The Government Pension Bureau has raised the individual benefit payments by approximately 300 percent retroactive to 1 July 1946 to assist the beneficiary in meeting the increased cost of living.

In a conference held with the members of the Social Insurance Investigating Committee, an important topic was their proposal to adopt a universal national pension system for quarterly payment to each person, upon reaching a designated age of a uniform flat amount. The initial payments would not be the full amount contemplated but would be adequate to meet minimum livelihood demands. The full pension would be given after the program has operated for ten years.

Another topic considered was the advisability of uniformity in various common aspects of the social insurance laws. There was common agreement such uniformity should be maintained particularly as to the inclusion of all forms of remuneration in determining the tax and benefit basis.

SECTION VIII MEDICAL SERVICE DIVISION

Japanese Civilian Hospital Strength Report for the period ending 9 May 1947 shows 3,211 hospitals with a capacity of 223,439 beds, 108,191 of which were occupied. During this same period 313,586 out-patients were treated.

The plans for dissolution and disposition of the former properties of the Japan Medical Treatment Corporation (Nippon Irodan) have been completed.

The essential points of the final plan calls for nationalization of all sanatoria formerly owned and operated by the corporation and the establishment of a committee within the Ministry of Welfare to consider individually the disposition of clinics, dispensaries, and hospitals to Prefectures or Municipalities having specific plans for the proper utilization of the properties of the corporation.

SECTION IX CONSULTANTS

Nutrition

The results of the food consumption surveys in the Cities of Kure, Sapporo and Kanazawa, together with that of the corresponding rural areas, Sanyo, Hokkaido, and Hokuriku are presented in the accompanying table.

The Nutrition Consultant, PHW, GHQ, SCAP, discussed "Nutrition in Public Health" before the orientation course for Public Health Medical Officers on 24 June.

An agreement was reached between Price Control and Rationing, ESS, GHQ, SCAP, and Public Health and Welfare, GHQ, SCAP, with regard to the issue by the Japanese of canned foods, either Japanese or imported in the ration for Foreign Nationals as follows:

- a. Meat or Beef, lean, shall constitute either canned or fresh eat, but fresh meat should be issued when available.
- b. Canned goods shall include vegetables or fruits, fish, shrimp, etc.
- c. Butter may be imported, canned butter or fresh butter.

Arrangements were made for instruction of the Japanese with regard to the use of imported foods particularly soya flour, corn flour, dried peas and milo. The Nutrition Section of the Sanitary Bureau of Tokyo has arranged for a series of tall and demonstrations of the use imported foods by members of the Health Bureau and the Imported Foods Instruction Committee to teachers of schools, nutritionists of hospitals and factories and midwives. Material is being prepared by the Ministries of Welfare and Agriculture for distribution to Prefectures.

The Imported Foods Committee of the Ministries of Welfare and Agriculture have arranged with newspapers to include a column (1/5 to 1/6 of the usual paper), 3 times a week on nutrition, foods and methods of cooking, preservation and production of food, school lunches and diets for special categories of people.

Social Affairs Bureau, Ministry of Welfare

The Bureau of Social Affairs (Shakai Kyoku) of the Ministry of Welfare (Koseisho) has been assigned the primary responsibilities in the field of welfare administration within the Japanese Government. There is a total of nine (9) bureaus and one (1) board with the Ministry of Welfare which may be divided into three groups:

1. Social Security and Welfare
 - a. Social Affairs Bureau
 - b. Childrens Bureau (Established March 1947)
 - c. Social Insurance Bureau
 - d. Repatriation Relief Board
2. Public Health
 - a. Public Health Bureau
 - b. Medical Affairs Bureau
 - c. Prevention Bureau
3. Labor
 - a. Labor Standards Bureau
 - b. Labor Administration Bureau
 - c. Vocational Stabilization Bureau

Plans are being developed for the establishment of a separate Labor Ministry and it is expected that the three bureaus dealing with labor will be transferred out of the Ministry of Welfare upon the creation of the new ministry.

Historical Background

The Social Affairs Bureau (Shakai Kyoku) was established in August 1920 in the Ministry of Home Affairs and became responsible for all social work activities on the national level. The creation of this bureau was the outgrowth of a relief section which was established in 1917 as a part of the Local Government Bureau and renamed the Social Affairs Section (Shakai-ka) in 1919.

The Social Affairs Bureau was included in the nearly created Ministry of Welfare in 1938. In 1941 the name of the Social Affairs Bureau was changed to Living Bureau (Seikatsu Kyoku) apparently as a part of the general program of reorganizing the welfare program to meet the needs of the military. Early in 1943 the Living Bureau and the Population Bureau of the Ministry of Welfare were merged into the Peoples Health Bureau (Kenmin Kyoku). In the fall of 1945 after the termination of hostilities the social Affairs Bureau was re-established. The responsibilities of the Bureau in the field of child welfare were transferred from the Social Affairs Bureau in March 1947 when a Children's Bureau (Jido Kyoku) was established within the Ministry of Welfare.

Organization and Functions of Social Affairs Bureau

At the present time the total number of persons employed by the Social Affairs Bureau is 104 including clerical employees. The work of the Bureau is carried out through 4 sections: General Affairs, Protection, Welfare and Supply.

The responsibilities of the Bureau are divided among the four sections of the Bureau as follows:

1. General Affairs Section (Shomu-ka)
 - a. Overall planning for social welfare
 - b. Investigations and statistics concerning welfare
 - c. Minsei-iin organization
 - d. Social welfare training and education
 - e. Matters not assigned to other sections
2. Protection Section (Hogo-ka)
 - a. Administration of Daily Life Security Law
 - b. Disaster Assistance

3. Welfare Section (Fukuri-ka)
 - a. Special program for disadvantaged groups such as Eta.
 - b. Aid for physically handicapped.
 - c. Special assistance program for Germans in the prefectures of: Kanagawa, Hyogo, Nagano, Tokyo Yamanashi
 - d. Program for “street-girls”.
 - e. Public pawnshops, bathhouses, barbershops, markets and dining halls
 - f. Other programs such as recreation

4. Supply Section (Busshi-ka)

Note: Busshi-ka is also translated as commodities or materials section.

 - a. Work Shops (Jusan-jo)
 - b. Goods and materials required for relief and assistance.

SECTION II
VETERINARY AFFAIRS DIVISION

Field Survey

A survey of animal disease control and meet and daily inspection activities in Tottori and Shiga Prefectures was completed. It was found that conditions are rapidly improving under the guidance of Military Government Officers.

Weekly Animal Disease Report

The Ministry of Agriculture and Forestry (Bureau of Animal Industry) reported the following new outbreaks of disease during the period 27 June to 2 July 1947:

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Aichi	Swine Erysipelas	1
Tokyo	Swine Erysipelas	5

Bovine Tuberculosis Eradication 1946

Following is a summary of the report of bovine tuberculosis eradication for 1946 submitted by the Ministry of Agriculture and Forestry.

<u>Prefecture</u>	<u>Incidence</u>

SECTION III DENTAL AFFAIRS DIVISION

Of the 1079 applicants who completed the National Dental Examination held in May, 762 passed successfully.

SECTION IV NURSING AFFAIRS DIVISION

National Public Health Nurses Program

The 50 nurses undergoing the current four months Public Health Nurses Course and who have been assigned to the various health centers have visited homes, works in clinics, visited special hospitals, and attended conferences in connection with their work.

Public Health Nursing Bags (professional hand-carry bags for P.H. nurses and containing medicines, thermometers, etcetera) will soon be available for these courses. Letters have been sent to the Prefectures explaining the program and the needs of the nurses who are coming for the new course starting in August.

The new legislation which will raise the standards of nurses and midwives in Japan was passed by the Diet on 3 July 1947.

SECTION V SUPPLY DIVISION

Production

The following releases of DDT products and typhus vaccine were approved by the Ministry of Welfare during the period 28 June-5-July:

Prefecture	10% DDT Dust	5% DDT Residual Effect Spray	Typhus Vaccine
Ehime	1,500 lbs.		
Fukui		2,500 gals.	
Fukushima	1,700 lbs.	2,100 gals.	
Kagoshima	18,300 lbs.	600 gals.	
Oita	10,000 lbs.	5,000 gals.	
Mie	6,000 lbs.	1,000 gals.	
Yamagata	590 lbs.	95 gals.	2,140 vials
Tokyo	1,000 lbs.	1,000 gals.	
Ministry of Welfare	100 lbs.		
Hakodate Repatriation Center			1,800 vials
Ujina Repatriation Center			720 vials
Sasebo			1,080 vials
Yokohama			360 vials
Kobe			360 vials
Total	39,190 lbs.	12,295 gals.	6,460 vials

Production of DDT dusters and spraying equipment continued according to schedule. Actual production for the manufacturing period of 22-28 June was accomplished as follows:

DDT Dusters	1,000
Sprayer, knapsack type, 3 gallon	4,250
Sprayer, pump type, semi-automatic	2,010
Sprayer, hand type, 1/2 gallon	4,550
Total	11,810

The program of production of medical supplies required for Anti-Tuberculosis Program, Initiated at the beginning of this year, has shown satisfactory progress.

Actual production for the period 11 June to 20 June was as follows:

Photoreographic machines	5
Total Production of photoreographic machined to 20 June	96
35 mm. Film	20,387 rolls
Total production of 35mm. Film to 20 June	66,200 rolls

Distribution

In connection with the insect and rodent control program, the Ministry of Welfare has continued shipments of equipment and pyrethrum emulsion. In addition to the quantities already listed in previous issue of this Bulletin, the following has been distributed to the prefectures listed, as of 2 July 1947:

Prefecture	Quantity Pyrethrum	
	Emulsion 50-gal. drums	Knapsack Sprayer DDT Duster
Aomori	50	
Fukushima	44	

Ibaraki		100	91
Tochigi	26		
Tokyo	243		
Kanazawa	130		
Nagano	42		
Shizuoka	85		
Aichi	142		
Mie			260
Shiga			110
Kyoto	25		
Osaka	68		320
Hiroshima	209		
Total	1,064	100	781

The following are the manufacturer and outlets of x-ray apparatus where hospitals and doctors concerned may purchase x-ray equipment and supplies. List of x-ray film supply sources appeared in Weekly Bulletin for week ending 28 June.

<u>Name of Company</u>	<u>Address</u>
Dai Nippon Roentgen Mfg. Co., Ltd.	84, 3-chome, Kanmoku-cho, Joto-ku, Osaka

Shimazu Seisakujo Co., Ltd.	Nishiojinishi, Sanjo-dori, Chukyo-ku, Kyoto
Tokyo Branch	3, 1-chome, Kanda Nishiki-cho, Chiyoda-ku, Tokyo
Shibuya Roentgen Equipments Mfg. Co., Ltd.	4286, 8-chome, Shina Machi, Toshima-ku, Tokyo
Tokyo Shibaura Electric Co., Ltd.	16, 1-chome, Nihonbashi, Honcho, Chuo-ku, Tokyo
Tensho Electric Industrial Co.	2256, 5-chome, Shinamachi, Toshima-ku, Tokyo

The new "distribution plan" for medicaments will be discussed at conferences held by the Pharmaceutical Affairs Section, Ministry of Welfare, at places and dates designated below, in which prefectural officials in charge of distribution of medical supplies, doctors', dentists', and veterinary associations concerned will attend:

- 11 - 12 July 1947 inclusive - Tokyo
- 15 - 16 July 1947 inclusive - Yamagata
- 21 - 22 July 1947 inclusive - Kumamoto
- 25 - 26 July 1947 inclusive - Okayama
- 28 - 29 July 1947 inclusive - Osaka

Narcotics

The monthly report for May 1947 records the following facts:

1. Narcotic Registrants in Japan - 84,024.
2. Apprehension of 35 Narcotic Registrants and of 52 unregistered persons for violations of the Narcotic Laws.
3. Nine (9) registered persons and sixteen (16) unregistered persons were convicted or are being presently prosecuted for violations of the Narcotic Laws.
4. Forty-two thefts of Narcotics, including the theft of Order Forms and Temporary License of one physician.
5. Three fires resulting in losses of narcotic stocks.

The first monthly report of Marihuana (Taima) cultivation records the following:

1. Hectares under cultivation 3771.38
2. Fields under cultivation 115,051
3. Registered to cultivate 34,998

No violations of the Marihuana Laws are recorded to date.

SECTION VI PREVENTIVE MEDICINE DIVISION

General

A commission consisting of Dr. Wm. McD. Hammon, University of California, Dr. Gordon Meiklejohn, University of California, Dr. Jorge Casals, Rockefeller Foundation, and Dr. Don M. Reese, University of Utah, has arrived in Japan for the purpose of investigating and studying Japanese B. Encephalitis.

Typhus Fever

Comparative Score (includes figures of 30 June)

1946 - 31,149

1947 - 1,010

Vaccination in Hokkaido

The vaccination program in Hokkaido is gradually progressing. As of 21 June 1947, a total of 635,683 persons have received the initial dose of 1 cc, while 327,756 persons have received the second dose. At this season of the year it has been extremely difficult to get people to report for vaccination.

Japanese B. Encephalitis

The vaccination program against Japanese B. Encephalitis in Okayama Prefecture is being conducted in a very satisfactory manner. Of the 16,816 persons notified to report for vaccination, 11,656 had received the intradermal booster dose of .1 cc vaccine during the period 1 July to 4 July. The program will be completed by 8 July according to plans.

Insect and Rodent Control

There is available for immediate delivery to the prefectures about 200,000 gallons of 5% DDT solution insecticide. Plans are set up to increase this amount to 1,000,000 gallons by the end of the summer. This is distributed on a population basis similar to the distribution of pyrethrum emulsion 30X. The cost to the prefectures is twenty cents (20c) (2/3 of the cost to Japanese Government).

The Japanese do not fully understand the value of 5% DDT solution used as residual spray inside of buildings. As the pyrethrum emulsion 30X is cut with 30 times as much water the initial cost is lower but it should be borne out that one thorough spraying with DDT will accomplish much better results than 8 to 10 spraying with pyrethrum, the cost of labor and supervision more than offsetting the initial cost of the material.

In some prefectures the pyrethrum emulsion is doled out directly to the individual homes in quantities too small to be of much value, and usually with inadequate instructions as to the use of it. While it is desired to

eventually have available through commercial channels ample insecticides for public purchase pyrethrum and DDT are now controlled and distributed for use in public health control programs by trained personnel and should be so used.

