be made.

The following table lists quantities of the 27 controlled medicines allocated for April, May and June.

<u>ITEM</u>	<u>QUANTITY</u> (Unit Kg except as noted)
Acrinol	598
Aminopyrine	8,454
Alcohol 95%	145
Evipan	194
Evipan Sodium	94
Ephedrine HCL	549
Procaine HCL	1,398
Aromatic Castor Oil	37,988
Glycerin	6,490
Saponated Sol.Cresol	134,992
Sesame Oil	995
Sodium Salicylate	18,989
Sodium Bicarbonate	269,996
Alcohol for Disinfection, 70%	64,616
Phenol Crystals	16,962
Tar & Sulphur Paste	8,992
Simple Ointment	991
Zinc Oxide in Oil	27,849
Nupercaine	139
Barbital	1,098
Phenobarbital	39
Glucose	8,994
Carbromal	39
Ointment of Japan Wax	1,498
Magnesium Oxide	6,493
Santonin	14,380,000 tablets
Pituitrin	109,500 Ampoles

In addition to the 27 medicines listed above, three items of baby food have been allocated to all prefectures for April, May and June in the following quantities:

Dextro Maltose	280,000 Kg.
Malt Extract	92,900 Kg.
Rice Powder	45,993 Kg.

Inclosure No.5 gives the allocation by prefectures of five controlled medicines for the quarter April, May and June.

Inclosure No.6 gives the allocation breakdown by prefectures for sanitary cotton materials for the April, May, June quarter. The following totals are so allocated:

Absorbent cotton	817,550 Kg
Gauze	22,614,613 Meters
Bandage	335,000 Rolls

SECTION V NARCOTIC CONTROL DIVISION

Illicit Traffic

The following is a summary of the Annual Report for 1948 regarding the illicit narcotic traffic in Japan prepared for the information of the United Nations.

Former Japanese Army and Navy narcotic stocks unreported under the Narcotic Law continued to be a source of supply for illicit traffic during 1948. Registrants arrested, totalling three-tenths of one percent of all registrants, were in many cases in illegal possession of such stocks. Toward the end of the year evidence was obtained that foreign nationals were smuggling narcotics into Japan from the Asiatic Continent. These narcotics were in crude form but indications were that finished narcotics have also reached Japan through illicit channels from the same sources.

In August, with the arrest of a foreign national narcotic trafficker, evidence was obtained that heroin was being smoked in Japan either by mixing the narcotics with tobacco or by placing a small amount of heroin on the end of the cigarette. In November, a raid in Tokyo resulted in the arrest of 12 persons, ten of whom were addicts including one foreign national who was the source of supply for the group.

Portions of the heroin seized in the illicit traffic were of a high degree purity, while other portions were adulterated with various substances principally magnesium carbonate. Some of the heroin was of a gray or yellowish color.

During 1947 and 1948 a total of 95 foreign nationals were arrested for trafficking in narcotics. In 1949 by the middle of February a total of 51 foreign nationals were arrested for narcotic violations which indicates the increased importance of this class of trafficker with whom many Japanese are usually involved. Reports show large percentage of the addicts apprehended in traffic sponsored by these foreign nationals are smoking heroin rather than using injections.

Small amounts of narcotics were seized from repatriates arriving in Japan included in which were 247.5 grams of raw opium. Three seizures were made of small amounts of narcotics intended for shipment out of Japan. Two defendants were arrested and sentenced to six months penal servitude and one year suspended sentence, respectively. Two persons escaped arrest.

Thefts from registrants also continued to be a source of supply for illicit traffic. The number of thefts was reduced from a monthly average of 37 in 1947 to 25 in 1948. No wholesalers were burglarized. The number of hospitals losing narcotics in this manner reached a peak of seven during July but was reduced to one per month in October, November and December.

Out of 12 persons arrested for cultivation of the opium poppy three were admonished, three were fined and two were sentenced to penal servitude of ten and six months. The number of plants cultivated was comparatively small, the greatest seizure being 300 plants.

Seventy-two persons were admonished and 149 were arrested for illegal cultivation of marihuana in a total area of only five tan (1.25 acres). Thirty-four person were brought to trial for violation of the Marihuana Law with the following results: Twenty-four were fined amounts varying from two to ten thousand yen; nine were sentenced to penal servitude for terms varying from two to four months and one received a suspended sentence. None of them were convicted of introducing the marihuana into illegal traffic.

A considerable amount of marihuana was discovered growing wild in the northern island of Hokkaido. Measures are being taken to destroy such crops during 1949. Information aids are being employed to apprise the

populace of the law prohibiting the cultivation of marihuana except by registered persons and then for fiber purposes only.

Twenty-one thousand two hundred sixteen registrants were inspected and 2,830 investigations were originated. There were 1,070 arrests for narcotic violations during the year. Of these 275 were registrants and 795 non-registrants. Five hundred sixteen defendants were convicted for narcotic violations which are classified as follows:

Illicit manufacture	1
Illegal possession	215
Illegal sale	205
Possession of opium poppy	5
Theft of narcotics	13
Forging narcotic documents	2
Others	75

Among the above persons 115 were registrants, 30 of whom received sentences of penal servitude totalling 25 years 3 months. Seventy-two registrants, including ten of those sentenced to penal servitude, were fined a total of ¥ 231,650. Twenty-three other registrants received suspended sentences totalling 69 years and were fined a total of ¥ 34,000.

Of the 401 non-registrants convicted, 132 were sentenced to penal servitude for a total of 84 years 10 months; 218, including 53 sentenced to penal servitude, were fined a total of ¥ 644,900 and 104 defendants received suspended totalling 280 years and were fined a total of ¥ 232,250.

SECTION VI WELFARE DIVISION

Repatriation Camps and Housing Projects

Reference Public Health and Welfare Section Weekly Bulletin No.117, Section VII (for the period 21 - 27 March 1949), (Inclosure No.3).

Reference Inclosure above lists the names and locations of the camps and/or housing projects that will become the responsibility of the Government.

Attached (Inclosure No.7) is a list of additional repatriation camps and/or housing projects to be returned to the Government as per instructions given in reference Public Health and Welfare Section Bulletin.

National Child Welfare Week Program

The Ministry of Welfare has announced that the period 5 - 11 May will be designated as National Child Welfare week. The 5th of May is Children's Day and is a holiday. The 8th of May has been designated as "Mother's Day". The Ministry reports that planning on a national level has been completed and that prefectures have been given the benefit of this planning.

It has been suggested that prefecture planning be based on the following points:

1. Dissemination of information by means of poster, pamphlets, radio, newspapers, paper pictures, theatres and slides.
2. School literary exhibition, athletic meeting, children's meetings, etc.
3. Exhibitions, lectures, conferences, PTA discussion meetings, etc.
4. Health examination, examination of blood type, etc.
5. Local annual activities for the children as central figures and investigation of the folklore.

Welfare Officers and Team Commanders will doubtless be requested to participate.

Social Work Education

The Osaka College for Social Work, (Osaka Shakai Jigyo Gakko) No.2, Tajima-cho, Minami-ku, Osaka-shi, will open for the first time a two year course on 10 May. Applications will be received until 20 April, 50 students will be accepted and graduation from high school is the minimum educational requirements. A third 3-months lecture course opens on 18 April.

The third group of one year "research" students were graduated on 28 March at the Japan School of Social Work, 266, 3-chome, Harajuku, Shibuya-ku, Tokyo. These graduates have accepted the following positions:

Welfare Section, Kure Military Government
Central Community Chest Association
Child Welfare Section, Nara Prefecture
Aomori Prefectural Office
Miyagi Social Work Association
Kanto Military Government Team
Tochigi Community Chest Association
Sagami Day Nursery
Railway Service Society
Visiting Nurse, Saisei-kai Hospital
Airindan Settlement
Saitama Ikuji-in (orphanage)
Welfare Section, Kagawa Prefecture
Aomori Prefectural Office (3)
Professional Case Worker, Tokyo
Assistant Nurse of Ajiro Dormitory for Mothers & Children
Yokosuka Christian Social Center (2)
Welfare Section, Fukoka Prefecture
Fujikura Gakuin (Institution for the feeble minded)
Fukushima Aikku-en (orphanage)
Medical Social Work, St. Luke's Hospital, Tokyo.
Welfare Section, Aomori Prefecture
Public Health & Welfare Section, Kawasaki City Office
Child Welfare Section, Gumma Prefecture

Social Work Education in the United States

Catalogue of member schools of the American Association of School of Social Work listed in Public Health and Welfare Weekly Bulletin No.109 (for period 24 - 30 January 1949) are now being received and will be made available upon request. Information regarding the admission of foreign students and scholarships is also available. It is emphasized that these are graduate schools of social work and unless accepted as special students, Japanese would have to be university rather than old system college graduates.

As listed in Public Health and Welfare Section Weekly Bulletin No.110, (for period 31 January - 6 February 1949) catalogues will also be available from the member schools of the National Association of Schools of Social Administration. Since these are undergraduate schools it is emphasized that the education for social work which is offered in these schools is not in all instances synonymous with that offered in the graduate schools. In fact, a great many of the courses offered by the NASA schools at the undergraduate level are social science courses or courses which are related to social work but are not always designed specifically to prepare people for professional practice.

SECTION VII SOCIAL SECURITY DIVISION

Welfare Pension Reserve Fund

Repeatedly inquiries and requests have been received for loans from the reserve fund accumulated by the Welfare Pension Insurance program. This reserve fund is administered by the Finance Ministry. Prior to 1946, a

small part of the Fund was loaned out to Health Insurance Societies and other applicants desiring to use the money for the construction of clinics or similar projects related health and welfare.

Since the early part of 1946, however, loans have been permitted only to the government and the reserve has been used to help absorb government bond issues. Repeated efforts on the part of the Ministry of Welfare to obtain permission for loans to Health Insurance Societies, National Health Insurance Associations and other insurers have been turned down, the most recent one on 4 March 1949.

Consequently, no encouragement can be given at this time to applicants for loans of the above description.

SECTION VIII
MEMORANDUM TO JAPANESE GOVERNMENT

None.

CRAWFORD F. SAMS
Brigadier General, Medical Corps
Chief

9 Inclosures:

Incl.1: Technical Bulletin - Health Insurance - TB-PH-SS 4.

Incl.2: Distribution of 10% DDT Dust to Prefectures and Government Agencies - 1948

Incl.3: Distribution of 5% DDT Dust to Prefectures and Government Agencies - 1948

Incl.4: Distribution of Typhus Vaccine to Prefectures and Government Agencies - 1948

Incl.5: Allocation of Controlled Medicines.

Incl.6: Plan of Distribution for Textile Sanitary Materials.

Incl.7: List of Accommodating Facilities.

Incl.8: Monthly Summary of Vital Statistics in Japan: January, 1949.

Incl.9: Weekly Report of Communicable Disease and Venereal Disease for the Week Ended 26 March 1949.

SECTION II
PREVENTIVE MEDICINE DIVISION

Tuberculosis Control

Attention is called to the two Public Health and Welfare Section Technical Bulletins dealing with tuberculosis control which were distributed to Military Government Teams with Weekly Bulletin No.117.

A classic article entitled "BCG Vaccination in Denmark" by Johannes Holm is reproduced in full in TB-PH-Prev. Med. 5. Every Military Government Health Officer and Nurse, Japanese Health Officer and doctor concerned with the treatment or control of tuberculosis would do well to become thoroughly familiar with this article as it provides important information concerning the most progressive work done with BCG up to 1946.

Another important article entitled "Streptomycin in the Treatment of Human Tuberculosis" is reproduced in full in TB-PH-Prev. 6. This article is particularly important and timely since the first sizeable amount of streptomycin available for the treatment of tuberculosis in Japan arrived in Tokyo recently and is now in the process of distribution to qualified hospitals. This Technical Bulletin will, for the time being at least, be the official guide for the use of streptomycin in the treatment of tuberculosis in Japan.

It is suggested that Military Government Health officials become thoroughly familiar with these two Technical Bulletins. The widest possible dissemination of the information contained in these two bulletins is desired; consequently loan to Japanese doctors and public health officials is to be encouraged.

Use of Tuberculin

It has been reported that unassayed tuberculin is still being used in some prefectures. Every effort is being made to provide all prefectures with assayed tuberculin and it is anticipated that sufficient quantities of assayed tuberculosis will be available in the near future. Up to this time, however, only one lot (National Institute of Health Lot No.2-2) has been released. When additional tuberculin is released it will be announced in the Weekly Bulletin. In the meantime, Military Government Teams should ascertain that unassayed tuberculin is not being used.

Venereal Disease Control - Case-holding

Inspection trips to various prefectures indicate that a weak link in the venereal disease control chain of activities is case-holding. Unless a case is held until the disease becomes non-infectious, all previous efforts in finding the case and bringing the patient under treatment will have been in vain. According to J. H. Stocks, J. E. Moore and other authorities, a minimum of twenty injections of an arsenical plus an equivalent amount of bismuth given in a continuous series of injections is necessary to prevent the occurrence of an infectious relapse and thus insure the control of infectiousness in cases of early syphilis.

Reliable data shows that up to 65% of the patients who receive inadequate treatment later develop infectious relapsing lesions. These lesions which occur on muco-cutaneous surfaces (ano-genital, buccal and skin) and often appear trivial and insignificant are responsible for the further dissemination of the disease in these cases. In order to protect the public health it is therefore necessary to insure that every patient receives at least the minimum of 10 weeks of continuous mapharsol and bismuth therapy. However, since this is only the minimum required for the control of infectiousness, the standard 24-week treatment schedule, aimed at the cure of the patient should be the goal of treatment.

Case-holding is a combined operation requiring cooperation of the doctors, nurses, and medical social workers. The doctors should impress their patients with the necessity for continued treatment. Public Health nurses should visit every patient who discontinues treatment to determine the reason for not continuing treatment and take whatever steps are necessary to return the patient to treatment.

Article 15 of the Venereal Disease Prevention law (Reference Weekly Bulletin No.83, 1948) provides for the treatment of all patients until the disease is non-infectious. Private patients under the care of private physicians should be reported when they discontinue treatment prematurely and these cases also must be followed up by the Public Health nurses to insure that they resume treatment either by a private physician or at the health center venereal disease clinic. The medical social worker should investigate all those cases to determine whether lack of money is the cause for case lapsing, as often is the case.

Article 21 of the Venereal Disease Prevention Law provides that fees for examination and treatment at venereal disease clinics or hospitals shall be reduced in part or in whole according to the ability of the patient to pay. To implement this provision of the law the national treasury is subsidizing 50% of the expenses incurred by the prefectural government in providing treatment free of charge, or at a reduced fee, up to 10% of the total number of venereal disease cases reported in each prefecture.

Military Government Health Offices should check the effectiveness case-holding procedures in their prefectures and determine whether all patients are being given the benefit of complete treatment regardless of their ability to pay.

Sanitation

Directions for conducting the Insect and Rodent Control Program in 1949 will be sent by the Ministry of Welfare to Prefectural Governors in the near future and will be published in this Bulletin as soon as issued.

The ditch cleaning program of the labor department, utilizing unemployed workers, must be pushed to insure complete cleaning of ditches in order to obtain early mosquito control before onset of the spring rains.

The Ministry of Forestry and Agriculture is coordinating its efforts with those of the Ministry of Welfare by making plans to treat all horse and cow barns in cities and large towns with 5% DDT residual effect insecticide, thus killing early crops of Culex pipiens and Culex triatassiorhynchus, the main suspected vectors of Japanese B encephalitis. The Ministry of Forestry and Agriculture through its prefectural branches will distribute the insecticide together with complete instructions for application, to individuals who will spray their own sheds and stables.

The Ministry of Welfare is instructing the prefectural health departments to put on, at the same time, an intensive program of larvae control with its sanitary teams, covering all possible breeding places of mosquitoes on private premises, in public areas, shrines, and ditches, as well as doing residual effect spraying of hospitals, movie houses, schools, bathhouses and other public places.

The responsibility for coordination and efficient operation of this program rests with the Chief of the prefectural health department through the environmental sanitation inspectors of health centers, and city, town and village sanitation offices, and the assistant inspectors of sanitary team districts.

Military Government Health Officers should ascertain that sufficient emphasis is given this program, particularly in the early stages, to insure smooth and effective operation.

Training Courses at Institute of Public Health

On 2 May 1949 the following recurring courses will begin at the Institute of Public Health in Tokyo:

1. Three-month course in Sanitary Engineering for engineers employed in prefectural health departments or engaged in the fields of water supply or sewage disposal in other departments of the prefectural or municipal government.

2. Two-month course for pharmacists who are employed in prefectural or municipal public health laboratories. Training in new techniques for the chemical examination of foods, beverages and drugs will be stressed.

It is emphasized again that only well-qualified candidates should be sent to the training courses. Official announcements concerning the above mentioned courses have been sent by the Ministry of Welfare to prefectural governors.

SECTION III VETERINARY AFFAIRS DIVISION

Council on Veterinary Affairs (Reorganization)

At the general meeting of the Japan Veterinary Medical Association held 29 March it was decided to reorganize the Council on Veterinary Affairs and incorporate it as an advisory committee within the parent organization (J. V. M. A.) In the past, the Council has acted as an independent body to which all pertinent veterinary problems were referred for consultation and advice. Although the old council has performed in a very creditable manner, a need was felt for wider representation from all regions in Japan. Therefore the reorganization will include members from all branches of the veterinary profession and from as broad an area as practical under present conditions.

Veterinary Text-Books

Encouraging progress was reported recently by the committee on veterinary text-books. Preliminary arrangements have been made with an established publisher who has previously printed the majority of veterinary publications.

The present program includes eight text-books covering the fundamentals of veterinary education. Six of the text-books will be re-editions including the latest available materials, one will be a translation of an American text and one will be entirely new. All authors will submit manuscripts by 1 September 1949 for final review and the finished publications are expected to be available in March 1950 (New school year begins April 1).

Animal Hygiene Experiment Laboratories

The annual conference of the directors of the National Animal Hygiene Experiment Laboratories was held in Tokyo, 7 April and the program for 1949-1950 agreed upon. Earlier, surveys had been made to ascertain the ten most important diseases in Japan and the entire program was directed at the solution of the disease control programs. Research projects with practical objectives are being established in connection with the following: Engine Encephalomyelitis, Equine Infectious Anemia, Abortion Diseases of Cattle, Abortion Diseases of Equines, Pullorum Disease, Swine Cholera-erysipelas, Parasitism, Osteo-malacia, Sheep and Goat Paralysis and Rinderpest. Some work will be done to ascertain the efficiency of more indigenous drugs. All findings of practical significance and use will be printed in pamphlet form for wide distribution.

Weekly Animal Disease Report

The Animal Hygiene Section, Ministry of Agriculture and Forestry reports the following outbreak of animal diseases for the period 2 - 8 April 1949.

<u>Prefecture</u>	<u>Diseases</u>	<u>Number of Cases</u>
Miyagi	Swine cholera	5
Oita	Black-leg	1
Hokkaido	Swine plague	2
Tokyo	Swine cholera	6

SECTION IV SUPPLY DIVISION

Biologics Reassay

During the period 28 March - 4 April the biologics as listed below were reassayed and found to meet minimum requirements.

<u>Item</u>	<u>Manufacturer</u>	<u>Lot No.</u>	<u>Quantity</u>
Triple Typhoid Vaccine	Kitasato Inst.	639	39,400 cc
Diphtheria Antitoxin	Takeda Pharm. Co.	10	9,456 cc
	Chiba Pref. Lab.	10	9,429 cc
	Chiba Pref. Lab.	11	9,910 cc
	Kitasato Inst.	115	15,780 cc
(*)Smallpox Vaccine	Kitasato Inst.	40	115,600 doses
Tetanus Antitoxin	Beppu Inst.	5	9,700 cc
	Chiba Pref. Lab.	15	9,780 cc
Typhus Vaccine	Takeda Pharm. Co.	10	19,660 cc
	Takeda Pharm. Co.	12	19,660 cc

(*) The smallpox vaccine listed above will be added to the reserve stock of 82,800 doses, reported in Weekly Bulletin No.118 for the period 27 March - 2 April.

Distribution of Spraying and Dusting Equipment

During the period 27 March - 2 April 3,112 pieces of dusting and spraying equipment were distributed to 17 prefectures as follows:

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsack Sprayer</u>	<u>Semi-Automatic Sprayer</u>	<u>Hand Sprayer</u>	<u>Engine Sprayer</u>
Hokkaido	-	-	-	-	1
Iwate	-	-	20	-	-

Kagawa	-	-	-	100	-
TOTAL	2,210	303	248	350	1

Allocations of Cement

The plan of allocation of cement for the maintenance and repair of waterworks for the first quarter Japanese FY 1949/50 (April-June), as formulated by the Ministry of Welfare, is furnished in Inclosure No.1 with this Bulletin.

A breakdown of the second distribution of cement for the reconstruction of the Hokuriku District, Ishikawa and Fukui Prefectures category "Culture and Welfare Institutions", for the period of January - March, fourth quarter Japanese FY 1948/49, is furnished in Inclosure No.2 with this Bulletin.

A further breakdown of allocation of cement by the Ministry of Welfare, during the fourth quarter Japanese FY 1948/49, January - March, to general categories under the major category "Culture and Welfare Institutions," is included in included in Inclosure No.3. The prefectural breakdown of this allocation plan is furnished in Inclosure No.4.

SECTION V NARCOTIC CONTROL DIVISION

Communications

Information has been received that some police telephones in narcotic prefectural offices have either been removed or are in the process of being removed since the number of calls of agencies other than police have reached too great a proportion. It has been learned, however, that there was no intention to remove police telephones from those agencies directly connected with law enforcement as is the case with narcotic agents. The use of the police telephone is to be restricted to those calls which cannot be conveniently and effectively completed by commercial lines and to those calls which do not interfere with regular police activities. Action has been taken to have the police telephones restored to those prefectural narcotic offices from which they have already been removed.

Seizures

Laboratory equipment, chemicals, and narcotics in process were seized from a clandestine laboratory. The operators of the laboratory, both fugitives, had been successful in obtaining the necessary chemicals, the smuggled crude narcotics, and printed labels closely resembling those of a large pharmaceutical company in Japan. The seizure is considered one of the most important to date in eliminating the traffic in heroin in Japan.

SECTION VI WELFARE DIVISION

Community Chest - Japanese Red Cross "Joint Fund" Agreement

The "Joint Fund" Campaign of the Community Chest and Japanese Red Cross which began in October 1948 to finance the two organizations for the fiscal year April 1949 - March 1950 was a very marked improvement over the results of their separate fund raising campaign in the Fall 1947.

The total amount raised in 1947 (separate efforts) was ¥ 713,096,261.00 (¥ 571,071,681.00 Community Chest - ¥ 142,024,580.00 Japanese Red Cross). The total amount raised in 1948 (combined efforts) was ¥ 1,084,334,871.12 or an increase of ¥ 371,238,610.00 (51%) over 1947.

Several conferences have recently been held by officials of the Community Chest and the Japanese Red Cross to determine their campaign activities for the Fall of 1949 to cover fiscal year 1950 (April 1950 - March 1951). It was the decision of the parties concerned that a "Joint Fund" Campaign would again be conducted this Fall (1949) and in subsequent years the Community Chest Fund Campaign and the Japanese Red Cross Fund and/or Membership Campaign would be independent of each other. The agreement between the Central Community Chest Committee and the Japanese Red Cross Society is given below:

CAMPAIGN AGREEMENT (Fall 1949)

between

Central Community Chest Committee and Japanese Red Cross Society 31 March 1949

I. GENERAL

1. Fundamentally the Central Community Chest Committee (CCCC) and Japanese Red Cross (JRC) shall carry on their respective fund campaigns independently of each other. The campaign for fiscal year 1949 only however shall be carried on jointly.

2. For fiscal year 1950 CCCC and JRC shall carry on the fund drive campaigns independently, the former in or about October, and the latter in or about May, each lasting one month period.

3. Before March 31, 1950, except for the proposed joint fund drive, JRC shall not engage in membership enrollment or any other fund campaign, unless major disasters occur which necessitate the raising of disaster relief funds by JRC.

4. In the Joint Fund Campaign characteristics of each party shall be duly honored by other.

5. Each party shall endeavor to diffuse the spirit, ideals and aims of the other with due respect, along with its own.

6. Both parties shall inform the public in general in order that they may understand the objectives of the Joint Campaign and contribute spontaneously their monetary gift in favor of the social work fund and Japanese Red Cross working fund.

II. 1949 JOINT CAMPAIGN TITLE

The title of the 1949 Joint Fund Campaign shall be "CC for Mutual Aid & JRC fund Drive".

III. JOINT CAMPAIGN PERIOD

The period of the Joint Campaign shall be for one month from October 1 to 31 inclusive, 1949.

IV. ORGANIZATION

The CCCC and JRC shall form a Joint Central Council in Tokyo and Bipartisan Fund Drive Committee in Prefectures to promote harmonious cooperation in the Joint Campaign. For Prefectural Committee members the people served in the same capacity for 1948 Drive are recommended.

V. JOINT CAMPAIGN GOAL

The goal of funds to be raised shall be determined by the Prefectural Bipartisan Committee on the basis of demands from CCC and JRC Chapters, duly studied and weighed plus expenses for the Campaign. Particulars of funds required shall be duly publicized.

VI. THE DRIVE

1. The Joint Campaign shall be carried on under terms governed by this Agreement and by particulars to be prepared by CCCC and JRC in forms of their respective "Campaign program", formulated in compliance with the Agreement.

2. During the Joint Campaign activities and operations of one party shall be honored by the other by mutual understanding.

3. Each collection chest shall bear marks of both parties; e.g. CC and JRC.

4. Receipts issued for all contributions shall bear the names of both parties.

5. JRC Membership shall be treated during the Joint Campaign as was in the case of 1948 Joint Campaign.

VII. PROPAGANDA

Names of both parties and aims of the drive shall be used jointly as much as possible. But each party shall also have liberty to make special appeals at its own expenses regarding its normal activities.

VIII. DISTRIBUTION

At the close of the Joint Campaign funds shall be distributed among the member in proportions of one's ratio to the goal, after the Joint Campaign expenditures are deducted; the amounts thus distributed shall be publicized with their objects.

In case either the total amount collected surpasses the goal or falls short of it, the distribution shall be effected under the condition provided in the preceding paragraph.

IX. COMMISSION & REFUND

Neither payment of commission for raising the fund, nor refunding of contributions received shall be recognized under any circumstances in this Joint Fund Campaign.

X. EXPENDITURE

1. The Joint Campaign expenses of the Central Offices shall be borne by CCCC and JRC respectively at the same ratio as the funds raised for the entire country.

2. Local Joint Campaign expenditures shall be borne by the Prefectural CCC and RC Chapters at the same ratio as the fund is raised.

3. Cost of making collection chests shall be borne by the party that makes them, and it shall retain sole title.

XI. DETAILS OF AGREEMENT

Details implementing this Agreement to effect the efficient operation of the Joint Campaign shall be determined by the Joint Central Council and the Bipartisan Fund Drive Committees of the Prefectures.

XII. JUNIOR RED CROSS

This Agreement shall not affect Japanese Junior Red Cross enrollment practices and procedures.

/s/ Tadatsugu Shimadzu
(for JRC)

(for CCCC)

Licensed Agencies for Relief in Asia (LARA)

Overseas shipments of relief supplies to LARA, number 144 through 148 have arrived in Yokohama and contained 123.32 tons. These shipments included the following relief items:

144th Shipment: Arrived aboard the S.S. Straat Malakka on 24 March and contained 2 tons (food).

145th Shipment: Arrived aboard the S.S. Contest on 26 March and contained 6.3 tons (food).

146th Shipment: Arrived aboard the S.S. President Monroe on 27 March and contained 102.64 tons (food, 95.9tons - clothing, 6.74tons).

147th Shipment: Arrived aboard the S.S. Garden State on 27 March and contained 7.72 tons (clothing).

148th Shipment: Arrived aboard the S.S. Juria Lukenbach on 28 March and contained 4.66 tons (clothing, 2.07tons - miscellaneous, 2.59tons).

The total LARA relief supply shipments to Japan, as reported, now totals 7,937.22 tons, consisting of the following items:

	<u>Tons</u>
Food	5,933.07
Clothing (including bedding and shoes)	1,585.39
Medical Supplies	85.72
Cotton (raw)	207.62
Miscellaneous (soap, seeds, findings, etc.)	<u>125.42</u>
TOTAL	7,937.22

Japanese Red Cross Society

First Aid:

The following statistics covers the activities of Chapters (prefectural) in the field of First Aid Instruction for the period 24 November 1948 - 26 March 1949:

<u>Name of Place</u>	<u>Period of Instruction</u>	<u>No. enrolled</u>		<u>No. passed examination</u>		<u>Type of Students</u>
		<u>Men</u>	<u>Women</u>	<u>Men</u>	<u>Women</u>

Kizaki-mura	1 Apr '49		50			Members of Women's Club (10 hours)
		1,275	537	434	264	

Note: Except where otherwise stated, the above First Aid courses consisted of 20 hours or more of instruction.

Volunteer Services:

The following brief outline sets forth the major projected activities for the Volunteer Services for the period April 1949 - March 1950:

April - Set up Special Advisory Committee on Plans for Services to Children.

Nutrition (To write a pamphlet on Nutrition).

Conferences to assist in organizing Volunteer Service Groups in six blocks: North, Northwest, Central, and Middle West (Honshu), Shikoku and Kyushu.

Tokyo Volunteers' General Meeting.

To set up Production Corps in Tokyo to work with yarn and white material on hand.

Publish monthly Magazine "Red Cross News".

Pamphlet "Blind and Deaf" and "Everybody's Volunteer Service".

To begin College Activities in Nippon Joshidai.

May - Set up Central VS Committee

Set up Special Advisory Committee on

- a. Service to the Blind and Deaf
- b. Publish "Public Health and Hygiene" pamphlet.

Training Course on "Service to Children".

Publication of "Red Cross News", and pamphlet "Nutrition Service".

Making of slides "Everybody's VS".

June - Special Advisory Committee on Nutrition Service and Engineering Service.

"Red Cross News".

Publication of pamphlet "Public Health and Hygiene".

July - Special Advisory Committee for preparation in publishing pamphlet "Day Nursery Service".

Training Course on "Nutrition.

Concert to publicize "VS Songs".

"Red Cross News".

Publication of pamphlet Engineering Service.

August - Special Advisory Committee on Public Health and Hygiene Service
(Preparation to hold Training Courses).

Day Nursery Service

"Red Cross News".

Preparation of pamphlet "VS Abroad".

Sept - Special Advisory Committee on Public Health and Hygiene Service (Preparation to hold Training Courses).

Day Nursery Service

"Red Cross News".

Preparation of pamphlet "VS Abroad".

Oct - Central VS Committee.

Special Advisory Committee for preparation on pamphlet "Transportation Service".

"Red Cross News".

Making of a movie "Japanese Red Cross VS".

Nov - VS General Meeting (15 November).

Special Advisory Committee for preparation of pamphlet Relief Service.

Training Course on Public Health and Hygiene.

"Red Cross News".

Pamphlet "Transportation Service.

Dec - Special Advisory Committee for preparation of pamphlet "Recreation Service".

"Red Cross News".

Publication of "Relief Service".

Jan - Special Advisory Committee for preparation of pamphlet "Art and Skills".
1950

Training Course "First Aid".

Publication of pamphlet "Recreation Service".

Making of slides "VS in Other Countries".

Feb - Unfinished Business

Mar. - Unfinished Business

Note:

"Red Cross News". The original plan was to call the VS Magazine "W.C.V.S. News". However, at the suggestion of the Chief of General Affairs Division, it was decided on "RC News", since there is no other RC magazine. Also by calling it "RCVS News", the name might limit the readers to volunteers only. However, the magazine is considered to be VS magazine. There will be distributed to the volunteers and any interested persons for the price of ¥ 2.00 per copy.

"The Handbook of JRVS" has finally gone to the printers and is expected to be available for distribution in May.

Explanation of Engineering Service:

The plan on this service is for the volunteers to assist the municipal or prefectural personnel in clearing roads after disasters, putting up temporary shelters or soup kitchens, in other words, manual labor service.

Explanation of Transportation Service:

Volunteers who have bicycles, rearscars and carts are to assist, in time of disasters, transporting supplies or injured and act as messengers. In non-disaster times, the volunteers can transport emergency confinement cases to hospitals, etc., in view of shortage of taxis and ambulances.

Cooperative for American Remittances to Europe, Inc. (CARE)

CARE, Inc., has slightly altered the contents of their Food Package (oriental pack) and as a matter of comparison between the old food pack and the new food pack the contents are listed below:

CARE Food Package (Oriental)

<u>New</u>	<u>Old</u>
5 lbs Rice	5 lbs Rice
2 lbs Flour	2 lbs Flour
2 lbs Sugar	2 lbs Sugar
2 lbs Miso	2 lbs Miso
2 lbs Beef in Juices	15 oz. Canned Fish
2 lbs Corned Beef Loaf	1 lb. Canned Beef
1 lb Milk Powder	1 lb Milk Powder
1 lb Coffee	1/2 lb Chocolate
1 lb Soap	6 oz Soap
1/2 lb Hard Candy	1 lb Raisins
	1 lb Kidney Beans
1/2 lb Powdered Eggs	1/2 lb Powdered Eggs
1 1/2 lb Salt	1 1/2 lb Salt
1 qt Vegetable Oil	24 oz. Vegetable Oil

17 oz. Shoyu	17 oz. Shoyu
1 Hand Towel	1 lb Apricots
	8 oz. Cocoa
	1-1/4 oz. Soup Concentrate
	1 ##### Cloth

Approximately 5,000 CARE food packages (oriental pack), containing those items given under "New" above, arrived in Japan (Yokohama) aboard the S.S. President Harding, 8 April.

Ministry of Welfare In-Service Training Program

The Ministry of Welfare, through the Social Affairs Bureau, have encouraged In-Service Training and a summary report conveying these training programs, under their auspices, for the period 1 January - 31 January 1948, is inclosed (Inclosure No.5).

Policies and programs for In-Service Training, for the fiscal year 1949, are now being prepared by the Social Affairs Bureau and will be presented at the Prefectural Welfare Department Chiefs' Conference to be held in Tokyo on 22-23 April. Information covering this presentation will be published in a subsequent Public Health and Welfare Section Weekly Bulletin.

SECTION VII SOCIAL SECURITY DIVISION

Health Insurance Hospital Society

Under government-managed Health Insurance, there are a number of hospitals and clinics located in some 25 prefectures. The chief directors of each of the hospitals have formed a Health Insurance Hospital Society which has for its purpose research in the improvement of medical care for the insured and efficiency in hospital administration. The administrative supervision of these medical care facilities is conducted through a prefectural Insurance section. This Health Insurance Hospital Society is a private, not a quasi-government agency and should not be confused with an authorized Health Insurance Society as provided in the Health Insurance Law. The following hospitals are reported as having membership in the Society.

<u>Prefectures</u>	<u>Hospitals</u>	<u>Location</u>
Hokkaido	Hokushin Hospital	Sapporo
Miyagi	1st Miyagi Hospital	Sendai City
Miyagi	2nd Miyagi Hospital	Sendai City
Akita	Minsei Hospital	Noshiro-city
Yamagata	Shinjo Hospital	Shinzi-machi
Tochigi	Suzumenomiya Hospital	Suzumenomiya-mura
Saitama	Omiya Hospital	Omiya City
Saitama	1st Hospital	Urawa City
Tokyo	Yamate Hospital	Shinjyuku-ku
Tokyo	Katsushika Clinic	Katsushika-ku
Tokyo	Tonan Hospital	Shinagawa-ku
Tokyo	Kamata Hospital	Ota-ku
Tokyo	Uguisudani Hospital	Taito-ku
Kanagawa	Yokohama Central Hospital	Yokohama City
Kanagawa	Kawasaki Hospital	Kawasaki
Kanagawa	Tsurumi Clinic	Yokohama City
Shizuoka	Sakuragaoka Hospital	Shimizu City
Shizuoka	Mishima Hospital	Mishima City
Yamanashi	Kajikazawa Hospital	Kajikazawa-machi
Yamanashi	Yamanashi Hospital	Kofu City
Toyama	Fushiki Hospital	Takaoka City
Ishikawa	Naruwa Hospital	Kanazawa City
Fukui	Katsuyama Hospital	Katsuyama-machi

Gifu	Tsuchida Hospital	Tsuchida-mura
Gifu	Tajimi City Hospital	Tajimi City
Aichi	Chukyo Hospital	Nagoya City
Mie	Hatsu Hospital	Yokkaichi City
Mie	Matsusaka Civilian's Hospital	Matsusaka City
Kyoto	Kumamoto Hospital	Kyoto City
Hyogo	Kobe Central Hospital	Kobe City
Nara	Miwa Hospital	Isoshiro-gun
Yamaguchi	Tokuyama Central Hospital	Tokuyama City
Ehime	Taishu Hospital	Kita-gun
Ehime	Uwajima Social Insurance Hospital	Uwajima City
Fukuoka	Kokura Commemoration Hospital	Kokura City
Fukuoka	Kosei-so Hospital	Naokata City
Fukuoka	1st Health Insurance Hospital	Kurume City
Saga	Saga Hospital	Saga City
Saga	Uranosaki Hospital	Yamachiro-,machi
Kumamoto	Hitoyoshi Hospital	Hitoyoshi City
Kumamoto	Amakusa Joint Hospital	Honwatari-machi
Kumamoto	Yashiro Hospital	Yashiro City
Oita	Nankai Hospital	Saeki City

Medical Care Costs

To procure medical and hospital services for persons insured under government-managed Health Insurance or Seamen's Insurance, the Welfare Ministry has contracts with a variety of public hospitals. Among other things, these contracts regulate the treatment and accommodation fees to be charged by the hospital for services rendered to the insured. These are based on the standard medical treatment point values used in insurance medical practice.

In the past, however, the fees agreed upon in contracts with public hospitals operated by the national government used to be 10 percent below standard fees. This reduction was made by nationally operated facilities in view of the tax exemption of such institutions. This arrangement used to apply to National Hospitals, National University hospitals, welfare Society (Kosei-dan) facilities and social insurance institutions.

In an effort to increase the revenues of government-operated hospitals, this practice has been terminated as of 1 April. Contracts concluded subsequent to that date will provide that standard point values shall be applied in compensated institutions for services rendered by them to insurance patients. Thus government operated hospitals will be on the same footing as other public hospitals, e.g. private university hospitals or Red Cross hospitals. The only institutions which will continue to provide services to the social insurances at a 10 percent discount will be the social insurance facilities.

SECTION VIII MEMORANDUM TO JAPANESE GOVERNMENT

None.

CRAWFORD F. SAMS
Brigadier General, Medical Corps
Chief

7 Inclosures:

Incl. 1 - Allocation of Cement or Maintenance & Repair of Water-works in the First Quarter, JFY 1949 - April-June.

SECTION II PREVENTIVE MEDICINE

Tuberculosis Control - Case Supervision

An increase in the tuberculosis death rate from 161.6 per 10,000 per annum for the month of January 1948 to 163.9 for January 1949 has occurred in Japan. In addition to the increase in death rates, the case rate for the first three months (January - March) of this year was 30% higher than that for the same period in 1948. Since the ratio of reported cases to deaths appears to have remained between 2.6 and 2.7 for the past two years, the greatly increased case rate implies a corresponding increase in death rates in the near future.

In order to cope more adequately with any increases in either case rates or death rates which may occur, Military Government Health Officers are urged to intensify efforts to promote case supervision. Proper supervision of cases requires that case records be maintained at health centers with regular entries on treatment, clinic visits, and home visits by public health nurses. Public health workers have suggested that for reasonable control of tuberculosis at least fifty home visits should be made annually by public health nurses for each tuberculosis death. Because so few patients with tuberculosis are hospitalized in Japan, the place of home visits in the control of tuberculosis becomes even more important. A review should be made of community tuberculosis deaths and of the number of home visits to tuberculosis patients so that sufficient home visits are made to be effective. This may require readjustment of clinic assignments of nurses so as to permit more time for field work.

Sanitation

Directions for the insect and rodent control program for 1949 have been sent to the prefectures by the Ministry of Welfare. They are contained in Koseisho-Hatsu Ei-35 of April 9th from the Vice Minister to Prefectural Governors, (Incl. No.1), and Eihatsu #381 of 9 April 1949 from the Chief of the Public Sanitation Bureau to Prefectural Governors (Incl. No.2).

SECTION III VETERINARY AFFAIRS DIVISION

Japan Veterinary Scientific Society

On 10-11 April, approximately 200 veterinarians attended the annual session of the Japan Veterinary Scientific Society. The number of papers (108) presented was so great that there was neither adequate time for presentation nor discussion. In the future, the session will be held in conjunction with the annual meeting of the J.V.M.A. and the program divided into sections of related subjects.

Milk Sanitation Program

The Ministry of Welfare is notifying all prefectural authorities of the release of extra cattle feed on a link system in return for increased milk, primarily intended for the school lunch program. Bottled milk plants in six major cities must score at least 80% in order to retain approval for feed allotments and any condensed milk or milk powder processing plant returning low quality products can be deleted from the program.

Equine Encephalomyelitis Control Program.

Veterinarians of both the Ministry of Welfare and the Ministry of Agriculture and Forestry are being notified to cooperate closely in the supervision of the current DDT spraying program. The program provides for treating with 5% DDT solution all horse barns, cattle stables and pig pens. Public Health Veterinarians are particularly charged with the responsibility for the cattle stables. (Dairy and work cattle). Stables in low lying country and in areas of dense human population should receive priority. Intense support of this program will be necessary if the goal for completion by June 1st is to be achieved.

Weekly Animal Disease Report

The Animal Hygiene Section, Ministry of Agriculture and Forestry reports the following outbreak of animal diseases for the period 9-16 April 1949.

<u>Prefecture</u>	<u>Disease</u>	<u>Number of Cases</u>
Kagawa	Swine-cholera	14
Fukuoka	Swine-cholera	1
Gumma	Positive E.E.E.	1
Miyazaki	Suspicious E.E.E.	1
Tokyo	Swine-cholera	25

SECTION IV
SUPPLY DIVISION

Production

The two month average production of pharmaceuticals and medical supplies reported for January and February exceeded 1948 monthly averages in yen value by 35 percent. Following are quantitative production averages for the subject period:

<u>Commodity</u>	<u>January - February average</u> <u>(1948 Monthly Average - 1.00)</u>
Laboratory Animals	1.02
Penicillin	1.88
Biologics	No Production
Hexylresorcinol (crystal)	1.93
Textile Sanitary Materials	1.34
Rubber Sanitary Goods	1.04
X-ray & Electrotherapy Equipment	1.29
X-ray film	1.24
X-ray tubes	1.13
Rodenticides	1.21
DDT 100%	2.43
DDT Dust 10%	1.09
Dental Instruments	0.99
Glassware	0.94
DDT Dusters and Sprayers	0.64
Hexylresorcinol Capsules	0.55

Inclosure No.3 furnishes detailed production tables of the medical, dental, sanitary materials and equipment for January and February together with monthly averages for the current and previous years for comparison.

Quarterly Allocation Controlled Medicines

Reference is made to section IV of Weekly Bulletin No.118 for the period 27 March to 2 April which discusses the allocation of controlled medicines for the period April, May and June. Three controlled items as listed below have been allocated for distribution during the quarter April - June in addition to the items in reference Weekly Bulletin. All prefectural governors were notified of the quantities allocated by Ministry of Welfare letter, Yaku-Hatsu No.636 dated 15 April. The racemic (synthetic) ephedrine HCl listed below is allocated in addition to the natural alkaloidal salt as included in reference Weekly Bulletin.

Additional Items Allocated for April, May, June

(Unit: gm)

<u>Prefecture</u>	<u>Soybean Oil</u>	<u>Powdered Extract of Nux Vomica</u>	<u>Racemic Ephedrine HCl</u>
Hokkaido	21,000	66,000	34,000
Aomori	7,000	18,000	10,500
Iwate	8,000	20,000	11,700

Nagasaki	8,000	28,000	14,300
Kumamoto	13,000	33,000	19,600
Oita	8,000	22,000	13,200
Miyazaki	6,000	15,000	9,100
Kagoshima	13,000	33,000	19,700
TOTAL	488,000	1,448,000	799,000

SECTION V
NARCOTIC CONTROL DIVISION

Narcotic Control Activities Report - February

The February report on narcotic control activities from the Ministry of Welfare contained the following information:

Total registrants	91,414
Arrest - Registered persons	23
Unregistered persons	78
Convictions - Registered persons	18
Unregistered persons	39
Thefts of Narcotics (Including one hospital)	21
Losses by fire (wholesaler)	1

Penalties for registrants varied from ¥ 1,000 to ¥ 10,000 fine and from three to eight months penal servitude with one suspended sentence of two years. Penalties for non-registrants varied from ¥ 500 to ¥ 30,000 fine and from four months to one year six months penal servitude with six suspended sentences varying from three to four years duration. Four registrants received administrative disposition (suspension of license) and 14 registrants were admonished for minor violations.

The report also summarized the activities of narcotic agents as follows:

Inspection of registrants	1,601
Investigations originated	233
Investigations concluded	171
Investigations not concluded	300

Eighty-one grams of heroin and 79 grams of morphine in addition to various other narcotics were seized ##### evidence during the month.

SECTION VI
WELFARE DIVISION

Cooperative for American Remittances to Europe, Inc.. (CARE)

The following report covers "CARE Operations in Japan" for the period ending 31 March 1949:

a. <u>Food</u>		
Total packages received		19,989
Packages damaged	2,813	
(Includes 1,881 sub-standard)		
Packages delivered	<u>13,917</u>	<u>16,730</u>
Total packages on hand		3,259
b. <u>Woolen</u>		
Total packages received		8,016
Packages damaged	100	
Packages delivered	<u>4,543</u>	<u>4,643</u>
Total packages on hand		3,373
c. <u>Blanket</u>		
Total packages received		1,644
Packages damaged	10	
Packages delivered	<u>1,064</u>	<u>1,074</u>
Total packages on hand		570
d. <u>Knitting</u>		
Total packages received		1,008
Packages damaged	5	
Packages delivered	<u>944</u>	<u>949</u>
Total packages on hand		59

Licensed Agencies for Relief in Asia (LARA)

Overseas shipments of relief supplies to LARA, numbers 149 through 152, have arrived in Yokohama and contained 89.64 tons. These shipments included the following relief items:

- a. 149th Shipment: Arrived aboard the S.S. President Buchanan on 29 March and contained 8.64 tons (food).
- b. 150th Shipment: Arrived aboard the S.S. China Victory on 2 April and contained 13.75 tons (food).
- c. 151st Shipment: Arrived aboard the S.S. Chastine Maersk on 6 April and contained 12.75 tons (clothing, 10.69 tons - miscellaneous, 2.06 tons).
- d. 152nd Shipment: Arrived aboard the S.S. President Harding on 8 April and contained 54.5 tons (food).

The total LARA relief supply shipments to Japan, as reported, now totals 8,026.86 tons, consisting of the following items:

	<u>Tons</u>
Food	6,009.96
Clothing (Including bedding and shoes)	1,596.08

Medical supplies	85.72
Cotton (raw)	207.62
Miscellaneous (soaps, seeds, findings, etc.)	<u>127.48</u>
TOTALS	8,026.86

Public Assistance Report - February

The Ministry of Welfare has submitted the following figures for the month of February 1949. Figures for January 1949 and for February 1948 are shown for purpose of comparison.

	<u>Feb 1949</u>	<u>Jan 1949</u>	<u>Feb 1948</u>
Persons Institutional	138,575	139,160	135,684
Persons Non-institutional	1,577,157	1,625,950	2,020,410
Total	<u>1,715,732</u>	<u>1,765,110</u>	<u>2,156,094</u>
Assistance - Cash*	650,124,954	631,140,911	376,219,148
Assistance - Kind	25,673,430	14,836,592	51,971,621
Totals	<u>¥ 675,798,384</u>	<u>645,977,503</u>	<u>428,190,769</u>

*Before deductions for repayment.

Help the Repatriates Campaign of Love

The Ministry of Welfare has reported the central and prefectural committees are again being organized to carry out a "Help the Repatriates Campaign of Love", for a more or less indefinite period extending from 20 April. Basis for the campaign is to overcome local and national "indifferences" between those who remained in the country and those who have returned from abroad and to give special welcome to those who will be returning this year. While the Japanese Government favors the program it is their aim that the prefectural committees be made up of non-governmental officials.

Many of the local committees raised funds for expenses during the 1948 campaign. Funds raised during the 1948 campaign were generally used to pay for propaganda (poster, loud speakers, movies) and supplemental assistance for needy repatriates.

SECTION VII SOCIAL SECURITY DIVISION

National Health Insurance

With this issue of the Public Health and Welfare Weekly Bulletin is an Index of the National Health Insurance Law (Incl. No.4). This Law was an enclosure to Public Health and Welfare Weekly Bulletin No.104, dated 20-26 December 1948.

Benefits Paid Under Government-managed Health Insurance

Reference is made to Public Health and Welfare Weekly Bulletin Nos.95 and 102 for periods 18-24 October and 6-12 December 1948 respectively for a summary of the Health Insurance program, especially the part under government management, and for monthly benefit statistics through August 1948.

Publication of benefit data for the subsequent months was delayed by the creation of the Social Insurance Medical Fee Payment Fund which began its operations in September 1948. Assumption by the Fund of the responsibility for payment of all doctor's bills received for treatment of persons insured under Health Insurance (as well as under Seamen's Insurance and most National Public Service Mutual Aid Associations) caused an initial gap in the availability of even the preliminary consolidated reports for the country as a whole. Data for the months of September through December 1948 are now presented in this issue of the Bulletin (Incl. No.5).

A comparison of these figures with those for the earlier months of the year reveals a continuously large number of cases and steady increases in the per-case cost of the medical and particularly dental care. The reason is at least two-fold. It lies, firstly, in the greater reliance of the insured on insurance medical and dental care, partly because fewer can afford to seek private care and partly because of greater cooperation by insurance doctors and dentists owing to the increased point values for insurance medical treatment. Secondly, in addition to the above-mentioned readiness of insurance doctors to give service to insurance patients, a tendency is reported

prevalent among some insurance doctors to supply other than essential treatment or, in case of possible alternative methods, that carrying the higher point value.

It is noted that the number of cases and the increases in cost are less #### for dependents of primary insured than for the primary insured themselves. This is due probably to the requirement of an equal sharing between insurer and insured of dependents' treatment cost acting as a brake on the utilization of available services and as an incentive to choose the less expensive treatment whenever possible.

Also an increase is noted of late in the average amounts of sickness and injury allowance. This must be regarded as being due to the general rise in wages. Further and more visible increases are to be expected in subsequent months as taxable wages have been raised from a maximum of ¥ 8,100 to ¥ 13,500 per month, effective 1 January 1949 and the rate of the combined employer and employee contribution has been upped from 3.6 to 4.4 percent of wages, also effective that date.

Finally, it is worthy of note -- although not apparent from the figures presented in the enclosure -- that a considerable increase in coverage exceeding 500,000 primary insured and an estimated 1,200,000 dependents has occurred during the last five months of 1948. Increases in the government-managed part of the program account for roughly 300,000 primary insured and 700,000 dependents. The balance is accounted for by increases in the society-managed part of the program. Total coverage under the government-managed part as of December 1948, amounted to 3,096,597 primary insured and an estimated 7,100,000 dependents. The increase in coverage was not caused by any changes in the law but must be ascribed to the growth in the number of enterprises and more effective enforcement of the coverage provisions of the law. As of December 1948, the number of establishments covered by government-managed Health Insurance totaled 118,905 compared with 106,811 in July 1948.

& 25 other prefectures
Re: Forwarding the roster of Korean nationals whose repatriation has been permitted by GHQ, SCAP.

SECTION II
PREVENTIVE MEDICINE DIVISION

Investigation of Diseases Outbreaks

Memorandum (PHMJG 99), subject, "Functions and Responsibilities of Health Officers et al., in Investigation of Disease Outbreaks", has been prepared and transmitted to the Ministry of Welfare, Japanese Government. Subject memorandum defines the function, responsibility and jurisdiction of health center directors and other public health officials, professional or technical personnel, with respect to the investigation of outbreaks of human disease and correction of the causes thereof. It places responsibility directly upon the health officer for the initiation and direct supervision of all such investigations, utilizing such other specialized personnel as may be available to him, in their respective fields. Subject memorandum does not express any new policy or any policy not already expressed or implied in the present public health organization; it does, however, insist upon the application of sound and accepted public health principles in epidemiological investigations and in the elimination of public health hazards.

Health Center - Unauthorized Use of Name Prohibited

Article 8 of the Health Center Law (Law 101, 5 September 1947) specifically prohibits the use of the name Health Center (Hoken-sho) for any organization not established under the provisions of the Health Center Law.

It has been determined that in some cases private organizations are using names which, although not specifically designated as Health Center (Hoken-sho), are nevertheless so similar that they are being interpreted as "health center". Examples are Hoken-kan (health hall), "Herusu-senta" (health center).

The use of such nomenclature is not only a violation of the Health Center Law but is also confusing and misleading the public concerning the significance of the term "health center" which is the official local governmental public health organization.

To correct this situation appropriate instructions have been issued by the Disease Prevention Bureau, Ministry of Welfare to each prefectural Governor and to the Mayor of the major cities (Yo-Hatsu No.333 dated 9 April 1949).

It is suggested that Military Government Health Officers ascertain that the spirit and intent of Article 8 of the Health Center law is complied with.

Public Health and Welfare Information

National Conference of Information Officials.

The first national conference for prefectural public health and welfare information officials was held in Tokyo on 13 - 14 April 1949. The conference was attended by hundred thirty persons representing every prefecture in Japan. Information activities policies and programs for 1949 were outlined and discussed. Delegates were urged to include in their information programs a monthly discussion of some phase of the major public health and welfare problems confronting the people of Japan, i.e., Tuberculosis, Venereal Disease, Communicable Disease, Nutrition, Sanitation, Mother and Child Hygiene and welfare activities. Necessity for close liaison between the central

government and prefectural and local officials was stressed. Technical advice, guidance and instruction in the various fields of information work was presented through discussions and demonstrations let by experienced men in each of the fields of activity.

It was suggested that officials put into immediate effect a publicity program concerning the early control of mosquitoes in support of the nation-wide mosquito control program designed to forestall a possible break of Japanese B Encephalitis. This control program is correlated with the Ministry of Agriculture and Forestry. (See item under Veterinary Affairs, this Bulletin).

SECTION III NURSING AFFAIRS DIVISION

Prefectural Five-Month Public Health Nurses Course

Following the completion in Tokyo on 26 March of the one-month public health nurses course for instructors, designed to provide teachers for the prefectural five month public health nurse course, the nurses worked out a curriculum and program considered adaptable to all the prefectures and which was accepted by the Ministry of Welfare.

On 20 April, the Medical Affairs Bureau, Ministry of Welfare, forwarded I-Hatsu No.405, subject: "Training Course for Public Health Nurses," to each prefectural Governor which outlines the following list of subjects in order of preference. This provides for 444 class hours, plus 18 hours for "excursions".

<u>Subject</u>	<u>Hours</u>	<u>Instructor *</u>
Introduction to Public Health	34	
Principles & Practice of P.H.N.	52	
Nursing Technique	100	
Nutrition	18	Nutritionist
Communicable Diseases	46	Medical (Doctor) - 28, Nursing - 18
Tuberculosis	38	Medical (Doctor) - 18, Nursing - 20
Venereal Diseases	32	Medical (Doctor) - 14, Nursing - 18
Oral Hygiene	6	Dental (Dentist)
Maternity Hygiene	30	Medical (Doctor) - 16, Nursing - 14
Infant & Child Hygiene	32	Medical (Doctor) - 16, Nursing - 16
School Hygiene	10	
Industrial Hygiene Adult Hygiene (none Com.Dis.)	12	
Principles & Method of Teaching	14	
Social Service	10	Social Worker Specialist
Mental Hygiene	<u>10</u>	P.H. Nurse if proper specialist not available
Total	444	
Excursion and Others	<u>18</u>	
Grand Total	462	

Class Schedule: Six(6) hours daily (Monday through Friday), Saturday 3 hours
Total 33 hours weekly. Class periods limited to two (2) hours

Lectures: Fourteen (14) weeks

Field Practice: Six (6) weeks

*Unless otherwise indicated, all instructors are Public Health Nurses.

Requirements:

1. A clinical nurses license or,
2. Until 31 December 1949, a total of one year's experience in study or practice work, under a Doctor's Certification, in public health nursing, clinical nursing or midwifery will be acceptable for entrance. However, on 1 January 1950, the effective date of the Nursing Law No.203, all applicants must possess a clinical nurses license.

Note: Ministry of Welfare Ordinance No.4, dated 29 January 1949 subject: "Regulations Relative to Public

Health Nurses”, sets forth the above requirements and also additional data concerning the five-month public health nurses course.

I-Hatsu No.405 also provides for appointment of public health nurses as full-time instructor in charge of the course, further that two or more prefectures can jointly sponsor a course with the prefecture holding the course being responsible for the program. This provision has merit as a joint sponsorship would permit more qualified instructors for the course at less expense to the prefectures.

Other pertinent points establish class levels at not less than 15, nor more than 50, however, under joint prefectural program, 60 students may be permitted. The ratio of students to staff nurses was established as 2 to 3 respectively for health center field experience with a maximum of six students at one time so as not to interfere with the health center program. Billets are to be provided for students from points too far for daily commuting. Facilities and necessary equipment will be provided by the prefectures. The cost of tuition will be determined by the prefectures at a later date.

SECTION IV VETERINARY AFFAIRS DIVISION

Condensed Milk and Prepared Milk Foods

Recent investigations have revealed an effort to divert spoiled condensed milk and prepared milk foods to the candy and bakery industries. Considerable quantities of condensed milk have already been justly condemned by the Ministry of Welfare as being unfit for human food of any kind. In the future (after June 1st) both of these products will be packed and distributed in retail sized tin cans, and if older than six months from date of manufacture (printed on package) should be re-inspected and tested before release for distribution. Japanese inspectors must enforce more strict compliance with present standards of milk sanitation, especially in milk processing plants.

Animal Hides

Assistance is being requested of Japanese veterinary inspectors in all slaughter-houses in a program to obtain better hides from horses, cattle and swine. It is reported that over 75% of all hides in Japan (except Hokkaido) are spoiled for economic production of good leather by reason of nicks, knife cuts and accumulated filth. If better workmanship is insisted upon, at the time of skinning the carcass, and more careful handling of the hide thereafter, a sizeable reduction in the percentage of damaged hides is anticipated.

Weekly Animal Disease Report

The Animal Hygiene Section, Ministry of Agriculture and Forestry reports the following outbreak of animal diseases for the period 16-22 April.

<u>Prefecture</u>	<u>Disease</u>	<u>Number of Cases</u>
Tokyo	Swine-cholera	27
Hyogo	“ ”	4
Miyagi	“ ”	2
Aomori	Suspicious E.E.E.	2

Operational Instruction concerning Mosquito Control (DDT Spray Program)

The following instructions from the Animal Hygiene Section, Animal Industry Bureau, Ministry of Agriculture, subject: “Disinfecting with 5% DDT Solution”, were issued on 20 April 1949 to all prefectural Governors.

1. Purpose.

For driving away blood-sucking insects, 800,000 stables in the whole country must be disinfested with 200,000 gallons of DDT oil solution. Vaccination of horses and swine also is to be carried out against equine enzootic encephalomyelitis.

2. Plan

- (1) Area: Whole country.
- (2) Period: From the first day of May to the end of May.
- (3) Distribution:
 - (a). 50,000 gallon: At the rate of number of horses and cattle in each prefecture.
 - (b). 60,000 gallon: For number of stable in rice field district in each prefecture.
 - (c). 10,000 gallon: At the rate of number of swine in each prefecture.
 - (d). 80,000 gallon: For emergency.
 - (e). Necessary amounts in Livestock breeding farm, race course and others are included in items (a), (b) and (c).
 - (f). D.D.T. in items (a), (b), and (c) are allotted to each prefecture.
- (4) Enforcement Method:
 - (a). Organization of disinfecting squads:
These squads are organized by officials of cities, towns and villages, agents of Agriculture Improvement Bureau, the staff of Agriculture Association, Livestock Insurance Association and Health Centers.
 - (b). Disinfecting objective:
In the limit of allotted amount, prefectural government pick out disinfecting area.
 - (c). Ceiling, walls and dark place in the stable are to be disinfested with 5% D.D.T. solution.
 - (d). Method of disinfection and amount.
Stables are to be disinfested by sprayer or paint brush with 1/4 gallon of D.D.T. oil solution.
- (5) Charge of Cost:
 - (a). Each individual pays all charges for disinfection, (actual expenses of 1/4 gallon are 100 yen).
 - (b). This D.D.T. under control of the Welfare Ministry has been appropriated for this plan.
Expenses for purchase of D.D.T. will be paid by each Prefectural Government during the first ten days of August.
- (6) Report:
Each Prefectural Governor shall report the results of this program to the Ministry of Agriculture and Forestry and the Ministry of Welfare upon the completion of this plan without delay.
- (7) Cooperators for this plan:
General Headquarters, SCAP
Military Government Teams
Welfare Ministry, Prefectural Health Departments and Health Centers
Ministry of Agriculture and Forestry:
Agricultural Improvement Bureau
Agriculture Administration Bureau
Land Development Bureau
(We entreat Military Government in each district to cooperate strongly)
- (8) Information concerning this plan will be disseminated by means of newspaper, radio and other media.

INITIAL DISTRIBUTION OF 5% D.D.T. OIL SOLUTION IN EACH PREFECTURE

<u>PREFECTURE</u>	<u>GALLON</u>	<u>PREFECTURE</u>	<u>GALLON</u>
Hokkaido	10,000	Mie	1,400
Aomori	2,500	Shiga	2,000
Iwate	3,000	Kyoto	1,800
Miyagi	3,000	Osaka	1,800
Akita	2,500	Hyogo	5,000
Yamagata	3,000	Nara	500
Fukushima	3,500	Wakayama	1,200
Ibaraki	2,500	Tottori	2,000
Tochigi	2,500	Shimane	2,000
Gumma	2,500	Okayama	4,000
Saitama	3,000	Hiroshima	3,000

Chiba	3,000	Yamaguchi	2,500
Tokyo	1,500	Tokushima	1,500
Kanagawa	2,000	Kagawa	2,000
Niigata	3,000	Ehime	2,000
Toyama	1,000	Kochi	1,500
Ishikawa	1,200	Fukuoka	3,500
Fukui	700	Saga	3,000
Yamanashi	800	Nagasaki	2,500
Nagano	2,500	Kumamoto	4,000
Gifu	2,000	Oita	3,500
Shizuoka	2,300	Miyazaki	4,000
Aichi	2,300	Kagoshima	5,000
Total		120,000	

NOTE: Additional Supply can be obtained upon request.

Milk Inspection

The Veterinary Affairs Section, Ministry of Welfare, conducted sanitary inspections on the following dairy farms and milk plants during the month of February 1949.

Special Milk

Number of farms inspected	----	5
Samples examined	----	12

Amount of meat and meat products condemned	----	228
Cause for condemnation	--	Uncleanliness, saleness and peutfaction
Disposition	----	Fertilizer

Seafood Inspection

The Veterinary Affairs Section, Ministry of Welfare, conducted the following sanitary inspections on seafood establishments during the month of February 1949:

Wholesale Seafood Markets

Number of establishments		----	1,366
Number of establishments inspected		----	954
Sanitary condition	----	Good	174
		Fair	637
		Poor	181
Total number of inspections		----	4,481
Amount of meat and meat products examined		----	33,591,268 kgs
Amount of meat and meat products condemned		----	643,937
Cause for condemnation	--		Peutrefaction, staleness and uncleanliness
Disposition	----		Fertilizer and animal feed

Seafood Processing Establishments

Number of establishments		----	8,868
Number of establishments inspected		----	2,875
Sanitary condition	----	Good	488
		Fair	1,636
		Poor	770
Total number of inspections		----	4,123
Amount of meat and meat products examined		----	6,656,801 kgs
Amount of meat and meat products condemned		----	181
Cause for condemnation	--		Peutrefaction and staleness
Disposition	----		Animal feed

Seafood Retail Shops

Number of establishments		----	43,712
Number of establishments inspected		----	15,975
Sanitary condition	----	Good	2,304
		Fair	9,773
		Poor	3,834
Total number of inspections		----	17,245
Amount of meat and meat products examined		----	1,901,846 kgs
Amount of meat and meat products condemned		----	1,269
Cause for condemnation	--		Peutrefacgion and staleness
Disposition	----		Animal feed and fertilizer

Food Sanitation

The Food Sanitation, Ministry of Welfare, reports the following sanitary inspection of food and beverage establishments during the month of February 1949:

Number of inspections		----	477,336
Establishments to be improved		----	73,124
Establishments completing improvements		----	89,037
Number of food samples collected for analysis		----	4,539
Number of administrative punishments		----	2,293

Census of Food Inspectors

Number authorized with 50% national subsidy		----	1,767
Actual number employed receiving national subsidy		----	1,584
Actual number employed receiving no national subsidy (Prefecture and city employees)		----	2,180

SECTION V SUPPLY DIVISION

During the period 3-16 April, 7369 pieces of dusting and spraying equipment were distributed to 31 prefectures as follows:

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsack Sprayers</u>	<u>Semi-Automatic Sprayers</u>	<u>Hand Sprayers</u>	<u>Engine Sprayers</u>

TOTAL	3,076	1,960	1,502	830	1

Ten (10) lots of biologics were reassayed and found to meet minimum standards on 14 April. The vaccines affected are listed below:

<u>Item</u>	<u>Manufacturer</u>	<u>Lot No.</u>	<u>Quantity (Unit: cc)</u>
Typhus Vaccine	Takeda Pharm. Co.	8	39,740
		11	39,740
		13	29,740
	Handai Laboratories	20	16,920
		21	16,340
		22	16,860
Tetanus Antitoxin	Chiba Prefecture Lab.	16	19,780
Triple Typhoid Vaccine	Takeda Pharm Co.	22	70,100
		50	73,000
	Kitasato Inst.	647	39,400

Distribution figures for January and February 1949 have been tabulated and the following indexes have been computed, using 1948 monthly averages as basis:

<u>Item</u>	<u>January - February Averages</u> <u>(1948 monthly average equals 1.0)</u>
Total Medical Supplies & Equipment Reported (Yen)	1.36
Controlled Medicines (Yen)	0.92
Non-Controlled Medicines (Yen)	1.45
Patent Medicines (Yen)	1.27
Dental Instruments (Yen)	1.02
Dental Materials (Yen)	1.07
Rubber Medical Goods (Yen)	2.39
Cotton Sanitary Materials (Yen)	1.59
Medical Instruments (Yen)	1.14
X-ray and Electrotherapy Equipment (pieces)	1.13
Rubber Sanitary Goods (Kgs)	1.45
Absorbent Cotton (Kgs)	1.20
Gauze (Meters)	1.17
Staple Fiber Bandage (Rolls)	0.68
Triangular Abdominal Bandage (pieces)	1.11
Lint (pieces)	3.28
X-ray Film, 2·1/2×2·1/2(Doz)	0.50
X-ray Film, 4—3/4×6·1/2(Doz)	0.71
X-ray Film, 6·1/2×8·1/2(Doz)	0.84
X-ray Film, 8×10 (Doz)	0.70
X-ray Film, 5×7 (Doz)	0.14
X-ray Film, 10×12 (Doz)	1.15
X-ray Film, 11×14 (Doz)	1.07
X-ray Film, 35mm (Rolls)	0.40
X-ray Film, Dental (Doz)	0.85
X-ray Film, 120 Size (Rolls)	1.20
Santonin (Tablets)	1.64
Sulfadiazend (Tablets)	0.47

Detailed distribution figures for medical, dental and sanitation supplies and Equipment for January and February, together with their monthly averages for 1947 and 1948 may be found in Inclosure No.1.

Pyrethrum Emulsion

A total of 109,600 gallons of pyrethrum emulsion concentrate (to be diluted 30 times with water) was manufactured during the period 26 March - 10 April, which will produce 3,288,000 gallons of finished insecticide. This amount represents approximately 25% of the annual production goal of 434,300 gallons of concentrate. The sixteen pyrethrum emulsion producers have already received total allocations of petroleum products and all necessary raw materials to complete the 1949 production schedule and from all indications 4,300 drums of finished concentrate will be produced by 25 April. Present production trends signify the program will be completed in time to carry out insect and rodent control activities as planned. Distribution of the finished pyrethrum emulsion concentrate will be made as the material is produced.

Hexylresorcinol Production

Hexylresorcinol production during the week of 1 - 8 April continued to show increases in both crystalline form and gelatin coated pills. 596.97 kgs of crystals were produced and the entire amount passed assay. A total of 1,549,334 pills were produced, with 40,000 failing to pass assay and 290,893 still under assay. During the period 26 March - 8 April, 1,189.9 kgs of crystalline type hexylresorcinol and 1,997,630 pills were produced and passed assay. Less than one percent of the crystalline type and two percent of the pills failed to pass assay. It is anticipated

that increasing quantities of hexylresorcinol will be made available henceforth for distribution throughout all prefectures.

SECTION VI NARCOTIC CONTROL DIVISION

Enforcement

Two narcotic registrants, physicians, who lost narcotics through failure to store them in a locked cabinet, were prosecuted and fined ¥ 1,000 each. While the fines are small the action will tend to eliminate some of the many minor theft of narcotics.

Acting on information that narcotics, seized from traffickers in Hokkaido, had originated in Kobe, enforcement officials apprehended the individual in Kobe and found him in possession of a quantity of heroin. The same procedure proved successful in Tokyo in following up information obtained elsewhere. Coordination of informational leads has reached a high degree of efficiency.

False Claims of Narcotic Addiction Cures

A press release in which it was claimed that Ofunojin is an absolute cure for narcotic addiction is being investigated as a possible violation of the Pharmaceutical Affairs Law. Competent authorities have stated that "Ofunojin treatment, then, is a variant of the atropine and hyoscine treatments which have been thoroughly discredited --- as being not only ineffective but even dangerous".

SECTION VII WELFARE DIVISION

Licensed Agencies for Relief in Asia (LARA)

LARA, at present, has approximately 5,000 bales of clothing available in their warehouse (Yokohama) for allocation. Basic clothing needs have been provided for all authorized institutions, orphanages, hospitals, etc., included in the LARA program. Program for these institutions has developed whereby supplemental aid, through LARA supplies, is sustaining.

LARA Central Committee has recommended a special distribution plan to provide practical clothing for social workers (usually poorly paid) in institutions, etc., who have been constantly responsible for the distribution of LARA supplies for the past two and a half years. It is proposed that each of the aforementioned social workers receive two (2) essential items of wearing apparel. The category of social workers to be included in the distribution is proposed in accordance with the following:

- a. Women workers in Homes for Widows and Children.
- b. Women workers in Day Nurseries.
- c. Workers in institutions caring for children and infants. This does not include camps for repatriates or other war sufferers now does it include hospital staff members.
- d. Staff members of Prefectural Welfare Offices who have had responsibility for actual distribution of LARA goods.

NOTE: Will not exceed 30 persons on any prefectural staff with the possible exception of Tokyo and Osaka.

The plan of distribution in each prefecture will be presented to the Military Government Welfare Officer, for his information and comment, by the officials of the Prefectural Welfare Section.

This special allocation and distribution will be reported separately by the Ministry of Welfare to the LARA Central Committee and to Public Health and Welfare Section, GHQ, SCAP and will give, in detail, items distributed, where and to whom distributed. Individual receipts will be taken from each individual receiving items of wearing apparel (receipt will carry "han").

The total number bales of clothing necessary for this distribution will be 473 (338 bales for women - 135 bales for men). Twenty-three thousand nine hundred and sixty-three individuals are estimated for inclusion in this distribution, namely

Prefectural offices (reference, sub-paragraph d above)

Men	1,120
Women	<u>222</u>
Total	1,342

Institutional welfare workers (reference, sub-paragraphs a, b, c, above)

Men	16,796
Women	<u>5,825</u>
Total	22,621

Grand Total	<u><u>23,963</u></u>
-------------	----------------------

The special allocation and distribution proposal was coordinated with the Welfare Branch, Military Government, Headquarters Eighth Army and it was the concense that the proposed special distribution, particularly in view of large quantity of LARA clothing (bales) now available, was an appropriate award and would serve not only to furnish needed supplemental clothing to these specific welfare workers but also would be an effective means of giving recognition to them for their efficient handling of LARA supplies over the past two and a half years.

NOTE: Previous special allocations and distribution of LARA goods approved were: yard goods for nurses' uniforms (hospitals), hand-bag kits for Day Nursery workers, yard goods for doctors' coats (hospitals), shoes for nurses (hospitals) and shoes for prefectural welfare workers.

The special LARA allocation and distribution briefly outlined above has been approved and distribution will begin on or about 25 April.

Public Assistance - Medical Care

The Social Affairs Bureau, Ministry of Welfare has released Sha-Otsu-Hatsu No.92 dated 1 April 1949, subject: "Handling of Medical Care Under the Daily Life Security Law", which outlines new eligibility requirements for recipients and non-recipients of public assistance and prescribes forms.

Provisions are:

a. Those receiving daily living assistance are automatically eligible.

b. Those not receiving daily assistance are eligible if, after determining their minimum living needs by use of the public assistance allowance tables, the difference between their needs and income is not sufficient to pay for the medical care.

(In the latter case resources owned by the applicant or support by relatives are taken into account. Resources such as "tools of trade", the "home place" under certain circumstances, and things necessary for education and spiritual comfort such as a radio, may be excluded from consideration. Income from relatives must be actual and not presumptive).

c. Those covered by health insurance may be eligible for partial medical care costs (generally for their dependents, who are not fully covered).

In determining eligibility for those not receiving public assistance, the cost of medical care used in such determination must be based on the prevailing medical fee scale which is computed through the point system of social insurance medical care. It is recognized that an individual may have sufficient funds for this purpose but may not have sufficient funds to cover the ordinary fee scale for private care. In these cases the heads of cities, towns and villages are urged to assist in arranging for less expensive private medical care.

The plan includes authorization of hospitalization "only when according to the physician's diagnosis or certification it has been recognized as difficult to attain the object of medical care by means of residence protection", such as for an operation or, "when it is recognized that if the person responsible for subsistence (breadwinner) needs care and his recovery will be hastened to a marked degree, resulting in the redemption of his working capacity".

Nursing care may also be provided under restricted circumstances. Birth aid is considered under the same circumstances as those outlined above.

Child Welfare - Duties of Child Welfare Officials

The Children's Bureau, Ministry of Welfare has issued Ji-Hatsu No.186, dated 4 March 1949, subject, "Duty of Child Welfare Official and the Guidance and Supervision for Him", a copy of which is attached to this Bulletin (Incl. No.2). This order supplements the information contained in Ji-Hatsu No.808, dated 2 December 1948, subject, "Concerning the Sending of the Outline of the Function of the Child Welfare Officials and Child Welfare Workers", a copy of which was attached as Inclosure No.7 to Public Health and Welfare Weekly Bulletin No.96.

The present order clarifies the legal position of the child welfare official and requires close cooperation with child welfare workers and heads of cities, towns and villages.