It should also be born cut that the DDT is stable an will keep for a long time, while the pyrethrum loses its strength rapidly when open to the air, and will deteriorate over a period of time even in closed containers. Therefore pyrethrum should be used in the season that it is made while DDT can be held back and stored for future use.

Venereal Disease Control

In V.D. control, the Military Government Health Officer guides the Japanese through the Japanese Venereal Disease Control Officer. This man is the most qualified and a full-time public official from the Prefectural Health Department. He is responsible to set up and supervise modern V.D. clinics according to the recommendations of the Military Government Health Officer, and either conducts these clinics himself or trains other doctors and nurses to operate them, supervises contact tracing as well as the other clinical and administrative work of his division.

By close supervision of the prefectural V.D.C.O. and the development of demonstration clinics, it is believed more Japanese personnel will be introduced to correct public health V.D. control. Regardless of the fact that Japanese personnel are not highly trained in V.D. control, clinical and epidemiologic work on civilians should be carried out only by Japanese personnel.

SECTION VII SOCIAL SECURITY DIVISION

Worker's Accident Compensation

The Amendments to the Health Insurance Welfare Pension Laws in connection with the new Worker's Accident Compensation Insurance Act will not be in force until the latter is made effective early this fall. This means Health Insurance and Welfare Pension Insurance continue to cover some workers for occupational disabilities until the Worker's Accident Compensation Insurance Act is put into operation.

National Health Insurance

Representatives of the Social Security Division, PH&W, GHQ, SCAP attended two conferences in Chiba prefecture where considerable interest was shown in the National Health Insurance program. More than 500 people attended each conference which included town masters, association chairman, federation secretaries, doctors, nurses, teachers, students and committee men of numerous associations.

These representatives emphasized that SCAP recognizes health insurance as one of the chief elements in a national health program; that social insurances should be deeply rooted in an understanding and participation by the population it serves; and that the system requires re-evaluation and reformulation.

Each conference prepared petitions for submission to the prefectural and national government asking for an additional subsidy to carry out definite projects especially the establishment of adequate clinics.

SECTION VIII MEDICAL SERVICE DIVISION

Japanese Civilian Hospital Strength Report for the period ending 16 May 1947 shows 3,214 hospitals with a capacity of 223,574 beds, 109,965 of which were occupied. During this same period 337,440 out-patients were treated.

SECTION IX CONSULTANTS

Legal

Military Government Health Officers who have been dissatisfied with Prefectural Health Officials have, in several insurances, exerted pressure at the prefectural level, to effect their removal. These Japanese officials are

appointed by the Ministry of Welfare, and any action on their removal or transfer should be taken on the Ministerial level.

The taking of direct action by local Military Government Health Officers in securing the removal of Prefectural health officials is not permitted. The proper method of removing health officials who are considered unsatisfactory is to initiate a report stating the facts and forward it to GHQ, SCAP, for the attention of PH&W Section, together with a recommendation of action that is desired. Appropriate action will then be taken through the Ministry of Welfare.

Nutrition

The results on food consumption in the nutrition surveys conducted in May 1947 are reported in the accompanying table for the cities of Fukuoka, Sendai, Matsuyama and the surrounding prefectural area of Kyusyu, Tohoku and Shikoku respectively.

SECTION I
WELFARE DIVISION

Training Conference

A one-week training conference for local welfare personnel will be held from 25 - 30 July at Zentsuji, Kagawa-ken, Shikoku. About 50 persons will attend from the four Shikoku prefectures. The planned program is similar to that of conferences previously conducted by the Japan Social Work Association (Nippon Shakai Kigyo Kyokai) and the Ministry of Welfare. Other future training conferences of one week duration will be held at various places throughout Japan.

Japan Social Work School

The Japan Social Work School operating under the sponsorship of the Japan Social Work Association and the Ministry of Welfare was recently accredited by the Ministry of Education as a Semmon Gakko, with a three year education program for persons wishing to prepare for the social welfare field.

Japanese Red Cross

The Public Relations Office of the American Red Cross, FETO, has made its facilities and staff available to the Japanese Red Cross for assistance in the development of its public relations program. American methods and principles of public relations and publicity as they might be applicable in Japan, are to be emphasized and assistance will be given in analysis of publicity methods already in effect. Relations with the press will be strengthened and a planned program developed of regular news items to be released at national and prefectural levels.

American Red Cross consultant service to the Japanese Red Cross in the development of its field service and chapter organization will be possible with the arrival in Japan this week of Mr. Ferdinand Michlantz, assigned to the International Activities-Japan staff. Mr. Michlantz will also assist the Japanese Red Cross as an advisor in the development of its volunteer service activities.

SECTION II
VETERINARY AFFAIRS DIVISION

Weekly Animal Disease Report

The Ministry of Agriculture and Forestry (Bureau of Animal Industry) reported the following new outbreaks of animal diseases during the period 6-12 July 1947:

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Nagano	Swine Erysipelas	4
Shizuoka	Swine Erysipelas	1
Gumma	Swine Erysipelas	1
Chiba	Swine Erysipelas	8
Fukuoka	Anthrax	1
Kumamoto	Texas Fever	6

SECTION III
NURSING AFFAIRS DIVISION

Education

Ward administration and supervision have been stressed this month at the Model Demonstration College of Nursing.

Nurses will no longer take medical histories as they have in the past. These will be taken by the physician. Nurses will no longer take the doctor's census of patients, this having been transferred to the admission office. Nursing is gradually getting placed in the hands of nurses with other hospital work going to proper channels.

The food situation at the college has slightly improved with the aid of LARA. A new director of nurses for the Japanese Red Cross will soon be appointed.

National Public Health Nurses Course

The nurses are engaged in field work and home visiting. Public Health Nurses' Bags have been almost impossible to obtain, so the committee drew plans and had manufactured, a wooden box with compartments for medications etc., which will serve the same purpose. They have been equipped and bag technique has been worked out and accepted.

The curriculum for the next course has been changed to meet the needs of the nurses. Doctors have agreed to cooperate to the fullest extent in giving the desired subjects.

SECTION IV SUPPLY DIVISION

Distribution

As announced in previous issues of the Weekly Bulletin, the Ministry of Welfare has in the past, made allocations and shipments of VD drugs to prefectures on an automatic basis without request from the individual prefectures. This procedure was necessary in order to meet an emergency situation since there was not not time to contact each individual prefecture concerning their requirements. This procedure is now being changed and in the future the Ministry will expect each prefecture to order mapharsen, bismuth subsalicylate, sulfathiazole, sulfadiazine and penicillin, required for VD treatment, by direct application to the Ministry of Welfare, attention: Pharmaceutical Affairs Section. The Ministry will supply prefectures from various wholesalers throughout Japan who now are maintaining stocks of VD drugs. Distribution after receipt in prefectures will be the responsibility of the Prefectural Health Officer as has been the practice in the past. The Ministry will notify Prefectural Health Officers of the action taken upon their request and will instruct local dealers to notify the Prefectural and Military Government Health Officers when the supplies are received.

The Ministry of Welfare is now processing instructions to prefectures covering the procedures outlined above, the actual date of dispatch will be included in a subsequent issue of the bulletin. In the meantime, Prefectural Health Officers should take immediate steps to compute requirements of VD supplies and be prepared to submit orders to the Ministry of Welfare sufficiently in advance of actual requirements to permit delivery before present stocks become exhausted.

Shipments of insect and rodent control supplies made during the period ending 9 July 1947, were:

Prefecture	Quantity Pyrethrum	Knapsack	
	Emulsion. 50-gal. Drums	Sprayers	Hand Dusters
Hokkaido		100	
Tokyo	120	240	600
Kyoto	56		
Osaka	238		
Hyogo	85		
Okayama	26		
Totals	525	340	600

Since the beginning of April a total of 238,390 gallons of 5% DDT Residual Spray has been distributed under the supervision of the Ministry of Welfare as follows:

<u>Prefecture</u>	<u>Quantity 5% DDT Spray Unit: gallon</u>
Hokkaido	15,000
Aomori	1,500
Iwate	6,600
Miyagi	16,310
Akita	10,300
Yamagata	95
Fukushima	2,960
Ibaraki	10,200

Production

The following releases of DDT products and typhus vaccine were approved by the Ministry of Welfare, during week ending 12 July:

<u>Prefecture</u>	<u>10% DDT Dust</u>	<u>5% DDT Spray</u>	<u>Typhus Vaccine</u>
Fukui		2,500 gals.	
Fukushima	1,700 lbs.	2,100 gals.	
Oita	10,000 lbs.	5,000 gals.	
Mie	6,000 lbs.	1,000 gals.	
Yamagata	590 lbs.	95 gals.	2,140 vials
Tokyo	2,700 lbs.	1,000 gals.	
Kagoshima	18,300 lbs.	600 gals.	
Aichi	1,500 lbs.		
Kanagawa			360 vials
Hyogo			360 vials
Sasebo Quarantine Port			1,080 vials
Ujina Quarantine Port			720 vials

Mixing of DDT production from American furnished DDT concentrate continues to be excellent. A total of 3,991,250 lbs. of 10% DDT Dust and 240,752 gallons of 5% DDT Residual effect spray, kerosene base, represent stocks in wholesale warehouses of the Ministry of Welfare as of 5 July.

Total production during 47 and production during period 29 June - 5 July of DDT Dusters and spraying equipment has been accomplished as follows:

	<u>Production 29 June - 5 July</u>	<u>Total Production</u>
DDT Dusters	1,500	19,746
Sprayer, knapsack type, 3 gal.	3,850	19,453
Sprayer, semi-automatic, pump type	2,100	17,720
Sprayer, hand, 1/2 gal.	650	6,650

Narcotics

Thefts of narcotic stocks from hospitals continues to be the cause of the larger losses of narcotics by registrants. The Ministry of Welfare has been requested by the Narcotic Control Officers to instruct all hospitals, through prefectural authorities, their stocks of narcotics must be safeguarded by being stored in regulation steel safes or in concrete and steel strongrooms complete with good padlocks.

Several requests for information have been received from various Military Government Teams relative to narcotic control, and for information concerning Opium Poppy and Marihuana cultivation. It is suggested that the Narcotic Inspectors of the prefecture be contacted first, in an effort to gain the necessary information. In the event that such authorities cannot give the information desired, Narcotic Control Officers will obtain and forward the information upon receipt of requests through routine channels.

The Ministry of Welfare reports the breaking of a ring of narcotic traffickers in Nagano-ken, with the apprehension of 20 persons to date, and the investigation being presently continued. This ring of traffickers comprised some seven central "Broker" who, by means of intimidation, secured narcotics from registrants and others, selling by the same means, to both registered and unregistered person. Both police and narcotic officials in Nagano-ken are to be commended for their good investigative work and the close cooperation shown, in successfully conducting this case.

SECTION V PREVENTIVE MEDICINE DIVISION

Typhus Fever

Comparative score (includes figures of 11 July)
1946 - 31,443
1947 - 1,066

Complement-fixation Tests

Through the 406th Medical General Laboratory, the following results of complement-fixation tests were obtained. Serum samples tested were those sent in by various prefectures taken from suspect typhus cases:

Total tested 646
Pos. Murine 276
Pos. Epidemic 103
Type undermined 167
Negative 98

As typhus cases occur, continued cooperation of Military Government Teams in submitting blood samples of suspect cases of typhus is earnestly desired. Send such samples to 406th Medical General Laboratory, APO 500, c/o Major T. O. Berge.

Typhus Vaccination in Hokkaido

Reports from Hokkaido as of 30 June 1947 concerning the progress of the typhus vaccination program in Hokkaido are as follows:

Persons vaccinated 1st dose 716,488
Persons vaccinated 2nd dose 502,792

These results include figures from 31 cities and towns in the prefecture.

Head Louse Control (Results reported 8 July 1947)

Primary Schools

Boys 207,680)
Girls 1,325,550) Includes first and second dustings of children in eleven prefectures.

Orphanages

Boys 696)
Girls 1,107) First and second dustings of children in six prefectures.

Infant Homes

Boys 2,796)
Girls 3,251) First and second dustings of children on six prefectures.

Japanese B. Encephalitis

The Japanese B. Encephalitis vaccination program was completed during the period 1 July to 5 July. A total of 14,473 persons were given a .1cc I.D. dose. Of this number, 13,257 were children and 1,216 were adults. Blood samples prior to vaccination were taken from 210 persons.

Tuberculosis Control

In recent visits to various prefectures, the plan of the Ministry of Welfare for the control of tuberculosis was discussed. It was pointed out the completion of this plan depended upon adequate financial assistance. There has been a considerable cut in the allotted assistance, however, much of the work in the control of tuberculosis within the home is a matter of education. There is no reason why the basic principles, which have already been mentioned, shall not be emphasized more strongly to the individuals in the health centers through women's organizations through the physicians, Public Health Nurses, and dentists and druggists associations. Also, the work of the home care committee in the various cities, towns and villages can certainly be carried out on a voluntary basis. It will require much supervision and constant reiteration until the Japanese public becomes conscious of the value of these points.

Insect and Rodent Control

The Ministry of Welfare has supplied funds to each prefecture on a matched fund basis to carry on the insect and rodent control programs. The funds allocated for insecticides are 1/3 of the total budget set up for each

prefecture and 1/2 for labor. These funds must be matched by the prefectures and are the minimum amounts to be used for insect and rodent control.

Some of the prefectures are not setting up such a budget, but are diverting those funds to pay for other things, such as routine garbage, night soil and refuse collection, sweeping streets and even things unrelated to public health work.

A check as to the amount of money furnished each prefecture should be made, also the manner in which these funds are being used. Any of this money spent for uses other than actual insect and rodent control will be returned to the Ministry of Welfare and the person responsible for such expenditure will be held strictly accountable.

Port Quarantine

A conference, designed to correlate controls over international commerce and travel in this theatre, was recently held under the auspices of the G-1 section of SCAP. The Port Quarantine Officer, GHQ, SCAP, attended and took part in the phase on the discussion dealing with port quarantine.

Full cholera restrictions are in effect against all ships from the Asiatic mainland, but as yet no cases or suspects have been reported. Particular care is being taken with those repatriates now being returned from Hulutao. Due to unsettled conditions there, it is assumed these people do not receive adequate processing on the Manchurian side. Processing is therefore started the first day aboard ship in Hulutao and the first phase is completed before the vessel reaches Japan.

WEEKLY REPORT OF INCOMING QUARANTINE AND COMMUNICABLE DISEASES

Quarantine Station	Name Vessel	Port of Dept.	Date of Dept.	Diagnosis	Date of Diagnosis	Cases	Deaths

Ujina	Nihon Maru	Rangoon	Jun 10 (arr Jul 2)	Malaria	Jul 1	1	0
Ujina	Kumano Maru	Rangoon	Jul 2 (arr Jul 4)	Malaria	Jul 1	1	0

SECTION VI SOCIAL SECURITY DIVISION

General

Draft copies of two laws, an unemployment compensation insurance act and an unemployment assistance law were received and analysis begun. The need for such programs will be particularly urgent if the proposed rationalization of employment is instituted with resulting unemployment.

Conferences were continued with Japanese officials with reference to a proposed cabinet order effectuating appeal provisions in the Welfare Pension, Health Insurance, and Workers' Accident Compensation Laws.

Conferences were held with Japanese officials and members of the Social Security Investigating Committee with regard to the mission and report on social security in Japan.

Health and National Health Insurance

The National Health Insurance Section of the Insurance Bureau, Ministry of Welfare, has submitted to the Ministry of Finance, a request for a supplementary appropriation of 1,400,000,000 yen for improving the program. The amount requested was arrived at following a conference with the National Federation of National Health Insurance Association Secretaries and the National Health Insurance Reform League. The most important items in the request are those for establishing or constructing adequate medical facilities where vitally needed, and partial compensation for the costs of medical care.

Several magazines are being published, limited by paper in availability, dealing with social insurance problems and medicine, in connection with health insurance. The magazines a limited distribution, being sent to health insurance associations and by subscription to doctors active in insurance practice. The magazines are the

Health, Oasis, Medical Journal, and the Social Security Bulletin. The Prefectural insurance offices should have copies of the magazines.

SECTION VII
MEDICAL SERVICE DIVISION

Japanese Civilian Hospital Strength Report for the period ending 23 May 1947 shows 3,221 hospitals with a bed capacity of 223,750, of which 113,932 beds were occupied. During this same period 310,885 out-patients were treated.

SECTION VIII
CONSULTANTS

Nutrition

The results of physical examinations used in the nutrition surveys are presented in the accompanying tables. There is a slight increase in symptoms associate with vitamin B deficiency in May but not as great as in May of 1946. Such changes are in part related to deterioration of food during storage between harvests.

NUTRITION SURVEY - JAPAN - 1946-1947

Percentage of individuals showing physical symptoms associated with nutritional deficiencies. Tokyo, Eight Cities(Nagoya, Osaka, Kure, Fukuoka, Sapporo, Sendai, Kanazawa and Matsuyama). Twenty-seven prefectures, rural areas (Ibaraki, Tochigi, Gumma, Saitama, Chiba, Tokyo, Kanagawa, Shizuoka, Aichi, Shiga, Kyoto, Osaka, Hyogo, Wakayama, Okayama, Hiroshima, Fukuoka, Saga, Kumamoto, Hokkaido, Iwate, Miyagi, Toyama, Ishikawa, Fukui, Ehime, and Kochi).

*The survey in February 1946 included only 4 cities, Nagoya, Osaka, Kure and Fukuoka.

**The survey in February 1946 included 19 prefectures - Ibaraki, Tochigi, Gumma, Saitama, Chiba, Tokyo, Kanagawa, Shizuoka, Aichi, Shiga, Kyoto, Osaka, Hyogo, Wakayama, Okayama, Hiroshima, Fukuoka, Saga and Kumamoto.

Note: 1. Four sets of data refer to the percentage of individuals within restricted age or sex groups as follows:

- a. Brady Cardia: Percent of men and women over 13 years of age.
 - b. Delayed Menstruation: Percent of women 17 to 45 years of age.
 - c. Impaired Lactation: Percent of lactating women whose children up to six months must be given mixed or artificial feeding.
 - d. Bone mal-growth: Impaired growth of bone or rickets in children up to six years.
2. No Symptoms: Percent of individuals who showed no symptoms studied in the survey.
 3. One or More Symptoms: Percent of individuals who showed one or more symptoms studied in the survey.
 4. A new set of subjects are used in the February 1947 surveys and will be used throughout 1947.

SECTION IX
MEMORANDA TO JAPANESE GOVERNMENT

SECTION I
WELFARE DIVISION

Licensed Agencies for Relief in Asia (LARA)

The 14th overseas shipment of relief supplies to LARA arrived in Yokohama on 13 July. Received in this shipment were:

Baby Food (Canned)	74,825 tons
Whole Milk (powdered)	3 "
Chocolate Drink	17,430 "
Shoes & Clothing	1,099 "
Medical Supplies	<u>36 "</u>
Total (net) weight	96,714 "

Japanese Red Cross Society

The SCAP-American Red Cross agreement, through which American Red Cross staff consultants are assigned to the PHW Section for assistance to the Japanese Red Cross Society in the reorganization of it a program, has been extended until 1 July 1947. Emphasis by the consultant staff, during the coming year will be placed on chapter organization fund raising, and the development of fundamental Red Cross services, including Junior Red Cross, Disaster Preparedness and Relief, Volunteer Services, Water Safety, First Aid, Home Nursing and the support of government programs in the fields of public health and medical services.

SECTION II
DENTAL AFFAIRS DIVISION

Nine dentists were rehabilitated during June.

SECTION III
VETERINARY AFFAIRS

Weekly Report of Animal Diseases

The Ministry of Agriculture and Forestry (Bureau of Animal Industry) reported the following new outbreaks of animal diseases during the period 13-19 July 1947.

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Hyogo	Anthrax	1
Chiba	Swine Erysipelas	1

Monthly Report of Animal Disease for June 1947

Following is a summary of the Monthly Animal Disease Report for June 1947 submitted by the Ministry of Agriculture and Forestry (Bureau of Animal Industry):

<u>Disease</u>	<u>No. of Cases</u>
Anthrax	1
Brucellosis	11
Trichomoniasis	50
Texas Fever	6
Equine Infectious Abortion	19
Swine Erysipelas	16
Swine Plague	1
Strangles	174
Rabies	1
Scabies	3
Equine Infectious Anemia	100
Pullorum Disease	40

SECTION IV
NURSING AFFAIRS DIVISION

Weekly Status Report

Press Conference

Nursing Affairs Division held a press conference on 14 July for the Japanese and American editors, in which the new legislation passed by the Diet on 3 July concerning nursing and midwifery laws of Japan, was explained and discussed.

Curricula for Midwives, Class A & B nurses and Public Health Nurses courses have been recommended by the committee and approved by the Ministry of Welfare, and meet the requirements of the new legislation.

NOTE: Being handled by separate attached notice and mailed with W.B. to each M.G. team.

SECTION V
SUPPLY

Production

Indigenous production of anthelmintics is not sufficient to meet requirements. Concerted effort is being made to increase production as rapidly as possible; however, it is estimated that Japanese production will not be adequate for at least 9-12 months. A spot import program of santonin, hexylresorcinols and digenia simplex (herb utilized for extracting a Japanese anthelmintic) is being submitted to meet requirements during the next year.

Release of the following quantities of DDT products and typhus vaccine were approved by the Ministry of Welfare for the period 13-19 July:

<u>Prefecture</u>	<u>10% DDT Dust</u>	<u>5% DDT Residual Effect Spray</u>	<u>Typhus Vaccine</u>
Saitama	40,000 lbs.	1,000 gals.	
Akita	1,000 "	1,840 "	1,000 vials
Ehime	2,000 "		
Saga		3,000 "	
Gifu	10,000 "		
Yamaguchi	50,000 "		
Hiroshima		5,380 "	
Miyazaki		1,860 "	
Niigata		3,810 "	
Aomori			100 vials
Fukuoka	50,000 "		
Kagawa	20,000 "		
Tokushima		1,230 "	
Wakayama	888 "		
Toyama		2,000 "	
Mie	500 "	1,900 "	
Kochi	<u>10,000 "</u>	<u>300 "</u>	
Total	184,388 lbs.	22,320 gals.	1,100 vials

Mixing of DDT products from American furnished DDT concentrate continues to be excellent. A total of 4,005,156 lbs. of 10% DDT Dust and 278,410 gallons of 5% DDT residual effect spray, kerosene base, represents stocks in wholesale warehouses of the Ministry of Welfare as of 12 July.

Total production during 1947 and production during period 6-12 July of DDT dusters and spraying equipment has been accomplished as follows:

	Production <u>6-12 July</u>	Total <u>Production</u>
DDT Dusters	500	20,246
Sprayer, knapsack type, 3 gallon	3,860	24,213
Sprayer, semi-automatic, pump type	2,000	19,720
Sprayer, hand type, 1/2 gallon	<u>850</u>	<u>14,500</u>
Total	7,210	78,679

Narcotics

The following information relative to the "Cultivation of the Opium Poppy" is for the benefit of all Military Government Teams and prefectural authorities:

The cultivation prohibition refers only to the specie *Papaver Somniferum* L., this being the "The Opium Poppy". This is the only one of many species of the Papaveraceae Family, and related species, that have been cultivated for the opium content. Therefore, other species of poppy can be grown for decorative effects as flowers.

The following excerpt from a pamphlet entitled "The Opium Poppy and Other Poppies", edited by the U.S. Treasury Department in 1944 states: - "It is expected that the determination of Opium Poppies, under the law, will be primarily chemical. The term "Opium Poppy" includes the plant *Papaver Somniferum*, any other plant which is the source of opium or opium products, and any part of any such plant." Botanical proof that a plant is *Papaver Somniferum* would be satisfactory, but it is thought that by using a chemical proof, the definition will forestall arguments as to whether a particular kind of poppy found growing in a certain field does or does not belong to the species *Papaver Somniferum*. If it is proved to contain morphine, the most essential narcotic component of opium, that is sufficient to bring it under the Narcotic Control Act.

There is no known variety of *Papaver Somniferum* in which morphine is absent. Chemical tests may be made readily from the fresh latex of the fresh plant by the use of Iodine Reagent M-2 which gives unmistakable morphine-iodine crystals, and by using Froehde's, Marquis' and Mecke's reagents which yield characteristic color reactions. Dried parts of the plant, such as capsules, leaves or petals, must have the morphine content extracted prior to the use of the above reagents for morphine determination.

SECTION VI PREVENTIVE MEDICINE DIVISION

Typhus Fever

Comparative Score (includes figures of 18 July)

1945	31,534
1946	1,085

Scrub Typhus

Two cases of scrub typhus have been reported from Niigata prefecture. Neither case occurred in the group vaccinated with "Type A" scrub typhus vaccine. One case occurred in the group vaccinated with "Type B" vaccine and one case in a non-vaccinated individual.

Typhus Control

Sporadic typhus cases continue to occur in many sections of Japan, particularly in Aichi prefecture (192). Increased emphasis should be planed on the control of fleas, as at this time, fleas are nearing the peak in population density. Species of fleas involved include: all species found on rats; the human flea, and fleas found on cats and dogs. All of these species will bite humans and are capable of transmitting the rickettsiae of typhus fever, through their fecal droppings.

In treating for fleas it is best to begin at the source -- breeding places. Household pets should be dusted with pyrethrum dust or DDT dust. Sleeping quarters of pots cleaned and dusted or sprayed with DDT. Mats in houses and floors under mats should be thoroughly sprayed with residual DDT effect spray or dusted with 10% DDT dust. Bedding should be dusted. One thorough treatment of either spray or dust should be sufficient to kill fleas and flea larvae for at least 3 months. Rat burrows, runways, harborages should also be treated, particularly before an anti-rat

campaign. Publicity concerning fleas should be made among the civilian population. Such material is being prepared by the Ministry of Welfare for reference use in the prefectures.

Hokkaido Typhus Vaccination Program

Results of vaccination against typhus fever in Hokkaido as of 10 July 1947.

Total vaccinated	763,053 (First dose)
" "	580,193 (Second dose)

Sanitation

Insect and Rodent Control

The sanitary associations can be used to carry on field control work -- larvaecidal and adult. It must be remembered, however, that they are no longer operating as a section of the Tonari Gumi but under the supervision and direction of the Prefectural Health Officials. Volunteer labor can be used in lieu of prefecture funds to hire labor of equal value. However, the labor should be scheduled so that personnel is available to carry on a continuous program.

Water Supplies

Close attention to keeping filter cleaned should be made during the hot months as algae and other aquatic plants grow rapidly -- causing bad taste and odor, and worms and certain larvae that live in the slim coating on the filter cause serious trouble by boring down through the sand thereby causing short circuits.

The supply of chorine and necessary chemicals for treatment and sterilization should be checked as this operation is probably the most important in dysentery and typhoid control.

Venereal Disease Control

The following statistics are taken from the Japanese Government Venereal Disease Control Report for May 1947, and includes only the work done by public clinics.

Gonorrhea		
Acute	6,594	
Chronic	3,648

SECTION VII SOCIAL SECURITY DIVISION

General

In the formation of the new Ministry of Labor, the Cabinet has decided that the administration of the Workers' Accident Compensation Insurance Law, to become effective in the near future, and the unemployment compensation Law, new legislation now being prepared, will be the responsibility of this Ministry, also that the administrative responsibilities of the Seamen's Insurance be transferred from the Ministry of Welfare to the

Ministry of Transportation. The above decisions relieve the Social Insurance Bureau, Ministry of Welfare, of the administrative responsibilities for these three types of social insurance.

Seamen's Insurance

The Ministry of Transportation has decided to comply with the requirements of the 1924 Brussels Convention of the Maritime Commission of the International Labor Conference in that all nations will give free medical care to foreign seamen affected with or exposed to venereal disease. This is the first time in the history of Japan that it has complied with this reciprocal agreement among nations.

A program for providing additional facilities to render adequate medical care to foreign seamen is being developed by the Ministry in coordination with the present facilities of the Seamen's Insurance. The above mentioned programs are in preparation for the resumption of foreign trade by Japan.