Public Assistance and Child Welfare Institution Care

The Social Affairs Bureau, Ministry of Welfare has issued Sha-Otsu-Hatsu No.91, dated 7 April 1949, subject, "Management of Protective Institutions" which concerns action to be taken in the event of poor management or mismanagement of institutions, reports of which are continuously found in newspapers and Military Government reports. Further clarification of this matter has been presented to the prefecture welfare officials at their meeting in Tokyo 22 - 23 April. Public Health and Welfare Section has requested that the Ministry of Welfare and prefecture welfare departments fully recognize their responsibility to the persons for the care of which national or prefecture funds are being expended and requested that drastic action be taken when negligence or mismanagement is found either in public or private institutions.

Welfare officers may wish to alert local newspapers to their responsibilities in throwing light on institutional care in their communities.

SECTION VIII SOCIAL SECURITY DIVISION

Legislation

Amendments to all the social insurance laws except National Health Insurance are scheduled for consideration by the present Diet. In general, they provide adjustments in contributions and benefits to keep pace with the inflationary trend, a strengthening of the legal basis for advisory councils, and modification necessary to maintain conformity with related legislation.

Particular vital amendments are proposals to increase contribution rates and establish partial sharing of initial medical examination costs by direct charge to primary insured under Health Insurance. The greatly expanded use of that program has invalidated previous actuarial calculation.

Legislation is also being proposed to meet any unemployment problem that may arise from the adjustments in industry resulting from the application of the economic stabilization program. A public works program geared to employ such workers, an expanded unemployment insurance system, and a more effective employment exchange program are contemplated.

SECTION IX MEMORANDUM TO JAPANESE GOVERNMENT

SECTION I GENERAL

Enclosed with this Weekly Bulletin are the January and March issues of the World Health Organization's Newsletter, furnished for the perusal of the Military Government Public Health Officers.

The Public Health and Welfare Section, by arrangement with WHO, will continue to receive Newsletter issues for subsequent distribution to Military Government PHO's. WHO is also mailing copies direct to the Ministry of Welfare and the Japan Medical Association in sufficient quantities to permit distribution to each prefectural health department and prefectural medical association.

SECTION II PREVENTIVE MEDICINE DIVISION

Smallpox Control

Ten cases of smallpox have been reported from Osaka Prefecture, eight of them within Osaka City and all in the same neighborhood. The affected area has been placed under quarantine and vaccination is being done on a wide scale.

Prefectural and municipal officials expressed doubts with respect to their authority to enforce such a quarantine, perhaps in order to shift the burden of responsibility therefor to the Occupational Forces. The Infectious Disease Prevention Law is quite explicit on this subject and there are no amendments, revisions or enforcement regulations which in any way abridge the scope of the basic law. The attention of all Public Health Officers is invited particularly to Articles I, VIII and XIX of subject law, enumerating the "infectious diseases" and defining the authority of the Governor and other competent officials with respect to the control thereof.

Immunization Resumed: Typhoid - paratyphoid

Stocks of reassayed typhoid-paratyphoid vaccine have now become sufficient for a resumption of routine inoculations on a limited scale. The Ministry of Welfare through Yo-Hatsu No.365 of 21 April 1949, subject, "Execution of Typhoid and Paratyphoid Preventive Inoculations in This Year," has directed prefectures to arrange a program for typhoid-paratyphoid inoculations from 1 May through June, to include initial immunization of children 36 to 48 months of age, and "booster" inoculations for all those required by law.

Initial immunizations for typhoid-paratyphoid will be given subcutaneously and, for children 36 months to 48 months of age, will consist of three inoculations of 0.25, 0.50cc respectively at intervals of five to ten days. Some children over 48 months of age have not yet received the initial series of inoculations, therefore all children under school age who have not had the initial series of TAB inoculations should receive them at this time. "Booster" immunizations will be given intra-cutaneously only and will consist of a single inoculation of 0.1cc typhoid-paratyphoid vaccine.

For carrying out the proposed program, special care will be required to instruct all physicians in the proper method of intracutaneous inoculations. The use of cutaneous needles and well fitted small syringes will insure more accurate dosage and minimize waste incurred by changing needles for each separate inoculation. The instruction of physicians performing the inoculations, and the procurement of sufficient needles and syringes of the proper type will be primarily the responsibility of local health authorities. The Ministry of Welfare is planning a series of regional meetings with prefectural Health Department officials to give verbal directions in the proper methods of typhoid-paratyphoid immunization as applied to the present program.

The reference Yo-Hatsu, together with proposed distribution to prefectures is included with this Bulletin (Inclosure No.1).

Tuberculosis Control

Reference section II, Weekly Bulletin No.120, for period 11 - 17 April 1949. Line one and two of item entitled "Tuberculosis Control-Case Supervision" which reads "An increase in the tuberculosis death rate from 161.6 per 10,000 per annum for the month of January 1948 to 163.9 for January 1949 has occurred in Japan," should read "An increase in the tuberculosis death rate from 161.6 per 100,000 per annum for the month of January 1948 to 163.9 for has occurred in Japan.

Public Health Information

The producer of the motion picture, "Maternal and Child Handbook", reports the copies of this film have been sent to the following prefectures:

35mm. Film

1. Information Section, Ministry of Welfare, Tokyo.
2. Public Health Board, Tokyo
3. Health Department, Osaka Prefectural Office
4. Children Section, Public Welfare Division, Hokkaido Provincial Office
5. Public Health Section, Wakayama Prefectural Office
6. Nutrition Section, Health Department, Chiba Prefectural Office
7. Maternal and Child Health Section, Kanagawa Prefectural Office
8. Public Health Department, Iwate Prefecture

16mm. Film

1. Children Section, Fukui Prefectural Office
2. Public Health Section, Health Division, Nagano Prefectural Office
3. Public Health Section, Health Division, Hiroshima Prefectural Office
4. Public Health Section, Health Division, Gifu Prefectural Office
5. Public Health Department, Saitama Prefecture

SECTION III VETERINARY AFFAIRS DIVISION

Animal Hygiene Section, Ministry of Agriculture and Forestry submitted the following report on outbreak of animal diseases for the period 23 - 29 April 1949.

<u>Prefecture</u>	<u>Diseases</u>	<u>Number of Cases</u>
Hyogo	Swine-cholera	14
Fukushima	" "	3
Tokyo	" "	4
Tokyo	Anthrax (cattle)	1
Aomori	Suspicious E.E.E.	1

SECTION IV SUPPLY DIVISION

Biologic Reassay

During the period 18 - 25 April the following vaccines have been reassayed and found to meet minimum standards.

<u>Item</u>	<u>Manufacturer</u>	<u>Lot No.</u>	<u>Quantity(Unit: cc)</u>
Diphtheria Antitoxin	Aichi Pref. Lab.	15	9,660
Diphtheria Antitoxin	Toshiba Inst.	10	9,360

		144	3,800
		151	26,600
		262	19,250
		200	14,650
Typhoid Vaccine	Kaketsu Lab.	19	140
		19	120
Typhus Vaccine	Takeda Yakuin Co.	15	18,740
		17	19,740
		20	19,740

22	19,740
23	19,740

Production

The three month average production of medical supplies and pharmaceuticals reported for January - February - March exceeded 1948 monthly averages in yen value by 62 percent. Following are quantitative production averages for January - February - March as compared to 1948 monthly average production:

(1948 Monthly Averages - 1.00)

<u>Commodity</u>	<u>March</u>	<u>Jan, Feb, Mar.</u>
Laboratory Animals (each)	1.09	1.04
Biologics (cc)	No Production	No Production
Penicillin (O.U.)	3.46	3.45
Hexylresorcinol Crystals (kg)	4.90	2.55
Hexylresorcinol Capsules (piece)	5.80	2.39
Textile Sanitary Materials (lbs)	1.26	1.30
Rubber Sanitary Materials (kgs)	1.21	1.10
X-Ray & Electrotherapy Equipment (piece)	0.97	1.11
X-Ray (square meter)	1.22	1.09
X-Ray Tubes (each)	1.32	1.19
Rodenticides (kg)	1.64	1.35
DDT 100% (lb)	2.37	2.40
DDT Dust 10% (lb)	3.09	1.76
DDT Spray 5% (gal)	1.09	0.76
DDT Dusters & Sprayers (each)	0.69	0.71
Dental Instruments (piece)	0.82	0.94
Surgical Instruments (piece)	1.48	1.41
Glassware (piece)	1.11	1.00

Detailed production tables of the medical, dental, sanitary materials and equipment for February and March together with monthly averages for the current and previous years for comparison are attached (Inclosure No.2).

SECTION V
NARCOTIC CONTROL DIVISION

Enforcement

Eleven foreign nationals and eight Japanese were arrested in a raid which resulted in the seizure of 140 grams of morphine hydrochloride. Some of the defendants exhibited serious withdrawal symptoms from having smoked the morphine.

In April a total of 21 foreign nationals were arrested for narcotic violations.

A hospital administrator and 11 other Japanese were arrested in Aichi Prefecture for illicit dealing in narcotics. Seven clinics and two pharmacies were involved in the investigation which revealed a black market broker was the source of supply for a total of 21 suspected persons.

In Chiba Prefecture a newspaper editor, a director of a hospital, and a fuel dealer were arrested as a result of illicit transactions involving 1,325 grams of morphine and 2,175 grams of cocaine. Some of the narcotics, stolen from a Japanese military installation at the end of the war, were obtained by foreign nationals and supplied to the illicit traffic in Tokyo and Yokohama. The arrests were made as a result of information obtained while investigating a narcotic theft.

A physician, a narcotic registrant, and his son, unemployed, were arrested in Kumamoto Prefecture for trafficking in narcotics which were obtained on forged narcotic order forms. Information leading to the arrests was furnished by a local wholesaler.

SECTION VI
WELFARE DIVISION

Public Assistance - National "Appeal" System

The Ministry of Welfare has released Kosei-Sho-Rei #17, dated 25 April 1949, which is an amendment to Kosei-Sho-Rei #38, of 1946, and which sets up the procedure for handling "complaints". The Ministry has also released Sha-Otsu-Hatsu #106, dated 25 April 1949, subject: "Amendment of Part of the Enforcement Regulations of the Daily Life Security Law", which amplifies and explains the amendment to the Ordinance. The Amendment to the Ordinance does not give an applicant the right to appeal, since the right to appeal will necessitate an amendment to the Daily Life Security Law. It does, however, set up a system whereby "complaints" will be received and by which the applicant or recipient can "appeal" over the heads of local welfare officials to the mayor, and if still dissatisfied, to the prefectural governor. Actually, the effect is the same as if the law were changed. It is expected that the Daily Life Security Law will be amended in this respect.

It will be noted that the plan also provides that when an application for assistance is rejected, the local official must notify the applicant in writing that the application has been rejected and the basis for rejection.

The Ordinance is effective 1 May 1949. Copies of the amendment to the Ordinance and the explanatory material are attached to this issue of the Weekly Bulletin, (Inclosure No.3).

Helen Keller Fund

The Helen Keller Fund Campaign Committee reports a net figure of ¥ 35,873,993 collected from all sources in Japan.

The Committee has elected an Executive Committee of ten prominent Japanese to administer the expenditure of the Helen Keller Fund. Proposed programs for the blind and other physically handicapped groups will be submitted in the near future to the Executive Committee for consideration and final action by the Central Committee.

Consumer Livelihood Cooperatives

The following information has been received from the Ministry of Welfare on Consumer Livelihood Cooperatives:

Number of Consumer Livelihood Cooperative Associations	Number of Members	Number of Members Families	Number of Directors	Amount Invested
177	226,900	910,263	2,776	32,612,270

NOTE: Details by prefecture will be forthcoming.

Japanese Red Cross Society

Volunteer Services (Public Health and Hygiene):

Red Cross Volunteer Groups will not take over any of the responsibilities of the Public Health authorities and will only render voluntary assistance to the Health authorities in carrying out their responsibilities to their respective communities.

Programs of voluntary assistance will cover the following activities:

1. Assist the Health authorities by passing out accurate and up-to-date health and hygiene educational material to families and individuals. Encourage group discussions on hygiene subject under the supervision of competent authorities.

2. Assist the Health authorities in their efforts to train citizens to respect public property, by encouraging them to keep all public buildings, streets and public facilities, and sewers clean.

3. Assist in the execution under the Health authorities supervision, campaigns to exterminate rats, fleas, lice, flies, mosquitoes and other disease carriers. To volunteer their service to the Health authorities in planned programs to disinfect public toilets, dumping grounds and other germ accumulating areas. The control of distribution and use of disinfectants, insecticides and rodenticides to remain exclusively with the Health authorities.

4. Volunteer their services to the Health authorities and medical institutions the assist them in clerical work, caring for the children while parents are being inoculated or temporarily hospitalized. Assist doctors and nurses in lay work.

5. Volunteer individual and group services in times of disaster, especially in assisting the authorities and Red Cross medical teams in caring for the injured.

6. House to house canvassing for the purpose of securing the public cooperation in support of mass x-ray or inoculation programs. Volunteers will assist authorities in registration work.

SECTION VII SOCIAL SECURITY DIVISION

Health Insurance

On 28 April 1949 the Diet amended the Health Insurance Law. A summary of these amendments follows; a transcript of the amendments accompanies this Bulletin (Incl. No.4).

1. A clarification in Article 2 of the term "standard remuneration".

2. A change in Article 3 in the number of classes and the range of standard monthly remuneration. These changes regressed from a 40 class, 300 yen to 8,100 yen range, to a 19 class, 2,000 yen to 24,000 yen range. Attendant to this change were deletions in Articles 49 and 50 on insured's minimum funeral allowance since proposed minimum range on standard remuneration beings at 2,000 yen.

3. A new Article 6-2 to exclude registration taxes on Health Insurance Societies.

4. A change in Article 11 to increase penalty assessments for failure to pay contributions and provision for the removal of fractional amounts in the calculation of assessments.

5. A change in Article 11-2 to clarify collection procedures in the wards of large cities.

6. A new chapter on advisory councils and the attendant deletion of portions of Article 22, presently pertaining to such councils.

7. Provisions added in Articles 43-2, 43-6 and 44-2 for the assessment and payment of a partial charge for benefits to insured persons equivalent to the first consultation fee. Such amount is payable directly to the doctor by the insured patient and is deductible by the insurer from the doctors statement. It does not apply to benefits to dependents.

8. Provision in Articles 43-3 and 43-4 for guidance from the Welfare Minister, predicated upon the recommendations of the Central Medical Care Advisory Council, on the appointment of and the service standards of doctors, dentists and pharmacists.

9. Provision in Article 50-2 for an increase in maternity allowance to an insured persons from 100 yen to 200 yen per month.

10. A change in Article 59-3 increasing funeral allowance on the death of a dependent from 1,000 to 2,000 yen.

11. An increase in Article 59-4 in the amount allowed for childbirth expense form 500 to 1,000 yen.

12. Provision in Article 71-4 for an increase in overall contribution rates for government-managed Health Insurance from a range of 3.6% to 4.4% to within the limits of 4.5% to 5.5%.

13. Provision in Article 75-2 that the maximum rate for an insured person's contributions under society-managed Health Insurance be raised from 2.5% to 3.0% of such person's standard remuneration.

14. Provisions in Articles 84-3 and 84-4 for the appointment of secretaries and clerks for Health Insurance Appeals Boards.

15. Provisions in Articles 87, 88 and 88-2 for an increase in penalties for irregularities in compliance to the Law.

The proposed amendment concerning a change in contribution rate scale from 3.6% - 4.4% range to 4.5% - 5.5% range, in government-managed Health Insurance has a planned effective date of 1 April 1949. The remaining amendments have a planned effective date of 1 May 1949.

Social Insurance Division
Social Insurance Statistics

Benefits Paid Under Society-managed Health Insurance

Reference is made to PH&W Weekly Bulletin Numbers 95 (18-24 Oct 1948), 96 (25-31 Oct 1948), 103 (13-19 Dec 1948) and 120 (10-17 April 1949), for a summary of the Health Insurance Program as revised and monthly benefit statistics under the society-managed part of the program for the first five months of the past fiscal year (April through August 1948). Benefits paid under this branch of the program for the months of September through December 1948 are attached (Incl. No.5).

These data reveal a similar development toward more and costlier benefits under society-managed Health Insurance as was noted for the government-managed branch of that program during the period under review. (See PH&W Weekly Bulletin No.120). The reasons must be assumed to be the same.

Out of the total increase in coverage noted for the program as a whole, the society-managed part accounts for an increase by approximately 200,000 primary insured and 500,000 insured dependents during the months of August through December 1948. The total numbers insured under society-managed Health Insurance in December was 2,619,287 primary insured and an estimated 6,000,000 dependents. The number of Health Insurance Societies grew from 710 in July to 774 in December 1948 covering an unknown but large number of establishments, as societies are authorized only in the large-scale enterprises. Frequently these enterprises have branch establishments the personnel of which are all member of the one Health Insurance society bearing the name of the enterprise.

Re: Repatriation of Mrs. Mitsu Yamamoto from Formosa to Japan Proper.

Apr. 15 Engo No. 421 All prefectural governors. "
Re: Strengthening of measures for emergency relief after re-commencement of repatriation work.

SECTION II PREVENTIVE MEDICINE DIVISION

Smallpox

Recently two outbreaks of smallpox have occurred in Japan, one in Fukuoka Prefecture and one in Osaka. In each case the outbreak first started in Koreans and in one case, at least, there is highly presumptive evidence that the family of the first case had entered Japan illegally.

In Fukuoka Prefecture there have been a total of 13 cases since 1 April of which eight occurred in Fukuoka City, four in Moji and one in Omuta. In addition, one imported cases occurred in a Japanese sailor returning from Pusan, Korea. The Omuta patient had been in Fukuoka just two weeks prior to the onset of the disease. The cases in Fukuoka have been scattered throughout the city, whereas those in Moji were localized in one area.

In Osaka, 15 cases have been reported since 22 April, of which 12 were confined to a small, circumscribed area, while the two others occurred at no great distance away.

Public Health Officers are urged to be on the alert for any suspicious or presumptive cases of smallpox or for any unexplained deaths, fevers or eruptions, especially in infants and children and particularly in black-market areas and areas where there are considerable numbers of Koreans or Chinese, with opportunity for unregistered or illegal entrants to come and go.

Venereal Disease Control - Serological Tests for Syphilis

Inspection trips to various prefectures reveal that the diagnosis of syphilis is often made on the basis of two precipitation-type serologic (usually the Murata and Ide tests).

Comparative studies of the various precipitation tests carried out by the National Institute of Health with the co-operation of the United States Army 406th Medical General Laboratory indicate that the Murata, Ide and Hokken (or Kitasato) tests respond with satisfactory sensitivity to syphilitic reagin but do not demonstrate adequate specificity for syphilis. The results of this study show that these precipitation tests are more sensitive than the standard United States Army Kahn test but gave more false positive reactions. (The Meinicke test appeared to be unsatisfactory because of its relative insensitivity and non-specificity and should not be used). The danger of relying on positive precipitation tests alone to establish a diagnosis of syphilis is apparent, especially in prenatal, premarital and other apparently healthy people.

Since the precipitation tests are very sensitive even though they may not be adequately specific for syphilis, they should be employed as a screening test and those found to have a positive or doubtful reaction should be regarded as suspects rather than syphilitics. These suspects should be followed up with an adequate history, a complete physical examination and a confirmatory Wasserman test to form a basis upon, which the diagnosis can be made. The history and physical examination should not be done perfunctorily but should be carried out with a view to determining whether the positive serological result is due to syphilis or to some non-syphilitic condition like respiratory infection, leprosy, malaria, infectious mononucleosis, vaccinia (following smallpox vaccination) etc. It must be borne in mind that many infectious disease may produce a transiently positive reaction in the absence of syphilis.

Military Government Public Health Officers should check the prefectural laboratories to determine whether Wasserman tests are being performed. The Health Centers should do the routine precipitation tests and forward all positive and doubtful reacting sera to the prefectural laboratory of other similar institutions where a confirmatory Wasserman test can be made.

Training Course for Nutritionists

The fifth course for public health nutritionists will be held from 30 May to 23 July at the Institute of Public Health in Tokyo. Well qualified candidates working in prefectural health departments or in health centers should be selected for training. Prefectures which have a backlog of untrained nutritionists may send more than one student. An official announcement concerning the course is being sent to prefectural governors by the Ministry of Welfare.

SECTION III SUPPLY DIVISION

National Pharmaceutical Examination

Reference Weekly Bulletin No.115, Ministry of Welfare notification No. 66 published in the Official Gazette 18 April announces the places and dates of the first national practical examination for pharmacists. Three locations are specified: Tokyo, Osaka and Fukuoka. The examinations will be held from Monday 18 July to Wednesday 20 July, beginning at 0900 hours each day. Those making application to undergo this examination are required to show evidence of passing the theoretical examination which is scheduled for 15 May as previously announced.

Biologics Reassay

During the period 2 - 6 May the following vaccines have been reassayed and found to meet minimum standards.

<u>Item</u>	<u>Manufacturer</u>	<u>Lot No.</u>	<u>Quantity (Unit: cc)</u>
Diphtheria Antitoxin	Hayashi Seiyaku Co. Ltd.	27	9,869

Diphtheria Antitoxin	Hayashi Seiyaku Co. Ltd.	29	9,869
Diphtheria Antitoxin	Kaketsuken	4	9,801
Diphtheria Antitoxin	Hokkaido Seiyaku Co. Ltd.	25	6,036
Diphtheria Antitoxin	Hokkaido Seiyaku Co. Ltd.	28	792

Decontrol of DDT Distribution

Memorandum (PHMJG 102), dated 3 May 1949, subjects "Release of Control Over Distribution of DDT Products for Public Health Purposes", has been prepared and delivered to the Ministry of Welfare, Japanese Government. Subject memorandum informs the Ministry that no objection is offered by Public Health and Welfare Section to the proposed plan of release of control over DDT distribution.

Estimated production in Japan of DDT 10% and finished DDT products during the current Japanese fiscal year will be sufficient to satisfy all public health programs. In addition, finished insecticides can be made available for general public use from indigenous production. Production for the current year of DDT 100% is estimated at 900 metric tons, DDT 10% at 10,560,000 pounds and DDT 5% residual effect spray, 2,100,000 gallons. Under these circumstances control over the distribution of DDT products for public health use is no longer necessary.

Ministry of Welfare has adequate reserve stocks on hand at the present time and will continue to maintain such stocks to meet any foreseeable emergency need.

It is suggested that the usual surveillance be exercised to insure compliance with the operations of the DDT distribution activities, especially at it pertains to the prevention of diversion of the DDT products into illegal channels and to insure compliance with the provisions of existing laws and regulations.

Pyrethrum Emulsion

A total of 107,000 gallons of pyrethrum emulsion concentrate was manufactured during the period 10 - 25 April, which will produce 3,210,000 gallons of finished insecticide. A total of 216,000 gallons of pyrethrum emulsion concentrate has been produced since 26 March and the production program will be completed well ahead of schedule.

The first distribution of pyrethrum emulsion concentrate for 1949 was made during the period 10 - 26 April. The emulsion is supplied in 50 gallon drums of the concentrate which is diluted 1 part to 30 parts of water prior to use. Distribution was made as follows:

Distribution of Pyrethrum Emulsion Concentrate (Unit: 50 gallon drum)

<u>Prefecture</u>	<u>Drums</u>	<u>Prefecture</u>	<u>Drums</u>
Hokkaido	45	Nagano	30
Aomori	40	Shiga	100

Cement Allocations

Detailed breakdown, by prefectures, of allocations of cement for April, May and June, 1st Qtr JFY 1949, for use in expansion, repair and rehabilitation of medical and pharmaceutical supply factories (Unit: metric tons) is attached (Incl. No.1).

Detailed breakdown by major categories, classifications by bureaus, sections, type of work, of allocations of cement for April, May and June, 1st Qtr JFY 1949, for use in public health and welfare programs (Unit: metric tons) is attached. (Incl. No.2).

SECTION III NARCOTIC CONTROL DIVISION

Narcotic Control Activities Report - March

The March report on narcotic control activities from the Ministry of Welfare contained the following information:

Total registrants	92,030
Arrests - Registered persons	30
Unregistered persons	165
(Including four Koreans and 24 foreign nationals)	
Convictions - Registered persons	17
Unregistered persons	52
(Including two Koreans and 13 foreign nationals)	
Thefts of Narcotics (including one hospital and one manufacturer)	30
Losses by Fire (including two hospitals)	7

Penalties for registrants varied from ¥ 3,000 to ¥ 20,000 fine and from three months to one year penal servitude. Penal servitude was reduced to suspended sentences in all but one case. Penalties for non-registrants tried in Japanese Courts, totaling 28 sentences, varied from ¥ 1,000 to ¥ 50,000 fine and from three months to one year penal servitude. Fifteen sentences were suspended. One defendant was found not guilty. Penalties for foreign national non-registrants, totaling 14 sentences, tried in Military Courts varied from ¥ 5,400 to ¥ 97,200 fine and from three months to three years penal servitude. Seven sentences were suspended.

The total amount of narcotics lost through thefts was comparatively small including 38 grams of morphine, later recovered, stolen from the manufacturer. Seven out of the 30 persons responsible for the thefts were arrested.

The report also summarized the activities of narcotic agents as follows:

Inspection of registrants	1,749
Investigations originated	301
Investigations concluded	187
Investigations not concluded	328

Recidivists

From August 1947 to 30 April 1949 there were 41 recidivists among narcotic violators. They are classified as follows according to nationality:

Japanese	34
Korean	2
Chinese	5

SECTION IV WELFARE DIVISION

Licensed Agencies for Relief in Asia (LARA)

Overseas shipments of relief supplies to LARA, number 153 through 163, have arrived in Yokohama and contained 488.91 tons. These shipments included the following relief items:

- a. 153rd Shipment: Arrived aboard the S.S. Flying Scud on 10 April and contained 110.35 tons (food).
- b. 154th Shipment: Arrived aboard the S.S. Andrew Jackson on 11 April and contained 260.38 tons (food, 243.1 tons - clothing, 15 tons - medical supplies, 85 tons - miscellaneous, 1.43 tons).
- c. 155th Shipment: Arrived aboard the S.S. Pioneer Mail on 14 April and contained 54.08 tons (food, 37.15 tons - clothing, 16.63 tons - miscellaneous, .3 tons).
- d. 156th Shipment: Arrived aboard the S.S. President Pierce on 14 April and contained .7 tons (clothing).
- e. 157th Shipment: Arrived aboard the S.S. Montana on 14 April and contained 1 tons (miscellaneous).
- f. 158th Shipment: Arrived aboard the S.S. Pacific Transport on 14 April and contained 6.2 tons (clothing).
- g. 159th Shipment: Arrived aboard the S.S. President Wilson on 16 April and contained 6.8 tons (food, .07 tons - clothing, 6.3 tons - medical supplies, .23 tons - miscellaneous, .2 tons).
- h. 160th Shipment: Arrived aboard the S.S. Young America on 20 April and contained 10.40 tons (food, 10.05 tons - miscellaneous, .2 tons).
- i. 161st Shipment: Arrived aboard by the S.S. Lakeland Victory on 25 April and contained 11.85 tons (food, 1.95 tons -clothing, 9.2 tons - miscellaneous, .7 tons).

- j. 162nd Shipment: Arrived aboard the S.S. President Van Buren on 25 April and contained 12.7 tons (food).
- k. 163rd Shipment: Arrived aboard the S.S. Indian Bear on 26 April and contained 14.45 tons (food).

The total LARA relief supply shipments to Japan, as reported, now totals 8,515.77 tons, consisting of the following items:

	<u>Tons</u>
Food	6,439.78
Clothing (including bedding and shoes)	1,650.11
Medical Supplies	86.80
Cotton (raw)	207.62
Miscellaneous (soaps, seeds, findings, etc.)	<u>131.46</u>
TOTAL	8,515.77

Japanese Red Cross Society

Volunteer Services:

Briefly outlined below are the statistics covering "Volunteer Service Activities" as reported by the listed Red Cross Chapters (prefectural) for the period 1 June 1948 - 30 April 1949:

<u>Chapter</u>	<u>Types of Service</u>	<u>No. of Volunteers</u>	<u>Remarks</u>
Tokyo	Services to Repatriate from Russia at Tokyo Station	37	5 & 6 June, 24 June - Served tea, received letters for mailing, welfare inquiries.
	Entertainment Services	108	19-20 December, for benefit of the repatriates. 29 January at Junior Red Cross Rally. 21 Feb. for the physically handicapped.
	Production Service	22,380	Ripping of ARC ditty bags: Musashino - 7,000 bags (3-20 Sept.) 500 volunteers Ota-ku - 113,650 bags (7 Sept. - 4 Nov.) 21,380 volunteers Arakawa-ku - 15,000 bags (24 Sept. - 2 Dec.) 1,000 volunteers
	Services at Blind School	250	Lunch preparation, dormitory service, reading and writing, nursing
	Nursery at Control Red Cross Hospital	108	2 or 3 volunteers on duty from 2 to 5 PM to care for the children of the hospital visitors
Nagasaki	Disaster Volunteer Service	129	Flood disaster of 11 September assistance to disaster victims
	Road Cleaning	149	Beginning 10 January
Ibaraki	Comfort articles to hospital patients	1,200	Postal cards, candy, pickles, letters given to National Hospital patients.
	Comfort articles to children's institutions	5,500	Food and toys to children in Homes for Delinquents
	School hot lunch service	150	

	Services to the aged	6,800	
	Comfort articles to the indigents	250	Year-end presents and money
Gumma	Vessel disaster rescue service	149	5 Jan. - vessel disaster near Iwojima lighthouse - rescue
	Child welfare service	200	Discussion meetings for mothers on child welfare
	Services at Blind & Deaf Mute School	125	Beginning 5 April - cleaning service twice a week
	Eat extermination	75	Made 10,000 rat extermination baits
Tochigi	Material and money collection	80	For Fukui Disaster victims: collected ¥ 49,700 and 136 articles during 6 days in August
	Gifts to the indigents	20	¥ 5,000 given to Home for War Widows and ¥ 3,000 to Home for War Orphans, earned by the volunteers.
Nara	Fire disaster service	28	Municipal office building fire
	Fire disaster service	45	Fire in front of Nara station
	Meeting for the aged	42	230 aged persons over 70 years of age invited
	Assistance to Mobile Clinic	320	Assisted Chapter Mobile Clinics in various areas
	Gift to Fire Department	25	¥ 3,000 earned by the volunteers donated to the town fire dept. for their activities
Shizuoka	Visits to indigent families and institutions	680	Visits to National Hospitals, Children's institutions, war sufferers families, etc.
	Nursing and comfort services to disaster victims	350	Volunteer groups in Shizuoka, Numazu, Kanaya, Iwamatsu, Higashi Kawane - nursing services to the wounded, comfort articles to the victims
	Service on Mobile Clinic Day	5	Staff aid service (Morimachi Volunteer group)
	School Lunch service	50	Morimachi Volunteer Group
	Fighting mountain fires	36	Morimachi Volunteer Group
Nagano	CC-RC Fund Drive		Entire volunteer groups in the prefecture
	Sewing service	20	On 3 Dec., Volunteer women remade bedding for duty officers at the school and town office.
	Services to the aged	53	Aged persons invited to the elementary school and served tea and cakes
	Service to repatriates	80	17-23 Oct. - tea party for the repatriates, visits to

			their homes and donations of gifts
	Collection of money and articles for five victims	209	Held drive during March for victims of Noshiro and Akashi fires
Miyagi	Disaster service	20	Assisted nurses in time of fire disaster
	Disaster service	30	Assisted in canteen service
	Entertainment's for hospitalized patients	60	
	Entertainment's war victims	30	
	Road cleaning	120	
	Collection of newspapers	28	800 newspapers collected to send to Japanese in South Pacific
	Services to the Municipal Police	50	Encouragement in Savings account for the benefit of Municipal Police Building Project
	Road repairing service	30	After typhoon "Ione"
	Fund raising for school building	50	
	Cooperations with CC Fund Drive	300	
	Extermination of rats and insects	20	Distribution of DDT to the homes
	Service to hospitalized patients	45	Donation of money and articles to patients at National Hospital
Iwate	Health service	22	Assisted in disinfection of homes -498 hours' service
	Services to patients	45	Visits and services to patients -381 hours
	Services to disaster victims	73	276 hours
	Services to families	50	Errands for families short of hands -47 hours
	Services to repatriates	16	Various services including street collection of money 20 hours
Fukui	Hot lunch service	272	Twice a week in Elementary School
	Comfort articles	272	Rice cakes made from rice donated by volunteers, given to Home for the Aged
	Child Welfare service	495	Building of Nursery School playground

	Service at Fukui Station		Planning to begin in April
	Disaster service	1,100	Community kitchens, etc.
Okayama	Service by Nursing Volunteer Group	45	Assisted in training of Prefectural Disaster Relief Corps
Kochi	Disaster service	211	
	Welfare service	1,319	Distributed New Year rice cakes to 59 indigent families with the money earned by the vol. Also cleaning of roads and shrines and assisted in fund drive
	Family service	122	Services to families with illness, etc.
	School service	24	Assisted in school rebuilding
	Services in Blind Deaf School	34	On 15 Sept., prepared lunch for teachers and students, Chapter persons and volunteers, held discussions on health and demonstration of home nursing techniques given.
Kagoshima	Flood disaster service	200	Flood disaster of 14-15 July, in Kawauchi assisted in shelter and canteen services for 500 victims. Co-operated with prefectural office in road cleaning and disinfection.
	Service at time of fishing boat disaster	30	Due to typhoon 23 fishing boats were capsized on 8 March with 34 victims. Assisted firemen in those rescue, donated 1 cup of rice each, cooked and served them to the victims. Collected bedding, clothes and helped find shelter.
	Service to repatriates		Since last year, volunteers in various districts met the trains carrying repatriates when they stopped at their station and served them hot tea.

Public Assistance - Tenth Revision of Standard Allowances

The Ministry of Welfare is currently determining an increase (10th) in standard allowances for public assistance. Increases will be based on official price increases in foods and other rationed items, as well as a possible increase in the amounts for fuel, housing, clothing and other items. It is believed that another change will result in allowing 100% grants by local governments.

Projected In-Service Training Program of the General Affairs Section of the Bureau of Social Affairs, Ministry of Welfare

Following is a statement regarding the Ministry of Welfare plans for in-service training:

- a. Objectives:
 - 1). To establish and carry out a social work training program for personnel in national and local offices.
 - 2). To stress the training of government personnel.
 - 3). To initiate and practice a tangible "in-service training program".
- b. Organization:

- 1). To appoint training officers in the sections and divisions concerned of the Ministry of Welfare and organize a steering committee on training, to consist of the vice-minister, bureau and section chiefs as chairmen and members respectively.
 - 2). A full-time secretary in each "Misei-bu" (Prefectural Welfare Department) is requested.
 - 3). A full-time in-service training officer is requested.
 - 4). An official in local sub-offices shall take charge of training.
- c. Method:
- 1). To hold a short training course for prefectural full-time officials and full-time "in-service training" officials, by the Ministry of Welfare.
 - 2). Attendance of a training director will be expected at block meetings of the Minsei-bu-cho (Welfare Department, Chief, Kosei-Ka-cho, (Welfare Section Chief) and Jido-Ka-cho (Children's Section Chief).
 - 3). The Social Work Training Schools in Tokyo and Osaka will be improved and prefectures will be urged to send students so that the schools will profit by meeting prefecture needs and the prefectures will have more trained personnel.
 - 4). Prefectures shall hold training classes for city, town and village welfare officials. At business conferences and research meetings, the prefectures shall distribute various documents on social work matters.
 - 5). In-service training shall be promoted among social workers, both in public and private institutions, and all time serving directly in the social work field.

Remarks: A part of the expense for the holding of "Minsei-iin" meetings "Jido-iin" meetings, nurse training meetings, and institution personnel training meetings and nurse training schools shall be borne by the state. By "in-service training" is meant that practical training is given to persons already serving in this field and the purpose is to more effectively attain a definite skill in the position. Guidance will be given in the form of case work, discussions, lectures and writings.

Group Work Seminars

Osaka College of Social Work: Forty-one students of which seven were women, were awarded certificates. The age range was 23 to 60 years. All students returned to positions in institutions, settlement houses, prefectural offices and other types of social work in which they would immediately use their training. Prefectures represented were: Osaka 26 students, Hyogo 6, Kyoto 4, Nara 2, Wakayama 2, and Shiga 1.

Japan Social Work School: Fifty-four students of which 25 were women were awarded certificates. The age range was from 21 to 67, of which 25 students were 30 years of age under. All about the seven who were students in the one-year course of the Japan Social Work School returned to positions in prefectural offices, orphanages, schools and private social agencies. Prefectures represented were: Tokyo 29 students, Kanagawa 4, Chiba 3, and Hiroshima 2. One student each came from Saitama, Tochigi, Aomori, Akita, Yamagata, Toyama, Nagano, Shizuoka, Mie, Tokushima, Kumamoto, Gifu, Ibaraki, Gumma, Niigata and Oita.

At both schools the daily five-hour session was broken into short periods of lectures, committee work, individual conferences, group discussion, and recreation. The basic material was given in Japanese in a half hour lecture by the interpreter (previously prepared) which was followed by one and one-half hours of group discussion giving direct contact between the instructor and students.

Visits to three different types of agencies, including settlements and institutions, was preceded by a discussion of items to be observed, and followed by individual written comments and class discussion. Written assignments during the course and the fiscal true-false examination on basic principles, gave an opportunity to evaluate the students' comprehension of the material given. Those students who were already working with groups and could therefore test the principles by their experience, showed a readiness to accept new methods. They should reflect in their communities the value of these courses.

Continuing study of group work is to be done by these students who have organized group work associations, and it is expected that group work will be included in the curriculum of the two schools of social work hereafter.

Public Assistance - Minsei-iin

Junior and Assistant Minsei-iin - Discussions with the Ministry of Welfare and with the National Minsei-iin Rei Mei have resulted in an order excluding Junior or Assistance Minsei-iin from any aspects of the public assistance program, including sitting in on local council meetings while specific cases are under discussion. Individual case loads do not appear to warrant the use of assistants in any areas which have been reviewed in connection with this problem. The Minsei-iin Rei Mei stated that Assistants and Juniors were not being used for these purposes. (Sha-Otsu-Hatsu No.110, 23 April 1949).

Fund Raising by Minsei-iin - Sha-Otsu-Hatsu No.72, 15 March 1949, orders governors to limit the use of Minsei-iin to their legally authorized duties and suggest that Minsei-iin, as such, shall not participate in fund-raising and in other activities in their communities. The Minsei-iin Rei Mei further suggested that Minsei-iin officially should not raise funds for their own welfare use; however, in connection with Red Cross or Community Chest fund campaign they may participate as ordinary citizens and are to be so identified.

Public Assistance - Unauthorized Restrictions

Complaints continuously reach Public Health and Welfare Section, SCAP concerning the fact that local officials are refusing public assistance to some families on the basis that the family falls under the category of "repatriates", "war sufferers", or families of military personnel who have died overseas or still believed to be overseas. Generally the complaint quotes the public official or Minsei-iin as telling them that the rejection is based on orders from Military Government or from SCAP. It is not known whether local officials use this method as a reason for rejection in otherwise cases, or whether they believe some such order to be in effect.

Welfare Officers should clarify this point with local officials and re-emphasize that public assistance is based on need and not on category.

Day Nurseries under the Ministry of Welfare

A plan submitted by the Ministry of Welfare (Children's Bureau) providing for the inclusion in the school Lunch Program of those children attending public and private day nurseries has been approved. 248.17 metric tons of powdered skim milk have been allocated to the 2,111 day nurseries involved, and will provide 25 grams of powdered skim milk per day (for 50 days) for 198,540 pre-school children included in these nurseries during May and June.

With information going to the prefectural welfare departments from the Ministry of Welfare, receipt and report forms are included together with menus and other information to be utilized by the prefectures in the initial program to be developed during May and June. The extension of this program beyond 30 June is dependent upon the success of this initial experiment.

Copies of informatives going to the welfare departments will be forwarded to each Military Government Welfare Officer as soon as the translation is completed. A tabulation of the allocation of skim milk for rationing in nursing facilities for the first fiscal quarter (May and June) is given below:

Prefecture	Number of Facilities	Number of Persons	Quantity per Day (g)	Days of Nursing	Quantity demanded	Remarks

SECTION V
SOCIAL SECURITY DIVISION

National Health Insurance

Chapter VI of the National Health Insurance Law, paralleling Articles 284 through 293 of the Social Autonomy Law, permits cities, towns, and villages to cooperate in order to obtain joint National Health Insurance objectives. In certain areas this cooperation has been most significant.

For example, in Shizuoka Prefecture six communities have federated under the provisions of the National Health Insurance Law for purpose of establishing and operating a cooperative non-profit hospital. Each municipality concerned therein, however, conducts its own National Health Insurance program--three being municipally administrated and three with administration by Agricultural Cooperative Associations.

This particular project was supported by the Prefectural National Health Insurance Federation with the assistance of the Insurance Bureau of the Ministry of Welfare. The initial cost of establishment was raised by contributions from each cooperating town, with amounts of contributions based upon the number of insured and the distance of the town from the hospital site. The Ministry of Welfare authorized an appropriation to supplement the contributions and the remainder required was borrowed from in the area concerned.

The hospital has been in operation for a year and has been quite satisfactory. It has balanced its budget and has been able to pay off a part of the loan without additional assessments. This was accomplished even though the hospital operated on a fee-per-point rate less than the standard recommended by the Medical Fee Calculating Committee.

Persons insured under National Health Insurance have priority to the facilities offered but persons insured under other social insurance plans, namely, Health Insurance, Seamen's Insurance and Mutual Aid, also receive service. In addition, services are extended to the few non-insured persons in the communities. Initial joint administration has been limited to a National Health Insurance representative from each community on a joint governing body, however, an expansion of the body is now planned to include representatives from all social insurance groups who use the facilities. This project is a good example of joint cooperation which may provide a method for communities which have heretofore been unable to effect satisfactory programs.

Full-Year Training Course in Public Health

On 5 July the Institute of Public Health in Tokyo will inaugurate a full-year course in public health for medical graduates. Medical officers employed in prefectural and municipal health departments or health centers and teachers of public health in medical schools are eligible to attend. The course will include broad fundamental training in the various public health subjects and three months of supervised field work in health centers. It is designed particularly for younger medical graduates who are beginning a career in public health administration or teaching. The series of 3-month "refresher" courses for medical officers already established in their positions still will be continued at the Institute with the next course beginning 7 July.

The Institute of Public Health will furnish dormitory accommodations for students in the full-year course and will pay expenses connected with field teaching activities; subsistence expenses (estimated at ¥ 6,100 per month) must be borne by the student or by the governmental agency supporting him. An official announcement concerning the course was sent by the Ministry of Welfare on 21 April to prefectural governors and on 10 May to the deans and professors of hygiene in medical schools.

Training Course for Veterinarians

The seventh two-month course for public health veterinarians will be held at Institute of Public Health in Tokyo from 13 June to 13 August. Veterinarians employed in meat, milk and seafood sanitation activities in prefectural and municipal health departments and in health centers are eligible to attend. Well-qualified candidates should be selected. An official announcement concerning the course is being sent to prefectural governors by the Ministry of Welfare.

SECTION II PREVENTIVE MEDICINE SECTION

Tuberculosis Control

Reference is made to Section I, Weekly Bulletin #119, in which announcement is made of the arrival of imported streptomycin in Japan. Due to the small amount received in relation to potential demand, the matter of allocation was very difficult. The Ministry of Welfare's plan of distribution was approved by PHMJG 103, dated 7 May 1949. The plan is designed to restrict the use of the imported streptomycin to well-qualified hospitals. Consideration was given to the annual number of tuberculosis deaths and number of tuberculosis beds available in each prefecture as well as to the sponsorship and facilities of the institutions involved. Many prefectures and institutions will undoubtedly feel that they have not received their share.

In order to have the officials concerned better informed on the matter, the allocation table is attached as Inclosure No.1. The unit ##### is forty grams, the amount considered necessary for the treatment of one adult patient. It will be noted that about 12% is classified as "reserved". This is being held for use in emergencies or future allocation to those institutions which have demonstrated their ability to make most effective use of original distribution. The amount in the column "For General Use" is that which is to be allocated to hospitals by the Prefectural council on streptomycin.

Sanitation

The National government subsidy for insect and rodent control is listed in the attached Inclosure No.2. The same information was forwarded by the Ministry of Welfare on 10 May to each prefecture.

On 12 May the following telegram was sent to each governor by the Chief of the Public Sanitation Bureau, Ministry of Welfare.

"There is danger of an encephalitis outbreak. You will start full scale control program with sanitary teams and inspectors immediately".

Following this, detailed instructions were sent to the Governors outlining control activities that are to be carried out by the public health departments, the health centers, city, town and village sanitary offices and by individuals. In addition the instructions included information affecting agencies other than the public health agencies, as follows:

- a. Agriculture section: To procure and distribute to each live stock owner, a sufficient quantity of DDT 5% residual effect spray (together with appropriate instructions for use) to spray all animal barns and shelters, and to coordinate equine encephalitis control with Japanese B encephalitis control.
- b. Public works: To expedite the cleaning of roadside ditches and drains.
- c. Public safety: To clean and maintain fire water reservoirs in such a manner as to prevent mosquito breeding.
- d. Cleaning sections: To collect and dispose of all trash and refuse collected by individuals during cleanup work and to remove regularly all garbage and refuse particularly during the mosquito and fly season.

The Ministry of Welfare has made provisions to supply the Ministry of Agriculture with 200,000 gallons of 5% DDT residual effect spray to be used for the spraying of animal barns and sheds. Necessary guidance and assistance should be given by Public Health personnel in order to insure prompt and proper execution of the program. Substitute material such as pyrethrum, cresol solution, etc., should not be used. Shipments of the 5% DDT residual effect spray were made to each prefecture on 12 and 13 May for distribution through the Agriculture Associations.

SECTION III NURSING AFFAIRS DIVISION

Publications

The National Organization Public Health Nurse Manual will be on sale 20 May at ¥ 300.00 for Bible paper and ¥ 350.00 for regular paper. Send orders direct to

Far Eastern Literary Company

Room 135, Finance Bldg. Annex
2-1chome, Uchisaiwai-cho
Chiyoda-ku, Tokyo

SECTION IV
VETERINARY AFFAIRS DIVISION

Standard for Ice Candy

The following standard was established by the Ministry of Welfare in the manufacturing of Ice Candy. This standard was presented to a representative group of members of the Japan Ice Candy Associations who will disseminate the information to all members for compliance. Prefectural Government Health Departments will be notified of the standards and will take the necessary action to obtain compliance.

a. Freezing tubes must be large enough to adequately observe and clean the interiors. Metal tubes that do not become rusty will be required. Eventually angular corners will be replaced by rounded corners.

b. Original water must be city water or a laboratory certified water safe for drinking. However, boiling of the water will be required that is to be utilized in making the candy. The length of time of boiling will be five minutes, and if sediment is present in the water, it will be filtered.

c. Equipment utilized for mixing or preserving the materials, and freezing tubes must be sterilized either by boiling or soaking in chlorine water (750 p.p.m).

d. The liquid used for the ice candy will be kept in clean and lidded vessels and when transferred to the freezing tubes, the transfer tubes must be thoroughly cleaned prior to use. When food solids are mixed with the liquids, pincettes shall be used.

e. Ice candy will have a stick handle (hashi) and the hashi will be boiled prior to use. The completed product will be handled by the handles only.

f. Water for melting and drawing the frozen product shall be certified water.

g. The finished product must be retained in containers that are protected against fly and dust and free from the presence of melted water.

h. Ice candy shall not contain more than 1,000 bacteria per cc of melted water, and when milk is used, not more than 3,000 per cc. Ice candy shall have no coli-group bacteria that changes Endo-medium (Fuchsin- milch sugar agar agar red).

i. Artificial sweet materials, pigments of flavors which are used for ice candy shall be suitable according to the provisions of the Food Sanitation Law.

j. Ice candy shall not contain any materials of animal origin except gelatin and for the time being, milk.

k. Ice candy shall not contain any materials of mineral origin except as stated in item i.

l. Ice candy that contains Indian beans, fruit juice, etc., shall not contain any artificial pigments.

m. Metal containers shall not be cadmium plated or plated any other plating subject to chemical action when placed in contact with fruit juices.

Veterinary License Bill

The Veterinary License Bill with a supplementary Amendment is now under consideration in the Diet. Details of the Bill will be disseminated upon final Diet action.

Animal Diseases

The Animal Hygiene Section, Ministry of Agriculture and Forestry reported the following outbreak of animal diseases for the period 7-13 May.

<u>Prefecture</u>	<u>Disease</u>	<u>Number of Cases</u>
Kyoto	Swine-cholera	5
Yamagata	"	6
Saitama	"	3
	Swine erysipelas	1
Chiba	"	10
Fukuoka	"	2
Kagoshima		2

SECTION V SUPPLY DIVISION

Pharmaceutical Affairs

It is encouraging to note that few complaints have been reported in recent Military Government Monthly Activities Reports on matters under sub-heading "Supply". This sparse comment or the omission of this sub-heading entirely, is encouraging if it signifies a smooth operation of supply activities and an ample supply of necessary items.

Vigilance in pharmaceutical and supply matters is ever necessary. Not many months ago Japan was in a medical supply situation of scarcity. That condition of scarcity has rapidly improved due to the increased volume of production accompanying economic rehabilitation in the pharmaceutical and allied industries. This increase in productivity has made it possible to remove distribution controls from an increasing number of items, including newly introduced medicines such as sulfathiazole, penicillin, mapharsen and bismuth subsalicylate injection. And now (see previous issue of the Weekly Bulletin), controls over, the distribution of DDT products have been removed.

Progressively, as the pressure is removed from a struggle against scarcity, attention becomes focused on the establishment of and adherence to high standards of quality of materials, and of ethical practices, by the professions and industries concerned in pharmaceutical affairs. The emphasis has evolved from quantity to quality.

The legal basis was established for the enforcement of these standards and ethics by enactment in July 1948 of the Pharmaceutical Affairs Law and the promulgation of its Enforcement Regulation in August. Copies of these documents in official English translation have been supplied to Military Government personnel and others concerned as inclosures with copies of the Weekly Bulletins No.85 and No.88. It is important that prefectural health and law enforcement officials be thoroughly acquainted with the provisions of this law and its regulations, and it will be extremely satisfying for Military Government Public Health and Legal Officers to be likewise familiar with those provisions, using that knowledge as a means of constant surveillance to insure a progressive movement toward an abundant supply of safe and high quality commodities essential to improved public health activities.

Coal Allocation

The allocation plan for standard coal to the pharmaceutical manufactures under the ESB category "Medicines" for the first quarter JFY 1949 (April, May, June) by districts and prefectures, (Unit: Metric Ton) is attached (Inclosure No.3). A total of 22,000 metric tons of high calorie and 5,000 metric tons of low calorie standard coal has been allocated to manufacturers in 39 prefectures throughout Japan for the period.

SECTION VI NARCOTIC CONTROL DIVISION

Enforcement

The arrest of one Korean and three Japanese resulted in the seizure of a small clandestine laboratory which had prepared 1,500 ampoules of heroin solution from five grams of heroin hydrochloride stolen from a pharmaceutical company during the war. The strength of the solution reduced to 30 percent of normal potency to produce the large number of ampoules. The shop of an electric bulb manufacturing company was being used as a

laboratory. The broker, the Korean, was receiving ¥ 35 per ampoule while the Japanese were attempting to obtain ¥ 500 per ampoule when arrested in Tokyo.

SECTION VII WELFARE DIVISION

Public Assistance - Correction to Inclosure

Item 5 of Sha-Otsu-Hatsu No.106 which was inclosed with Public Health and Welfare Weekly Bulletin No.122 should read in part: "which is prescribed in Article 8, para.1 of the Enforcement Regulation (#38)". Item 10 should read in part: "Its acceptance shall not however, be refused on the ground that the form of a complaint is not adequate".

Item 9 provides that the handling of a complaint by the Governor is one of the duties which cannot legally be delegated to the District Chief.

Day Nurseries Under the Welfare Ministry

Reference Weekly Bulletin No.123, the informatives and dispatches prepared by the Children's Bureau, Ministry of Welfare are attached as Inclosure No.4, for information of Welfare Officers. The inclosure consists of Hatsu-Ji #38 dated 11 May 1949. "Outline for the Day Nursery Program", March 10, 1949: Ji-Hatsu #401, dated 11 May 1949; Receipt Forms to be utilized by the prefectures in acknowledging receipt of items received from the central office; Receipt Forms to be given to the Prefectural Welfare Department upon receipt of the supplies by the day nurseries concerned; a Stock Record Form to show amounts received, balances on hand, etc; Report of the Operation of the Lunch Itself showing number of children included, number of lunches served together with the Report of the Management Aspects of the Program. Also inclosed is a statement on "Principles of Dealing with the Day Nursery Lunch Materials", an outline of the responsibilities of the committee for the day nursery school lunch program and menus as suggestions indicating ways that skim milk can be included in soups and stews to provide one-dish servings. The last two include a schematic diagram of the organization of the day nursery school lunch program and a statement regarding the nursery school lunch sub-committee of the Central Child Welfare Council.

While this program is designed to be a self-supporting one, families without means to reimburse the nursery for the school lunch feeding will be assisted, as necessary, through the medium of the public assistance programs.

Licensed Agencies for Relief in Asia (LARA)

Overseas shipments of relief supplies to LARA, Numbers 164 and 165, have arrived in Yokohama and contained 309.64 tons. These shipments included the following relief items:

- a. 164th Shipment: Arrived aboard the S.S. Maiden Creek on 25 April and contained 303.78 tons (food, 274.68 tons - clothing, 27.85 tons - miscellaneous 1.25 tons).
- b. 165th Shipment: Arrived aboard the S.S. Pioneer Dale on 9 May and contained 5.86 tons (food).

The total LARA relief supply shipments to Japan, as reported, now totals 8,825.41 tons, consisting of the following items:

Food	6,720.32 tons
Clothing	1,677.96 tons
Cotton (raw)	207.62 tons
Miscellaneous (soaps, seeds, findings, etc.)	<u>132.71 tons</u>
TOTAL	8,825.41 tons

Japanese Red Cross Society

Junior Red Cross:

Outlined below is a summary of the activities covering the Junior Red Cross National Conference held at Yokohama (8 - 10 May) in cooperation with the Kanagawa Prefectural Red Cross Chapter and the Yokohama Board of Education:

Place: Mainichi Hall, Japan Trade Fair Ground, Yokohama.

These Present: Two hundred and thirty representatives from all the prefectures in Japan including 147 Junior Red Cross members and 83 teacher-sponsors and Chapter personal. Originally ##### were issued for boy and girl and sponsor or Chapter member from each of 45 Chapters but many more came than were expected.

Object: For the purpose of getting the Junior Red Cross representatives from all the prefectures together on the occasion of Japan Trade Fair where the Junior Red Cross in Kanagawa had set up a Junior Red Cross room, showing the purpose, projects and activities of Junior Red Cross in pictures, dolls and other material.

SECTION VIII SOCIAL SECURITY DIVISION

Reference, Appeals Boards and Advisory Councils

A review of Military Government Monthly Activities Reports for the period ending 31 March 1949 indicates some mis-understanding in distinguishing between the National Health Insurance provisions for appeals procedures and those for advisory councils and also to the appeals procedures available to persons insured under society-managed Health Insurance.

To quote, for example:

*****Company Health Insurance Society has no appeal procedure or Advisory Board. It was recommended that a board be elected by the insured persons to handle appeals, etc.”

A referee has been appointed by the Ministry of Welfare for each prefecture and his jurisdiction extends over appeals by persons insured under Welfare Pension Insurance, Seamen’s Insurance, government-managed Health Insurance or society-managed Health Insurance. These laws do not provide for appeal boards for individual prefectures on Health Insurance Societies. One appeals board, for each of the three laws named above, has been appointed by the Ministry of Welfare and these three boards convene in Tokyo to hear appeals made from the references’ decisions.

Similarly, one advisory council has been appointed by the Ministry of Welfare under each of the three laws named above and three councils convene in Tokyo to advise the Ministry of Welfare concerning the respective programs. The advisory councils and appeals boards constitute six separate bodies.

To quote from another report for the same period:

“The *****Company Health Insurance Society has no particular form of appeal system for the insured ##### are generally accepted on an impartial basis by the ##### ##### ##### of the meat commendatory findings of this review was the excellent job of publicizing the insurance program.”

The appeals procedure for society-managed as well as government-managed Health Insurance is provided in Chapter VI of the Health Insurance Law (Chapter VII, following the 19-9 amendments to the law) and Cabinet Order 274 of 1948. It is the obligation of the prefectural insurance section and the prefectural referee to acquiring all insured ##### with the facilities available for appeals and fair hearings. The referee should be independent of the prefectural insurance section in order that his decisions shall not be influenced by ##### being connected in any way with the original determinations of the administrative agency. For the same reason, no employee of the Ministry of Welfare is a member of any of the central appeals boards.

To quote again:

“The ***** Town National Health Insurance Association does not have an Appeal Board, all appeals at present are handled by the official in charge. It was recommended that an Appeal Board be set up.”

Each governor has appointed a prefectural National Health Insurance Appeals Board under Article 52-3 of the National Health Insurance Law. Appeals and mediation are provided for under National Health Insurance in Chapter VIII of the Law and Cabinet Order 274 of 1948. There is no provision in law for prefectural referees, a central (national) appeals board, or a referee or appeals board in an individual National Health Insurance

Association. It is the obligation of the prefectural insurance section to inform persons insured under National Health Insurance of the procedure to be followed in appealing to the prefectural board.

The National Health Insurance Law (Article 8-18) and Cabinet Order 224 of 1948 provide for advisory councils where the program is administered by a city, town or village but not where it is administered by an association or a corporate juridical body. There is no prefectural or national advisory council provided by the National Health Insurance Law. The members of the advisory council are appointed by the mayor of the city, town or village, with the consent of the assembly.

Social Insurance Statistics

Benefits paid Under Welfare Pension Insurance

Reference is made to Public Health and Welfare Bulletin Nos. 97 and 106 for a brief description of the Welfare Pension Insurance program and monthly benefit data for the first six months (April through September 1948) of the fiscal year 1948/49.

Inclosure No.5 to this issue of the Bulletin lists comparable benefit data for the months of October 1948 through February 1949. The upward trend in the level of benefits noted before has continued throughout this period owing to rises in the wage level.

Since July 1948 the number of insured and of establishments covered has risen appreciably. As of the end of February 1949 the total number of insured was reported as 5,643,507; of these 4,253,447 were men and 1,390,060 women. Five million six hundred nineteen thousand, two hundred and fifty-one persons were compulsorily covered. ### on a voluntary basis. The total number of establishments covered was 135,440 of these 129,085 were compulsorily covered, 6,304 on a voluntary basis. During that month, wages ### under this program averaged ¥ 4,933 namely ¥ 5,573 for men and ¥ 2,977 for women.

Amendments to the Welfare Pension Insurance Law which passed the Diet on 28 April 1949 further increasing ##### and benefits will not take effect until 1 May 1949 and will be summarized when May statistics are presented.

SECTION II
PREVENTIVE MEDICINE DIVISION

Smallpox

The recent outbreaks of smallpox, which have occurred in Fukuoka prefecture since the first week of April and in Osaka since about 22 April, still remain for the most part concentrated in their respective areas of origin. However, the occurrence of other cases, in places near or contiguous to those of the original foci, demonstrates the danger of spread of the disease, particularly along lines of travel. There is danger of a nation-wide epidemic unless the strictest possible control measures are now unremittingly enforced.

The supply of smallpox vaccine immediately available is not sufficient to undertake an immediate revaccination program for the entire population of Japan. It is, however, adequate for necessary vaccination of contacts and persons in the areas where cases occur. Present plans call for (1) the immediate re-immunization of all persons in areas where smallpox cases have been reported or may be reported in the future, (2) re-immunization of the entire population of Japan as rapidly as vaccine becomes available beginning with the most vulnerable areas and progressing to the least vulnerable areas.

In case of any doubt whatsoever, each reported suspect case should be regarded from the epidemiological standpoint as a genuine case until proved otherwise, and all precautionary measures should be taken. The presence of even a low level of immunity, in persons who have previously been vaccinated, may produce a modified disease so that a positive diagnosis may be difficult without careful study.

Military Government health authorities are urged to investigate all reported cases and to rigidly enforce appropriate control measures.

SECTION III
NURSING AFFAIRS DIVISION

Education

The Chiefs of the Nursing and Health Center Sections, Ministry of Welfare, jointly issued a directive (I-Kan No.20) to each prefectural health department on 18 February 1949, which further clarified the use of health centers in nurses field training. This directive, quoted below, provides for field training at any health center and not necessarily the model health center.

“The field practice of students at the one or two year Public Health Nurses’ Training School, Nurses who have passed the public health nurses’ examination and the students of the 5-month Public Health Nurses’ Course should hereafter to be differentiated and practiced according to the function of health center as follows:

Items:

1. The entire field practice for the students attending the five-month Public Health Nurses' Course given by the prefecture, and one month out of the three month field practice for the students attending the authorized one or two year Public Health Nurses' Training School may be given at the model health center.

2. At the health centers other than the model health centers, field practice for those who have passed the public health nurses' examination shall be given to those who need health center experience for certification.

3. The five month Public Health Nurses' Course given by the prefectures should be used to re-educate those who have obtained public health nurses' license by taking only the public health nurses' examination before the amendment and should guide them to acquire thorough technique. However, this number should be limited so that it will not interfere with the regular attendance."

Ministry of Welfare Ordinance No.1, dated 20 May 1949, establishes the requirements for class "A" and "B" schools of nursing.

SECTION IV VETERINARY AFFAIRS DIVISION

Animal Hygiene School

The Animal Hygiene Section, Bureau of Animal Industry, Ministry of Agriculture and Forestry will conduct schools on animal hygiene at the Animal Hygiene Experimental Laboratories located in Kodaira, Taniyama, Wadayama and Shichinohe. The schools will last for a period of two weeks and the students will be selected from the veterinarians now engaged in animal disease control work. Military Government veterinarians have been asked to present special lectures at the school located in their region.

School Schedule

Kodaira, Tokyo	May 23 - June 5
Taniyama, Kagoshima	May 24 - June 6
Wadayama, Hyogo	June 1 - June 14
Shichinohe, Aomori	June 5 - June 18

Negligent Reporting

The Veterinary Affairs Section, Sanitation Bureau, Ministry of Welfare has been unable to submit complete reports to Public Health and Welfare Section due to the failure of prefectures to submit their reports on schedule. The incidence of disease has increased in the central Honshu area and it is necessary to have information relative to rabies on a weekly basis until effective control has been accomplished. It is suggested that Military Government Health Officers and Military Government Regional Veterinarians bring this matter to the attention of the concerned individuals without delay.

Rabies in Dogs

The incidence of rabies in dogs in the Kanto region remains constant and presents a problem in the control due to the rapid influx of stray dogs into the region. Since 1 January 1949 a total of 91 cases of rabies have been reported in six prefectures, namely, Tokyo (41), Kanagawa (10), Chiba (19), Saitama (14), Ibaraki (3) and Gumma (4). Rabies vaccine is at present insufficient to supply all prefectures but top production will be reached in June and sufficient quantities will be available. Every effort should be made to round up the stray dogs and require city and prefectural authorities to establish an ordinance requiring all dogs be leashed until such time that a distinction can be made between individually owned dogs and those classed as strays. Where dog pounds do not exist, city and prefectural authorities should be advised to provide facilities for the impounding of dogs as a means of control and for observation.

Animal Diseases

The Animal Hygiene Section, Bureau of Animal Industry, Ministry of Agriculture and Forestry reported the following outbreak of animal diseases for the month of February and March 1949:

<u>Disease</u>	<u>February</u>	<u>March</u>
----------------	-----------------	--------------

Anthrax	0	3
Blackleg	2	0
Swine cholera	10	79
Swine erysipelas	120	16
Swine plague	3	16
Swine paratyphus	0	5
Rabies	9	22
Brucellosis	18	15
Trichomonas	141	214
Equine infectious abortion	27	51
Equine infectious anemia	60	69
Pullorum disease (fowl)	5,125	6,129
Strangles	26	13
Bovine Tuberculosis	76	51
Equine encephalomyelitis	5 suspect	1 suspect

(None of the suspect cases were confirmed).

Weekly Animal Disease Report

The Animal Hygiene Section, Bureau of Animal Industry, Ministry of Agriculture and Forestry reported the following outbreak of animal diseases for the period 14-20 May.

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Gumma	Swine erysipelas	1
Oita	"	2
Kagoshima	"	8
Chiba	"	1
Yamagata	Swine cholera	3
Tokyo	"	4
Iwate	Equine encephalomyelitis	1 suspect
Yamagata	"	1 suspect

SECTION V SUPPLY DIVISION

Import of Guinea Pigs

In order to supplement the supply of guinea pigs from Japanese production in an effort to accelerate the reassay program for biologic products, it has been necessary to schedule shipments of guinea pigs from the United States. A total of 10,000 animals was approved for emergency supply to Japan on GARIOA import program, scheduled to arrive in two equal shipments by air, the first the 15th of May and the second the 15th of June.

The May shipment arrived in Japan on 19 May and 23 May and was turned over immediately to the National Institute of Health for use in the reassay program. It is planned, with the use of these animals, to complete the reassay of all biologic products within the next two months.

Pyrethrum Emulsion

A total of 124,050 gallons of pyrethrum emulsion concentrate was manufactured during the period 25 April - 10 May. This quantity of concentrate will produce 3,721,500 gallons of finished insecticide. A total of 340,650 gallons of pyrethrum emulsion concentrate has been produced during the period 26 March - 10 May. The production program is well ahead of schedule and will provide the prefectures with sufficient quantities of the material to carry out scheduled public health programs.

The second distribution of pyrethrum emulsion concentrate for 1949 was made during the period 26 April - 10 May. The emulsion is supplied in 50 gallon drums of the concentrate which is diluted one part to thirty parts of water prior to use. Distribution was made as follows:

Distribution of Pyrethrum Emulsion Concentrate (unit: 50 gallon drums)

Fukushima	59
Saitama	43
Chiba	35
Tokyo	397
Shizuoka	87
Aichi	20
Nagano	15
Osaka	37
Wakayama	23
Tokushima	<u>31</u>
TOTAL	747

Distribution Summary of Public Health Supplies

Distribution figures for February and March 1949 have been tabulated and the following indexes have been computed, using 1948 monthly averages as basis:

	January-February-March Averages (1948 monthly average equals 1.00)	
Total Medical Supplies & Equipment Reported (Yen)	1.42	1.46
Controlled Medicines (Yen)	0.80	0.89
Non-Controlled Medicines (Yen)	1.50	1.58
Home Remedies (Yen)	1.56	1.36
Dental Instruments (Yen)	1.14	1.42
Dental Materials (Yen)	2.77	1.88
Rubber Medical Goods (Yen)	3.31	2.75
Cotton Sanitary Materials (Yen)	1.86	1.68
Medical Instruments (Yen)	1.26	1.19
X-Ray and Electro-therapy (pieces)	0.93	1.08
Rubber Sanitary Goods (kgs)	1.80	1.57
Absorbent Cotton (kgs)	1.44	1.35
Gauze (Meters)	1.42	1.22
Staple Fiber Bandage (Rolls)	0.62	0.65
Triangular Abdominal Bandage (pieces)	0.33	0.88
Lint (pieces)	2.00	2.87
X-Ray Film, 2½ X 2½ (Doz)	0.01	0.33
X-Ray Film, 4-¾ X 6½ (Doz)	0.53	0.64
X-Ray Film, 6½ X 8½ (Doz)	0.89	0.87
X-Ray Film, 8 X 10 (Doz)	0.94	0.78
X-Ray Film, 5 X 7 (Doz)	0.22	0.17
X-Ray Film, 10 X 12 (Doz)	1.43	1.29
X-Ray Film, 11 X 14 (Doz)	1.64	1.25
X-Ray Film, 14 X 17 (Doz)	-	0.25
X-Ray Film, 35mm (Roll)	0.80	0.54
X-Ray Film, Dental (Doz)	1.27	1.00
X-Ray Film, 120 Size (Roll)	1.06	1.11
Santonin (Tablets)	2.50	1.35
Sulfadiazine (Tablets)	0.01	0.31

Detailed distribution figures for medical, dental and sanitation supplies and Equipment for February and March, together with their monthly averages for 1946, 1947 and 1948 may be found in Inclosure No.2.

Distribution of Dusting and Spraying Equipment

During the period 1 - 14 May 1949, 4,887 pieces of dusting and spraying equipment were distributed to 34 prefectures as follows:

Prefecture	DDT Duster	Knapsack Sprayer	Semi-Automatic Sprayer	Hand Sprayer	Engine Sprayer
Hokkaido		2	52	1	
Aomori					6
Iwate					4
Miyagi	240	61			
Akita			5		1
Yamagata	48			25	
Fukushima		10			
Ibaraki		12	7		
Gumma			45		
Saitama	20	41	6

Fukuoka		20	3		
Saga	100	25	60		
Nagasaki	250	50	10	50	
Kumamoto		50			
Miyazaki	205	160			
Kagoshima	1,000	30			

SECTION VI NARCOTIC CONTROL DIVISION

Enforcement

An investigation in Hiroshima of narcotic violations in 1947 and 1948 has resulted in two persons being presently prosecuted. All persons concerned were Japanese nationals.

The apprehension in April 1949 of four Japanese nationals has resulted in the solving of hospital robberies beginning in May 1946 and to the present date, and ranging from Hokkaido to Ibaraki, Chiba, Kanagawa and Shizuoka Prefectures. Confessions were obtained from the defendants of thefts of narcotics or medicines from seven hospitals, one of which was robbed twice.

Recording System for Violations

Instructions are being sent by the Narcotic Section of the Ministry of Welfare to the Prefectural Narcotic Sections for instituting a new system of recording narcotic and taima violations in which violations in each prefecture are prefaced by three key letters for that prefecture and followed by a number. Investigations will be numbered in succession in chronological order for ease in locating at any time. All investigations originated since 1 April 1949 will be numbered under the new system.

SECTION VII WELFARE DIVISION

Programs for Widows

Newspaper publicity and discussion in the Diet indicates that some groups of widows are being used for special projects such as the creation of widow's towns. Since welfare and education officers on Military Government Teams may be consulted for advice and assistance with these projects, it is suggested that close liaison be maintained between them. It appears that the expansion of the workshop program and construction of so-called widow's towns are a questionable use of funds and contrary to present welfare policy. There is a public assistance program to meet the immediate needs of widows and children, the Ministry of Labor operates vocational training schools, sheltered workshops and public works, and the Ministry of Education also has work training under their adult education program.

Establishment of a National Physical Rehabilitation Center by Law

Reference Public Health and Welfare Weekly Bulletin No.106, Section VIII.

Subject Law was passed by the Diet on 17 May and will go into effect 1 October 49. This is an interim measure as Article 24 of a proposed Rehabilitation of Physically Handicapped Law contains a provision for establishing a physical rehabilitation center. The proposed law will be presented during the fall session of the Diet.

The interim Law permits the Ministry of Welfare to proceed immediately in establishing a National Physical Rehabilitation Center at Sagami-hara National Hospital in Kanagawa Prefecture. The Center will be operated as a model institution working in close cooperation with the Ministry of Labor and Ministry of Education, and will permit the training of medical and social workers in physical rehabilitation and in the development of a sound and comprehensive physical rehabilitation training program. It is planned to utilize the professional personnel, when they have become completely oriented, in establishing programs in physical rehabilitation centers presently established throughout Japan.

Consumers Livelihood Cooperatives

Reference Public Health and Welfare Weekly Bulletin No.122, Section VI.

The following is a breakdown of Consumer Livelihood Cooperative Associations by prefecture as of 31 April. The term "area cooperative association" indicates a consumer cooperative made up of people from a community. The term "occupation cooperatives" indicates a consumer cooperative whose members are all employed within the same place of business, i.e., factory, department store, office etc.

<u>Prefecture</u>	<u>Area</u>	<u>Occupation</u>	<u>Prefecture</u>	<u>Area</u>	<u>Occupation</u>
Hokkaido	15	2	Iwate	4	-
Miyagi	7	2	Yamagata	1	-
Ibaraki	5	1	Tochigi	8	1
Gumma	4	1	Saitama	27	1
Tokyo	7	2	Kanagawa	6	-
Niigata	17	2	Ishikawa	1	-
Fukui	3	2	Yamanashi	4	-
<u>Prefecture</u>	<u>Area</u>	<u>Occupation</u>	<u>Prefecture</u>	<u>Area</u>	<u>Occupation</u>
Nagano	11	2	Gifu	7	-
Shizuoka	4	1	Mie	3	-
Shiga	-	2	Kyoto	3	1
Osaka	2	1	Nara	4	1
Wakayama	3	1	Shimane	4	-
Yamaguchi	15	2	Tokushima	11	1

Kagawa	5	2	Kochi	7	-
Fukuoka	9	8	Saga	1	-
Nagasaki	4	-	Oita	1	-
Miyazaki	2	1	Kagoshima	2	-
Aichi	9	2			

The following prefectures did not have any consumer cooperative associations reported as of 31 April: Aomori, Fukushima, Akita, Chiba, Toyama, Hyogo, Okayama, Hiroshima, Ehime and Kumamoto.

There has been an increase of 78 Consumer Cooperative Associations in the month of April.

SECTION VIII SOCIAL SECURITY DIVISION

Amendment to the Welfare Pension Insurance Law and the Seamen's Insurance Law.

As reported in Public Health and Welfare Weekly Bulletin No.122 the Diet on 28 April passed the amendment (Law No.37) to the Health Insurance Law. The Welfare Pension Insurance Law and the Seamen's Insurance Law were revised by amendments passed on 28 April (Law No. 38) and 19 May (Law No. NK) respectively. Several of the amendments were the same for all three laws and others peculiar to Health Insurance program. The amendments to the Welfare Pension Insurance Law and the Seamen's Insurance Law are reviewed jointly in the following paragraphs. Amendments to both laws will be incorporated in the translations of the two laws to be distributed later in the form of a Technical Bulletin.

Article 3 in both laws has been revised in order that there may be a standard definition in these two laws and the Health Insurance Law with respect to "remuneration" for purposes of determining earnings to be included in the computation of contribution and benefits.

The "Table of Standard Remuneration" set up by the amendment to Article 4 of the Seamen's Insurance Law is identical with the new Health Insurance Table provided by Law No.37 of 1949. The effect of the Seamen's Insurance amendment is to raise the ceiling on taxable wages from ¥ 8,000 to ¥ 24,000 and set the minimum standard monthly remuneration at ¥ 2,000 instead of ¥ 500, with a reorganization of the groupings into 19 instead of 30 classifications. (The Health Insurance amendment raised the ceiling on taxable wages under that law from ¥ 13,800 to ¥ 24,000 and set the minimum standard remuneration at ¥ 2,000 instead of ¥ 300, with a reorganization of the groupings into 19 instead of 40 classifications). The effect of the Welfare Pension Insurance amendment is to reorganize the groupings to compare with the first 10 of the 19 classifications under the other two laws, changing the minimum standard monthly remuneration from ¥ 300 to ¥ 2,000, and the ceiling on taxable earnings from ¥ 8,100 to ¥ 8,000.

With the exception of the amendment to Article 58, to provide a specific contribution rate of the person who leaves covered employment but voluntarily continues as insured (for purposes of only old age retirement and survivor's benefits), no changes are made in the rates of contributions or benefits under Welfare Pension Insurance. The "temporary" contribution rates continue to be 3.5% for miners and 3.0% for other men and for women; and the "normal" rates being 12.3% for miners, 9.4% for other men, 5.5% for women, and 7.8% for those persons who voluntarily continue to be insured after leaving covered employment. Employer and employee bear equal shares of the contributions.