National Health Insurance

The Minister of Finance and the Cabinet have indicated they were unable to meet the requests for additional appropriations of 1,400,000,000 yen in the interest of the National Health Insurance program for the remainder of the 1947 fiscal year. It was reported by the Insurance Bureau, however, that an additional appropriation of 177,000,000 yen was made which will provide for only a small part of the planned program for rehabilitating and reorganizing the National Health Insurance Associations.

The Diet has created a Welfare Committee which has taken up the problems of the National Health Insurance program as one of its most important subjects. Already representatives from various prefectures of these Associations have visited the Committee to inform them as to the difficulties and problems facing this program.

SECTION VIII VITAL STATISTICS DIVISION

During July and August, Dr. Selwyn D. Collins, Head Statistician, United States Public Health Service, Bethesda, Maryland, will serve as special advisor to SCAP on public health statistics. It is expected that he will visit a limited number of units during his stay in Japan.

Beginning in July, three important procedures will be instituted. First, a post-card report system, using a "free-postage" form of government report card will be used by attendants of berths, deaths and stillbirths to report such occurrences to the local Koseki offices. They will be checked against the declarations of the parents to determine the completeness of registration and in this way will serve as a cross check on the registration system.

Second, a new "free-postage" government post card report form will be used for the first time to report cases of morbidity. A supply of both the above forms has been distributed to all physicians and also to midwives, in the former case.

Third, the morbidity report forms for submitting reports between the local Health Offices, local Health Centers, prefectural Health Offices and the Ministry of Welfare have all been revised.

The most outstanding announcement to be made at this time is the transferal of the vital statistics responsibility, formerly carried by the Bureau of Census, to the Ministry of Welfare, to be made on 1 September 1947. This step is a great advancement in public health statistics in Japan and will unite morbidity and the statistics sometimes referred to as vital statistics, which include births, deaths and stillbirths. There will be much more attention given to public health statistics in the future and the administration of the public health services of the national, prefectural and local levels will be based on public health statistics. This will make possible dependable public health administration.

The following table presents revised vital statistics series for all Japan by months from July 1946 to April 1947. In previous bulletins this Section has released the monthly numeric reports of vital events for the period July 1946 to February 1947. "Numeric reports" are based upon monthly statements from approximately 11,000 local offices as to the number of events for which declarations have been made in each local area.

In October 1946 there was instituted a system whereby local offices each month sent to the national government, through prefectural officers, schedules (or transcripts) of all declarations filed with the local office.

These schedules have been coded and tabulated in the Cabinet Bureau of Statistics. The data thus obtained are more complete than the preliminary numeric reports and are tabulated to refer more closely to the month of occurrence than to the month of filing.

The present revised series for July 1946 to September 1946 are from the monthly numeric reports but the counts of births, deaths and infant deaths have been corrected for a small percentage of out-of-Japan events erroneously included in the previously published series. The figures for October 1946 to April 1947 are from the monthly schedule reports not previously published.

The rates shown are based upon the revised vital statistics series and the estimated population as of 1 July 1946 (for 1946) and 1 July 1947 (for 1947). The population estimates were prepared by the Research and Statistics Division, Economic and Scientific Sections.

Births

The birth rate has exhibited a general upward trend. Such an increase could be expected following demobilization of military personnel and the return of a large number of repatriates. The seasonal fluctuations have followed the pattern of previous years. Normally births reach a peak in January, decline to a low in June and then steadily increase throughout the succeeding months.

It should be noted that the January peak is always higher than the true facts and the December and February figures correspondingly lower than they should be due to the Japanese custom of reporting some December and February births as if they occurred in January. This custom derives in part from a desire to keep babies born in December from automatically being considered two years of age in January and in part from the fact that January is generally considered a lucky month. In January 1947 there were reported 294,363 births, representing a rate of 44.4 per 1,000 populations per annum. In April there were 211,188 births with a rate of 32.9.

Deaths

The 1946 death rate declined to the level of the middle 1930's. During the past 11 month deaths have shown approximately the same seasonal fluctuations as in previous years. The monthly median number of death from 1935 to 1941 showed a peak in January, declined fairly steadily to a low in June, rose again to second high point in August, and then declined to the low point of the year in November. During the latter half of 1946 deaths steadily declined to the usual low in November, increased during the subsequent winter months and declined sharply in April, 1947. It may be noted that the decrease from July to November 1946 was somewhat greater than the normal seasonal drop. On the other hand deaths in February and March of 1947 were somewhat higher than in January where as they are usually lower. In April 1947 there were reported 100,308 deaths representing a rate of 15.6 per 1,000 persons per annum.

Infant Deaths

In all but 2 of the 10 months (July 1946 to April 1947) the infant death rate per 1,000 live births was lower than the rate of the corresponding month of any previous year for which monthly data are available (1937-1942). Infant deaths have followed the normal seasonal pattern except in February and March when the number was higher than in January whereas it has usually been lower. Normally infant deaths reach a peak in January, decline steadily, except July, to reach a low in September and then increase steadily to the next January high point. The infant death rate per 1,000 live births during 1946 and 1947 exhibited essentially the same pattern except for slumps in December and February despite increasing numbers. This is because the increase in births was greater than the increase in infant deaths in these months.

It should be noted that the infant death rate per 1,000 live births may be somewhat artificially low in a period of increasing numbers of births and than artificially high when births decline because infant deaths include infants born throughout the previous year. In April 1947 there were 18,067 infant deaths with a rate of 85.5 per 1,000 live births.

Stillbirths

The stillbirth rate has been lower than in any year prior to 1940. During the war years the recorded stillbirth rate was lower than currently but this may have been due to incomplete reporting. The apparent general upward trend in the number of stillbirths from June 1946 to the first part of 1947 was the normal seasonal pattern. Stillbirths

fluctuate, of course, with births. Normally the peak number occurs in January and the low point for the year occurs in June. The stillbirth rate per 1,000 live births during the past 10 months has fluctuated from a high of 50.9 in December, 1946 to a low of 34.0 in January, 1947. In April 1947, there were 9,474 stillbirths with a rate of 44.9 per 1,000 live births.

Marriages

The marriage rate has shown a general upward trend since July, 1946. Normally marriages increase, with some fluctuation, from a low in June to a high in the following March. During the past 10 months the increase, therefore, has been a normal seasonal one but has also reflected a real increase over previous years. This was to be expected following demobilization and the return of repatriates. The sharp increase in September and subsequent drop in October was due to an announced change in declaration forms in October which caused people to declare many marriages in September which otherwise would have been declared in October. The peak in marriages (85,111) was, as usual, reached in March this year. In April there were 76,599 marriages and a rate of 11.9 per 1,000 population.

Divorces

As in the case of marriages, there was a significant increase in divorces following the war. The extremely high peak in September, however, was at least in part due to the change in declaration procedures in October, causing people to file divorces somewhat sooner than they might have. Although divorces in the first part of 1947 have remained at a fairly high level compared with pre-war years there has nevertheless been a significant decrease compared with 1946. In April there were 6,623 divorces representing a rate of 1.0 per 1,000 population per annum.

NUMBER OF BIRTHS, DEATHS, INFANT DEATHS, STILLBIRTHS MARRIAGES AND DIVORCS FOR JAPAN JULY 1946 – APRIL 1947

Year and Month	Births	Deaths	Infant Deaths	Still Births	Marriages	Divorces
1946:

* Per annum rates per 1,000 population

** Per annum rates per 1,000 live births

Source: Numbers of vital events are based upon monthly numeric reports, July to September 1946 and monthly schedule reports, October 1946 to April 1947, from the Bureau of the Census. Rates are based upon estimated population July 1, 1946 and 1947, from ESS, GHQ, SCAP.

SECTION IX MEDICAL SERVICES DIVISION

The civilian hospital strength report for period ending 30 May 1947 shows 3,224 hospitals with a bed capacity of 223,810 of which 114,997 are occupied.

SECTION X CONSULTANTS

NUTRITION

The data on food consumption obtained in May nutrition surveys in four coal mines, a copper mine and railway workers in Tokyo are contained in the accompanying table.

The best use of imported foods by the Japanese is a matter of concern. The Ministry of Welfare through its Nutrition Section in the Bureau of Public Health has recommended to prefectural officers the need for practical demonstrations on the use of the imported foods – especially in areas where such foods are likely to be distributed. The demonstrations would be conducted by nutritionists on duty in the welfare offices or by competent home economists attached to schools or universities. Some literature on the preparation of the imported foods has been sent out to prefectures by the Ministry of welfare. Subsequent material is being assembled and will be available soon. Definite educational programs have been set up in some prefectures.

A conference of nutritionists will be held in Tokyo the 23rd and 24th of July on the preparation of imported foods. This means that there should be available in the prefectures, for education of the population, individuals who have some experience in the use of imported foods.

WELFARE DIVISION

Licensed Agencies for Relief in Asia

The 15th overseas shipment of LARA relief supplies arrived in Yokohama on 21 July aboard the SS Flying Enterprise. The relief supplies in this shipment were as follows:

Whole Milk (powdered)	9,900 tons
Bedding (blankets, etc.)	3,184 tons
Clothing, including shoes	15,000 tons
Medicinals (vitamins)	<u>150 tons</u>
Total (net) weight	28,279 tons

Monthly Military Government Activity Reports

Review of Annex B-2 of subject reports indicates increased activity on the part of MG Teams in checking the efficacy of the public assistance program. Several teams report inefficiency or lack of knowledge of the provisions of the Daily Life Security Law on the part of Minsei-iin and local welfare officers.

In an effort to determine the causes of inefficiency and lack of knowledge, the Kyoto team studied the age grouping and occupations of the 1,918 minsei-iin in Kyoto-shi. The facts were illuminating, and as a result local welfare officials will attempt a training program.

Several teams report, that as a result of Father Flanagan's visit, interest in the children's institutions increased to the point where local officials and/or private entrepreneurs hope to set up Boys Towns. Some teams report that existing institutions are sufficient and that funds and energies might more profitably be expended on rehabilitation of such institutions. Teams report lack of recreational area and equipment; lack of vocational programs, equipment and teaching personnel; lack of medical supplies and equipment, as well as lack of general institutional equipment.

Other pertinent comments: Akita suggests day nurseries should be an adjunct to mother and child homes if the training program is to be effective. Fukuoka points out that "there exists among vagrants a tendency to become restless and leave institutions provided for them, at the first opportunity. Cause is lack of close surveillance and inadequate planning for each day. The children are left too much on their own".

Nagano team inspected 20 village public assistance programs. "An outstanding example of the deficiencies in the village public assistance program is the Mura of Mamejima.

1. No case record of reliefee
2. No record of amount of food issued
3. Four months behind in payments of yen in kind

The corrective action taken by this office was to have the local welfare officials accompany our representative during the inspection. We were thus able to show and explain each deficiency that was noted. Also in several flagrant cases a re-inspection was made with the Prefectural Welfare Officials."

Other teams have noted that local welfare officials are inclined to exaggerate the type of records kept, the number of visits made to families by minsei-iin, and their knowledge of the program. Best results seem to follow when team representatives actually check on families involved. The importance of the monthly activity reports in the formulation of national programs and policies cannot be too highly emphasized. Reflections from these reports will be found in the Child Welfare Law, which is expected to be enacted at an early date, and in other laws, ordinances and action taken in the field of welfare.

SECTION II
VETERINATY AFFAIRS DIVISION

The Ministry of Agriculture and Forestry (Bureau of Animal Industry) reported the following outbreaks of animal diseases during the period 20-26 July 1947:

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Tottori	Blackleg	2
Nagano	Swine Erysipelas	1
Chiba	Swine Erysipelas	1
Yamanashi	Swine Erysipelas	3

SECTION III DENTAL AFFAIRS DIVISION

The value of dental instruments manufactured during June totaled 9,012,848.10 yen, while that for dental materials 2,987,715.02 yen.

SECTION IV NURSING AFFAIRS DIVISION

National Public Health Nursing Program

The first, four-month refresher course class of Public Health Nurses will have their graduation exercises 28 July. The next class is due to open 2 August 1947.

Education

The Red Cross nurses of Japan held a three day meeting, 22-24 July, at Central Red cross Headquarters, Tokyo. Nursing Affairs Division assisted in lectures on Nursing Education. The purpose of the meeting was to assist the Red Cross Nurses in understanding the new legislation which establishes nursing education standards.

SECTION V SUPPLY DIVISION

Distribution

Since the Ministry of Welfare assumed responsibility for DDT distribution on 1 March 47, sizable quantities of DDT dust have been distributed to all prefectures throughout Japan. It was expected that once prefectures had received stocks, that demands might decrease to some extent but the amounts being distributed still average over 100,000 lbs. per week.

Supplies of DDT are adequate for use in health control programs and there is no intention of restricting distribution for that purpose. However, every effort must be extended to insure that DDT is not reaching the black market or being disposed of for other than disease control purposes. It is not intended that DDT be placed on sale in the open market. Distribution is to be strictly controlled by prefectural health officers in order to secure maximum utilization of available stocks. The majority of DDT concentrate being used in Japan is imported, together with all petroleum products used preparation of spray. Under these conditions DDT products must be handled as controlled items with supervision over control being exercised directly by Japanese Government officials. The delegation of authority for distribution control to private agencies is not authorized.

Shipments of pyrethrum emulsion to the prefectures under supervision of the Ministry of Welfare have totaled 13,129 drums of 50 gallons each, or a total of 656,450 gallons. This almost completes the distribution as planned, of a total of 13,690 fifty-gallon drums. All prefectures except five have received their allotted supply. These exceptions are Hokkaido, Aichi, Mie, Shiga and Wakayama. On 23 July the completed shipments were as follows (unit is 50-gallon drum).

<u>Prefecture</u>	<u>Quantity Allotted</u>	<u>Quantity Shipped</u>
Hokkaido	605	180
Aomori	127	127
Iwate	87	87
Miyagi	222	222

Production

Releases of DDT Products and Typhus Vaccine for Period 20-26 July:

<u>Prefecture</u>	<u>10% DDT Dust</u>	<u>5% DDT Residual Effect Spray</u>	<u>Typhus Vaccine</u>
Dept. of Trans	8,800 lbs.	25,000 gallons	
Iwate	10,000 lbs.		
Miyagi	30,000 lbs.		
Tokushima	15,000 lbs.		
Hiroshima	50,000 lbs.		
Yokohama Quar. Station	350 lbs.	150 gallons	
Nagoya Quar. Station	300 lbs.	100 gallons	
Kobe Quar. Station	350 lbs.	150 gallons	
Moji Quar. Station	350 lbs.	150 gallons	
Nagasaki Quar. Station	300 lbs.	100 gallons	
Hakodate Quar. Station	3,000 lbs.	500 gallons	3,100 vials
Ujina Quar. Station	1,000 lbs.	200 gallons	1,440 vials
Maizuru Quar. Station	13,308 lbs.	1,000 gallons	1,800 vials
Sasebo Quar. Station	5,400 lbs.	1,150 gallons	
Yokosuka Quar. Station		250 gallons	
Ibaraki			600 vials
Kagawa		3,060 gallons	
Yamagata		2,100 gallons	
Aomori		2,330 gallons	
Total	138,158 lbs.	36,240 gallons	6,940 vials

Mixing of DDT products from American furnished DDT concentrate continues to be excellent. A total of 3,909,076 lbs. of 10% DDT Dust and 278,410 gallons of 5% DDT Residual Effect Spray, kerosene base, represents stocks in wholesale warehouses of the Ministry of Welfare as of 19 July.

Production of DDT dusters and spraying equipment continued according to plan.

	<u>Production</u> <u>13 – 19 July</u>	<u>Total 1947</u> <u>Production</u>
DDT Dusters	1,500	21,746
Sprayer, knapsack type, 3 gallon	1,800	26,013
Sprayer, semi-automatic, pump type		19,720
Sprayer, hand type, 1/2 gallon	<u>2,500</u>	<u>17,000</u>
Total	5,800	84,479

Production of supplies required for the anti-tuberculosis campaign continues according to plan. Production program of 100 new photoroentographic machines has been completed. Production of 35 mm film is gradually increasing and a total 37,000 rolls was produced in June. Approximately 20,000 rolls was produced during period 1 - 10 July.

The production of insect and rodent control supplies and equipment during June was excellent. A total of over 4,000,000 lbs. of 10% DDT dust and a sizable reserve stock of 5% DDT residual effect spray is now stored in Japanese wholesalers warehouses strategically located throughout Japan. Pyrethrum emulsion production program for 1947 utilizing 1946 pyrethrum crops was completed on 15 June.

Production Insect & Rodent Control Supplies – June 1947

Antu (rat poison)	7,602 kgs.
Nekoirazu (rat poison)	2,805 kgs.
Rat traps (spring type)	2,000 each
Pyrethrum Emulsion (X-30)	197,000 gallons
DDT Dusters	9,300 each
Sprayer, knapsack type, 3 gallon	12,050 each
Sprayer, pump type, semi-automatic	10,090 each
Sprayer, hand type, 1/2 gallon	6,000 each
10% DDT Dust (utilizing American DDT concentrate)	826,460 each
5% DDT residual effect spray (utilizing American DDT concentrate)	68,858 gallons
10% DDT dust (utilizing Japanese DDT concentrate)	336,336 lbs.

The yen value of production of medical supplies (medicines, biological, dental materials, dental instruments, medical instruments and surgical dressings) during 1947 has increased from 123,227,198 yen for January to 337,827,742 yen for June 1947. The largest increases have been effected in non-controlled and patent medicines. During the past three months the amount of coal and electricity furnished the pharmaceutical industry has been increased and is considered the principal contributing factor to the overall increase in production.

The production of biological during June was highly satisfactory with the exception of triple typhoid vaccine. Delay in establishment of a new price and the setting up of rigid assay procedures has delayed production to some extent. A satisfactory price structure was finally established during June.

QUANTITATIVE PRODUCTION OF VACCINES DURING JUNE 47

Vaccine	<u>Production</u>		<u>Stock on Hand – 30 June</u>	
	<u>Crude Vaccine</u>	<u>Finished Vaccine</u>	<u>Crude Vaccine</u>	<u>Finished Vaccine</u>
Cholera	720,500 cc	6,000 cc	2,031,000 cc	261,900 cc
Typhus	309,078 cc	-	-	7,029,723 cc
Triple Typhoid	65,112,255 cc	1,848,780 cc	81,428,940 cc	2,998,720 cc
Smallpox	2,333,845 doses	1,473,520 doses	18,258,000 doses	1,512,795 doses
Diphtheria Toxoid	315,000 cc	-	-	846,105 cc
Diphtheria Antitoxin	-	76,400 cc	-	534,553 cc

Production of laboratory animals continues to show steady progress. The retarding factor in animal production of inadequate supplies of animal foodstuffs is being reduced progressively. Increased allocations and deliveries have been made of the necessary raw materials to build additional new animal cages. Sizable increases in quantities supplied laboratories has been made since February 1947.

No. ANIMAL SUPPLIED LABORATORIES

	<u>Feb. 47</u>	<u>March 47</u>	<u>April 47</u>	<u>May 47</u>	<u>June 47</u>
Guinea pigs	947	1,670	2,783	3,980	5,311

14 x 17	5,002 dozen
Dental	50 dozen
35 mm.film	39,276 rolls

Narcotics

The Legal Section of GHQ, FEC, has supplied the following information relative the apprehension of Chinese Nationals for violations of Japanese Laws.

1. If the Chinese person is registered with the Chinese Consul General and has a pass-book bearing his photograph, signature and registration number as a Chinese National, he may be arrested only by a member of the occupation forces with power of arrest, and must be tried in Provost Court.

2. If the Chinese person is not registered with the Chinese Consul General, he may be treated as a Japanese National, arrested by Japanese police and tried in Japanese Court.

SECTION VI PREVENTIVE MEDICINE DIVISION

Typhus Fever

Comparative Score (include figures of 24 July)

1946 - 31,602

1947 - 1,106

Murine Typhus Control

The remaining summer and fall months are still important ones, in combating murine typhus, in which to effect control of fleas and mites infesting homes and other buildings. With the exception of the prefectures of Hokkaido, Yamagata and Miyagi in particular, the great majority of typhus cases occurring at the present time are of marine origin. In these three prefectures and in most of the other prefectures north of Tokyo, epidemic (louse-borne) typhus is the predominant form. Control measures, therefore must be applied to effect the control of fleas (rat and human, etc.) and mites in homes. The seasonal peak in the flea population density is at hand and flea control is important.

Homes and other buildings infested with fleas thoroughly treated now with 5% DDT residual effect spray will be protected against these insects for a period of at least three months. The "rickettsicidal spray" containing 2% cresolis is also effective in controlling mites as well as fleas and bedbugs. If fire is a hazard, 10% DDT dust may be used in place of spray for fleas.

The Ministry of Welfare has issued information and instruction to all prefectural governments to institute publicity and educational campaigns concerning the prevention and control of murine typhus through the control of fleas and rat mites.

Insect & Rodent Control

Field inspections of the insect and rodent control programs in many prefectures reveal the following facts:

1. There are on hand adequate supplies of pyrethrum emulsion 30x and 10% DDT dust. Reasonably liberal allotments of 5% DDT oil solution are being or have been delivered to the prefectures. There is adequate equipment, and enough trained personnel to carry on necessary programs.

2. Due to the low incidence of insect borne diseases, there is a feeling this work is not actually necessary, and the material should be held pending an actual outbreak of some such disease. When the insect population is low, the most important and inexpensive control can be effected. It is recommended that accumulation of DDT above the amounts necessary for actual disease control should be used for pest control, particularly against fleas, mites, bed bugs etc., which can and may be guilty of transmitting diseases and which present a high moral factor. In some cases where pulverized talc, road dust or other inert material is available the powder can be out to 5% and dusted on the floors, futon, tatami and even in attics for rat flea control. Dusters should be used that spread a fine dust uniformly over surfaces where infestations of vermin occurs.

The important buildings to be so treated are hotels, theaters, buses, bath houses and other places where large crowds of people gather.

The 5% DDT oil solution should be applied to walls, ceilings, light cords, the under side of furniture, particularly movie seats, etc. Due to the limited supply of this material it should be used indoors and priority should be given to hospitals, public baths, public latrines, street cars, buses, hotels, food handling establishments, slaughter houses, dairies and other places where flies and mosquitoes are attracted.

House where insect borne disease occur, particularly typhoid and dysentery, should have top priority.

In some of the rural villages DDT is distributed to the individual. This is not recommended, as it spreads the insecticides so thinly that it is ineffective and the important foci of insect borne diseases are left uncovered.

The pyrethrum 30x should be used for larva control -- fly and mosquito -- it must be used promptly as its insecticidal value decreases with time.

Local adjustments to any of these recommended practices should be made to fit quantity of the various insecticides on hand and local conditions.

Tuberculosis Control

At Yamagata Station, it was noted that following the announcements of train arrivals and departures, there was a short announcement on public health. The control of tuberculosis was mentioned. This is considered an excellent method of bringing this subject to the attention of the public and is recommended for use in other prefectures.

SECTION VII SOCIAL SECURITY DIVISION

General

As a result of extended research by the "Committee for the Investigation of the Social Insurances", the Ministry of Welfare has a proposed plan to submit to the present session of the Diet providing for a comprehensive and unified Social Security program. This plan would bring together, all of the various social insurance systems now existing in Japan.

Unemployment Insurance

Discussions were held with officials of the Ministry of Finance reference coverage of government employees under an unemployment insurance plan, and it was concluded that such worker would be covered by the pending Unemployment Insurance Law, with a proviso that certain groups could be excluded by Cabinet order.

The Ministry of Transportation is drafting a proposed unemployment insurance bill for seamen.

Welfare Pension Fund

Officials of the Ministry of Welfare have presented a plan for loans from the Welfare Pension Reserve fund, totaling 500,000,000 yen for the purpose of assisting National Health Insurance Associations.

National Health Insurance

The request of the Ministry of Welfare for a supplemental appropriation of 1,400,000,000 yen for National Health Insurance was not granted by the ministry of Finance or the Cabinet. However, there has been 177,000,000 yen authorized, with the possibility that another 100,000,000 yen may be authorized following further reports on the condition of the program. The important points to be covered by the additional appropriation are: an increase in salary for visiting nurses; an increase in pay for doctors on full time bases in National Health Insurance clinics and hospitals; a subsidy for establishing more clinics, and an increase in salary for administrative personnel in National Health Insurance Associations.

SECTION VIII MEDICAL SERVICE DEVISION

Civilian Hospital Strength Report for the week ending 6 June 1947 shows 3,289 hospitals with a capacity of 223,865 beds, of which 113, 151 were occupied. During this period 340,460 out patients were treated.

SECTION IX VITAL STATISTICS DIVISION

The attached tables summarize the vital statistics of Japan for the month of May, 1947. The numbers reported are from the monthly schedule report with rates being based upon the estimated population as of 1 July 1947.

Following the usual seasonal pattern, births declined approximately 5% from 211,188 in April to 201,070 in my. The birth rate per 1,000 population in May 1947 was 30.4 compared with 19.3 in May 1946.

Deaths also showed the usual seasonal decline, having dropped 6% from 100,308 in April to 94,332 in May. The death rate in May was 14.2 compared with 17.6 in the same month last year.

The number of infant deaths in May (15,293) was 15% less than in April (18,067). The infant death rate per 1,000 live births was 76.1. Comparable data are not available for same period last year.

Despite a decrease in the number of live births, stillbirths increased 5% from 9,474 in April to 9,971 in May. The rate per 1,000 live births was 49.6.

The number of marriages (112,978) was the highest number reported since July 1946 when the present reporting system went into effect and was nearly 50% higher than the April number (76,599). In previous years the number of marriages in May was about the same as in April. The marriage rate in May 1947 was 17.1. Data are not available for 1946.

Divorces increased 20% from 6,683 in April to 7,962 in May. April and my have not differed greatly in past years, for which data are available. The divorce rate per 1,000 population was 1.2.

SECTION I WELFARE

Public Assistance

Further increases in public assistance grants were effective 1 August or retroactive to that date. (List increase dated 1 July). The Ministry of Welfare reports the following budget will meet increases in the prices of staple foods and green vegetables.

	Number of Persons in Family					Each Additional Person
	1	2	3	4	5	
Largest Cities	15.80* (17.85)	26.90 (30.35)	33.20 (37.50)	39.50 (44.65)	44.20 (50.00)	4.70 (5.35)
Intermediate Cities	14.15 (15.80)	24.10 (27.05)	29.75 (33.40)	35.40 (39.75)	39.65 (44.50)	4.25 (4.75)
Towns and Villages	12.50 (13.95)	21.30 (23.70)	26.30 (29.30)	31.30 (34.90)	35.10 (39.05)	3.80 (4.15)

*These figures represent public assistance grant for one day.

Note:

- a. Amounts in () indicate increases allowable over basic grants by order of prefectural governors. Increases over these amounts (), must be approved by the Ministry of Welfare.
- b. Expenses for children under one year of age fed. Chiefly by artificial nutrition may be added.
- c. Expenses for school lunches for children may be added.
- d. Single persons in institutions may be paid for at the rate of payment allowed for single persons as noted above. Families in institutions will receive family allowances.

Public Assistance Report for June

	June 1947	May 1947	June 1946
No. of persons (not in institutions)	2,615,884	2,637,281	
No. of Persons (in institutions) assisted	<u>131,628</u>	<u>126,052</u>

Cash Grants	Yen 213,863,215	Yen 208,811,628	
Grants in Kind (Cost)	<u>20,470,570</u>	<u>26,219,215</u>	
Total	Yen 234,333,785	Yen 235,030,843	Yen 41,143,743

Disaster Relief Bill

The final draft of the National Disaster Law for Japan has been completed and will be submitted to the present session of the Diet.

The law is one of the most advanced pieces of disaster legislation in the world today. It departs from the theory of waiting until disaster strikes before adequate plans are formulated and it begins with the acceptance of the government's responsibility for the results of widespread disaster.

The plan sets up a National Disaster Board at cabinet level headed by the Prime Minister and with the Welfare Minister as Vice Chairmen. Other interested Ministries comprise the balance of the board, plus the President of the Japanese Red Cross Society and outstanding civilians picked by the Prime Minister for their knowledge of disaster planning.

This National Disaster Board will meet for the purpose of projecting plans for aid to the people in time of disaster. During the disaster period this board will, through the Ministers, expedite the flow of disaster supplies, medicines and service from national level.

Each prefecture will have a Prefectural Disaster Board which will prepare plans for the types of disaster peculiar to their prefectures and will function along the same lines as the National Board.