The "temporary" and "normal" rates were introduced in the amendments of July 1948 (Law No.127 of 1948) wherein the normal rate was set down as a paper figure and the temporary rate was declared to be effective "for the time being". Old age pensions will not be paid under Welfare Pension Insurance until 1956 and the temporary rate includes a provision that old age pensions will be computed only on wages not in excess of ¥ 300 (the former minimum standard monthly remuneration and which will continue to be the basis for computations relative to old age pensions under the temporary rate regardless of the fact that the minimum standard monthly remuneration is now ¥ 2,000).

In the "temporary" contribution rate for Seamen's Insurance, there have been made reductions of .2% for unemployment insurance and .42% for the long-term benefits and an increase of 2.12% to meet the increased cost of medical care. This results in a net increase of 1.5% in the temporary rate. A slightly higher increase in the "normal" rate is due to the fact that the rate for long-term benefits was not reduced as much as in the temporary rate although the other changes are the same for the normal and temporary rates. In the temporary rate it is contemplated that

computations for old-age benefits will continue to be based on wages not in excess of ¥ 500, the minimum standard remuneration prior to the current revision of that minimum to ¥ 2,000.

The various rates as amended are as follows:

	<u>Contribution Rates</u>			
	<u>Normal</u>		<u>Temporary</u>	
	<u>Present</u>	<u>Proposed</u>	<u>Present</u>	<u>Proposed</u>
A. Includes medical care, unemployment insurance, Old-age pension, invalidity, retirement, survivors and funeral benefits				
Seamen	8.1%	8.4%	4.0%	4.2%
Shipowners	11.5%	13.0%	7.5%	8.8%
Total	19.6%	21.4%	11.5%	13.0%
B. Excludes unemployment insurance				
Seamen	7.00%	7.4%	2.9%	3.2%
Shipowners	10.40%	12.0%	6.4%	7.8%
Total	17.40%	19.4%	9.3%	11.0%
C. Voluntary-includes only old age pension, retirement and survivors benefits				
Seamen	10.0%	10.0%	10.0%	10.0%

The provisions in Article 2 of both the Welfare Pension and Seamen’s Insurance Laws for the present Welfare Pension Insurance Committee and the Seamen’s Insurance Committee are deleted and anew Chapter V is inserted in each law to provide for a Welfare Pension Insurance Advisory Council and a Seamen’s Insurance Advisory Council. Each of the two groups is a national body composed of 18 members with equal representation accorded to insured persons, employers and “those representing the public interest” with respect to the Welfare Pension Insurance Advisory Council, and to seamen, shipowners and “those representing the public interest, including representatives of the medical profession” with respect to the Seamen’s Insurance Advisory Council. Each Council is to advise concerning the respective programs at the request of the Welfare Minister and will have the right to make recommendations on its own initiative. The Welfare Minister is obligated to consult the Councils “before acting upon matters involving planning, legislation, or major administrative policy” concerning the programs.

Penalty provisions have been increased in general in both laws. Provision is made in the Welfare Pension Insurance Law to subject an employer to imprisonment for failure to remit employees’ deductions; this corresponds to the other two laws. Provision is made in the Seamen’s Insurance Law to correspond to the Health Insurance penalty for an employee who refuses to submit to a medical examination. This latter penalty would be rarely invoked but is intended as an aid in cases of fraud.

The 1948 amendment which provided additional amounts for dependents of invalidity pension recipients are revised in both laws to require that such dependents, in order to receive such additional amounts, shall have been supported by the pension recipients at the time he became disabled.

At the suggestion of the Japanese Legislative Bureau, certain additions were made to the Welfare Pension Insurance Law to clarify the provision already in the laws that survivors of the same priority shall share equally instead of being subject to the former rule whereby the eldest male received the total sum. This will be done at a later date for Seamen’s Insurance since related questions concerning survivors under that law have not been settled; however such provision is actually equally effective in the latter law although not as clearly stated as in the Welfare Pension Insurance Law.

Certain Articles in the Welfare Pension Insurance Law which provide for administrative procedures have been amended to prevent duplication of function when similar action is taken under Health Insurance and have been amended also to recognize determinations made by Health Insurance Societies as well as the prefectural insurance offices.

Through misunderstanding at the time provision was made in July 1948, in the Health Insurance Law for the Medical Care Advisory Council and the Medical Fee Calculating Committee, similar Articles were not added to the Seamen's Insurance Law. Appropriate Articles have now been inserted in the Seamen's Insurance Law to provide for participation in these Councils.

Article 33-(9) of the Seamen's Insurance Law concerning the computation of unemployment insurance benefits; has contained a provision to the effect that a recipient of a sickness allowance shall be paid unemployment insurance benefits in an amount equal to the difference between such allowance and the amount of his full unemployment insurance benefit. It was pointed out to officials of the Ministry of Welfare that such a provision is inconsistent with the requirement that a person, in order to be eligible for unemployment insurance benefits, must be able as well as willing to accept employment. His receiving a sickness allowance, which is a payment made to compensate for a wage loss due to illness, indicates his inability to work and therefore his ineligibility to receive any unemployment insurance benefits. The current amendments delete this provision and the Ministry of Welfare is to issue a notice to prefectural insurance offices to stress the fact that a person is ineligible for any unemployment insurance benefits for the period of time for which he receives a sickness allowance.

Following repeated requests of fishermen, supported by the Ministry of Transportation and the Sea Products Bureau of the Ministry of Commerce, the qualifying period for old age benefits for those fishermen who engage in fishing as seasonal rather than continuous employment is reduced from 15 to 10 years. The benefits for such fishermen, as a consequence, are reduced by half. The fishermen's representatives and the government officials rejected suggestions concerning an increase in contribution rates for such fishermen in order to maintain the same benefit rate for them as for other seamen.

Following similar requests that such fishermen be exempted from compulsory unemployment insurance, provision is made to permit such exemption upon application by the employer after he has obtained the consent of three-fourths of the seamen (fishermen) employed by him.

Ministry of Welfare Officials have given the following figures on present and estimated future coverage under the Seamen's Insurance Law:

<u>Date</u>	<u>Total</u>	<u>Fishermen affected by above amendments</u>	<u>Other Seamen</u>
31 Jan 49	114,276	17,582	96,694
31 Mar 50	165,600	60,000	105,600

The method of computing unemployment insurance benefits is revised to conform to the same change made in this session of the Diet to the Unemployment Insurance Law which relates to landworkers. Unemployment insurance benefits will now be computed on the basis of 60% of the seamen's average daily standard remuneration, but not in excess of ¥ 300 per day, instead of on the basis of a sliding scale of from 40% to 80% the average daily standard remuneration.

National Health Insurance Nurses

Reference is made to I-hatsu 347, dated 4 April, subject: "Policy of Guidance on Business of Public Health Nurses", which was prepared by the Nursing Section in the Ministry of Welfare, with the cooperation of the Medical Affairs, Preventive Medicine and Insurance Bureaus, and sent to the prefectural governors. This is the first in a series of notifications regarding information and training for public health nurses including visiting nurses in the National Health Insurance program. The notification gives the channels of administration for dissemination of information. Further, reference is made to Public Health and Welfare Weekly Bulletin No.121, Nursing Division, which gives a detailed account of the forthcoming Public Health Nurse training course. There is considerable latitude and flexibility in determining the eligibility of those who may attend this course. The National Health Insurance nurse interested in obtaining a public health nurse certificate and advancing her professional information should make use of this opportunity.

In conferences with representatives of the National Health Insurance nurses, during staff visits to the various prefectures, their plea for increased professional information and the opportunity to attend refresher courses has been a subject strongly emphasized. As a result, constant efforts have been carried on to expand the programs sufficiently to have the nurses with National Health Insurance included. The efforts have been successful and now the National Health Insurance nurse has an opportunity to attend short courses for improving her professional training. This is an improvement over former days when the National Health Insurance nurse had practically no opportunity to attend organized courses for increasing her professional knowledge.

With the establishment of these new programs the number of adequately trained nurses will be increased as well as the fact that the work with National Health Insurance will become more attractive.

SECTION IX
MEMORANDA TO JAPANESE GOVERNMENT

None.

May 14 Engo No.539	Governor, Fukushima Prefecture	”
	Re: Dependents to be taken back by Korean nationals whose repatriation has been permitted by GHQ, SCAP.	

SECTION II
PREVENTIVE MEDICINE DIVISION

Smallpox

Reference Section II, Weekly Bulletin No.125, control measures against smallpox in Fukuoka and Osaka appear to be meeting with success. This is evidenced by the fact that there have been no new cases reported in Fukuoka during the period 23 to 29 May. In Osaka where the outbreak is of more recent origin there have been only three cases reported during this period. The total reported cases in Osaka now stand at 52.

While it is too early to say that there will be no further spread nevertheless the progress of these outbreaks serves to emphasize the need for and the value of effective control measures.

Military Government Health Officers are urged to exercise vigilant surveillance in order to insure that proper control measures are carried out wherever cases occur.

Public Health Information

The motion picture film “Beautiful Instinct”, a sex education picture, has been completed and will soon be available for showing. All inquiries concerning this film should be directed to the Radio Motion Picture Company, Ltd., Tokyo, Japan.

SECTION III
VETERINARY AFFAIRS DIVISION

Refrigeration of Biologicals

Arrangements have been completed with the Animal Hygiene Section, Ministry of Agriculture and Forestry requiring all laboratories producing animal biologics to provide suitable containers that can be refrigerated with ice or dry ice. All future shipments shall be made in these containers and the plan of expediting their handling while in transit has been coordinated with the Minister of Transportation, to guarantee that no delay will occur of

any biologicals while in transit. These containers are to be returned by the Prefectures to the shipper without delay due to the scarcity of them.

Hog Cholera

During the month of May, approximately 250 cases of Hog Cholera were reported from Yamagata Prefecture. Investigations by the Animal Hygiene Section, Ministry of Agriculture and Forestry disclose information that the farmers are not taking advantage of present immunization facilities as they feel that some subsidy from National Level is indicated. An educational program should be employed to inform the farmers as to the advantages of immunizing their hogs thereby preventing unnecessary losses in number as well as the monetary losses so incurred. Information at national level indicates that some prefectures have carried out education programs, but other prefectures have not appeared too interested.

Monthly Animal Disease Report

The Animal Hygiene Section, Livestock Bureau, Ministry of Agriculture and Forestry, submitted the following report on those animal diseases occurring during the month of April 1949.

<u>Diseases</u>	<u>March</u>	<u>April</u>
Anthrax	3	1
Blackleg	0	1
Swine cholera	79	190
Swine erysipelas	16	12
Swine plague	16	8
Swine paratyphus	5	17
Rabies	22	21
Brucellosis	15	19
Trichomonas	214	266
Equine infectious abortion	51	57
Equine infectious anemia	69	74
Pullorum disease (fowl)	6,129	2,957
Strangles	13	9
Bovine tuberculosis	51	50
Equine encephalomyelitis	1 suspect	1

NOTE: Tottori and Fukuoka Prefectures have not as yet submitted their monthly report.

Rabies continue to remain prevalent in the Kanto Region. Extra allocations of rabies vaccine are being made to the prefectures of the region. The rapid increase in the population of dogs, and the increasing number of strays that have a history of migrating from one prefecture to another are affecting materially, the success of the immunization program in eradicating rabies.

Weekly Animal Disease Report

The Animal Hygiene Section, Livestock Bureau, Ministry of Agriculture and Forestry reported the following outbreak of disease in animals for the period 21-27 May 1949.

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Shizuoka	Swine cholera	2
Ibaraki	Swine cholera	2
Tokyo	Swine plague	1
Aichi	Swine erysipelas	3
Chiba	"	3
Nagano	"	4
Yamanashi	"	2
Yamagata	Swine cholera	250
	Equine encephalomyelitis	1 (suspect)

NOTE: Vaccines and serums have been distributed to the Yamagata Prefecture. Earlier efforts to have farmers vaccinate their hogs against cholera were not successful. The loss as represented is approximately 10% of the hog population in the prefecture.

Monthly Meat Inspection Report

The Veterinary Affairs Section, Sanitation Bureau, Ministry of Welfare, submitted the following information concerning the number of livestock slaughtered as well as the meet and meat-products establishments inspected during the month of March 1949.

	<u>Cattle</u>	<u>Calves</u>	<u>Horses</u>
Number slaughtered	18,952	1,020	5,122
Body weight (kgs)	6,690,962	103,923	1,724,302
Dressed weight (kgs)	3,343,055	49,462	799,747
Condemned Ante-mortem	2	0	0
Condemned Post-mortem	11	1	7
Partial	411	11	208
Viscera	3,628	74	763

	<u>Swine</u>	<u>Sheep</u>	<u>Goats</u>
Number slaughtered	42,401	46	98
Body weight (kgs)	2,698,600	1,912	2,780
Dressed weight (kgs)	2,181,399	815	1,262
Condemned Ante-mortem	3	0	0
Condemned Post-mortem	8	0	0
Partial	433	0	0
Viscera	10,739	1	3

Amount of meat and meat products examined		475,774 kgs
Amount of meat and meat products condemned		868 kgs
Cause for condemnation		Uncleanliness, peutrid and staleness
Disposition		Fertilizer

Monthly Milk Inspection Report

The Veterinary Affairs Section, Ministry of Welfare, conducted sanitary inspections on the following dairy farms and milk plants during the month of March 1949.

Special Milk

Number of farms inspected	4
Samples examined	13

Over bacterial standards (50,000 per cc)	3
Under butterfat standards (3.0 percent)	0
Number of plant inspections	11
Over bacterial standards (50,000 per cc)	3
Under butterfat standards (3.0 percent)	0

Ordinary Milk

Number of farms inspected	10,980
Samples examined	29,652
Over bacterial standards (20,000 per cc)	483
Under butterfat standards (3.0 percent)	820
Number of plant inspections	5,071
Over bacterial standards (20,000 per cc)	284
Under butterfat standards (3.0 percent)	298

Goat Milk

Number of farms inspected	36
Samples examined	29
Over bacterial standards (20,000 per cc)	3
Under butterfat standards (3.0 percent)	2

Milk Produced on Dairy Farms During Month of March

<u>Type of Milk</u>	<u>No. of Farms</u>	<u>No. of Cows & Goats</u>	<u>Amount Produced</u>
Special	6	126	25,102 Lit.
Ordinary	56,801	108,623	15,620,084 Lit.
Goat	4,598	5,953	180,948 Lit.

Quantity of Milk Bottled in Milk Plants During March

<u>Type of Milk</u>	<u>No. of Plants</u>	<u>Raw Milk</u>	<u>Pasteurized</u>	<u>Sterilized</u>
Special	6	12,313	9,000	
Ordinary	2,934		2,303,470	4,278,896 L
TOTAL	2,940	12,313	2,312,470	4,278,896 L

All milk is bottled in bottles of 1 go representing 180 cc.

Monthly Seafood Inspection Report

The Veterinary Affairs Section, Ministry of Welfare, conducted the following sanitary inspections on seafood establishments during the month of March 1949.

Wholesale Seafood Markets

Number of establishments	1,426
Number of establishments inspected	938
Sanitary condition	
Good	150
Fair	622
Poor	166
Total number of inspections	4,211
Amount of seafood examined	135,612,778 kg
Amount of seafood condemned	73,753 kg
Cause for condemnation	Putrefaction, staleness
Disposition	Fertilizer and animal foods

Seafood Processing Establishments

Number of establishments	9,477
Number of establishments inspected	3,420
Sanitary condition	Good
	547

	Fair	1,947
	Poor	926
Total number of inspections		4,844
Amount of seafood examined		339,105 kg
Amount of seafood condemned		1,855 kg
Cause for condemnation	Putrefaction -staleness	
Disposition	Fertilizer and animal foods	

Seafood Retail Shops

Number of establishments		43,609
Number of establishments inspected		16,165
Sanitary condition	Good	2,531
	Fair	9,828
	Poor	3,806
Total number of inspections		17,328
Amount of seafood examined		1,493,866 kgs
Amount of seafood condemned		2,532 kgs
Cause for condemnation	Putrefaction -staleness	
Disposition	Fertilizer and animal foods	

Monthly Food Inspection Report

The Food Sanitation Section, Ministry of Welfare, reports the following sanitary inspection of food and beverages establishments during the month of March 1949.

Food establishments

Number of inspections	192,187
Establishments to be improved	43,085
Establishments completing improvements	54,397
Number of food samples collected for analysis	3,351
Number of administrative punishments	1,341

Census of Food Inspectors

Number authorized with 50% national subsidy	1,767
Actual number employed receiving national subsidy	1,582
Actual number employed receiving no national subsidy (Prefecture and City employees)	2,106

SECTION IV SUPPLY DIVISION

Inspection of Pharmaceuticals

The Ministry of Welfare has instituted an intensive campaign against adulterated and misbranded drugs, with special emphasis on injection materials. Prefectural governors have been notified by official correspondence, file Yaku-hatsu No.779, dated 4 May, subject: General Inspection of Drugs, to take thorough control measures by inspection, necessary remedial action, and report to the Ministry, to insure the production and supply of safe and effective injection materials of excellent quality. The period of this campaign is from 21 May to 21 June. The interest and assistance of Military Government personnel in this activity can be of inestimable value in removing from supply channels undesirable medicines which do not meet the standards of quality, packaging and labeling required by the Pharmaceutical Affairs Law (Law No.197, 1948) and its enforcement regulations (15 August 1948).

This campaign is an intensified activity for the period of one month. However, the inspection of all drugs, devices and cosmetics to detect violations and to correct irregularities according to current laws and regulations governing the manufacture, distribution and sale of those supplies, is a continuing activity which must be carried on throughout the twelve months of the year. In this connection a recent notification, file Koseisho-hatsu-yaku No.69, dated 9 May, subject: The Counter-Measure for Control of Drugs, was dispatched by the Pharmaceutical and Supply Bureau to all prefectural governors emphasizing the need for continued rigid control over manufacture and sale of adulterated drugs, and including specific instruction for such control.

Production

The four month average production of pharmaceuticals and medical supplies reported for January, February, March and April exceeded 1948 monthly averages in yen value by 65 percent. Following are quantitative production averages for the four month period as compared to 1948 monthly average production.

(1948 Monthly Average - 1.00)

<u>Commodity</u>	<u>April</u>	<u>January through April</u>	
Laboratory Animals (each)	1.21		1.08
Biologicals (pressed assay) (cc)	No Production		No Production

Detailed production tables of the medical, dental, sanitary supplies and equipment for March and April, together with monthly averages for the current and previous years for comparison are attached. (Inclosure No.2)

SECTION V NARCOTIC CONTROL DIVISIONS

Record of Sales of Narcotics

Local wholesalers are being instructed to maintain in their records a serial number of each bottle or package of narcotics sold to registrants in order that each such bottle or package in the stocks of physicians, hospitals, etc., may be identified as having been sold by a particular wholesaler.

Compounders and producers are being instructed hereafter to print an identifying number on the label of each bottle or package of narcotics which will be recorded by compounders, producers, central wholesalers and local wholesalers at the time of sale.

The above measures will enable agents to trace each package or bottle of narcotics found in illicit traffic as having been stolen or otherwise diverted.

Enforcement

Narcotic agents in Shimane Prefecture have inspected all but 20 out of 897 registrants in the prefecture. During the inspections six physicians, all living in rural areas, were determined to be narcotic addicts. Appropriated action was taken including the cancellation of their narcotic registration.

In Tokyo the procedure of delivering narcotics evidence in criminal cases to clerks of the Court upon presentation of an order from a Court official resulted in the loss of evidence when two clerks obtained narcotics upon presentation of a forged order. The narcotics were recovered and the two clerks arrested. Instructions are being issued to narcotic agents not to deliver any narcotics to a third person for any reason. The agents will deliver the evidence to the Court officials in person when such evidence is needed for prosecution of the defendants.

SECTION VI

WELFARE DIVISION

Principles and Practices in the Public Assistance Program

Inclosed with this Weekly Bulletin is TB-PH-WEL-20, "Principles and Practices in the Public Assistance Program". (Inclosure No.1). This technical bulletin reviews and interprets aspects of the Public Assistance Program in Japan. Most important is the reassertion of the democratic principles and practices which should be inherent in Japan welfare programs.

Cooperative for American Remittances to Europe, Inc. (CARE)

The following report covers "CARE Operations in Japan" since the arrival of the first shipment of "gift" packages in July 1948:

a. <u>Food</u>			
Total packages received			24,989
Packages damaged, etc.	2,666		
Packages delivered	<u>15,174</u>		<u>17,840</u>
Total packages on hand			7,149
b. <u>Woolen</u>			
Total packages received			8,016

Packages delivered	<u>1,229</u>		<u>1,239</u>
Total packages on hand			405
d. <u>Knitting</u>			
Total packages received			3,024
Packages damaged, etc.	7		
Packages delivered	<u>1,392</u>		<u>1,399</u>
Total packages on hand			1,625

SECTION VII SOCIAL SECURITY DIVISION

The following statement was used as the basis of a conference recently held by the Chief of Section with representatives of the Japanese Press:

Japanese Advisory Council on Social Security

(1) The Japanese Government has announced the appointments of the members to the Advisory Council on Social Security. They include leaders in industry, labor, the professions and the government. Members of the Diet are properly included. The Council is independent of any Ministry and has full freedom of expression and research. It is the Japanese counterpart of the United States Committee on Economic Security organized in 1935 and the British Inter-departmental Committee on Social Insurance and Allied Services appointed in 1941. These committees were also organized during periods of economic stress and austerity.

(2) This Council has the great responsibility of formulating a Japanese program of social security in accordance with Japanese needs and resources. Such a program will be one of the four corner stones of the total Public Health and Welfare program planned for Japan.

(3) The Council will give advice as to the most effective ways of providing economic security within the limited means. In particular, the Council will have the task of formulating concrete plans for the establishment of an integrated system to improve on the variety of programs now in force.

(4) It is appropriate that such action be taken at this time so that the efforts of the Council may be coordinated with other governmental action directed toward the recovery and stabilization of the Japanese economy. Indeed it seems imperative that a solid up-to-date social security plan be established at this juncture even if its standards must necessarily conform to present austerity conditions. It is particularly needed in Japan where traditional ways of meeting economic hazards are no longer effective. It could provide a rock-bottom below which no person's livelihood would be allowed to fall and set the foundation for a system that can be expanded with improved economic conditions.

(5) Though necessary for its establishment and administration, Social Security is not attained by laws and insurance principles alone. It is realized in conjunction with, and as a part of, a productive economy which is able to furnish the necessary food, shelter, clothing and medical services for the livelihood of the people. Without such realization and basic support, social security cannot effectively exist.

(6) Social Security assists in the recovery, stabilization and maintenance of a sound economy in several significant respects. The recognition engendered in each individual of his basic obligation to organized society, and the assurance of protective and curative benefits in time of incapacity, unemployment and other times of need are direct factors in the maintenance of morale and the enlisting of full support essential for the achievement of full production.

(7) It provides the financing of medical services necessary for maintaining an effective working force; the stabilization of purchasing power is promoted; it assists in minimizing friction in employer-employee relations during the periods of adjustment that are inevitable in an industrial economy.

(8) The creation of the Advisory Council on Social Security is the initial action taken by the Japanese Government as a result of the review of the reports of the Social Security and the American Medical Association Missions. The following statement is embodied in the report of the Social Security group with respect to such an advisory group:

“The social security program affects so many people and is the concern of so many interested groups that it is desirable to have, for some years to come, the assurance of representation and participation at a high level of all these interested....A council representing employers, industrial, maritime, and governmental workers, the professions, agriculture and representatives selected for their interest and knowledge of economic and social problems, could perform this advisory function. Such an advisory group would be invaluable to the ministries and to the Diet. It would bring to the government the consensus of national opinion with reference to social security matters and constitute a channel to assure communications between the public groups and their government”.

(9) These reports have been given to the Japanese Government as documents of reference and guidance in formulating and effectuating plans for reformation of the present Japanese social security programs. It was pointed out that material savings in government costs and more adequate benefits can be made possible by integration and coordination of the all too complicated, competitive and inadequate programs.

(10) Effective utilization of present resources and facilities would seem to be the immediate goal of the Advisory Council. Further, participation in policy determinations by the people most concerned, full knowledge on the part of all participants of their right and obligations, and the opportunity for appeal and fair hearings are procedural guarantees implementing these contained in the Japanese Constitution and self-evident prerequisites of social security program.

(11) Economic recovery and stabilization are primary objectives of the nation Basic social security within the limits of that economy is properly a complementary goal for all Japanese.

(12) The Advisory Council on Social Security has grave responsibilities and should receive the full attention and cooperation of the nation. I wish it full success.

Social Insurance Statistics

Benefits Paid under Seamen's Insurance

Reference is made to Public Health and Welfare Weekly Bulletin Nos.98 and 107 for a summary of the Seamen's Insurance program and reports of benefits paid during the months of April through September 1948.

In inclosure No.3 benefit payments are shown for the months of October 1948 through February 1949. The most marked changes from previous reports are the rise in the average payment for sickness and injury allowance which reflects the rise in wages; the addition of dependents' short-term benefits; and the rise in the average pension payment which reflects the increases and additions effective in September 1948 (on reference above).

As of February 1949 changes from last July not reflected in the data shown below include the following: Rise by 20,624 in the number of primary insured, now totaling 112,243 and 95,482 (under the unemployment provisions) respectively employed by 4,001 ship owners covered (3,572 under the Unemployment provisions of the Act). Monthly wages subject to taxation averaged ¥ 4,490 in general and ¥ 4,661 under the unemployment provisions of the Act.

SECTION I
PREVENTIVE MEDICINE DIVISION

Typhus Control

A new memorandum to the Japanese Government SCAPIN 2011, dated 28 May 1949, subject, "Prevention and Control of the Typhus Fever Group of Diseases" has recently been issued. This memorandum rescinds SCAPIN 1523 and PHMJG 3, relating to the rickettsicidal spray program. Rescission of these instructions was necessary in keeping with the developments in the general typhus picture in Japan, including the low incidence of epidemic typhus the relative increase in the incidence of murine typhus, the presence of an unidentified type of typhus, and the continued existence of Tsutsugamushi Fever (Scrub Typhus) areas and the discovery of new or hitherto unreported scrub typhus areas.

The new memorandum emphasizes the year-round continued action of sanitary inspectors and sanitary teams, and other public health personnel concerned, of city health sections, health offices of towns and villages and health centers, in the execution of:

a. Year-round preventive measures including periodic surveys of insect and rodent population directed against the vectors and rodent reservoirs, including among others three important points;

- (1) Periodic surveys of insect and rodent populations.
- (2) Disinfestation and immunization of repatriates and illegal entrants to Japan.
- (3) Disinfestation and immunization of all vagrants, street waifs and others.

b. Immediate control measures when suspect, clinically recognized or confirmed cases of any of the disease of the typhus fever group occur.

This memorandum will be implemented by special detailed instructions to prefectural government officials by the Ministry of Welfare.

Venereal Disease Control - Periodical Examination of Prostitutes

Inspection trips to various prefectures reveal that the routine weekly examination of prostitutes is still being carried out by some prefectural health departments.

Ministry of Welfare Ordinance No.45, 1945, "Special Regulations for the Venereal Disease Prevention Law" which required the periodic examination of prostitutes and the issuance of health certificates, was rescinded by the Venereal Disease Prevention Law (Law 167, 1948), No provision is made in the new law for the routine weekly examination of prostitutes since it has proven to be ineffective in preventing the spread of venereal disease. Although prostitutes are a great source of venereal disease infection, it is impossible to "clean them up" and keep them free of infection. The American Medical Association, in a statement of policy, stated "Medical inspection of prostitutes is untrustworthy, inefficient, gives a false sense of security, and fails to prevent the spread of infection."

Medically speaking, infectious venereal disease is too difficult to detect by any system of routine examination and exposure between examinations is too frequent to make the procedure effective. In the diagnosis of chronic gonorrhea, which is the usual stage of the disease found in prostitutes, the examination of the cervical smear is notoriously unreliable. In the chancre state of syphilis, during which most cases of syphilis, during which most cases of syphilis are transmitted the serological test may be negative. On the other Hand, a positive serological the serological test per se does not mean that the patient is infectious; in fact, in the case of prostitutes, a positive serological test is often due to latent or non-infectious syphilis.

These routine examination of prostitutes contributes little to a sound venereal disease control program. The main accomplishment is probably a penal job of keeping the prostitutes from infecting others during the few weeks of isolation. In view of the lack personnel, funds and facilities, it is possible to justify from the public health standpoint the routine examination of prostitutes.

Emphasis on venereal disease control among the general population, where more positive results are attained, offers greater opportunities to reduce venereal disease incidence. Outpatient clinics should be established

in all prefectural venereal disease hospitals for the purpose of finding and treating cases among the general public. All members of society, including prostitutes, should be accepted for diagnostic and treatment service, as individuals. No special consideration should be given to prostitutes as a group.

It is suggested that Military Government Public Health Officers should check the venereal disease control activities of prefectural health departments to determine whether the weekly examination of prostitutes is still being conducted.

Sanitation - Mosquito Control

It is of utmost importance that mosquito larvae be located and destroyed during the month of June in order to prevent them from developing into adults before the onset of the rainy season. The effectiveness of later control measures depends to a great degree on the effectiveness of work done before the rainy season sets in.

Find inspections show that mosquitoes are breeding freely in the following locations:

1. Small reservoirs for the storage of "night soil" and water for use on agricultural land.
2. Ditches which have been become blocked (particularly covered sections).
3. Small containers or pools in public or private gardens, about houses or in other locations commonly neglected.

The effective control of mosquito breeding in such places depends to a great extent on the sanitary inspector. In most cases the sanitary inspector can obtain immediate correction by calling the attention of responsible persons to the defects and instructing them on necessary control measures. Where it is not possible to eliminate the breeding areas by emptying containers, draining pools or filling depressions, sanitary teams will apply the proper insecticides.

All locations requiring periodic treatment by sanitary teams should be listed on a weekly schedule sheet giving location, type of treatment, area to be treated, and dates of treatment. These schedules should be drawn up at least one week in advance so that the itinerary can be planned for efficient operation. The application of insecticide should be made routinely on a weekly basis to all locations requiring it.

SECTION II VETERINARY AFFAIRS DIVISION

Equine Encephalomyelitis Immunization

The Ministry of Agriculture and Forestry reports a total of 30,000 horses have been immunized against equine encephalomyelitis in nineteen prefectures since the beginning of March. All horse utilized by Occupation personnel for recreational purposes were also immunized regardless of age. The present program is continuing in which horses 4 years of age and under are receiving the immunizations, can when upon completion, in the event additional vaccine is available, horses beyond the present age group will be immunized based on their value to the the economy of Japan.

Veterinary License Law

The Veterinary License Law No.186 was passed by the Diet and promulgated on 1 June 1949. Copies of this Law will be issued to Regional Military Government Veterinarians through the medium of the Weekly Bulletin.

Rabies in Kanto Region

Approximately 150 cases of rabies in dogs and cats have been reported from the Kanto Region since 1 January 1949. The Ministry of Welfare has submitted a plan for quarantining the prefectures having reported rabies and the following provisions will be issued to Prefectural Governors as a Ministerial Order.

1. All dogs and cats will be confined to the premises of their owners and are prohibited from roaming in streets, parks, playgrounds and in rural areas unless they are on a leash and muzzled if possible.

2. Three days after public notification by newspaper or radio, all dogs and cats found roaming from the premises of their owners and not under restraint, will be collected as stray animals and impounded. Animals not escorted will be classed as strays.
3. All dogs and cats that are collected as stray animals will impounded for a period of 1 day (24 hours). Owners of dogs and cats may have the privilege of reclaiming their pets during this period of impounding, but must be required to be furnish proof of ownership (dogs only are registered), (cats are not required to be registered). Owners of dogs not previously registered will be required to register their animals before they are released form the pounds. If dogs reclaimed from the pound have not been immunized against rabies within the last six months, Prefectural Public Health Veterinarians will be responsible for their immunization prior to their release. Cats will also be immunized prior to their release.
4. Public notice by newspapers or radio as to the locations of the dog pounds will be made as a means of notifying dog and cat owners so that they may have the privilege of reclaiming their pets should they be apprehended as stray animals.
5. Dogs and cats unclaimed following the period of confinement in the pounds will be disposed of by selling to research laboratories or destroyed humanly under the supervision of a veterinarian and their carcasses utilized only for fertilizer. Under no condition will the carcass meat be utilized for food. It is advised that the resale of unclaimed impounded dogs be temporarily halted to pet shops and other agencies selling dogs to individual families in the areas where the disease is endemic, due to the emergency of the present situation.
6. The inter-prefectural movement of dogs and cats will be prohibited during the period of quarantine and movement within the prefecture should be limited. No dogs shows will be allowed to be held in any area under quarantine.
7. The Prefectures will if necessary, require veterinarians in private practice to assist in the immunization of all dogs and cats as a means of expediting the program of rabies control.

Animal Quarantine Stations

The Ministry of Agriculture and Forestry will present a plan whereby a more efficient control of animal products, imported and those apprehended by the Maritime Security Division from smugglers, will be established to effect better security measures in the control of animal diseases which might develop from animal products originating in foreign countries. Upon approval of the plan, informative copies will be issued to all Military Government Veterinarians.

Equine Encephalomyelitis

Nagano Prefecture reports a confirmed case of equine encephalomyelitis in the Suwa district. Prefectural animal disease control sections should be alerted for the purpose of investigating any case which appears suspicious as well as making an immediate notification to the Animal Hygiene Section, Ministry of Agriculture and Forestry.

Weekly Animal Disease Report

The following outbreaks of animal diseases occurred during the period 28 May - 3 June as reported by the Animal Hygiene Section, Ministry of Agriculture and Forestry.

☆ 2

SECTION III SYPPPLY DIVISION

Coal Deliveries

Detailed breakdown of deliveries of high calorie standard coal against the approved allocated amounts, for the Forth Quarter, JFY 1948 (January - March 1949), to the medical supply and pharmaceutical manufactures, by districts and prefectures. is being furnished. (Unit : Metric tons). (Incl. No.1)

This data indicates that 98.2% of the final allocation of standard coal (18,000 metric tons) or 15,872.#### metric tons was actually received and distributed to the various medicine manufacturing plants. The Ministry of Commerce and Industry is responsible for delivery of low-grade standard coal. Sizeable stockpiles have accumulated. The recommendation to the Economic Stabilization Board by the FFC Coal Allocation Committee has been made to the effect that all coal below 4,000 calorie content be removed from all controls to expedite the movement of stockpiles of this surplus low grade standard coal.

Distribution of Sprayers and Dusters

During the period 15-28 May 7,924 pieces of dusting and spraying equipment were distributed to 37 prefectures as follows:

☆ 3

SECTION IV NARCOTIC CONTROL DIVISION

Narcotic Control Activities from the Ministry of Welfare contained the following information:

Total registrants 92,626
Arrests - Registered persons 26
Unregistered persons 96
(including six Koreans and 31 foreign nationals)

Convictions - Registered persons 9
Unregistered persons 34
(including two Koreans and one foreign nationals)

Thefts of narcotics (including two hospitals) 23
Losses by fire (including two hospitals) 4

Penalties for registrants varied from ¥5,000 to ¥10,000 fine, the only penal servitude sentence being for four months. Penalties for non-registrants tried in Japanese Courts varied from ¥1,000 to ¥10,000 fine and from three months to 18 months and one sentence for one year minimum to but not exceeding two years. Five sentences were suspended/ Penalties, for foreign national non-registrants, totaling one sentence, tried in Military Courts resulted in a ¥50,000 fine and one defendant found not guilty.

Four out of the 23 persons responsible for the thefts were apprehended.

The report also summarized the activities of narcotic agents as follows:

The report also summarized the activities of narcotic agents as follows:

Inspection of registrants 1,472
Investigations originated 397
Investigations concluded 293
Investigations not concluded 398

Enforcement

The arrest of a Korean broker in Kyoto resulted in the apprehension of 12 other defendants four of whom were interns at Kyoto Medical College. The amount of seized narcotics, although comparatively small, consisted of morphine and heroin. One addict, a seller of dolls, was among those arrested.

☆ 4

Public Assistance Reports by Prefectures

Inclosed with this Bulletin (Incl. No.3) is Table • , public assistance reports by prefecture for the month of March 1949.

International Conference of Social Work Memberships

The International Conference of Social Work is inviting individual memberships. First established in 1928, it has been recently reorganized with the following objectives:

1. A world-wide organization for social welfare.
2. A non-political, non-governmental and non-sectarian organization.
3. Promotes the interchange of welfare experience and information.
4. Facilitates and promotes cooperation between international organizations.

Future goals of the Conference include the holding of a series of regional meetings in 1950 and a world wide Conference in 1952. National Committees in various countries throughout the world will have a continuous program of meetings either under its own auspices or under other appropriate sponsorship.

Members will receive copies of the Conference News, a summary record of Social Welfare Forum Activities and Services throughout the world.

Individual memberships are: Active - \$5.00
Sustaining - \$10.00
Contributing - \$25.00 or more

Remittances may be sent to U.S. Committee, International Conference of Social Work, 82 North High Street, Columbus 15, Ohio.

Poverty Causes Truancy

This has been the subject of several newspaper articles recently which report results of surveys made by the Ministry of Education and local boards of education. Compared with prewar school attendance rate of 99.6% this non-attendance has become a matter of serious concern. The foremost causes are poverty and illness (tuberculosis is the main reason for the latter). One article states: Some parents comply with their children's reluctance to attend school because they are unable to provide them with school articles. Some others, however, are more hard pressed, and are forced to have their children keep house while they go out to work. Many junior high school students, moreover, work to help their parents support their families. In one prefecture, the report stated that half of the prefecture's non-school attending junior high school students had become delinquents, and were either playing truant or confined in reformatories.

A few prefectural governments have taken steps to give aid to the non-attending children. The Kagawa prefectural government is one of these. It has provided children of poor families with clothes, school articles and 700 yen each. Aomori Ken reported that it had reduced non-attendance by giving monetary assistance and by having teachers encourage school attendance. Yamagata prefectural officials are confident that they can solve the problem, if the Livelihood Protection Law, the Child Welfare Law and the Juvenile Protection Law are throughly enforced.

It is suggested that Military Government Welfare Officers contact Military Government Education Officers for further information regarding these surveys, especially as they may indicate need for more careful consideration of eligibility for public assistance in families with school children.

Community Chest

There will be sent to Military Government Welfare Officers, this week, through technical channels, materials, which have already been forwarded to the Prefecural Community Chest Committee Offices for their use and reference:

- a. Three financial accounting books (general ledger, cash accounting and journal).
- b. Instruction for use of accounting books, reference, sub para. a above.
- c. Manuals for Community Chest Workers
- d. Constitution of the Central Community Chest Committee.

The Community Chest-Japanese Red Cross Joint Fund Campaign (Fall 1949) is in the process of being organized and a manual prepared by the Community Chest when completed, in a subsequent issue of the Public Health and Welfare Weekly Bulletin.

Public Assistance - Tenth Revision

Included with this Weekly Bulletin (Incl. No.4) is a copy of Hatsu-Sha #49, dated 18 May 49, subject: "Extent of the Expenses to be Provided for Living Assistance under the Daily Life Security Law", and explanatory material of application.

Attention is called to the fact that the standard amount as determined by the allowances table is the standard from which income and resources are deducted. Prefecture governors may decrease the table of allowances for the prefecture of for Ministry of Welfare. No changes in the allowances are authorized without proper notification.

Under the tenth revision, governors may designate the effective date to be 1 May or 1 June 1949. Retroactive payment are authorized to the designated date. Welfare Officers will also note that local heads of governments are now permitted to authorize 100% of the necessary assistance grant.

SECTION VI SOCIAL SECURITY DIVISION

The Social Insurance Budget for 1949-50

National appropriations on general account to the Insurance Bureau, Ministry of Welfare, for the current fiscal year 1949-50 aggregate ¥1,670,056,000. This amount constitutes roughly 6% of the total sum of ¥27,468,497,000 appropriated on general account to the Ministry of Welfare. The corresponding figures for last year (fiscal year 1948-49) were ¥993,964,466 and ¥21,174,334,000 respectively; the corresponding percentage was 4.7%. Expressed as percent of the total national budget on general account, these appropriations compare as follows:

☆ 5

A breakdown of the total appropriation of ¥1,670,056,000 into major appropriation items reveals as the largest appropriation item that for National Health Insurance totaling ¥918,987,000. Next in size is that for Welfare Pension Insurance amounting to ¥416,396,000. Third comes the appropriation for Health Insurance aggregating ¥186,889,000. The smallest appropriation is that for Seamen's Insurance ¥133,389,000. The balance of ¥14,395,000 is budgeted for the over-all cost of top level administration, planning and control including such across-the-board functions as referee and appeals program and the administrative cost (insofar as it is chargeable to the government) of the Social Insurance Medical Fee Payment Fund.

To complete the account of national appropriations for the social insurances under the jurisdiction of the Ministry of Welfare a sum of ¥6,668,000 should be added to the above total of ¥1,670,056,000. This entire sum is given to the prefectural governments as the national government's 50% share of the cost of prefectural personnel engaged in the administration of National Health Insurance. This amount, although allocated and earmarked by the Insurance Bureau, is made available directly to the Local Finance Committee for distribution to the prefectures. Thus Ministry of Welfare's jurisdiction amounts to ¥1,676,724,000. Out of this total, ¥1,651,883,000 of 98.5% consist of national subsidies and grants to the several programs. Broken down by program, they are as follows:

National subsidy to health Insurance Societies ¥89,435,000
National subsidy to government-managed Health Insurance

\89,927,000
National subsidy to Welfare Pension Insurance \416,064,000
National subsidy to Seamen's Insurance \132,562,000
National grant-in-aid to National Health Insurance
(including appropriation to Local Finance Committee) \925,655,000

It should be kept in mind, that the above figures constitute merely one part of the total annual cost of the said programs, namely the cost borne by the national government. By far the larger share of the cost is borne, of course, by the insured and their employers. To get an idea of the total sums involved in the operation of these programs, their total budgets for 1949-50, including all revenues from government and private sources as well as all expenditures (estimated) are given below.

☆ 6

The consolidated budgets of society-managed Health Insurance and of National Health Insurance cannot be known in advance. On the basis of rough estimated one approximately equal or exceed that of government-managed Health Insurance. The consolidated budget of National Health Insurance is given more uncertain in view of the reorganization of that program now in progress. On the basis of past experience, it should not fall below \5,500,000,000 but might run as high as twice amount. Furthermore, the total revenues and expenditures of the four insurance programs which are not under the jurisdiction of the Ministry of Welfare, to wit: the Government Pension System, the National Public Service Mutual Aid Associations, Unemployment Insurance, and Workmen's Accident Compensation Insurance are likely to match those of the three compulsory government-managed program shown above. Thus we may estimate the total consolidated social insurance budget for the current year to be in the neighborhood of 58 billion yen on the revenue side and approximately 36-44 billion yen on the expenditure side, the balance to accumulate in the form of reserves. This involves about two percent of the estimated national income for the current fiscal year.

Revision of Social Insurance Medical Fee Payment Fund Law

On 23 May, a bill of amendments to the Social Insurance Medical Fee Payment Fund Law Passed the Diet and was signed into law. It become effective on 1 June 1949.

The two most significant changes brought about by these amendments pertain to the size of the deposits required from the insurers and to the number of members and composition of the Reviewing and Auditing Committees established in each (prefectural) branch office of the Fund. Other minor changes effect tax exemptions, fines, refunds, etc.

Henceforth the Fund is to "have on deposit from the insurers in every month amount's roughly equal to one-and-a-half times the highest sum required during any one of the past three months". In the past, the Fund was required to have on deposit at all times amounts equal to the highest sum required during any one of the past three months. Unfortunately, this requirement frequently was not complied with. Moreover, it proved inadequate even when observed, owing to the fact that the utilization of the insurances and the cost of treatment rose from month to month. As a consequence delays arose in the payment of doctors which caused considerable dissatisfaction among them. Henceforth, it is hoped, deposits will be made on time and will prove ample to assure payment in full of all doctors' bills due.

Another source of past delays was the inadequate staffing of the Reviewing and Auditing Committees (shinsa-iin-kai). The statutory limitation of the membership to not more than 10 members necessitated the appointment of "temporary members". Even so their number was frequently too small to perform the examination of doctors' bills with dispatch. In the future the chief secretary of each (prefectural) branch office of the Fund will appoint up to 21 members to the Reviewing and Auditing doctors as in the past, but the public interest as well. While in the past all members of the Committee whether representing the doctors or the insurers have in fact been doctors, in the future "men of learning and experience" --not necessarily doctors--will be added. The decision on professional questions involved in the reviewing of doctors' bills is to remain in the hands of professional men; however, other types of review could profitably be undertaken by the non-medical members. These might include checks on the eligibility of the patient, especially with a view to insuring that occupational cases compensable under Workmen's Accident Compensation Insurance are not charged to the Fund--as has happened in the past.

In-service Training Courses

On 1 June the Insurance Bureau, Ministry of Welfare, opened the eighth training course for those handling the administration of social insurance. It was the first course held since before the war. The proceeding seven had been held between 1927--when Health Insurance became effective--and the beginning of the war. One hundred persons are registered for the present course which includes representatives from each prefectural Insurance Section and many branch offices. The course will last for one month during which item lectures and studies will deal with all phases of social insurances and related subjects.

This course is to serve also as a pattern for each prefectural Insurance section to follow in conducting a nation-wide program of in-serve training. Considerable emphasis is also being given to expanding the informational service program.

No.567 patients and the specified repatriate patients. Civil Welfare
Departments,
Prefectural
governments.

SECTION II PREVENTIVE MEDICINE DIVISION

Tuberculosis Control

Health officers are aware of the problem Japan is facing in the control of tuberculosis. Due to insufficient facilities, funds and personnel, the services which can be provided must necessarily be less than ideal. However, such a situation must not result in any relaxation of efforts to keep the tuberculosis control program balanced and to bring it as rapidly as possible to an adequate level of effectiveness.

In order to keep in mind certain factors which should be included in a program of tuberculosis control, the following is quoted from Smillie's book - "Public Health Administration in the United States".

"An active service would be organized on approximately the following scale:

- a. Facilities should be provided for 1,500 clinic visits for each 100 annual deaths from pulmonary tuberculosis in the community.
- b. The file of active cases should be equal to at least 5 cases per annual death.
- c. Case-finding work should uncover at least two new cases each year per annual death.
- d. An average of at least three clinic visits annually should be made for each person registered in the clinic. One-fourth of those cases should be in the incipient stage.
- e. An average of three contacts should be examined for each new case found.
- f. At least fifty nursing visits should be made to homes for each annual death. A fourth of those visits should be to post sanatorium cases.
- g. Provision should be made for at least one hospital bed (occupied 300 days) per annual death from the disease. Many communities have supplied two beds for tuberculosis per annual death. Twenty-five percent of hospitalization should be for incipient cases.

Although the above standard of services as quoted are probably much more complete than even those found in the United States and beyond present possibility of achievement here in Japan, they can be used as a guide in the evaluation of tuberculosis control activities. Every effort is being made at the national level to provide the necessary facilities, clinics and hospital beds.

It is estimated that about 50% of the goals suggested in items "a" and "g" have been attained. However, only about 5 or 10% of those outlined in items "b" through "f" for which local administration is primarily responsible have been realized. Local health officers, heads of clinics and sanatoria, as well as private physicians must undertake responsibility for the attainment of these goals. Unless continuous efforts are made in this direction, the tuberculosis control program cannot be expected to produce results comparable with those in western countries.

Preventative Vaccination

Attention is directed to Weekly Bulletin No.102, "Preventative Vaccination" and Inclosure No.1 "Rules".

It is anticipated that sufficient biological products will have passed assay so that the immunization program can be resumed. In connection with this it is important that the "Rules for the Execution of Inoculations" be followed carefully.

Special emphasis should be placed upon the places and manner of storage of vaccines as well as the qualifications of the custodian. Frequently in the past, vaccines have been handled more casually than articles of food and by custodians who had little or no appreciation of the properties of the article in their possession.

Care should be exercised that no biological product is used unless it is in the original container and properly labelled. This should be the doctor's responsibility. In the past there have been instances where neither the doctor nor the person filling the syringes looked at the label.

All instances of unusual or severe reaction should be carefully investigated from an epidemiological viewpoint. Reports of such instances are extremely valuable to public health authorities, even if they are late. Through the study of such reports, action can be taken at the proper administrative levels to correct desirable conditions which may exist.

Training Courses at the Institute of Public Health

The ninth in the series of three-month refresher training courses for medical health officers and for sanitarians will begin at the Institute of Public Health in Tokyo on 5 July. Well-qualified individuals holding responsible positions should be selected for training. Official announcements concerning these courses have been sent to prefectural governors by the Ministry of Welfare.

Concerning the Retentions of Prefectural Health Departments

The recent movement for economy in governmental expenditures through the reorganization of governmental agencies and reduction of governmental personnel has led to much discussion regarding possible elimination of certain sections and departments within prefectural governments. Reports indicate that prefectural governments are considering the elimination of prefectural health departments and placing health functions under some other department. Numerous letters, petitions and representations have been received at this headquarters and at the Ministry of Welfare protesting any changes in prefectural government organization which might result in the reduction in either the importance or the effectiveness of the health department.

The place of the health department in prefectural government has been established by the Local Autonomy Law and implementing regulations. Therefore, no major change in status is possible without prior amendment to basic law through Diet action. Since no recommendations for elimination of health departments has been made by the Ministry of Welfare, and since the Ministry of Welfare, as well as this Headquarters, is fully aware of the importance of retaining separately functioning health departments, it is not likely that any proposals for change will be initiated by them.

The public response in support of prefectural health departments is encouraging. The expressed opinion of public spirited individuals and organizations is an important adjunct to democratic processes of government. Such opinions, directed to the proper local and national governmental agencies will keep them informed of their responsibilities to the public.

SECTION III NURSING AFFAIRS DIVISION

Nurses Association

The National Japanese Midwives, Public Health Nurses and Clinical Nurses Association has been readmitted into the International Council of Nurses at the recent meeting in Sweden.

Books

The material used in the Clinical Nurses' refresher course is being published by the Clinical Section of the Nurses' Association and will soon be on sale. The book contains the course given by Public Health and Welfare Nursing personnel plus the three year curriculum and an outline of the subjects contained in the curriculum that

were not taught due to the limited time available. This will be a 600 page book and will be helpful in the schools of nursing.

Budget

The following is a breakdown of the national budget for nursing and midwifery education. Amount to be given to the prefectures for education:

<u>Public Health Nurses</u> in general: 10 day course (approx.)	¥ 10,250 each pref.
<u>Midwives</u> in general: 10 day course	¥ 10,250 for each pref.
<u>Clinical Nurse</u> in general: 1 month course	¥ 13,250 for each pref.

Courses for leaders:

Public Health Nurse Courses for leader two-10-day courses (approximately) during the year for each region

	¥ 102,480
<u>Midwives</u> : - Leaders in <u>midwifery</u> two-10-day courses in each region	¥ 110,000
<u>Clinical Nurses</u> - Leaders in Clinical Nursing: one-three month course in each region Ministry of Welfare budget ¥ 402,000 for the 8 regions plus the money given by the National Association	¥ 320,000 (¥ 722,000)

National Refresher Courses to be given in Tokyo during the year.

Public Health Nurse: one-10 day course for full time instructors	¥ 21,400
Midwives: one-10 day course for full time instructors	¥ 21,400
Clinical Nursing: one-four month course for full time instructors	¥ 200,000

There is ¥ 25,000 for the one Prefectural public health nurse school in each prefecture, and in the event that there is no prefectural school now in existence this money may be used for the now five month course in public health nursing as a prefectural project. This is the entire amount allowed for these schools from the budget this year. This money will be paid to the prefecture as well as the money for the prefectural courses mentioned above. This has been marked for education and schools, etc. and is not to be used for other purposes.

Regional Committees appointed by the Nurses Council (these members will be checked and if satisfactory will be officially notified of their appointments).

1. Hokkaido Area

1. Public Health Nurse	Ogata, Yoshii
2. Midwife	Takamura, Aya
3. Clinical Nurse	Takasu, Kisa
4. Doctor	Takimoto, Shozo
5. Doctor	Nisino, Rikuo
6. Doctor	Iwashita, Kenzo

2. Tohoku Area

1. Public Health Nurse	Inabe, Yoshiko
2. Midwife	Hanada, Miki
3. Clinical Nurse	Watanabe, Tora
4. Doctor	Sato, Motoi
5. Doctor	Saito, Kaoru
6. Doctor	Hosokawa, Fumiko

3. Kanto Shinetsu Area

1. Public Health Nurse	Ikegami, Motoi
2. Midwife	Niwa, Miyo
3. Clinical Nurse	Abe, Yae
4. Doctor	Takeuchi, Ichi
5. Doctor	Asano, Mitsushige
6. Doctor	Yumoto, Asa

4. Tokyo Area

1. Public Health Nurse	Hayashi, Tane
2. Midwife	Koyanagi, Koto
3. Clinical Nurse	Yumoto, Kimi
4. Doctor	Obata, Korekiyo
5. Doctor	Terada, Kumie
6. Doctor	Shibuya, Tokuo

5. Tokai Area

1. Public Health Nurse	Konno, Ayako
2. Midwife	Tsuji, Hisako
3. Clinical Nurse	Murata, Sato
4. Doctor	Toyoda, Bumzo
5. Doctor	Tanaka, Toichi
6. Doctor	Miyanagi, Masao

6. Kinki Area

1. Public Health Nurse	Kamiya, Toyoko
2. Midwife	Harada, Tane
3. Clinical Nurse	Nagashima, Misako
4. Doctor	Katsu, Keitoku
5. Doctor	Tokuyama, Tomio
6. Doctor	Harayama, Yoshio

7. Chugoku Area

1. Public Health Nurse	Maruyama, Teruko
2. Midwife	Toda, Harie
3. Clinical Nurse	Yamazaki, Hideko
4. Doctor	Oshima, Shoji
5. Doctor	Kakizaka, Reisuke
6. Doctor	Kusaka, Ren

8. Shikoku Area

1. Public Health Nurse	Yagi, Shigeo
2. Midwife	Ono, Tsuyano
3. Clinical Nurse	Kiyota, Kii
4. Doctor	Sensyu, Shiro
5. Doctor	Nagano, Shigeo
6. Doctor	Seijyo, Minoru

9. Kyushu Area

1. Public Health Nurse	Sugimoto, Kamenno
2. Midwife	Wachi, Chiyo
3. Clinical Nurse	Tsusue, Misue
4. Doctor	Sasaki, Takeo
5. Doctor	Sakai, Momoko
6. Doctor	Aramaki, Ichi

The following is the amount of budget for each of the 25 Schools of Nursing under the National Hospital set-up. This is the full amount of budget according to number of students for the year. This budget includes money for instructors, uniforms, etc. Five hundred yen per month for each student as an allowance, ¥ 348.00 per month for books, paper, pencils, etc. and ¥ 1,350.00 for food per month.

<u>Name of School</u>	<u>National Hospitals Only</u>	
	<u>Fixed Number of Students</u>	<u>Amount</u>
Sapporo	52	1,237,785
Sendai	80	2,319,675
Kasumigura	52	1,417,785
Tochigi	83	2,422,377
Saitama	35	1,009,762
Tokorozawa	35	959,762
First National	80	2,311,970
Second National	75	2,135,632
Hamamatsu	55	1,478,987
Nagoya	50	1,402,480
Kanazawa	83	2,032,377
Maizuru	66	1,856,025
Kyoto	20	600,300
Ohsaka	80	2,439,675
Himeji	40	1,129,270
Okayama	84	2,362,240
Iwakuni	43	1,139,677
Zentsuji	103	2,743,727
Kokura	67	1,951,297
Tsukusi	70	1,824,000
Kamegawa	80	2,191,970

Kumamoto	70	1,874,000
Miyakonojo	60	1,748,325
Kagoshima	82	2,216,877

SECTION IV
VETERINARY AFFAIRS DIVISION

Animal Disease

The Animal Hygiene Section, Ministry of Agriculture and Forestry reported the following outbreak of animal diseases for the period 4 - 10 June.

<u>Prefecture</u>	<u>Disease</u>	<u>Number of Case</u>
Akita	Swine Cholera	3
Yamagata	Swine Cholera	4
Chiba	Swine Cholera	1
	Swine erysipelas	11
Ibaraki	Swine Cholera	1
Kanagawa	" "	1
Saitama	" "	2
	Swan erysipelas	1
Niigata	" "	2
Tottori	" "	1
Tochigi	" "	1
Nagano	" "	2
Shiga	" "	1
Aichi	Swan erysipelas	7
Gumma	" "	1
Shizuoka	" "	2
Tokyo	" "	1

Yamanashi	Swine erysipelas	1	
Hyogo	Anthrax Cattle	1	
Hiroshima	Blackleg	2	
Toyama	Equine encephalomyelitis	1	suspect
Aomori	" "	2	"
Miyazaki	" "	1	"

Note:

The reported cases of equine encephalomyelitis are regarded as suspects and investigations are being made by Ministry officials in conjunction with prefectural officials.

Many farmers have not taken advantage of having their hogs immunized against swine cholera and swine erysipelas. This is due to the fact that the increase in the production of hogs has been very rapid and the farmers believed that they could market their hogs without necessarily having them immunized.

SECTION V SUPPLY DIVISION

Pharmaceutical Affairs Law

Inclosed with this Bulletin are copies of official English translations of the following Ministry of Welfare Ordinances issued under authority of the Pharmaceutical Affairs Law (Law No.197, 29 July 1948):

<u>Incl No.</u>	<u>Ord. No.</u>	<u>Date</u>	<u>Title</u>
1	61	29 Dec 48	Amendment to Enforcement Regulation
2	8	1 Feb 49	Regulation for Control of Manufacture and Assay of Biologic Products
3	13	9 Mar 49	Amendment to Enforcement Regulation
4	14	28 Mar 49	Amendment to Enforcement Regulation

The Enforcement Regulation was published 15 August 1948, as Ministry of Welfare Ordinance No.37, official English translation of which was furnished with Weekly Bulletin No.88. Brief descriptions of the above tabulated ordinances follow:

Incl. No.1 Ordinance No.61, 1948, adds provisions to the Enforcement Regulation which will facilitate labeling of small ampoules containing drugs or cosmetics; and further designates as powerful drugs in Appendix No.1 of the Enforcement Regulation amyresorcinol, isoamyresorcinol and hexyresorcinol.

Incl. No.2 Ordinance No.8, 1949, is the Regulation for Control of Manufacture and Assay of Biologic Products currently in force. This regulation replaces the former Ministry of Welfare Regulation No.32, 1947, which had been continued in force by Article No.66 of the Enforcement Regulation.

Incl. No.3 Ordinance No.13, 1949, increases fees for the National Pharmacists Examination. Reference is made to Weekly Bulletin No.117, Supply Section.

Incl. No.4 Ordinance No.14, 1949, amends Appendix No.1 Powerful Drugs, of the Enforcement Regulation so that phenylaminopropane, phenylmethylaminopropane, their sale and preparations are designated without exception as powerful drugs.

Pyrethrum Emulsion

A total of 63,950 gallons of pyrethrum emulsion concentrate was manufactured during the period 10 - 25 May. This quantity of concentrate will produce 1,918,500 gallons of finished insecticide. A total of 400,350 gallons, or the equivalent of 12,010,500 gallons of finished insecticide, has been produced during the period 26 March - 25 May.

The balance of the production program for 1949 remaining is 33,950 gallons of pyrethrum emulsion concentrate. This will be completed during the period 25 May - 8 June. The 1949 production schedule is for 434,300 gallons of the pyrethrum emulsion concentrate.

Further distribution of pyrethrum emulsion concentrate for 1949 was made during the periods indicated below. The emulsion is supplied in 50 gallon drums of the concentrate which is diluted one part to thirty parts of water prior to use. Distribution was made as follows:

Distribution of pyrethrum Emulsion Concentrate (Unit: 50 gallon drum)

<u>Prefecture</u>	<u>5/23-5/29</u>	<u>5/30-6/5</u>	<u>Prefecture</u>	<u>5/23-5/29</u>	<u>5/30-6/5</u>

Biologics Assay

In reporting the status of biological products the use of the term “reassay” is discontinued in this and future editions of the Weekly Bulletin. To avoid confusion the products will be reported as undergoing assay. The use of “reassay” is of primary significance to Ministry of Welfare agencies, including the National Institute of Health which performs the assay.

During the period 24 May - 6 June the following biologics have been assayed and found to meet minimum standards:

<u>Item</u>	<u>Manufacturer</u>	<u>Lot No.</u>	<u>Quantity</u>	
<u>Diphtheria Antitoxin</u>	Beppu Chiryo Igaku K.K.	13	8,135

SECTION VI NARCOTIC CONTROL DIVISION

Enforcement

Nine foreign nationals and one Japanese were arrested in Tokyo in possession of decks of finished heroin and a quantity of semi-processed narcotics believed to have been smuggled from the Asiatic continent. Traffickers from the Kobe-Osaka area were among those arrested and included one fugitive from the Tokyo area. The arrests and seizures, including a precision scale, will remove at least three alleged major violators from the illicit traffic.

The Chiefs of the Public Peace Sections of the 73 police stations in Tokyo were given an indoctrination regarding the functions of the police in combating illicit narcotic traffic. Eleven of the stations have water front areas under their jurisdiction. Cooperation between Narcotic Agents, the Tokyo Metropolitan Police Narcotic Squad, and the police is gradually improving in the Tokyo area.

Administrative Action

Instructions (Yaku Hatsu No.902, dated 24 May 1949) have been dispatched to the governors of prefectures which require narcotic agents to establish liaison with Maritime Safety Bureau officials in order to more effectively combat the smuggling of narcotics into Japan. The agents will advise Maritime personnel regarding the various kinds of narcotics appearing in the illicit traffic and the modus operandi of smugglers.

Instruction (Yaku Hatsu No.758, dated 13 May 1949), which established the new system of numbering narcotic and marihuana cases in chronological order, have materially improved the reference files at both the national and prefectural levels. Card index files, an integral part of the new system, are more easily maintained, and make it possible to follow the activities of any individual or group of illicit traffickers.

SECTION VII WELFARE DIVISION

Licensed Agencies for Relief in Asia (LARA)

Overseas shipments of relief supplies to LARA, numbers 166 through 171, have arrived in Yokohama and contained 78.76 tons. These shipments included the following relief items:

- a. 166th Shipment: Arrived aboard the S.S. China transport on 11 May and contained 7.23 tons (clothing)
- b. 167th Shipment: Arrived aboard the S.S. China transport on 16 May and contained 20.37 tons (food, 8.67 tons - clothing 11.7 tons)
- c. 168th Shipment: Arrived aboard the S.S. Jave Neil on 19 May and contained 4.8 tons (clothing)
- d. 169th Shipment: Arrived aboard the S.S. Lipscomb Lykes on 19 May and contained 25.77 tons (food, 23.07 tons - clothing 2.7 tons)
- e. 107th Shipment: Arrived aboard the S.S. China Victory on 21 May and contained 5.96 tons (clothing, 5.8 tons - miscellaneous .16 tons)
- f. 171st Shipment: Arrived aboard the S.S. Marine Snapper on 23 May and contained 14.63 tons (clothing, 14.3 tons - miscellaneous .33 tons)

The total LARA relief supply shipments to Japan, as reported, now totals 8,904.17 tons, consisting of the following items:

Food	6,752.06
Clothing (including shoes, bedding, etc.)	1,724.49
Medical supplies	86.80
Cotton (raw)	207.62
Miscellaneous	<u>133.20</u>
TOTAL	8,904.17

Community Chest

The activities of the Central Community Chest, since their organization meeting (12 August 1947), have continuously been slanted towards strengthening their Prefectural Community Chests and many aids (instructions publicity layouts, conferences, etc.) have been made available. The general improvement of the administration and operation of the Community Chest, during the past two years, on a national and prefectural level, has been and is in evidence. Many Prefectural Community Chest Committee have and are applying techniques that have been discussed and recommended at national conferences. An example of the sincerity of purpose and approach to meeting the problem of confining agency membership in the Community Chest to these agencies which serve a useful purpose and encouraging these agencies to maintain high standards is the investigation carried on by the Osaka Community Chest to evaluate the work and programs of its member agencies. This investigation is made primarily as part of their study to determine the financial needs of their member agencies and is set forth below, in outline, as a matter of interest to Military Government personnel:

INVESTIGATION FORM of the Community Chest of Osaka

Out side of the column:

- a. Code number
- b. Date of investigation
- c. Name of Investigator
- d. * Space for mark

I. General

- a. Name of agency
- b. Kind of service
- c. Establishment under the Act _____
- d. Address
- e. Name of Governing Representative
- f. Name of Executive

- g. Station close by
- h. Date of establishment

II. Administration

- a. Name of Administrator
- b. Form of Administration
(Juridical persons with funds, Juridical person without funds, society etc., or private single person).
- c. Date of Approval
- d. Books for Accounting and Operation
(For the defecting ones mark crosses on the corresponding members)

- 1. Statements of Budget of Income and Expenditure.
- 2. Statements of Settling Account of Income and Expenditure.
- 3. Monthly Reports
- 4. Cash Book
- 5. Journal
- 6. Loan Ledger
- 7. Files of Inquiries about Purchasing Supplies.
- 8. Day Book of Stamps and Post Cards.
- 9. Assets Lodger
- 10. Supplies Lodger
- 11. Protection Lodger
- 12. Diary of Work
- 13. Files of Receipts
- 14. Files of Inquiries of income and expenditure.

e. Investigator's Observation

- 1. Are the above written books kept correctly? Yes or No.
- 2. Are vouchers kept perfect? Yes or No.
- 3. Is there any distinction between finances of individual and Agency? Yes or No.
- 4. Other Notices.

III. Outline of Operation of each month, from February 1948 to January 1949, with total and average.

- a. Monthly total of services rendered daily.
- b. Number of staff members at the end of each month.
- c. Number of clients at the end of each month.
- d. Legal amount of relief allowance (or fee of child welfare law).
- e. Legal amount of administration allowance.
- f. Total of salaries.
- g. Other expenditures for operation.
- h. Deficits (or Loans) at the end of each month.
- i. Total of one year.
- j. Average.

IV. Condition of Accommodations

1. Client's rooms:

_____ Rooms in total
 _____ Mats per capita

2. Cleaning and sanitation of rooms: Good or Bad

3. Bedding: Sufficient, Insufficient or Short

4. Sized of rooms:

- a. Observation room: _____ Tsubo
- b. Clinic room: _____ Tsubo
- c. Sick room: _____ Tsubo
- d. Crooping room: _____ Tsubo
- e. Kitchen: _____ Tsubo
- f. Toilet: _____ Tsubo

5. Lavatories: Men's _____, Women's _____

- 6. Meeting (Amusement) room: _____ Tsubo
- 7. Dining room: _____ Tsubo
- 8. Job room: _____ Tsubo
- 9. Play field _____ Tsubo in total
_____ Tsubo in capita
- 10. Cleaning and sanitation of each room: Good or Bad
- 11. Other notices.
- 12. Is there any equipment against fire? Yes or No
- 13. Is there any accommodation for refugee? Yes or No Perfect or Imperfect
- 14. Capacity: Clients Is the capacity number proper? Yes or No Reason Why

V. Treatment of Clients

1. Case work

- a. Is case work carried on? Yes or No
- b. Are recording cards kept perfect? Yes or No
- c. Are individual interviews and treatments carried on? Yes or No
- d. Are after-care or follow-up services carried on? Yes or No

2. Cooking

- a. Are menus kept? Yes or No
- b. Is there a table of standards of calories, and daily records? Yes or No
- c. How many calories does a client take per day? _____ Calories
- d. How many grams of protein does a client take per day? _____ Grams

3. Clothing

- a. Is there any plan of preparing clothing and bedding through a year? Yes or No
- b. Cleaning and sanitation of clients' clothing. Good or Bad Sufficient, Insufficient or Short

4. Health and Sanitation

- a. Examine each of the following items. If it is considered good, mark a circle on the corresponding number.
 - (1) Health examination more than 4 times a year, and their records.
 - (2) Immunization, preventive injection, vaccination, prevention of intestinal worms and other infectious diseases.
 - (3) Nurses and connection with medical institutions.
 - (4) Protection of the sick.
 - (5) Provisions of medicine and instruments.
 - (6) Sick rooms or rest rooms.
 - (7) Bathing more than twice a week.
 - (8) Examination of Cleanliness.
 - (9) Every kind of disinfection.
 - (10) Disposal of filth.

5. Is there any special consideration about education and comfort? _____

6. Is client's daily program proper? _____

7. Investigator's opinion about the treatment of client. _____

VI. Deficits

- 1. Item
- 2. Amounts
- 3. Total
- 4. Prospect of covering deficits and the resources for that purpose.
- 5. Investigator's opinion about the use of money, creditor, and prospect of covering.
- 6. Desirable amount of Payment to cover the deficits from funds of the Community Chest.

VII. Staff Member

1. Investigator's opinion about the staff members:
 - a. Is there any full-time employee who gives case work services to clients
 - b. What earnestness and understanding have the employees for their work?
2. Name
3. Position
4. Age
5. Dependent family (number of)
6. Years of service
7. Salary
8. Schools and certificates qualification

Japanese Red Cross Society

First Aid: Briefly outlined below is information covering the first instructor course in First Aid given at the National Headquarters (Tokyo) to Chapter (prefectural) personnel:

Date: 26 - 31 May (six days including Sunday)

Hours: 0900 -2100

31 students attended

31 students were certified as completing the Course

29 students were certified as FA instructors

Type of Students:

Chapter employees from each of 27 Chapters, two from Osaka Chapter, and two from Headquarters.

Chapter represented:

Aomori, Iwate, Miyagi, Akita, Yamagata, Tokyo, Saitama, Ibaraki, Gumma Niigata, Fukui, Ishikawa, Aichi, Nagano, Osaka, Hyogo, Mie, Wakayama, Tottori, Shimane, Okayama, Yamaguchi, Kagawa, Fukuoka, Saga, Kumamoto, Miyazaki and Kagoshima.

Duties of the attendants in their Chapters:

Health	1
Water Safety	1
First Aid	1
Accounting	3
Business Affairs	1
Field Service	4
Disaster relief	17
Training (nurses)	1
Hospital	1
Social Service	1
Hospital Supply	1

Note:

In the future those who attended the above course will be assigned to conducting First Aid Training Courses in their respective Chapters (prefectures)

SECTION VIII SOCIAL SECURITY DIVISION

Employer Organization

In a recent interview with representatives of the Business Men's Association of Tokyo, it was stated that an increased interest is being taken in the prefectures for revitalizing employer associations. Also recent visits to several prefectures found employer associations in the process of organization. These associations have the potential possibilities of becoming very influential and active in the development of a sound social security system in Japan. The employers play a very important role in the social insurances and should be encouraged to take a more active interest in the operations at all levels of administration. They, as well as the insured, are desirous of receiving more information regarding all phases of social insurances, especially the small entrepreneur employing between 5 and 30 employees.

In a conference with the officers of one association, they stated that in order to emphasize the importance of employer-employee relationship in the social insurances, they were planning to organize a special committee which would have an equal representation of employers and employees. This committee would be advisory with respect to welfare and social insurance activities.

In addition to prefectural employer associations, there is a national Federation of Employer Associations of long standing with headquarters in Tokyo. Membership in the Federation is voluntary. The general purpose of the Federation is to consolidate the opinions of all employers on national policies and for collective representation concerning overall policies being formulated by the national government.

Ministerial Instructions

The following is a list of English translated issued by the various Bureaus of the Ministry of Welfare to the prefectural governments for the periods indicated:

30 May - 4 June

<u>DATE</u>	<u>FILE NO.</u>	<u>SUBJECT</u>	<u>TO:</u>	<u>FROM:</u>
<u>Accounts Section</u>				
May 31	Kai-hatsu No.52 1	Re: Payment into the national treasury of hire (for fiscal year 1947-48) for the vehicle sold by the U.S. Forces.	Director, Health Department Miyazaki	Chief, Accounts Section
June 1	Kai-hatsu No.528	Re: Attendance on the field auditing of accounting.	Governors, Ibaraki& Tochigi Prefs.	"
<u>Public Sanitation Bureau</u>				
June 1		Re: Council on operation of the health centers.	All prefectural governors.	Director, Public Sanitation Bureau
June 1	Ei-hatsu No.579	Re: Forwarding written appointments of members of the Hot Spring Investigation Committee of Tochigi Prefecture.	Governors, Tochigi Pref.	
June 3	Ei-hatsu No.581	Re: The first allotment of a uniform of environmental sanitation inspectors.	Prefectural governors concerned	"
June 4	Ei-hatsu No.585	Re: Sub-standard condensed milk being stocked in store houses of the Daily Product Distribution Corporation.	Governors, Tokyo Metropolis and Saitama Pref.	"
June 4	Ei-hatsu No.586	Re: Inquiry of questions on the Eugenic Protection Law.	Governors, Aichi Pref.	distribution goods
<u>Medical Affairs Bureau</u>				
June 2	I-hatsu No.491	Re: Distribution of gasoline for dental treatment (for July).	All prefectural governors.	Director, Medical Affairs Bureau
<u>Pharmaceutical and Supply Bureau</u>				
May 30	Yaku-hatsu No.937	Re: Transmission of written applications for permission of manufacturing contraceptive agents.	All prefectural governors.	Director, Pharmaceutical& supply Bureau
May 31	Yaku-hatsu No.953	Re: Striking from the list of the specified distribution goods.	"	"
May 30	Yaku-hatsu No.956	Re: Notice on the articles permitted to manufacture as contraceptive agents.	"	"

June 1	Yaku-hatsu No.970	Re: Making an entry of date of delivery, etc., into the allotment certificate for purchase.	//	//
June 3	Yaku-hatsu No.979	Re: Report on discovery of substandard drugs, etc.	//	//
June 3	Yaku-hatsu No.1004	Re: Allotment of the quantities allotted for distribution and amendment of a part of the quantities authorized for distribution of the specified distribution goods (drugs, and infant and child remedies) for the second quarter in fiscal year 1949-50.	//	//
June 3	Yaku-shu No.429	Re: Discovery of a forged imported drug, sulfadiazine tablets (100 tablets).	//	//
June 3	Yaku-shu No.430	Re: Discovery of a forged drug (solution of hydrogen dioxide).	//	//
<u>Social Affair Bureau</u>				
May 30	Sho-hatsu No.895	Re: Consultation on licensing of the protective institutions under the Daily Life Security Law.	Governor, Fukui Prefecture	Director, Social Affairs Bureau.
May 30	Sho-hatsu No.900	Re: Excess payment beyond the standard of expenses to be expended for aid for calling under the Daily Life Security Law.	Governor, Nara Prefecture	//
May 30	Sho-hatsu No.901	Re: Guidance for execution and inspection of business affairs on enforcement of the Daily Life Security Law and business affairs on emergency relief under the Disaster Relief Law.	Governor, Ishikawa Prefecture.	//
May 31	Sho-hatsu No.903	Re: Readjustment of the protective institutions under the Daily Life Security Law.	Governor, Fukushima Prefecture.	//
May 31	Sho-hatsu No.904	Re: Allocation of clothings, one of relief commodities from LARA, to the infants and the pre-school children of inmates of prisons.	Governor, Tochigi & six other prefectures.	//
May 31	Sho-hatsu No.906	Re: Extra-ordinary allocation of relief commodities from LARA.	Governor, Yamagata Pref.	//
May 31	Sho-hatsu No.907	Re: Allotment of alcohol for operation of the work providing agencies.	Governor, Yamagata & 3 other prefs.	//
June 1	Sho-hatsu No.908	Re: Allocation of relief commodities from LARA for disaster relief.	Governor, Hokkaido.	//
June 1	Sho-hatsu No.909	Re: Extra-ordinary distribution of clothings by way of temporary aid of living aid under the Daily Life Security Law.	Governor, Fukuoka Prefecture.	//
June 1	Sho-hatsu No.910	Re: Results of inspection on allocation of relief commodities from LARA.	Governor, Yamagata Prefecture.	//

June 2	Sho-hatsu No.912	Re: Charge of allotment of relief commodity (candles) from LARA.	Governor, Osaka Prefecture.	''
June 2	Sho-hatsu No.914	Re: National grant-in-aid for expenses on protection of specified women for fiscal year 1949-50.	Governor, Tokyo and seven other Prefectures.	''
June 2	Sho-hatsu No.915	Re: Consultation on licensing of the protective institutions under the provision of Article 7 of the Daily Life Security Law.	Governor, Yamagata Prefecture.	''
June 2	Sho-hatsu No.918	Re: Allocation of relief commodities from LARA.	Governor, Tokyo & 7 other prefs.	''
June 2	Sho-hatsu No.919	Re: Questions on the Consumer's Livelihood Cooperative Association Law.	Governor, Toyama Pref.	''
June 3	Sho-hatsu No.920	Re: Notice on the business conference of persons concerned with the sheltered work agencies for the handicapped.	Governor, Tokyo & eight other prefs.	''
June 4	Sho-hatsu No.921	Re: Investigation into foreign nationals and stateless persons receiving public assistance.	Governor, Hyogo Pref.	''
June 4	Sho-hatsu No.922	Re: Investigation into foreign nationals and stateless persons receiving public assistance.	Governor, Fukushima and 4 other prefs.	''
May 30	Sho-otsu -hatsu No.147	Re: Handling of clothes of the U.S. Army among clothings as one of relief commodities from LARA.	All prefectural governors.	
May 30	Sho-otsu -hatsu No.148	Re: Allocation of leather belt for the second quarter.	''	''
May 30	Sho-otsu -hatsu No.149	Re: Allotment of materials for construction of the social work agencies.	''	''
May 30	Sho-otsu -hatsu No.150	Re: Allocation of electromotors and transformers.	''	''
May 30	Sho-otsu -hatsu No.151	Re: Allotment of oil or grease products for operation of the work providing agencies.	''	''
May 30	Sho-otsu -hatsu No.152	Re: Allotment of oil or grease products for operation of the work providing agencies for the first quarter.	All prefectural governors.	''
Children's Bureau				
May 30	Ji-otsu -hatsu No.20	Re: Allocation of skimmed powder milk for food services at the child care facilities.	All prefectural governors.	Director, Children's Bureau.
May 30	Ji-hatsu No.489	Re: Allocation of soy for food services at the child care facilities.	''	''
May 30	Ji-hatsu No.49	Re: Consultation on appointment of the (acting) child welfare officials.	Governor, Mie Pref.	''

June 2	Ji-hatsu No.495	Re: Approval on change of the location of the child welfare center.	Governor, Fukui Pref.	//
June 2	Ji-hatsu No.496	Re: Consultation on appointment of the (acting) child welfare officials.	//	//
June 2	Ji-otsu -hatsu No.22	Re: Disposition of public works on mothers homes (day-nurseries) for fiscal year 1948-49.	All prefectural governors.	//
June 2	Ji-otsu -hatsu No.23	Re: National liability on expenses on equipments of day-nurseries (public works) for fiscal year 1949-50.	//	//
June 2	Ji-otsu -hatsu No.24	Re: The state of execution of the child welfare week in fiscal year 1949-50.	//	//

Insurance Bureau

June 1	Ho-hatsu No.60	Re: Expansion and strengthening of healthfacilities under the nation health insurance.	All prefectural governors.	Director, Insurance Bureau & Public Sanitation Bureau
--------	-------------------	--	----------------------------	--

Repatriation Relief Agency

May 30	Engo No.597	Re: Re-issuance of the repatriation certificate.	Governor, Tokyo Metropolis.	Director, Repatriation Relief Bureau.
June 1	En-but-su No.602	Re: Notice on selling price of clothings.	Governors, Saitama and Koichi Prefs.	//
June 1	En-but-su No.603	Re: Sale of unnecessary articles among the commodities kept by all the repatriation reception centers.	Governors, Hokkaido & 10 other Prefs.	//
June 4	Engo No.609	Re: Permission on extension of the valid period of time for Korean nationals whose repatriation has been permitted by GHQ, SCAP.	Governor, Osaka Pref.	//
June 4	En-shi No.610	Re: Excess expenditure beyond the fixed amount of expenses on distribution necessary in extra-ordinary distribution of the emergency household effects for fiscal year 1948-49.	Governor, Hyogo Pref.	//
May 31	Ichi-fuku No.2882	Re: The regulations on treatment of demobilized patients.	All directors of Civil Welfare Departments, prefectural governments.	Director, Demobilization Bureau.

World Health Organization

Inclosed with this Bulletin, for Military Government Teams only, is a copy of the World Health Organization pamphlet, "Who - What It is ... How It Works ... What It Does". Sufficient copies have been received to permit distribution to each Prefectural Medical Association and Prefectural Health Department in addition to copies for the Japan Medical Library Association and the Ministry of Welfare. The Ministry is planning to reproduce the pamphlet in Japanese.

Forwarded with this Bulletin is Public Health and Welfare Technical Bulletin entitled "Group Work". Short Title - TB-PH-SS.5.

SECTION II PREVENTIVE MEDICINE DIVISION

Training Course for Laboratory Technicians

A two-months course for laboratory technicians in health centers will be held at the Institute of Public Health in Tokyo from 11 July to 10 September. Practical training in the various procedures performed in health center laboratories will be given. The present course will be limited to 30 students. A second course will be held later in the year, for those unable to attend the first course. A list of the prefectures entitled to send students to the course beginning 11 July is included in the official announcement sent to prefectural governors by the Ministry of Welfare on 8 June.

Review of Status of the Biologic Production and Control Program

Reference, Weekly Bulletin, Preventive Medicine Division, Nos. 104, 105, 106, 110, 112, 118, 119 and 122.

The use of Japanese produced biologic products was suspended of 25 December 1948. The suspension of these products resulted from a series of serious reactions with some deaths occurring in children who had been injected with diphtheria toxoid. A program for the re-assay of all Japanese produced biologic products which had been released for human use was initiated at the National Institute of Health. Representative samples of each lot of biologic products were sent for assay to the Institute which began assaying the various products in the order of greatest need for the respective product, i.e. smallpox vaccine, diphtheria and tetanus antitoxin, typhoid vaccine, tuberculin and BCG vaccine, etc. The adoption of assay procedures for each biologic product made in Japan was finally completed about February 15, 1949. Since this date the priority system pointed out above has been followed when a shortage of laboratory animals and other supplies necessary for assay has prevented the simultaneous assay of all products.

The procedures adopted by the National Institute of Health for the re-assay of formerly released biologic products were augmented, where necessary, to apply also for the assay of new or unreleased biologic products. An attempt has been made to assay both "old" and "new" product concurrently since March 1, 1949.

The task of the National Institute of Health has been an extremely difficult and enormous one. Most handicaps have now been overcome and the Institute is currently performing an excellent job. The animal shortage alone has been so acute that it was necessary to import 10,000 guinea pigs from the United States to supplement the indigenous supply.

Immediately after the suspension of the use of Japanese produced biologic products, the Disease Prevention Bureau, Pharmaceutical Supply Bureau, and the National Institute of Health formed a committee of twenty-five persons to inspect each laboratory producing biologic products. The purpose of the survey was to determine whether or not the laboratories were qualified to produce the products they were licensed to produce. The survey and the report of the committee was completed and on 12 April 1949, it was decided that of the 37 laboratories investigated, only 11 were qualified for the immediate reissuance of both manufacturing and product licenses. An additional four laboratories had adequate facilities, personnel and capital to qualify them for a manufacturing license; however, data on the quality of their products as determined from Ministry of Welfare assay records was insufficient to justify the immediate reissuance of product licenses to these laboratories. Criteria of qualification for product licenses were established and the above mentioned laboratories have been notified as to the steps it would be necessary for them to take before they would be eligible to receive product licenses. There are no other laboratories in Japan at the present time which are considered to be eligible for licenses for the production

of biologic products for human use. Any laboratory which can meet the requirements which have been established as necessary for the production of sterile, safe, and effective biologic products may apply for and will be granted license for production. In general, these criteria may be stated as follows:

1. An adequate physical plant suitable for the production, processing, storage, and handling of biologic products.
2. An adequate number of sufficiently trained and qualified personnel necessary for the production of biologic products.
3. Physical and laboratory equipment suitable for use in the production of biologic products.
4. Financial reserve sufficient to enable the laboratory to operate.
5. The production of biologic products suitable for human use as determined by the actual assay of the product by the National Institute of Health and by the evaluation of the production procedure to be used by the laboratory for the production of a specific product.

(Note):

Item 1-4 above determine whether a laboratory should be issued a manufacturing license. Item 5 determines whether or not a laboratory should be issued a product license. It is necessary for a manufacturing laboratory to obtain a product license for each biologic product it desires to produce.

Product licenses are issued under the authority of manufacturing licenses, however, a manufacturing license does not entitle a producer to produce biologic products unless the producer has been granted a product license for each product he wishes to produce. Licensed laboratories and the products they are licensed to produce are listed in tabular form:

* Product to be Licensed

	Vaccines					Toxicid	Antitoxin			
	Smallpox	Typhoid	Typhus	Cholera	Pertussis	Diphtheria	Diphtheria	Tetanus	Diluted Tuberculin for Mantoux Test	BCG Vaccine
Biologic Laboratory Yashima, Kagaku, Tokyo						×				
Kitasato Institute, Tokyo	×	×	×	×	×	×	×	×	×	
Toshiba Seibutsu Eikagaku Institute, Niigata	×	×	×			×	×		×	
Handai Biseibutsu Institute, Osaka		×	×	×		×	×			
Takeda Ykuhin Kogyo, Hikari.	×					×	×			
Fugisawa Yakuhin Kogyojo, Osaka		×				×				
Kagaku & Kessei Ryoho Institute Kumamoto	×	×	×	×	×	×	×			
Sankyo K.K., Tokyo		×	×	×		×	×			
Chiba Kessei seizjo, Chiba		×	×			×	×	×		
Japan Anti-Tuberculosis Association, Kiyose									×	×

× - Production License to be granted.

* - Every laboratory must maintain a record of at least 50% production of each product satisfactorily passing the National Institute of Health assay in order to retain license for each product

All regulations pertaining to the production of biologic products have been or are now in the process of being revised. The fundamental regulation was officially promulgated as Ministry of Welfare Ordinance No.8 on 21 February 1949. Pertinent general regulations which augment and explain Ministry of Welfare Ordinance No.8 are in the process of promulgation and include "Guiding Principle for the Manufacture of Biologic Products", "License Procedure", "Naming of Biologic Products" and "Labels, Circulars, of Biologic Products." In addition to

these general regulations there is a specific regulation governing the production of each biologic product. These regulations are referred to as "Minimum Requirements". A list of "Minimum Requirements" adopted, or in process of adoption at the present time, is listed below:

SPECIFIC OFFICIAL TITLE

Pertussis Vaccine

Smallpox Vaccine

Cholera Vaccine

Typhus Vaccine

Typhoid Vaccine

BCG Vaccine (Dried)

Diphtheria Antitoxin

Diluted Tuberculin for Mantoux Test

Diphtheria Toxoid

Maintenance and Distribution of the Strain of Tubercle Baccillus to be used for the Production of BCG Vaccine

The ban on the use of Japanese produced biologic products has not been entirely lifted. Only those products which successfully pass the assay conducted by the National Institute of Health may be used. A list of products by producers, which have passed assay, is published each week in the Weekly Bulletin, by the Supply Division of the Public Health and Welfare Section.

All regulations pertaining to the biologic production and control program are being distributed in both the Japanese and English languages by the Ministry of Welfare, Japanese Government. This is an attempt to eliminate misinterpretation of the regulations which has resulted in the past at the local levels of use. Official English translations of all regulations will be published in the Weekly Bulletin as they are promulgated. One of these has already been published. (Weekly Bulletin No.128).

There has been and there will continue to be for some time, a shortage of all biologic products for human use. Licensed producers are being continuously encouraged to expand their facilities and to produce all products for which they are licensed at maximum capacity. Production quota restrictions have been entirely lifted as one means of encouragement. Some quotas have been issued at the request of producers to be used as an aid toward obtaining loans from banks.

The biologic production and control program should be a cooperative program between the Japanese Government and licensed manufactures. Assistance of an informative and technical nature may be obtained by the manufacturer from the National Institute of Health. This is a primary responsibility of the National Institute of Health but it can only assist in response to specific requests.

Hexylresorcinol: Report on Effectiveness Desired

Health Officers may in the course of their work hear of studies or reports on the effectiveness as a vermifuge of the new gelatin coated hexylresorcinol product released under Ministry of Welfare revised specifications. This headquarters would welcome the forwarding of reports of the more extensive or authentic studies which may have been made by Japanese physicians or health agencies, particularly if comparisons through use of "controls" are made with other commonly used vermifuges. Although the passing of adult round worms following treatment indicates some specificity, a search for ova in the stools two or three weeks following treatment is a more reliable means of determining effectiveness. Absence of ova following treatment of individuals previously diagnosed as being infested should be the criteria of cure.

SECTION III
NURSING AFFAIRS DIVISION

Private Employment Exchanges

The following has been extracted from Economic and Scientific Section's Labor Bulletin, Vol. II, No. 8, dated 30 April 1949.

"Control of Private Employment Exchanges. The original Employment Security Law had Provisions for public licensing and control of private employment exchanges. These provisions have been amended to make

them conform more nearly to International Labor Office Conventions and Recommendations and to permit more latitude for the operation of non-profit private employment exchanges. Under the new law, a distinction is made between fee-charging profit-making agencies and fee-charging non-profit making agencies with the latter given somewhat less restrictive regulation. Another provision would permit these private employment agencies to limit their service to certain categories of workers, with the permission of the Labor Ministry. For example, a Nurses' Association under the new provisions would be able to set up a non-profit fee-charging agency and to limit its services to its own members, provided the Labor Ministry approved."

This clarifies the misunderstanding that has heretofore existed concerning the operation of non-profit employment exchanges by nursing associations.

Education

Four Japanese nurses departed Japan on 19 June for one year of study in the United States. The Rockefeller Foundation is sponsoring three of the group, two for post graduate study in public health nursing and one for clinical nursing. The American Red Cross is sponsoring the remaining member who will study Red Cross nursing techniques at ARC Headquarters.

Four Japanese nurses who have been taking post graduate training in the United States are expected to return to Japan next month.

SECTION IV VETERINARY AFFAIRS DIVISION

Animal Diseases

The Animal Hygiene Section, Ministry of Agriculture and Forestry, submitted the following report on animal diseases occurring during the period 11-17 June.

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Hokkaido	Swine plague	13
Akita	Swine cholera	2
Yamagata	" "	3
Chiba	" erysipelas	7
Ishikawa	" "	1
Shizuoka	" "	1
Toyama	" "	2
Niigata	" "	3
Yamanashi	" "	1
Nagano	" "	2
Fukushima	" "	5
Saitama	Equine encephalomyelitis	1 (suspect)

SECTION V SUPPLY DIVISION

Mission of American Pharmaceutical Association

The Public Health and Welfare Section requested authorities in Washington to invite a delegation of members of the American Pharmaceutical Association to visit Japan, to advise on pharmaceutical education and on the organization and functions of the pharmaceutical association. Improvements have been accomplished in both of these important public health activities to implement the objectives of the Occupation. The standards of educational requirements in Japan have been advanced, aimed to place pharmacy on a high professional plane. The same objective was to be accomplished by dissolution of the wartime pharmacists associations, which have been replaced by newly organized pharmaceutical associations based on democratic concepts.

The American Pharmaceutical association, following acceptance of the invitation selected a mission consisting of five leaders in the field of pharmacy in the United States, who are scheduled to depart from California

on 25 June. The members are Dr. Glen L. Jenkins, President of the American Pharmaceutical Association and Dean of the college of Pharmacy, Purdue University, Lafayette, Indiana; Dr. Hugh C. Muldon, Dean of the College of Pharmacy, Dequesne University, Pittsburgh, Pa., Dr. Troy Daniels, Dean of the College of Pharmacy, University of California at Berkely, California, Mr. Don Franke, Chief Pharmacist, University of Michigan Hospital at Ann Arbor, Michigan; and Mr. F. Royce Franzoni, Vice-President National Association Board of Pharmacy, member District of Columbia Board of Pharmacy, and practicing pharmacies in Washington D. C.

It is contemplated that the visiting delegation will consult with Japanese leaders in all phases of pharmaceutical affairs, professional and commercial, as well as with Japanese Government officials, national and local. Field inspection trips will be scheduled to examine installations of educational, therapeutic and commercial natures.

Pharmacy Week

The ensuing visit of the mission of the American Pharmaceutical Association will coincide with Pharmacy Week in Japan. The Japanese Pharmaceutical Association has set aside the week of 5 July through 11 July as Pharmacy Week. This is another “first” in the history of pharmaceutical affairs in Japan.

Theme chosen for this activity is “Infectious Diseases”, considered appropriate to the summer season. A vigorous public campaign will be conducted in cooperation with other public health professional groups, with related commercial agencies, and with government officials, to acquaint the Japanese public with the dangers of infectious diseases and necessary protection against them, and the part the interested professional, commercial and governmental groups play in protecting the health of the Japanese people. The information will be disseminated through the media of posters, displays, press, radio, meetings, and other means of communication. It is expected programs will be conducted on national and local levels throughout the duration of Pharmacy Week.

Hexylresorcinol Production

A total of 507.7 kg of hexylresorcinol crystals passed assay during the period 21 May - 3 June, while 6.0 kg failed assay tests, and 321.0 kg were under assay. The two-week production of hexylresorcinol capsules totaled 4,591,883, with 1,396,000 still under assay. The assayed figure includes 55,000 pills of 0.2 grams hexylresorcinol content.

Total production for May:

	<u>Crystals</u>	<u>Capsules</u>
1-7 May	229.7 kg	902,400 capsules
8-20 May	758.2	2,424,154
21 May - 3 June	<u>507.7</u>	<u>4,591,883</u>
Total	1,522.6 kg	7,918,437 capsules

Totals of 5,487.5 kg of hexylresorcinol crystals and 16,312,237 capsules were produced during the first five months of 1949. Monthly average crystal production for 1949 equals 3.6 times 1948 monthly averages, an indication that hexylresorcinol production is expanding steadily so that increasing quantities of the drug will be available for distribution throughout all prefectures.

Reference is invited to Preventive Medicine Section of this Bulletin for further comments regarding hexylresorcinol.

Distribution of Sprayers and Dusters

During the period 29 May - 11 June 13,534 pieces of dusting and spraying equipment were distributed to 39 prefectures as follows:

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsack Sprayer</u>	<u>Semi-automatic Sprayer</u>	<u>Hand Sprayer</u>	<u>Engine Sprayer</u>
Hokkaido	0	0	50	10	2
Aomori	0	0	84	0	0

Biologics Assay (Passed)

In the previous issue of the Bulletin it was announced that in future reporting on the status of biological products the term “reassay” was to be discontinued. This concerns reporting on the supply status of these products only.

During the period 7 June - 13 June the following biologics have been assayed and found to meet minimum standards.

<u>Item</u>	<u>Manufacturer</u>	<u>Lot No.</u>	<u>Quantity</u>
<u>Cholera Vaccine</u>	Tokyo-to Fisei Institute	7	Unit: cc 28,400
<u>Diphtheria Antitoxin</u>	Nihon Saikin	1	22,710
		2	22,710
		3	22,710

SECTION VI NARCOTIC CONTROL DIVISION

Information

The Code of Ethics adopted by the Japanese Motion Picture Association 14 June contains the following statements: "Method of smuggling should not be depicted in detail" and "Illegal traffic and use of narcotics and medicines similar to this must not be depicted."

Administrative Action

Instructions (Yaku Hatsu No.255, 13 June 1949) issued by the Ministry of Welfare to the prefectures cover the transfer and receipt of broken narcotics. All broken narcotics must be listed on the order form at the time of receipt from a local wholesaler and are not to be replaced from other packages. The sale price will be reduced according to the amount of breakage. Local wholesalers may receive replacement narcotics from central wholesalers, if the narcotics are broken in transit, if the exchange is approved by a narcotic agent, and if order forms are used and the proper notation made.

Additional instructions (Yaku Hatsu No.1030, 16 June 1949) state that in the future seized narcotics, residual narcotics, excess narcotics or inferior narcotics will be delivered to the Narcotic Section, Ministry of Welfare, rather than Sankyo Company, Tokyo, as heretofore. This change follows completion of two satisfactory vaults which have been constructed in the new quarters now occupied by the Narcotic Section. An official of the Narcotic Section has been assigned to receive, inventory, segregate and periodically dispose of the narcotics, as an agent of the Drug Disposal Committee, for salvage into medicinal narcotics.

The Yaku Hatsu sets forth in detail the duties and responsibilities of agents in properly inventorying, sealing, marking for identification, and forwarding the narcotics by no later than the 10th day of each month following the month during which the narcotics become available for disposition. Forms which are to be accomplished in connection with the above actions are attached to the Yaku-Hatsu.

SECTION VII WELFARE DIVISION

Repatriate “Loving Spirit” Fund Campaign

Many Military Government Monthly Welfare Activities Reports indicate that a national “Love the Repatriates Fund Campaign”, is underway in their prefectures. Questions have been raised as to whether or not this is a part of a National Fund Campaign.

The Ministry of Welfare has approved this campaign with the understanding that funds collected will be used to provide returning repatriates with comfort items, free telephone and telegraph service, etc. The Ministry recommended that the total amounts collected, including an itemized breakdown of expenditures, be published in the local press. The Ministry of Welfare has instructed the Prefectural Welfare Departments to support and encourage the local committees (made up of private social work agencies, religious bodies, and civic groups), but not to actively participate in the campaign. The above information is contained in En-Shi No.639, dated 13 June 49, from: The Director of the Repatriation and Relief Bureau, Ministry of Welfare to Each Prefectural Governor, subject: Concerning Collection in Connection with Love Campaign for Repatriation Relief.

The Ministry of Welfare has been informed that the local Prefectural Planning Committees should seek the advice of the local Military Government Welfare Office in the event they have difficulties in drawing up their programs.

Vocational Loans

The People’s Finance Corporation Law was passed by the Diet on 17 May 1949. Under this new law the People's Bank and the Pension Bank are liquidated and are replaced by the People's Finance Corporation. The Corporation is capitalized for ¥ 1,300,000 and is authorized to make individual business loans for amounts up to ¥50,000 for a three year period at 12% interest per annum. The People's Finance Corporation operates under the jurisdiction of the Ministry of Finance. An agreement between the Ministry of Finance and the Ministry of Welfare permitted the former People’s Bank to act as a banking agent for the Ministry of Welfare in disbursing Welfare Vocational loans and receiving the interest and principal of outstanding Welfare Vocational loans. Under a new agreement between the Ministry of Finance and the Ministry of Welfare the People’s Finance Corporation will be ##### to ### ##### banking agent handling Welfare Vocational loans which were formerly processed through the People's Bank.

The Ministry of Welfare Vocational Loans have been increased from a maximum of ¥ 7,000 to ¥ 15,000 per individual loan, with interest rate increased from 6% per annum to 9% per annum. The loans term is five years. A shorter term loan of ¥ 10,000 per person at 12% per annum for a three year period has also been authorized.

The maximum number of persons, as a group or corporation permitted to request Welfare Vocational loans is 30 persons.

Public Assistance Reports - April 1949

The Ministry of Welfare has submitted the following figures for the month of April 1949. Figures for March 1949 and April 1948 are shown for the purpose of comparison:

	<u>April 1949</u>	<u>March 1949</u>	<u>April 1948</u>
Persons-institutional	133,412	139,312	135,944
Persons non-institutional	1,517,821	1,582,679	2,013,927
TOTAL	1,651,233	1,721,991	2,149,871
In Cash*	¥660,088,535	801,720,789	366,200,622
In Kind	53,247,114	52,276,377	59,685,650
¥	713,335,649	853,997,166	425,886,272

*Before deductions for repayment.

Public Assistance by Prefectures

Inclosed with this Bulletin (Incl. No.1) is Table VI, Public Assistance Reports by Prefectures for the month of April 1949. It will be noted that April reports show a decline over March in all columns save that of Relief Expenses in Kind which are ¥ 970,737 greater than for March. Total Relief Expenses in Cash are ¥ 141,488,191 less than for March. In April, 5,900 fewer persons receiving institutional care than in March; 64,858 fewer persons were reported receiving non-institutional care. All prefectures reflected a reduction in case load in April over March except Ibaraki, Saitama, Nagano, Shiga, Okayama and Oita. These reductions in case loads may reflect seasonal employment which in the agricultural areas particularly would see thousands of person returning to the fields. Also to be considered as a factor is the re-absorption of repatriates into the economy of the many areas of selected residence. In this regard attention is invited to the reduction in amount for "In Kind" aid, April 1948 and April 1949.

Cooperative for American Remittances to Europe, Inc. (CARE)

The following report covers "CARE Operations in Japan", since the arrival their first shipment in July 1948 through 31 May 1949:

a. Food

Total Packages received		29,989
Packages damaged, etc.	2,676	
Packages delivered	<u>16,904</u>	<u>19,580</u>
Total packages on hand		10,409

b. Woolen

Total Packages received		8,016
Packages damaged, etc.	60	
Packages delivered	<u>7,565</u>	<u>7,625</u>
Total packages on hand		391

c. Blanket

Total Packages received		1,644
Packages damaged, etc.	10	
Packages delivered	<u>1,519</u>	<u>1,529</u>
Total packages on hand		115

d. Knitting

Total Packages received		3,024
Packages damaged, etc.	24

Total packages on hand		4,980

Disaster Relief

Inclosed with this issue of the Public Health and Welfare Weekly Bulletin (Incl No.2) is Chu-Sai Hatsu No.18, dated 17 June 1949, from the Working Committee of the Central Disaster Relief Planning Board to the Chairman, Regional and Prefectural Working Committees of Disaster Relief Planning Boards, which sets forth instructions covering the establishment of special warning and evacuation procedures for those areas in danger of tidal waves.

Prefectural and local Disaster Relief Committees, within tidal wave danger areas, are being requested to complete their special warning and evacuation procedures within a period of 60 days. Military Government officials will, in most instances, be contacted by prefectural and local officials for guidance and assistance in formulating adequate and effective plans.

SECTION VIII
SOCIAL SECURITY DIVISION

Social Insurance Records

Conversations have been held recently with representatives of the Insurance Bureau, Ministry of Welfare, relative to a project to set up a card index for all beneficiaries under the Welfare Pension Insurance Program to serve as a basis of actuarial studies. In the course of these discussions, the following details on existing record-keeping practices were ascertained.

Prior to 1944, record-keeping and benefit payments for both Welfare Pension Insurance and Seamen's Insurance were handled from the national office in the Ministry. While the Seamen's Insurance administration has remained so centralized, the records for individuals insured under Welfare Pension Insurance were decentralized to the prefectures in late 1944 because of space restrictions resulting from the bombing of Tokyo. The decentralization was intended to be temporary war measure but, because of continuing congestion in the national government offices, there is no definite plan to return the records to the Ministry of Welfare.

In those prefectures which have "Branch Offices" supplementing the prefectural Insurance Section, the Welfare Pension Insurance records were further distributed to the branch office servicing the area in which the individual was employed or the branch office which was paying benefits. Each branch office thereafter has maintained its own such records. The only exceptions to this is found in Tokyo-to where all such Welfare Pension Insurance records for the metropolis were maintained in a single branch office until recently when space limitations made it necessary for each branch office to maintain such records for all persons becoming insured for the first time. The older records continue to be located in the one branch office.

The Seamen's Insurance Section of the Insurance Bureau, Ministry of Welfare, continues to keep a complete card file on all insured seamen and determines and pays all long-term benefits for seamen. Only short-term benefits are paid by the prefectural or branch office and no separate cards are maintained for the individual seamen for that purpose, the determinations being made upon the pocket-ledger carried by the insured seaman and upon the ledger which lists seamen according to the shipowners who employ them.

Under Welfare Pension Insurance, each prefectural Insurance Section or Branch Office maintains a card file on all persons who first became insured in area served by such prefectural Insurance Section Office or Branch Office. This card file contains all relevant information on the insured person and is kept up-to-date within the limitations outlined below. It serves as the basis for the computation of the insured person's benefits. Each card carries a number preceded by a letter indicating the prefecture originally issuing the number.

When an employer reports a new employee to the Prefectural Insurance Section (or Branch Office, as appropriate), he is supposed to indicate whether or not such employee previously was assigned a number under the Welfare Pension Insurance program. If the insurance office is of the opinion that no number has been assigned to this employee, it assigns a number to him, sets up a record card for him, and notifies the Welfare Pension Insurance Section, Insurance Bureau, Ministry of Welfare, that the number was assigned. If, on the other hand, the insurance office believes that a number may have been issued previously to this employee but is unable to determine such number definitely, it requests the Ministry of Welfare to advise it of the proper number.

The Ministry of Welfare maintains a master index consisting of cards for each insured person, showing his account number, date of birth (but not birthplace) sex and the date he first became insured. Theoretically, this index should prevent the issuing of more than one number for any individual but the records are not up-to-date, allegedly because of lack of staff, and consequently several numbers may be assigned to the same person and a corresponding number of individual record cards will be maintained in the local insurance offices.

When a worker had been insured through a prefectural Insurance Section or Branch Office other than the office to which his current employment is reported, the office originally issuing the account number retains the individual record card it had set up for him. No notification is sent to such office concerning his new employment until such employment is terminated or the individual applies for benefits. When the current employment is terminated, a summary report is made by the office serving his last employer to the office which originally issued the account number and the date is recorded on the individual record card there. If the worker applies for benefits, the office to which he applies obtains the necessary data from the office which holds the individual record card, computes the amount to which he is entitled, and pays the allowance. The individual record card is not

forwarded in such a case, nor is it forwarded when the insured persons obtains employment in different prefectures or different branch office areas. It is always retained in the office which originally issued the account number.

When an insured person changes to employment in an area served by an office other than the one through which he was first insured, such other office maintains a record of his current employment in a ledger in which he is listed with other employees of the same employer.

SECTION IX
MEMORANDUM TO THE JAPANESE GOVERNMENT

None.

CRAWFORD F. SAMS
Brigadier General, Medical Corps
Chief

3 Inclosures:

1. Public Assistance - April 1949.

SECTION I
PREVENTIVE MEDICINE DIVISION

Tuberculosis Control

Reference is made to tuberculosis control note in Weekly Bulletin, No.120, wherein it was noted that there had been an increase in the number of tuberculosis cases reported for the first three months of 1949.

This phenomena is now traced further. During the first five months of 1949, 185,225 cases were reported. This represents approximately a 25% increase over the 147,362 cases reported during the first five months of 1948.

During the first four months of 1949, 46,013 tuberculosis deaths were reported. In 1948 the figure was 47,680. Allowing for the increase in population, this suggests about a four percent decrease in the death rate.

The reason for the increase in reported cases has not been determined. However because of this increase, greater effort is indicated at the local level in case supervision. Prefectural and regional Civil Affairs Health Officers are urged to utilize the time remaining before the BCG program is reinstated to cause the establishment of sound case supervision systems. Particular attention should be given to the number of home visits made by nurses. Another important aspect is a case register to be maintained by the tuberculosis control officer of the health centers. This will to a considerable extent indicate on an individual basis whether or not sufficient home visits are being made.

SECTION II
MEDICAL SERVICES DIVISION

Literature for Medical Schools

The Medical Sciences Division of the Rockefeller Foundation has announced a grant of \$30,000 for the purchase of American medical texts and journals for a selected group of twenty Japanese medical schools. The grant was made through the Council on Medical Education of the Japan Medical Association, which will supervise the distribution and use of the literature. The grant will provide each school with approximately 80 standard medical texts and reference books and two years' subscription to thirty representative journals on clinical and pre-clinical subjects. It is expected that the literature will begin to arrive about the first of September.

In selecting the schools to benefit from the grant, consideration was given to geographical location as well as to the facilities for the proper care and use of the books and journals. Medical schools in the following universities will receive literature:

Hokkaido	Chiba	Asakashi	Kagoshima	Hirosaki	Niigata
Tottori	Jikei-kai	Tohoku	Kanazawa	Tokushima	Keio-Gijuku
Gumma	Nagoya	Okayama	Osaka	Tokyo	Kyoto
Yamaguchi	Kyusyu				

The cooperation of the public health officers of Civil Affairs Teams is solicited to see that the libraries of the schools concerned utilize the books and journals to the best advantage of the faculty and students and that opportunity be given for their use by medical personnel from neighboring medical schools and institutions and members of the medical profession.

SECTION III
VETERINARY AFFAIRS DIVISION

Animal Diseases

The Animal Hygiene Section, Ministry of Agriculture and Forestry submitted the following report on those animal diseases occurring during the period 18-24 June.

<u>Prefecture</u>	<u>Disease</u>	<u>Number of Cases</u>
Ehime	Swine erysipelas	1
Kagoshima	" "	167
Chiba	" "	5
Shiga	" "	1
Nagano	" "	1
Akita	Swine cholera	4
Miyagi	" "	7
Saitama	" "	8
Iwate	" "	12
Fukushima	Equine encephalomyelitis	1 (suspect)

Rabies Report

The Veterinary Affairs Section, Ministry of Welfare submitted the following report on rabies occurring during the period 13 -19 June.

<u>Prefecture</u>	<u>Number of Cases</u>
Tokyo	10
Kanagawa	2
Chiba	3
Saitama	0
Ibaraki	2
Gumma	1

NOTE: Quarantine measures have been established in the above-named Prefectures under Ministerial Order.

SECTION IV SUPPLY DIVISION

Biologics Assay

During the period 13 -20 June the following biologics have been assayed and found to meet minimum standards.

Item	Manufacturer	Lot No.	Quantity Unit: doses
Small Pox Vaccine	Kitasato Institute	*45	316,200
		46	30,720
		47	309,900
		48	154,550
	Sukegawa Institute	1	178,700
		2	40,000
Typhus Vaccine	Handai Biseibutsu Institute		Unit: cc
		24	16,620
		25	17,260
		9	11,540

Distribution of Sprayers and Dusters

During the period 15 - 18 June, 7,549 pieces of dusting and spraying equipment were distributed to 37 prefectures as follows:

<u>Prefectures</u>	<u>DDT Duster</u>	<u>Knapsack Sprayer</u>	<u>Semiautomatic Sprayer</u>	<u>Hand Sprayer</u>	<u>Engine Sprayer</u>
Hokkaido	0	0	0	0	4
Iwate	200	0	0	0	0
Miyagi	0	0	0	100	0
Akita	0	0	0	10	0
Yamagata	0	0	50	0	0
Fukushima	336	100	30	0	0

Kumamoto	150	25	15	0	0
Kagoshima	160	0	0	0	0

Pyrethrum Emulsion

During the period 6 - 20 June distribution of pyrethrum emulsion was made to the prefectures listed below. The emulsion is supplied in 50 gallon drums of the concentrate which is diluted one part to thirty parts of water prior to use. Distribution was made as follows:

Distribution of Pyrethrum Emulsion Concentrate (Unit: 50 gallon drum)

<u>Prefecture</u>	<u>Drums</u>
Kanagawa	130
Fukui	12
Hyogo	42
Okayama	75
Yamaguchi	58
Kagawa	11
Ehime	20
Nagano	50
TOTAL	398

Production of DDT Dusters and Sprayers

The production plan for DDT sprayers and dusters for CY 1949 totals 300,000 pieces of the various types. This plan exceeds the 1948 production accomplished by 47,357 pieces. The total of 300,000 pieces to be manufactured includes 2,500 engine sprayers. Only 120 were produced in 1948:

The breakdown of the production plan for each type of sprayer and duster follows:

<u>Type to be Produced</u>	<u>Estimated Production (Unit: each)</u>
DDT Dusters	118,400
Sprayers, Knapsack type	102,800
Sprayers, pump type	42,900
Sprayers, hand type	33,400
Sprayers, engine type	2,500
TOTAL	300,000

It is anticipated that the demand for these items will be much greater on the domestic market than heretofore, now that DDT products have been removed from distribution control. However, such institutions as hospitals, health centers, schools, restaurants, hotels, mines, theaters, public conveyances, etc., will receive top priority deliveries. Priority deliveries will be supervised by the prefectural governments, who have been instructed to widely publicize the availability and purchasing methods for such equipment.

Hexylresorcinol Production

A total of 388.0 kgs of hexylresorcinol crystals passed assay during the period 4-7 June, with none failing assay, and 228.8 kgs still under assay. The two week production of hexylresorcinol capsules, totalling 4,095,100 capsules, passed assay which included 450,000 capsules of 0.2 grams hexylresorcinol content.

Totals of 6,376.4 kgs of hexylresorcinol crystals and 20,406,400 hexylresorcinol capsules have been produced which successfully passed assay from 1 January - 17 June. Concerted efforts are constantly being made to make available increasing quantities of the drug for distribution throughout all prefectures.

Production Summary, January through May

The five month average production of medical supplies and pharmaceuticals reported for January - May exceeded 1948 monthly averages in yen value by 66 percent. Following are quantitative production averages for January through May as compared to 1948 monthly average production:

	(1948 Monthly Average -- 1.00)	
Commodity	<u>May</u>	<u>January Through May</u>
Laboratory Animals (each)	1.36	1.14
(*) Biologics (passed assay) (cc)	0.49	0.10
Penicillin (O.U.)	5.24	3.37
Hexylresorcinol Crystals (kg)	3.98	3.42
Hexylresorcinol Capsules (piece)	13.52	6.06
Textile Sanitary Materials (lbs)	1.50	1.31
Rubber Sanitary Materials (kg)	1.11	1.14
X-ray and electrotherapy equipment (piece)	0.98	1.12
X-ray tubes (each)	1.08	1.16
Rodenticides (kg)	0.68	1.15
DDT 100% (lbs)	2.11	2.41
DDT Dust 10% (lbs)	1.84	1.96
DDT Spray 5% (Cal)	0.85	0.74
DDT Dusters and Sprayers (each)	0.68	0.75
Dental Instruments (piece)	1.22	1.29
Surgical Instruments (piece)	1.51	1.42
Glassware (piece)	1.21	1.10

(*) Biologics reported are those passing assay from current production

Detailed production tables of the medical, dental, sanitary supplies and equipment for April and May, together with monthly averages for the current and previous years for comparison are attached. (Incl. No.1)

SECTION V NARCOTIC CONTROL DIVISION

Enforcement

A quantity of "Neo-Neo-Hetolopin" ampoules were siezed in Osaka after it was determined the ampoules contain opium alkaloid. The ampoules were being sold under the label of Niwa Pharmaceutical Research Laboratory, a clandestine laboratory operated by three illicit traffickers who were arrested.

Information

Instructions (Yaku Hatsu No.1058, 11 June 1949) issued by the Ministry of Welfare to all Prefectures cover the sale of so-called exempt narcotics. Since some physicians have been buying the preparations as non-registrants and dispensing them as registrants the following instructions were issued:

- a. Registrants may buy such preparations only from local wholesale dealers, except for personal use.
- b. All registrants are required to maintain and forward reports on purchases and sales.
- c. Retail dealers may not sell a quantity greater than an amount sufficient for the personal use of the purchaser; the purpose of use must be distinctly stated in the record.
- d. A retail dealer selling excessive amounts to a particular person will have his license suspended.
- e. No person is authorized to sell, dispense or otherwise distribute preparations which are purchased or otherwise obtained from an exempt narcotic retail dealer.

SECTION VI WELFARE DIVISION

In-Service Training

A Council on Education and Training of Social Workers has been organized in the Ministry of Welfare, chaired by Vice Minister Kasai and including the chiefs of the following Bureaus and Sections; Bureau of Social Affairs; Protection and General Affairs Sections; Children's Bureau; Planning and Child Care Sections; Repatriation Relief Bureau; Repatriation office, Guidance and General Affairs Sections.

Purpose of this Council is to coordinate in-service training programs for various Bureaus and Sections and the first objective is an "Institute on In-Service Training" planned for the first three weeks in September at the Japan School of Social Work, Tokyo. Applicants are to include: (Sixty will be accepted)

- a. B-class officials or officials of similar rank associate with the training of social workers in prefectural offices.
- b. Directors of in-service training of social workers in prefectures.
- c. Prospective directors of in-service training of social workers in prefectures.

Civil Affairs Welfare Officers may wish to contact appropriate Japanese officials and encourage them to submit, to Mr. Midzuno, Ministry of Welfare, suggestion for this Institute so that it may meet the needs in the field. As a follow-up, Welfare Officers may also wish to suggest through technical channels ideas for curriculum for this Institute.

Licensed Agencies for Relief in Asia

Overseas shipments of relief supplies to LARA, numbers 172 through 179, have arrived in Yokohama and contained 350.91 tons. These shipments included the following relief items:

- a. 172nd Shipment: Arrived aboard the S.S. Kyska on 31 May and contained 228.54 tons (food).
- b. 173rd Shipment: Arrived aboard the S.S. Philippine Bear on 1 June and contained 1.96 tons (food, .29 ton - clothing, 1.62 tons - miscellaneous, .05 tons).
- c. 174th Shipment: Arrived aboard the S.S. Fleetwood on 2 June and contained 3.28 tons (food).
- d. 175th Shipment: Arrived aboard the S.S. Cotton States on 4 June and contained 53 tons (food).
- e. 176th Shipment: Arrived aboard the S.S. Marchen Maersk on 4 June and contained 12.77 tons (clothing, 10.80 tons - miscellaneous, 1.97 tons).
- f. 177th Shipment: Arrived aboard the S.S. President Polk on 6 June and contained 30 tons (food).
- g. 178th Shipment: Arrived aboard the S.S. Philippine Transport on 6 June and contained 11.11 tons (clothing, 8.66 tons - medical supplies, 1.53 tons - miscellaneous, .92 tons).
- h. 179th Shipment: Arrived aboard the S.S. Joplin Victory on 11 June and contained 10.25 tons (food).

The total LARA relief supply shipments to Japan, as reported, now totals 9,255.08 tons, consisting of the following items:

	Tons
Food	7,077.42
Clothing (including shoes, bedding, cotton, etc.)	1,953.19
Medical Supplies	88.33
Miscellaneous	<u>136.14</u>
TOTAL	9,255.08

Disaster Relief and Preparedness

Typhoon "Della" struck Japan on 20 - 21 June. The following information given in brief outline was reported by the Working Committee, Central Disaster Relief Planning Board in their final report on 24 June and covers information received from the stricken areas through 23 June:

- a. Prefectures affected totaled 20, namely:

*Fukuoka	*Tokushima	Saga	*Kochi	*Kagoshima	Osaka
*Miyazaki	Kyoto	*Oita	Hyogo	Kumamoto	Nara
Nagasaki	Okayama	Hiroshima	*Mie	*Ehime	Aichi
*Shizuoka	*Wakayama				

* Devastation greatest

- b. Damage and destruction:

Persons dead	93
Persons Injured	85
* Persons missing	263
House destroyed	1,676
House damaged	1,026
House inundated		
(over 1st floor)	3,786
(below 1st floor)	35,155
Sections of roads destroyed		
Highways washed out	1,343
Bridges washed out	367
Sections of railway right-of-ways damaged	490
Farmlands washed or buried:		
Rice	7,487 acres
Other	<u>477 acres</u>
Total	7,964 acres
Farmlands flooded:		
Rice	82,450 acres
Other	<u>4,846 acres</u>
Total	87,296 acres

Note: Relief needs are being met on local levels through Prefectural and Regional Disaster Relief Committees. Working Committee, Central Disaster Relief Planning Board are making surveys to determine extent of national (government rehabilitation assistance necessary, if any, beyond local (prefectural) ability to meet rehabilitation needs.

Public Assistance - Grants to Employed Persons

Reference Weekly Bulletin No.113. A paragraph under the above heading was included with the closing statement that "the Ministry of Welfare will clarify the above situation by order". Sha Hatsu No.324, dated 25 February 1949, was issued by the Social Affairs Bureau and indicates that in the event of non-payment of salary or partial payment of salary to the account of an employee, such employee in applying for a grant under the Daily Life Security Act, will be handled individually and on a basis of individual need. Applications are not to be accepted from groups nor is a flat sum to be allowed; action taken will be predicated on the needs of the individual and his family. Assistance that is allowed will be considered at a first claim upon the unpaid portion of salary due to the worker from his employer.

Noon Day Supplementary Lunches in Day Nurseries

Ji Hatsu No.537, dated 15 June 1949, has been issued to all prefectures by the Children's Bureau and sets up the schedule of fees to be charged for supplemental mid-day feeding in day nurseries. Powdered skim milk has been released to prefectures by the Ministry of Agriculture and Forestry in sufficient amount to provide supplemental noon day feeding for each school day for approximately 200,000 pre-school children for the Quarter, July, August, and September. The following "Standard for Food Supply in Day Nurseries" is reproduced for information. The rates for reimbursement have been adjusted at ¥4 per child per day for pre-school children and ¥25 per day for infants receiving whole milk.

Standard for Food-supplying in Day Nursery (per day for a child)

		Volume (gr)	Calorie	Protein (gr)	Cost (yen)	
Pre-school age children	Skim milk	25.0	89.5	6.40	1.330	
	"Miso"	10.0	15.8	1.20	0.205	
	"Shoyu" dried	5.0	2.5	0.37	0.410

	Oil	1.5	13.5		0.162	
	Vegetable	29.0	9.5	0.60	0.359	
	Fish	30.0	37.2	5.50	0.879	
	Fuel	Wood: one faggot one and a half for faggot 100 children		39.50		0.592
	Total	102.0	173.6	14.07	4.006	
				¥ Odds Adjusted	4.00	
Infant	Whole mild added with sugar	52.5	237.0	9.92	25.040	
				¥ Odds Adjusted	25.00	

SECTION VII SOCIAL SECURITY DIVISION

Social Insurance Statistics

Benefits Paid Under the Government Pension System:

Reference is made to Public Health and Welfare Weekly Bulletin Nos. 100 and 108 for a summary of the Government Pension System (Onkyu) and Benefit date for the month January through September 1948.

Inclosure No.2 carries the benefit statistics through February 1949. A rise in all benefits is clearly discernible. It is due in part to the rise in government workers' salaries and in that respect is most marked in the survivors' allowances, due to the fact that most of these lump-sum payments are computed on the basis of the last

monthly-rather than annual-salary multiplied by the number of years of service. In part, however, this rise is due to a liberalization of the manner in which benefit amounts are computed which became effective retroactively as of 1 July 1948 for civilians and on 1 September for former military personnel. This revision did away with the fictitious salary (below actual) used before as a basis for computation. Pension benefits decided prior to the amendments referred to were recomputed on a new and higher scale. (Lump-sum allowances decided and paid prior to enforcement of those amendments remained unaffected). As far as new benefits are concerned, the actual salary received at the time the benefit becomes due now serves as the basis of computation. Moreover additional allowances are paid to the recipients of certain pensions who have dependents.

VIII	MEMORANDUM TO THE JAPANESE GOVERNMENT	10

SECTION I PREVENTIVE MEDICINE DIVISION

Public Health Information

Attention is invited to Inclosure No.1 to this bulletin which is concerned with Ministry of Welfare Information Plan for the months of July through September, 1949. This plan, as prepared by the Information Unit of the Ministry of Welfare, presents the public health and welfare subjects on which information will be released to the public through all media of transmission. This plan also indicates the months in which emphasis on these subjects will be placed. Copies of this basic plan have been issued to: (a) each prefectural public health and welfare department; (b) the Information Section of each prefectural government; (c) the Japanese Radio Broadcasting Company; (d) the Press and (e) to certain ministries of the Japanese Government in an attempt to coordinate the Public Health and Welfare Information Program. It is hoped that this plan will serve as a basis and guide for conducting public health and welfare information activities, not only at the national level, but at the prefectural and local levels as well. This plan may of course be modified to meet certain conditions existing at prefectural and local levels. A plan covering the months, October through December, will be distributed sufficiently in advance to allow time for proper planning.

Sanitation

The reduction in personnel (30% of government employee) is being used as an excuse to curtail Insect and Rodent Control activities. It should be borne in mind that the Insect and Rodent Control Program has already been cut back to the minimum and further reduction of these functions is extremely hazardous. Rather it is desirable to increase and strengthen the inspection function of insect and rodent control activities in order to secure the maximum assistance and cooperation from the individual. At the present time the Ministry of Welfare is insisting that subsidy for this part of the program must not be cut and it is fairly certain that it will not be cut the 30%, if at all.

SECTION II VETERINARY AFFAIRS DIVISION

Veterinary Conference

The Veterinary Affairs Section, Ministry of Welfare, held a two-day conference in Tokyo for all Prefectural Veterinary Chiefs concerned with meat, milk, seafood and rabies control. Training films were shown covering all phases of sanitary controls in the production and handling of milk and/or milk products, rodent and insect control and public sanitation. Discussions were held following the showing of the films. An open discussion on current problems confronting the veterinary profession was held and a good response was received. During this discussion, present defects in the reporting system now employed was mentioned and the response indicated a change is necessary in order to avoid future confusion resulting from improper interpretations.

Conference on Quarantine Controls

A conference between representatives of the Japan Security Division, Animal Hygiene Section of Ministry of Agriculture and Forestry, and Veterinary Affairs Section of Ministry of Welfare is being established for the purpose of coordinating the present system of reporting on smuggling activities concerned with the introduction of animals and animal products through illicit channels. A compiled report will be issued to all Civil Affairs Veterinarians as a matter of their interest.

Importation of Hides

A list of all tanneries and their locations designated to process imported hides will be submitted to each Civil Affairs Veterinarian. The Animal Hygiene Section, Ministry of Agriculture and Forestry are establishing a more effective control over imported hides and the formulated plan will be published in the Weekly Bulletin.

Meat Inspection - April 1949

Under the supervision of the Veterinary Affairs Section, Ministry of Welfare, prefectural veterinary meat inspectors conducted ante and post-mortem inspections on the following species of animals during the month of April.

	<u>Cattle</u>	<u>Calves</u>	<u>Horses</u>

Animal Diseases

The Animal Hygiene Section, Ministry of Agriculture and Forestry reports the following outbreaks of animal diseases for the period 25 June - 1 July.

<u>Prefecture</u>	<u>Disease</u>	<u>Number of Cases</u>
Ibaraki	Swine erysipelas	1
Kagoshima	Swine erysipelas	17
Niigata	Swine erysipelas	2
Chiba	Swine erysipelas	3
Nagano	Swine erysipelas	4
Shimane	Swine erysipelas	2
Iwate	Swine cholera	24
Shizuoka	Swine cholera	11
Yamagata	Swine cholera	2
Miyagi	Swine cholera	1
Saitama	Swine cholera	1
Fukushima	Equine encephalomyelitis	1 (suspect)
Hokkaido	Equine encephalomyelitis	1 (suspect)
Tochigi	Equine encephalomyelitis	1 (positive)

Note: The Animal Hygiene officials are concentrating on establishing immune belts around the outbreaks of cholera and erysipelas. The positive case of equine encephalomyelitis was confirmed only by clinical symptoms shown.

SECTION III SUPPLY DIVISION

Distribution of Sprayers and Dusters

During the period 19-25 June, 7,536 pieces of dusting and spraying equipment were distributed to 24 prefectures as follows:

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsack Sprayer</u>	<u>Semiautomatic Sprayer</u>	<u>Hand Sprayer</u>	<u>Engine Sprayer</u>
Hokkaido	100	0	0	0	3

Distribution Summary of Public Health Supplies

Distribution figures for April and May 1949 have been tabulated and the following indexes have been computed, using 1948 monthly averages as basis:

April-May Averages (1948 Monthly average equals 1.00)

<u>Item</u>	<u>May</u>	<u>April-May</u>
Total Medical Supplies & Equipment Reported (Yen)	1.80	1.55
Controlled Medicines (Yen)	1.02	0.85
Non-Controlled Medicines (Yen)	1.98	1.70
Patent Medicines (Yen)	1.62	1.46
Dental Instruments (Yen)	1.78	1.64
Dental Materials (Yen)	1.88	1.88
Rubber Medical Goods (Yen)	3.25	3.18
Cotton Sanitary Materials (Yen)	2.05	1.76
Medical Instruments (Yen)	1.69	1.30
X-Ray and Electrotherapy Equipment (pieces)	1.53	1.18
Rubber Sanitary Goods (kgs)	1.68	1.68
Absorbent Cotton (kgs)	1.68	1.36
Gauze (Meters)	1.40	1.30
Staple Fiber bandage (Rolls)	0.73	0.65
Triangular Abdominal Bandage (pieces)	0.22	0.55
Lint (pieces)	0.50	2.03
X-ray Film, 2·1/2x 2·1/2 (doz)	0	0.20
X-ray Film, 4·3/4x 6·1/2 (doz)	0	0.38
X-ray Film, 8x 10 (doz)	1.23	0.94
X-ray Film, 6·1/2x 8·1/2 (doz)	0.90	0.90
X-ray Film, 5x 7 (doz)	0.26	0.24
X-ray Film, 10x 12 (doz)	1.41	1.31
X-ray Film, 11x 14 (doz)	2.32	1.52
X-ray Film, 35mm (rolls)	0.86	0.66
X-ray Film, Dental (doz)	2.57	1.65
X-ray Film, 120 Size (rolls)	1.42	1.70
Santonin (tablets)	1.40	1.72
Sulfadiazine (tablets)	0.07	0.21

Detailed distribution figures of medical, dental and sanitation supplies and equipment for April and May, together with their monthly averages for 1946, 1947 and 1948 may be found in inclosure No.2.

SECTION IV NARCOTIC CONTROL DIVISION

Enforcement

In Yamaguchi Prefecture an investigation of narcotic purchases revealed a physician, who purchased 114 grams within one year, was dispensing an average of 48 grams of dionine annually. Large hospitals with many out-patients require from five to ten grams only per year. The subject physician is being advised that narcotics purchased at one time must be limited to not more than the amount sufficient for a three-month period and that narcotics must be used only when they are actually indicated in the proper treatment of patients.

In one case heroin in the amount of 260 grams was seized in Kobe with the arrest of two defendants. The heroin was part of a shipment smuggled into Japan.

Administrative Action

There were seven hospitals which reported loss of narcotics through theft during May. Three of these hospitals were in Shiga Prefecture which is adjacent to the Kyoto-Osaka-Kobe area. Administrative action has been taken with regard to the hospitals concerned.

SECTION V WELFARE DIVISION

Institute on Supervision in Group Work

The Osaka College of Social Work, in cooperation with prefectural welfare offices in the Kansai Region, will conduct a 5 day Institute on Supervision in Group Work from 11 July through 15 July for a selected group of 35 supervisors in public and private agencies. Mr. Donald Typer, Youth Organization and Student Activities officer of Civil Information and Education Section, SCAP will conduct the program of lectures, discussions, demonstrations and field trips to group work agencies. This institute, following the seminar in group work given by Miss Dorothea Sullivan last February, is another step in the development of a group work curriculum at the Osaka College of Social Work, since it expects to prepare supervisors who may later be used as field work supervisors for students in a group work course.

National Survey of Physically Handicapped Persons

Reference Public Health and Welfare Weekly Bulletin No.102, the survey has been completed but the national totals indicate it was not a through survey. A spot check made in 18 communities on Honshu corroborated this indication.

By utilizing figures from such sources as the National Census Bureau - the former Mutual Assistance Society (Kyojo Kai), the Pension Bureau, and the subject survey, the Ministry of Welfare developed and submitted the following new information on the number of physically handicapped persons in Japan:

Blind	34,312
Strong Amblyopia (visual defect)	13,665
Deaf Mutes	83,501
Partially Deaf	9,612
Blind Deaf Mutes	4,800
Strong amblyopia & partially deaf	56,690
Loss of one or more limbs	214,399
Tubercular convalescents	20,166
Mentally disabled	10,279
TOTAL	447,424

These above figures, include only the first “two classes” of the physically handicapped (Severely handicapped (Koo) - Intermediate (kan)) and are deemed to be conservative.

Japanese Red Cross Society

Reference Public Health and Welfare Section Weekly Bulletin No.122, The Japanese Red Cross have inaugurated, through their Volunteer Services, a program of Public Health and Hygiene. The services to be performed by this voluntary assistance have been previously published, reference above.

The Public Sanitation Bureau, Ministry of Welfare, in a communication (Eihatsu No.622) dtd 14 June 49, to Governors and Mayors, officially announced the Public Health and Hygiene Volunteer Service Program of the Japanese Red Cross. The communication set forth the following information:

a. The Japanese Red Cross now has 1,800,000 volunteers engaged in several activities and a new activity will be Public Health and Hygiene.

b. Welfare Ministry recognizes the value of this volunteer activity and is desirous of cooperating wholeheartedly for its success.

c. Requests Prefectural and Municipal offices to cooperate and utilize these volunteer services in their Health Centers.

SECTION VI SOCIAL SECURITY DIVISION

In-Service Training

The annual course on social insurance administration, reference Weekly Bulletin No.127, held by the Insurance Bureau, Ministry of Welfare came to a close on 30 June with 95 persons receiving a certificate of completion. A shorter course for administrators of National Health insurance is now being held.

During the seven-day period 1-7 July approximately 120 junior officials of the National Health Insurance units of the prefectural Insurance Sections and of the prefectural federations of National Health Insurance carriers from all parts of the country are participating in a training course likewise held under the auspices of the Insurance Bureau, Ministry of Welfare.

The various phases of the work involved in National Health Insurance administration and supervision are presented to the trainees by members of the Bureau staff. Also a representative of the Social Security Division of SCAP was requested to present observations on the present state of National Health and such particular aspects as coverage, financing, reporting and general administration. The desirability for local officials, contrary to habits previously formed, to attempt to act not merely mechanically as the agents to their superiors or higher levels but by applying their own constructive thought to the problems encountered was stressed. Another point of emphasis was the need of making the National Health Insurance program truly a community plan by arousing the whole community to a full discussion of all current issues in connection with the reorganization pursuant to the 1948 amendments.

Health Insurance

The Ministerial Ordinance containing enforcement regulations to the Health Insurance Law as amended May 1949, is enclosed with this issue of the Bulletin for distribution to Civil Affair Teams only (Inclosure No.3).

SECTION VII MEMORANDUM TO THE JAPANESE GOVERNMENT

None.

CRAWFORD F. SAMS

SECTION I
PREVENTIVE MEDICINE DIVISION

Public Health Information and Education

A Information Training Institute for the particular benefit of the chiefs of Japanese Government Information agencies and leading national advertising agencies will be conducted by the Civil Information and Education Section, GHQ, SCAP, over a three-month period, 12 July through 4 October. Upon completion of the course the persons in attendance will have received detailed instruction relating to:

1. Better techniques relating to the use media of transmission;
2. Preparation and distribution of materials;
3. The practice of public relations;
4. Liaison with prefectural agencies.

Lectures and demonstrations will be given by expert personnel of Civil Information and Education Section. The information Unit, Ministry of Welfare, will be represented by eight of its staff members as students of this course. Plans call for these persons, upon completion of the course, to visit the health departments of the prefectures and assist them in their public health and welfare information programs.

Sanitation - Encephalitis Control

Houses where suspect cases have been reported must be sprayed immediately with DDT 5% residual effect spray. Not only should the inside be thoroughly and completely covered but under the house, under the eaves and places where chickens, fowl or animals are kept should be well sprayed. This spraying should be performed not only on the house where the case occurred, but for all of the adjoining houses with ten meters. In addition to the residual effect spraying of the premises where the case occurred, areas around the house for one mile must be combed for mosquito breeding places, and treated so as to immediately stop and prevent further breeding of mosquitoes.

This work should be done by the sanitary teams and not be left to the fumigation squad from communicable disease control sections. The routine infectious disease control measures are not adequate to take care of the vector control necessary to the control of encephalomyelitis diseases.

SECTION II
VETERINARY AFFAIRS DIVISION

Inter-prefectural Movement of Livestock

Prefectural Animal Disease Control Officials are relaxing their controls over inter-prefectural shipment of livestock. A recent outbreak of hog cholera in Iwate Prefecture was traced directly to the buyer who moved the hogs immediately after being immunized with hog cholera vaccine, Ministry Officials are now investigating this situation in an effort to establish and maintain closer control measures by prefectural officials.

Animal Diseases

The Animal Hygiene Section, Ministry of Agriculture and Forestry reported the following outbreak of animal diseases for the period 2-8 July.

<u>PREFECTURE</u>	<u>DISEASE</u>	<u>NUMBER OF CASES</u>
Tokyo	Swine erysipelas	2
Shimane	Swine erysipelas	4
Kagoshima	Swine erysipelas	13
Ishikawa	Swine erysipelas	1
Fukushima	Swine erysipelas	1
Chiba	Swine erysipelas	3
Tochigi	Swine erysipelas	3
Akita	Swine cholera	1
Iwate	Swine cholera	23
Kanagawa	Swine cholera	2

Miyagi	Swine cholera	17
Ibaraki	Equine encephalomyelitis	1 (suspect)
Shimane	Equine encephalomyelitis	1 (suspect)
Fukuoka	Equine encephalomyelitis	1 (suspect)

SECTION III
SUPPLY DIVISION

Biologics Assay

During the period 28 June to 4 July the following biologics have been assayed and found to meet minimum standards.

<u>Item</u>	<u>Manufacture</u>	<u>Lot No.</u>	<u>Quantity</u> <u>Unit; doses</u>
<u>Smallpox Vaccine</u>	Denshenyo Institute	21834	188,000
	Kyoto Biseibutsu Institute	35	86,100
		36	86,250

Distribution of Sprayers and Dusters

During the period 26 June to 2 July 12,109 pieces of dusting and spraying equipment were distributed to 26 prefectures as follows:

<u>PREFECTURES</u>	<u>DDT DUSTER</u>	<u>KNAPSACK SPRAYER</u>	<u>SEMIAUTOMATIC SPRAYER</u>	<u>HAND SPRAYER</u>	<u>ENGINE SPRAYER</u>
Hokkaido	0	0	0	0	5

SECTION IV
NARCOTIC CONTROL DIVISION

Narcotic Control Activities Report

The May report on narcotic control activities from the Ministry of Welfare contained the following information:

Total registrants	92,867
Arrests - Registered persons	17
Unregistered persons	107
(including four Koreans and 22 other foreign nationals)	
Convictions - Registered persons	12
Unregistered persons	94
(including four Koreans and 22 other foreign nationals)	
Thefts of narcotics (including seven hospitals)	28
Losses by fire (including one hospital)	7

Penalties for registrants varied from ¥ 1,000 to ¥ 10,000 fine with three sentences of six months penal servitude. The remaining six sentences of penal servitude were suspended. Penalties for non-registrants tried in Japanese Courts varied from ¥ 1,000 to ¥ 20,000 fine and from four months to 18 months penal servitude. Fifteen out of 49 sentences of penal servitude were suspended.

Penalties for foreign nationals tried in Military Courts varied from ¥ 5,400 to ¥ 180,000 fine and from three months to two years penal servitude. Five out of 28 sentences of penal servitude were suspended. Five of the defendants were also sentenced to deportation. Of the total number of defendants five were found not guilty. Five out of the 28 persons responsible for the thefts were arrested. There were ten arrests for marihuana law violations.

The report also summarized the activities of narcotic agents as follows:

Inspection of registrants	1,738
Investigations originated	377
Investigations concluded	416
Investigations not concluded	378

Convictions

Two narcotic traffickers in Kobe were indicted and sentenced to penal servitude in a local court within 19 days after the procurator received the case from narcotic agents. Publicity given the speed with which the defendants were sentenced should prove a deterrent to other narcotic law violators.

SECTION V
WELFARE DIVISION

Licensed Agencies for Relief in Asia (LARA)

Overseas shipments of relief supplies to LARA numbers 180 through 185, have arrived in Yokohama and contained 93.71 tons. These shipments included the following relief items:

- a. 180th Shipment: Arrived aboard the S.S. Mount Davis on 22 June and contained 20 tons (food).
- b. 181st Shipment: Arrived aboard the S.S. Pioneer Lake on 23 June and contained 25 tons (food).
- c. 182nd Shipment: Arrived aboard the S.S. Trien Maersk on 25 June and contained 27.5 tons (food).
- d. 183rd Shipment: Arrived aboard the S.S. Young America on 29 June and contained 1.62 tons (raw cotton).
- e. 184th Shipment: Arrived aboard the S.S. China Transport on 29 June and contained 1.72 tons (food).
- f. 185th Shipment: Arrived aboard the S.S. Explorer on 29 June and contained 17.87 tons (clothing).

The total LARA relief supply shipments to Japan, as reported, now totals 9,348.79 tons, containing the following items:

	<u>Tons</u>
Food	7,151.64
Clothing (including shoes, bedding, cotton, etc.)	1,972.68
Medical Supplies	88.33
Miscellaneous	<u>136.14</u>
Total	9,348.79

Community Chest

Certain prefectural welfare departments appear to be misinterpreting Sha Hatsu Otsu No.89, subject as above, issued 7 April 1949, by the Ministry of Welfare, interpreting the release to mean that under the guise of "guidance", prefectural welfare departments are to re-enter the field of direction and control of private welfare agencies. Such control was not the intent nor is it the interpretation placed on the dispatch by the Ministry.

The dispatch under question was released by the Ministry of Welfare for information only, and guidance is to be interpreted as advice and counsel to be given informally, upon request, to the prefectural Community Chest Committee so that the Chest can plan the prefectural fund campaign with current knowledge of the content of the prefectural public welfare program.

Community Chest funds are not to be raised in lieu of public assistance and public welfare appropriations and projects. Instances of violations of this basic agreement on the part of the prefectural welfare chiefs and departments are invited through technical channels.

SECTION VI SOCIAL SECURITY DIVISION

Advisory Council on Social Security

The Advisory Council on Social Security has completed its internal organization. Four subcommittees, Administration and Planning, Social Insurances, Social Medical Care, and Public Assistance have been established and a number of meetings of each committee has been held. Each committee is headed by a Diet member.

Because of the immediate interest in medical care costs under the social insurances, the council has suggested the appointment of a liaison committee to work with Public Health and Welfare Section with reference to this problem.

No time limits have been set by the Prime Minister for the submittal of recommendations by the Council on the various aspects of social security. It is expected that a preliminary report will be available by the end of the year.

Health Insurance

Information recently received from the Insurance Bureau, Ministry of Welfare, reveals that the municipal employees of cities, towns and villages now covered by the Health Insurance Law, have in some prefectures, established a prefecture wide Health Insurance Society of the local public body officials. The above action was approved by the Ministry Welfare in accordance with Chapter III of the Health Insurance Law. The basic requirements for forming the society will be found in Article 29 of the law whereby two or more working places, with the consent of a majority of their employees may form a Society. In actuality this procedure means that all of the employees of the local public bodies in a prefecture, collectively and cooperatively, administer their own health insurance program in accordance with the law. In addition these Societies may form a Federation with the approval of the Minister of Welfare.

SECTION VII MEMORANDUM TO THE JAPANESE GOVERNMENT

None.

CRAWFORD F. SAMS
Brigadier General, Medical Corps
Chief

3 Incl:

1. Summary Report of Cases and Deaths from Communicable Diseases in Japan for Week ended 2 July 1949.

SECTION II PREVENTIVE MEDICINE DIVISION

Poliomyelitis

There is a higher incidence of poliomyelitis this year than last year in Japan. Similar increase has been noted recently in other parts of the world. During the first 21 weeks, (through 28 May) of 1949 there were a total of 1619 cases of polio reported in the United States while 596 cases were reported in Japan. Outbreaks occurred in Reunion Island January to March 1949; Mauritius, November 1948 to February 1949; and Ceylon, November - December 1948. During 1948 New Zealand reported 170 cases of polio.

During the first six months (26 weeks) of 1949 there were a total of 765 cases of polio in Japan, compared to 226 in the same period the previous year. However, since reporting of polio began in September 1947, the reporting may not have been as complete last year as this year.

Since the indications are that poliomyelitis will continue to occur at a relatively high incidence this year, measures should be taken to inform the public of the dangers involved and of means to protect themselves. According to information recently published by the National Foundation for Infantile Paralysis, chilling and fatigue are predisposing factors in the development of paralytic symptoms, flies are said to be definitely implicated in the spread of poliomyelitis, with evidence of recovery of the virus from food contaminated by flies, from flies themselves and from sewage polluted by the excreta of polio cases. Drinking water is probably an important factor, especially in Japan.

Health Department and Health Center activities should be directed towards general insect control with the elimination of fly breeding and protection of food from flies and toward the education of the public directed particularly towards families with children. The importance of boiling all drinking water and protecting of young children from contact with known cases, and from chilling or fatigue should be included in health measures and in publicity campaigns.

Ekiri

Ekiri, a highly fatal disease of children in Japan has not been well understood by Japanese workers, particularly as to its etiology and treatment. A Commission headed by Dr. Katharine Dodd visited Japan during the summer of 1947 to make a study of Ekiri. Based on this study, certain information has been assembled on the diagnosis and treatment of Ekiri and is published as Inclosure No.1 to this Bulletin.

Information contained in this article will be of value to Civil Affairs Health Officers in advising Japanese health agencies on preventive and therapeutic measures which should be taken. Efforts should be directed towards the inclusion of adequate amounts of calcium in the diet, as well as taking the usual sanitary measures for the prevention of bacillary dysentery.

A more complete discussion of Eriki, has been published in Pediatrics, January 1949, under the title, "The Etiology of Ekiri, a Highly Fatal Disease of Japanese Children," by Katherine Dodd, M.D. and others.

Medical Social Work Program in Health Centers

Due to the need for extreme economy in governmental operations, many positions have been considered for possible consolidation or elimination. Positions which have been newly established have been most critically considered. In this regard it is important that the health officials understand that medical social work is a basic part of the Health Center program and that any reduction of this program through loss of medical social workers be guarded against.

Special training has been given medical social workers in a ten-day course at the Institute of Public Health and also to a certain number in attendance at a three-months' course in medical social work at the Japan School of Social Work. (Refer to Section VII, this bulletin, Welfare Division, for additional information on Medical Social Work Trainees). It would be most unfortunate if the medical social work program should be crippled at the start before it has had an opportunity to demonstrate its usefulness.

SECTION III NURSING AFFAIRS DIVISION

Nursing Affairs

The next four months course for the training of public health nurses will begin at the Institute of Public Health the first part of August. Civil Affairs Nurses are asked to furnish guidance in the selection of students for this refresher course.

The Japanese Midwives, Clinical Nurses and Public Health Nurses' Association is now publishing two monthly nursing journals. The "Kango" is published by the Main Association; Miss Yasuko Otake is the Editor. The "Public Health Nursing Journal" is published by the Public Health Section of the Association with Miss Sada Miura as the Editor. The Civil Affairs Nurses would contribute much to the success of these two journals if they would encourage the nurses of their prefectures to consider these journals as their journals and send articles and news items to them regularly. All articles should be sent to the editors, both of whom can be reached at the Association headquarters, 266 3 chome, Harajuku Shibuya-ku, Tokyo. The first issue of the "Kango" will be published 27 July.

SECTION IV
VETERINARY AFFAIRS DIVISION

Equine Encephalomyelitis

A total of 400,000 horses have been immunized for equine encephalomyelitis since the beginning of the program that was inaugurated February 1949. To date twenty-eight cases have been reported of which only three were actually confirmed. In support of this program, DDT spray was utilized on approximately 480,000 farms throughout Japan where horses were known to be stabled. Over 200,000 gallons of DDT was allocated for this program.

Bovine Encephalomyelitis

Recent reports indicate the possibility of cattle being affected by the virus of equine encephalomyelitis. Symptoms as disclosed to date are similar in detail to those seen in horses. Blood samples are being drawn and sent to laboratories for study. During the epizootic of equine encephalomyelitis in 1948, laboratory tests disclosed neutralizing antibodies and comparable titres in cattle but no symptoms were observed. Additional studies are being made as this condition may be a new entity in the disease of cattle.

Weekly Animal Diseases

During the period 9-15 July, the following outbreaks of animal diseases occurred:

<u>Prefecture</u>	<u>Disease</u>	<u>Number of Cases</u>
Gumma	Swine erysipelas	3
Kochi	Swine erysipelas	2
Yamanashi	Swine erysipelas	1
Fukushima	Swine erysipelas	1
Shizuoka	Swine erysipelas	4
Akita	Swine cholera	2
Iwate	Swine cholera	28
Toyama	Equine encephalomyelitis	1 (suspect)
Fukuoka	Equine encephalomyelitis	1 (suspect)
Hokkaido	Equine encephalomyelitis	1 (suspect)

SECTION V
SUPPLY DIVISION

Pyrethrum Emulsion

During the period 21-27 June distribution of pyrethrum emulsion was made to the prefectures listed below. The emulsion is supplied in 50 gallon drums of the concentrate which is diluted one part to thirty parts of water prior to use. Distribution was made as follows:

<u>Prefecture</u>	<u>Drums</u>
Osaka	68
Hyogo	<u>55</u>
TOTAL	123

Distribution of Sprayers and Dusters

During the period 3-9 July, 13,106 pieces of dusting and spraying equipment were distributed to 26 prefectures as follows:

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsack Sprayer</u>	<u>Semiautomatic Sprayer</u>	<u>Hand Sprayer</u>	<u>Engine Sprayer</u>
Hokkaido	30	0	0	0	2
Iwate	0	0	71	100	0
Ibaraki	24	0	0	0	0
Fukushima	288	0	0	0	0
Tochigi	3616	60	0	50	0
Saitama	280	28	64	160	1
Chiba	320	280	135	280	3
Tokyo	648	350	156	360	2
Kanagawa	330	53	73	130	2
Niigata	100	0	0	110	0
Fukui	0	0	0	20	0
Nagano	0	25	20	0	0
Shizuoka	0	0	45	0	2
Aichi	24	60	0	60	0
Kyoto	1	0	0	100	0
Osaka	290	160	126	0	2
Wakayama	1000	0	0	250	0
Shimane	0	286	60	0	0
Hiroshima	120	70	15	0	0
Tokushima	0	0	100	0	3
Kochi	0	0	0	0	1

Saga	500	0	0	0	0
Kumamoto	200	0	0	0	0
Oita	0	100	0	0	0
Miyazaki	50	300	0	0	0

Assay of Biologics

During the period 5-11 July the following biologics have been assayed and found to meet minimum standards:

<u>Item</u>	<u>Manufacturer</u>	<u>Lot No.</u>	<u>Quantity</u>
<u>Diphtheria Antitoxin</u>	Kitasato Institute	113	16,299
		114	14,463
<u>Smallpox Vaccine</u>	Kyoto Biseibutsu Institute	38	91,520
		39	91,520
	Handai Biseibutsu Institute	10	289,750
		11	280,400
		12	294,650
	Kagaku & Kessei Ryoho Institute	116	240,000
	Densenybo Institute	21850	479,000

<u>Typhoid and Paratyphoid</u>		Unit: Dose	
	Kitasato Institute	705	39,350
		713	38,850
		751	39,350
		761	39,350
	Fuji Saikin	91	37,800
	Nitto Yakuhin	69	39,350
<u>Tuberculin</u>	Kekkaku Yobokai	1	8,826
		2	9,216

SECTION VI
NARCOTIC CONTROL DIVISION

Hospital Narcotics

Narcotics administrators of all the major hospitals in Japan have been advised it is the responsibility of the hospital, under the Narcotic Law, to store narcotics safely. Although a steel safe with a combination lock is a suitable place to store narcotics, the hospital authorities are required to place such a safe so that it is reasonably protected from burglary. In addition the administrators have been advised that storage of a week's supply of narcotics in a place other than a safe is not acceptable as adequate protection for narcotics.