In addition the Prefectures will have a Disaster Operating Team composed of the following sections:

Police	Fire
Health	Welfare
Economics	Engineering

The plan provides for the recognition of the Japanese Red Cross Society as a quasi-governmental agency in time of disaster. The Japanese Red Cross Society will be the coordinator of all volunteer organizations.

Licensed Agencies for Relief in Asia

The 16th and 17th overseas shipments of LARA relief supplies arrived in Yokohama 25 and 29 July 1947 respectively.

The 16th shipment consisted of 1252 cases of canned fruit and vegetables (gross weight 20.43 tons).

The 17th shipment contained:

Skimmed Milk (dried)	44.95 tons
Food (canned & staple)	32.87 tons
Clothing (including shoes)	<u>4.50 tons</u>
Total (net) weight	82.32 tons

SECTION II VETERINARY AFFAIRS DIVISION

Field Survey

A survey of veterinary affairs in Shiga, Wakayama and Niigata prefectures was completed. The condition of domestic animals is much improved due to an abundance of summer forage. Animal disease control measures are effective. Ante and post mortem inspection of meat is being maintained in all slaughter houses. A demonstration of proper procedure was made in each prefecture visited. The "dairy score card" is being utilized for the inspection of dairy farms and milk plants. Sanitation of these establishments is generally below standard and equipment badly worn.

Seafood Inspection

Field surveys disclose the absence of seafood inspection in some prefectures and the Ministry of welfare is taking action to correct this situation.

Sausage Inspection

In the past Japanese establishments engaged in the manufacture of sausage, hams, bacon, head cheese and other meat and meat food products have functioned without the presence of an inspector. The Ministry of Welfare is taking corrective action.

Monthly Meat Inspection Report for May 1947

Following is a summary of the monthly Meat Inspection Report for May 1947 submitted by the Ministry of Welfare:

	<u>Cattle</u>	<u>Calves</u>	<u>Sheep & Goats</u>	<u>Swine</u>	<u>Horses</u>
Number slaughtered	12,070	663	389	8,805	3,468
Condemned ante mortem	1	0	0	0	1
Condemned post mortem					
Total	15	0	0	2	6
Partial	255	9	0	45	222
Viscera	2,542	45	0	4,835	754

Monthly Dairy Inspection Report for May 1947

Following is a summary of the monthly dairy inspection report for May 1947, submitted by the Ministry of Welfare:

Special Milk

Farm inspections	3
Sample examined	6
Over bacterial standards (50,000 per cc)	0
Under butterfat standards (3.3 percent)	0
Plant inspections	4
Over bacterial standards (50,000 per cc)	0
Under butterfat standards (3.3 percent)	0

Ordinary Milk

Farm inspections	5946
Sample examined	8283
Over bacterial standards (50,000 per cc)	411
Under butterfat standards (3.3 percent)	1047
Plant inspections	3635
Over bacterial standards (2,000,000 per cc)	166
Under butterfat standards (3.0 percent)	789

Goat Milk

Farm inspections	32
Sample examined	56
Over bacterial standards (2,000,000 per cc)	8
Under butterfat standards (3.0 percent)	4

Weekly Animal Disease Report

The Ministry of Agriculture and Forestry (Bureau of Animal Industry) reported the following outbreaks of animal disease during the period 27 July - 2 August 1947:

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Kumamoto	Texas Fever	9
Yamanashi	Swine Erysipelas	1
Chiba	Swine Erysipelas	1

SECTION III NURSING AFFAIRS DIVISION

National Public Health Course

The first four-month course in Public Health Nursing was completed and graduation exercises held 28 July at which 49 nurses received certificates. The second course will open 4 August. A representative is expected from each prefecture.

SECTION IV SUPPLY DIVISION

Distribution

In order to conserve limited stocks of penicillin, one Military Government Team has recommended that penicillin stocks be held at key points within prefectures and released only in those cases in which penicillin is

particularly indicated. This is considered to be an excellent recommendation and follows the pattern of penicillin distribution at the national level. The Ministry of Welfare has appointed a penicillin distribution committee which recommends quantities of penicillin to be allocated to the various areas and hospitals throughout Japan.

During the period ending 30 July, a total of 7,254 pieces of equipment for use in the insect and rodent control program were distributed to the prefectures by the Ministry of Welfare. Shipments were made as follows:

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsack Sprayer</u>	<u>Semi-automatic Sprayer</u>	<u>Hand Sprayer</u>
Gifu	984		400	
Tochigi	984			
Niigata	504		400	
Fukuoka				2,365
Yamagata	692	125		360
<u>Yamanashi</u>		440		
Totals	3,164	565	800	2,725

The Ministry of Welfare has prepared allocation of the following U.S. produced medicaments to all prefectures for distribution to hospitals, doctors, dentists and veterinarians:

Petrolatum Liquid Heavy: Unit 1 pt. btl.	2,412
Plaster of Paris, orthopedic: Unit 4 lb.can	18,000
Dextrose, 1000 cc: Unit btl.	7,900
Soft Soap: 1 lb. jar	10,883

The above supplies will be shipped in the near future. The actual allotment to each prefecture should be of record in the Pharmaceutical Affairs Section of the Prefectural Health office. Local officials should immediately develop a prefectural distribution plan and be prepared to make distribution to using agencies upon receipt of the items.

The Pharmaceutical Affairs Section, Ministry of Welfare, reported that the Konishiroku Photo Film Industry Co. had shipped the following amount of x-ray films to their Kyusyu Branch for sale to all using agencies on Kyusyu Island.

16 July 1947	100 doz.	10 x 12
25 July 1947	<u>1,000 doz.</u>	10 x 12
Total	1,100 doz.	

The above does not include other sizes of films sent to the above mentioned agency during July for which figures are not yet available.

Production

Mixing of DDT products from American furnished DDT concentrate continues to be excellent. A total of 3,909,938 lbs. of 10% DDT Dust and 309,756 gallons of 5% DDT Residual Effect Spray, kerosene base, represents stocks in wholesale warehouses of the Ministry of Welfare as of 26 July.

Production of DDT dusters and spraying equipment continued according to plan.

	<u>Production 20-26 July</u>	<u>Total 1947 Production</u>
DDT Dusters	1,000	22,746
Sprayer, knapsack type, 3 gallon	1,800	27,813
Sprayer, semi-automatic, pump type	-	19,720
Sprayers, hand type, 1/2 gallon	<u>2,400</u>	<u>19,400</u>
Total	5,200	89,679

Production of triple typhoid vaccine has been accelerated during the past two weeks and it is expected that supplies will be adequate to carry out immunization programs throughout Japan in the near future.

It has been decided that barring unforeseen circumstances, further importations of typhus vaccine will not be necessary during the fiscal year 1948. Japanese production together with present stocks on hand is estimated to sufficient to meet all requirements.

Narcotics

In June 1947 all of the remaining Japanese military stocks of narcotics, excepting morphine, opium, cocaine and narcopon, were transferred into civilian socks. A large quantity of codeine was thus transferred, repackaged and made into tablet form, and is now in the hands of the central wholesalers in Tokyo and Osaka, ready for distribution through other central wholesalers and local wholesalers to practitioners, pharmacists, hospitals, etc.

The monthly report from the Japanese Government for June 1947 records the following facts:

- a. 84,078 narcotic registrants in Japan.
- b. Apprehension of 100 registrants and 46 non-registrants for Narcotic Law violations.
- c. Fifteen (15) registered and twenty-two (22) non-registered persons were convicted or are being prosecuted for violations of the Narcotic Laws.
- d. Forty-one (41) thefts of narcotic stocks.
- e. Fifteen (15) fires resulting in the loss of narcotic stocks.

SECTION V PREVENTIVE MEDICINE DIVISION

Typhoid Fever Control

Typhoid fever control programs have produced good results, the incidence having been reduced approximately 50% since the beginning of the occupation. Rates will be further reduced by extension of the immunization program. Plans for a nationwide immunization program for this season were made and publicized in Weekly Bulletin #20. The necessary vaccine has been produced and is now being packaged and tested for sterility, safety and potency. Military Government Health Officers are urged to consult with prefectural and city health officers in order to ascertain that necessary arrangements have been made to carry out this program. Distribution has already begun. Sufficient vaccine for the first dose and in some instances for the complete course, has been delivered to many cities. Because of considerable flooding in certain areas of Aomori, Akita, Iwate, Yamagata and Miyagi prefectures special consideration has been given to supplying vaccine for immediate immunization in these prefectures.

Since the success of this program will depend upon the completeness of the immunization program; and since immunizations are not compulsory, it will be necessary to make special efforts to insure that all persons are immunized with three doses of vaccine. It is suggested that Military Government Health Officers, through the prefectural health organizations, initiate a publicity campaign through the newspapers, theatres, posters, bulletin boards and other media, emphasizing the importance of the program and the necessity for all persons to report at the appointed time. This type of publicity has produced good results in the past.

Typhus Fever

Comparative Score (includes figures of 1 August)

1946	31,665
1947	1,117

Murine Typhus

Reference is made to public Health Reports Vol. 62 No. 3, January 17, 1947, Control of Rat Ectoparasites with DDT. By the use 10% DDT dust the control of fleas infesting rats was accomplished in a series of tests performed in grocery stores, warehouses, feed stores, etc. The powder continued to be effective for a period of at least 4 months.

In treating any premise with DDT, it is desirable to apply the dust in such a manner as to insure its contact with the rat ectoparasites. The DDT dust should be applied directly to the ectoparasite breeding places. Dust applied along active rat runways will be picked up on the feet and tails of the rats as they move along the runways, and thereby will be carried back to the nest and harborage areas. Rats also will pick up dust over their entire bodies

when passing through dusted holes and burrows. In addition rats habitually preen themselves, and dust accumulated on their feet will be transferred to the fur in this manner. Fleas on the rats then will contact the DDT dust while moving through the fur. The quantity of dust necessary will vary due to variation in size and character of the places to be treated. A dust composed of 10% DDT in pyrophyllite was applied to rat runways, rat burrows, and rat harborage areas at the average rate of 8 pounds per premise (stores, warehouses, etc.). Particular effort was made to treat burrows and harborage areas thoroughly, so besides dusting of burrows and runways a small amount of dust was placed directly into the mouth of each burrow entrance hole. If the hole was in a horizontal plane a ring of dust was laid around it. This procedure was used to insure maximum contact by the rats on entrance. That maximum contact occurred, was borne out by the fact that dust so applied usually had been wiped up to a large degree by the passage of rats, after several days had elapsed.

Occasionally it was necessary to remove rubbish and other materials to gain access to the more important rat infestations. Such a procedure is recommended for it has been found that a complete treatment of the rat infested premise is necessary for the over-all control of rat fleas.

Recent reports indicate that wet table DDT dusts and water emulsions DDT sprays are being more and more favored in insect control work. Investigations along these lines should be encouraged. Research on wetting-agents, emulsifiers and solvents of DDT should be stimulated in Japan.

Venereal Disease Drugs

In order to successfully carry out VD programs, a steady and adequate supply of VD drugs is essential. The current high price of VD drugs is interfering with programs because prefectural governments are unable to provide drugs to treat cases now enrolled in the clinics. The necessity for making changes in the present subsidy system for VD drugs is recognized and already several conferences have been held with the officials of the Ministry of Welfare in an effort to find a solution to this problem. The plan which appears to be the most feasible, provides for an increase in the national subsidy, with allocations of money to the prefectures on a sliding scale system, based upon that percentage of the total cost which the individual prefectures are able to pay. Every possible effort is being made to arrive at a satisfactory solution to this problem at the earliest possible date. Military Government Health Officers are urged to make every effort to keep current VD programs from losing ground while financial arrangements are being worked out on a national level.

Laboratory Branch

Biologics Assay and Refrigeration. One of the current problems in the production of typhoid and paratyphoid vaccines is the lack of refrigeration of the vaccines from the time of production until used. Visits to the laboratories throughout Japan have shown this lack of refrigeration is general rather than localized. Large quantities of TAB are being kept in so called "cold storage rooms" where the temperature ranged up to 85°F. After delivery of the vaccine to the prefectural health authorities it has, in some instances, been allowed to sit at room temperature for several weeks before its use. This one problem alone is sufficient to defeat the purpose of the immunization program. Military Government Health Officers should check the storage places for vaccine both at the manufacturer and after it has been delivered to the prefectural health office. 2° to 5° C is the correct temperature for storage of TAB. Temperatures above 10° C are unacceptable and result in rapid loss of potency. When adequate refrigeration is not available within the laboratory or the prefectural health office, refrigerated space should be obtained from commercial cold storage companies i.e. beer companies, commercial cold storage plants, etc. During the actual immunization program the vaccine should be refrigerated until it is actually used.

Duties of laboratory inspectors - - most of the laboratory inspectors hired by the prefectural health organizations seem to be unaware of the scope of their duties. These fall roughly into two main groups; the first consisting of the taking of sample biologicals for assay. Allowing the manufacturer to present him with samples is unacceptable. He should go to the laboratory and pick random samples from the finished product. Secondly, most inspectors have been doing no inspection whatsoever. They have been satisfied to confine their duties to taking of samples. Inspectors should be made to realize their duties entail periodic inspection of the laboratories and the enforcement of rules and regulations necessary for the production of safe, sterile, potent vaccine.

Assay of TAB When the original minimum requirements were written for the manufacture of TAB a compromise was allowed the Japanese as a matter of temporary expediency. This compromise gave them the privilege of taking their samples from the diluted vaccine before it was bottled in the final containers. This was done by pipetting vaccine from the carboy. This method was very undesirable and has been stopped. Letters emanated

from the Ministry of Welfare to the manufactures, stating that samples must be chosen from the final bottled vaccine. Laboratory inspectors are responsible for enforcement of this policy.

Water supplies

Filters should be cleaned much more frequently at this time of the year to prevent wood, algae and fish growth. Where supplies are short conservation measures should be instituted. Uses of water for washing vehicles, wetting streets, filling swimming pools, etc., should be controlled.