Narcotic Registrants

Information has been received that unauthorized persons have been conducted through some of the narcotic plants where narcotics are processed, compounded or packaged. The Narcotic Section, Ministry of Welfare, has advised all such registrant that narcotic installations are not to be visited by any persons other than personnel who are working there in or who have obtained proper clearance.

SECTION VII
WELFARE DIVISION

Cooperative for American Remittances to Europe, Inc., (CARE)

The following report covers "CARE Operations in Japan" through 30 June 1949:

a. <u>Food</u>			
	Total Packages received		29,989
	Packages damaged, etc.	2,527	
	Packages delivered	<u>17,975</u>	<u>20,502</u>
	Total Packages on hand		9,487
b. <u>Woolen</u>			
	Total Packages received		8,016
	Packages damaged, etc.	60	
	Packages delivered	<u>7,916</u>	<u>7,976</u>

Total Packages received		4,980
Packages damaged, etc.	-	
Packages delivered	1,396	<u>1,396</u>
Total Packages on hand		3,584

SECTION VIII SOCIAL SECURITY DIVISION

National Health Insurance

The attention of the Welfare Officer of the Civil Affairs Team is called to Ho-hatsu Nos.27 and 56 of 16 April and 25 May 1949, issued by the Insurance Bureau, Ministry of Welfare, to the Governors of each prefecture which govern the application for and distribution of national subsidies to National Health Insurance for the cost of administration, health guidance doctors and public health nurses in the current fiscal year. It is interesting to note that, for the first time, it is clearly spelled out that subsidies received have to be returned by any insurer who fails to meet in actual operation the stipulated conditions under which they were received. (Section 4, paragraph C (1) of Ho-hatsu No.27).

Medical Care Under Social Insurances

Conferences have been held with the Social Security Committee of the Japanese Medical Association for discussion of various subjects involving medical care given in accordance with the social insurance programs or matters related thereto. The Social Insurance medical Fee Payment Fund, the reviewing of medical care claims, the settlement of claims under National Health Insurance and doctors' income tax were among the subjects discussed.

Concerning the question of bringing about a settlement of outstanding medical care bills under National Health Insurance, it was suggested that there might be a variety of ways for setting these accounts according to local conditions but that as a standard recommendation it might seem reasonable to create a sinking fund to be fed from certain ear-marked revenues such as collection of past contribution, fines, interest on reserves, and perhaps a small share of current contributions.

As for the doctors' grievances in connection with inequities in the taxation of income, derived from social insurances, all possible help was promised in representing justified complaints to the Shoup Taxation Mission currently studying the entire field of taxation in Japan. (See reference below).

Briefing of Shoup Taxation Mission

Meetings have been held with members of the United States Tax Mission to Japan under the Leadership of Dr. Shoup which is currently studying the whole field of taxation and related issues. Present problems of social insurance taxation and tax collection, government subsidies, reserves, etc., were brought to the attention of Mission. Likewise, petitions, grievances, recommendations, etc. received from groups with an interest in social insurance were transmitted to the Mission with recommendations for action; prominent among these were the complaints on the part of the doctors concerning taxation of their income derived from social insurance medical care.

Social Insurance Medical Fee Payment Fund

No objection was raised by the Public Health and Welfare Section to the revision of certain report forms incidental to the operations of the Social Insurance Medical Fee Payment Fund. The forms which have been collected into one Appendix to the Enforcement Ordinance to the Law as revised effective 1 June 1949, concern the following matters on which reports are required from each Branch Office of the Fund.

Form No.1 "Social Insurance Medical Fee Payment Fund Inspection Certificate". This form is an identification card issued by the Ministry to Fund inspectors and bearing the inspector's name and title.

Form No.1-2 is a standard form for the preparation of the budget of revenues and expenditures for administration of the Fund as required for each fiscal year.

Form No.1-3 pertains to the annual settlement of accounts of the revenues and expenditures for the administration of the Fund.

Form No.2 is an annual inventory form on which all properties of the Fund are to be listed each year.

Form No.3 contains five separate forms, all annual, listing respectively (a) the number of insurers with whom contracts have been concluded; (b) the amounts of doctors' bills paid for each group of insurers (government -managed Health Insurance, society managed Health Insurance, Seamen's Insurance, National Public Service Mutual Aid Associations, and National Health Insurance); (c) the amounts of deposits received from each group for payment of doctors bills; (d) the amount of deposits received from each to meet the administrative expenses; (e) a breakdown of (total) revenues and expenditures of the Fund by class.

Form No.4 contains eight, separate standard lists on which the following data, broken down by group of insurer, are to be reported each month: (a) Changes in the number of contracts with insurers; (b) Total of bills due and paid; (c) Total deposits for payment to doctors due and received; (d) Total deposits for administrative expenses due, received and paid out; (e) Reconciliation of actual administrative revenues and expenditures with those budgeted; (f) Summary of the result of the review and audit of doctors' bills broken down into general medical care, hospitalized and ambulatory (listed separately), and dental care given to primary insured and to dependents (listed separately), also the number of doctors involved, cases and days of sickness involved, number of points claimed by the doctors and (separately) approved by the Reviewing and Auditing Committee; finally the total amount paid to the doctors.

SECTION IX
MEMORANDUM TO THE JAPANESE GOVERNMENT

None.

CRAWFORD F. SAMS
Brigadier General, Medical Corps
Chief

3 Incls;

1. Ekiri - Diagnosis and Treatment. (Information to Civil Affairs Health Officers)
2. Summary Report of Cases and Deaths from Communicable Diseases in Japan Week ended 9 July 1949.
3. Japanese Hospital Report - May 1949.

SECTION II PREVENTIVE MEDICINE DIVISION

Public Health Information

Greater coordination of public health information activities and greater cooperation in carrying out activities between the Prefectural Health Department and the health centers is urgently needed.

Recent surveys have shown the information activities at the branch health center level is extremely weak due, in part, to lack of contact with prefectural public health and model health center officials responsible for public health and welfare information programs. The health centers are one of the most important outlets for public health information as they are working directly with the people of the community.

These health centers need knowledge of the broad general information program of the Ministry of Welfare and of the general programs of the prefectural health departments, and of the prefectural model health centers. They need more information material (posters, leaflets, etc.), visual and materials, and advice and guidance on the proper use of such materials and techniques of presentation in order to successfully carry on this important part of the public health program.

Plans are being developed at the national level which will be of distinct aid to the health centers. In the interim it is suggested that the Civil Affairs Teams urge the persons responsible for information work in the prefectural model health centers to increase their contacts with other health centers in helping plan and conduct information programs at that level of administration.

Sanitation

Mosquito and Fly Control by Individuals:

Flies and mosquitoes are considered important agents in the transmission of poliomyelitis and encephalitis respectively. Control of these insect vectors requires the coordination of individual efforts and those organized insect control teams.

DDT preparations now on sale to the public should be accompanied by sufficient directions for proper use. Numerous examples of misuse and wasteful ineffective applications have been noted.

Instructions should be distributed in written or printed form to all users of DDT preparations to correct this misuse and should include the following basic information:

“Residual effect spraying of interiors of dwellings, barns, animal sheds and other buildings for control of adult flies and mosquitoes.

1. Insecticides to be used: 5% emulsion, solution, or wettable dust, must be in liquid form and 5% concentration.
2. Where the insecticide is applied: The material is applied to walls, ceilings, underside of shelves, furniture and other places where flies and mosquitoes come to rest - inside of buildings or sheds.
3. Amount to be applied to surfaces treated: is roughly 1 liter per 8 tsubo (1 quart per 250 square feet).
4. Method of application: The insecticide can be applied with spray gun held close enough to the wall so the material will not be blown away by air currents, and not close enough to run. The surface should be thoroughly wet but not enough put on to run off the surface and be wasted.”

Application can also be made satisfactorily by painting it on the surface from an open container with a paint brush or rag, or by whisking it on with a whisk broom.

SECTION III
NURSING AFFAIRS DIVISION

Training Programs

The next course for the training of nurses working in tuberculosis programs will commence on 23 August at the Toin Gakuen in Tokyo under the sponsorship of the Anti-Tuberculosis Association. Notices in reference to the course have been sent to the prefectural governor and the Chief of the Prefectural Health Department. Because of a limitation of field work facilities only 30 students will be admitted to the course; selections will be made from applications submitted to the Anti-tuberculosis Association. Civil Affairs Nurses are asked to furnish guidance in the selection of candidates; nurses working in health centers, town or village offices, prefectural offices or tuberculosis sanatoria are eligible to attend.

SECTION IV
VETERINARY AFFAIRS DIVISION

Conference on Biological Products

A conference was held with Agriculture and Forestry Ministry officials concern in the production and control of veterinary biologicals.

Present surveys disclose many errors are being made in the production of these biologicals. In order to produce a product capable of meeting and passing assay standards, an outline on "Sterility and Safety Testing of Biologic Product" was presented to each member present. It was also recommended that the outline be incorporated as a part of the regulatory requirements now governing the production of veterinary biologics.

Animal Disease

The Animal Hygiene Section, Ministry of Agriculture and Forestry submitted the following report of those animal diseases occurring during the period 16 - 22 July.

<u>Prefecture</u>	<u>Disease</u>	<u>Number of Cases</u>
Niigata	Swine erysipelas	1
Chiba	Swine erysipelas	1
Shizuoka	Swine erysipelas	1
Gumma	Swine erysipelas	2
Saitama	Swine erysipelas	1
Kagoshima	Swine erysipelas	12
Saitama	Swine cholera	1
Kanagawa	Swine cholera	2
Miyagi	Swine cholera	4
Gumma	Equine encephalomyelitis	1 (positive)
Ibaraki	Equine encephalomyelitis	1 (suspect)
Aomori	Equine encephalomyelitis	1 (suspect)

Meat Inspection

Under the supervision of the Veterinary Affairs Section, Ministry of Welfare, prefectural veterinary meat inspectors conducted ante- and post-mortems on the following specie of animal during the month of May.

	<u>Cattle</u>	<u>Calves</u>	<u>Horses</u>
Number slaughtered	12,540	1,027	3,159
Body weight (kgs)	4,584,292	85,317	1,041,770
Dressed weight (kgs)	2,310,888	41,187	483,582
Condemned Ante-mortem	0	0	1
Condemned Post-mortem			
Total	16	3	15
Partial	400	23	205
Viscera	3,161	56	522

	<u>Swine</u>	<u>Sheep</u>	<u>Goats</u>
Number slaughtered	46,997	113	171
Body weight (kgs)	3,978,112	2,905	3,104
Dressed weight (kgs)	2,372,293	1,473	1,482
Condemned Ante-mortem	1	0	0
Condemned Post-mortem			
Total	15	0	1
Partial	441	0	1
Viscera	11,760	4	7

Prefectural veterinary meat inspectors conducted sanitary inspections of the following establishments handling and processing meats.

Meat Processing Plants

Number of establishments	302
Number of establishments inspected	239
Sanitary condition		
Good	77
Fair	138
Poor	24
Total number of inspections	425
Amount of meat and meat products examined	591,704 kgs.
Amount of meat and meat products condemned	0

Meat Retail Shops

Number of establishments	14,055
Number of establishments inspected	8,062
Sanitary condition		
Good	2,446
Fair	4,532
Poor	1,084
Total number of inspections	9,058
Amount of meat and meat products examined	838,421 kgs.
Amount of meat and meat products condemned	158 kgs.
Cause for condemnation	Putrifaction
Disposition	Fertilizer

Milk Inspection

The Veterinary Affairs Section, Ministry of Welfare, submitted the following report in which Prefectural veterinarians conducted sanitary inspections of dairy farms and milk plants during the month of May.

Special Milk

Number of farms inspected	4
Samples examined	10
Over bacterial standards (50,000 per cc)	2
Under butterfat standards (3.3 percent)	0
Number of plant inspections.	11
Over bacterial standards (50,000 per cc)	2
Under butterfat standards (3.3 percent)	0

Ordinary Milk

Number of farms inspected	10,216
Samples examined	20,551
Over bacterial standards (50,000 per cc)	746
Under butterfat standards (3.3 percent)	742

Number of plant inspections.	5,041
Over bacterial standards (50,000 per cc)	362
Under butterfat standards (3.3 percent)	349

Goat Milk

Number of farms inspected	33
Samples examined	36
Over bacterial standards (20,000 per cc)	5
Under butterfat standards (3.3 percent)	0

Milk Produced on Daily Farms During May

<u>Type of Milk</u>	<u>No. of Farms</u>	<u>Number of Cows and Goats</u>	<u>Amount Produced</u>
Special	6	140	19,464 Lit.
Ordinary	58,917	112,693	18,253,611 Lit.
Goat	7,122	9,529	222,617 Lit.

Quantity of Milk Bottled in Milk Plants During May

<u>Type of Milk</u>	<u>No. of Plants</u>	<u>Raw Milk</u>	<u>Pasteurized</u>	<u>Sterilized</u>
Special	6	13,961	12,000	25,961 Lit.
Ordinary	2,947		2,804,560	7,608,191 Lit.

All Milk is bottled in 1 go bottles representing 180cc.

Milk Products Produced During May

Type of Product

Powdered whole milk	169,056 kgs.
Powdered whole milk modified	458,631 kgs.
Evaporated milk	107,264 kgs.
Sweetened condensed milk	699,145 kgs.
Butter	152,922 kgs.
Cheese	21,010 kgs.

Seafood Inspection

The Veterinary Affairs Section, Ministry of Welfare, submitted the following report on sanitary inspections of seafood establishments as performed by Prefectural veterinarians during the month of May.

Wholesale Seafood Markets

Number of establishments	1,403
Number of establishments inspected	954
Sanitary condition	Good 124
	Fair 625
	Poor 205
Total number of inspections	4,706
Amount of seafood examined	105,494,396 kgs.
Amount of seafood condemned	1,493,576 kgs.

	16	289,200
	17	262,950
Toshiba Seibutsu Institute	62	164,800

SECTION VI NARCOTIC CONTROL DIVISION

Enforcement

Two Japanese and their source of supply were apprehended smuggling narcotics into a hospital ward. A small quantity of narcotics were seized.

Information

Instructions (Yaku Hatsu No.1246, dated 12 July 1949) issued by the Ministry of Welfare contain specific instructions regarding the prevention of narcotic thefts in hospitals. The instructions contain a warning that hospital administrators will be prosecuted and/or have their narcotic license cancelled if recurrent thefts occur as result of insecure storage or if a theft is the result of carelessness on the part of the hospital.

Instructions (Yaku Hatsu No.1262, dated 12 June 1949) issued by the Ministry of Welfare establish a uniform method of reporting all cases of investigation resulting in admonition, administrative disposition or arrest as well as all special investigations. Reports of admonitions, administrative dispositions and arrests will be numbered consecutively in each prefecture and the report promptly forwarded to the Narcotic Section, Ministry of Welfare, where a central file covering all phases of narcotic control has been established.

The instructions also establish a uniform procedure for reporting, storing and forwarding evidence seized in narcotic cases. The evidence reports will accompany the reports of arrest and will be used in the accounting procedure of evidence seized, used as evidence, and forwarded for disposition when court action is concluded.

SECTION VII WELFARE DIVISION

Community Chest - Japanese Red Cross "Joint Fund Campaign"

The final and official compilation (15 June 1949), covering the Community Chest Japanese Red Cross "Joint Fund" Campaign was submitted by the Community Chest Central Committee. The report is most encouraging and reflects an acceptance of the movement. A total of ¥ 1,116,394,451.43 was raised towards the established goal of ¥ 1,175,450,000 or 95.0 % of quota. This is an increase of ¥ 403,298,194.43 over the combined totals the two organizations raised last year (Fall Campaigns 1947) or an increase of 56.0 %. (See Inclosure No.1)

SECTION VIII SOCIAL SECURITY DIVISION

National Health Insurance

Increasing public interest in the expansion of social security programs to furnish means by which the population may obtain economical medical care continues with emphasis throughout the world. Not only is this of major interest to the lay public but also to the medical profession. The American Medical Association, at its annual

convention in June, exhibited marked interest in this subject with particular emphasis on industrial and rural health insurance plans. It can be said that voluntary prepayment medical care plans have demonstrated the feasibility of the insurance approach in meeting some of the needs and is now commonly accepted as means for providing convenient and economical methods to pay for medical care. There is, however, a difference of opinion as to the type of insurance to be employed in accomplishing the objective.

The medical profession in the United States now favors the voluntary type of health insurance while many governments in the world have turned to social insurance operated on a compulsory basis. The American Medical Association, while steadfastly opposing other than voluntary medical care plans, has recently altered its previous policy of recognizing only those voluntary medical care plans operated by doctors, groups of doctors, medical institutions or societies. At this year's annual convention, the House of Delegates of the American Medical Association adopted a resolution which provides means for recognizing lay-sponsored voluntary medical care plans when such plans meet certain criteria of good medical care and have the endorsement of the local medical society. As a rule, these plans would be locally sponsored and administered by local committees or cooperative organizations.

Beyond that, however, a further step was taken by the House of Delegates in that a resolution was passed providing recognition of larger federations of locally approved medical care plans. The federations may be even national in scope for the purpose of handling national accounts of nation-wide organizations. Another benefit to be derived from such federation would be the possible assistance in extending coverage and distribution of these plans, particularly in those rural areas now lacking sufficient medical care.

It is significant to note how the revised policies of the American Medical Association now parallel in some respects the National Health Insurance programs in Japan. The basic principle of these National Health Insurance medical care programs, which are similar are that are lay sponsored on a local option basis by those local communities which voluntarily make their own decision as to whether they need and want a cooperative health insurance plan for providing economical medical care. Under this program the local community also makes its own arrangements with the purveyors of medical care and actually handles its own program. For effective and sound administration, protective provisions have been set forth in a national law which is supervised by officials of public entities. Furthermore representatives of the medical profession, government and laymen cooperatively participate at all levels of administration in formulating the planning, policies and procedures of the programs. In addition the local communities operating these programs have the privilege of federating over small or large areas for the purpose of attaining their objectives.

SECTION I
GENERAL

Ministerial Instructions

The following is a list of English translated instructions issued by the various Bureaus of the Ministry of Welfare to the prefectural governments for the periods indicated:

11-23 July 1949

<u>Date</u>	<u>File Number</u>	<u>Subject</u>	<u>To</u>	<u>From</u>
<u>Account Section</u>				
July 11	Kai-hatsu No.696	Re: Specifications along with the last payment report.	Governor, Shimane Pref.	Chief, Accounts Section
July 11	Kai-hatsu No.698	Re: Copy of the checkup on the last month account relative to the report of the settlement of account of expenditure for 1949.	Governors, Kanagawa & 8 other Prefs.	"
July 12	Kai-hatsu No.704	Re: Field examination of accounts.	Governors, Niigata & Toyama Prefs.	"
July 13	Kai-hatsu No.707	Re: Field examination of accounts.	Governors, Niigata & Nara Prefs.	"
<u>Public Sanitation Bureau</u>				
July 12	Ei-hatsu No.723	Re: Handling of the indications on exported foodstuffs.	All prefectural governors.	Director, Public Sanitation Bureau
July 12	Ei-hatsu No.728	Re: Instruction of temporary operation of the anti-smallpox vaccination & the Cabinet Order on the enforcement date for part of preventive vaccinations.	"	"
July 13	Ei-hatsu No.733	Re: Mass control of additional articles to manufactured goods to be examined officially.	"	"
July 14	Ei-hatsu No.738	Re: Setup of communicable diseases wards, disinfecting equipment and V.D. Hospital for 1950.	"	"
July 15	Ei-hatsu No.741	Re: Joint responsibility for the expenditure of the preventive vaccinations for 1949.	"	"
<u>Medical Affairs Bureau</u>				
July 15	I-hatsu No.618	Re: Documents for approval of compensation for public servants disasters.	All chiefs, Bureau's local offices, National Hospital & sanatoriums.	Director, Medical Affairs Bureau

Pharmaceutical and Supply Bureau

July 11	Yaku-hatsu No.1252	Re: Disposal of ration articles on hand of local dealers who fail to make renewal of the registration.	All prefectural governors.	Director, Pharma- ceutical and Supply Bureau
July 11	Yaku-hatsu No.1256	Re: The monthly report on violation of the law concerning narcotics.	"	"
July 11	Yaku-hatsu No.1259	Re: The badge of pharmaceutical agents.	"	"
July 12	Yaku-hatsu No.1262	Re: Report on the violation cases of the law concerning narcotics.	"	"
July 13	Yaku-hatsu No.1265	Re: Distribution of hexylresorcinol.	"	"
July 14	Yaku-hatsu No.1275	Re: Quantity of the samples to be submitted for the assay of the Biological Preparations.	"	"
July 15	Yaku-hatsu No.1283	Re: Distributing quantity of DDT preparations & anti-eruptive typhus vaccine, and the results of collecting the charge.	"	"
July 16	Yaku-shu No.544	Re: Handling part of medical supplies as the result of the revision of the Temporary limited Construction Regulation.	"	"

Social Affairs Bureau

July 12	Sha-hatsu No.1124	Re: Special allocation of leather shoes for Welfare Commissioners.	Governors, Gumma & 2 other Prefs.	Director, Social Affairs Bureau
July 12	Sha-hatsu No.1126	Re: Special distribution of milk.	Governor, Kanagawa Pref.	"
July 14	Sha-hatsu No.1132	Re: Consultation for approval of security facilities provided by the Daily life Security Law, Article 7.	Governor, Osaka Pref.	"
July 14	Sha-hatsu No.1133	Re: Interpretation of Article 8 of the Enforcement Regulation of the Daily Life Security Law.	"	"
July 14	Sha-hatsu No.1134	Re: Interpretation of Article 8 of the Enforcement Regulation of the Daily Life Security Law.	Governor, Gumma Pref.	"
July 14	Sha-hatsu No.1135	Re: Approval of security facilities provided by the Daily Life Security Law.	Governor, Aichi Pref.	"
July 14	Sha-hatsu No.1136	Re: Approval of security facilities provided by the Daily Life Security Law.	Governor, Hokkaido Pref.	"
July 14	Sha-hatsu No.1137	Re: Consultation for approval of security facilities provided by the Daily Life Security Law, Article 7.	Governor, Hyogo Pref.	"

July 14	Sha-hatsu No.1142	Re: Allocation of hemp for the operation of the workshops for the 2nd Quarter period.	Governors, Kyoto & 4 other Prefectures.	Director, Social Affairs Bureau

SECTION II PREVENTIVE MEDICINE DIVISION

Insect and Rodent Control

The following article appeared in the publication "News Release" of the American Medical Association (for release in United States papers on 8 July 1949) concerning the use of DDT in the control of diseases carried by rat fleas.

This article gives weight and support to the control measures used in Japan for the past three and a half years in the prevention and control of flea-borne diseases, particularly endemic typhus fever and plague.

It is suggested that the source of this information and the information contained in the article be widely publicized among the Japanese public, all prefectural and city public health departments, health centers, medical associations and other groups interested in the betterment of public health and in the prevention of insect-borne disease.

"USE DDT TO CONTROL DISEASES CARRIED BY RAT FLEAS"

CHICAGO - DDT dusting is reported superior to any other method now in use for the rapid control of murine typhus (a contagious fever) and other diseases carried by rat fleas, according to an editorial in the current (July 9) Journal of the American medical Association.

The editorial says:

“in the United States, murine typhus, according to Assistant Surgeon General C.L. Williams (of the United States Public Health Service, Washington, D.C.), constitutes an important problem in nine states grouped in the Southeast.

“These states are: North Carolina, South Carolina, Georgia, Florida, Tennessee, Alabama, Mississippi, Louisiana and Texas. Ninety-two per cent of the human cases of murine typhus in the United States are reported in these nine states. Despite the rat distribution and rat-proofing programs, a steady rapid increase has taken place, moving from 1,882 cases in 1940 to 5,401 in 1944.

“In 1944, personnel of the United States Public Health Service carried out experiments on the control of rodent ectoparasites, using DDT mixed with an inert powder to dust rat runs in buildings. Results indicated that flea indexes in buildings could be reduced by as much as 90 percent and could be kept at a low level for about three months.

“A flea control project was begun in 1945, federal funds for that purpose being made available. The program was carried on by state health departments according to a uniform pattern established in agreement with the Public Health Service. As the result of this campaign there was a progressive reduction in the incidence of the disease.

“In 1944 there were 5,401 cases of murine typhus reported in the United States. In 1945 there were 5,193, in 1946 there were 3,365 and 1947 the number was 2,034 which represents an over-all decline of about 62 percent. The steady decline has continued into 1948, present date indicating that there will be reported between 1,100 and 1,200 cases.

“The material used is a dust mixture of 10 percent DDT to 90 percent pyrophyllite. This dust is spread along rat runs, in burrows and, so far as practicable into rat harborages. The theory of operation is not to dust the rats themselves but to kill the fleas when they drop off the rats. Apparently rats carry the dust in which they have walked to their nest where additional fleas are killed. Through this method, two main types of rat fleas (*Xenopsylla cheopis* and *Leptopsyllais segnis*) have been greatly reduced in numbers.

“In addition to the reduction in rat fleas, incidence in rats of a positive complement fixation test for typhus also decreased. The author believes that DDT dusting is superior to any other method now in use for the rapid control of any disease carried solely or principally by rat fleas.”

SECTION III VETERINARY AFFAIRS DIVISION

Animal Disease

The Animal Hygiene Section, Ministry of Agriculture and Forestry reported the following outbreaks of animal disease during the period 23 - 29 July.

<u>Prefecture</u>	<u>Disease</u>	<u>Number of Cases</u>
Gumma	Swine erysipelas	1
Shizuoka	Swine erysipelas	2
Chiba	Swine erysipelas	6
Tokushima	Swine cholera	1
Iwate	Swine cholera	5
Tochigi	Equine encephalomyelitis	1 (positive)
Tochigi	Equine encephalomyelitis	1 (suspect)
Yamagata	Equine encephalomyelitis	1 (positive)

Monthly Animal Disease Report

The Animal Hygiene Section, Ministry of Agriculture and Forestry, reported the following outbreaks of animal diseases for the months of May and June.

<u>Diseases</u>	<u>May</u>	<u>June</u>
Anthrax	2	0
Swine paratyphus	12	32
Blackleg	0	2
Swine erysipelas	210	382
Swine cholera	392	100
Swine plague	9	8
Piroplasmiasis	0	1
Trypanosomiasis	0	1
Brucellosis	29	12
Trichomonas	273	80
Strangles	12	56
Equine infectious anemia	119	197
Equine infectious abortion	28	8
Pullorum disease (Fowl)	1,113	1,051
Bovine tuberculosis	79	123
Equine encephalomyelitis	2	3

Rabies Report

The Veterinary Affairs Section, Ministry of Welfare submitted the following report on new cases of rabies in dogs occurring during the period 17 - 23 July.

<u>Prefecture</u>	<u>Number of Cases</u>	<u>Total to date</u>
Tokyo	6	95
Kanagawa	1	25
Chiba	3	70
Saitama	4	52
Ibaraki	0	10
Gumma	No report	40
Tochigi	0	2
Shizuoka	0	1

SECTION IV SUPPLY DIVISION

Mission of the American Pharmaceutical Association

The American Pharmaceutical Mission which arrived on 1 July, met with government leaders in public health activities both on the national and the prefectural levels, with leaders in pharmaceutical manufacturing, with leaders in pharmaceutical education, and with leaders in the pharmaceutical professional associations during their 31 day visit to Japan. In addition visits were made to all types of installations concerned with pharmaceutical affairs, including educational institutions, assay laboratories, manufacturing plants, public health facilities such as hospitals, public health centers and private clinics, and visits to practicing pharmacists in private pharmacies and public health facilities.

The members of the Mission were:

Dr. Glenn L. Jenkins	Dean, School of Pharmacy, Purdue University, Lafayette, Indiana, and President of the American Pharmaceutical Association.
Dr. Hugh C. Muldoon	Dean, School of Pharmacy, Duquesne University, Pittsburgh, Pennsylvania.
Dr. Troy C. Daniels	Dean, College of Pharmacy, University of California, Medical Center Campus, San Francisco, California.

Mr. Don E. Francke

Chief Pharmacist, University Hospital, University of Michigan, Ann Arbor, Michigan, and Editor, Bulletin of the American Society of Hospital Pharmacists.

Mr. F. Royce Franzeni

Practicing pharmacist, Washington, D.C., Member of the District of Columbia Board of Pharmacy and Vice President of the National Association of Boards of Pharmacy.

During the period 12 - 23 July the Mission made an extensive field inspection trip throughout Western Japan, visiting Hiroshima, Kyushu, Kyoto, Osaka, Nara, Mie, Aichi and Gifu. In all of these places conferences were conducted with local bodies of government officials, pharmaceutical associations, educators, manufactures groups and others concerned with the practice of pharmacy, including the practical pharmacists in all fields of pharmacy. Inspections were made of as many installations in those places as time permitted.

The Mission departed from Japan, on 31 July, for the United States. They have publicly expressed appreciation to the various Civil Affairs Teams, Japanese Agencies and other individuals who have contributed toward a successful and enjoyable month in Japan.

Production Summary, January through June 1949

The six month average production of medical supplies and pharmaceuticals reported for January - June exceeded 1948 monthly averages in yen value by 68 percent. Following are quantitative production averages for January through June as compared to 1948 monthly average production:

(1949 Monthly Average - 1.00)

<u>Commodity</u>	<u>June</u>	<u>January through June</u>
Laboratory Animals (each)	1.31	1.11
Biogocis (new production - yen)	1.06	0.25
Penicillin (OU)	5.16	3.67
Hexylresorcinol crystals (kg)	5.26	3.74
Hexylresorcinol capsules (piece)	14.26	6.77
Textile sanitary materials (lb)	0.82	1.23
Rubber sanitary materials (kg)	1.29	1.16
X-ray and electro-therapy equipment (Piece)	1.12	1.12
X-ray tubes (piece)	1.14	1.15
Rodenticides (kg)	No report	0.96
DDT dusters and sprayers (piece)	1.73	0.94
DDT 100% (lb)	2.66	2.44
DDT dust 10% (lb)	2.67	2.08
DDT spray 5% (gal)	1.42	0.85
Dental instruments	1.17	1.27
Surgical instruments	1.50	1.46
Glassware	1.14	1.10

Detailed production tablets of the medical, dental, sanitary materials and equipment for May and June, together with monthly averages for the current and previous years for comparison are attached (Incl. No.1).

Distribution and Use of Imported Streptomycin Preparation

The following is a report by the Ministry of Welfare of the distribution of the GARIOA imported streptomycin in accordance with PH JG 103.

Report of Streptomycin Distribution (PH JG 103)

SECTION V NARCOTIC CONTROL DIVISION

Illegal Cultivation of the Opium Poppy

Illegal cultivation of the opium poppy resulted in the arrest of five defendants in four prefectures. The number of plants cultivated ranged from 30 to 1,100. One of the defendants, a Korean, in addition to cultivating 1,100 plants was in illegal possession of a considerable quantity of narcotics.

Enforcement

Preliminary reports of the arrests of 27 foreign nationals, all charged with the possession and/or sale of heroin, during July indicate the enforcement program with respect to these traffickers is gaining momentum. The arrests were reported from Tokyo, Yokohama, Osaka, Kobe, Fukuoka and Nagasaki.

In Gifu prefecture 13 traffickers were arrested for illicit dealing in morphine and heroin. Of the defendants who have been tried, three were sentenced to five years hard labor and two were sentenced to two years hard labor. The remainder of the cases are pending.

SECTION VI WELFARE DIVISION

Disaster Relief letter #5

Enclosed with this Weekly Bulletin is a translation of Disaster Relief Letter #5, issued by the Japanese National Red Cross to all Chapters, subject: "Liaison and Coordination of the Work of All Non-Governmental Organization and Individual Engaging in Disaster Relief Work" (Incl.No.2)

Public Assistance Report - May

The Ministry has submitted the following statistical report for the month of May. Figures for April 1949 and for May 1949 are shown for purpose of comparison:

Social Studies Reference Book

To introduce Junior High School students to the social welfare programs and agencies of their city the Osaka Municipal Public Welfare Bureau has written a reference book which may be of interest to other prefectures. The contents include chapters on public assistance, care of children of all categories, work with war sufferers and repatriates, hospital and clinic facilities, programs for the unemployed, housing social education, disaster relief, the Red Cross, Community Chest, volunteers and cooperatives.

The first 10,000 copies have been distributed but orders are now being taken for the next issue due off the press on 10 September 1949. Copies are 20 yen ##### piece and may be obtained by written to: Investigation Section (Chosa-ka) Public Welfare Bureau, Osaka Municipal Office, Nakanoshima, Kita Ward, Osaka City.

SECTION VII SOCIAL SECURITY DIVISION

Social Insurance Coverage for Employees of Labor Unions

On 26 July 1949, the Employment Security Bureau of the Ministry of Labor, with the concurrence of the Ministry of Welfare, issued an instruction ("Shoku-Hatsu" No.921, dated 7 July 1949) to the effect that since a full-time employee of a labor union is not an employee of the company which employs the union members, and by which he was employed before becoming a full-time employee of the union, the former employer is not obligated under the various social insurance laws for such worker. Since the Labor Union Law prohibits the former employer to pay wages or other compensation to such person who has become a full-time employee of a labor union, his former employment relationship, and any insured status based on such former employment relationship, must be considered as having been terminated. Renewal of the insured status is dependent upon whether the union comes under compulsory coverage provisions of a given social insurance law or, if not compulsorily covered, takes steps to become voluntarily covered. In either case the employer's share of contributions must be borne by the union and not by the former employer.

Prefectural Social Insurance Office and Social Insurance Branch Offices

Each of the 46 prefectures has a section in the prefectural Welfare Department designated as the “Insurance Section” or, in Yamagata Prefecture, more accurately “Social Insurance Section”. This office of the prefectural government is concerned with the administration of Health Insurance, Welfare Pension Insurance, and Seamen’s Insurance and with supervision of National Health Insurance.

Thirteen prefectural insurance sections have “Social Insurance Branch Offices” which serve given geographical areas within the prefectures with respect to the administration of Health Insurance, Welfare Pension Insurance and Seamen’s Insurance. The entire staffs of these branch offices which are subordinate to the chiefs of the prefectural insurance sections, are national service employees. All of the members of the staff the prefectural insurance section, except some of those assigned to the National Health Insurance Sub-section, are national public service employees. Some of the personnel assigned to the National Health Insurance Sub-section are employees of the prefectural government.

The distribution of the 43 currently existing Social Insurance Branch Offices among the 13 prefectures in which such offices are established is as follows:

<u>Prefecture</u>	<u>Number of Branch Offices</u>
Tokyo	9
Osaka	6
Aichi	6
Fukuoka	5
Hyogo	4
Hokkaido	3
Niigata	2
Kanagawa	2
Shizuoka	2
Nagano	1
Hiroshima	1
Yamaguchi	1
Nagasaki	1
Total	43

Benefits Paid by the National Public Service Mutual Aid Associations

Reference is made to Public Health and Welfare Bulletin No.101 for a brief description of the National Public Service Mutual Aid system of social insurance for government and public workers. Benefit data published in that issue of the Bulletin covered the first three months (April through June) of the fiscal year 1948.

Enclosure No.3 gives benefit data for the remainder of fiscal year 1948 (July 1948 through March 1949). These data are not complete, inasmuch as the Ministerial Associations to-date have failed to submit current reports for October 1948 and the months following. However, this incompleteness affects merely short-term benefit statistics as long-term benefits are paid only by the government Enterprise Associations. (Ministry officials and those of similar government agencies other than business enterprises receive their long-term protection under the Government Pension System).

During the period reported, there have been in existence 27 associations, 20 of the “Ministerial type” and 7 established in the various “government enterprises”. At the end of the fiscal year 1948 (31 March 1949), the former accounted for an estimated average of 1.2million members (880,000 men and 320,000 women), plus 2.3 million dependents, the latter for 1.1million (940,000 men and 190,000 women) plus 1.8million dependents.

Since 1 July 1948, the Mutual Aid Associations have discontinued paying any new benefits claimed for job-connected causes but have continued paying those job-connected claims which had arisen prior to that date. (These are given at the end of Inclosure No.3). New claims for job-connected benefits are currently paid by each individual Ministry pending enactment of a comprehensive workmen’s accident compensation scheme for government and public workers.

Effective 1 July 1949, contribution rates levied on government employees who belong to any of the Ministerial Associations have been increased from 2.2 to 2.5 percent of basic salaries. In most of the Government Enterprise Associations the rate remains as before.

SECTION I
PREVENTIVE MEDICINE DIVISION

Training of Nutritionists

The sixth 2-month training course for nutritionists engaged in public health work will be held at the Institute of Public Health in Tokyo from 29 August to 29 October. Nutritionists employed in prefectural or municipal health departments or in health centers are eligible to attend. Well-qualified candidates should be selected. Prefectures with a back-log of untrained nutritionists may send more than one student to the course. An official announcement concerning the course has been sent to prefectural governors by the Ministry of Welfare.

Venereal Disease Control - Pre-Marital Health Examinations

Attention is invited to EIHATSU 716, dated 7 July 1949, from the Chief of the Public Sanitation Bureau of the Ministry of Welfare, and Chief of the Statistical Department of the Welfare Minister's Secretariat, to prefectural governors, subject, "Filling in the Marriage Registration Form and the Vital Statistics Marriage Schedule Form, as to Whether Health Certificates Were Exchanged According to the Provisions of Article 8 of the Venereal Disease Prevention Law."

This notification instructs the prefectural governors of Fukuoka, Nagasaki, Saga and Tochigi to have recorded on the marriage registration form and on the vital statistics marriage schedule form, whether or not health certificates were exchanged. These four prefectures were selected to carry out this procedure as a pilot study for three months, after which time the other prefectures may be requested to follow suit.

Although the health certificates will not be required as a pre-requisite to the marriage registration, the local health centers should follow-up those cases which did not receive pre-marital examinations. These people should be requested to report to the local health center or to their private physician for a belated examination which would still be of great value as a case finding measure as well as educating the public about pre-marital examinations.

It is deemed premature and inadvisable at present to demand the presentation of health certificates since it is felt that such a requirement would hinder the registration of the marriage; however, in the future, it is planned to institute such a procedure.

Civil Affairs Public Health Officers are urged to give whatever assistance is necessary to expedite the execution of this program.

Tuberculosis Control Activities

A copy of a British press release on the use of streptomycin has been obtained through the courtesy of the United Kingdom Liaison Mission in Japan. This article contains a summary of a well-controlled experiment with streptomycin and is quoted in its entirety for the information of those concerned. (Inclosure No.1)

Certain points in this study seem to stand out clearly:

1. Proof that streptomycin is of value in the treatment of progressive tuberculosis of recent origin.
2. Proof that streptomycin is of great value in those cases which are least acutely ill.
3. Proof that the greatest effect is to be found in the early days of treatment.
4. Proof of development of streptomycin resistance which undoubtedly influence effectiveness.
5. Proof of the need for observation of patients over a long period of time such as is done in cancer studies.
6. Proof that streptomycin is not the final answer in the treatment of tuberculosis.

Japanese B Encephalitis

Suspected cases of Japanese B Encephalitis are being reported sporadically from widely separated sections of Japan. Although a clinical diagnosis of Japanese B Encephalitis has been made in a number of cases by health officials or communicable disease hospital staff members, confirmation of the diagnosis by means of laboratory examination has not yet been obtained.

As of 6 August, the 406th Medical General Laboratory has examined blood specimens from approximately 30 Japanese patients, but has not yet been able to furnish a positive serological diagnosis.

SECTION II
NURSING AFFAIRS DIVISION

Refresher Courses

Reference is made to the budget allotments for prefectural, regional and national refresher courses in Weekly Bulletin No.128. This report pointed out that money is available for 3 types of refresher courses, prefectural, regional and national; however, plans are still being formulated by the Ministry of Welfare regarding the use of this budget so prefectures and regions should not plan for allocations until notification is received from the Ministry of Welfare.

Prefectural Courses

Information on the prefectural courses for clinical nurses, public health nurse and midwives was sent to the Sanitation Section of each prefecture in the form of Ikan No.50 (13 June 1949). The course outlines of this notification are submitted to the prefectures as suggested guides in planning the prefectural courses; changes may be made, with discretion, to fit the prefectural needs. These prefectural courses should be held for nurses, midwives and public health nurses in general (in other words, those working on a staff level). Nurses and midwives from various programs and fields should be given the opportunity of attendance. Each prefecture, on a matching basis will receive the following amount of money by requesting same of the Nursing Section, Ministry of Welfare.

Public Health Nurses	10,250 yen
Midwives	10,250 yen
Clinical Nurses	13,250 yen

Regional Courses

Information on the clinical nurses' regional courses was submitted to the Chief of Regional Branch Office, Ministry of Welfare in the form of Ihatsu No.526 (17 June 1949). An amount of ¥ 80,000 is to be available to each region to help defray the expenses of this course. Half of this amount is being granted through the Clinical Nurses Section of the National Association and half by the Ministry of Welfare. Therefore, in applying for this money one request for ¥ 40,000 must be made to the Clinical Nurses Section of the Association through the prefectural association and another request for ¥ 40,000 must be made to the Nursing Section of Ministry of Welfare through the Regional Ministry of Welfare Office. This course should be made available to head nurses or nurses with leadership ability.

Definite plans for the usage of the budget allotted for the training of public health and midwifery leaders have not yet been formulated.

National Courses

The following plans have been made in regard to national refresher courses to be held in Tokyo. The clinical nurses course for instructors of future Class "A" Nursing Schools will be held in September. Plans are being made at present for an instructors course for teachers of future midwifery and public health nursing schools.

Detailed information regarding these national courses will be submitted to Civil Affairs Nurses and prefectural departments in the near future.

School Nurses

On 11 June 1949, the Ministry of Education issued Hatsu Sho No.7 regarding short training courses for school nurses. This notification was sent to the Prefectural Boards of Education and the Governors.

According to this notification, 13,500 yen is to provide each prefecture by the national government. Two groups of nurses are to be trained for the following periods.

- 1 School nurse (2 months course)
- 2 Assistant school nurses (1 month course)

The curriculum to be used is included in this notification. In many prefectures the courses are already in progress.

Civil Affairs Nurses are asked to work with the Civil Education Section and the Board of Education and offer possible suggestions or assistance. Various reports in reference to these courses show a real need for instruction by qualified nursing instructors.

SECTION III VETERINARY AFFAIRS DIVISION

Training Course for Veterinarians

The eighth in the series of 2-months training courses for public health veterinarians will be held at the Institute of Public Health in Tokyo from 29 August to 29 October. Well qualified candidates who hold responsible positions in prefectural or municipal health departments or in health centers should be sent for training. An official announcement concerning the course has been sent to prefectural governors by the Ministry of Welfare.

Animal Diseases

The Animal Hygiene Section of Ministry of Agriculture and Forestry, has submitted the following report of animal diseases for the period 30 July - 5 August.

<u>Prefecture</u>	<u>Disease</u>	<u>Number of Cases</u>
Fukushima	Equine encephalomyelitis	4 (suspect)
Fukushima	Equine encephalomyelitis	1 (positive)
Fukushima	Swine cholera	4
Tochigi	Equine encephalomyelitis	1 (positive)
Yamaguchi	Equine encephalomyelitis	1 (suspect)
Toyama	Anthrax	1
Saitama	Swine cholera	2
Miyagi	Swine cholera	26
Tokyo	Swine cholera	1
Tokyo	Swine erysipelas	1
Tokyo	Swine plague	1
Saga	Swine plague	15

Rabies Report

The Veterinary Affairs Section, Ministry of Welfare, submitted the following report of new cases of rabies developing during the period 24 - 30 July:

<u>Prefecture</u>	<u>New Cases</u>	<u>Total to Date</u>
Tokyo	7	102
Kanagawa	2	27
Chiba	4	74
Saitama	5	57
Ibaraki	1	11
Gumma	1	42
Tochigi	0	2
Shizuoka	0	1

SECTION IV
SUPPLY DIVISION

Imported Anthelmintics

An additional quantity of 50 kgs of santonin (in crystal form to be processed into finished santonin tablets) has arrived in Japan on GARIOA imports. Allocation to manufacturers has been made and distribution of the drug in tablet form will be made during the third quarter, Japanese fiscal year 1949, (October through December). Monthly indigenous production of santonin averages 50 kgs with a total for the year of 600 kgs of santonin crystal. Additional quantities of santonin have been requested on GARIOA imports and further shipments of the drug should reach Japan during the current year.

The following tabulation indicates distribution activities based upon previous processing of the santonin crystals into the finished tablet form:

<u>Month</u>	<u>Stock Beginning of Period</u>	<u>Production During Period</u>	<u>Distribution During Period</u>	<u>Stock End of Period</u>
Feb-49	436,480	1,288,860	1,460,070	265,270
Mar-49	265,270	9,368,832	8,630,202	1,003,950
Apr-49	2,632,550	7,166,950	4,738,020	5,061,480
May-49	5,061,480	5,828,460	5,849,440	5,040,500
Jun-49	5,040,500	4,791,280	6,160,080	3,671,700

Approval was given to the plan of distribution of digenia simplex, a seaweed gathered in Pacific waters off the coasts of Formosa, Chiba, and Okinawa and used in various forms as an anthelmintic drug, imported also on the GARIOA 1949 program. This shipment included a total of 241,237 kgs of digenia, or total of approximately 241 tons. Detailed information has been gathered from the various manufacturers of digenia preparations outlining the history of their manufacturing activities, clinic data available on the efficacy of the drug, names and composition of the finished preparations.

Imported Culture Media for Penicillin Production

Approval was given to the plan of corn steep liquor distribution, which includes a total of thirteen hundred drums, fifty gallons each, or a total of 65,000 gallons of corm steep liquor, the preferential medium for penicillin production. The material is expected to arrive during August at a convenient time, since present stocks of the corn steep liquor are nearly exhausted. The present approval of the allocation plan will expedite the distribution of the import when it does arrive and will insure thereby continued levels of penicillin production. This shipment represents approximately half of the total quantity of corn steep liquor requested on the FY 1949 GARIOA import program. The balance of the material is scheduled to arrive in Japan in the near future.

Approval was given to the allocation plan of lactose likewise imported on the GARIOA 1949 program. This shipment of 130tons of lactose will be used as a culture medium for penicillin production.

These culture media will be used to effect the 1950 indigenous penicillin production goal of 1,000 billion oxford units.

Imported Castor Oil

Approval was given to the Ministry of Welfare Plan of allocation of 49,729 kgs of castor oil, imported on the GARIOA 1949 program, to various manufacturers to process the imported USP grade castor oil into the aromatic type of castor oil. Expeditious action is being taken to insure prompt processing of the imported material into the finished aromatic type of castor oil of proper assay standards so as to replenish dwindling stocks.

Assay of Biologics

During the period 26 July to 1 August the following biologics have been assayed and found to meet minimum standards:

<u>Item</u>	<u>Manufacturer</u>	<u>Lot No.</u>	<u>Quantity</u>	
Cholera Vaccine	Chiba Kessei	11	38,100	
		14	38,300

Pyrethrum Emulsion

During the period 11 - 31 July, distribution of pyrethrum emulsion was made to the prefectures listed below. The emulsion is supplied in 50 gallon drums of the concentrate which is diluted one part to thirty parts of water prior to use. Distribution was made as follows:

<u>Prefecture</u>	<u>Drums</u>
Hokkaido	31
Iwate	46
Tokyo	64
Saitama	4
Aichi	7
Niigata	97
Yamaguchi	18
Osaka	45
Kanagawa	5
Toyama	67
Nagano	14
Kyoto	<u>10</u>
TOTAL	408

Distribution Summary of Public Health Supplies

Distribution figures for May and June 1949 have been tabulated and the following indexes have been computed, using 1948 monthly averages as basis:

Item	Monthly Averages (1948 Monthly average equals 1.00)	
	June	Jan-June
Total Medical Supplies & Equipment Reported (Yen)	1.73	1.55
Controlled Medicines (Yen)	.80	.84
Non-Controlled Medicine (Yen)	2.11	1.77
Patent Medicines (Yen)	1.23	1.42
Dental Instruments (Yen)	1.35	1.57
Dental Materials (Yen)	1.33	1.88
Rubber Medical Goods (Yen)	3.31	3.13
Cotton Sanitary Materials (Yen)	1.75	1.77
Medical Instrument (Yen)	1.65	1.34
X-ray and Electrotherapy Equipment (pieces)	1.70	1.39
Rubber Sanitary Goods (kgs)	1.64	1.66
Absorbent Cotton (kgs)	1.16	1.33
Gauze (Meters)	1.43	1.32
Staple Fiber Bandage (Polls)	.51	.61
Triangular Abdominal Bandage (pieces)	.44	.55
Lint (pieces)	1.10	1.88

Detailed distribution figures of medical, dental and sanitation supplies and equipment for May and June, together with their monthly averages for 1946, 1947 and 1948 may be found in Inclosure No.2.

Reference is made to previous issue of the Weekly Bulletin, as noted below, in which distribution summaries of Public Health supplies have been reported. The following corrections should be made:

Weekly Bulletin No.127, column which now reads March & April should read January to April.

Weekly Bulletin No.131, column which now reads March & April should read January to April.

SECTION V
NARCOTIC CONTROL DIVISION

Narcotic Control Activities Report

The June report on narcotic control activities from Ministry of Welfare Contained the following information:

Total registrants	93,288
Arrests - Registered persons	38
Unregistered persons	168
(including nine Koreans and 23 Chinese)	
Convictions - Registered persons (one found not guilty)	7
Unregistered persons	53
(including one Korean and seven Chinese	
Four others including one Chinese were	
found not guilty).	
Thefts of narcotics (including eight hospitals)	24
Losses by fire (including one hospital)	6

Penalties for registrants varied from ¥ 1,000 fine to one year six months penal servitude plus ¥ 30,000 fine. Two out of four sentences of penal servitude were suspended. Penalties for non-registrants tried in Japanese Courts varied from ¥ 5,000 fine to two and one-half years penal servitude. Ten out of 45 sentences of penal servitude were suspended.

Penalties for foreign nationals in Military Courts varied from ¥ 18,000 fine to one-half year penal servitude. Two out of seven sentences to penal servitude were suspended. Three deportations were ordered including the one case in which deportation is to follow six months penal servitude.

Forty-seven registrants were admonished and eight were dealt with administratively their licenses being suspended. Eighteen non-registrants held for investigation were released because of insufficient evidence.

The report also summarized the activities of narcotic agents as follows:

Inspection of registrants	2,155
Investigations originated	382
Investigations concluded	324
Investigations not concluded	395

There arrests were reported for violation of the Marihuana Law.

Enforcement

These persons including an ex-policeman were arrested in Tokyo for illegal possession and sale of morphine and cocaine.

Eight cases of illegal cultivation of the opium poppy were reported from Aomori Prefecture. The number of plants being cultivated varied from ten to 1,000 stalks.

SECTION VI
WELFARE DIVISION

In-Service Training Institute

The 18-day Institute for Prefectural In-Service Training Directors has been postponed to October 10 through 27. (Reference Weekly Bulletin No.130, Section VI).

Prefectural Welfare Chiefs will attend the first two days of the Institute which will be concerned with public welfare administration. The Ministry of Welfare is requesting that material used in in-service training in the prefectures, such as manuals for Minsei-iin, instructions on polices and procedures, administrative review outlines, case record forms, monthly report forms, and suggestions for improvements in administration procedures and training, be forwarded to Mr. Matsumoto (Mr. Mizuno, referred to in previous Bulletin, has been transferred), Social Affairs Bureau, Ministry of Welfare. The purpose of this Institute is to build on the past experience in the prefectures, to integrate successful plans and to formalize methods and materials which may be useful in the future.

Civil Affairs Welfare Officers are invited to consult with prefectural officials regarding the choice of the person being sent to the Institute and to be of every assistance possible in accumulating material which will be useful in the Institute discussions. Review of monthly reports indicate that Civil Affairs Welfare Officers have made a very significant contribution to the Japanese in this area and therefore it is again suggested that they forward through channels possible suggestions for future in-service training programs based on their experience.

Child Welfare

Attached to this Weekly Bulletin as Inclosure No.3 is a copy of the Amendments to the Child Welfare Law (Law No.211, dtd 15 Jun 49), and Inclosure No.4, a copy of Hatsu Ji No.70, dtd 15 Jun 49, subject: Enforcement of the Partial Amendment of the Child Welfare Law. Translations of the Cabinet Order and the Regulations will be attached to next week's Bulletin.

SECTION VII SOCIAL SECURITY DIVISION

Appeals Activities

The attached table Inclosure No.5, "Appeals under the Health, seamen's and Welfare Pension Insurance Laws during the period October 1947 to July 1949", was presented by the Insurance Bureau, Ministry of Welfare, on 4 August 1949 as an accounting of appeals activities, since the establishment of social insurance referees and appeals boards in 1947.

The 626 appeals reported are shown as having been filed in 44 of the 46 prefectures. No appeals have ever been reported from Yamagata or Oita Prefectures. One appeal was reported for Yamanashi in March 1948, one for Aichi in April 1948, and one for Shiga in May 1948.

Sixteen appeals were filed in Kumamoto beginning in April 1948. The last one was decided in December 1948 and no activity has been reported since.

Thirteen appeals have been made to the control appeals boards from the referees' decisions and all have been acted upon - seven in favor of the insured.

Forty appeals have been filed in Miyagi Prefecture and all have been disposed of - 31 in favor of the insured and 9 in support of the original determinations.

Other Prefectures reporting 25 or more appeals are: Kagawa 36, Ehime 34, Shizuoka 30, Kyoto 29, Osaka 26 and Hyogo 25.

Reporting the greater number of appeals should not be considered at this time as reflecting unfavorably upon the accuracy of the prefectural Insurance Section's original determinations. On the contrary, reporting few or no appeals warrants the inference that such prefectures have done little to acquaint the insured persons with their newly established right to a fair hearing.

Social Insurance Statistics

Inclosure No.6 furnishes benefit payment data, as far as available and not published previously, for the remaining months of the fiscal year 1948 - 49 under all programs submitting regular reports.

For a description of these programs reference is made to Public Health and Welfare Weekly Bulletins No.8 (1947) and No. 97(1948) with enclosure, Technical Bulletin PH-SS-2.

Publication of Public Health and Welfare Weekly Bulletin

Effective with this issue (No.137), publication of the Public Health and Welfare Bulletin will be on a semi-monthly basis. Beginning 1 September 1949, material will be assembled for publication on the first and fifteenth of each month and will be ready for mailing on or about the fifth and twentieth of each month.

Future issues will include a section on "Civil Affairs Operations" which will contain pertinent information on public health and welfare field activities.

SECTION II PREVENTIVE MEDICINE DIVISION

Venereal Disease Prevention Week

The week beginning 1 September has been designated as "Venereal Disease Prevention Week" by the Vice-Minister of Welfare in commemoration of the first anniversary of the Venereal Disease Prevention Law.

Instructions regarding the various activities to be carried out at the national and prefectural levels are contained in SOHATSU 531 dated 29 June, SOHATSU 43 and 580, both dated 21 July which have been sent to all prefectural governors by the Ministry of Welfare.

At the national level the Ministry of Welfare is undertaking the following activities:

1. A nation-wide poster contest with ¥ 21,000 in prizes.
2. Distribution of posters to cooperating central agencies, such as Medical and Nursing Associations, which are also available to prefectures upon request.
3. Free distribution of 3,000 copies of a Venereal Disease leaflet to each prefecture.
4. Free distribution of Venereal Disease film strips to each movie theater.
5. Free distribution to each prefecture of five sets of Venereal Disease posters for exhibition purposes, each set composed of ten posters.
6. Dissemination of venereal disease information through the media of newspapers, magazines and radio.
7. Subsidy of ¥ 10,000 - ¥ 20,000 per prefecture to aid prefectural health departments in carrying out information activities during Venereal Disease Prevention Week.

At the prefectural and local levels the health departments and health centers are expected to carry out an intensive and extensive venereal disease information program during this week utilizing the material distributed by the Ministry of Welfare to the best advantage.

It is suggested that Civil Affairs Public Health Officers render whatever assistance is necessary to plan and execute an effective venereal disease publicity program for the Venereal Disease Prevention Week.

Trachoma

A report on trachoma in Chiba prefecture was published in the Far East Command Surgeon's Circular Letter on 1 November 1948 and in Weekly Bulletin No.98, Inclosure No.1 of 8 November 1948. Another report on a trachoma survey and on results of treatment of trachoma with sulfonamide in Kyoto prefecture is published as Inclosure No.1 to this Bulletin.

Trachoma has been reportable in Japan since 1947, but from the results of surveys made on special groups it is evident that ordinary reporting is very incomplete. As noted in the inclosed report, as much as 49% of certain unselected groups are trachomatous, and it is estimated that the prefecture as a whole may have a general incidence of as high as 9%.

The beneficial results of treatment with sulfonamides are now well established. Further study and follow-up of treated cases would furnish additional information on relapse or re-infection rates, and the possible need for treatment beyond that found to be immediately effective. Since any reduction, even if temporary, in the number of active cases, would favorably ##### trachoma central problems, support by local public bodies, (cities, towns and villages) of surveys and treatment of school children, would be an important public health measure. If accompanied by an appropriate program of public educational ##### on instruction in personal hygiene to school children, ##### could be towards those among whom it would be most effective.

The following steps are suggested in order to evaluate the trachoma problem in each prefecture and reduce the ##### from this cause:

1. Survey one or more groups of school children in representative areas of the prefectures and give complete treatment to those found infected.

2. Draw up a plan based on the incidence of trachoma found in the survey and on the economic ability of individuals and of the prefecture as a whole, for the diagnosis and proper treatment of all trachoma which can be discovered by mass examinations of groups among which a high incidence is expected, and of family or other group contacts of known cases.

3. Accompany every step of initial survey and treatment, and subsequent control programs, by wide publicity on the findings of surveys, on the value and importance of treatment and on practical preventive measures which may be taken by individuals. These should include the avoidance of irritation to the eyes from sun-glare, dust and wind, the avoidance of touching or rubbing the eyes with the hand or other objects, the use of only clean (boiled or chlorinated) water for washing the face, the avoidance of contamination from others with known disease of the eyes, attention to all matters of personal hygiene, and the maintenance of general body resistance to disease through proper diet and rest.

Public Health Information - Insect-borne Diseases

There are still at least 45 days which are favorable for the spread of certain insect-borne diseases - notably Japanese B Encephalitis, Malaria, Dengue and Filariasis by mosquitoes; and other enteric infections including typhoid, bacillary dysentery and organisms of salmonella group transmitted in part by flies; and plague and murine typhus carried by fleas. Prefectural and health center information officials should be reminded again that the season for the transmission of insect-borne diseases is but half over and information activities concerning the control of insects should be not be relaxed but should even be stepped up since the majority of insects concerned reach their peak of population density at this season of the year and thus increase the danger of explosive outbreaks of one, two or all of the diseases mentioned.

SECTION III NURSING AFFAIRS DIVISION

New Publications

A new text book "The Principles and Practice of Nursing" has just been published by the Ministry of Welfare. It is a compilation of lectures given by Miss Harter in the refresher courses for clinical nurse instructors in Tokyo. It contains lectures on the following subjects:

Principles of Nursing Education
Principles of Nursing Procedures
Ward Administration and Personal Relationships
Internal Nursing
Surgical Nursing
Pediatrics
Tuberculosis Nursing
Anatomy and Physiology
Nursing Care

This book should be very useful to instructors in the nursing schools and may be purchased from:

The Medical Friend Company
No.40, Momozono-cho, Nakano-ku, Tokyo-to
Price - ¥ 500

Midwifery

The first Japanese nurse to study midwifery in the United States departed Japan on 9 August for a four month period of observation at the Maternity Center, New York.

SECTION IV VETERINARY AFFAIRS DIVISION

Veterinary Refresher Course

The graduation exercise for the seventh class of public health veterinarians was held 13 August at the Institute of Public Health. The course was given for 42 students representing the health centers and public health departments of the prefectures throughout Japan. To date, a total of 304 students have graduated from this training course and are now engaged in public health veterinary service.

Equine Encephalomyelitis

Since 1 January 1949, a total of 53 cases of equine encephalomyelitis have been reported. Of this number, 11 cases were confirmed by laboratories as positive and the remaining 42 cases were classified as suspects based on the clinical symptoms shown.

Weekly Report on Rabies

Rabies continued to remain prevalent during the weekly 31 July to 6 August, with the largest number of cases being reported in the Tokyo-Kanagawa area. Total cases to date are:

Prefecture	<u>New Cases</u>	<u>Total Since 1 Jan</u>	<u>Number Immunized This Week</u>	<u>Total Immunized Since 1 January</u>
Tokyo	7	109	0	11,969
Kanagawa	6	33	1,473	11,992
Chiba	0	74	2,284	31,580
Saitama	2	59	1,065	45,286
Ibaraki	1	12	5	29,782
Gumma	2	44	865	12,055
Tochigi	0	2	769	9,002
Shizuoka	0	1	0	8,095

Weekly Animal Disease

The following number of animal diseases were reported by the Animal Hygiene Section, Ministry of Agriculture and Forestry for the period 6 - 12 August.

<u>Prefecture</u>	<u>Disease</u>	<u>Number of Cases</u>
Toyama	Anthrax	2
Fukushima	Equine encephalomyelitis	1 suspect
Gumma	Equine encephalomyelitis	1 suspect
Hokkaido	Equine encephalomyelitis	1 suspect
Miyazaki	Equine encephalomyelitis	2 suspects
Tokushima	Equine encephalomyelitis	1 suspect
Fukuoka	Equine encephalomyelitis	1 suspect
Miyagi	Swine cholera	64
Hiroshima	Swine cholera	17
Saitama	Swine cholera	1
Chiba	Swine erysipelas	9
Yamanashi	Swine erysipelas	2
Gumma	Swine erysipelas	1
Ibaraki	Swine erysipelas	11
Saitama	Swine erysipelas	1
Fukuoka	Swine erysipelas	10
Wakayama	Swine plague	3

Monthly Animal Disease Report

The Animal Hygiene Section, Ministry of Agriculture and Forestry, submitted the following revised report on the outbreaks of animal diseases during the months of May and June:

<u>Disease</u>	<u>May</u>	<u>June</u>
Anthrax (1cow-1sheep)	2	0
Blackleg	0	2
Swine erysipelas	210	382
Swine cholera	392	100
Swine plague	9	8
Swine paratyphus	12	32
Rabies	4 cows	4 (3 cows 1goat)
Brucellosis	29	12
Trichomonas	273	80
Strangles	12	56
Equine infectious anemia	119	197
Equine infectious abortion	28	8
Pullorum Disease (Fowl)	1,113	1,056
Bovine tuberculosis	79	123
Equine encephalomyelitis	2	3

SECTION V SUPPLY DIVISION

Counterfeit American Medicines on the Black Market

The Tokyo Metropolitan Police recently while conducting an investigation uncovered violations of the Pharmaceutical Affairs Law No.197, 1948. They discovered large stocks of streptomycin, penicillin in oil, and sulfadiazine supposedly of American origin being disposed of through the blackmarket. These drugs when analyzed were found to contain sodium bicarbonate for streptomycin, "Stabisol" (a trade name for bismuth subsalicylate injection) for the penicillin in oil, and the more toxic sulfanilamide for the sulfadiazine. In some cases chalk tablets with small amounts of sulfa were substituted for the sulfadiazine. Check of the labels, cartons and bottles discloses that they were all counterfeit. Differences in inks, paper, glass, etc., were discovered under ultra-violet examinations.

This information has been released to the press, and reports have been published in the Japanese and English language editions. The papers published warnings against purchase of so-called streptomycin on the blackmarket and cautioned doctors to be wary of the authenticity of any such drugs brought to them by patients for administration. These releases were made by both SCAP and the Japanese police. The public was informed that a well organized ring of forgers and counterfeiters specializing in bogus medical preparations bearing labels of well-known American firms had been apprehended. Facsimiles of original labels and containers were used bearing the names of Merek and Company, Eli Lilly and Company, the Upjohn Company, and Commercial Solvents Corporation.

The distribution of imported streptomycin has been very carefully controlled. These warnings emphasized the harmful effect on the tuberculosis control program by destroying the confidence of both the doctor and the patient in the efficacy of streptomycin treatment for tuberculosis when fake drugs such as these fraudulent preparations are used under the impression that they are real streptomycin.

Biologics Assay

During the period 2 - 8 August the following biologics have been assayed and found to meet minimum standards:

<u>ITEM</u>	<u>MANUFACTURER</u>	<u>LOT NO.</u>	<u>QUANTITY</u>
			Unit: cc
Tuberculin	Kekkaku Yobokai	4	22,356
		5	25,644
Typhus Vaccine	Takeda Yakuhin K.K.	16	19,960
	Kagaku & Kessei Ryoho Institute	134	18,400
	Handai Biseibutsu Institute	11	14,760
Smallpox Vaccine	Kitasato Institute	58	98,050
		59	148,000
	60	158,250	
	Hokkaido Seiyaku K.K.	68	97,000
	Toshiba Seibutsu Institute	65	179,750

SECTION VI
NARCOTIC CONTROL DIVISION

Enforcement

During the month of July, the Narcotic Squad of Tokyo Metropolitan Police arrested 39 persons for narcotic violations and seized a total of 178 grams of narcotics. The majority of the cases were the result of investigations of other crimes. One of those apprehended in possession of heroin was an addict and pickpocket.

The activity of the Tokyo Police in supplementing the work of narcotic agents is attributed to a series of conferences and lectures conducted to inform the police of their responsibility in assisting in the enforcement of the narcotic law as it relates to street peddlers and addicts. The same procedure of indoctrinating the police regarding illicit traffic in narcotics has been undertaken in the other large metropolitan areas in Japan.

SECTION VII
WELFARE DIVISION

Consumer Cooperatives

As of 31 July 1949 there have been 475 Consumer Cooperative Associations formed according to the provisions contained in the Livelihood Consumers Cooperative Law No.200. These 475 associations have a total voting membership of 592,419 with a total investment of ¥ 76,537,900. The following prefectures are not included in these figures: Akita, Fukushima, Chiba, Toyama, Tottori and Ehime.

Newly Organized Welfare Associations

Information contained in field reports indicate confusion as to policy concerning: (a) Ministry of Welfare participation in subject matter, and (b) Civil Affairs Team's sections responsibilities in subject matter.

In reference to (a) above, legally the Ministry of Welfare may participate in the organization of private groups but it was pointed out to the Ministry officials that they could make a greater contribution in this area if they were prepared to answer questions, provide visual aid materials, educational materials, such as pamphlets and other printed aid matter, for use by newly formed welfare organizations.

In reference to (b) above, Women's Affairs Branch of CI&E, SCAP states that the objectives of women's organizations are the responsibility of the Civil Affairs Team section concerned. All other matters concerning women's organizations are the responsibility of the Civil Affairs Women's Affairs Officer.

Child Welfare

Inclosed with this Weekly Bulletin as Inclosures Nos.2 and 3 are Cabinet Order No.205, subject: Cabinet Order for Partial Amendment of Enforcement Order of Child Welfare Law, and Ordinance No.23, subject: Amendment to Ordinance No.11, 1948.

SECTION VIII SOCIAL SECURITY DIVISION

Recent conferences with prefectural social insurance officials and others interested in the prefectural administration of social insurance programs brought out the following problems which likely are of general application and interest.

Health Insurance - Supervision of Health Insurance Societies

Probably due to the comparatively autonomous character of "society-managed" Health Insurance, prefectural insurance officials have indicated they have virtually no control over Health Insurance Societies which are not paying benefits commensurate with deductions made in employees' earnings. An actual example is a Society which has discontinued payment of sickness (cash) allowances because of the "inability of the employer" to keep up his share of the contributions although deductions are regularly made from the employees' wages. It is the responsibility of the prefectural insurance section to keep advised of the circumstances of the Health Insurance Societies and take appropriate action when learning of such a situation as described above. If the deficiencies are not rectified, the chief of prefectural insurance Section may recommend to the Welfare Minister that under Article 38 of the Health Insurance Law he appoint government officials to administer the affairs of the Society or that, under Article 39, he order the dissolution of the Society which would result in the insured person's coming under "government managed" Health Insurance.

National Health Insurance - "Special" Associations

It is apparent that some misunderstanding exists as to authority for members of a given trade or occupation to form a "special" National Health Insurance Association, as compared to the "general" type of association. The impression has been gained in some quarters that "the Ministry of Welfare will not recognize" an application to establish a "special" association. It is true that such associations are not encouraged by the Ministry of Welfare because they generally have not been successful in the past, but they are specifically authorized by Chapter IV of the National Health Insurance Law and may be formed upon approval of the application by the prefectural governor.

National Health Insurance - Divided Responsibility for Administration

Some municipalities have taken steps to divide responsibility for administration of National Health Insurance. In an area where National Health Insurance has been administered by a juridical person (such as an Agricultural Cooperative Association), the municipal assembly has acted to adopt the program on a city-wide basis and taken over the administration of the program. The responsibility for administration is then "delegated" back to the juridical person which then directs all financing, determines contribution rates and prescribes and grants benefits. This may result in discrimination against townspeople who are not members of the juridical person. The move is initiated by the juridical person in order to obtain subsidies from public funds not available to other than municipally managed programs and is in violation of the spirit of the program.

Doctors' Payments

A device designed to expedite payments to doctors and employed by the Medical Fee Payment Fund in one predominately rural prefecture, wherein only one bank is established, operates as follows: Upon completion of the calculating of doctors' monthly bills, a notification in duplicate is issued to the bank. The insurers' payments to the Fund are deposited in the bank as received. Upon receipt of an amount adequate to pay a given doctor's bill, the bank transfers such amount to the doctor's account and informs him by sending him a copy of the notification. When the insures comply literally with the provisions of the Medical Fee Payment Fund Law and make advance deposits with the Fund, the doctors will be paid through transfer of credits by the bank immediately upon receipt of the notifications from the Fund, one copy of the notification having been mailed directly to the doctors.

Joint Collections of Social Insurance Premiums

In the absence of legislation providing for a completely unified social insurance tax collection agency, the several administrators of the social insurances in one prefecture have made positive progress of considerable proportions in the collection of delinquent accounts. While the employer must make separate payments under individual reports to the Employment Security Section for Unemployment Insurance, to the Labor Standards Office for Workmen's Accident Compensation Insurance and to the Insurance Section for Health Insurance, Welfare Pension Insurance and Seamen's Insurance, the auditors of each of the three agencies audit for all three whenever they call upon an employer. If an auditor working out of the Labor Standards Office finds an employer is delinquent in Health Insurance Contributions, he makes a demand upon him in the name of the Insurance Section and unless the employer pays the account to the Insurance Section promptly, that office follows up with action to insure compliance with the law. The audit reports of the single auditor are accepted by all three sections with respect to the employers visited by such auditor.

Seamen's Insurance

Attention of the Welfare Officer of Civil Affairs Teams is called to Hohatsu Nos. 69 and 69(1) dated 16 July 1949, subject: "Enforcement of Seamen's Insurance", issued by the Insurance Bureau, Ministry of Welfare to prefectural Governors and the Ministry of Transportation. The Bureau has requested that, with the revision of the Seamen's Insurance, extra effort and cooperation be given to make sure that all seamen are covered that should be covered and that all employers remit contributions promptly and in accordance with the proper standard remuneration. The Ministry of Transportation has given assurance that all local Maritime Offices will give full cooperation to this endeavor.

Aug. 13 En-i No.917	Re: Supplying medicines etc., for medical care abroad the repatriation train.	Governor, Gifu Pref.	"

Monthly Civil Affair Reports: Public Health Activities.

Frequently the Public Health and Public Welfare Sections of the Monthly Civil Affairs Activities Reports (Annexes B1 and B2) contain material of interest to other Civil Affairs Health Officers as well as to higher headquarters. Excerpts from such reports, together with ##### comments (bracketed) by headquarters will be published in the restricted #####.

Medical Publication

1. The medical books and journals which are Government property must be protected and properly turned in when prefectural ##### ##### to function. Limited funds for published material makes conservation extremely necessary.

SECTION II PREVENTIVE MEDICINE

Charts on Communicable Disease

Charts showing the weekly rates of poliomyelitis for this year and for 1948, and of Dysentery for the this year, as ##### ##### 1947 and 1948, rare published on page 4 of the Digest of Weekly Report of Communicable Diseases in Japan for the week ended 13 August 1949. The publication of those charts is an innovation insofar as this Bulletin is concerned, and additional charts will be published when data on any communicable disease is of sufficient interest for portrayal by chart.

A glance at the two charts which have been published will show that rates for poliomyelitis are much higher than last year, and the dysentery rates, although higher than last year, are still lower than for 1947. Those charts do not present any material that has not already been presented in the Digests and Summary Report but they present this material in a manner were equitable for rapid visual evaluation.

Venereal Disease Control - Contact Tracing

Reference is made to Weekly Directive No.42, Headquarters Eighth Army, 25 June 1949, Section XXX, subject, "Venereal Disease Control and Contact Tracing."

Pending revision of Section II, Circular No.39, Headquarters Eighth Army, 9 May 1949, subject: "Venereal Disease Control and Contact Tracing," reference Weekly Directive No.42 suspends certain paragraphs of this circular which certain to the supervision of contact tracing by the Provost Marshals and amends others so that the venereal disease contact report is forwarded for appropriate and necessary action to the Public Health Officer of the Civil Affairs Team.

The Public Health Section of the Local Civil Affairs Team will serve in a supervisory capacity as an administrative organization for tracing the Japanese contacts named in the venereal disease contact reports. The actual tracing of the Japanese contacts will be function of the Japan so public health agencies and will involve a local program by the Japanese for the apprehension, examination and treatment of the contacts. Military and/or Japanese police should not be used routinely, but only whom it is deemed necessary by the public health authorities.

It would be highly desirable if the infected patient could be made available to the local public health authorities for the purpose of locating and identifying the contact. In a great many cases the infected person may not be able to give the name and address of the contact but will be able to locate and point out the contact. In these instances every effort should be made by the Civil Affairs Public Health officer to enlist the aid of the patient in finding the contact.

Since the success of this program will depend upon the degree of coordination and cooperation obtained between the different agencies concerned (military units, Civil Affairs Teams and Japanese health departments), it is suggested that meetings be held between representatives of those agencies at the local level for the purpose of discussing ways and means of carrying out the contact tracing program effectively.

Training Courses at Institute of Public Health

Courses for the training of public health personnel are scheduled at the Institute of Public Health in Tokyo as follows:

Sanitary Engineers	26 September to 17 December
Public Health Pharmacists	26 September to 25 November
Medical Health Officers	30 September to 23 December
Sanitarians	30 September to 23 December

The course for sanitary engineers will be open to engineers employed in the fields of water supply, sewage disposal or sanitation by prefectural or municipal governments.

The course for pharmacists is designed for workers employed in prefectural health department laboratories and will emphasize technical procedures for the analysis of drugs, foods, beverages and cosmetics. The course will be limited to 25 students who will be selected from the applications received prior to 8 September.

The courses for medical health officers and for sanitarians will be a continuation of the series of refresher courses given at the Institute for these categories of personnel. Particular care should be taken to see that well-qualified candidates holding responsible positions are selected for training.