Port Quarantine

Weekly report of incoming quarantinable and communicable diseases week ending 26 July 1947:

Quarantine Station	Name of Vessel	Port of Departure	Date of Departure	Date of Entrance	Diagnosis	Date of Diagnos.	Cases	Deaths
Ujina	Settsu Maru	Rangoon	7 July	20 July	Malaria	Before Embarkation	14	0
Maizuru	Esan Maru	Nakhodka	18 July	21 July	Dysentery Amebic	24 Jul	1	0
Maizuru	Esan Maru	Nakhodka	18 July	21 July	Dysentery Amebic	25 Jul	2	0
Maizuru	Esan Maru	Nakhodka	18 July	21 July	Dysentery Amebic	26 July	1	0

SECTION VI SOCIAL SECURITY DIVISION

General

The Government Mutual Aid Associations have presented a draft of proposed ordinance changes. One important change is to amend the ordinance excluding from membership those beyond certain salary limits. The new ordinance proposes including all employees within a government agency and excludes only those who are elected or politically appointed to office.

The basic wage of a Japanese worker constitutes only a fraction of his earnings. In addition to the basic wage he is paid a variety of bonuses or allowances. Among those are: the family allowance, computed on the number of his dependents; the cost of living allowances, based on the cost of living index for his community; quarterly bonus, ordinarily related to the amount of the basic wage; efficiency allowance, based on length and quality of service; rental allowance, in recognition of unusual (not related to war) housing problems; and the ordinary per diem and travel allowances.

Wages referred to in Welfare Pension Insurance are defined by Cabinet Order as the basic wage plus such allowances or bonuses as are paid regularly and not less frequently than every three months. Family allowances,

however, were specifically excluded by the Welfare Minister in a ruling of 6 March 1943. Other allowances excluded (by Cabinet Order) are; expenses granted for regular commuting between residence and place of employment; allowance for the cost of transportation on assignment of duty away from the usual place of business; and rental or lodging allowances which do not result in proportionate deductions from the basic wage.

Health Insurance

Surveys of National Health Insurance activities were made in four prefectures on Kyusyu and in Chiba. The situation of this social insurance program with the greatest coverage remains most critical. The number of National Health Insurance Associations forced to suspend activities continues to increase. Sentiment for a fundamental revision of existing health insurance schemes appears to be growing rapidly. At the same time the people are overwhelmingly insistent on the need for increased governmental subsidies to preserve the present minimal benefits until the necessary reform can be accomplished.

At local meetings of prefectural chapters of the Japanese Medical Association and of the national organization assembled in Tokyo, the more progressive and socially minded physicians of Japan have determined to demonstrate that they have a sincere interest in plans for a scientific health insurance system for the protection of the people against excessive medical care costs. The formation of several prefectural organizations of physicians engaged either wholly or for the most part in the treatment of health insurance subscribers should have a salutary effect on the emergence of a satisfactory plan.

SECTION VII MEDICAL SERVICE DIVISION

Japanese Civilian Hospital Strength Report for period ending 13 June 1947 shows 3,304 hospitals with a capacity of 224,263 beds, 108,188 of which were occupied. During this same period 337,332 out-patients were treated.

SECTION VIII VITAL STATISTICS DIVISION

Vital statistics work in the prefectural health offices of Kyoto, Osaka, Kobe, Kure and Hiroshima was reviewed by the Chief, Vital Statistics Division, PHW, accompanied by Dr. S. D. Collins on TDY from the U.S. Public Health Service. Joint conferences were held in each of the above places with health and justice officials. All prefectural health offices are anticipating the establishment of public health statistics units. The "free post card service" for reporting morbidity and attendants' reports of births, deaths, and stillbirths to Kosei offices has been introduced.

SECTION IX MEMORANDA TO JAPANESE GOVERNMENT

PHMJG-31	28 July 1947	Application for Permission to Publish Results of Nutrition Surveys.
PHMJG-32	28 July 1947	Application for Permission to Allow Access to Results of Nutrition Surveys.
PHMJG-33	31 July 1947	National Disaster Plan.

LARA Relief Supplies

The 18th LARA relief shipment arrived in Yokohama this week. The shipment consisted of the following supplies.

23.17 tons of shoes and clothing
12.5 tons of powdered milk

Child Welfare Law

The final draft of the Child Welfare Law went to the Diet this week. Translations of the law will be sent to MG Teams, through channels, upon passage by the Diet. The following is a summary of its provisions.

1. Directs that national and local public bodies as well as parents and guardians are responsible for the healthy growth of children.
2. Establishes National and Prefectural Child Welfare Boards to study the needs of children and advise welfare officials of these needs.
3. Provides for the hiring of child welfare workers for the promotion of the welfare of children and expectant and nursing mothers.
4. Provides for setting up a Child Welfare Station, or Center, in each prefecture for the purpose of child study for proper placement, consultation service, health examinations and guidance and for other purposes.
5. Provides for a Maternal and Child Health Program with free services for those unable to pay for them. Urges expectant and nursing mothers to take advantage of such service. Provides additional food and other necessary supplies for expectant or nursing mothers. Provides free obstetrical service in "lying in" agencies for those unable to pay for such service.
6. Provides care for neglected or abused children.
7. Provides for a foster home care program.
8. Protects children from exploitation and prevents certain occupations harmful to children.
9. Offers matching funds to local governments for provision of and operation of children's institutions.
10. Provides for licensing, minimum standards, and periodic inspection of children's institutions.
11. Provides for appeals on local decisions.
12. Provides protection for individual rights by punishing those who reveal confidential information.

National Fund Raising Organization

A Central Committee has been established for the purpose of organizing a national fund raising organization to finance approved private social welfare agencies. This committee held their first meeting in Tokyo on 6 August. Information covering current developments, of this endeavor, will be reported through the Weekly Summary.

Undeliverable Gift Parcels (11 pound International Mail Packages)

Since the re-establishment of international mails with Japan, which included allowing the sending of 11 pound Gift (relief) parcels into Japan, a total of 371,000 such parcels have arrived (1 Sept 46 – 12 June 47).

Four hundred and ninety were undeliverable, and in accordance with existing regulations, the contents will be used for relief purposes. The Social Affairs Bureau, Ministry of Welfare, was designated as the official authorized agency to receive the items contained in the undeliverable parcels. Distribution will be made under supervision of SCAP, with priority being given to public child health and welfare institutions.

Housing

Review of Annex B-2 Monthly MG Activities Reports for May 1947 indicates wide discrepancy in figures listed as to the houses destroyed and the number rebuilt with those at national level. Inasmuch as the figures at national level are based upon those submitted by prefectural governments no reasonable explanation can be given for this wide variance.

Teams are requested to use care in compiling these figures by requiring the prefectures to give the source of their report to MG Teams, making sure that figure submitted to MG Teams are the same as those submitted to national level.

Housing is of such importance in Japan today that alert surveillance should be exercised by team members, of all building occurring in their prefectures.

Review of recent figures released by the Board of Reconstruction, Tokyo, indicate that during the period August 1945 to May 1947:

- a. Total dwellings erected 529,584 of 11.9 tsubo per family.

- b. Other houses total 188,464 making grand total of 636,048 in all of Japan.
These figures include legal and black market channels.

Two hundred thousand houses are needed each year to meet obsolescent and new population requirements and it is estimated that only 260,000 homes will be completed this year. The number of homes destroyed in Japan was estimated at 3,500,000.

SECTION II VETERINARY AFFAIRS DIVISION

Field Survey

A survey of Veterinary Affairs in Gunma Prefecture was completed. Animal disease control measures are effective. The tuberculin test of dairy cows should be expedited if it is to be completed this year. Dairy farms and milk plants are being rated too high on the "Dairy Score Card". Demonstrations of proper scoring were made. Sanitation of meat and dairy establishments is comparatively good. For the purpose of improving ante and post mortem meat inspection procedure, proper methods were demonstrated.

Weekly Animal Disease Report

The Ministry of Agriculture and Forestry (Bureau of Animal Industry) reported the following new outbreaks of animal disease during the period 3-9 August 1947:

<u>Prefecture</u>	<u>Disease</u>	<u>No. of cases</u>
Oita	Anthrax	1
Chiba	Swine Erysipelas	1

SECTION III NURSING AFFAIRS DIVISION

The second four-month course for Public Health Nurses was opened on 4 August in Tokyo. Forty-nine nurses were present with 38 Prefectures represented.

SECTION IV SUPPLY DIVISION

Distribution

Additional shipments of insect and rodent control equipment and pyrethrum emulsion were made by the Ministry of Welfare to the prefectures. A total of 3,150 pieces of equipment were shipped in the period 30 July to 7 August and 14,850 gallons of pyrethrum emulsion in the period 23 July to 7 August, as follows:

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsack Sprayer</u>	<u>Semi-automatic Sprayer</u>	<u>Hand Sprayer</u>	<u>Pyrethrum Emulsion 50-gal. Drum</u>
Hokkaido					
Yamagata	292	440			246
Tokyo				120	
Kanagawa	1,200				
Yamanashi				12	
Aichi					26
Mie					25
Hyogo		150		400	
Shizuoka			100	120	
Kumamoto		<u>160</u>	<u>160</u>		
Totals	1,492	750	260	652	297

The shipments to Aichi and Mie fulfil their slotted quotas for pyrethrum emulsion of 751 (Aichi) and 211 (Mie) 50-gallon drums.

A total of 799,680 tablets of Japanese produced sulfathiazole were distributed of all prefectures for VD control during July 1947.

A distribution consisting of 20,000 vials of U40, 10 cc U.S. produced insulin is being undertaken by the Pharmaceutical Affairs Section, Ministry of Welfare to all prefectures.

The Ministry of Welfare, forwarded two directives to all prefectures pertaining to the distribution and sale of DDT products as follows:

1. Directive YAKU, No.797, subject; "Distribution and Use of DDT", dated 31 July 1947. Directs the use of DDT only for the purpose of the epidemic prevention program, and not to sell any type of DDT to general consumers.
2. Directive YAKU, No.798, subject: "DDT Products", dated 31 July 1947. Directs the officials to be on the lookout for DDT products being sold in the "open market". Upon discovery the prefectural officials concerned will take immediate stops to halt their sales, and will forward a sample of the product together with a report of investigation to the Pharmaceutical Affairs Section, Ministry of Welfare.

The Konishiroku Photo Industry Company and Fuji Film Company distributed the following sizes and amounts of x-ray films to their branch offices and to prefectures during July 1947:

<u>10 x 12</u>	<u>8 x 10</u>	<u>6 x 8</u>	<u>5 x 7</u>	<u>4-3/4 x 6</u>	<u>Dental</u>
10,363 doz.	697 doz.	292 doz.	1,244 doz.	22 doz.	364 doz.

35mm

16,296 cans (3 rolls in can; 50 exposures each)

Stock of x-ray films kept in the warehouses of the two film companies are being released to their branch offices for general distribution.

Production

Releases of the following DDT products and Typhus Vaccine were approved for the period 27 July - 9 August.

<u>Prefecture</u>	<u>10% DDT Dust</u>	<u>5% DDT Residual Effect Spray</u>	<u>Typhus Vaccine</u>
Hokkaido	10,000 lbs.		
Nagasaki		1,865 gals.	
Gifu		500 gals.	
Saga			1,500 vials
Aichi		2,850 gals.	
Fukushima	3,823 lbs.		
Kobe. Quar. Station			400 vials
Tokyo	90,000 lbs.		
Saitama			1,080 vials
Akita			3,000 vials
Chiba	30,000 lbs.		
Shizuoka		4,630 gals.	
Osaka	20,000 lbs.		
Transp. Ministry	<u>8,300 lbs.</u>		
Totals	162,123 lbs.	9,845 gallons	5,980 vials

Mixing of DDT products from American furnished DDT concentrate continued to be excellent. A total of 3,783,078 lbs. of 10% DDT Dust and 359,524 gallons of 5% DDT Residual Effect Spray, kerosene base, represents stocks in wholesale warehouses of the Ministry of Welfare as of 2 August.

Production of DDT dusters and spraying Equipment

	<u>Production 27 July-2 August</u>	<u>Total 1947 Production</u>
DDT Dusters	1,200	23,946
Sprayer, knapsack type, 3 gallon	800	28,613
Sprayer, pump type, semi-automatic	-	19,720
Sprayer, hand type, 1/2 gallon	<u>2,610</u>	<u>22,010</u>
Total	4,610	94,289

SECTION V PREVENTIVE MEDICINE DIVISION

A memorandum (PHMJG-34) has been prepared and transmitted to the Ministry of Welfare directing that Poliomyelitis be included in the list of reportable communicable diseases and that a report of Poliomyelitis be included in the weekly summary report furnished by the Ministry of Welfare to Public Health and Welfare Section, GHQ SCAP.

Memorandum (PHMJG-35) has been completed and transmitted to the Ministry of Welfare. Subject memorandum embodies certain extensions, clarifications and interpretations of PHMJG-15 subject: "Physical Examination, Immunization and Medical Care of Japanese Nationals Employed for the Occupation Forces". A copy of PHMJG-35 will be furnished to all Military Government Public Health Officers.

Approval has been granted for the performance of a "screening" test for syphilis on all repatriates. As previously reported, individual case follow-ups will be conducted by the local health authorities in the prefectures of final abode.

PORT QUARANTINE – WEEKLY DISEASE REPORT – 27 July to 2 August 1947

Quarantine Station	Name of Vessel	Port of Departure	Date of Departure	Date of Entrance	Date of Inspection	Diagnosis	Date of Diagnosis	Cases
Sasebo	Ehikomaru	Rangoon	9 July	29 July	29 July	Malaria	9 July	1
Hakodate	Shinkomaru	Maoka	18 July	20 July	20 July	Dysentery	29 July	1
Hakodate	Shinkomaru	Maoka	18 July	20 July	20 July	Para-typhus	29 July	1
Hakodate	Mamiyamaru	Maoka	24 July	26 July	26 July	Typhus	31 July	1
Maizuru	Esanmaru	Nakhodka	18 July	20 July	22 July	Dysentery	28 July	2
Maizuru	Taiikumaru	Nakhodka	24 July	27 July	28 July	dysentery	30 July	1

Typhus Fever

Comparative Score (includes figures of 8 August 1947)
1946 - 31,727
1947- 1,727

Scrub Typhus

Results of the vaccination program in Niigata to date:

Type "A" vaccine - 5 cases with 1 death
Type "B" vaccine - 2 cases with no deaths
Non-vaccinated in test area - 2 cases and no deaths

Three additional cases occurred in non-vaccinated persons outside the test area - two of three occurred near Sanjo, along the Agano river, and one case near Nagaoka City.