Official announcements concerning the four above-mentioned courses are being sent to prefectural governors by the Ministry of Welfare.

School Health Program

In 1946, the Chief, Public Health and Welfare Section, General Headquarters, Supreme Commander for the Allied Powers, participated in a series of conferences which were concerned with the organization of the Children's Bureau, Ministry of Welfare, and during the course of those conferences he proposed that such public functions as were then in the Ministry of Education, particularly school hygiene, should be transferred to the Ministry of Welfare. At this time (1946) it was agreed that it was best to leave those functions in the Ministry of Education, but only until the now Health Center System was properly operating.

With the growth and development of the Health Center System during the past year the problem was again brought up for consideration on 4 March 1949 in a conference between representatives from Public Health and Welfare Section, Civil Information and Education Section, General Headquarters, Supreme Commander for the Allied Powers, the Ministry of Welfare and the Ministry of Education of the Japanese Government. In this and a series of three subsequent conferences of this group, the decision was reached that certain specific functions of the school health program should be transferred from the Ministry of Education to the Ministry of Welfare. Based on this decision a committee of four persons, one from each of the groups concerned, was appointed to study this problem and make pertinent recommendations as to the specific functions concerned and changes, if any, necessary in existing legislation.

Upon completion of the study by the committee on this phase of the program drafts of the following documents were prepared:

1. Draft of, "Amendment of the Board of Education Law".

(Art. 49-2 In addition to the provisions in the proceeding Article, the Board of Education shall take charge of the matters concerning the planning and execution of the school health program under its jurisdiction.

The Boards of Education shall cooperate with Prefectural Governors and/or Mayors of the cities concerned in securing professional advice and services of Health Centers as provided by the Ordinance issued jointly by the Education Minister and the Welfare Minister.)

2. Draft of, "Notification to be issued jointly by Education Minister and Welfare Minister in regard to coordination of school and Health Center".

Art.1. In planning and execution of the school health program provided for in the present Ordinance, the Prefectural Board of Education shall previously negotiate with the Prefectural Governor, and the Board of Education in the cities concerned with the Mayer.

Art.2. The Health Center is authorized to inspect school concerning the following items and, if deemed necessary, give recommendations and guidance to the proper school authorities:

- (1) The water supply and connected facilities for drinking, washing, bathing, etc.
- (2) Sewage and garbage disposal and the facilities for the same.
- (3) The control of insects and rodents.
- (4) The sanitation of school buildings, dormitories, grounds, swimming pools and other connected facilities.
- (5) The selection, delivery, storage, handling, preparation and serving of foods.
- (6) The sanitation of the kitchen and facilities.

Art.3. The Board of Education shall require all personnel concerned with school lunch preparation to undergo the complete health examination conducted under direction of the Health Center.

Art.4. The Health Center shall be concerned to furnish reference materials and offer technical advice when deemed necessary concerning school lunch program.

Art.5. The Health Center shall be encouraged to offer information, submit exhibits, or give other assistance, for health education in the schools.

Art.6. The Board of Education shall encourage the school authorities to use the pertinent technical guidance and assistance as provided by the Health Center in the execution of the school physical examination.

Art.7. The Health Center shall give a complete medical examination of special cases as reported by the school authorities and shall determine follow-up procedures as judged necessary.

Art.8. The Board of Education shall encourage the personnel connected with school health program to receive special training and instruction as may be offered through the Health Center.

Art.9. The Board of Education shall require the principal of the school to conform with the Law for the Prevention of Infectious Diseases, Tuberculosis Control Law, Preventive Vaccination Law, Food Sanitation Law and other laws and ordinances concerning health with specific instructions, guidance and assistance from the Director of the Health Center in carrying out provisions of the above laws.

The above documents were submitted for review to members of the agencies concerned at a general conference held on 22 August 1949. The content of the drafts of these documents was acceptable and the next steps of procedure were outlined.

1. The drafts to be prepared in final form.

2. The Amendment of the Board of Education Law to be presented to the Diet of the Japanese Government for action at the forthcoming September Session.

3. The joint Ordinance to be issued to prefectural and city Boards of Education, Prefectural Governors and Prefectural Health Departments, following passage of the amendment of the Board to Education Law.

4. Detailed instructions implementing the Ordinance to be prepared and distributed.

Additional information concerning the new School Health Program will appear in later issues of this Bulletin.

SECTION III NUTRITION

Nutrition surveys for May 1949 are attached as Inclosure No.1.

SECTION IV NURSING AFFAIRS DIVISION

Nursing School

In the current reorganization of Civil Affairs Teams close contact on the part of Civil Affairs nurses with the Japanese nursing schools will be difficult to maintain. It is suggested that efforts be directed to guidance of the Nursing Section of the Prefectural Health Department and the Japanese Nurses, Midwife, and Clinical Nurses Association in order to develop in them the highest concept of responsibility in the overall nursing program.

Midwifery Courses

Questions have arisen pertaining to conflicting information on short courses for midwives. At present plans are underway for two different programs: (1) two-months course for midwives working in health centers. This course is sponsored by the Maternal and Child Section of the Children's Bureau. Candidates for this course should be midwives who are to be placed in these positions in the future. Detailed information will soon be sent to the prefectural Health department by the Children's Bureau. The course is to be given early in October, (2) three-months course for instructors in future midwifery schools which will qualify as such according to Law #203 (July 1948). This course is being planned to begin January 1950. These are the only two plans for national midwifery courses at present.

SECTION V VETERINARY AFFAIRS

Ministerial Order

The following Ministerial Ordinance was established by the Ministry of Agriculture and Forestry in accordance with Article 19 of the Animal Infectious Disease Control Law.

“Any importation of cattle, goat, sheep, swine as well as their carcasses, meat, bone, hide, hair or wool shall be prohibited for the time being from or through Mexico, South America, Siberia, China, Hong Kong, French Indo-China, Siam, Burma, Ceylon and Java. However, this shall not be applied to any cattle goat, sheep or swine accompanied by a certificate issued by the competent official of the exporting country verifying as free from any germ or not having any fear of disseminating disease (hereafter referred to “the Certificate”) and which is to be slaughtered immediately after the quarantine inspection in a slaughter house designated by the officials of the Animal and Plant Quarantine Station, and to any carcass, meat, bone, hide, hair or wool thereof accompanied by the Certificate.

Supplementary Provisions

1. This Ministerial Ordinance shall come into force as from August 1949.

2. This Ministerial Ordinance shall not be applied to livestock and others which have been concluded the contract of importation with Japanese Government before the enforcement of this Ministerial Ordinance.

3. The Ministry of Agriculture and Commerce Ordinance No.33 - 1909 concerning prohibition of Living Cattle Imported from China and Siberia shall be abolished.

Okinawa Veterinarians

Dr. K. Higoshi, chief Livestock Section, Economic Department of the Okinawa Civilian Administration and Dr. M. Toyama, Okinawa Veterinarian with Military Government of Okinawa are now attending the 8th Veterinarians Course at the Institute of Public Health.

Monthly Animal Disease Report

The Animal Hygiene Section, Ministry of Agriculture and Forestry, reported the following outbreak of diseases in animal for the month of July.

<u>Disease</u>	<u>No. of Cases</u>
Anthrax	2
Swine erysipelas	139
Swine cholera	129
Swine plague	9
Swine paratyphus	8
Pireplasmosis	7
Strangles	19
Equine infectious anemia	338
Brucellosis	24
Trichomonas	222
Equine infectious abortion	12
Pullorum Disease (Fowl)	560
Bovine tuberculosis	75
Equine encephalomyelitis	4

Weekly Rabies Report

The Veterinary Affairs Section, Ministry of Welfare reported the following cases of rabies occurring during the period 14 - 20 August.

Prefecture	New Cases	No. Since 1 Jan, 49	No. Immunized This period	Total Immunized Since 1 Jan,49
Tokyo	8	119	477	12,709
Kanagawa	2	38	45	12,328
Chiba	8	88	1,483	33,063
Saitama	6	65	508	45,794
Ibaraki	1	15	693	30,863
Gumma	0	47	0	12,643
Tochigi	0	2	468	9,734
Shizuoka	0	1	1,563	11,355

Monthly Meat Inspection Report

Prefectural veterinary meat inspectors conducted ante and post-mortem inspections on the following livestock slaughtered during the month of June.

	<u>Cattle</u>	<u>Calves</u>	<u>Horses</u>
Number of head	12,090	1,049	2,874
Live weight (kgs)	4,374,883	85,887	1,063,735
Dressed weight (kgs)	2,222,465	41,167	483,186
Condemned ante-mortem	0	0	1
Condemned post-mortem	0	0	0
Total	22	4	4
Partial	304	20	122
Viscera	2,069	52	436

	<u>Swine</u>	<u>Sheep</u>	<u>Goats</u>

Condemned ante-mortem	4	0	0
Condemned post-mortem	0	0	0
Total	4	1	0
Partial	184	0	1
Viscera	11,693	3	8

Prefectural veterinary meat inspectors conducted sanitary inspections of the following establishments handling and processing meats.

Meat Processing Plants

Number of establishments	-----	305
Number of establishments inspected	-----	237
Sanitary condition		
Good	-----	70
Fair	-----	146
Poor	-----	21
Total number of inspections	-----	395
Amount of meat and meat products examined		104,095
Amount of meat and meat products condemned		0

Meat Retail Shops

Number of establishments	-----	13,841
Number of establishments inspected	-----	7,770
Sanitary condition		
Good	-----	2,497
Fair	-----	4,400
Poor	-----	873
Total number of inspections	-----	8,931
Amount of meat and meat products examined		499,338
Amount of meat and meat products condemned		179
Cause of condemnation	-----	Putrefaction
Disposition	-----	Fertilizer

Monthly Milk Inspection Report

Prefectural veterinarians conducted the following sanitary inspections of dairy farms and milk plants during the month of June.

Special Milk

Number of Farms inspected	-----	4
Samples examined	-----	13
Over bacterial standards (50,000 per cc)	-----	2
Under butterfat standards (3.3 per cent)	-----	0

Number of Plant inspections	-----	9
Over bacterial standards (25,000 per cc)	-----	1
Under butterfat standards (3.3 per cent)	-----	0

Ordinary Milk

Number of Farms inspected	-----	13,540
Samples examined	-----	13,994
Over bacterial standards (2,000,000 per cc)	-----	873
Under butterfat standards (3.0 per cent)	-----	841

Number of Plant inspections	-----	3,820
Over bacterial standards (2,000,000 per cc)	-----	485
Under butterfat standards (3.0 per cent)	-----	454

Goat Milk

Number of Farms inspected	-----	52
Samples examined	-----	53
Over bacterial standards (2,000,000 per cc)	-----	3
Under butterfat standards (3.0 per cent)	-----	6

Milk Produced in Daily Farms in June

<u>Type of Milk</u>	<u>No. of Farms</u>	<u>No. of Cows and Goat</u>	<u>Amount Produced</u>	
Special	6	139	24,632	Lit
Ordinary	59,313	11,532	21,347,270	Lit
Goat	7,139	9,617	215,943	Lit

Quantity of Milk Bottled in Milk Plants in June

<u>Type of Milk</u>	<u>No. of Plants</u>	<u>Raw Milk</u>	<u>Pasteurized</u>	<u>Sterilized</u>

Ordinary	2,791		3,157,531	4,778,354 Lit
Total	<u>2,797</u>	<u>13,285</u>	<u>3,167,531</u>	<u>4,778,354</u>

Milk Products Produced in June

Powdered Whole Milk	130,328 kgs
Powdered Whole Milk modified	584,435
Evaporated Milk	324,726
Sweetened Condensed Milk	876,317
Butter	187,523
Cheese	24,623

Monthly Seafood Inspection Report

The Veterinary Affairs Section, Ministry of Welfare, submitted the following report on sanitary inspection of seafood establishments conducted by Prefectural veterinarians during the month of June.

Wholesale Seafood Markets

Number of establishments	-----	1,412
Number of establishments inspected	-----	980
Sanitary condition		
Good	-----	155
Fair	-----	638
Poor	-----	187
Total number of inspections	-----	4,652
Amount of seafood examined	-----	77,579,195 kgs
Amount of seafood condemned	-----	386,354 kgs
Cause for condemnation	-----	Peutrefaction
Disposition	-----	Fertilizer

Retail Seafood Shops

Number of establishments	-----	47,843
Number of establishments inspected	-----	19,290
Sanitary condition		
Good	-----	2,630
Fair	-----	10,916
Poor	-----	5,744
Total number of inspections	-----	20,745
Amount of seafood examined	-----	3,106,296 kgs
Amount of seafood condemned	-----	3,406 kgs
Cause for condemnation	-----	Peutrefaction
Disposition	-----	Fertilizer

Seafood Processing Plants

Number of establishments	-----	10,909
Number of establishments inspected	-----	3,698
Sanitary condition		
Good	-----	551
Fair	-----	2,066
Poor	-----	1,081
Total number of inspections	-----	5,689
Amount of seafood examined	-----	472,125 kgs
Amount of seafood condemned	-----	4,502 kgs
Cause for condemnation	-----	Peutrefaction
Disposition	-----	Fertilizer

Monthly Food Inspection Report

The Food Sanitation Section, Ministry of Welfare, submitted the following report on the sanitary inspections conducted by Prefectural food sanitarians in establishments, processing, handling and selling food and beverages during the months of April, May and June.

Food Establishments -- April

Number of establishments	-----	635,437
Number of establishments inspected	-----	205,840
Number of establishments completing improvements	-----	83,826
Number of administrative punishments	-----	27,701
Number of food samples collected for analysis	-----	3,441
Number of establishments requesting food analysis	-----	2,109

Food Establishments -- May

Number of establishments	-----	669,972
Number of establishments inspected	-----	214,606
Number of establishments completing improvements	-----	104,187
Number of administrative punishments	-----	31,992
Number of food samples collected for analysis	-----	2,913
Number of establishments requesting food analysis	-----	1,549

Food Establishments -- June

Number of establishments	-----	613,956
Number of establishments inspected	-----	153,285
Number of establishments completing improvements	-----	88,897
Number of administrative punishments	-----	22,897
Number of food samples collected for analysis	-----	5,249
Number of establishments requesting food analysis	-----	2,459

SECTION VI SUPPLY DIVISION

Hexylresorcinol

The 24 producers of hexylresorcinol products in Japan have formed a Hexylresorcinol Manufacturers Committee within the Federation of Japanese Pharmaceutical Manufactures Associations for the purpose of (1) coordination among manufactures to improve the quality of hexylresorcinol preparations and increase production, (2) education as information of the professional and lay public concerning the use of hexylresorcinol as anthelmintic drug, and (3) to study and solve financial and commercial problems.

Of particular importance is the education of and information for professional groups and for the lay public relative to the value of hexylresorcinol in combatting worm infestations. This is a new drug in Japan and its use is not fully understood and appreciated by the unformed. Information concerning this drug is available from the Ministry of Welfare to health departments, health center chiefs, manufactures, and medical associations.

It is especially important that adequate medical supervision be given to the use of hexylresorcinol in the treatment of groups of individuals, such as school children, factory workers, or community groups.

Biologics Assay

During the period 9 - 22 August the following biologics have been assayed and found to meet minimum standards:

<u>ITEM</u>	<u>MANUFACTURER</u>	<u>LOT NO.</u>	<u>QUALITY</u> (Unit: cc)
<u>Diphtheria Antitoxin</u>	Denenbyo Institute	2805	8,214

SECTION VII
NARCOTIC CONTROL DIVISION

Narcotic Control Activities Report - July

The July report on narcotic control activities from the Ministry of Welfare contained the following information:

Total registrants	93,503
Arrests - Registered persons (including six foreign nationals)	189
Unregistered persons	195
(including 24 foreign nationals and 13 Koreans)	
Convictions - Registered persons	3
Unregistered persons	32
(including four foreign nationals one found not quality)	
Thefts of narcotics (including four hospitals)	25
Losses by fire (including one local wholesaler)	4

Penalties for registrants in Japanese Courts varied from six months penal servitude, suspended for two years, to six months penal servitude plus ¥ 30,000 fine. Two out of three sentences were suspended. Penalties for non-registrants tried in Japanese Courts varied from ¥ 3,000 fine to one year six months penal servitude plus ¥50,000 fine. Six out of 20 sentences of penal servitude were suspended.

Penalties for foreign nationals in Military Courts varied from one year penal servitude to seven years six months penal servitude plus ¥ 100,000 fine. There were no suspended sentences.

One hundred thirty six registrants were admonished and 14 were dealt with administratively, their licenses being suspended. Twenty-seven non-registrants, including three foreign nationals were released because of insufficient evidence. There were 32 persons arrested for illegal cultivation of marihuana one of which was diverted into illicit traffic.

The activities of narcotic agents during the periods are summarized as follows:

Inspection of registrants	2,022
Investigations originated	480
Investigations concluded	440
Investigations not concluded	350

SECTION VIII
WELFARE DIVISION

Public Assistance

The Ministry of Welfare has submitted the following figures for the month of June. Figures for May 1949 and June 1948 are included for purposes of comparison:

	June 1949	May 1949	June 1948
Persons-Non-institutional	1,528,913	1,519,262	1,841,429
Persons-institutional	132,310	130,847	140,591
TOTALS	1,661,223	1,650,109	1,982,020
Assistance - Cash*	¥ 767,113,119	661,773,531	397,062,940
Assistance - Kind	15,335,966	38,442,214	30,308,832
TOTALS	¥ 882,449,085	700,215,745	427,371,772

*Before deductions for repayment

Prefecture Public Assistance Report

Inclosed with this Bulletin (Incl No.2) is public assistance report by prefecture for the Month of June 1949.

CARE Activity Report for July 1949

The following is monthly report of CARE activity as of 31 July 1949:

	<u>Food</u>	<u>Woolen</u>	<u>Blanket</u>	<u>Knitting</u>	<u>Cotton</u>
1. Total No.of Packages According to B/L	29,989	9,024	2,644	3,024	4,980
2. Minus Damaged, Lost, etc.	2,527	60	38	24	-
3. Actual No. Good Packages Received	27,462	8,964	2,606	3,000	4,980
4. Deliveries to Date	19,305	8,927	2,329	2,986	2,881
5. Total on Hand	8,157	37	37	14	2,099

Licensed Agencies for Relief in Asia (LARA)

Overseas shipments of relief supplies to LARA, numbers 187 through 197, have arrived in Yokohama and contained 248.94 tons consisting of 208.79 tons food, 23.83 tons clothing, 10.9 tons clothing materials, 5.21 tons soap and .21 tons miscellaneous. The total LARA relief supply shipments to Japan, as reported, new totals 9,597.73 tons. Note: Shipments numbers 186, 194 have not as yet been reported but will be included at a later date.

Child Welfare

Inclosed with this Bulletin (Incl No.3) is Hatsu-Ji No.72, dated 15 June 1949, subject: "Relations between the Child Welfare Law and Juvenile Law".

Community Chest

Inclosed with this Bulletin for information of welfare officers are two booklets prepared for use by schools. One booklet is a Handbook for Secondary School teachers (Incl No.4) and the other a Handbook for primary School teachers (Incl No.5).

Disaster Relief and Preparedness

Typhoon "Kitty" struck Japan on 31 August - 1 September. The following information, given in brief outline, was reported by the Working Committee, Central Disaster Relief Planning Board, in their initial report on 1 September 1949:

1. Prefectures affected:
Tokyo-to, Kanagawa, Shizuoka, Chiba, Yamanashi, Saitama, Gumma, Tochigi, Nagano, Niigata, Fukui, Ishikawa, Toyama.
2. Damage and Destruction:

Deaths	61
Injured	181
Lost or Missing	15
Houses destroyed	1,030
Houses damaged	3,223
Houses inundiated over 1st floor	54,810
Houses inundiated below 1st floor	59,161
Sections of road destroyed	80
Landslides	22
Railroad washouts	9
Bridges washed away	125
Boats carried away (under 5000 tons)	50
Boats sunk	18

Boats lost	2
Rice fields destroyed	256
Rice fields flooded	625
Vegetable fields destroyed	65
Vegetable fields flooded	80

3. Forty-thousand persons in Tokyo-to are being accommodated in temporary emergency shelters.

4. Relief needs are being met on local levels through prefectural and regional relief committees. Japanese Red Cross Medical Teams are rendering services in areas where needed.

SECTION IX SOCIAL SECURITY DIVISION

National Health Insurance

The National Health Insurance Central Society is cooperating with the Disease Prevention Section, Public Sanitation Bureau, Ministry of Welfare in sponsoring and promoting the Parasite Prevention Week scheduled for the third week in September. The Central Society and the prefectural National Health Insurance Federations will do a large share of the promotional work with the Ministry of Welfare and prefectural governments providing the technical and professional supervision and guidance.

Critical Condition of Health Insurance

The high utilization of health insurance throughout the nation during the latter part of 1948 and the first part of 1949 was so unexpected and rapid in acceleration that reserves were being depleted and income from contributions could not match benefit expenses. On 1 May, therefore, the Law was amended to provide a higher contribution rate, a higher wage ceiling to which the contribution rate could be applied, initial consultation fees, and higher penalty provisions for employer non-conformity and program abuse by the insured; yet these amendments were not as effective as anticipated, especially in smaller establishments, and the government-managed phase of the program has shown little improvement. As a result the payments to insurance doctors by the government have been delayed and in recent weeks such condition has resulted in action of the Ministry of Welfare to remedy the situation.

On 9 August the Ministry of Welfare released Hohatsu No.77, increasing the joint employer-employee contribution rate, effective from 1 August, from 5% to 5.5%. This increase, however, was not considered sufficient to bridge the gap and on 13 August Hohatsu No.80 was released which sets forth effective measures to be taken in each prefecture in the examination of employer irregularities in reporting subject payroll, in the collection of delinquent contributions and the prompt payment of current amounts, in the suppression of irregular benefit payments, in the examination of irregular claims from doctors, and in the imposition of penalties. In addition, Hohatsu No.80 provides for significant monthly reports to the Welfare Minister from the prefectural Insurance Section showing the status and progress made in effecting the provisions of the Hohatsu. It is estimated that such action will improve administration and increase revenues 10% or more through the coming months.

Inconsideration of the present demands for payment of insurance doctor claims, the Ministry of Welfare has negotiated two loans from the Ministry of Finance. Those loans total 1.4 million yen which is the approximate amount outstanding and representative of medical care fees for two months. The first loan is to be received in late August and the second in September and should assure a paid-up status between the government and the doctors early in October. The loans are to be repaid by the end of March 1950 and the increased income expected under the above Hohatsu and utilization of remaining reserves are ##### to be sufficient to keep accounts current and pay off the loans.

Full information on program trends and utilization is not available after May 1949; however, for the month of May a leveling in the upward trends of cost per case and utilization were noted. This, of course, may only be preliminary to a higher utilization peak during the winter months which may be of sufficient magnitude to demand additional measures to those set forth above.

SECTION II PEVENTINE MEDICINE DVISION

Poliomyelitis

The following news release from The American Medical Association on the subject of poliomyelitis makes pertinent recommendations for dealing with a threat of widespread poliomyelitis. Since the poliomyelitis season has not yet ended in Japan the contents of the news release are still pertinent and timely. Therefore, it is reproduced in full below for the information of all health officers.

It is suggested that the source of this information together with the information contained in the article be widely publicized among the Japanese public, all prefectural and city health departments, health centers, medical associations, and other groups interested, to the betterment of public health in general and the control of poliomyelitis in particular.

“AMA MAKES RECOMMENDATIONS ON CONBATING SPREAD OF POLIO”

CHICAGO -- Recommendations for dealing with the threat of widespread infantile paralysis are contained in an editorial in the current (August 20) Journal of the American Medical Association.

The editorial while offering suggestions for preventing the spread of poliomyelitis also speaks against disturbing or altering unnecessarily the normal pattern of life in the community.

“Whatever is done to upset the usual routine of children in a household or of adults in their habits is likely to bring more trouble than good as far as control on infantile paralysis is concerned,” says the editorial.

It points out that the incubation period is seven to 14 days but may be as short as three days or as long as 45 days. The disease may be spread by contact through discharges from the mouth, body wastes and flies. It adds in part:

“During an epidemic infection is highly prevalent, but only a limited number of cases are clinically identifiable. For every known case between 10 and 100 persons have inapparent infection. Examination of the spinal fluid is an important although not specific procedure. The period of greatest communicability is the latter part of the incubation period and the first week of acute illness.

“At least three groups of strains of poliomyelitis virus are now known, and infection with any one of these may or may not render the person infected immune to attack from the other two. Susceptibility to infection is general. Thus far the known vaccines, drugs, serums or antibiotics are without specific value against the disease.

“The expectancy with regard to permanent crippling at the time of onset indicates that about 50 percent will ultimately emerge free, about 25 percent will have mild physical limitations, about 15 percent will have severe crippling and about 5 to 10 percent will die. Pregnant women are probably not more susceptible to poliomyelitis than other persons. Children born to women who have poliomyelitis during pregnancy or labor are normal. Fatigue in the early stage of poliomyelitis may influence adversely the extent of paralysis. Children should be prevented from becoming overfatigued during the poliomyelitis season.

“The following points are stressed among the recommended epidemic measures:

- "1. General notice to physicians of the prevalence or increase of incidence of the disease, description of usual characteristics of onset and necessity of diagnosis and medical care particularly for bed rest, and information to the public at large on similar matters.
- "2. Isolation in bed of all children with fever pending diagnosis.
- "3. Education in such technique of bedside nursing as will prevent distribution of infectious discharges to others from patients isolated at home.
- "4. Postponement of elective nose or throat operations or dental extractions.
- "5. Avoidance of excessive physical strain.
- "6. Avoidance of unnecessary travel and visiting especially of children during high prevalence of the infection.

“Patients with acute poliomyelitis are admissible to a general hospital if appropriate isolation precautions are employed. Isolation procedures used for the care of patients with acute poliomyelitis are similar to techniques used in the hospital care of other communicable diseases. Patients may be cared for at home if home facilities and medically supervised care are adequate.

“Public and private schools should not be closed during an outbreak of poliomyelitis nor their opening delayed except for specific reasons. Schools to which children are transported in buses from widely separated areas or boarding schools, excluding colleges and universities, should delay opening sessions if an outbreak of poliomyelitis exists in the area where the school is located. Summer camps should open as usual unless there is an outbreak of poliomyelitis in the area in which the camp is located. Places of recreation and amusement need not be closed; however, the attendance of children at such places should be discouraged.

“These recommendations were motivated by the desire to avoid as far as possible the effect of disturbing or altering unnecessarily the normal pattern of life in the community”.

Public Health and Welfare Information

The Information Unit, Ministry of Welfare, has prepared a schedule of proposed information activities for the third quarter of 1949 covering the months, October, November and December. (See Inclosure No.1).

This schedule indicates the subjects on which release of information is desired by each Ministerial Bureau, and the month in which emphasis should be placed. This schedule is designed to serve as a guide to the prefectural health and welfare departments in planning their information programs. It may, however, be modified to meet existing conditions at prefectural and local levels.

Copies of this schedule written in Japanese together with descriptive details of each subject for the month of October have been distributed to all prefectural health and welfare departments. Descriptive details of subjects for November and December are being prepared and will be distributed at a later date.

Licensing of Biologics Manufacturing Laboratories

Reference Section II, Weekly Bulletin, Number 104, 105, 106, 110, 112, 118, 119, 122 and 129.

The use of Japanese produced biologic products was suspended in December 1948. This suspension and the legal expiration of all manufacturing licenses in January 1949 automatically resulted in the closure of all biologics product laboratories.

A Memorandum to the Japanese Government, PHMJG 98, dated 12 April 1949, established criteria for issuing licenses to laboratories producing biologic products. This memorandum approved the immediate issuance of licenses to 11 laboratories and established provisions for issuing licenses to four others within a short period of time. All other laboratories still remain closed. (Twenty-eight laboratories).

Ministry of Welfare Ordinance No.8, entitled “Regulations for the Control and Manufacture and Assay of Biologic Products” dated 21 February 1949, defines a biologic product as “any virus, therapeutic serum, antitoxin or analogous product applicable to the diagnosis, prevention, treatment or cure of diseases or injuries of man”. The laboratories which are licensed for production at the present time are those producing the more common, more efficacious biologics required for use under the provisions of the Preventive Vaccination Law. In order to expedite the issuance of licenses to other laboratories a superficial division into four groups has been devised. These groups are based upon the type of biologic product produced according to the definition of a biologic product.

GROUP I. Those biologic products covered in the Preventive Vaccination Law and/or which specific minimum requirements are, or have been, issued. All products of this group must be assayed by, or under the supervision of the National Institute of Health prior to release for distribution. Procedures for the control of these products and for the issuance of licenses to the laboratories producing them were established in PHMJG 98.

GROUP II. Biologic products of the diagnostic antigen or serum type such as antigens for use in tests for venereal disease, blood grouping sera, immune sera, bacterial suspensions for use in the Widal Test, etc.

The establishment of specific minimum requirements for each product of this category will require a long period of time. General requirements for this group of products, in addition to those already established for all biologic product, will be established in the immediate future. Laboratories desiring to produce products of this category can apply for licenses, undergo inspection, and if found to fulfill the fundamental requirements for licensing, as stated in Ministry of Welfare Ordinance No.8, and “Guiding Principles for the Manufacture of Biologic Products” and PHMJG 98, licenses will be issued as rapidly as processing is completed. Each laboratory will be required to assay each lot of each product of this type produced and submit detailed production protocols and

protocols of assay, together with samples of each lot of each product to the National Institute of Health for approval prior to the release of each lot of the product for use. The December of the National Institute of Health may release each lot of material for use on the basis of the data submitted by the manufacturer or he may require at his discretion that the material be assayed by the National Institute of Health.

GROUP III. Biologic products for which specific minimum requirements have not been promulgated, for which official standards of potency do not exist, but which may be assayed under the provisions of Ministry of Welfare Ordinance No.8 and "Guiding Principles for the Manufacture of Biologic Products" for sterility, safety, purity, identity, and pyrogenicity, where applicable. Examples of products of this category are Schwartzmann's filtrate, AO vaccine, and Streptococcus Toxoid. Many products of this category are undoubtedly of questionable efficacy. The Ministry of Welfare will enforce criteria which have been established in order to determine whether production of these products can be permitted. Laboratories desiring to produce the products of this category should apply for licenses. If the laboratory can fulfill the requirement necessary for the issuance of licenses it may be permitted to resume production. It will however be necessary for these laboratories to meet all criteria specified in PHMJG 98 including the submission of samples for assay prior to the actual issuance of licenses by the Ministry of Welfare.

The National Institute of Health cannot establish potency standards for all products of this group at the present time. If the product in question passes sterility, purity, identity, safety and pyrogenicity tests, where applicable, and if the efficacy of the product is questionable, or not known, the Ministry of Welfare may issue a temporary production license. At the same time it will appoint a committee to undertake clinical evaluation of the product. If at the end of a specified period of time the product has been demonstrated to be of no value the license will be suspended and the product taken off the market. If the product is definitely demonstrated to be of value, specific minimum requirements will be issued and the product changed from Group III category to Group I category.

GROUP IV. Biologic products such as normal human plasma, normal human serum, citrated normal human whole blood and human blood derivatives. Specific minimum requirements for each product, known to be of this group, are in process of preparation at the present time. The nature of this type product is such that it would be impractical to require that each lot of each product be sent to the National Institute of Health for assay. The manufacturing, or processing laboratory will be required to comply with the minimum requirements by carrying out the assay of the product under the supervision of the National Institute of Health.

One example of the difficulty encountered in the assay of this type product is that each bleeding of normal human whole blood constitutes a "lot" of product. The manufacturer will be required to assay each lot for sterility, freedom from venereal disease, blood group and sub-types, etc., specific labeling and storage requirements, and specific requirements for the care of equipment in the processing of the material will be enforced. Minimum requirements for this group of products will apply only to those laboratories preparing products for commercial and/or other distribution. They are not intended to include hospital laboratories.

Laboratories desiring to produce products of this category should apply for licenses. If they are able to meet the requirements necessary for licensing, licenses will be issued.

In mid-August the Ministry of Welfare sent the above general information, to Prefectural Governors and Biologics Manufacturers. It is duplicated here for the information of all persons concerned in order to aid in the solution of any misunderstandings which may arise.

Japanese B Encephalitis Control Measures

Observations of Japanese B Encephalitis control measures in the field indicates a serious deficiency both in the application of mosquito control techniques and materials being used. In some cases control measures in and about the house where a case has occurred merely consists of very incomplete application of a cresol solution within the house together with the slipshod cleaning of ditches and cutting of weeds in the neighborhood.

The objective is to eliminate all adult and larval forms of mosquitoes, flies, mites, fleas and other household insects in the homes where cases have occurred as well as in and around all adjoining houses for a distance of not less than 50 meters. This requires proper and thorough application of 5% residual effect DDT spray in kerosene in the homes where cases have occurred and in all other houses within a radius of 50 meters. Addition of 2% cresol to the DDT spray will do no harm but its value is questionable. It is emphasized that the primary objective of treating

houses where cases have occurred is to destroy all insects and maintain an insect free environment for the remainder of the insect season.

Since mosquitoes are known to be vectors of Japanese B encephalitis through and complete larvacidal control measures must be carried out over a radius of not less than one kilometer from the house where the case has occurred.

Civil Affairs personnel should give all possible assistance to the Japanese health officials in order to insure that maximum efforts are made by the Japanese and that the techniques employed are effective.

SECTION III NURSING AFFAIRS DIVISION

National Nursing Conferences

On 15 and 16 September the Ministry of Welfare, Nursing Section, held a conference for chief nurses of prefectural health departments. The purpose of this conference was to give guidance in the establishment and development of nursing divisions or sections in prefectural health departments. Civil affairs nurses should give assistance to prefectural personnel in the formation of these sections in areas where there do not exist in order that nursing affairs activities can be planned and carried out through these sections under the guidance of the regional civil affairs nurses.

On 5, 6 and 7 October a conference for the presidents of the prefectural branch organizations of the Japan Midwife, Public Health Nurse and Clinical Nurse Association will be held in Tokyo under the auspices of the National Association. The purpose of this meeting is three fold:

1. To study the Association constitution.
2. To discuss the duties and functions of the prefectural branch associations.
3. To gain a clearer understanding of the functions of democratic organizations for women.

Detailed information regarding this conference will be sent to the presidents of the regional associations by the national organization.

Between the 17 - 20 October a conference for public health nursing leaders will be held in Hakone; representatives to the conference should be sent from the prefectural health departments, prefectural health insurance federations or health centers. This meeting has been planned primarily for public health nursing leaders with the hope that it will serve as a means to plan public health nursing programs and discuss common problems. Detailed information regarding this conference will be sent to the prefectural health departments.

SECTION IV VETERINARY AFFAIRS DIVISION

Equine Encephalomyelitis

During the period 1 Jan - 9 Sep 1949, a grand total of 126 cases of equine encephalomyelitis have been reported and classified into 47 confirmed positive cases and 79 suspects.

Swine Diseases

During the period of 1 January - 9 September 1949, totals of 383 cases of swine cholera and 828 cases of swine erysipelas have been reported. Miyagi Prefecture continues to have the greatest incidence of swine cholera reporting 51 new cases during 3 - 9 September 1949.

Current Report on Rabies

The Veterinary Affairs Section, Ministry of Welfare, submitted the following report on rabies for the period 28 August - 3 September.

<u>Prefecture</u>	<u>New Cases</u>	<u>Case Since 1 Jan</u>	<u>Dogs immunized During Period</u>	<u>Total Immunized Since 1 January</u>	<u>Number Yet to be Immunized</u>
Tokyo	3	122	1,679	16,702	6,005
Kanagawa	2	42	119	13,396	2,104
Chiba	0	89	623	35,946	30,000
					(2nd treatment)
Saitama	5	70	0	45,794	500
Ibaraki	0	16	490	32,271	15,000
Gumma	0	49	1,075	13,718	14,400
Tochigi	0	2	1,457	11,929	11,158
Shizuoka	0	1	1,862	13,313	6,896
TOTAL	10	391	7,305	183,069	86,063

The number of dogs registered in all Japan as of 1 July 1949, is reported to be 652,756. In addition, it is estimated that there are 171,447 stray dogs running at large in Japan. The relationship between stray dogs and the incidence of rabies is generally acknowledged. Therefore, the Veterinary Affairs Section of Welfare Ministry was advised to institute a vigorous program to eliminate stray dogs. The Ministry of Welfare reported that during the period 1 January - 1 July 1949, 37,412 stray dogs have been destroyed. Furthermore, a program of re-vaccination of all registered dogs for the second time this year, is now starting.

SECTION V SUPPLY DIVISION

Report of the Mission of the American Pharmaceutical Association

Memorandum to the Ministry of Welfare, Japanese Government, PHMJG 115, dated 13 September 1949, subject: "Report of Mission of the American Pharmaceutical Association", formally submitted the Report of the Mission which visited Japan during the month of July to study conditions in the pharmaceutical fields. The Mission which consisted of five representatives of the American Pharmaceutical Association, headed by the Association's President Dr. Glen L. Jenkins, submitted the Report to SCAP setting forth findings of the Mission in the fields of pharmaceutical education, public health activities, professional organizations, interprofessional relations, legislation and enforcement procedures, the National Board of Pharmacy, the manufacture and production of pharmaceutical products, distribution of drugs, and hospital pharmacy. The Report also contains recommendations made by the Mission covering these various fields of activity, which in the opinion of the Mission, if adopted and/or implemented, will raise and improve the status of the pharmacist and his relation to the public health activities in Japan. The Memorandum to the Ministry of Welfare states that the report is turned over for reference and study and such implementation of its recommendations as the Ministry may desire. Copies of the Report have also been distributed to the Japanese Pharmaceutical Association, the Japanese Medical Association, and the Japanese Dental Association. The Ministry of Welfare will translate the Report into Japanese and will make it available to all agencies and groups concerned and interested.

The summary of the recommendations as contained in the Report is as follows:

a. An early separation of medicine and pharmacy by legal and educational means be made to the end that the physicians diagnose and prescribe and the pharmacists secure, store, compound and dispense pharmaceutical products on the physicians' prescription.

b. Greater emphasis be given to theoretical and practical pharmacy, especially compounding and dispensing, and to biological sciences, pharmacy administration and pharmaceutical ethics in the pharmaceutical college curricula.

c.

(1) All persons compounding and dispensing medicines meet the same requirements for education, licensure and equipment.

(2) Prescriptions be required for powerful and poisonous drugs.

(3) Pharmaceutical Law specify that the National Pharmacists Committee be composed primarily of pharmacists.

d. Only qualified pharmacists be appointed to key positions concerned with the handling of pharmaceutical activities in government agencies.

e. A model pharmaceutical manufacturing plant be built to demonstrate proper manufacturing techniques; plant to be small in order to prevent interference of competition with free enterprise.

f. There be a greater exchange of teachers between colleges in Japan and between Japan and other countries.

g. A nation-wide survey be made to determine man power and educational needs in pharmacy and to determine proper distribution of both schools and graduates.

h. More study be given to a sound plan of financing pharmaceutical colleges to the end that they be less dependent on tuition.

Biologic Assay

During the period 23 August - 5 September the following biologics have been assayed and found to meet minimum standards:

Item	Manufacturer	Lot No.	Quantity
Smallpox vaccine	Hokkaido Siyaku K.K.	70	72,200
		76	88,600
		80	100,700
Tetanus antitoxin	Kitasato Institute	270	14,000
		266	22,950
	Chiba Kessei	21	9,780
		24	9,600
Typhus Vaccine	Takeda Yakuhin Kogyo K.K.	19	19,720
		24	19,720
		27	19,720
	Kagaku & Kessei Ryoho Institute	115	17,020
		122	17,940
Typhoid and Paratyphoid	Fujisawa Yakuhin Kogyo K.K.	51	39,350
		52	39,350
	Fuji Saikin K.K.	85	37,700
		88	37,700
		94	37,700
		97	37,700

Guinea Pigs

The serious problem confronting the Ministry of Welfare concerning the supply of an adequate number of guinea pigs to the National Institute of Health for assay of biologics, was alleviated recently when the newly organized Gifu Prefectural Experimental Animal Association contracted to supply 6,000 animals per month beginning in September.

Sixty thousand guinea pigs will be required for assay purposes at National Institute of Health during the next twelve months and it is estimated an additional 100,000 animals will be required by biological manufactures, laboratories, and education institutions for the same period.

Decontrol of Critical Materials

The Economic Stabilization Board during August submitted to General Headquarters its proposals for the decontrol of specific critical materials and the retention of other materials on allocation and distribution control. Emphasis is being placed on the decontrol of materials insofar as possible in keeping with the plan of turning back to the Japanese the responsibility for administration of supply and demand matters. Items which are imported to

Japan using appropriated funds will remain on control until such time as indigenous supplies or production are sufficient to preclude further imports. The control of textile remains in force. The Economic Stabilization Board was instructed to submit to General Headquarters further justification for its proposals if decontrol of textiles is to be considered. The items which have been removed from control include certain fuels (coal and pitch coke), industrial chemicals and metals, and paper.

Production of Cyclopropane Anesthetic

Numerous inquiries have been received regarding the status of production of cyclopropane in Japan. As the present time, there is no indigenous production of this anesthetic. Some chemical manufactures had expressed interest and a desire to produce cyclopropane. Efforts are now being made to expedite the initiation of this production. The advantages of cyclopropane are:

- a. Very effective in concentrations providing an adequate supply of oxygen is available.
- b. Gives less pulmonary irritation than other.
- c. Less excitement of the patient during induction.
- d. Low toxicity.

Disadvantages of using this anesthetic are employed.

- a. Very explosive when oxygen-rich mixtures are employed.
- b. Lack of respiratory stimulation.
- c. Planes of anesthesia difficult to detect except by experienced individuals.
- d. Tendency to produce cardiac arrhythmias and headaches.

Dissemination of Information Regarding the Use of DDT Products

The Ministry of Welfare and the DDT Manufactures Association, along with other agencies of the Japanese Government, have planned an extensive advertising campaign to publicize the use, application and effectiveness of DDT products in the control of insects of medical importance. The campaign will receive special emphasis during September, which has been designated "National Clean-Up Month" by the Japanese Government. Such information will be disseminated through a wide variety of media of transmission including radio, newspapers, special publications, visual aids, exhibits, demonstrations, bill boards, pamphlets, and lectures. A documentary film, "The Tale of DDT", now in production, will be distributed to all prefectures in Japan during October.

Erratum

Attention is called to a typographic error in Bulletin No.138 (15 - 31 August), page 18, Biologics Assay. The column headed "Quality" should read "Quantity".

SECTION VI NARCOTIC CONTROL DIVISION

The intensified drive against illicit peddlers of narcotics in Japan which was started in April has resulted in the arrest of many major violators and in the seizure of large quantities of opium, heroin and morphine.

The most recent seizure was made in Tokyo and Nagano Prefecture. Narcotic agents were successful in negotiating the purchase of four pounds of opium in Tokyo which led to the further seizure of 185 pounds of raw opium at Tokura Hot Springs, Nagano Prefecture. The opium, which represents the largest single seizure in Japan since 1946, was originally stolen from a Japanese Medical Supply Depot in Nagano at the end of the war by a Village Master who committed suicide when his crime was discovered in 1946. At that time, 180 pounds of opium were seized.

During April, 140 grams of morphine were seized in Yokohama by enforcement officials. The principal defendant involved in this illicit traffic was sentenced to seven and a half years penal servitude and a ¥ 100,000 fine. In June, two Koreans and one Japanese were apprehended for the illegal possession and smuggling of 266 grams of heroin. This seizure was made in Kobe.

The concerted drive in which police, Occupation enforcement personnel and Japanese narcotic agents are participating has resulted in the arrest of 1,283 Japanese, 203 Chinese and Formosans, four out of five of whom

were addicted to narcotics, and 59 Koreans. During this period, 383 Japanese, 96 Chinese and Formosans and 18 Koreans were found guilty of violating the Japanese Narcotic Law and SCAP Directives. Fourteen of the Foreign Nationals were sentenced to deportation after serving their term of confinement. The percentage of sentences suspended by Occupation courts has been reduced from 44.4% in January to 10.3% during the past five months.

Two Japanese received the maximum penalties under the Japanese Narcotic Law, five years penal servitude. The ratio of suspended sentences has dropped from 39.2% in January to 25.1% during the last five months. Fines totaling ¥ 1,641,300 have been assessed by the courts which the beginning of the year.

The degree of success of strict enforcement which has rendered illicit narcotic traffic extremely hazardous in Japan, as well as unprofitable, has resulted in some addicts surrendering themselves to the authorities and requesting confinement in order to control their addiction.

SECTION VII WELFARE DIVISION

Study Abroad Opportunities for Japanese

The United National Division of Social Affairs is now offering fellowships to Japanese leaders in social work for the purpose of six months observation visits abroad. Approximately ten fellowships may be available for 1950 if transportation can be obtained through GARIOA funds which it is anticipated, may be approved in the next session of Congress. It is expected that said GARIOA funds will provide for a group of national leaders to make study visits of three to six months to the United States and for a limited number of one year graduate scholarships for study in specialized schools such as social work.

Dr. Jal F. Bulsara, Regional Director of the Southeast Asia Division of Social Affairs, United Nations, Office at Bangkok, visited Japan on very short notice the end of August at which time he interviewed in Osaka and Tokyo 48 possible candidates for the United Nations Fellowships. Details regarding the United Nations Fellowships will be forwarded to each Regional Welfare Officer.

Cooperative Agencies for Remittances to Europe and East (CARE)

Following is report of CARE activities for the month of August 1949:

	FOOD	WOOLFN	BLANKET	KNITTING	COTTON
Total number packages delivered	29,989	9,024	2,644	4,032	4,980
Minus damaged, lost, etc.	970	60	38	26	-
Number good packages received	29,019	8,964	2,606	4,006	4,980
Deliveries to Date	22,057	8,946	2,465	3,339	3,709
Total on Hand	6,962	18	141	667	1,271

Disaster - Typhoon Kitty

The following information of damage caused by typhoon "Kitty" was submitted by the Prevention Bureau, Ministry of Welfare. Report is as of 1000 hours, 3 September 1949:

Dead	-	98
Persons injured	-	455
Persons missing	-	35
Houses totally damaged	-	2,745
Houses partially damaged	-	8,889
Houses lost	-	1,291
Houses flooded above floor	-	84,995
Houses flooded under floor	-	44,974
Non-resident houses damaged	-	4,450

Report covers the following 21 prefectures: Tokyo, Kanagawa, Gumma, Chiba, Ibaraki, Tochigi, Shizuoka, Nagano, Niigata, Fukushima, Yamagata, Akita, Saitama, Yamanashi, Fukui, Ishikawa, Toyama, Miyagi, Iwate, Hokkaido and Aomori.

Japanese Red Cross

Junior Red Cross - Junior Red Cross Youth Leadership Training Center at Sakanoiki Beach, Oita Prefecture was held 1 - 7 August 1949. This year's training center was held on the regional level rather than on the national level, with 44 boys and girls representing seven Chapters in Kyushu Region. This group was comprised of 24 boys and 20 girls whose average age was 16.1 years. The students were mostly from the third year of middle school and several from the first and second year of the higher school. Seventeen members were not enrolled in Junior Red Cross.

Safety Section - Water Safety Instructor's Training Courses were given during June, July and August in Kanagawa, Kumamoto and Chiba Prefectures. One hundred eighteen persons attended and received instructions.

Licensed Agencies for Relief in Asia (LARA)

LARA shipments Nos. 186, 194, 196, 198 and 199 arrived in Yokohama during July and totaled 68,969 tons of food, clothing, medical supplies and miscellaneous items.

The total LARA relief supply shipments to Japan, as reported to date now totals 9,666,699 tons.

Public Works Projects and Work Relief Projects

Considerable interest has recently been exhibited by the Japanese Government and others in the day laborer who secures his work through the Public Employment Security Offices (PESO). Welfare Division has recently rejected a national program for providing daily assistance to this group. There is, however, some evidence that more persons are registering for employment and that the average number of days of work per month is decreasing. Welfare officers are requested to review this problem in each prefecture periodically in order to determine the effectiveness of the work programs as they relate to possible need for public assistance in an area.

Many prefectures and local governments have not been able to take full advantage of public works projects because of lack of funds for matching purposes. It is to be noted that there are separate and distinct types of projects known as Work Relief Projects which may go into operation in the PESO area when certain criterion of employment needs are met. These criteria are:

a. (For day laborers only). If more than 200 day laborers fail to secure work for ten consecutive days, or if more than 200 fail to secure 12 days employment out of the past 30 days (usually, however, the calendar month) a work relief project may be started in that area. Generally, the PFSSO office attempts to rotate work among those who apply. The history of this group has been that they have generally averaged about 20 work days a month.

b. (For other types of laborers and other types of employment). A work relief project may be started when the number of men drawing unemployment compensation amounts to 1.2% of the total male non-agricultural labor force (not including the day labor type) and when one half of this 1.2% have drawn unemployment compensation over three months. The number of work relief jobs made available will equal the number of persons who have received unemployment compensation more than three months plus the number of registered non-recipients who have been registered over one month (generally six weeks).

An added advantage in Work Relief Projects is that the greatest portion of expense is borne by the national government.

The importance to the area of complete registration of all physically able unemployed should be emphasized to the Japanese if full advantage is to be taken of these funds in preference to public assistance. There have been known instances in which misguided PESO officials have refused further registrations because "there were not enough jobs to go around anyway".

SECTION VIII SOCIAL SECURITY DIVISION

General

Attention of the Welfare Officers of Civil Affairs Teams is called to the following Ho-hatsus (Notices) issued by the Insurance Bureau, Ministry of Welfare to the Prefectural Government, Insurance Section, regarding the social insurance programs under supervision of the Ministry. A brief summary as to the contents of the Ho-hatsus is given below.

Ho-hatsu No.70, dated 18 July 1949, subject, "Rules Concerning the Receipt and Payment of the National Subsidy to be Treated by the Post Office" and Ho-hatsu No.75, dated 3 August 1949, subject, "Regarding the Business Managed by 'Advance Payment' Officials in Welfare Insurance Account and Seamen's Insurance Special Account" pertain to benefit claims and attempt to effectuate a uniform system of prompt and convenient payment of such claims and to make such payment independent of the contribution collection operations. The Chief of the General Affairs Unit of the prefectural Insurance Section will usually be the "advance payment" official (local Finance Officer) for making payment of claims, which will be made in cash through a branch of the Bank of Japan or local Post Office, whichever is more convenient to the insured. This local finance official is named "advance payment official" because he can requisition necessary funds for operations in advance and not have to wait for the old procedure of the Government's quarterly allocation of appropriated funds. The Chief of the Prefectural Insurance Section has the responsibility for collection of contributions. Both of these officials must be national public servant officials.

Information and Education

The value and effectiveness of information and education in the reestablishment of the National Health Insurance program was conclusively shown in Akita Prefecture. The Insurance Section, Welfare Department, of Akita Prefectural Government reported they chose 31 localities, where the National Health Insurance program had been suspended, to conduct a comprehensive survey. The survey took four months, during which time every household in each locality was contacted. The principle questions were regarding income, cost of living, and the cost of medical care. The National Health Insurance program was discussed and the representatives from the Insurance Section gave information on various phases of the program.

At first the people were reluctant to discuss their income, as they thought the interviewers were actually from the tax office. When this feeling was dispelled, the Insurance Section reported the people were very willing to discuss their finances and the medical care problem. At the end of the survey a summary of the opinion was that 66% of the people interviewed favored National Insurance, 18% opposed it, and 16% were indifferent. Within a month following the survey, 28 of the 31 localities reorganized the National Health Insurance program.

The Welfare Department of the Prefecture Government took a particular interest in this survey in that it realizes the definite responsibility the Prefecture Government has for the National Health Insurance program. Further surveys are to be carried on throughout the Prefecture.

National Health Insurance

In Public Health and Welfare Weekly Bulletin No.94, dated 17 October 1948, attention was called to the fact that the local public bodies could enter into negotiations to obtain medical care facilities designated for disposition by dissolving organizations. Inasmuch as the Agricultural Association, which established and operated medical care facilities is being dissolved, the localities in which their facilities are located should consider obtaining them for continuation as non-profit institutions. The law dissolving the Agricultural Association does, however, give the reorganized Agricultural Cooperative Association priority in obtaining the facilities belonging to the Agricultural Association. In the event the reorganized Cooperative does not exercise its right, the local government should give consideration for obtaining these facilities in connection with the National Health Insurance program.

SECTION IX MEMORANDUM TO THE JAPANESE GOVERNMENT

<u>PHMJG</u>	<u>DATE</u>	<u>SUBJECT</u>	<u>SURVEILLANCE</u>
113	8/6/49	Removal of Control on Designated Ration Goods.	No

SECTION II PREVENTIVE MEDICINE DIVISION

Typhus Fever

Attention is invited to SCAPIN 2011 dated 28 May 1949, subject: Prevention and Control of the Typhus Fever Group of Diseases in Japan, Paragraph 3, which states "the threat of typhus fever in Japan is still existent." With the advent of colder weather, the incidence of typhus fever may be expected to rise which will necessitate the immediate application of proper prevention and control measures.

Based on result of complement fixation tests for typhus fever in Japan during 1948 (1 Jan - 31 Dec) on 1,366 serum samples representing 837 suspect cases, received for testing at the 406th Medical General Laboratory, Tokyo, "both epidemic and murine typhus appeared in relatively small numbers scattered generally throughout the main islands"* Epidemic typhus (louse borne) was most prevalent in Osaka and Kyoto prefectures. (Osaka, 119 of 180 suspect cases; Kyoto 28 of 42 suspect cases). In Tokyo 12 of 125 suspect cases were positive for epidemic typhus. Murine typhus appeared to be scattered from Hokkaido to Kyushu with the greatest incidence in Gifu prefecture (21 of 54 suspect cases).

The presence of as yet an unidentified type of typhus fever must be kept in mind. Of the 405 total positive reactions obtained. 80 showed identical titers with both epidemic and murine antigens which undoubtedly points to the existence of a serologically intermediate form of typhus in Japan. This type may be the form in which typhus persists and, dependent upon the species of vector, lice or fleas, cases of epidemic or murine typhus may result.

With the low incidence of typhus reported during the nine months of 1949, complacency of the Japanese health officials concerning the danger of typhus fever, is apparent. It is urged, therefore, that Civil Affairs Teams stress the fact that typhus fever is still a potential threat in Japan and that the provisions of SCAPIN 2011 be vigorously executed from October through June**

Note: Interestingly enough the highest seasonal proportion of epidemic typhus positive sera was seen in specimens received in April through June 1948.

* Reference: Annual Historical Report - 406th Med Gen Lab, Tokyo, Honshu, Japan -1948.

** Memorandum to Japanese Government (SCAPIN 2011) dated 28 May 1949, subject: Prevention and Control of the Typhus Fever Group of Diseases in Japan.

Sanitation - Rodent Control

The Japanese Sanitary Teams are currently being reduced in personnel due to the close of the heavy mosquito and fly breeding season. The assistant inspector is retained on a 12 month basis and should have a plan for rodent control in his villages or district to be carried on during the months of October to April. During these months, rats migrate to homes and buildings in their search for warmth and food. In so doing they become much more of a public health problem as they are in close contact with humans, and their ectoparasites infest homes, and attack persons along with their rat hosts.

Also, rat extermination programs are more effective during these months as the rat's food supply is scarcer and they are found in more concentrated numbers which makes baiting and trapping programs very efficient.

The Insect and Rodent Control Officers were called to Tokyo for a week's briefing on the national government insect and rodent control plans and recommendations, 26 - 30 September.

It is advisable to assist the prefecture public health city, town and village officials in working out problems of financing planning, and directing rodent control programs using to the fullest extent the Ministry of Welfare Sanitary Team subsidy for this work.

SECTION III VETERINARY AFFAIRS DIVISION

Monthly Food Inspection Report

The Food Sanitation, Ministry of Welfare, submitted the following report on the sanitary inspections conducted by prefectural food sanitarians in establishments processing, handling and selling food and beverages during the month of July.

Number of establishments	692,569
Number of establishments inspected	211,298
Number of establishments completing improvements	120,068
Number of administrative punishments	5,148
Number of food samples collected for analysis	9,473
Number of establishments requesting food analysis	1,922

All prefectures report that food establishment owners are making every effort to comply with the provisions of the Food Sanitation Law.

This completely reverses the former attitude of establishment owners, for in the past, considerable objection and poor tolerance for food inspectors had been noted as evidenced by complaints from the inspectors.

Monthly Animal Disease Report

The Animal Hygiene Section, Ministry of Agriculture and Forestry reported the following outbreaks of animal diseases occurring during the month of August.

<u>Diseases</u>	<u>Number of Cases</u>
Anthrax	1
Blackleg	4
Swine erysipelas	55
Swine cholera	370
Swine plague	41
Piroplasmoses	9
Swine paratyphus	20
Equine infectious anemia	319
Brucellosis	102

Trichomonas	151
Equine infectious abortion	14
Pullorum disease (fowl)	1,836
Equine encephalomyelitis	55
Bovine tuberculosis	45

Weekly Animal Disease Report

The Animal Hygiene Section, Ministry of Agriculture and Forestry, reported the following outbreak of animal diseases for the period 17 - 23 September.

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>	
		<u>Positive</u>	<u>Suspect</u>
Iwate	Equine Encephalomyelitis	1	0
Miyagi	// //	13	0
Akita	// //	1	0
Tochigi	// //	39	4
Ibaraki	// //	5	0
Nagano	// //	1	0
Oita	// //	0	1
Miyazaki	// //	0	2
	Totals	60	7

This week's report now brings the total cases of Equine Encephalomyelitis to 297 of which 100 cases are classed as suspects pending confirmation.

Indications are that some horses that were immunized early at the beginning of the program, have shown mild clinical symptoms. Further investigations are being made as this may indicate that the vaccines utilized have poor anti-genicity properties and additional research will be necessary to correct this defect.

Weekly Rabies Report

The Veterinary Affairs Section, Ministry of Welfare, submitted the following report on rabies occurring in the Kanto Region during the period 11 - 17 September.

<u>Prefecture</u>	<u>New Cases</u>	<u>Case Since 1 Jan</u>	<u>Dogs Immunized During Period</u>	<u>Total Immunized Since 1 Jan</u>	<u>Number Yet to be Immunized</u>
Tokyo	2	128	849	18,957	3,850
Kanagawa	2	46	105	13,541	1,959
Chiba	0	101	1,231	37,505	28,441
Saitama	4	79	0	49,670	5,000
Ibaraki	0	16	1,405	34,501	12,770
Gumma	0	50	0	13,718	17,718
Tochigi	0	2	301	13,746	9,341
Shizuoka	0	1	523	13,853	11,664

The Ministry of Welfare issued further instructions in an effort to obtain more satisfactory compliance on the part of dog owners in observing the provisions of the present quarantine measures still being enforced.

The supply of rabies vaccine still remains insufficient to provide adequate amounts to all prefectures due to recent rejections of lots of vaccine during assaying tests.

The possibility of rats being a reservoir of infection still is being considered and laboratory tests are to be continued specimens of rats. This possibility exists in that very young puppies have shown rabid symptoms without the history of being previously bitten.

Monthly Milk Inspection Report

The Veterinary Affairs Section, Ministry of Welfare submitted the following report in which prefectural veterinarians conducted sanitary inspections of daily farms and milk plants during the month of July.

Special Milk

Number of farms inspected	6
Samples examined	18
Over bacterial standards (50,000 per cc)	1
Under butterfat standards (3.3 percent)	0
Number of Plant inspections	17
Over bacterial standards (50,000 per cc)	1
Under butterfat standards (3.3 percent)	0

Ordinary Milk

Number of farms inspected	8,867
Samples examined	16,087
Over bacterial standards (2,000,000 per cc)	1,237
Under butterfat standards (3.0 percent)	1,013
Number of Plant inspections	3,870
Over bacterial standards (2,000,000 per cc)	522
Under butterfat standards (3.0 percent)	375

Goat Milk

Number of farms inspected	39
Samples examined	42
Over bacterial standards (2,000,000 per cc)	6
Under butterfat standards (3.0 percent)	8

Milk Produced on Daily Farms in July

<u>Type of Milk</u>	<u>Number of Farms</u>	<u>Number of Cows & Goat</u>	<u>Amount Produced</u>
Special	5	136	27,547
Ordinary	57,768	111,869	22,965,399
Goat	7,177	9,507	207,269

Quantity of Milk Bottled in Milk Plants in July

<u>Type of Milk</u>	<u>Number of Plants</u>	<u>Raw Milk</u>	<u>Pasteurized</u>	<u>Sterilized</u>
Special	5	14,178 Lit.	12,191 Lit.	
Ordinary	2,764		3,383,023	495,656
Total	2,769	14,178	3,395,214	495,656

Milk Products Produced in July

Powdered whole milk	164,425 kgs.
Powdered whole milk modified - 15% sugar added	222,786
Powdered whole milk modified - 35% sugar added	580,065
Sweetened condensed milk	847,776
Butter	361,895
Cheese	61,137

Monthly Seafood Inspection Report

The Veterinary Affairs Section, Ministry of Welfare, submitted the following report of sanitary inspections made by prefectural veterinarians on all establishments handling and processing seafood.

Wholesale Seafood Markets

Number of establishments	1,408
Number of establishments inspected	1,017
Sanitary condition -	
Good	152
Fair	666
Poor	199
Total number of inspections	4,601
Amount of seafood examined	39,343,346 kgs
Amount of seafood condemned	314,676 kgs
Cause for condemnation	Peutrefaction
Disposition	Fertilizer

Retail Seafood Shops

Number of establishments	48,996
Number of establishments inspected	18,387
Sanitary condition -	
Good	3,144
Fair	10,957
Poor	4,286
Total number of inspections	20,409
Amount of seafood examined	3,003,701 kgs
Amount of seafood condemned	3,067 kgs
Cause for condemnation	Peutrefaction
Disposition	Fertilizer

Seafood Process Plants

Number of establishments	10,452
Number of establishments inspected	3,510
Sanitary condition -	
Good	556
Fair	1,993
Poor	961
Total number of inspections	5,247
Amount of seafood examined	741,041 kgs
Amount of seafood condemned	238 kgs
Cause for condemnation	Peutrefaction
Disposition	Fertilizer

Monthly Meat Inspection Report

The Veterinary Affairs Section, Ministry of Welfare, submitted the following report in which prefectural veterinary meat inspectors conductors conducted ante and post-mortem and sanitary inspections on livestock slaughtered during the month of July.

	<u>Cattle</u>	<u>Calves</u>	<u>Horses</u>
Number slaughtered	14,894	1,460	3,743
Body weight (kgs)	5,358,395	123,238	1,303,819
Dressed weight (kgs)	2,687,040	66,914	565,186
Condemned ante-mortem	1	0	0
Condemned post-mortem			
Total	20	3	12
Partial	269	27	147
Viscera	3,210	69	630

	<u>Swine</u>	<u>Sheep</u>	<u>Goats</u>
Number slaughtered	55,485	15	212
Body weight (kgs)	4,639,681	598	4,082
Dressed weight (kgs)	2,743,456	283	1,739
Condemned ante-mortem	2	0	0
Condemned post-mortem			
Total	7	0	0
Partial	312	0	4
Viscera	16,887	0	5

Prefectural Veterinary Meat Inspectors conducted sanitary inspections on the following establishments processing and selling meat during the month of July.

Meat Processing Plants

Number of establishments	302
Number of establishments inspected	248
Sanitary condition -	
Good	70
Fair	142
Poor	36
Total number of inspections	629
Amount of seafood examined	118,635 kgs
Amount of seafood condemned	6 kgs
Cause for condemnation	Peutrefaction
Disposition	Fertilizer

Retail Meat Shops

Number of establishments	14,457
Number of establishments inspected	8,016
Sanitary condition -	
Good	2,687
Fair	4,466
Poor	863
Total number of inspections	9,045
Amount of seafood examined	479,668 kgs
Amount of seafood condemned	959 kgs
Cause for condemnation	Peutrefaction
Disposition	Fertilizer

SECTION IV SUPPLY DIVISION

Biologic Assay

During the period 6 - 25 September the following biologics have been assayed and found to meet minimum standards:

<u>Item</u>	<u>Manufacturer</u>	<u>Lot No.</u>	<u>Quantity</u> Unit: Dose

SECTION V
NARCOTIC CONTROL DIVISION

Information

Instructions Yaku Hatsu No. 1622, (16 September 1949) issued by the Ministry of Welfares, will result in all narcotic items bearing a control number on the label which will be a required part of the sales record. The system, effective as of 1 January 1950, will enable enforcement agents to trace any legitimate narcotics found in the illicit traffic determining the point of diversion either through theft or otherwise.

Enforcement

Information obtained during an investigation in Shikoku resulted in the seizure of 114 grams of heroin in Tokyo. One of the two defendants arrested has been released from Kosuge prison, where he had been confined on a fraud charge, only the night before.

The concerted drive of enforcement agencies on narcotic traffickers had led to the apprehension of two major narcotic peddlers in Yokohama, who had transferred the scene of their activities from Kobe. The defendants were in possession of 156 grams of heroin at the time of their arrest and had complete equipment for a "cutting" plant. Two hundred ponds of saccharin were also seized as a result of the narcotic seizure.

In Tokyo the Narcotic Squad of the Metropolitan Police, during one thirty-day period, seized 775 grams cocaine, 26 grams morphine, 20 grams heroin and 5 grams codeine in addition to smaller amounts of other narcotics. Thirty-two persons were apprehended and charged with illegal possession and sale of the above narcotics. Among those arrested was a group of 14 violators who were apprehended after one member of the ring committed suicide by swallowing the contents of a five-gram bottle of morphine.

SECTION VI
WELFARE DIVISION

Community Chest - JRC Drive 1949-1950

In anticipation of the October Drive for Community Chest - JRC Funds throughout the nation, Ministry of Welfare and Fund representatives were called into conference with Public Health and Welfare Section to discuss certain of the weaknesses that were apparent in the last two campaigns.

As a result of this conference, the following "Nine-Point for Guidance" was developed for the guidance of public officials and private agency representative.

"For the past two years the Joint CCC-JRC Fund Campaigns have, by reason of the success of their mutual efforts, contributed greatly to the financial support of social works of the various communities of the nation. The campaign to be launched 1 October 1949 is as important, if not more important, than the preceding campaigns. Cooperation of all citizens is urged that the drive may represent at least as great a success this year as was evidenced in last year's campaign and to the success of the goal your earnest efforts are solicited. The following "Nine Points" are set forth as guiding principles to govern the conduct of the current campaign.

"1. The governor or other public officials undoubtedly will want to lend their good offices to the success of the joint drive for funds but every precaution must be taken that the campaign and the committees engaged therein are not dominated by public officials. Paragraph 5 of the Social Work Law requires prior approval and reports to the governors for fund campaigns to be undertaken for the support of social work undertakings; also subsequent reports as to the success of such fund campaigns upon their conclusion and a report of the allocation of funds contributed. However, this is in no way to be construed as giving any public official control over any portion or part of the funds or control over the allocation of same.

"2. Public institutions are supported by public funds derived from national or local tax and other revenue sources. Private agencies, on the other hand, are supported in the main by private contributions. Of course, prefectural and local governments in many instances support individuals in private institutions by paying for the care of such persons on an individual basis. However, private funds raised through Community Chest campaigns are intended for the support of private institutions and are not to be channeled to the support of public institutions or publicly supported institutions. Generally, the most acceptable practice is for public institutions to be operated by

public employees, however, in some cases public institutions have been entrusted to a private individual or private organizations for operation. If these private organizations or individuals apply for Community Chest funds, allocation committees should carefully screen the operations of these institutions to determine that the services which these agencies wish to provide are over and above those which the public is responsible for, in providing for the care of persons in that institution.

“3. Usually, a Community Chest organization at the prefectural level will include among its committees one on screening, one on fund raising, and one on allocations. In some instances the screening and allocation committees might be combined. Each committee should have in its membership persons in the community known for their integrity as well as their experience, leadership and judgment. Careful selection of committee personnel will do much to obviate later difficulties and to assure the general public that the program is of the utmost importance and deserving of full community support. Persons without integrity placed in positions of responsibility in Community Chest Work will bring immediate discredit not only upon the Chest but upon all agencies involved in the drive.

“4. Often times persons most effective in fund raising are those who have some responsibility for agency operation. While the positive assistance of all persons is solicited in the raising of funds, the allocation of funds should have no relationship to agency participation in the fund drive itself. This means that the allocation committee that handles the distribution of funds among participating agencies should not be dominated by fund receiving agencies or personnel. No agency nor agency representative included as an approved agency in the fund campaign should sit on the allocation committee. In fact, it is most desirable that the allocation committee have on it representatives of business, management, the professions, labor, farmers, fishermen and other segments of society interested in social work and character building programs, who can objectively evaluate the services provided by, and the financial requirements of agencies that have been approved for participation in the fund drive campaign.

“5. Prior to the launching of the campaign, the amount to be raised in each prefecture and the proposed allocations the rounder, i.e., the listing of agencies and funds proposed for their support, should be given widest possible publicity through the media of the public press, radio, and otherwise, as these medias offer widest coverage and could make their donation to the success of the drive by publicizing the scope and purpose of the campaign.

“6. After the campaign has been concluded and the success of the campaign is known, the public should again be advised through the press and otherwise as to the general success of the campaign and any necessary adjustments in allocations to agencies supported by the campaign together with detailed breakdown of all expenses involved. Note: Article 5 of the Social work Law also requires complete reports be made to the appropriate government office following such a drive.

“7. No commission or honorarium should be paid to any solicitor or official for his participation in the campaign. Such services are given gratuitously and without expectation of financial reward. Of course, this does not apply to full-time, paid JRC-CC officers or employees but it does apply to general solicitors and to public or private officials assisting in the drive.

“8. Welfare Commissioners are already engaged in a multitude of complex community problems. They are importuned on every hand to give both of their time and of their own private means in the diverse fields of social work; therefore, because they are already engaged to the maximum of their ability, they should not be expected to be engaged in their official capacity as Welfare Commissioners in JRC - CCCC fund raising, agency screening, or fund allocation.

“9. It has been found that some study groups or research organizations were erected in order to receive the allocation of funds. It is problematic whether funds should be allocated to any of these organizations. The careful study of such organizations must be made by established agencies which are familiar with the local social work services and screen out unqualified organizations of this kind.

“The above points and principles, if carefully adhered to, will obviate a great deal of criticism that has devolved around CCCC-JRC campaigns and private agency operations.

“The Community Chest Campaign about to be launched deserves the thoughtful consideration and positive assistance of every citizen. Its importance to the recovery of many individuals in the community and the rehabilitation of such individuals for work for the community in the future dare not be ignored.”

It is the desire of Community Chest-JRC Fund officials that the drive open promptly and close on schedule and that immediately thereafter, information relating to allocations to agencies, together with all expenses, in detail, be made public through the press, radio and other media.

Inclosure No.1 gives the goals established by each prefecture according to information forwarded to the CCCC Tokyo by Prefectural Community Chest-JRC Officers.

School Lunch Program

A release of 7,784 tons powdered skim milk has been made by the Ministry of Agriculture and Forestry to the Ministry of Education, with the approval of Public Health and Welfare Section and Economic and Scientific Section for October, November and December 1949. It will be noted that this release affords a daily issuance of 22 grams of powdered skim milk per school child per school day for 6,100,000 children. Imported powdered skim milk will be allocated to carry this number of children from 1 October 1949 to and including 30 June 1950 and contains the minimum daily requirements of animal protein for proper growth and development.

Every effort is being made by the Ministry of Education to see that this milk is utilized in those areas, principally rural, where the diet is most deficient in animal protein. Nutritionists and accountants are being added to the Ministry Staff to afford at least a minimum in supervision, guidance and council to prefectural officials. It is hoped that this minimum staff can be strengthened in the next fiscal year.

Inclosed herewith Inclosure No.2 is a breakdown of “Alloted Quota to Skim Milk for School Lunch Use”.

UNICEF Programs

UNICEF program details are being finalized by UNICEF representatives and the Ministries of Welfare and Education. Following are the four programs in which UNICEF is participating.

- (a) Demonstration school lunch feeding program.
- (b) Demonstration infant feeding program.
- (c) Demonstration nursery school feeding program.
- (d) Cotton clothing program.

As soon as the programs are complete in detail information will be given through the press (and in the Bulletin) for the information of all concerned. The program will require, as presently developed, approximately \$500,000.

UNICEF

The first shipment of UNICEF supplies for the UNICEF program in Japan, consisting of 1,382 bales of raw cotton, arrived in Kobe on 18 September 1949.

Public Assistance Report - July

The Ministry of Welfare has submitted the following public assistance report for the month of July. Figures for June 1949 and for July 1948 are shown for purpose of comparison:

	<u>July 1949</u>	<u>June 1949</u>	<u>July 1948</u>
Persons non-institutional	1,534,509	1,528,913	1,813,371
Persons institutional	133,663	132,310	142,198
Totals	1,668,172	1,661,223	1,955,569
Assistance - Cash*	848,419,481	767,113,119	399,900,645
	12,966,497	15,335,966	109,881,659
Totals	¥ 861,385,978	882,449,085	509,782,304

*Before deductions for repayment.

Prefecture Public Assistance Report

Inclosed with this Bulletin (Incl. No.3) is public assistance report by prefecture for the month of July 1949.

Community Chest - Japanese Red Cross Fund Campaign

Inclosed with this Bulletin (Incl. No.4) is a packet of materials for the Community Chest- JAPCROSS Fund Campaign. Included are: Campaign Handbook, Guide for School Children; Community Chest in America, Calendar for 1950, two Posters, Statistics on CC- JAPCROSS 1948 Campaign, assorted emblems and buttons, the Agreement between CCCC and JAPCROSS for 1949 and a periodical.

Disaster Relief

The following information concerning the flood disaster in Kami Mizuuchi-gun, Nagano-shi, Nagano Prefecture which occurred 23 September 1949 was submitted by JAPCROSS 26 September 1949:

Number of houses affected (approximately)	5,000
Number of houses washed away	18
Number of houses completely collapsed	21
Number of houses inundated above floorboards	1,275
Number of deaths	1
Number of persons seriously injured)	
Number of persons slightly injured)	6
Number of persons missing	27-28

Four Japanese Red Cross medical relief teams and water supply teams were dispatched from Nagano Prefecture. Relief supplies were dispatched from JAPCROSS Headquarters.

The following information concerning the fire disaster in Kagoshima City, which occurred on 19 September 1949 was submitted by JAPCROSS 28 September 1949:

Houses totally destroyed	58
Households affected	68
People suffering from fire	220
People slightly injured	7

JAPCROSS dispatched one (1) medical relief team. Local JAPCROSS chapter distributed home medicines to sufferers. The JAPCROSS volunteer service group rendered services for feeding the sufferers. National Headquarters sent out the following relief articles to actual scene on 24 September 1949:

- a. 140 towels
- b. 140 note books
- c. 140 pencils

The following information concerning the bridge disaster in Toyama Prefecture, which occurred on 22 September 1949 was submitted by JAPCROSS 29 September 1949:

Collapse of suspension bridge over River Jingu, Hosoiri-mura, Noi-gun, Toyama Prefectural resulted in the following:

People missing	29
People seriously injured	4

Local chapter of JAPCROSS dispatched one medical relief team to scene immediately, which rendered aid and assistance to authorities.

Consumers Livelihood Cooperative Associations

As of 21 August 1949 there has been an increase of 65 new associations established over the 31 July figures. The report for all prefectures, with the exception of Akita, Chiba, Toyama and Ehime from whom no reports were received, reflects the following totals:

Consumers Livelihood Cooperative Associations	544
Voting members	673,888
Family members	2,391,501
Directors	8,056
Investment units	1,597,248
Yen Investments	88,746,390

Five Consumer Livelihood Cooperative Federations made up of 61 Associations.

SECTION VII SOCIAL SECURITY DIVISION

Cabinet Orders Concerning Social Insurance Appeals Procedures and National Health Insurance Advisory Councils

Inclosure No.5, "Cabinet Order 274 of 1948 - Regulations for the Insurance Referees, the Health Insurance Appeals Board, the National Health Insurance Appeals Board, the Seamen's Insurance Appeals Board and the Welfare Pension Insurance Appeals Board," and Inclosure No.6, "Cabinet Order 224 of 1948 - Cabinet Order Concerning National Health Insurance Advisory Councils," implement the provisions in the basic laws concerning appeals procedures and advisory councils.

Fundamental provisions concerning appeals procedures are found in Chapter VII of the Health Insurance Law as amended by Law 37 of 1949, Chapter VI of the Welfare Pension Insurance Law as amended by Law 38 of 1949, Chapter VI of the Seamen's Insurance Law as amended by Law 156 of 1949, and Chapter VIII of the National Health Insurance Law. The 1949 laws named above included amendments which inserted in the respective social insurance laws provisions concerning secretaries and clerks for the appeals boards. Such provisions previously were contained in Cabinet Order 274 of 1948. Cabinet Order 334 of 15 September 1949 revised Cabinet Order 274 of 1948 to conform to the 1949 amendments to the laws. Since the National Health Insurance Law was not amended in the last Diet session, the Cabinet Order's provisions concerning secretaries and clerks relate only to the National Health Insurance Appeals Boards.

The 1949 laws named in the previous paragraph also included amendments which revised provisions concerning social insurance advisory councils and embodied in one chapter in each law (Chapter VI of the Health Insurance Law, Chapter V of the Welfare Pension Insurance Law and Chapter V of the Seamen's Insurance Law) matters heretofore distributed between the basic laws and Cabinet Order 232 of 1947 ("Regulations Governing the Organization of the Health Insurance Committee, etc."). As a result, Cabinet Order 232 of 1947 has been abolished. However, since no amendments were made to the National Health insurance Law in the last Diet session, provisions for the National Health Insurance Advisory Councils continue to be contained in Articles 8-(18) through 8-(22) of the National Health Insurance Law and in Cabinet Order 224 of 1948.

SECTION IX MEMORANDUM TO THE JAPANESE GOVERNMENT

None.

CRAWFORD F. SAMS
Brigadier General, Medical Corps
Chief

10 Incls:

1. 1949 CCCC JRC Joint Campaign Goal by Prefectures.

Ministerial Instructions

The following is a list of English translated instructions issued by the various Bureau of the Ministry of Welfare to the prefectural government for the periods indicated:

12 - 24 September 1949

<u>Date</u>	<u>File Number</u>	<u>Subject</u>	<u>To</u>	<u>From</u>
<u>Public Sanitation Bureau</u>				
Sep. 13	Ei-hatsu No.933	Re: Holding the Training Course on Hygienic Insects.	Governors, All Prefs.	Chief, Sanitation Bureau.
Sep. 14	Ei-hatsu No.934	Re: Part of expenditures for preventing legal communicable diseases.	"	"
Sep. 15	Ei-hatsu No.938	Re: Inspection of articles with diluted or mixed pigments.	"	"
Sep. 16	Ei-hatsu No.953	Re: Submitting Special Monthly Report on hospital ration food, etc.	Sanitary Division chiefs, All Prefs.	"
<u>Medical Affairs Bureau</u>				
Sep. 14	I-hatsu No.769	Re: Rationing gasoline to dental clinics.	Governors, All Prefs.	Chief, Medical Affairs Bureau.
<u>Pharmaceutical and Supply Bureau</u>				
Sep. 13	Yaku-hatsu No.1607	Re: Fixing quantity of allocated sanitary materials for 3rd Quarter of 1949.	"	Chief, Pharma- ceutical Supply Bureau.
and				
Sep. 14	Yaku-hatsu No.1610	Re: Handling the renewal of registration provided for for in the Pharmaceutical Affairs Law.	"	"
Sep. 15	Yaku-hatsu No.1613	Re: Altering matters of the license for producing hexylresorcinol pills due to partial amendment and addition of the standards on hexylresorcinol & its preparations.	"	"
Sep. 16	Yaku-hatsu No.1622	Re: Giving numbers to narcotic drugs.	"	"
Sep. 16	Yaku-hatsu No.1623	Re: Addition articles to the List of Licensed contraceptives.	"	"
Sep. 16	Yaku-hatsu No.1624	Re: Supervision of biological products.	"	"
Sep. 17	Yaku-hatsu No.1633	Re: Repercussions of the recovery of industrial right by the Allied nationals.	"	"

Sep. 17	Yaku-hatsu No.1634	Re: Allocation of medicinals ration.	Governors, All Prefs.	Chief, Pharma- ceutical & Supply Bureau
Sep. 12	Yaku-shu No.695	Re: Additional allocation of designated medicines.	"	"
Sep. 15	Yaku-shu No.706	Re: Title on the Supplementary Book 1 to the National List of Medicines and Drugs, 1st edition.	"	"
<u>Special Affairs Bureau</u>				
Sep. 12	Sha-hatsu No.1493	Re: Production allotment of hand knitting yarns	Governor, Fukushima Pref.	Chief, Social Affairs Bureau.
Sep. 12	Sha-hatsu No.1499	Re: Lecturers of the Lecture Course for the Welfare workers.	Governor, Niigata Pref.	"
Sep. 12	Sha-hatsu No.1494	Re: Allocation of clogs & slippers to the social work agencies.	Governors, Tokyo & 2 other prefs.	"
Sep. 12	Sha-hatsu No.1500	Re: Special distribution of LARA goods.	Governor, Osaka Pref.	"
Sep. 13	Sha-hatsu No.1510	Re: Consolation money for the sufferers from the accidents caused by the Allied Forces.	Governor, Kyoto Pref.	"
Sep. 13	Sha-hatsu No.1511	Re: Approval for setup of protection institutions provided for in the Daily Life Security Law.	Governor, Aomori Pref.	"
Sep. 13	Sha-hatsu No.1512	Re: Consultation on approval for setup and national subsidy for equipment expense of the protection institutions provided for in the Daily Life Security Law.	Governor, Toyama Pref.	"

Sep. 29	Ji-hatsu No.806	Re: Sugar rationing for food supply at the fostering establishments.	All Prefectural governors.	"

SECTION II
PREVENTIVE MEDICINE DIVISION

Resumption of BCG Vaccinations

The first lot of BCG to pass the new assay tests are now ready for release. Delay has been due to instituting new methods for producing the dried vaccine at the same time that the assay procedure was changed. It requires approximately three months to complete assay. During this delay the provision of the Preventive Vaccination Law were necessarily held in abeyance.

This law, now in effect, provides that every tuberculin negative individual will be vaccinated with BCG before six months of age and that he shall be retested with tuberculin yearly and revaccinated if found negative at that time. Only those persons over thirty years of age and those whom a physician certifies to have a tuberculous infection are exempted from procedure. For other definite contraindications the vaccination may be postponed certification of the reason by chiefs of health centers.

It has been estimated that 30 million doses of BCG will be needed to carry out the law this fiscal year. The prospects are that about 15 million doses will be produced. As a result, during the first year of operation of the law there will be a temporary shortage of vaccine, which will be overcome before July 1, 1950. Priority should be given to especially exposed individuals such as family contacts and health workers. The Ministry of Welfare is issuing instructions in this matter.

Ministry of Welfare instructions to prefectures, Yo Hatsu 1129 of 24 August 1948 provides that one health center in each prefecture shall each year make a careful follow-up in the case of 1,000 vaccinations. It is desirable that during the first year of this new program that extensive studies be made to evaluate the effect of the vaccination or the tuberculin at different time intervals. It is also desired that careful observations be recorded as to the extent of the local reactions, particularly at one, two and three month intervals after the vaccination.

In observing the vaccinations, it is desirable to separate those who received re-inoculations from those who were vaccinated for the first time. There is some evidence to indicate that the results may be different.

The Japanese generally classify the local reactions as (a) none (b) induration (c) pustule (d) ulcer (e) crust (f) scar. Should any more extensive reaction (such as lymphadenopathy) occur it should be promptly reported to national officials who will institute appropriate investigation.

Sanitation: Street cleaning and garbage and refuse disposal

Technical supervision to ascertain that garbage and refuse is collected and disposed of regularly in such a way as to prevent public health nuisances from arising therefrom is a responsibility of the Sanitation Section (EISEI-KA) of the Public Health Department (MINSEI-BU) of city, town and village.

The actual operation is performed by a cleaning section, (SEISO KA) which is operated by the city, town or village office. The cost of operating this section is usually defrayed by the salvaging and selling of the material by the operators. In many cities, however, it is necessary to pay from tax funds a portion of the cost of operation.

The actual operation is usually carried out by an association (KUMIAI) or private contractor.

The failure of satisfactory garbage and refuse services in the towns and villages is due to this "salvaging system" of financing the operation. The collectors pick over the material taking that which is useful and leaving behind the material that is of no value, which accumulates and eventually develops into a regular dumping place.

In sections thinly settled with scattered homes, no service is provided. The individual home owner is responsible for disposal of his own garbage and refuse.

SECTION III
VETERINARY AFFAIRS DIVISION

FAO Veterinarian Visits Japan

Dr. K.V.L. Kesteven, Senior Veterinarian, FAO, United Nations, at the invitation of PH&W, SCAP, recently spent six days in Japan inspecting Japanese veterinary installations. Special attention was given to the present methods now utilized in the production of veterinary biologics. Arrangements were made to introduce a new strain of hog cholera virus so that a more effective crystal violet vaccine can be produced. Tissue and lyophilized samples of the Nakamura III strain of Rinderpest virus were delivered to PH&W for immediate research, the purpose being to produce a vaccine that will supplant the present simultaneous serum and virus method of immunization. Development and production of a vaccine will, if produced in large quantities, be offered as an export item to Far East countries.

Regional Veterinary Association Meetings

Representatives of PH&W attended Veterinary Association meeting in Hokkaido, Kumamoto, and Tokyo. Attendance at these meetings was considered good, and the programs presented gave excellent indications that the veterinary professional standards are gradually improving.

Veterinary Public Health Refresher Courses

Lectures on the subjects of seafood inspection and the relation of veterinary medicine to public health were given to the veterinary students of the Eighth Refresher Course for Veterinarians at the Institute of Public Health.

Influenza of Cattle

An outbreak of an acute disease of cattle diagnosed as bovine influenza, manifested chiefly by high fever, reddened conjunctiva, serous nasal discharge, laboured respiration and lassitude has assumed epizootic proportions. The cases are mild, the duration of the disease being 2 - 3 days following the first noticeable symptoms. The disease appeared in August in Nagasaki Prefecture where approximately 40,000 head of cattle were effected. Sporadic cases have been reported from Miyazaki, Kagoshima, Hiroshima, Hyogo, Osaka, Kyoto and Shiga Prefectures. Mildness of the attack resulted in only a few of the initial cases being reported. Investigations are being carried out by Animal Hygiene Experimental Stations in the affected areas. The fatality rate is very low and is not accurately known at this date.

In 1925, a similar outbreak occurred and was diagnosed as bovine influenza. The history of that outbreak parallels the present outbreak.

Equine Encephalomyelitis

During the last three weeks a definite reduction in the number of cases of equine encephalomyelitis has occurred. Between the period 1 January - 14 October, a total of 384 cases were officially reported, of which 257 were positive and 127 classed as suspects. The symptoms shown were pathognomonic and the fatality rate, while not yet ascertained, appears to be much lower than that reported for the 1947 - 1948 epizootics. Although an immunization program was completed, history disclosed that some supposedly immunized horses developed the disease.

Animal Diseases

The Animal Hygiene Section, Ministry of Agriculture and Forestry, submitted the following report on the outbreak of animal diseases for the periods 1 - 7 and 8 - 14 October.

For the period 1-7 October

<u>Prefecture</u>	<u>Diseases</u>	<u>No. of Cases</u>
Akita	Hog Cholera	4
Nagano	Anthrax	1 (horse)
Hokkaido	Equine Encephalomyelitis	2 (suspects)
Iwate	" "	1 (positive)
Miyagi	" "	3 (positive)
Akita	" "	1 (positive)
Fukushima	" "	7 (3 pos.,4 sus)
Tochigi	" "	11 (positive)
Saitama	" "	1 (suspects)
Chiba	" "	1 (positive)

For the period 8-14 October

<u>Prefecture</u>	<u>Diseases</u>	<u>No. of Cases</u>
Gumma	Hog Cholera	5
Chiba	Swine Erysipelas	1
Miyagi	Equine Encephalomyelitis	10 (positive)
Akita	" "	2 (suspects)
Yamagata	" "	2 (suspects)

Rabies

The Veterinary Affairs Section, Ministry of Welfare, reported 17 new cases of rabies in dogs in the Kanto Region for the period 25 September - 1 October.

<u>Prefecture</u>	<u>New Cases</u>	<u>Total since 1 Jan</u>
Tokyo	5	135
Kanagawa	3	54
Chiba	5	110
Saitama	4	83
Ibaraki	0	16
Gumma	0	52
Tochigi	0	2
Shizuoka	0	1
Total	17	453

SECTION IV
SUPPLY DIVISION

Plan of Distribution of Imported Streptomycin

A recent shipment of streptomycin amounting to 400,000 grams arrived in Japan from U.S.A., 7 October, and is being prepared for distribution. The Pharmaceutical houses responsible for the storage and central distribution are as follows:

<u>Name</u>	<u>Quantity</u>
Takeda Yakuhin Kogyo Co, Ltd.	100,000 grams
Shionogi Seiyaku Co, Ltd.	50,000 grams
Tanabe Seiyaku Co, Ltd.	30,000 grams
Fujisawa Yakuhin Kogyo Co.,Ltd.	30,000 grams
Yamanouchi Seiyaku Co., Ltd.	30,000 grams
Dainippon Seiyaku Co., Ltd.	30,000 grams
Daiichi Seiyaku Co., Ltd.	30,000 grams
Sankyo Co.,Ltd.	20,000 grams
Torii Seiyaku Co., Ltd.	20,000 grams
Tokyo Tanabe Seiyaku Co, Ltd.	20,000 grams
Banyu Seiyaku Co, Ltd.	20,000 grams
Nakamura Taki Shoten Co, Ltd.	20,000 grams

The streptomycin in this shipment will be handled as a designated ration item under Ministry of Welfare Notification No. 70, 1947, and will be distributed throughout Japan in accordance with the plans formulated by the Ministry of Welfare and approved by PH&W. Local distribution will be through a limited number of local sellers designated in each prefecture by the governor. The distribution breakdown is as follows: (The column headed "For General Use" refers to distribution to Hospitals as indicated by local (prefectural) streptomycin councils).

	Population (1948)	TB Deaths (1948)	DISTRIBUTED AMOUNT (NUMBER OF PERSONS)						
			Total	For General Use	National Sanatoria	National Hospital	Medical Schools	Research Institutes	National sanatoria of other ministries.

Penicillin Production in Japan

Penicillin production in Japan continued upward during August. A total of 159.1 billion Oxford Units passed assay of a record total 168.4 O. U. assayed. This amount represents the largest amount of assayed penicillin production reported for a single month and exceeds 1948 monthly average production by 6.4 times.

The Ministry of Welfare reported 81.2 billion O. U. procaine penicillin successfully passed assay during August. It will be distributed in vials of 300,000 - 1,500,000 - 3,000,000 Oxford Units. Monthly average production of all types of penicillin for the first eight months CY 1949 totalled 101.8 billion O.U., or, four times the monthly average production totals for CY 1948.

The outlook for future penicillin production is very promising. With the installation of newly designed 40 ton fermenting tanks at several manufacturing plants, it is estimated that production will reach 300 billion O. U. monthly. Conversely, prices are expected to be substantially reduced and will permit inclusion of penicillin on the Japanese export production schedule.

SECTION V NARCOTIC CONTROL DIVISION

Narcotic Control Activities Report - August

The August report on narcotic control activities from the Ministry of Welfare contained the following information:

Total registrants	93,714
Arrests - Registered persons	31
Unregistered persons	176
(including 33 foreign nationals and 20 Koreans)	
Convictions - Registered persons	7
Unregistered persons	45
(including 16 foreign nationals and 1 Korean)	
Thefts of narcotic (including 2 hospitals)	21
Losses by fire	3

Penalties for registrants varied from ¥ 5,000 fine to one year penal servitude. Two out of four sentences of penal servitude were suspended. Penalties for non-registrants tried in Japanese Courts varied from ¥ 5,000 fine to two years penal servitude. Six out of 15 sentences of penal servitude and one fine were suspended. One was found not guilty but appeal was made by procurators. Penalties for Japanese tried in Military Courts varied from one year to five years penal servitude (Four out of seven received five years penal servitude). Penalties for foreign nationals in Military Courts varied from 6 months suspended sentence and ¥ 36,000 fine to 5 years penal servitude. One out of 14 sentences of penal servitude was suspended. Five deportations were ordered.

Forty-five registrants were admonished and 25 were dealt with administratively, their licenses being suspended from one to six months. Eight non-registrants held for investigation were released because of insufficient evidence.

Three hundred fifty-seven violations of the Marihuana Law were reported. Of these 342 were admonished and 15 were arrested.

The report also summarized the activities of narcotic agents as follows:

Inspection of registrants	2,185
Investigations originated	587
Investigations concluded	615
Investigations not concluded	312

Enforcement

A report has been received of the arrest of an executive director of a pharmaceutical company in Ehime prefecture. The director has been sentenced to one year penal servitude and ¥ 50,000 fine. Thirteen other persons, five of whom are fugitives, were involved in the illicit narcotic transactions.

The director of the company is reported to have sold ¥ 100,000 narcotics illegally since 1946. The company was never registered under the narcotic law, but retained possession of the narcotics which were purchased before the effective date of the narcotic law. Two pharmacists, two physicians and the other persons involved sold the narcotics for approximately ¥ 1,000,000.

The director of the company appealed to the higher courts. The Attorney General's office is following the prosecution of the case.

SECTION VI WELFARE DIVISION

Red Cross

Safety Section - Headquarters of the National Local Police has decided to abolish the former first aid methods of the Japanese Police and adopt the Japanese Red Cross First Aid program in training Japanese Police in the use of first aid.

Volunteer Section - Tokyo Blind Association has started a Blind Women's Volunteer Service. Japanese Red Cross Headquarters is supplying them with knitting yarn and instructors.

Between 26-29 September, a Medical Social Work Orientation-Practice Conference was held at the Central Red Cross Hospital, sponsored by the Japanese Red Cross Headquarters.

Community Chest - Japanese Red Cross Joint Fund-raising Campaign for October 1949 reports, as of 5 October 1949, 17 prefectures have raised a total of ¥ 20,089,583 or 1.6% of the goal. Miyagi Prefecture is in the lead with 19.9% of its prefectural goal attained.

Licensed Agencies for Relief in Asia (LARA)

With the view of economizing in the costs incurred in the shipping and handling of LARA supplies at the local prefecture, city, town and village level, the Ministry of Welfare made the following suggestions:

1. Development of a well-thought-out coordinated plan of distribution at each level.
2. Utilize railway express service rather than dispatching a truck beyond 1 day's journey within a given area. Utilize small government owned vehicles for local delivery.
3. Minimum number of persons to handles shipments at the warehouse.
4. Simultaneous distribution of food and clothing in order to reduce warehousing charges and possible loss of supplies.
5. Keep the maximum number of clothing items to 20, i.e., adult male outer garments - 1 item; underwear - 1 item; boys outer garments - 1 item; underwear - 1 item; adult female outer garments - 1 item, etc.
6. Utilize volunteers from institutions receiving LARA supplies and from private volunteer welfare groups.
7. Reuse packing and crating materials.

UNICEF

Attached as Incl No.1 is a press release on the UNICEF program in Japan.

Authorization for Experimentation in the Public Welfare Program

The Ministry of Welfare has issued Sha Otsu Hatsu #322 (10 Oct 1949) which concerns authorization for prefectures to carry on experimentation in the public welfare programs and has requested that close contact be made with Civil Affairs Teams in connection with the experimentation. The order was issued at the request of prefecture and Civil Affairs Team Welfare Officials.

It is anticipated that this order will give approval to those projects now in operation.

In view of the fact that an effort will soon be made to coordinate experimentation throughout the country on a Civil Affairs Team regional basis with Region Teams, Prefecture officials, and Ministry personnel cooperating on designated problems, it is suggested that additional experimentation be held in abeyance temporarily.

Child Welfare - Councils for Youth and juvenile problems

At the request of the Prime Minister a Central for the Problems of Youth and Juveniles has recently been inaugurated. The Council is for the purpose of insuring coordinated action among all Ministries and other governmental bodies on the problem of juvenile delinquency. Private citizens from interested fields are also members of the Council. Prefectures, cities, towns and villages have been requested to organize similar coordinated agencies, support for which is to be provided from the member agencies.

As a promotional device, the Council is proposing that a week be designated nationally, November 14 - 20, for the purpose of calling attention to the problem.

Welfare Department Personnel

Enclosed with this bulletin as Incl No.2 is a copy of Hei-no 1793, concerning advice to governors against transfer of welfare personnel.

Social Work Bibliography TB-PH WEL 21 (Incl No.3) includes a complete list of publications, in Japanese, on Social Work, and should prove very useful in the field.

Change in Staff

Mr. Tom Metsker, formerly Kanto Region Civil Affairs Team Welfare Officer, has joined the Welfare Division Staff and will assume the duties of Mr. Micklantz, who joins the International Activities Section of the American Red Cross.

Following extracts were made from the Civil Affairs Team reports for August

Application of special allowances - (Aichi) - Spot checks of families receiving public assistance indicate that failure to include in grants permissible allowances such as the education allowance and the special allowance for artificial feeding of infants has resulted in absence from school and malnutrition.

Consolidation of small welfare offices - (Aomori) - Presently under discussion in two districts in a plan for consolidating some of the small welfare offices.

Group applications - (Chiba) - Thirty-eight Korean families whose income from making illegal sake had been cut off and 20 Japanese families whose wage-earners had lost employment as a result of reduction in force in a local plant, made group applications for assistance. After individual case investigations, 11 Korean families were found eligible for assistance. Because the Japanese applicants still had funds available from the retirement allowances received at time of discharge, none were eligible. All were referred to the Labor Exchange.

Absorption of unemployed - (Fukushima) -After fluctuating during the past several months, the case-load appears to be levelling off. Apparently, new job openings to a great extent have absorbed the unemployed. Local

welfare and employment officials are successfully coordinating their efforts to place the unemployed, and localities are either establishing or expanding public works program.

Field supervision - (Hokkaido) - Prefectures and district officials are gradually assuming the responsibilities of field services. A uniform approach to the problems of local administration has been aided by development of standardized review schedules. Follow up by the team on reviews made by officials has revealed that recommendations made by field staff have been followed.

Adult homeless - (Kanagawa) - Housing for adult homeless is becoming a severe problem. Some facilities for temporary shelter tend to become permanent residence.

Improvement in administration - (Kyoto) - The team observes, as a result of reviews made in remote areas, that the overall improvement found in welfare administration would not have been possible a year ago. Welfare has become an accepted part of governmental organization and the concept of administrative responsibility has improved even in these areas not in close touch with prefecture offices.

Costs of minsei-ii and jido-ii - (Saitama) - A study of minsei-ii, jido-ii costs which included all types of activities subsidized and all public sources of funds was completed by the prefecture welfare department. Average cost per minsei-ii for the current fiscal year was ¥ 6,419; for the 3160 minsei-ii over ¥ 20 million. In March, welfare departments in the six cities had 64 full time employees, whose total pay for the month was ¥ 362,218. Minsei-ii expenses in these six cities now average ¥ 205,951 per month.

Social insurances finances - (Tokyo) - The general financial situation in this field has created serious problems. Although use of insurance benefits has increased, premium collections have decreased due to irregular wage payments and company liquidations. To meet the situation a third increase in premium rates has been made, to 5.5% of basic wage. In one instance, employer rate is 4.5%, with an employee rate of 1.5%.

Minimum standards in day nurseries - (Gifu) - Surveillance of the enforcement of the minimum standards as applied to day nurseries revealed that not all operators had been informed of the law. The plea was made that standards could not be met because of inadequate funds. The town observed, however, that this type of agency is in a better position to make improvements than any other type. The majority of day nurseries are privately operated and a "considerable profit" is being made.

Minimum standards, general - (Kyoto) - Prefecture Child Welfare Section staff have begun official inspections under the Minimum standards Law. First inspections observed by the team were thorough and painstaking. Inspection of all children's institutions will be completed by December.

Foster home placements and adoptions - (Hyogo) - Because it means a reduction in income under the Child Welfare Law, institution directors are refusing to release children for foster home placement and adoption. Directors have used the excuse that the institutionalized children were not suitable for placement, but, have been known to approve placements on receipt of a gift.

Medical fee payment - (Osaka) - A committee from the Osaka-Fu Medical Association reviews bills submitted by doctors for treatment of insurance patients. Medical Association representatives cooperated with officials from the Ministry of Welfare and Fu in investigating 60 doctors and dentists suspected of overcharging and giving unsatisfactory treatment to Health Insurance patients. Forty-two of the 60 were found guilty. Five were dropped from the program, and the remainder placed on probation.

SECTION VII SOCIAL SECURITY DIVISION

Advisory Council on Social Security

In answer to several requests, a copy of the law establishing the Advisory Council on Social Security is attached to this issue of the Bulletin as Incl No.4.

Recently the Advisory Council held its seventh session at which the principal subjects discussed were the establishment of an administrative office for the Council and a recommendation regarding subsidies for the social insurance programs. The prime Minister's office informed the Council that recommendations would be made for

the supplementary budget to provide funds for meeting, in part, the request for establishing and staffing an administrative office.

At a previous meeting the Council passed and submitted to the Prime Minister's office a recommendation that the Government should give consideration to providing funds for meeting in full the cost of the social insurance administrative expenses and 10% of the cost for medical care benefits. The latter part of the recommendation resulted from the critical financial condition of the social insurance programs which provide medical care and cash sickness benefits. At present the Government's participation in the cost of administration varies with the several programs but it is very small.

The Government replied that the recommendation for meeting the administration costs from general revenues was being given favorable consideration but that the numerous financial problems involved in the economic stabilization program would initiate against increased subsidy for medical care. It was pointed out that more effective collection of contributions would diminish the need for government subsidy.

Medical Fee Payment Fund

During recent prefecture visits, conferences held with a number of doctors which revealed that many had an erroneous conception concerning the operations of the Social Insurance Medical Fee Payment Fund and the causes for delay in the payment of medical care claims. The doctors were erroneously placing the entire blame upon the Government. In the opinion of a number of the doctors, the Government was obligated to finance the Fund and underwrite the payment of the medical care claims regardless of the receipt of social insurance contributions; therefore, they felt that the Government had failed to carry out its responsibility.

The doctors are now advocating a large subsidy by the Government to settle medical care claims and are ignoring the fact that the health insurance programs should be established on a sound financial basis. Few realized that the deposits in the Fund depend upon the remittance of contributions collected from the insured and their employees; also doctors seemed to be unaware of the fact that aside from delinquencies in the remittance of contributions, there has occurred cases of "milking" of social insurance funds by insured encouraged or condoned by some doctors. There is, however, a responsibility of government administration which should receive more emphasis and that is the collection of delinquent contributions.

It was evident that the insurance doctors were not receiving sufficient information and orientation regarding the operation of the social insurances. It is urged that the local Social Insurance Medical Care Advisory Councils have frequent meetings with the local medical society so as to prevent and correct such erroneous conceptions. Furthermore, it was learned that few of the prefectural medical societies have a committee on social insurance. It is suggested that all of them establish such a committee to assist the advisory councils in disseminating pertinent information for the benefit of insurance doctors.

SECTION II
PREVENTIVE MEDICINE DIVISION

Status of Japanese Produced Biologic Products

The immunization program being carried out in Japan under provision of the Preventive Vaccination Law (Law #68, 30 June 1948) was temporarily halted in December 1948 when distribution of all Japanese produced biologic products was discontinued pending re-assay of already produced. Since that time the production and assay program has been carefully reorganized and necessary steps have been taken to insure that all products released for distribution are safe and effective.

All of Japan's pre-1949 regulations relative to the production and assay of biologic products have been or are in the process of being revised to conform to modern practices. All products in stock or in process of distribution in December 1948 have been re-assayed under stringent controls and all new stocks have been subjected to the same rigid assay tests. The program has progressed satisfactorily, however, a temporary shortage of vaccine still exists and is expected to exist for some time yet. All biologic products which have been released this year have passed the rigid assay requirements, all future products will be required to pass the requirements and both can be used with confidence.

Reports indicate that some Japanese centers and certain segments of the population still do not have full confidence in the Japanese biologic products. The Chief, Public Health and Welfare Section issued a public statement on 17 October 1949 clarifying the present status of the biologics assay program. The purpose of this statement was to give to the Japanese doctors of Japan, and the public at large, complete factual information on the status of this program in order to allay any apprehension which might still exist in Japanese confidence in Japanese produced biologic products. It is desirable that information in subject statement be widely disseminated, and for this reason a copy of subject press release is inclosed with this bulletin (Inclosure No.1) for the information and guidance of Civil Affairs Public Health officers. It is suggested that this material be disseminated to all prefectural public health personnel, to the doctors, and to the public within each prefecture.

Training Courses at the Institute of Public Health

Refresher training courses are scheduled at the institute of Public Health in Tokyo as follows:

- (1) Public Health Veterinarians - 28 November to 31 January.
- (2) Public Health Nutritionists - 28 November to 31 January.

Nutritionists employed in prefectural or municipal health departments or in health centers are eligible to attend. Prefectures which have a backlog of nutritionists in need of training may send more than one student to the course.

- (3) Public Health Nurses - 1 December to 31 March 1950 (sec Nursing Affairs).
- (4) Health Center Laboratory Technicians - 5 December to 9 February 1950 - limited to 30 students.

Effort should be made to see that well-qualified candidates are selected and sent to the above courses. Official announcements have been sent to prefectural governors by the Ministry of Welfare.

Penicillin in the Treatment of Syphilis

Information has appeared in various technical journals from time to time on the effect of penicillin in the treatment of syphilis. Certain articles have also appeared in popular magazines for lay consumption. In a recent issue of Collier's magazine (2 July 1949) there appeared an article entitled "A One-Shot Cure for Syphilis" by Morton Sonthheimer. This article graphically summarized in layman's language the results of man's long search for a simple and effective cure for syphilis and describes the achievement of this epoch making event.

The article was checked for accuracy by Dr. John F. Mahoney, who is mentioned in the article; by the Chief of the Division of Venereal Disease, U.S. Public Health Service; by the Chief of the Biological Research Department of the Pfizer Laboratories; and by the assistant medical director of the Bristol Laboratories.

Because of the importance of the information contained therein, subject article has been reproduced and is inclosed with this bulletin (Incl. No.2) for the information and guidance of Civil Affairs Public officials in Japan.

SECTION III NURSING AFFAIRS DIVISION

Refresher Courses

The ninth 4-month course for Public Health Nurses will begin at the Institute of Public Health on 1 December. Civil Affairs Nurses are again asked to aid the prefectural officials in the selection of a candidate. The public health nursing students of the Institute are now housed in a new dormitory in the same building where classes are held.

Nursing Literature

"The Handbook on Secondary School Programs" as prepared by the Ministry of Education under the guidance of Civil Information and Education Section and Public Health and Welfare Section has been completed. A copy of this handbook will be sent to the Education Section and the Public Health Section of each regional team in the near future. Copies have been made available to the Japanese Department of Education.

A Complimentary copy of "The Hospital Head Nurse" by Wayland has been sent to the Nursing Division, Public Health Section of each Regional Civil Affairs Team. This book may be purchased for 380 yen at the office of "Medical Friend Co.", 40 Momozonocho, Nakano-ku, Tokyo-to.

Class plans and suggestion relative for rotation of students in A & B Schools of Nursing are being prepared and will be sent to Civil Affairs Teams in the near future.

SECTION IV VETERINARY AFFAIRS DIVISION

Milk Conference

Public Health and Welfare representatives held a conference with representative members and officials of the Japan Dairy Products Association, purpose being to assist in the planning of a more acceptable method in the manufacturing of indigenous milk products.

The proposed plan of reducing allotments of sugar to the processors, creates a necessity on the part of some to convert their plants so that other milk products not requiring sugar can be produced.

Physical Examination of Laboratory Animals

Plans have been formulated between officials of the Ministry of Welfare and Ministry of Agriculture and Forestry, purpose being to complete to diagnostic tests and immunizations on all laboratory animals utilized in the production of human biologics.

Rabies Conference

A conference with prefectural officials concerned with rabies control in the Kanto Region, will be held 5 November. Present laxness on the part of the prefectural officials in enforcing rabies control measures has been an influencing factor in failure to eradicate the disease.

Bovine Influenza

A total of 57,180 cases of bovine influenza has occurred between the period of August to October. Of this number, 96 died and 70 were destroyed. The figures listed are still approximate in that the disease has been quite mild and in many areas no reports were received. Investigations are under way and laboratories have been successful in isolating a virus which is now undergoing serial passages in mice. The deaths have, in the majority of cases, been due to the invasion of secondary organisms with resulting pneumonias and septicemia. The symptoms have been mild and usually lasted only two or three days.

Institute of Public Health Veterinary Course

The eighth Refresher Course for Public Health Veterinarian was concluded on 29 October with a total of 42 students being graduated. Two Okinawan veterinarians attended this course, duration of which is two months.

Veterinary License Control

The first organizational meeting of the 25 Japanese veterinarians appointed by the Ministry of Agriculture and Forestry, was held in Tokyo on 29 October. This is an official governmental body authorized under the new Veterinary License Law to conduct national examinations for licensing of veterinarians. The council also has the authority for action in event of professional violations of the Law.

Veterinary Sub-committee on Assays

Under authority of the Pharmaceutical Law, the standards for veterinary biologics have been delegated to a sub-committee of veterinarians. On 29 October, a meeting of this group was held in Tokyo. An effort is being made to have the standards for veterinary biologics conform with these for human use in as far as it is compatible.

Monthly Animal Quarantine Report

During the month of September, animals and animal by-products were received and inspected in the following quarantine stations under supervision of the Animal Hygiene Section, Ministry of Agriculture and forestry.

Animals

Yokohama ----- 1 elephant from Bangkok, Siam

Gross weight of by-products quarantined

<u>Quarantine Station</u>	<u>Bone</u>	<u>Hide</u>	<u>Wool</u>	<u>Other Hair</u>	<u>Other goods</u>
Hakodate	-	-	-	-	-
Otaru	-	-	-	-	-
Yokohama	171,671	288,994	59	-	51,471
Nagoya	-	-	325,810.451	-	-
Osaka	-	2	11.4	-	0.2
Kobe	-	327,645	113,731	166 (Imp) 1,130.37 (Exp)	309,972
Moji	-	-	-	-	-
Nagasaki	-	-	-	-	-
				<u>166 (Imp)</u>	
Total	<u>171,671</u>	<u>616,641</u>	<u>439,611.851</u>	<u>1,130.37(Exp)</u>	<u>361,443.2</u>

Weekly Rabies Report

The Veterinary Affairs Division, Ministry of Welfare, submitted the following report on the outbreak of new cases of rabies in dogs for the period 16 - 22 October.

<u>Prefecture</u>	<u>New Cases</u>	<u>Total to Date</u>
Tokyo	7	155
Kanagawa	2	63
Chiba	11	125
Saitama	2	87
Ibaraki	4	22
Gumma	0	52
Tochigi	0	2
Shizuoka	<u>0</u>	<u>1</u>
Totals	26	507

Investigations have disclosed that many pet owners have not registered their dogs and cats due to the high tax that has been placed on pets by Prefectural Ordinance. This has caused considerable difficulty in the rabies control program, in that owners will not submit their pets for immunization for fear of being taxed by the Prefectural authorities, and because the owners do not have the money available to pay the tax.

In order to correct the present conditions which are influencing the presentation of animals for immunization, the officials of Ministry of Welfare have them requested to set up a conference for 5 November with the prefectural officials concerned in the control of rabies in the Kanto Region. This action is deemed advisable in as much as effective controls are at ##### very lax.

Weekly Animal Disease Report

The Animal Hygiene Section, Ministry of Agriculture and Forestry has submitted the following report on those animal diseases occurring during the period 22 - 28 October.

<u>Prefecture</u>	<u>Diseases</u>	<u>No. of Cases</u>
Akita	Swine Cholera	4
Shizuoka	" "	6
Chiba	Swine erysipelas	2
Kumamoto	Blackleg	1
Nagano	Anthrax	1
Chiba	"	1
Tochigi	Equine encephalomyelitis*	3 (2 pos - 1 sus)
Fukushima	" "	5 (suspects)
Kagoshima	" "	1 (suspect)

* Note: Positive cases to date --- 268
Suspect cases to date --- 137

Monthly Meat Inspection Report

The Veterinary Affairs Section, Ministry of Welfare, submitted that following report on meat inspection as conducted by Prefectural Veterinarians during the month of August 1949.

	<u>Cattle</u>	<u>Calves</u>	<u>Horses</u>
Number slaughtered	15,655	1,411	3,685

Prefectural veterinary meat inspectors conducted sanitary inspections on the following establishments processing and selling meat during the month of August.

Meat Processing Plants

Number of establishments	---	262
inspected	---	207
Sanitary condition	Good	56
	Fair	124
	Poor	27
Total number of inspections	---	387

Amount of meat and meat products examined	---	56,331	
Amount of meat and meat products condemned	---	360	
Cause of condemnation	---	Putrefaction	
Disposition	---	Fertilizer	
<u>Retail Meat Shops</u>			
Number of establishments	---	14,451	
	inspected	---	8,065
Sanitary condition	Good	---	3,095
	Fair	---	4,089
	Poor	---	881
Total number of inspections	---	10,743	
Amount of meat and meat products examined	---	474,326	
Amount of meat and meat products condemned	---	1,530	
Cause of condemnation	---	Putrefaction	
Disposition	---	Fertilizer	

Monthly Animal Disease Report

The Animal Hygiene Section, Ministry of Agriculture and Forestry, reported the following outbreak of animal diseases for the month of August.

<u>Disease</u>	<u>No. of Case</u>
Anthrax	3 (2 cows, 1 horse)
Blackleg	1
Swine erysipelas	12
Swine cholera	201
Swine plague	7
Piroplasmosis	1
Strangles	3
Equine infectious anemia	290
Brucellosis (cattle)	19
Trichomonas	128
Equine paratyphus	6
Pullorum disease (fowl)	2,776
Bovine tuberculosis	88
Equine encephalomyelitis	201
Rabies - cows	2

Equine encephalomyelitis after assuming a milk epizootic, now has become endemic with only sporadic cases being reported. A total of 405 cases have been reported, of which 137 were classified as suspects.

Monthly Food Sanitation Report for August

The Food Sanitation Section, Ministry of Welfare, submitted the following report on the sanitary inspections as conducted by Prefectural food sanitarians in those establishments processing, handling and selling food and beverages during the month of August.

Number of establishments registered	698,186
Number of establishments inspected	187,817
Number of establishments completing improvements	110,738
Number of administrative punishments	6,407
Number of cases to be tried under civil law	69
Number of establishments to be approved	23,668
Number of samples collected for analyses	7,494
Number of establishments requesting food analysis	1,952

During the month of August, a total of 86 outbreaks of food poisoning involving 1,511 people occurred with 33 death being recorded.

The number of food sanitarians new engaged in the inspection of food and beverages of non-animal origin totals 1,353.

The reduction of Prefectural personnel engaged in food sanitation has curtailed the inspection program considerably, resulting in fewer establishments receiving inspection. The remoteness of some of the food and beverage establishments in relation to the location of the Health Center prevents in many cases any attempt of carrying out inspection.

Monthly Milk Inspection Report for August

Prefectural Health Center veterinarians conducted sanitary inspections on dairy farms, milk plants and dairy products plants. The number of inspections made and the laboratory findings are as follows:

Special Milk

Number of farms inspected	---	6
Samples examined	---	18
Over bacterial standards (50,000 per cc)	---	1
Under butterfat standards (3.3 percent)	---	1
Number of plant inspected	---	18
Over bacterial standards (50,000 per cc)	---	1
Under butterfat standards (3.3 percent)	---	1

Ordinary Milk

Number of farms inspected	---	13,084
Samples examined	---	13,786
Over bacterial standards (2,000,000per cc)	---	1,750
Under butterfat standards (3.0 percent)	---	812
Number of plant inspected	---	3,833
Over bacterial standards (2,000,000per cc)	---	570
Under butterfat standards (3.0 percent)	---	371

Goat Milk

Number of farms inspected	---	42
Samples examined	---	48
Over bacterial standards (2,000,000per cc)	---	9
Under butterfat standards (3.0 percent)	---	13

Milk Produced on Dairy Farms in July

<u>Type of Milk</u>	<u>No. of Farms</u>	<u>No. of Cows & Goats</u>	<u>Amount Produced</u>

SECTION V SUPPLY DIVISION

DDT Movie Short

On 26 October the Ministry of Welfare and the DDT Manufacturers Association presented the preview of "The Tale of DDT", a documentary film which demonstrates the use of DDT in the control of household insects, to approximately 700 interested spectators at the Mainichi Press Theatre, Tokyo. The film is based on a letter written by a public health nurse from Fukushima, which is read over the air on radio station JOAK on the "Our Opinion

Hour” program. “The Tale of DDT”, and informative and highly interesting film, is being distributed by the Ministry of welfare to all prefectures, for the purpose of stimulating public interest in insect control.

Biologic Assay

During the period 11 - 23 October the following biologics have been assayed and found to meet minimum standards:

<u>Item</u>	<u>Manufacturer</u>	<u>Lot No.</u>	<u>Quantity</u>	Unit: dose

SECTION VI
NARCOTIC CONTROL DIVISION

Narcotic Control Activities Report - September

The September report on narcotic control activities from the Ministry of Welfare contained the following information:

Total Registrants	93,952
Arrests - Registered persons	27
Unregistered persons	178
(including 32 foreign nationals and 7 Koreans)	
Convictions - Registered persons	7
Unregistered persons	65
(including 15 foreign nationals and 5 Koreans)	
Theft of narcotics (including six hospitals)	26
Lossed by fire (including hospitals)	16

Penalties for registrants varied from ¥ 5000 to ¥ 50,000 fine and from four months ##### and six months penal servitude. Three out of five sentences of penal servitude were suspended. Penalties for non-registrants tried in Japanese Courts varied from ¥ 1000 to ¥ 50,000 fine and from two months to two years penal servitude. Five out ##### sentences of penal servitude were suspended. Twenty sentences were appealed by defendants and four by the prosecutors. The penalty of one Japanese tried in Military Court was two years penal servitude and one year suspended sentence. Penalties of foreign nationals and Koreans in Military Courts varied from one year suspended sentence to five years penal servitude. Of 18 cases before Military Courts, ##### as dismissed due to insufficient evidence, 16 received sentences of penal servitude, two received a partially suspended sentences and one a fully suspended sentence while six were ordered departed, before or after serving of sentence. Sixty registrants were admonished and 40 were dealt with administratively, their licenses being suspended from one week to three months.

Ninety-two violations of the Marihuana Law were reported. Of these 87 were admonished and five were arrested.

The report also summarized the activities of the narcotic agents as follows:

Inspections of registrants	1,728
Investigations originated	438
Investigations concluded	386
Investigations not concluded	509

SECTION VII
WELFARE DIVISION

Public Assistance Report - August

The Ministry of Welfare has submitted the following report for the month of August. Figures for July 1949 and August 1948 were for purpose of comparison:

	August 1949	July 1949	August 1948
Assistance- cash	¥ 878,789,129	848,419,481	420,431,334
Assistance- kind	<u>13,350,923</u>	<u>12,996,497</u>	<u>58,633,714</u>
Total	¥ 892,140,052	861,415,978	479,065,048
Persons - Institutional	132,321	133,663	144,613
Persons - non-institutional	<u>1,548,845</u>	<u>1,534,509</u>	<u>1,758,926</u>
Total	1,681,166	1,668,172	1,903,539

*See Incl No.3 for prefecture public assistance report. Following extracts were made from Civil Affairs Team Reports for August Saitama Prefecture. The Prefectural Welfare Department in cooperation with the Saitama Red Cross Chapter is sponsoring seven (7) local ophthalmological consultation clinics during August for the purpose of examining visually handicapped persons.

Kochi Prefecture - In order to help children who could not attend school due to their lack of clothing, the Okimachi Red Cross had a clothing campaign. In less than a month, over 500 pieces of clothing were collected. This clothing is to be renovated and distributed in time for the next school term. Well over 50 children will benefit by this program. All excess clothing will go to nurseries in the village.

The Red Cross Information Program has met with great success throughout the prefecture. It was estimated the pictures were shown over 80 times with over 27,280 people present.

The Kure-cho Red Cross Volunteer Service Group (Hoshidan) was reported as having received a subsidy of ¥ 5,000.00 from the Town Office. This case was investigated by the Kochi Red Cross and found to be a violation of local autonomy, and the Volunteer Service Group was requested to return the money to the town office.

Kagoshima Prefecture - Medical attention required by children at the Child Welfare Station in Kagoshima, is now performed by doctors belonging to the Japan Red Cross Hospital, which is located next door to the station.

Nagasaki Prefecture - Nagasaki City had to relocate its transient shelter in August and was met with a demand by the League of Repatriates from the Russian Zones, that the seemed floor of the shelter be reserved entirely for repatriates, including those who had returned more than a year ago. The City Welfare Chief denied this request as he wished to maintain the service for any needy, homeless wanderers, rather than cater to one category. It has been found that when the repatriates from the Soviet are promptly adjusted in their homes and villages, and not segregated, they do not agitate, but conform to the community pattern. The eighteen who returned to Iki Island are all employed and assimilated into the family and social group.

Red Cross

Community Chest: Japanese Red Cross joint fund raising campaign for October 1949 reports as of 24 October 1949, 46 prefectures have raised a total of ¥ 218,956,881.64 or 17.9% of the goal. Fukushima prefecture is in the lead with 53% of its prefectural goal attained.

Disaster Relief: The following information concerning the fire disaster in Kochi-shi, Tanesaki-machi which occurred on 20 October 1949 was submitted by JAPCROSS 22 October 1949:

House completely burned	80
House partially burned	82
House completely collapsed	7
Persons slightly injured	4

Two Japanese Red Cross relief teams were dispatched and on duty. Relief supplies sent from Headquarters: 8 layettes - 80 children's garment - 160 towels - 160 notebooks - 160 pencils.

Appointment of Full-time Directors for Welfare Departments

The Ministry of Welfare has requested to the governors of Aomori, Iwate, Miyagi, Mie, Saga, and Miyazaki to appoint full-time directors for the prefecture welfare departments.

Minsei-iin - Reassignment of duties

Attached to this Bulletin as Incl No.4 is a copy of HATSU SHA #72 dated 31 October, subject: Service limit of Minsei-iin (Jido-iin) in Public Assistance and Child Welfare Program. The Order changes considerably the duties of Minsei-iin and Jido-iin in certain areas. It is effective 1 December.

In-Service Training:

Certificates were given to 55 students who attended the 17-day Institute on In-Service Training at the Japan School of Social Work during the closing ceremony on 27 October. These students return to their prefectures with the responsibility for organizing In-Service Training programs and are designated as In-Service Training Directors although separate positions as such have not been created as yet and they do have other duties in their respective welfare positions. In three prefectures, Miyagi, Fukushima and Akita, the Japan Social Work Association with funds from the Community Chest have employed In-Service Training Directors during the past year. These men shared their experience with the class. These prefectures having the six largest cities, Aichi, Tokyo, Kanagawa, Hyogo, Osaka, and Kyoto had on additional representative.

From the final papers turned in by the students, the eight best plans for In-Service Training were presented to the class, these being from the following prefectures: Saga, Okayama, Mie, Ishikawa, Ibaraki, Fukui, Ehime and Miyagi.

Although the papers presented by the 17 American ##### were given in Japanese translation to each student it has been decided to compile a back including the speeches, both written and oral, and a digest of the discussions in English and Japanese for future use in In-Service Training programs. A committee from the group has been organized to edit this material. The group also decided to form an ### so that they may continue to share their experience in this important field of staff development and improvement of job performance in the welfare field.

SECTION VIII SOCIAL SECURITY DIVISION

Claims for Damages Resulting from the Occupation

SCAPIN 1195 (GS), 11 September 1946, informed the Japanese Government that "...the Supreme Commander for the Allied Powers recognizes no legal basis for liability with respect to (claims resulting from the Occupation), and accepts no responsibility for the adjustment and payment thereof."

Japanese nationals employed by the Special Procurement Board for the Occupation are protected under the Labor standards Law for on-duty injuries and illnesses, and by the Health insurance and Welfare Pension Insurance Laws for off-duty injuries and illnesses. Prior to its being abolished in 1948 by the provisions of the new Constitution, the Employees' Relief Ordinance (Imperial Ordinance 382 of 1918) afforded such coverage.

Employees of private employers may be insured, of course, under the workmen's Accident Compensation Insurance Law, Health Insurance Law and Welfare Pension Insurance Law. Other persons may be insured under the National Health Insurance Law.

Aside from the benefits a person may be eligible for under the social insurance laws named above, or under the Daily Life Security Law, the Japanese Government has made special provision to compensate for personal disability and property damage resulting from the Occupation. This program is designated "#####" for these Damaged in an Accident Caused by Occupation Forces" and is based upon the following Cabinet Decisions and Ministerial and Bureau Notification.

Cabinet Decision of 31 May 1946,
Welfare Ministerial Notification 86 of 3 July 1946,
Social Affairs Bureau Notification 87 of 3 July 1946,
Cabinet Decision of 4 January 1947,
Welfare Ministerial Notification 2 of 8 January 1947,
Social Affairs Bureau Notification 12 of 27 January 1947,
Welfare Ministerial Notification 18 of 1 March 1949, and
Social Affairs Bureau Notification 61 of 8 March 1949.

Supervision of the program has been assigned to the Protection Section, Social Affairs Bureau, Ministry of Welfare. It is designed to compensate these persons who are unable to obtain adequate indemnification from the person inflicting the damage or under the social insurance laws. The provisions apply to incidents occurring at any time since the termination of hostilities and there is no time limit prescribed in which claims must be filed following the date upon which damage was suffered. Application is made through the Liaison Office of the Prefectural

Government. Allowances are made for medical care, disability (¥ 60,000 maximum), survivors (¥ 50,000 maximum), personal property (¥ 5,000 maximum) and homes (¥ 10,000 maximum).

SECTION II PREVENTIVE MEDICINE DIVISION

Tuberculosis Control - Literature Available

The handbook entitled "The Modern Attack on Tuberculosis" by Henry D. Chadwick, M.D. and Alton S. Pope, M.D., has been translated into Japanese and recently published by the Far Eastern Literary Agency and Publishing House, Inc., Room 135, Finance Annex Building, 2 of 1 Uchisaiwai-cho, Chiyoda-ku, Tokyo. Telephone Ginza 57-5475.

The handbook, a Commonwealth Fund Publication, was first published in June 1942 with a second and third printing in October 1942 and February 1944. It was revised in 1946 with printings in April 1946 and March 1947.

This brief, 113 page, handbook is not a treatise on the bacteriological and immunological phases of tuberculosis since this is well covered in numerous other publications. Rather the authors have attempted to provide a concise digest of the experience of many workers and of present-day practices in a form servicable to the health officer and administrator. Because the facilities for tuberculosis control and forms of public health organizations vary widely, even in different parts of the same country, emphasis has been placed on principles rather than on exact methods that have been proved productive.

This book should be in the hands of every health officer and every doctor dealing with tuberculosis. The book is available from the publisher at the above the address at ¥ 90 per copy plus ¥ 20 postage. Also it may be procured locally by placing an order with the local book dealer.

It is suggested that Civil Affairs Health Officers inform the local health departments, health centers, hospitals and medical associations concerning the availability of this book and of its value particularly for health officers and other physicians concerned with the control of tuberculosis.

Information Activities

In the near future (on or about 18 November) the quarterly information plan of the Ministry of Welfare for the period January through March 1950, will be sent out to prefectural health departments, prefectural welfare departments, prefectural model health centers and prefectural information organizations.

This plan (sec Incl. No.1) indicates, by Bureau and by Section of the Ministry of Welfare, (a) subject on which information should be released and (b) the months(s) in which emphasis should be placed. The plan should be considered as a guide in planning public health and welfare information activities at prefectural and local levels.

In addition to this general plan a booklet containing details of some of the more important subjects is published semi-monthly by the Ministry of Welfare and sent to the offices mentioned above. It is suggested that the prefectural health and welfare departments be urged to furnish additional copies of the quarterly plan to local newspapers, local radio broadcasting stations and to all health centers.

The Ministry of Welfare, through its Information Unit, is planning to increase the release of information concerning the use of Hexylresorcinol in the treatment of cases of ascariasis. This program should be vigorously carried out at all levels of public health administration.

SECTION III NURSING AFFAIRS DIVISION

Midwifery Course

In January 1950 a short course for midwives will be held in Tokyo under the guidance of the Nursing Section, Ministry of Welfare. Although definite plans in regard to the course are not complete, it is suggested that Civil Affairs Nurses consider early the selection of applicants. It is recommended that the midwife of the Nursing Division be selected, or if the Nursing Division does not include such personnel at present, probably a midwife interested in working in the Division in the future could be chosen. Definite information regarding this course will be forwarded to the prefectural health departments.

According of Schools

Plans for the according of "A" Schools are being finalized by the Council. During the last of November and the first of December representatives from the Ministry of Welfare plan to meet with the Regional Examination Committees for orientation purposes in the following four areas: Hokkaido and Tohoku; Kanto, Kinki and Tokai; Chugoku, Shikoku and Kyusyu. Civil Affairs Nurses will be invited to these orientation meetings by the Ministry of Welfare and will be notified of the date by Public Health and Welfare as soon as the schedule is definitely established. A representative of the Nursing Affairs Division, Public Health & Welfare will accompany the Ministry officials on the tour of orientation. At this time all accrediting forms to be used in the evaluation of "A" Schools will be provided by Civil Affairs Nurses as well as to the Regional Examination committee members.

Tuberculosis Nursing Course

Beginning in 1950 the 4-month course sponsored by Anti-Tuberculosis Association will be given for nurses working in the tuberculosis sanatoria instead of for public health nurses as previously given. The course is being reorganized and will provide theory and practical experience in a tuberculosis sanatoria. Further notification will be given when the course plans are completed.

SECTION IV VETERINARY AFFAIRS DIVISION

Japanese Veterinary Medical Association

Activities of the JVMA are gradually increasing month by month and association shows evidence of assuming definite leadership. The president and other executive officials of the JVMA have made it a practice to attend all recent regional veterinary conferences. The regional conferences have been well attended and promise mutual support to the national JVMA. The monthly JVMA journal is gaining in stature and contain items of more practical significance. Plans are in progress for an amplified annual 3 day meeting, proposed to be held in the latter part of March in Osaka. Sizeable representation from every prefecture including government veterinarians is imperative to accomplish the aims of the convention.

Mutual Aid Veterinary Clinics

Recent complaints by Japanese veterinary private practitioners in the Tohoku Region and Hokkaido District have been directed against the government subsidized competition offered by these Mutual Aid Veterinary Clinics. Authority for livestock insurance, treatment and care is authorized under Law No. 185, December 15, 1947, and amendment Law 201, June 8, 1949. Attention of all civil affairs veterinarians is directed toward the possible impact of this law on veterinary practice within their areas.

Rabies Report

The Veterinary Affairs Section, Ministry of Welfare, submitted the following report on rabies occurring in dogs in the Kanto Region during the period 23 October 29 October and 30 October - 5 November 1949.

Prefecture	New Cases	New Cases	Total Cases
	<u>23- 23 Oct</u>	<u>30Oct- 5Nov</u>	<u>To-date</u>
Tokyo	1	90	165
Kanagawa	4	0	67
Chiba	0	0	125
Saitama	1	3	91
Ibaraki	2	2	26
Gumma	0	2	54
Tochigi	0	0	2
Shizuoka	0	-	-
Total	8	97	530

Weekly Animal Disease Report

The Animal Hygiene Section, Ministry of Agriculture and Forestry, Reported the following outbreak of animal diseases for the periods 29 October - 4 November and 5-11 November 1949.

<u>Prefecture</u>	<u>29 Oct-4 Nov</u>	<u>5-11 Nov.</u>	<u>No. of Cases</u>
Hokkaido	Swine Cholera		2
Oita	Equine encephalomyelitis		1(suspect)
Kyoto		Swine erysipelas	339
Hiroshima		Swine cholera	5
Miyagi		Swine cholera	9
Mie		Anthrax	1

SECTION V SUPPLY DIVISION

Allocations of Cement

A total allocation of 21,800 metric tons of cement will be distributed to the various prefectures during the 3rd Quarter JFY 1949, for repair, maintenance and construction of welfare institutes, waterworks and national parks. Total quantities for these categories are as follows:

Welfare institutes	20,000 Metric Tons
Waterworks	1,500
National Parks	300
Total	21,800 Metric Tons

Inclosure No.2 furnishes the detailed breakdown, by districts and prefectures, of allocations of cement for October, November and December, to the above categories.

Official Prices of Biologics

The Price Board, Japanese Government, has announced the official prices for certain biologic products, effective as of 1 November 1949. The prices quoted are F.O.B. producing laboratory.

<u>Product</u>	<u>Quantity</u>	<u>Price</u>
BCG Vaccine	1 dose	7.40
BCG Vaccine Diluent	12 cc	0.30
Tuberculosis	1 cc	4.80
Typhoid and Paratyphoid Vaccine	1 cc	2.04
Smallpox Vaccine	1 dose	4.25
Diphtheria Antitoxin	1 cc	42.00
*Tetanus Antitoxin	1 cc	42.00
*Typhus Vaccine	1 cc	23.00

* The Price Board has approved manufactures prices for the above biologic products. However, official prices have not been determined to date.

Biologic Assay

During the period 24 October to 7 November the following biologics have been assayed and found to meet minimum standards:

<u>Item</u>	<u>Manufacturer</u>	<u>Lot No.</u>	<u>Quantity</u>		
Smallpox Vaccine	Kagaku and Kessei Ryoho Institute	143	167,800 dose		
		144	222,600

SECTION VI
NARCOTIC CONTROL DIVISION

Prosecution of Narcotic Violators

The Attorney-General's Office, Japanese Government, has announced that one or two procurators will be designated, from among government procurators stationed in each prefecture, to prosecute narcotic cases. The action will not increase the number of procurators but will enable the specially designated procurators to become more familiar with successful prosecution of narcotic cases. The program of appointment will be completed during

November after which time conferences and special instructions will be utilized by the Attorney-General's Office to improve prosecution of narcotic cases.

One of the appeal courts in Japan recently required two narcotic officials to appear in court and explain the illicit narcotic traffic situation in Japan. This is the first time such action has been taken and is indicative of the increased interest being shown by Japanese Courts in the suppression of illicit narcotic traffic.

Enforcement

Seizure of 459 grams of heroin in Kobe and the arrest of six persons allegedly engaged in smuggling and illicit sale has not only broken up a ring of narcotic traffickers but has also dealt a telling blow to underworld traffickers in the current enforcement drive which has been underway in Kobe and other port cities since April 1949.

The narcotic license of a drug wholesaler, who was burglarized as a result of the company's negligence, has been cancelled and the remaining narcotics have been transferred to another dealer.

Ten persons, all of them pharmacists or drug clerks, have been arrested in Kyoto Prefecture for illegal possession and sale of large quantities of narcotics and synthetic narcotics, a report of which had not been made as required by the Narcotic Law.

Nine persons, six of them narcotic registrants (physicians), have been arrested in Aichi Prefecture charged with supplying narcotics to an addict who was also arrested. Besides the six registrants, one defendant, a physician, had received a sentence of six months (suspended) and ¥ 50,000 fine for a narcotic violation committed in November 1948, from which time his narcotic license has been suspended. The other two defendants are relatives of the registrants.

SECTION VII WELFARE DIVISION

Community Chest Fund Drive

Latest information supplied by CCCC indicates that as of 11 November the Drive has reached 62.5% of the total overall national goal.

Fukushima, Saitama, Iwate, Shizuoka, Niigata, Akita, Aomori and Gifu have reached 100% of their goal. All prefectures have reported, and in comparison with last year's figures for the same time, are favorable.

Against the total fund goal of ¥ 1,221,717,000, ¥ 764,218,620 have been raised. A year ago at this time, against a goal of ¥ 1,175,450,000, 39.2% of goal had been raised, a total of ¥ 561,488,153.16. According to a report of a year ago, of the first six Prefectures to go over the top, Fukushima, Saitama and Gifu were included, and they are again this year among the first achieve their goal. (Incl. No.3)

National Conference of Social Work

In addressing the 750 delegates at the annual National Conference of Social Work held at the Japan School of Social Work, 8 through 10 November, Mr. N. Nakagawa President of the Japan Social Work Association, paid special tribute to the ##### given the development of Japanese social work by the welfare personnel of SCAP and Civil Affairs Teams. This conference indicated considerable development in concepts of social work when questions of policy were raised by members of the discussion groups under the following subjects:

1. Problems of administration.
2. Problems for which emergency welfare plans are necessary.
3. Problems of community organization and social work interpretation.

Resolutions and recommendations were made by each group and were presented to the general assembly at the end of the conference with a delegate designated to deliver them to the Ministry of Welfare and the Diet.

There was considerable discussion of the relation between public and private welfare, particularly because of Article 89 in the Constitution, the need for revision of the Social Work Law, and of new basic concepts in public

welfare such as the right of the citizen to public assistance. Emphasis was placed on the fact that the emergency period was over, therefore, more permanent programs were needed which resulted in further discussion of the need for social work education and in-service training.

Representatives at the conference included fifty people, all from the private field, who were given awards for outstanding service. They were chosen from workers having had over 15 years service, not previously honored, and recommended by the presidents of the prefectural social work associations.

The Social Work Research Institute of the Japan Social Work Association conducted meetings 11 and 12 November, at which time papers were read in the following subject groups:

(1) Child Welfare; (2) Livelihood Assistance; (3) Rural Social Work and Social Work Administration and (4) Medical and related problems in social work. These papers have been published in a pamphlet and are available from the Japan Social Work Association, 266-3 Harajuku, Shibuya-ku, Tokyo.

Red Cross

On 25 October dedication of the additional buildings to the Yohohama Red Cross Hospital was held in the new building. Those present included Prince Takamatsu, Mr. M. Cooke (ARC), Mr. Uchiyama (Kanagawa Governor and President of the Kanagawa Red Cross Chapter), Vice-President of the Chapter and other Japanese Red Cross and prefectural and city officials. It was mostly through the efforts of the Kanagawa Chapter Director that funds were raised for the additional buildings. They consist of a 200 tsubo building for out-patient department and a 100 tsubo building for nurses dormitory, thereby adding 130 more beds for patients.

Extracts from Prefectural Reports for August

Oita Prefecture - A training course for social workers for all of Kyushu was held from 18 - 24 August. Representatives from the Welfare Ministry attended as "guest teachers".

Yamaguchi Prefecture - An inaugural ceremony of the establishment of a new Child Welfare Center building was held in Yamaguchi City on 2 August. This is the 3rd new child welfare center building to be established in this prefecture. The restoration of public parks for the benefit of the public at large is one of the major projects now underway under the surveillance of the Welfare Section.

Shimane Prefecture - There is a total of 84 schools participating in the school lunch program with a total of 51,141 children receiving meals. The lunch consists of canned food in the A, B, C, D & E Classes, skim milk and at times fresh fish and miso are served. The average cost meal is ¥ 4 in cities and ¥ 2.85 in towns and villages.

Wakayama Prefecture - Personnel surveys are being conducted of prefectural and district welfare departments to be used in conjunction with information gathered in administrative reviews for preparation of a special report on personnel practices in public welfare.

Shiga Prefecture - Under the direction of the prefectural Child Welfare Section 11 "Summer Sanatoriums" (Fresh Air Homes) were set up care for undernourished, underprivileged children. The sanatoria lasted ten days and accommodated 509 children from the 4th to 6th grades in school. The children were chosen by teachers and nurses according to need. Each group had one teacher per 20 children, plus three nurses, one doctor, one dietitian and three domestic workers. There were regular scheduled activities, lasting from 7a.m. to 7p.m. including organized recreation, free play, story telling, and music hour. The health centers and local governments aided the prefecture in this project. There was an average gain of 1lb per child at the end of the period. A follow-up is planned by nurses and teachers to help the parents with more adequate care of the children.

Osaka prefecture - Two more children's centers were opened in Joto Ikune Wards of Osaka City during August. These are located in crowded sub-standard neighborhoods. Their programs include scout troops, girls and boys chorus groups, neighborhood dramatic performances, reading rooms, supervised play and sports.

Osaka City Volunteer Association held a one-day nutrition training course on 26 August. This was attended by 51 workers from welfare institutions to teach nutritive values of everyday foods and a demonstration of the preparation and use of LARA and other foreign foods in combination with indigenous foods.

SECTION VIII

SOCIAL SECURITY DIVISION

National Health Insurance - The National Health Insurance Central Society, which serves informally as the consolidated unit of the various National Health Insurance Federations, have proposed and emphasized a program regarding National Health Insurance sponsoring heavy national subsidies and amendment to the law to make it compulsory on a national basis.

In conferences, Public Health and Welfare representatives advised the Society that it consider the possible deterrent effects of their proposed program upon the objectives of the Shoup Tax Mission and the progress that has been attained in local government under the local Autonomy Laws. It was pointed out that unwarranted demands for subsidies and changes to make the Law compulsory on a national basis, without consideration of the responsibilities and rights of the insured persons, could tend to nullify the insurance phase of the National Health Insurance programs, and could engender National Health Insurance resistance, as experienced during the war years. It would not only affect those who would be covered by National Health Insurance but also those insured under other programs who would be compelled, through general taxation, to share in the National Health Insurance burden. At the same time the need for a sound educational program in utilization of the existing insurances at insured's level was stressed, along with an informational program to all doctors, dentists, and others interested in National Health Insurances, on the operations and problems of a successful National Health Insurance programs.

Social Insurance Officers - With the reorganization of the Civil Affairs Teams the prefectural teams were terminated and civil affairs activities concentrated in the regional teams each covering a number of prefectures. There are eight regional teams now under Eighth Army but will be under direct supervision of SCAP, with the completion of reorganization by 31 December.

The observation and reporting on social insurance has been and will continue to be the responsibility of the Welfare Division of the Teams. In the reallocation of program emphasis social insurances have been given a high priority. As there will be a variation in the number of welfare officers in each regional office it will be the chiefs of the Welfare Offices responsibility as to how this function is assigned. However, in three regions, where there is a heavy concentration of industrial employees and population it was possible to have one full time social insurance officer allotted in the Welfare Division table of organization.

The programs to be given close observation and survey will be those under the jurisdiction of the Ministry of Welfare, namely National Health Insurance, Health Insurances, Seamen's Insurance and Welfare Pension Insurance. A close liaison, however, will be maintained with other social insurance programs under the jurisdiction of other Ministries and agencies of the Japanese Government, namely, Unemployment, Workmen's Accident Compensation and Mutual Aid Associations. All of the aforementioned social insurances programs and welfare programs have a close relationship and require emphasis on coordination.

SECTION I GENERAL

TRAINING COURSES AT THE INSTITUTE OF PUBLIC HEALTH

The eleventh in the series of three-month refresher courses for medical health officers and for sanitarians will be held at the Institute of Public Health in Tokyo from 9 January 1950 to 30 March 1950. Prefectures which have a back-log of untrained health officials may send more than one student to the course for medical officers. It is specially urged that health center directors receive this training. Well-qualified candidate should be selected. Official announcements of the two courses are being sent to prefectural governors by the Ministry of Welfare.

The ninth Veterinary Public Health course opened at the Institute of Public Health with 38 Prefectural Veterinarians and 2 Okinawan Veterinarians in attendance.

SECTION II PREVENTIVE MEDICINE DIVISION

IMPROVEMENT IN SANITATION: INDIVIDUAL PREFECTURES

Reference Weekly Bulletins Nos. 87, 94 and 103 of 1948, in which comparisons were made between seasonal prefectural morbidity rates experienced in 1947 and 1948 for certain intestinal diseases.

A further comparison of prefectural rates is now offered for typhoid and dysentery morbidity as experienced during the 1949 season of July, August, and September compared with previous years.

Separate mention of paratyphoid is omitted from this discussion since it has a minor role compared to that of other intestinal diseases, accounting for about 1/4 as many cases and about 1/8 as many deaths as does typhoid. Disease control measures applicable to typhoid are also applicable to paratyphoid.

Encouraging progress was made in the reduction of typhoid fever. The national morbidity rate per 100,000 per annum for typhoid for the three months of July, August, and September was 42.7 in 1947, 19.2 in 1949. The percentage reductions in seasonal rates were 55 in 1948 and 36 in 1949.

Among the various factors influencing the typhoid incidence, the carrier rate requires consideration. Estimates made in other countries indicate that approximately one person out of every eight or ten who suffer from the disease become carriers for varying lengths of time. In the United States (F.H. Top) an estimated 2% of patients still harbor and spread the organisms of typhoid for period longer than one year after suffering from an attack of the disease. If we apply the approximations of 10% of cases as "one year" carriers and 2% as cumulative carriers it is evident that typhoid cannot be wiped out in a single year. A reduction in the previous season's number of cases presumably is accompanied by a similar reduction in the number of new carriers or potential sources of infection for the subsequent year. With fewer sources of infection, even with the same control measures being applied, a year decrease in number of cases should be apparent. Exertions to improve environmental sanitation would, during any one year reduce the number of new cases of typhoid by attacking the chain between source and the new case, but would not immediately reduce the number of sources (carriers). Such reduction in number of sources would become apparent in the morbidity experienced during the following year.

Immunizations also have both an immediate and a delayed effect in reducing the number of typhoid cases. Complete coverage by initial and booster inoculations would presumably prevent clinical cases except where the contamination (dosage of organisms) was severe. Relative immunity as provided by inoculations should reduce the carrier rate in the same way it reduces the mortality rate and the severity of symptoms in those cases which develop in spite of previous inoculation. In Japan, however, the coverage by inoculation has never been complete. A total of 25,155,901 initial immunizations against typhoid-paratyphoid was reported to have been completed between 1 September 1947 and 30 April 1948. An additional 9,544,731 initial immunizations was reported completed between 1 May 1948 and 20 November 1948 with 18,178,524 booster immunizations given during the same period. There were no further typhoid-paratyphoid immunizations after 20 November 1948 until release of newly assayed vaccine stocks this spring. Only 18,934 initial and 353,701 booster immunizations were reported to have been given during the first six months of 1949. Thus less than 50% of the population had, since 1 September 1947, been given the protection against typhoid-paratyphoid which is afforded by immunization, whereas approximately 82% of the population would be so protected if the provisions of law regarding compulsory immunizations against typhoid-paratyphoid were completely enforced.

Besides the usual control procedure of early diagnosis, reporting, isolation, treatment and disinfection which apply to all communicable diseases, another important factor influencing the typhoid morbidity rate is environmental sanitation. The consumption of pure drinking water and non-contaminated food is essential for freedom from intestinal disease. Thus the incidence of typhoid will to some extent inversely reflect the effectiveness of environmental sanitation measures, including the operation of sanitary teams and the maintenance of acceptable standards by suitable inspections. The participation of the public both generally and individually as accomplished through public health information and education activities will also contribute towards an elevation of environmental sanitation and a corresponding reduction in typhoid.

The eleven prefectures showing a reduction in typhoid morbidity rate for the three month period of 1949 to half or less than the same period of 1948 were Nagano (14%), Ehime (17%), Saga (28%), Yamanashi (29%), Oita (30%), Tochigi (30%), Hokkaido (31%), Kagoshima (39%), Gumma (43%) and Kanagawa (50%) of these eleven prefectures, six (Ehime, Saga, Yamanashi, Oita, Kagoshima and Gumma) had typhoid rates of less than 1/3 that of the national rate during the 1949 season. Two others, Yamagata and Kumamoto had typhoid rates of less than 1/3 the national rate but showed less reduction in comparison with their experience of the preceding year.

While it is recognized that environmental sanitation is an important factor in the control of all intestinal diseases, it is probably less important in typhoid fever than in dysentery. Whereas immunizations tend to depress typhoid incidence, and the presence of carriers tends to smooth out fluctuations in case rates, the dysentery case rate is not modified by these two factors and therefore reflects more directly the sanitation of the environment. The national morbidity rate for dysentery for the month of July, August and September was 157.5 in 1947, 51.8 in 1948, and 84.5 in 1949. The percentage changes were a decrease in 1948 to 33% of the 1947 seasonal rate, and an increase in 1949 of 63% over the 1948 rate for the same three-month period.

Recent studies in the United States (L.L. Falk) suggest that dust and insects are a major source of bacterial contamination of vegetables grown above the soil surface, acting as vectors from distant sources of contamination rather than necessarily directly from the soil in which the vegetables are grown. A review of the meteorological data for Japan made in connection with studies on the factors involved in the 1948 epidemic of Japanese B Encephalitis, indicated that conditions of heat and rainfall were abnormal during the spring and summer of that year. At this stage, nothing more than conjecture can be offered regarding the factors involved. However, in general, it can be pointed out that efforts to improve the environmental sanitation must be continuous and that it is dangerous to conclude that marked improvement noted in any one season is due entirely to human effort. Such thinking may lead to relaxation of control efforts which are important in the eventual relegation of dysentery to the status of a controlled communicable disease.

The eleven prefectures showing a reduction in morbidity rate for dysentery in the three-month period of 1949 as compared with that of 1948 were Hokkaido (38%), Fukui (48%), Saga (59%), Okayama (60%), Ehime (60%), Hyogo (65%), Shiga (88%), Fukushima (91%), Yamanashi (95%), Oita (96%) and Aomori (98%). All others had an increase. However, eleven others (Nagasaki, Tottori, Kumamoto, Osaka, Kagoshima, Mie, Fukuoka, Nara, Kochi, Wakayama and Toyama), although showing an increase over the preceding years season, had dysentery rates during July, August, and September 1949 of half or less than that of the national rate for the same period.

The following tables show the standing of individual prefectures both with regard to improvement of their own prefecture rates, and in relation to the national rate during the period of July, August and September.

TABLE I
I
COMPARISON OF CASE RATES FOR DYSENTERY FOR THREE MONTHS' PERIODS
(JUL, AUG AND SEP) BY PREFECTURE, 1948 AND 1949

Prefecture	Case Rate Jul, Aug, Sep 1949	Case Rate Jul, Aug, Sep 1948	Ratio of 3 mo. 1949 rate to 3 mo. 1948 rate	Ratio of 3 mo. prefectural rate to nat'l rate 1949
------------	------------------------------------	------------------------------------	---	--

Hokkaido	27.7	72.2	38	33
Aomori	30.2	30.7	98	36
Iwate	153.3	128.4	119	181
Miyagi	45.6	35.3	129	54
Akita	45.1	42.9	105	53

Kagoshima	0.7	1.8	39	6
All Japan	12.2	19.2	64	100

Typhus Fever

Reports of the occurrence of suspect cases of typhus fever are being received from various prefectures in Japan, particularly in Kyushu. There are several points which should be re-emphasized in the typhus fever prevention and control program.

1. Louse borne (epidemic) typhus

a. prevention (before cases occur).

- (1) Louse population surveys conducted at frequent intervals among persons in poor, crowded areas of cities, jails, orphanages, old peoples' homes, mental hospitals, vagrant camps or shelters, and school children.
- (2) Immediate institution of delousing procedures, using 10% DDT dust, of all persons in any of the above mentioned places when the louse population appears to be building up (heavy infestation - 10 or more lice or numerous eggs easily seen on cursory examination of hair and clothing).
- (3) Protective immunization with typhus vaccine of persons in areas mentioned above.
- (4) Residual 5% DDT spraying of public conveyances.
- (5) Intensified case-finding work.
- (6) Information and Education program.

b. Control (when suspect cases on proven cases occur)

(1) Patients

- a) Immediate reporting of any suspect or definitely recognized case, a suspect case being any person with elevated temperature and headache of sudden or gradual onset, unless the person is suffering from some definitely recognizable disease. Reporting should be done within two hours after discovery.
- b) Immediate delousing of patient with 10% DDT dust only.
- c) Hospitalization of patient within 8 hours after discovery.

(2) Contents of patient(s).

- a) Immediate delousing of all known immediate contacts of the patient within the household, institution, camp, etc., within 8 hours after discovery of patient.
- b) Delousing of all other known contacts (relatives or visitors of the patient).
- c) Immunization of persons in 2 (a) and 2 (b) above.

(3) Fecal delousing (hair, clothing, extra clothing, bedding) of all living in the vicinity of the patient or suspect (work from home to home). Repeat in 7-10 days.

(4) Zonal delousing (if necessary) i.e. an entire ward (ku) of a city or other large prescribed areas. (Repeat in 7-10 days)

(5) Fecal or zonal immunization of persons living in prescribed areas.

(6) Expansion and intensification of case-finding efforts.

2. Flea borne (murine) typhus.

a. Suspect cases should be regarded as probable epidemic typhus and should be treated as such.

b. Emphasis should be placed on the control of fleas. Ten percent DDT dust applied to clothing and bedding will be effective against both fleas and lice. Fleas can transmit the rickettsii of epidemic typhus, likewise lice can transmit the rickettsil of murine typhus.

c. Pre-dusting of houses (under tatami) sheds, stores and other buildings infected with rate should precede rat control campaigns by 6-7 days. Apply 10% DDT dust along rat-runways, rat harborages, around entrances to rat burrows, under and around buildings, in attics and other places frequented by rats and mice.

d. Rodent control operations using all recommended methods.

e. DDT residual effect sprays (containing 2% cresolis in final solution) will tend to control rat-mite infestations in homes. (Rat mites have also been incriminated as vectors of typhus fevers). Such spray also has a long lasting killing effect, on straying lice, on fleas, and miscellaneous household insects. This type spray will also destroy rickettsiae which may be present in fecal droppings of lice, fleas and mites.

3. It is urged that serum samples from any suspect or clinically diagnosed case of typhus fever be obtained for laboratory confirmation.

1st sample - at date of onset or as near that date as possible.

2nd sample - during the latter part of the 2nd week of illness following date of onset.

3rd sample - during the latter part of the 3rd week or early part of the fourth week of illness.

Samples should be sent to the National institute of Health, Tokyo.

4. Control measures should not wait for laboratory confirmation of suspect cases.

SECTION III NURSING AFFAIRS DIVISION

Refresher Courses

A short course for midwives will be held at the Aikukai institute from 16 January to 4 March 1950. Each prefecture will be permitted to send one representative selected on the following order of preference:

1. The Midwife of the prefectural nursing section or division or one who might be employed there in the further, or,

2. The chief midwife of an obstetrical hospital, or,

3. A midwife of the health center staff.

Only those who have a midwifery license and have had working experience in midwifery will be admitted to the course.

A short course in nursing school administration will be held in Tokyo at the Red Cross Hospital from 6 February to 4 March 1950. Each prefecture will be permitted to send the clinical nurse of the prefectural nursing section or division. This course is planned for the purpose of assisting the prefectural clinic nurse to give better consultant service to nursing schools.

Nursing Books

Two new booklets of interest to nurses have recently been published.

1. Duties of Nurses Working in Hospitals

This booklet, published by the Ministry of Welfare, was prepared under the guidance of Public Health and Welfare. It outlines the duties of the staff nurse, head nurse, night supervisor, superintendent of nurses, instructors and educational directors.

It also contains a collection of laws and ordinances related to nurses, public health nurses and midwives.

Distributor: Kokumin Kyoiku-sha
174 Miyamae-cho, Meguro-ku, Tokyo-to
Price: 48 yen (postage additional)

2. Laws and Regulations Concerning medical. Nursing and Pharmaceutical Affairs

Distributor: Jiyuhyoron-shin
6-1 Minato-cho, Chuo-ku, Tokyo-to
Price: 450 yen (postage 40 yen)

Accreditation of Nursing School

In order to carry out the provision of the Midwife, Public Health Nurse and Nurse Law No. 203 (July 1948) nursing schools will be inspected and graded by the regional examination committees early in 1950. Plans for the accreditation procedure for Class "A" schools have been completed by the National Nursing Council. Representatives of the Nursing Section, Ministry of Welfare will meet in four places with the Examination Committee members on the following dates:

Tokyo	1 December (Kanto region)
Sendai	13 December (Hokkaido and Tohoku region)
Osaka	16 December (Kinki and Tokai region)
Okayama	19 December (Chugoku, Shikoku and Kyushu region)

Plans for the inspections and accreditation of Class "B" schools will be finalized in the near future so that all nursing schools will be graded before April 1950.

SECTION IV VETERINARY AFFAIRS DIVISION

Bovine influenza

A survey of those prefectures in Kyushu, Chugoku, Shikoku and Kinki Regions where bovine influenza occurred, discloses a reported total of 101,101 head of cattle having been attacked during the period of August through November. A total of 289 head died from secondary invasion of organisms, of which *pasteurella bovisepitiosa* appeared most frequently. Those cases regarded as other than mild, did in the majority of cases exhibit symptoms of hemorrhagic septicemia. It is estimated that approximately 300 - 400 cases exist at this in Mie and Gifu Prefectures, with some sporadic cases still being reported from these areas where the disease has already abated. The fatality rate is 0.29 percent.

Research to date discloses that a virus has been isolated and that the *pasteurella bovisepitiosa* organism has been demonstrated in the specimens obtained in the field from living and dead cattle. Research is continuing, and a symposium is being planned by the Ministry of Agriculture and Forestry for all Veterinary Chiefs in charge of animal disease control programs. The date of the symposium will be announced through regular channels upon completion of plans.

Food and Mouth Disease in Algeria

1. The Office of International Epizootics, Paris, France, has notified the Animal Hygiene Section, Ministry of Agriculture and Forestry, that an outbreak of foot and mouth disease in cattle has occurred in Algeria on 12 November 1949, origin of infection being in cattle recently imported from France.

Rinderpest in Formosa

Information received via radio from the Bangkok Office, FAO, regarding the outbreak of Rinderpest in Formosa, states that rinderpest is checked, 95 cattle dead, one cremated, prevention continuing, no further cases to date.

Action was taken in recommending the suspension of importation of livestock or livestock products from Formosa to Japan.

Monthly Meat inspection Report

1. Prefectural Veterinary Meat Inspectors conducted ante and post-mortem inspections on the following number of livestock slaughtered during the month of September.

	Cattle	Claves	Horses
Number slaughtered	17,071	1,403	4,210
Body wt. (kg)	6,050,958	125,099	1,350,469
Dressed wt. (kg).	3,075,657	59,818	628,189
Condemned ante-mortem	2	0	2
Condemned post-mortem			
Total	12	2	12
Partial	323	21	199
Viscera	3,903	49	651
	Swine	Sheep	Goat
Number slaughtered	60,166	22	254
Body wt. (kg)	5,039,690	843	5,564
Dressed wt. (kg).	3,096,954	393	2,236
Condemned ante-mortem	3	0	0
Condemned post-mortem			
Total	11	0	0
Partial	549	0	0
Viscera	19,043	3	1

2. Prefectural Veterinary Meat Inspectors conducted sanitary inspections on the following establishments during the month of September.

Meat Processing Establishments

Number of establishments	----	292
Number of establishments inspected	----	239
Condition -		
Good	----	61
Fair	----	147
Poor	----	31
Total number of inspections	----	455
Amount of meat and meat food products examined	----	61,776 kg.
Amount of meat and meat food products condemned	----	0

Meat Retail Shops

Number of establishments	----	14,417

Monthly Milk Inspection Report

1. Prefectural veterinarians conducted the following sanitary inspections of dairy farms and milk plants during the month of September.

Special Milk

Number of farms inspected	----	7
Samples examined	----	20
Over bacterial standards (50,000 per cc)	----	1
Under butterfat standards (3.3 per cent)	----	1
Number of plant inspected	----	20
Over bacterial standards (50,000 per cc)	----	1

Under butterfat standards (3.3 per cent)	----	1
<u>Ordinary Milk</u>		
Number of farms inspected	----	12,442
Samples examined	----	17,059
Over bacterial standards (2,000,000 per cc)	----	1,094
Under butterfat standards (3.0 per cent)	----	865
Number of plant inspected	----	4,528
Over bacterial standards (2,000,000 per cc)	----	437
Under butterfat standards (3.0 per cent)	----	394
<u>Goat Milk</u>		
Number of farms inspected	----	38
Samples examined	----	54
Over bacterial standards (2,000,000 per cc)	----	8
Under butterfat standards (3.0 per cent)	----	9

Milk Produced on Dairy Farms in September

<u>Type of Milk</u>	<u>No. of Farms</u>	<u>No. of Cows and Goat</u>	<u>Amount Produced</u>
Special	6	119	28,353 Lit.
Ordinary	61,055	114,222	24,016,587
Goat	7,163	9,744	208,450

Quantity of Milk Bottled in Milk Plants in September

<u>Type of Milk</u>	<u>No. of Farms</u>	<u>No. of Cows and Goat</u>	<u>Pasteurized</u>	<u>Amount Produced</u>
Special	6	13,599	12,829 Lit	
Ordinary	2,871		3,310,738.9	4,913,091.1
Total	2,877	13,599	3,323,567.9	4,913,091.1

Milk Products Produced in September

Powdered whole milk	----	116,655
Powdered whole milk modified -15% sugar added	----	143,517
Powdered whole milk modified -35% sugar added	----	623,608
Sweetened condensed milk	----	849,631
Butter	----	208,127
Cheese	----	20,980

Monthly Seafood inspection Report

1. Prefectural Veterinary Seafood inspectors conducted sanitary inspections on the following seafood establishments during the month of September.

a. Wholesale Seafood Markets

Number of establishments	----	1,409
Number of establishments inspected	----	943
Condition -		
Good	----	151
Fair	----	616
Poor	----	176
Total number of inspections	----	4,422
Amount of meat and meat food products examined	----	27,517,587 kgs
Amount of meat and meat food products condemned	----	164,176 kgs
Cause for condemnation		Putrefaction
Disposition		Fertilizer

b. <u>Seafood Processing Plants</u>		
Number of establishments	----	11,266
Number of establishments inspected	----	3,794
Condition -		
Good	----	676
Fair	----	2,187
Poor	----	931
Total number of inspections	----	5,873
Amount of meat and meat food products examined	----	614,043 kgs
Amount of meat and meat food products condemned	----	1,088 kgs
Cause for condemnation		Putrefaction
Disposition		Fertilizer
c. <u>Seafood Retail Shops</u>		
Number of establishments	----	52,941
Number of establishments inspected	----	20,312
Condition -		
Good	----	3,725
Fair	----	12,040
Poor	----	4,547
Total number of inspections	----	24,334
Amount of meat and meat food products examined	----	1,430,911 kgs
Amount of meat and meat food products condemned		2,309 kgs
Cause for condemnation		Putrefaction
Disposition		Fertilizer

Monthly Food Sanitation Report for September

1. The Food Sanitation Section, Ministry of Welfare, submitted the following report on the sanitary inspections as conducted by prefectural food sanitarians in those establishments processing, handling, and selling food and beverages during the month of September.

a. Number of establishment registered	----	771,281
Number of establishment inspected	----	227,919
Number of establishment completing improvements	----	137,918
Number of administrative punishments	----	3,754
Number of cases to be tried under civil law	----	9
Number of establishments to be improved	----	27,003
Number of samples collected for analysis	----	7,740
Number of establishments requesting food analysis	----	1,525

b. During the month of September, a total of 208 outbreaks of food poisoning involving 4,510 people occurred with 52 deaths recorded.

c. The number of food sanitations now engaged in the inspection of food and beverages of non-animal origin totals 1,405.

Monthly Animal Disease Report

1. The Animal Hygiene Section, Ministry of Agriculture and Forestry, reported the following number of animal diseases occurring during the month of October.

<u>Disease</u>	<u>No. of Cases</u>
Anthrax	3
Blackleg	2
Swine erysipelas	387
Swine cholera	26
Swine plague	6
Piroplasmiasis	3
Filariosis (Horses)	6

Strangles	7
Equine infection anemia	228
Brucellosis	42
Trichomonas	164
Equine infection abortion	25
Pullorum diseases (Fowl)	8,596
Bovine tuberculosis	90
Equine encephalomyelitis	32

Inspection of Animals and Animal By-products at Quarantine Stations During the Month of October.

1. Veterinarians assigned to the Animal Quarantine Stations inspected the following animal by-products on import consignment prior to their release to domestic channels.

Quarantine Stations	Hides	Wools
Hakodate	None	None
Otaru	None	None
Yokohama	397,085 kgs	94,388 kgs
Nagoya	None	422,456 kgs
Tsuruga	None	None
Osaka	25,400 kgs	3.75 kgs
Kobe	None	256 kgs
Moji	None	None
Nagasaki	None	None
	422,485 kgs	517,103.75 kgs

Weekly Rabies Report

1. The Veterinary Affairs Section, Ministry of Welfare submitted the following report on the number of Rabies occurring during the period 13-19 November.

<u>Prefecture</u>	<u>New Cases</u>	<u>Total Cases To Date</u>	<u>Number of Dogs Awaiting Immunizations</u>
Tokyo	3	169	23,501
Kanagawa	3	78	797
Chiba	4	129	25,718
Saitama	3	104	32,000
Ibaraki	0	26	11,500
Gumma	0	54	10,204
Tochigi	0	2	3,056
Total	13	562	106,776

SECTION V SUPPLY DIVISION

Phenylaminopropan and Phenylmethylaminopropan (Benzedrine)

Recent newspaper publicity has been given to the misuse of phenylaminopropan and phenylmethylaminopropan (benzedrine) preparations by juveniles and others. This problem was recognized by the Ministry of Welfare last March when action was taken to amend the Enforcement Regulations of the Pharmaceutical Affairs Law. These two drugs had been designated as powerful drugs, with certain exceptions. Ministry of Welfare ordinance No.14, 28 March 1949, deleted all exceptions as previously specified. Reference Bulletin No.128 (6 - 12 June) page 18.

On 31 May 1949, as Ministry of Welfare Notification No.102, Supplement No.1 of the National Formulary was published, which removed thee from the National Formulary. These drugs in the form of powder and tablet had been included in the National Formulary previous to publication of Supplement No.1. This action made it necessary for a manufacturer to obtain license in order to produce these drugs as non-official medicines. No such licenses have been issued to date.

The injection preparation had never been included in the National Formulary. Licenses had been issued to several manufacturers to produce injections as non-official remedies. Thus at the time of the recent newspaper publicity these manufacturers were legally entitled to produce, and distribution was permissible as powerful drugs.

Recent emergency action to control the misuse was taken by the Ministry of Welfare. Under date of 27 October, the Vice-Minister of Welfare instructed prefectural governors (Kosei-sho-hatsu-yaku No.164) that phenylaminopropan and pharnylmethylaminopropan had been deleted from the National Formulary, and that manufacturers of the injection were requested to voluntarily discontinue manufacture. Simultaneously, individual letters to manufacturers were dispatched pointing out the dangerous misuse of these infection materials, and requesting them to voluntarily discontinue manufacture. Under date of 25 November, the manufacturers notified the Ministry of Welfare they are complying with this request.

The Ministry of Welfare recognizes that these preparations are of value in medical practice. They are now formulating plans which will insure strict control over distribution so that administration will be permissible only under professional advice. Such plans will be put into effect as soon as possible. Manufacture will then be resumed.

Penicillin Production

The Ministry of Welfare reported a total of 222.4 billion Oxford units of penicillin passes assay during October. This amount included 111.4 billion Oxford units of procaine penicillin, a substantial quantity of which contained 2 percent or more of aluminum monostearate. Penicillin producers have indicated that retail sales have increased perceptibly since 1 October when the lower price revisions were announced by the Japanese Price Board.

Biologics Production

New biologic production valued at 85 million yen successfully passed assay tests at the National Institute of Health during October, as follows:

Product	Passed Assay
BCG Vaccine	932,800 doses
BCG Vaccine Diluent	100,932 cc
Tuberculin	239,523 cc
Typhoid and Paratyphoid	747,350 cc
Smallpox vaccine	16,300,250 doses
Diphtheria Antitoxin	73,824 cc
Tetanus Antitoxin	26,760 cc
Typhus Vaccine	174,360 cc

All biologics undergo preliminary assay tests at the manufacturers' laboratories before being submitted to National Institute of Health for final assay.

Biologic Assay

During the period 8 November to 21 November the following biologics have been assay and found to meet minimum standards:

Item	Manufacturer	Lot No.	Quantity doses
Smallpox Vaccine	Handai Biseibutsu Inst.	53	247,000
		66	215,000
		68	207,500
		72	227,200
		74	206,300
		75	239,200
		78	240,800

	Hokkaido Seiyaku K. K.	86	100,000
		97	254,700
		114	445,700
		115	341,000

Hexyresorcinol

Some improvement in hexylresorcinol capsule production was noted in October when 650,971 grams successfully passed assay. This amount included 3,365,000 capsules of 0.1 gram content and 1,572,000 of 0.2 gram hexylresorcinol content. A nation-wide educational program is being inaugurated by manufactures and the Ministry of Welfare, for the purpose of disseminating to the public the superior benefits of hexylresorcinol as an anthelmintic.

SECTION VI NARCOTIC CONTROL DIVISION

Prosecution of Narcotic Violators

Forty-nine District Procurators, eight High Public Procurators, and two Supreme Public Procurators have been designated by the Attorney-General's Office, Japanese Government, to prosecute all narcotic cases in the District Courts, Appeal Courts at Supreme Court. In addition two officials in the Attorney-General's office have been assigned to review and coordinate the work of narcotic procurators throughout Japan in an effort to eliminate narcotic trafficking.

Enforcement

Seizures of heroin in the amounts of 198 grams in Tokyo, 125 grams in Chiba, 70 grams in Yokohama and 918 grams in Kobe have been reported in individual cases resulting from intensive undercover investigations within the past thirty days. Narcotic enforcement authorities working toward discovering the source of illicit traffic successfully negotiated for the purchase of the narcotics.

Information

Improved storage of narcotics will result from instructions issued by the Ministry of Welfare (Yaku-Hatsu No.1763, 24 October 1949) which provide that in the future no local or central narcotic wholesaler will be granted a license unless a ferro-concrete vault is especially constructed to meet minimum specifications. Even should the specifications be met the license will not be granted unless public need is demonstrated. All presently licensed narcotic wholesalers have been advised to bring their storage facilities up to standard as soon as possible.

SECTION VII WELFARE DIVISION

Community Chest Report as of 22 November 1949

Latest information supplied by Provisional Fund Raising Headquarters of Japanese Red Cross reflects the following:

As of 22 November 1949 the combined CCC and Japanese Red Cross drive had reach 81.1% of the total overall national goal. Against the total fund goal of ¥ 1,221,717,000, ¥ 990,124,910.09 has been raised as of 22 November 1949.

Fukushima, Aichi, Shizuoka, Saitama, Akita, Aomori, Gifu, Iwate, Oita, Yamanashi, Mie, Miyagi, Miyazaki, Niigata have reached 100% or over their goals. These prefectures were first to go over the top in last year's campaign.

Extracts from Civil Affairs Team Reports for August

Chiba - During July in Chiba Prefecture there was an increase of nine more chapters and six new junior Red Cross groups totaling 360 members. A series of 34 lectures and demonstrations were given on life saving and first aid, eight individuals received instructor's licenses and five aid licenses. The traveling Japanese Red Cross clinic examined a total of 560 people in four villages - 8 doctors, 16 nurses, and 4 clerks participated.

Iwate - It is anticipated by the Community Chest that a Social Welfare Council be established in each city (4) and gun (12) in Iwate Prefecture. The money to be used in the support of the new councils is to come from Community Chest funds which last year were used as gifts to persons receiving public assistance. The purpose of these councils is to coordinate all social activities within their areas and between other areas, including those of the Minsei-iin Renmei and the Iwate Social Work Association.

Akita - Staff conferences at the prefectural, district and local levels are conducted monthly. Subject matter is planned in advance and directed discussions are coordinated by trained instructors. Subjects covering practical matters are preferred to theoretical ones. In the immediate future short courses for local welfare officials, standing commissioners of Minsei-iin and nursery teachers are being planned. The re-education leave policy is now in practice and one district official is attending the Japan School of Social work.

Kanagawa - The Child Welfare officials, in addition to their regular routine functions, planned and carried out in an elaborate program known as "Summer vacation Children's Meeting." The purpose of the meeting was to meet children and their parents as a group and to stress the importance and the Child Welfare Law. Child Welfare officials made talks, led discussion groups and directed recreational activities. A Demonstration Child Consultation Center was set up in order to acquaint the public with the kinds of services available.

Social Work Bibliography: refer to TB-PH-WEL 21 for correction in first paragraph of Part I. The Information Unit is in the General Affairs Section (not Social Affairs Section) Minister's Secretariat, Ministry of Welfare. (Statement in Japanese is correct.) It is suggested that inquiries for social work material in Japanese may also be directed to the Japan Social Work Association (Nippon Shakai Jigyo Kyokai), 266-3 chome, Harajuku, Shibuya-ku, Tokyo since this association published in October 1949 a bibliography in Japanese entitled "Shakai Jigyo Tosho Mokuroku" and is responsible for a large number of the Japanese publications on social work.

Institute of Social Research:

Papers presented at the two-day session of the Institute of Social Research of the Japan Social Work Association following the National Conference of Social work are available in a preliminary pamphlet from the Japan Social Work Association entitled: "Zenkoku Shakai Jigyo Kenkyu Happyo-kai: Happyo Shushi." The papers cover the following subjects: Child Welfare, Protection of Livelihood, Rural Social Work, Medical Protection Problems, Social Work Administration, In-Service Training for social workers and an analysis of modern social work in Japan today. When all of the papers have been edited they will be published in final form.

Public Assistance Report - September

The Ministry of Welfare reports the following public assistance figures for the month of September. Figures for August 1949 and for September 1948 are shown for purpose of comparison:

	Sept 1949	Aug 1949	Sept 1948
Persons - Institutional	132,683	132,321	144,882
Persons - Non-Institutional	1,857,864*	1,548,845	1,773,108
Totals	1,990,547	1,681,166	1,917,990
Assistance - Cash	892,053,116**	878,789,129	519,141,920
Assistance - Kind	64,118,727	13,350,923	23,266,546
Totals	956,171,843	892,140,052	542,408,466

* Approximately 260,000 persons received assistance as a result of Typhoon Kitty.

** Before deductions for repayment.

Inclosure No.1 Lists September Public Assistance Data by prefectures.

SECTION VIII
SOCIAL SECURITY DIVISION

Cabinet Orders Concerning Social Insurance Medical Care Councils and Social Insurance Medical Fee Calculating Councils

Inclosure No.2 "Cabinet Order 367 of 17 November 1949, Social Insurance Medical Care Councils", and Inclosure No.3, "Cabinet Order 368 of 17 November 1949, Social Insurance Medical Fee Calculating Councils", implement the provisions in the basic laws concerning appointment and supervision of insurance doctors and the determination of medical care fees for the social insurance programs.

Fundamental provisions concerning medical care advisory councils are found in Article 43-(5) of the Health Insurance Law and Articles 282(5) and 28-(6) of the Seamen's Insurance Law as amended by Law 156 of 1949. Prior to the 1949 amendments, the Seamen's Insurance Law contained no specific reference to the medical care advisory council set up in January 1949 under the Health insurance Law and Cabinet Order 23 of 1949 although the Seamen's insurance program had participated in the operations of these councils prior to the amendments made by Law 156 of 1949.

Provisions in the social insurance laws concerning medical fee calculating councils are found in Articles 43-(6) and 43-(7) of the Health Insurance Law, Articles 28-(6) and 28-(7) of the Seamen' Insurance Law and Articles 8-(5) and 8-(7) of the National Health Insurance Law. As in the case of the medical care advisory councils, there was no specific reference to the Seamen's Insurance Law concerning the medical fee calculating councils until the amendments made by Law 156 of 1949 although the Seamen's Insurance program had participated in the operations of the medical fee calculating committee established in January 1949 by the provisions of the Health Insurance Law and Cabinet Order 24 of 1949.

Because of technical legal effects of the 1949 amendments to the Seamen's Insurance Law, it was necessary to set up separate medical care advisory councils for the Health and Seamen's Insurance and separate medical fee calculating councils for the Health, Seamen's and National Health Insurances. However, Cabinet Orders 367 and 368 of 1949, which supersede Cabinet Order 23 and 24 of 1949, provide that the comparable bodies for each program will act jointly in their deliberations.

The two central medical care advisory councils will coordinate the activities of two advisory councils established in each prefecture. There will be but one medical fee calculating council for each of the three programs and no such bodies in the prefectures. The fees for medical care under Health Insurance, including both government-managed and society-managed, and under Seamen's Insurance, are set by the Welfare Minister upon the recommendation of the calculating councils but the individual National Health insurance Associations establish their own medical care fees, subject to the approval of the prefectural governor and using the recommendations of the medical fee calculating council only as a guide.

CRAWFORD F. SAMS
Brigadier General, Medical Corps
Chief

7 Inclosures:

1. Public Assistance Report for September, 1949.
2. Cabinet Order No.367 for 1949.
3. Cabinet Order No.368 for 1949.
4. Monthly Summary of Vital Statistics in Japan - September 1949.
5. Digest of Weekly Report of Communicable Diseases in Japan for Week Ended 5 November 1949.
6. Digest of Weekly Report of Communicable Diseases in Japan for Week Ended 12 November 1949.
7. Digest of Weekly Report of Communicable Diseases in Japan for Week Ended 19 November 1949.

VIII MEMO TO JAPANESE GOVERNMENT	12

SECTION I
PREVENTIVE MEDICINE DIVISION

Influenza:

In anticipation of possible cases or outbreaks of influenza during the coming winter season, the Ministry of Welfare has published new instructions on case reporting, serologic diagnosis, and control measures. The new instructions are contained in EI-HATSU No.1244 of 14 December 1949, subject, "Prevention and Control of Influenza". These instructions supercede those published last winter in YO-HATSU No.75 of 27 January 1949 and YO-HATSU No.151 of 17 February 1949.

The new EI-HATSU requires reporting by telephone or telegram and later by written report of initial cases and of epidemics of influenza with daily reporting of new cases both suspect and confirmed, together with the number of serologic tests performed and the number positive. In order to adequately utilize existing services of the national government in identifying an epidemic at the earliest possible date, sera from 8 to 10 patients early in any local outbreak suspected to be influenza are to be sent to the National Institute of Health. At least two serum specimens of not less than 5 cc each are to be collected on each patient to be tested, one as early as possible in the course of the illness, preferably within 48 hours of onset but not later than the 5th day, and the second from the 10th to the 14th day after onset. When an earlier report is desired an additional specimen may be submitted 5 or 6 days after the first, but a definite laboratory report requires comparison between an early serum specimen and one taken at the calculated height of serologic response, about two weeks after onset.

EI-HATSU 1224 also outlines routine control measures to be followed such as disinfection, home isolation, and where indicated, the prohibition of public gatherings.

Typhus Fever and Sanitation of Public Conveyances.

Attention is invited to SCAPIN 2011, dated 28 May 1949, subject, "Prevention and Control of the Typhus Fever Group of Diseases in Japan." Particular attention is called to paragraph 3(d) (e) pertaining to disinfection and disinfestation of public and private transportation utilities, etc. Reports and observations reveal that disinfestations and disinfection procedures are being done in a haphazard manner in many instances and not being given a thorough residual effect DDT spray treatment. Particular fault lies in the proper application of spray to the 3rd class railway coaches, buses and electric cars. Some transportation companies, particularly certain of the bus companies, are still using pyrethrum emulsion spray. This spray is not the equivalent of 5% DDT residual effect spray and its use should be discouraged in this work. Wettable DDT dust and DDT emulsions when applied as 5% sprays are considered to be the equivalent of the 5% DDT oil sprays and their use should be encouraged as stocks become available. At the moment investigation work and field trials continue in an effort to produce acceptable wettable DDT dusts and DDT stock emulsions. Until such time as these products are available only 5% DDT residual effect spray should be used. The addition of cresolis to the residual spray in a concentration of not less than 5% in final solution is still recommended for its action against the rickettsia of typhus fever which may be present in the fecal droppings of lice and fleas mixed with dirt particles on the floors and seats of all public conveyances.

It is important that the attention of all transportation officials be directed towards the improvement of the residual spray treatment of transportation utilities and also to seek a decided improvement in the generally poor sanitation of these utilities.

Streptomycin Dosage

Recently a copy of Minutes of the Seventh Streptomycin Conference which was held in the spring of this year, was presented to the Ministry of Welfare for translation and distribution to those to whom it might be considered to be of interest or benefit. This report which is quite voluminous (about 400 pages) was published by the Veterans Administration and represents the collective studies and opinions available concerning streptomycin therapy. Considerable space was given to the development of streptomycin resistance. Results of treatment in various types of tuberculosis are reported as guaged by different criteria - clinical, x-ray, laboratory, etc.

It is important to note that the report gives the regime consisting of 1 gram a day for forty-two days top rating in the evaluation of all the treatment regimes studied. This is very close to the 1 gram a day for forty days which has been suggested as standard for Japan from the inception of the program here. The only change which might be indicated here at present, is the giving of one gram in one dose daily rather than multiple doses. Recent

experience seems to indicate that a high level on blood streptomycin once a day will accomplish as much or more than a continued intermediate level. This procedure has not yet been adopted by the Ministry of Welfare.

Streptomycin Study

Attention is directed to Inclosure No.1 EI-HATSU No.1189, which orders the furnishing and describes the form of the first interim report concerning the results obtained from the use of the first lot of imported streptomycin.

The method of evaluation indicated is very similar to those which have been used in the United States.

This document is published for information only.

SECTION II VETERINARY AFFAIRS DIVISION

Japanese Veterinary Medical Association

The Board of Directors of the JVMA recently in Tokyo with full representatives from every region in Japan. One entire day and evening was devoted to current problems with active participation of the regional representatives. The Board selected the City of Osaka for the annual national convention on March 26-27-28, 1950. Support is requested for the attendance of all prefectural veterinary leaders and especially government officials. A sectional meeting will be devoted to veterinary public health.

Veterinary Biologics Assay Laboratory

Plans are now on the drawing board for the first unit of a new assay laboratory. It will be located in Tokyo on the site of the old Animal Hygiene Experiment Station, Committees on assay standards for veterinary biologics have been active in recent months and the list of approved methods is becoming more complete.

Record of Certificates Covering Fumigation of Straw Rope and Animal Diseases Status.

A total of 455,849 bundles of mandarin oranges were shipped to Vancouver, B.C. Canada. The final shipment took place from Kobe and Shimizu on 29 November 1949.

As required by the Canadian Veterinarian Director General, Department of Agriculture, certificates were prepared for each shipment to cover the fumigation of the straw ropes that were utilized for binding the cases together, and also to include the status of animal diseases in Japan in which Foot and Mouth disease, Rinderpest and Contagious Pleuro-pneumonia are specifically mentioned.

Bovine Influenza

The Animal Hygiene Section, Ministry of Agriculture and Forestry submitted a report in which no new cases of bovine influenza were reported from the Prefectures. There still remains a remote possibility that a few sporadic cases still exist which are not being reported. Recovery of approximately 300 cases in Gifu and Mie Prefectures is expected as the incidence of the disease was very low therein.

At the present time, Drs. Kono and Someya of the Institute of Public Health are engaged in research on the relationship of bovine influenza virus with that of the human strain. Materials consisting of nasal mucus, blood and tissue specimens from diseased cattle in Hyogo were collected on 9 November and research is continuing.

A virus has been isolated from the specimens and it is now undergoing comparative study with the human strain of influenza virus. A serological study is being made of the antibody reaction of bovine influenza in blood of cattle when challenged with the virus of human influenza. A report of findings is expected sometime during the month of December.

Correlation of the research study has been carried with Dr. Tajima of National Institute of Health.

Weekly Rabies Report

The Veterinary Affairs Division, Ministry of Welfare, submitted the following report concerning the incidence of rabies in Kanto Region, and the number of cases reported for the period 20 - 26 November:

<u>Prefecture</u>	<u>New Cases</u>	<u>Total cases Since 1 Jan.</u>
Tokyo	2	171
Kanagawa	1	79
Chiba	0	129
Saitama	4	108
Ibaraki	0	26
Gumma	0	54
Tochigi	<u>0</u>	<u>2</u>
Total	7	569

Since August, the incidence of rabies in the Kanto Region has become more localized in those Prefectures showing active cases as of this report. The Prefectures have exerted effort in trying to immunize all dogs regardless of whether or not they have been registered with city offices. The high tax that is placed on each dog has been in many cases, responsible for increased incidence of rabies as the owners were not offering their dogs for immunization. Plans are now under way to modify present city ordinances so that they do not serve as a barrier to future immunization programs.

Weekly Rabies Report

The Veterinary Affairs Section, Ministry of Welfare, submitted the following report on rabies occurring in dogs in the Kanto Region during the period 27 November 3 December 1949;

<u>Prefecture</u>	<u>New Cases</u>	<u>Total Cases to Date</u>
Tokyo	2	173
Kanagawa	1	80
Chiba	4	133
Saitama	4	112
Ibaraki	0	26
Gumma	1	55
Tochigi	0	2
Shizuoka	<u>0</u>	<u>0</u>
Total	12	581

Weekly Animal disease Report

The Animal Hygiene Section, Ministry of Agriculture and Forestry submitted the following report on those animal diseases occurring during the period of 26 November 2 December:

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Ibaraki	Swine erysipelas	2

Note: Number of swine erysipelas cases occurring since 1 January now total 1,412.

Weekly Animal Disease Report

The Animal Hygiene Section, Ministry of Agriculture and Forestry, submitted the following report on those animal diseases occurring during the period of 3 - 9 December 1949:

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Hokkaido	Hog Cholera	1
Miyagi	Hog Cholera	1
Hiroshima	Hog Cholera	13
Kumamoto	Black leg	2

Note: Number of swine choleras cases occurring since 1 January now total 1,657.

SECTION III NURITION BRANCH

Nutrition Survey

The result of the August 1949 nutrition survey (See Incl. No.2) for the areas covered, Tokyo, 11 large cities, other cities and the 46 rural prefectures, evidenced in the average per capita consumption of food, a light decrease compared with the May 1949 survey. Rural areas show the usual higher calorie diet over that of the urban areas with the still greater deficit in animal protein. However, the figures given below indicate the general improvement in the consumption of food by Japanese in the August 1949 survey when compared with the August 1948 survey.

<u>Month Year</u>	<u>Calories</u>		
	<u>All Japan</u>	<u>Urban</u>	<u>Rural</u>
May 1949	2084	2000	2127
Aug. 1949	2052	1948	2103
Aug. 1948	1987	1946	1998

While the consumption of leafy green and yellow vegetables and legumes are definitely less, there is a slight increase in the consumption of other fruits and vegetables. This may account for the drop in vitamin A intake and the slight increase in the vitamin C content in the diet.

Nutritional deficiency symptoms of bradycardia, edema, loss of knee jerk, and anemia, show a general increase. Hyperkeratosis and glossitis are especially evidenced in the rural areas. Vitamin B1 deficiency is wide spread in all Japan, particularly at this season of the year (August) when the low nutritive value of the Japanese diet is more in evidence.

Losses in body weight are noted in the 16 year age group. This too may be attributed to seasonal influences when high temperatures demand greater need for vitamin B in the diet. The decrease in ration foods at this time may also be another factor contributing weight losses.

SECTION IV SUPPLY DIVISION

License to Practice Pharmacy

Article 3, paragraph 2 of the Pharmaceutical Affairs Law (Law No.197 of 1948) limits the classification of individuals who are entitled to be licensed to practice pharmacy in Japan, as follows:

“License of pharmacist shall not be given to any person who does not fall under one of the following classifications:

- a. A person who has passed the National Pharmacist Examination.
- b. A person who is licensed as a pharmacist in a foreign country designated by the Minister of Welfare.”

Ministry of Welfare Notification No.254 published in the Official Gazette 21 November 1949 designates the United States of America under paragraph 2b of Article 3.

Reorganization of the Pharmaceutical and Supply Bureau

A partial reorganization of the Pharmaceutical and Supply Bureau of the Ministry of Welfare has been effected. Ministry of Welfare Ordinance No.38 (Enforcement Regulation of the Ministry of Welfare Establishment Law, Law No.151 of 1949), promulgated 25 October in the Official Gazette, sets forth the present organization in Articles 35 through 41. The Bureau consists of six sections as follows:

Enterprise Section
Pharmaceutical Affairs Section
Drug Manufacturing Section
Inspection Section
Biologic Section

Narcotic Section

The major changes from the previous organization are the creation of the Enterprise Section and the absorption into the Pharmaceutical Affairs Section of the defunct Medical Material Section. The Enterprise Section has been established to strengthen the activities of the Bureau concerned with economic affairs, both domestic and foreign (export).

Chloromycetin

Chloromycetin has been used successfully in treating typhoid fever and the typhus fever group of rickettsial diseases. It has been produced on an experimental scale by Japanese scientists, by both the fermentation and synthesis methods. Efforts are being made to inaugurate commercial production in Japan of this valuable drug.

Critical Raw Materials

The Ministry Welfare announced allocations of critical raw materials for the production of essential medical supplies and equipment, for January, February, March 1950, are the largest since the Occupation began. For the first time, sufficient quantities of such medical items as textile sanitary materials, rubber medical goods, artificial limbs and certain controlled medicines, will be produced to meet minimum domestic requirements.

Biologics Assay

During the period 22 November to 5 December the following biologics have been assayed and found to meet minimum standards:

<u>Item</u>	<u>Manufacture</u>	<u>Lot No.</u>	<u>Quantity</u>
Smallpox Vaccine	Kagaku & Kessei Ryoho Institute	157	287,400 doses
		158	201,300

SECTION V
NARCOTIC CONTROL DIVISION

Narcotic Control Activities Report - October

The October report on narcotic control activities from the Ministry of Welfare contained the following information:

Total Registrants		93,869
Arrests -	Registered persons	33
	Unregistered persons	146
	(including ##### foreign nationals and #####)	
Convictions -	Registered persons	6
	Unregistered persons	46
	(including eight foreign nationals and two Koreans)	
Theft of narcotics (including nine hospitals and one local wholesaler)		31
Losses by fire		7

Penalties for registrants varied from two months penal servitude and ¥ 5,000 fine to six months penal servitude and ¥ 10,000 fine. One sentence of penal servitude was suspended. Penalties for non-registrants tried in Japanese Courts varied from ¥ 5,000 fine to three years penal servitude. Nine out of 39 sentences of penal servitude were suspended. Fifteen sentences were appealed by defendants and two by procurators. Penalties for foreign national varied from \$100 fine to four years confinement at hard labor. Seven defendants were sentenced to confinement in hard labor including two defendants who were sentenced to deportation after a term of confinement in hard labor. There were no suspended sentences. Three defendants were found not guilty.

Forty-three registrants were admonished and 11 were dealt with administratively, their licenses being suspended from two weeks to three months.

Twenty-seven violations of the Marihuana Law were reported and all defendants were admonished. One defendant, previously arrested, was fined ¥ 1,000.

The report also summarized the activities of the narcotic agents as follows:

Inspection of registrants	1,557
Investigations originated	215
Investigations concluded	236
Investigations not concluded	441

SECTION VI WELFARE DIVISION

Child Welfare Cases

The Children's Bureau is requesting each To, Do, Fu and prefecture to submit one or two cases handled by child welfare officials and any good case handled by a child welfare center or child welfare institution. From these cases, to be at the Children's Bureau by the end of December 1949, a committee will select a group of 10 to 20 to be published in a pamphlet for training purposes. The selection will be completed by 15 February 1950. Refer to pamphlet in Japanese entitled "Child Welfare Work", a collection of 12 cases selected from over 200 cases submitted by child welfare officials and child welfare workers, published by the All Japan Minsei-iin Federation. The new pamphlet is to be primarily for child welfare officials and other child welfare personnel not voluntary, but in paid positions, and therefore the cases are expected to be more professionally handled. Considerable detail about this project is given in Ji-Otsu-Hatsu-No.55 dated 24 November 1949 sent to each prefectural welfare department through the governor.

Child Welfare - Law, Rules and Regulations as Amended

Attached (Incl No.3) are copies of the Child Welfare Law, Cabinet Order, and Ministry Regulations as amended during the past session of the Diet. Amended portion of the Law and orders are underlined.

CCCC

As of 8 Dec 1949, 89.9% of the total goal set for the Community Chest drive had been reached. In comparison at this last year only 74.9% of the goal had been obtained.

Against the total fund goal of ¥ 1,221,717,000 for this year ¥ 1,086,608,750 has been collected. A year ago at this time, against a goal of ¥ 1,175,450,000 a total of ¥ 879,631,985.05 yen had been raised.

Public Assistance - Personnel

The Ministry of Welfare has secured funds for 1950-51 fiscal year for subsidization of additional employees in the public welfare field - particularly for those localities which will delegate public welfare responsibilities to full time paid workers and which do not have sufficient staff to competently carry on the work. It is hoped that such funds may primarily be used to secure more competent staff than that now employed. Hatsu-Sha #77 (Incl No.4), subject: "Qualifications for the Welfare Official in Charge of Public Assistance Service" attempts to point out to the governors that these officials should meet certain minimum qualifications. In addition to this the Ministry will soon release an analysis of the job of the paid worker for further guidance. This material will be included in a future Bulletin.

Public Assistance - Distribution of UNICEF Clothing

Attached (Incl No.5) is a copy of Ji-Hatsu #33, dated 14 Nov 49, subject: "About Distribution of UNICEF Supplies" which set up the criteria by which UNICEF clothing will be distributed. Included therewith is a list of the clothing, by prefecture, of the first allotment (children under 9 years). The Ministry hopes to complete distribution by 1 January 1950.

Public Assistance - Distribution of Winter Relief Clothing

Attached (Incl No.6) is a copy of Sha-Otsu-Hatsu #254, dated 15 Nov 49, subject: "Special Distribution of Winter Relief Clothing to the Persons in Need." It will be noted that distribution is free of charge to public assistance recipients.

Housing for Repatriates - Repair & Purchase

Enclosed with this Bulletin (Incl No.7) is a copy of En-Shi #1277, dated 18 Nov, subject: "Concerning Repairing of Residences for Repatriates from Abroad" which deals with allocations of funds for the stated purpose, sets up standards for such repair, and describes standards for management. Inclosed also as Inclosure No.8 is a copy of En-Shi #1278, dated 18 November, subject: "Purchase of Companies Building: Used as Repatriates Housing", which describes procedure for the purchase of certain buildings now used for housing of repatriates.

Plan for Tidal Wave Forecasts

In accordance with Memorandum for the Japanese Government, AG 000.92 (3 Oct 49) GC-O, SCAPIN 2049, 3 October 1949, subject: "Earthquake Reports and Tidal Wave Forecasts", the National Disaster Planning Board has developed a national system for disseminating tidal wave warnings to the indigenous population. The plan is comprehensive in nature and if effectively applied will insure warning to danger areas with least possible delay. A "Test run" is scheduled for 20 December 1949 in the Miyagi-Sendai area as a demonstration of the practical operation of the plan.

Reference

"As United Nations Fellows See Us - Observations of Foreign Visitors on American Public Welfare", an article by Elma H. Ashton appearing in the October 1949 Social Work Journal is recommended as a highly informative review of the reactions of United Nations foreign study visitors to social work programs in America.

Outline of Welfare Objectives for 1950-1951

Attached to this Bulletin as Inclosure No.9 is an outline of objectives which will be used as a guide by Public Health and Welfare Section and the Ministry of Welfare during the coming year in further shaping the organizational and administrative structure considered essential for an effective system of national welfare services in Japan. Those objectives have been presented to the Ministry and have been agreed upon in principle. The Regions will, of course, recognize that the initial implementation of the objectives will require a great deal of staff work and coordination before practical working plans and procedures will be perfected by the Ministry for release and direction of affected agencies of the Japanese government. However, it is expected that the Ministry will immediately inform the Prefectures of the general nature of the objectives and the steps contemplated in their accomplishment and strongly advise against any abortive efforts at their implementation pending the release of detailed and uniform procedures by the Ministry. Every effort will be made to keep the Regions currently informed concerning the efforts of the Ministry in carrying out the several programs. The Ministry has asked for and been assured of maximum assistance from Public Health and Welfare Section and Region Civil Affairs Teams in the development and execution of the programs. Accordingly, the role of the Civil Affairs Welfare Officers will be detailed and released to the field through appropriate channels with the least possible delay. In the meantime, the Regional Welfare Officers will consider the attached outline as informative only and will wish to discourage the development of interim projects and demonstrations upon which their advice and assistance might be requested by the prefectural or local Japanese officials.

The application of Ministry instruction Sha-Otsu-Hatsu No.322 (10 October 1949), reference PHW Bulletin No.141, dated 1 - 15 October 1949, and Hatsu Sha No.72 (31 October 1949), reference PHW Bulletin 142, dated 15 - 31 October 1949, during the immediate interval suggest certain problems particularly in light of the above statement. Projects and demonstrations which have already been started should, of course, be contained as seems necessary and desirable. The cities affected by the latter Ministry directive, it is hoped, will proceed with the instructions concerning utilization of paid workers but will delay general reorganization pending further and uniform instructions from the Ministry. Further comments on such problems will be contained in future PHW Bulletins.

SECTION VII SOCIAL SECURITY DIVISION

Social Insurance Medical Fee Payment Fund Law and Ordinances

The attached inclosure (Incl No.10) contains the basic legal sources governing the operation of the Social Insurance Medical Fee Payment Fund, to wit: Law No.129 of 10 July 1948 as amended by the Law No.167 of 30 May 1949 establishing the Fund as a non-governmental institution but supervised and partially endowed by the National government, and two Ministerial Ordinances, No.34 of 30 July 1948 as amended by No.27 of 7 July 1949 containing general rules for the enforcement of the above Law, and No.56 of 13 December 1948 as amended by No.28 of 7 July 1949 regulating scope and exercise of the function, given to representative prefectural committees, of examining and certifying bills submitted by purveyors of medical care.

One further legal source implementing the law, to wit: Cabinet order No.277 of 31 August 1948, "Registration Ordinance of the Social Insurance Medical Payment Fund" has here been omitted. It merely specifies the mechanics of registering the Fund pursuant to Article 6 of the basic law and in keeping with other provisions of civil law.

It should be borne in mind that, owing to the above-said nature of the Fund, these legal instruments constitute only one part of its basis of operation. While the Fund derives from authorization under certain conditions and in certain way to render services to the several social insurances, it derives its mandate to do so from contracts entered into with the several insurers or federations thereof. These contracts set forth the mutual obligations of the Fund and the insurer subscribing to its services. In regard to the government-managed part of Health Insurance and Seamen's Insurance one contract is entered into by the Ministry of Welfare as the representative of the insurer (the National government). In regard to society-managed Health Insurance the national Federation of Health Insurance Societies acts as representative of the insurers and signs one standard contract for all of them. In the cases of the National Public Service Mutual Aid associations separate contracts are signed by the Fund with the head-office of each association cooperating (23 out of the 30 associations existing at this time). As regards National Health Insurance, the prefectural federations of National Health Insurance carriers or their Central Society would seem to be the logical parties to the contract. However, after an abortive attempt of one such prefectural federation effectively to utilize the services of the Fund, National Health Insurance is not cooperating for the time being and probably won't do so until its finances have been stabilized. Thus the contracts new in existence number 25 in all.

Further sources regulating the business of the Fund and its 46 branch offices are the "Detailed Articles" adopted by the Fund and approved by the Welfare Minister and, finally, the directives on procedure, reporting requirements, forms, etc. issued to the branch offices by the Chief Director of the Fund. As a result of the latter there are now in use standard notification forms to the insurers, doctors and banks involved in the bill examination and payment process as well as a uniform system of record keeping and accounting by each branch office.

The following figures, all pertaining to the first business year of the Fund (only seven months, September 1948 through March 1949) will convey a general idea of the scale and volume of business transacted.

1. Total personnel:	16 directors
	4 auditors
	693 bill examiners
	368 secretaries
	<u>1,160</u> clerks
Grand total	2,241

2. Total budget of the Fund ¥ 74,591,610
3. Total deposits received from insurers (Includes ¥ 90,136,708 for the administrative expenses involved) ¥ 5,186,423,593

Of the above total the individual programs cooperating with the Fund during the period specified above account for the following amounts:

Insurance program	Deposits for payment of medical and allied care bills	Deposits to defray cost of administration
	¥	¥
Government-managed Health Insurance	2,979,944,993	56,867,002
Seamen's Insurance	149,101,606	1,974,985
National Public Service Mutual Aid Associations	600,450,592	9,115,171
Society-managed Health Insurance	1,365,236,656	22,145,654
National Health Insurance	<u>1,553,038</u>	<u>33,896</u>
Total	5,096,286,885	90,136,708

4. Total payment made to purveyors of medical and allied care ¥ 485,951,697
5. Total number of medical care cases ¥ 8,474,088
6. Total number of doctors and dentists paid through the Fund is estimated in excess of 50,000 or better than 80 percent of all the doctors and dentists cooperating with the social insurances serviced by the Fund.

SECTION I
PREVENTIVE MEDICINE DIVISION

Diphtheria Immunization program

Sufficient toxoid has been produced and assayed to fill about 40% of the annual requirement. Since diphtheria immunization is scheduled twice annually, the balance of this year's inoculations will be performed about six months hence. The Ministry of Welfare has allocated the toxoid now available according to estimated population of the age group whose immunization is required by law, modified by reported case rates for diphtheria during the past year. Advice to prefectures regarding the priority which they are to follow in preparing lists and administering the toxoid to certain age groups of children has been published in Ei-Hatsu No.1212 of 6 December 1949, subject "Opening of Preventive Vaccination against Diphtheria", a copy of which is attached to this bulletin (Inclosure No.1). An attempt is being made to immunize as many as possible of those children who would have otherwise been given toxoid during the past year if toxoid had been available.

Additional toxoid is expected to be available in time for use during the coming program and will be allocated to supplement the initial distribution. If stocks (re-assayed and approved lots of toxoid) on hand are not usable due to improper storage or deterioration, information concerning the matter should immediately be sent by prefectures to the Ministry of Welfare so that consideration may be given when making additional allocations.

Typhus Fever

Errata. Attention is invited to the article entitled, "Typhus Fever and Sanitation of Public Conveyances", which appeared in Bulletin No.145 for period 1 - 15 December 1949. The last sentence of the first paragraph should read as follows: "The addition of cresolis to the residual spray in a concentration of not less than 2% in ##### dilution ...".

Publicity. In keeping with the general public health information program it is urged that at this time of the year emphasis be placed on publicity programs relating to the prevention and control of epidemic (louse-borne) typhus and murine (flea-borne) typhus in Japan.

Quarantine

Routine immunization requirements for entry into Japan were revised by SCAP Circular 17 of 30 July 1949, subject, "Foreign Quarantine Regulations for Japan." This circular extended from one year to three years the period of validity for certificates of immunization against smallpox, retained typhoid-paratyphoid validity of twelve months and included the requirement of yellow fever immunizations of persons arriving in Japan from endemic yellow fever areas.

The above circular also gave the duration of validity of various immunizations, when required, as calculated from the date of immunization as follows:

Cholera	7 days to	6 months
Plague	10 days to	6 months
Smallpox	14 days to	3 years
Typhoid-Paratyphoid	14 days to	12 months
Typhus	12 days to	12 months
Yellow fever	10 days to	4 years

Special requirements applicable to persons coming from epidemic areas of quarantinable disease have been revised by SCAP Memorandum, File AG 720.4 (29 Nov 49) PH of 29 November 1949, subject "Quarantine Regulations". The only special requirements now applicable are:

A valid certificate of inoculation against cholera of persons entering Japan by air from Calcutta.

A certificate showing successful vaccination against smallpox within 60 days of all persons entering Japan from Batavia.

Immunization Records

Reference YO-HATSU No.39 of 12 January 1949, subject "Individual Permanent Record Card". By reference YO-HATSU the adoption of the individual record card was required of all model health centers and advised for all others. However, national funds were available as subsidy only to model health centers, and a temporary record in the form of a ledger continued in use in most health center districts. These were described in YO-HATSU No.1355 of 15 October 1948, subject: Temporary Records of Immunization for Smallpox, Diphtheria and Typhoid-paratyphoid and in YO-HATSU No.38 of 13 January 1949, subject, "Temporary Record of Preventive Inoculation Against Tuberculosis".

The Ministry of Welfare has now published Ministry of Welfare Notification No.255 of 16 November 1949 (Inclosure No.2) which directs discontinuation of the use of temporary records of immunization effective 31 March 1950, after which date all records of immunization are to be entered on the individual record cards as described in reference YO-HATSU No.39 and amended by YO-HATSU No.128 and No.233.

The form to be used for individual records is a card 6 1/8 x 8 3/4 inches, printed on both sides, as indicated below:

(Front Page) Paper size ... A5

INDIVIDUAL RECODE OF PREVENTIVE INOCULATION

No.	Name of Person				Health Center			
Residence				City, Town, Village				
Date of Birth	Year	Month	Day	Sex				
Head of the Household		Relationship to the Household-head		Date of Card Year Month Day				
Smallpox		Typhoid & Paratyphoid A & B			Tuberculosis			
Date of Inocul,	Date Exam,	Result Seal	Date of Inocul,	Amt, Seal	Tuberculin Reaction	Test Reading Date	BCG Incl Seal	
				Date of Inocul,	Reaction	Reading Date	Method	
					x ()			
					x ()			
					x ()

Date of Inocul.	Amt.	Seal			x ()			
					x ()			
					x ()			
					x ()			
					x ()			
Peutussis					x ()			
Date of Inocul.	Amt.	Seal			x ()			
					x ()			
					x ()			
					x ()			
					x ()			
Death				Change of Residence				
Others								
Name of Vacc, Date of Inocul. Amt. Seal				Remarks				

Note:

- (1) Each separate injection of the initial series as well as of later inoculation will be recorded in the proper column.
- (2) In recording "Reaction" of tuberculin test, enter the long and the short diameters of redness in millimeter on either side of (x) (in case of redness, its outer diameter). Indicate double redness "D" induration "I", vesicles "V" and necrosis "N" by initial within the parenthesis.
- (3) In recording "reading" of tuberculin test get the average of the two diameters of redness and indicate (-) if less than 4mm, (=) if 5 to 9mm, (+) if larger than 10mm, (- +) if induration is present, (- ++) if induration is accompanied by double redness or vesicles, necrosis etc.
- (4) Method of BCG inoculation will be shown "Intradermic" or "scarification."
- (5) The following information should be recorded under "remarks";
 - a. Severe reaction; b. Name of disease, date of onset, severity recovery or other results; c. In case of T.B., patient, name and relationship of any other member of the family or household who is a T.B. patient, date of onset.

Training Course at the Institute of Public Health

Sanitary Engineers. Because of a scarcity of candidates for training, the three month course for sanitary engineers scheduled to begin on 9 January at the Institute of Public Health in Tokyo has been postponed until 3 April. A questionnaire sent to prefectural health departments indicated only 7 students available to take the course if it was held in January. It is hoped that a larger number of candidates will be ready for training by April.

Medical Health Officers. Medical Health Officers attending the next three month course beginning 9 January will be housed in new dormitory rooms recently completed on the fifth floor of the Institute of Public Health building. Meals will be served in a dining room located in the basement. Thus living arrangements for medical officers while in Tokyo will be much more comfortable and convenient than they have been in the past.

SECTION II NURSING AFFAIRS DIVISION

Public Health Nursing Schools

Ihatsu No.1031, dated 27 December was sent to prefectural governors by the Medical Affairs Bureau of the Ministry of Welfare. This notification outlines the plans for the establishment of the one year public health nursing schools in accordance with Public Health Nurse, Midwife and Nurse Law No. 203, July 1948. As previously recognized at the regional nurses conference (October 1948) only a few public health nursing schools will be needed in the immediate future. Ihatsu No.1030 outlines the necessary qualifications for instructors of these schools.

Institute for Health Insurance Nurse

From the budget of the National Health Insurance Section of the Insurance Bureau of the Ministry of Welfare funds will be allotted to each prefecture (except Kochi) for a 5-day Institute for Health Insurance Nurses to be held between February - April 1950. The nine health insurance nurses of Kochi will be included in the Ehime program. This institute has been jointly planned by the Nursing Section of Ministry of Welfare and the Educational Committee of the Public Health Section of the Nurse Association. Nursing procedures for public health nurses are to be taught. Teaching materials are being prepared by the Educational Committee of the public Health Section of the Nurses Association and will be sent to the chairman of Public Health Sections of the Prefectural Nursing Associations.

Detailed plans regarding the institute were sent by the above mentioned Educational Committee to the Chairman of the Public Health Section of the Nurse Association on 16 December 1949.

Educational Materials

Educational materials in the form of models, dolls, and instruments to be used in teaching programs in nursing schools may be obtained from the following sources:

Yamakoshi Seisakiyo
1, 3-chome, Okachi-machi, Taito-ku, Tokyo

Hisakata Shoten

17, 1-chome, Kuramae, Asakusa, Taito-ku, Tokyo-to

Takizawa Seisaku-jo
9, 2-chome, Yumi-cho, Bunkyo-ku, Tokyo-to

National Okiya Sanatorium
Ojiya-kyoku-nai, Niitaga-ken

Shimaza Seisakujo
18, Kuwabara-cho, Nishi-no-kyo, Chukyo-ku, Kyoto-shi

A new book "Safer Ways in Nursing to Protect Against Tuberculosis", has just been translated and published. This book may be obtained from the Medical Friend Company, 40 Momozano-cho, Nakano-ku, Tokyo-to, for the sum of 75 yen and postage. This book was originally prepared by the Joint Tuberculosis Advisory Service of the National League of Nursing Education, the National Organization for Public Health Nursing and the National Tuberculosis Association.

SECTION III VETERINARY AFFAIRS DIVISION

Animal Hygiene Experiment Stations

A comprehensive semi-annual report for period 1 April - 30 November 1949, on the experiments being performed at the National Annual Hygiene Experiment Stations has been submitted. It is believed that the current programs are being pursued with more vigor and practical objectiveness than heretofore. Major programs being continued include studies on Japanese Equine Encephalitis, Equine Infectious Anemia (improvement of diagnostic methods), abortion diseases of equines and bovines, and the treatment of lumber paralysis of sheep and goats.

The recent importation of the Weybridge strain of hog cholera virus and the ##### strain and Newcastle disease virus has renewed the hope of making successful vaccines against these diseases. Beginning 1 January 1950, a series of experiments will be conducted to determine its adaptability in Japanese swine and poultry.

Bovine Influenza

Final survey by Prefectural Veterinarians discloses that approximately 145,622 cattle were attacked by Bovine Influenza during the period August to November 1949. Deaths totaling 551 were reported, and were a result of secondary bacterial invasion of pasteurilla organisms. A specific virus has been isolated and is undergoing serial passages in mice. Research is continuing and findings will be compiled and published. Past history discloses that Bovine Influenza has been present in Japan, but due to its mild nature, it was never included in the list of reported diseases as required by law. Necessary steps are now being taken.

Monthly Food Sanitation Report

The Food Sanitation Section, Ministry of Welfare, submitted the following report on the sanitary inspections as conducted by prefectural food inspectors in those establishments processing, handling and selling food and beverages during the month of October.

a.	Number of establishments registered	----	841,858
	Number of establishments inspected	----	277,428
	Number of establishments completing improvements	----	128,262
	Number of administration punishments	----	147
	Number of cases to be tried under civil law	----	3
	Number of establishments to be improved	----	22,648
	Number of samples collected for analysis	----	4,423
	Number of establishments requesting food analysis	----	1,296

b. During the month of October, a total of 90 outbreak of food poisoning involving 681 people occurred with 34 deaths recorded.

c. Number of food inspectors now total 1,433.

Monthly Milk Inspection Report

Prefectural veterinarians conducted the following sanitary inspections of dairy farms and milk plants during the month of October.

Special Milk

Number of farms inspected	-----	6
Samples examined	-----	19
Over bacterial standards (50,000 per cc)	-----	2
Under butterfat standards (3.3 percent)	-----	0
Number of plant inspected	-----	19
Over bacterial standards (50,000 per cc)	-----	2
Under butterfat standards (3.3 percent)	-----	0

Ordinary Milk

Number of farms inspected	-----	13,648
Samples examined	-----	15,448
Over bacterial standards (2,000,000 per cc)	-----	1,061
Under butterfat standards (3.0 percent)	-----	978
Number of plant inspected	-----	3,920
Over bacterial standards (2,000,000 per cc)	-----	429
Under butterfat standards (3.0 percent)	-----	343

Goat Milk

Number of farms inspected	-----	42
Samples examined	-----	54
Over bacterial standards (2,000,000 per cc)	-----	8
Under butterfat standards (3.0 percent)	-----	3

Milk Produced on Daily Farms in October

<u>Type of Milk</u>	<u>No. of Farms</u>	<u>No. of Cows & Goats</u>	<u>Amount Produced</u>
Special	6	132	27,865 Lit.
Ordinary	61,526	114,846	24,253,570 Lit.
Goat	7,140	9,719	211,730 Lit.

Quantity of Milk Bottled in Milk Plants in October

<u>Type of Milk</u>	<u>No. of plants</u>	<u>Raw Milk</u>	<u>Pasteurized</u>	<u>Sterilized</u>
Special	6	13,716	11,762 Lit.	
Ordinary	2,749		3,614,137	5,153,408 Lit.
Total	2,755	13,716	3,625,899	5,153,408 Lit.

Milk Products Produced in October

Powered whole milk	-----	200,157 kgs
Powered whole milk modified - 15% sugar added	-----	771,599
Powered whole milk modified - 35% sugar added	-----	30,704
Sweetened condensed milk	-----	1,054,224
Butter	-----	199,609
Cheese	-----	18,263

Monthly Seafood Inspection Report

Prefectural veterinary seafood inspectors conducted sanitary inspections on the following seafood establishments during the month of October.

a. Wholesale Seafood Markets

Number of establishments	----	1,464
Number of establishments inspected	----	1,018
Condition		
Good	----	156
Fair	----	701
Poor	----	161
Total number of inspections	----	2,633
Amount of seafood examined	----	41,907,557 kgs
Amount of seafood condemned	----	1,261,664 kgs
Cause for condemnation - Putrefaction		
Disposition - Fertilizer		

b. Seafood Processing Plants

Number of establishments	----	10,857
Number of establishments inspected	----	3,444
Condition		
Good	----	695
Fair	----	2,024
Poor	----	725
Total number of inspections	----	8,308
Amount of seafood examined	----	2,202,809 kgs
Amount of seafood condemned	----	560 kgs
Cause for condemnation - Putrefaction		
Disposition - Fertilizer		

c. Seafood Retail Shops

Number of establishments	----	53,981
Number of establishments inspected	----	20,398
Condition		
Good	----	3,517
Fair	----	12,039
Poor	----	4,842
Total number of inspections	----	22,545
Amount of seafood examined	----	1,943,031 kgs
Amount of seafood condemned	----	8,861 kgs
Cause for condemnation - Putrefaction		
Disposition - Fertilizer

Monthly Animal Disease Report

The Animal Hygiene Section, Ministry of Agriculture and Forestry, submitted the following report on those animal diseases occurring during the month of November.

Diseases	No. of Cases
Blackleg	2
Swine erysipelas	234
Swine cholera	26
Texas Fever	2
Strangles	56
Equine infectious enemia	246
Brucellosis	17
Trichomonas	66
Equine infectious abortion	1
Pullorum disease (fowl)	18,587
Tuberculosis	73

Monthly Meat Inspection Report

Prefectural veterinary meat inspectors conducted ante and post-mortem inspection on the following number of livestock slaughtered during the month of October.

	<u>Cattle</u>	<u>Calves</u>	<u>Horses</u>
Number slaughtered	20,860	1,389	5,700
Body wt. (kg)	7,532,724	139,051	1,648,371
Dressed wt.(kg)	3,814,207	66,492	759,131
Condemned ante-mortem	1	0	3
Condemned post-mortem			
Total	16	2	17
Partial	316	20	223
Viscera	4,255	81	775
	<u>Swine</u>	<u>Sheep</u>	<u>Goat</u>
Number slaughtered	59,048	16	559
Body wt. (kg)	4,874,056	615	11,256
Dressed wt.(kg)	2,971,825	295	5,353
Condemned ante-mortem	2	0	0
Condemned post-mortem			
Total	13	0	0
Partial	288	0	3
Viscera	4,637	3	7

Prefectural veterinary meat inspectors conducted sanitary inspections on the following establishments during the month of October.

Meat Processing Establishments

Number of establishments	----	290
Number of establishments inspected	----	234
Condition		
Good	----	62
Fair	----	151
Poor	----	21
Total number of inspections	----	460
Amount of meat and meat food products examined	----	77,632 kgs
Amount of meat and meat food products condemned	----	938 kgs

Meat Retail Shops

Number of establishments	----	15,383
Number of establishments inspected	----	8,825
Condition		
Good	----	3,085
Fair	----	4,785
Poor	----	955
Total number of inspections	----	10,558
Amount of meat and meat food products examined	----	495,600 kgs
Amount of meat and meat food products condemned	----	119 kgs
Cause for condemnation - Putrefaction		
Disposition - Fertilizer		

Source: Ministry of Welfare

SECTION IV
SUPPLY DIVISION

Amendment to Enforcement Regulation of Pharmaceutical Affairs Law

Ministry of Welfare Ordinance No.40, published in the Official Gazette 15 December, amends parts of the Ministry of Welfare Ordinance No.37, 1948, which is the Enforcement Regulation of the Pharmaceutical Affairs Law, Law No.197, 1948. The purpose of these amendments is:

1. To bring the Enforcement Regulation in line with Article 17 of the Law Revising Parts of Local Finance Law, Law No.168 (31 May 1949). This article amends the Pharmaceutical Affairs Law, in conformity with extension of local autonomy, to allow prefectures to set and collect fees for licensing of pharmacies and sellers of drugs, rather than the Minister of Welfare who previously did so.

2. To add to the list of poisons and powerful drugs, Appendix No.1, certain drugs and their preparations newly licensed for manufacture in Japan. This action is taken upon the recommendation of the Japanese Pharmacopoeia Committee.

Drugs added to Appendix No.1 are:

Carbamylcholine chloride
 Sodium p-hydroxy m-nitrohydroxymercuribenzene
 Sodium p-hydroxy m-dinitro c-hydrxy #####
 Sodium p-hydroxy o-toluylic acid
 p-Carbaminophenylarsonic acid
 Molecular compounds of diallyl-barbituric acid and aminopyrine
 Procaine penicillin

Removal of Control from Designated Ration Goods

Ministry of Welfare Notification No.266, published in the Official Gazette 16 December, deletes 15 items of drugs and 3 items of infant foods from those designated for ration distribution by Ministry of Welfare Notification No.70, 1947, as follows:

<u>Item</u>	<u>Reason for Removal from Control</u>
<u>Medicines</u>	
Liquid phenol	Production in excess of sales
Ephedrine hydrochloride (including racemic)	"
Evipan (including Evipan soda)	"
Emetine hydrochloride	No production. Substitutes are used: Sulfa drugs, etc.
Pilocarpin hydrochloride	Production in excess of sales
Procane hydrochloride	"
Phenol	"
Nupercaine	"
Barbital	"
Dextrose	"
Bromdienthylacetylurea (Carbromal)	No production. Substitutes are used: evipan soda, phenobrabital, promvalerylurea
Hexylresorcinol pills	Production in excess of sales
Phenol disinfectant	"
Powdered extract of nux vomica	"
Magnesium oxide	"
<u>Foods</u>	
Dextri maltose	"
Malt soup extract	"
Rice powder for babies	"

With the publication of Notification No.266, hexylresorcinol capsules have been removed from distribution control. It is expected that such release of control will stimulate the sale of this valuable anthelmintic drug. The Ministry of Welfare is planning a wide program of public information, based on results of clinical tests now in progress, to acquaint the general public and the professions with the worth of hexylresorcinol in the fight against intestinal parasites.

Sulfadiazine Production

Production of sulfadiazine during October and November totaled 1,436 kg., which amounts to 11 times the total production for CY 1948. This greatly increased production is explained by the receipt of 4.8 metric tons of pyridine scheduled under CARIFOA FY 1949. A second shipment of 5.2 metric tons of pyridine will arrive in Yokohama this month.

Buffered Penicillin Tablets

The Ministry of Welfare announced 457,046 buffered penicillin tablets of 100,000 Oxford units each, were produced in Japan during November. Six manufacturers are producing the tablets which retail for ¥ 120 each. Total penicillin production for the period reached the all-time high figure of 236.1 billion units.

Precious Metals for Medical and Dental Use

To maintain a minimum standard of health, and for use in the production of medicines and dental materials, the Japanese Government will release precious metals for the first quarter, CY 1950, in the following amounts: Gold - 311,330 grams, Silver - 273,435 grams, Platinum - 569 grams, Palladium - 1,395 grams and Silver foil - 30,600 grams.

Hexylresorcinol Production

Ten hexylresorcinol manufactures produced 1,461kg of hexylresorcinol crystals and 901,392 grams (adult dosage) of hexylresorcinol capsules in November. All passed assay, 2,426,114 grams of hexylresorcinol (capsules) are stockpiled in manufacturers' warehouses.

Biologics Assay

During the period 6 December to 21 December the following biologics have been assayed and found to meet minimum standards:

<u>Item</u>	<u>Manufacturer</u>	<u>Lot No.</u>	<u>Quantity</u>
BCG Vaccine (dried)	Kekkaku Yobokai	42C	38,900 doses
		42F	46,000
		42E	32,900

The lots of Diphtheria Toxoid (listed below) which are in storage at prefectures indicated, have been reassayed and found to meet minimum standards. Use of these lots should be made only when storage conditions have been proper. Reference is made to letter to all commands, (File AG 444.2) PH dated 6 December 1949, subject: "Release of Japanese Produced Diphtheria Toxoid for Human Use". Paragraphs 3 and 5 subject letter follow:

"3. At the present time, 113 lots of diphtheria toxoid are ready for release for use: Of these, 45 lots were under the control of the various prefectural health departments throughout Japan at the time its use was suspended in December 1948. During the past year these lots have been in storage within the various prefectures wherever they were located. Conditions of proper storage should have been 0-5°C, refrigerator temperature. Inspections and reports indicate that some of this material has not been stored properly. However, it has not been possible to determine accurately which lots, or portions of lots, have and which have not been stored properly. The material which has not been stored properly is unsuitable for use and should not be used even though it may be included in the lots released.

"5. Prior to release and distribution of diphtheria toxoid on or about 15 December 1949, the Ministry of Welfare will notify the Chief of each Prefectural Health Department of the material to be released and that reassayed material which has not been properly stored is not be used. It will then be his responsibility to see that such material is not used and that it is destroyed."

SECTION V NARCOTIC CONTROL DIVISION

Enforcement

Conclusive evidence has been obtained that heroin being supplies to the illicit traffic in Japan is originating from the Asiatic Continent. Seven hundred eighty-two grams were seized during an attempt to smuggle the heroin into Niigata. On another occasion one pound of heroin was seized among contraband goods destined for Kobe. The smuggling of narcotics into Japan is significant in that it demonstrates the under world must rely on sources outside Japan.

The seizure of 70 grams of heroin in Yokohama led to the seizure of 260 grams in Osaka as the source of supply. The Osaka case resulted in the arrest of a well-known narcotic peddler who was free on bail pending trial at the time of his arrest.

Ten persons were arrested in Gumma Prefecture as the result of seizure of 510 grams of cocaine in a hotel in Takasaki City. Additional amounts of heroin, morphine and other narcotics were seized in the home of the leader of the racketeers. Investigation of the source of the narcotics is continuing.

Eight Japanese in Yokohama were arrested and charged with illegal possession and sale of narcotics which are believed to have been obtained by the burglary of a hospital in the same city.

SECTION VI WELFARE DIVISION

Community Chest Central Committee

As of 21 December, 92.3% of the total goal of ¥ 1,221,717,000 had been collected, or ¥ 1,129,891,122.57. Sixteen prefectures as of that date have made 100% or more of their quota, the highest being Aichi with a total of ¥66,192,028.18, or 110.3%.

Consumers' Livelihood Cooperative Association in Japan

At present there are 720 Consumer Cooperative Associations in Japan and seven Consumer Cooperative Federations (84 Cooperative Association members).

Total amount invested is ¥ 123,990,450 in 2,173,725 investment units.

Red Cross

The main building of newly constructed Red Cross Hospital at Musashino City (Tokyo-to) was formerly dedicated and opened for business on December. Construction was financed by the JRC Tokyo Chapter and JRC National Headquarters.

The JRC has received in the United States a gift of \$ 15,052.01 from the liquidation committee of the Tule Lake Cooperative Enterprises. This donation will be held in account by the ARC in Washington, D.C., to meet dollar obligations of the JRC, primarily in financing travel and incidental expenses of Red Cross Study-visitors to the United States.

Public Assistance Statistical Report - October

The Ministry of Welfare has submitted the attached figures for the month of October. Figures for September 1949 and for October 1948 are shown for purpose of comparison.

	<u>Oct. 1949</u>	<u>Sept. 1949</u>	<u>Oct. 1948</u>
Persons - institutional	133,551	132,683	143,806
Persons - non-institutional	<u>1,563,633</u>	<u>1,857,864</u>	<u>1,720,106</u>
Totals	1,697,184	1,990,547	1,863,912
Assistance - Cash	897,392,826	892,053,116	565,029,472
Assistance - Kind	<u>13,379,457</u>	<u>64,118,727</u>	<u>25,126,018</u>
Total	¥ 910,772,283	956,171,843	590,155,490

Public Assistance Statistical Report by Prefectures

Attached to this Bulletin as Inclosure No.3 is a copy of the prefecture public assistance totals. The Ministry of Welfare gives two reasons for decreases in the number of recipients. First, a decrease in disaster relief, and, secondly, decreases in 29 prefectures as a result of annual recertification of public assistance cases.

SECTION VII SOCIAL SECURITY DIVISION

Inclosure No.4 summarizes in tabular form the current financial provisions governing the several social insurance programs effective in Japan. The financing of these programs is briefly stated under three headings: (1) the basis and (with reference to National Health Insurance and Unemployment Insurance) method of assessing contributions, (2) their rate and appointment, and (3) the nature and extent of subsidization from general government revenues.

It is hoped that this summary will be helpful as a reference for orientation and surveillance purposes.