Murine Typhus

A question has arisen concerning the value of the Weil-Felix Reaction in murine typhus. This agglutination reaction using Proteus OX-19 is positive usually after the sixth day of the disease. This reaction is also positive in louse-borne (epidemic) typhus. The Weil-Felix reaction is used to show the presence of agglutinins in rising titre for Proteus OX-19 in serum taken from the patient as soon as the disease is suspected and at 2 to 5 day

intervals until the diagnosis is established. This type of reaction is also useful in Scrub typhus but using Proteus OX-K organisms. However, the Weil-Felix reaction in case of murine or epidemic typhus is not specific for either of the diseases. It does, however, indicate the probable presence of either one or the other of the two forms of typhus. For proper differentiation the complement fixation reaction, or better still, the rickettsial agglutination reaction using highly purified rickettsial antigens, must be used.

Blood samples taken for complement-fixation tests should be collected after the 2nd week of illness. Serum should be separated and shipped by RTO to the 406th Medical General Laboratory, Tokyo, Japan.

Insect & Rodent Control

The following is a list of proposed basic allotments for 1947 of 5% DDT in oil solution and shipments made through July. These amounts will be increased if the total supply is increased, however, current orders should be based on these figures. There will be approximately 750,000 gallons distributed on a population and necessity bases.

This material was not allocated, procurement obtained by open requisition. Some of the prefectures have received very little, while others are drawing more than their share.

As this material is the most valuable single insecticide available, it is recommended that each prefecture avail itself of the opportunity of getting the maximum amount possible.

It should be remembered this 5% DDT solution is for residual spraying indoors, it must be used properly as an integral part of the insect control program, by the regular insect control teams and not distributed to the individual.

	Proposed Allotments for 1947	Distribution January - July 1947
Hokkaido	33,270	20,345
Aomori	6,990	3,985
Iwate	4,380	6,650
Miyagi	12,930	14,640
Akita	4,020	10,400
Yamagata	6,300	2,110

Saga	2,820	4,950
Nagasaki	15,840	3,415
Kumamoto	9,000	2,435
Oita	7,680	10,095
Miyazaki	5,580	2,445
Kagoshima	7,890	980

Venereal Disease Control

Prefectural health bureaus, and specifically the prefectural VDCOs and their staffs, are charged with the primary responsibility for furnishing public treatment clinics for the diagnosis and treatment venereal diseases in the general population of the prefectures. This duty cannot be discharged by having the general public treated only by private physicians, allied public health agencies, or private corporations. Public clinics must be provided and operated by the VD division of the Health Bureau.

Health Centers are the preferred locations for VD clinics, since eventually a general health program with other clinics will be conducted at these community health centers. It is likely that many patients will avail themselves of the services of more than one clinic. Since these clinics will be operated as a function of the health bureau, public health education and contact tracing will be facilitated. Finally, these model VD clinics will furnish a place where undergraduate teaching can be given to medical students and nurses, and post-graduate instruction given to practicing physicians to aid them in their private practice.

SECTION VI SOCIAL SECURITY DIVISION

Unemployment Compensation

Joint discussions have been completed with the Labor and Finance Divisions of ESS and with Japanese officials regarding a proposed unemployment allowance and compensation program. In general, the program will provide:

1. Unemployment allowances of approximating 60% of basic wage, for a duration of four months, to practically all workers (including seamen) who have been insured under the regular insurance programs, and who become unemployed. Under provisions of the Unemployment Allowance program, benefits will begin in October 1947 and be payable through March 1948. The program will be financed entirely by the Government.
2. An unemployment insurance program covering practically all workers in firms employing five or more, plus the possibility of Government workers. Contributions by both employers and workers will begin in October 1947 and benefits will become payable in April 1948. Benefit provisions will provide for approximately 60% of current basic wage for a duration of six months to a year. The Government will finance the administration costs and contribute one-third of the benefits payable after 1 April 1948.

Seamen's Insurance

A series of conferences regarding a proposed bill for establishing unemployment compensation for seamen was completed with officials of the Ministry of transportation. Several changes were made for coordination with the proposed unemployment program for industrial workers.

Mutual Aid Associations

Conferences have been completed with officials of the Allowance Bureau, Ministry of Finance, regarding proposed ordinance amendments of immediate concern pertinent to Government Mutual Aid Associations. Preliminary clearance given to immediate amendments will provide:

1. Inclusion of all government workers under mutual aid programs, with the exception of:
 - a. Elected officials.
 - b. Appointments considered of a political nature.
2. The deletion of the clause providing for the exclusion of all employees receiving in excess of 1200 yen par month.
3. The increase of sickness, funeral, and childbirths allowances.
4. Modifications of proposals to conform with new structure of local governments and change in the school system.
5. The deletion of special war-time provisions.

SECTION VII
MEDICAL SERVICE DIVISION

Japanese Civilian Hospital Strength Report for period ending 20 June 1947 shows 3,333 hospitals with a capacity of 218,177 beds, of which 108,481 were occupied. During this same period 339,130 out-patients were treated.

SECTION VIII
VITAL STATISTICS DIVISION

On Tuesday, 5 August a conference was held at Sendai between prefectural health officials and members of the newly created Justice Department. Problems concerning registrations in the local Koseki Offices were discussed, including ways and means of making them more complete and accurate.

At Sapporo, on 8 and 9 August, a conference was held jointly between Japanese Justice Department and health officials for the purpose of discussing registration problems regarding births, deaths and stillbirths. This conference was one of a series of seven educational conferences.

The Chief of the Vital Statistics Division, PH&W, accompanied by Dr. Collins, Consultant public health statistics, TDY from the U.S. Public Health Service, attended both the conference.

SECTION IX
MEMORANDA TO THE JAPANESE GOVERNMENT

PHMJG-34	5 August 1947	Additions to List of Reportable Diseases.
PHMJG-35	5 August 1947	Clarification and Interpretation of PHMJG-15.
PHMJG-36	8 August 1947	Draft of Child Welfare Law.

Short Title: TB - PH - WEL 2

SECTION II
WELFARE DIVISION

Red Cross Activities

The one-month Fall membership and fund raising campaign of the Japanese Red Cross will begin 15 October. American Red Cross consultant staff will work with Japanese National Headquarters and Chapters in the development of publicity and an intensive fund raising organization.

Public Assistance

Suggestions of preferential treatment of any-group, within prefectures, should be analyzed by local Military Government Teams and proper action should be initiated. Newspaper stories and radio comments indicating such treatment should be checked for accuracy, and if found misleading, the publishers of such items should be acquainted with SCAP policy as outlined in SCAPIN 775.

Licensed Agencies for the Relief of Asia (LARA)

The 19th and 20th LARA relief shipments arrived this week and included:
3.8 tons of shoes and clothing
21.14 tons of food

Survey of Construction Completed by Prefecture Month of May 1947

SOURCE: JAPANESE GOVERNMENT BOARD OF RECONSTRUCTION

SECTION III VETERINARY AFFAIRS DIVISION

Society for Prevention of Cruelty to Animals

An organization of this nature which existed in Japan prior to the war is now being revived. American anti-cruelty societies are being used as models.

Monthly Animal Disease Report

Following is a summary of the monthly animal disease report for July 1947 submitted by the Ministry of Agriculture and Forestry (Bureau of Animal Industry):

<u>Disease</u>	<u>No. of Cases</u>
Anthrax	3
Blackleg	2
Trichomoniasis	43
Texas Fever	9
Scabies	12
Equine Infectious Abortion	24
Swine Erysipelas	11
Swine Plague	1
Strangles	93
Rabies	4
Equine Infectious Anemia	155
Pullorum Disease	738

Weekly Animal Disease Report

The Ministry of Agriculture and Forestry (Bureau of Animal Industry) reported the following new outbreaks of animal diseases during the period 10-16 August 1947:

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Kumamoto	Texas Fever	1
Aichi	Swine Erysipelas	1
Tottori	Swine Erysipelas	1
Shizuoka	Swine Erysipelas	1
Kanagawa	Swine Erysipelas	1

SECTION IV
NURSING AFFAIRS DIVISION

General

A representative of Nursing Affairs Division was instructing at the Nurses' Institute in Osaka from 11 to 16 August.

Two other representatives of the Division have been assisting in Prefectural nurses' meetings in Nara, Kyoto and Shiga, and also teaching at the Osaka Nurses' Institute.

Capt. Grace Mundell has taken up her new assignment in Miyagi Prefecture, as Prefectural Nurse.

SECTION V
SUPPLY DIVISION

Production

A new study of X-ray film requirements for domestic consumption in Japan has been made by the Ministry of Welfare, following figures indicating total monthly requirements:

<u>Size</u>	<u>Quantity</u>
11 x 14	33,140 each
10 x 12	231,370 each
8 x 10	11,030 each
6 1/2 x 8 1/2	10,690 each

Additional study is being made to increase requirements for size 11 x 14. Production of film in quantities by sized as indicated above has been scheduled beginning with the month of September 1947. This revised production is approximately a 40% increase over previous production.

A review of coal requirements for all hospitals in Japan has been made by the Ministry of Welfare. This review was accomplished by obtaining detailed reports from all prefectures for all private and government hospitals. Estimates of requirements have been made for all months in the year for heating, cooking and sterilization. Ibaraki, Tottori and Yamaguchi prefectures, have never reported to the Ministry of Welfare indicating their requirements. Ministry of Welfare officials are requesting increased allocations of coal to meet revised requirements. Military Government officials should assist hospitals in obtaining quantities allocated.

Release of the following DDT products and Typhus Vaccine was approved for the period 10-16 August:

<u>Prefecture</u>	<u>10% DDT Dust</u>	<u>5% DDT Residual Effect Spray</u>	<u>Typhus Vaccine</u>
Fukushima		1,200 gallons	

Mixing of DDT products from American furnished DDT concentrate continued according to plan. A total of 3,843,465 lbs. of 10% DDT Dust and 354,414 gallons of 5% DDT Residual Effect Spray, kerosene base, represents stocks in wholesale warehouses of the Ministry of Welfare as of 9 August.

Production of DDT dusters and spraying equipment:

	<u>Production 3-9 August</u>	<u>Total 1947 Production</u>
DDT Dusters	19,600	43,546
Sprayer, knapsack type, 3 gallon	3,850	32,463
Sprayer, pump type, semi-automatic	2,388	22,108
Sprayer, hand type, 1/2 gallon	<u>11,926</u>	<u>33,936</u>
Total	37,764	132,053

Completion of the Pyrethrum Emulsion (X30) Production Program for 1947 was effected 6 August. A total of 658,100 gallons have been produced and 655,200 gallons have been distributed to the prefectures. This quantity already produced is equal to 1946 production. In addition, 1,000,000 gallons of 5% DDT Spray is being provided

for the 1947 insect and rodent control program which was not furnished for the 1946 program. The entire 1946 pyrethrum emulsion production was not utilized and quantities produced to date during 1947 are considered adequate to meet requirements. Further, it is not advisable to build up large stocks in reserve since pyrethrum emulsion will deteriorate.

Distribution

The designations of X-ray film sizes may lead to confusion or misunderstanding. The Japanese refer to the various sizes quite differently from their America designation. The following comparison should prove useful:

<u>Japanese designations</u>	<u>American designations</u>
Yotsugiri	10 inch by 12 inch
Tairiku	11 inch by 14 inch
Daiyotsugiri	11 inch by 14 inch
Hansetsu	14 inch by 17 inch

Distribution of 70 Kilograms and 3,000,000 tablets of santonin to all prefectures is being planned by the Ministry of Welfare during August and September.

The following amounts of sanitary materials were distributed to all prefectures during July:

Absorbent Cotton	160,951 lbs.
Gauze	1,740,734 mtrs.
Bandages 9 mtrs.	72,806 pcs.
Bandages 4.5 mtrs.	70,173 pcs.
Triangular cloth	161 pcs.
Lint Cloth	10 pcs.
Abdominal bandage	41,146 pcs.

SECTION VI
PREVENTIVE MEDICINE DIVISION

Typhoid Fever Control

TAB vaccine supply. TAB vaccine is rapidly becoming available in increasing quantities and is now being distributed to cities and prefectures in accordance with the plan publicized by the Ministry of Welfare as announced in PH&W Weekly Bulletin No.20, May 1947.

Immunization Program

The importance of the nation-wide immunization program cannot be over emphasized. Each prefecture, city, town and village should give the program the maximum publicity, using every at their disposal. An intensive publicity campaign prior to beginning the immunizations and continuing throughout the program will contribute to the plan of having percentage of individuals report at the proper time. It is especially important that the need for the second and third doses be emphasized, since the results will be directly proportional to the thoroughness and completeness of the program. Every effort should be made to obtain complete coverage.

Typhus Fever

Comparative Score: (Includes figures of 14 August)

1946	31,763
1947	1,131

Dusting Stations

During the month of August, 6,725 persons were dusted in the dusting stations setup in the Osaka area. The work performed at these stations and similar station in other cities during the past months, has been of great value in the destruction of body lice.

Hokkaido Vaccination

Latest reports from Hokkaido show that 76% of the estimated number of persons to be vaccinated against typhus have received the initial dose.

Estimated no. of persons	1,283,875	
No. receiving first dose	967,567	76%
No. receiving second dose	842,613	66%

Scrub Typhus

A total of 18 cases of scrub typhus has been reported from Niigata prefecture. No cases have been reported from other known endemic areas in Japan.

Sanitation

Mr. Warren J. Kaufman, Sanitary Engineer, has been assigned to the staff of the Public Health Branch, Military Government, Headquarters Eighth Army.

Japanese B Encephalitis

Any suspected case of Japanese B Encephalitis in which there is a change of diagnosis or reasonable evidence that the diagnosis is not Japanese B Encephalitis should be reported in order that more accurate and uniform statistics may be maintained. Military Government Health Officers are requested to make such reports to Public Health and Welfare Section, GHQ, SCAP and also observe that a similar report is made through Japanese channels, to eliminate these cases from the records of the Ministry of Welfare.

Port Quarantine

Weekly report of incoming quarantinable and communicable diseases for week ending 3 August:

Quarantine Station	Name of Vessel	Port of Departure	Date of Departure	Date of Entrance	Diagnosis	Date of Diagnosis	Cases	Death
Maizuru	Enshu Maru	Nakhodka	27 July	30 July	Amoebic Dysentery	6 August	1	-
Maizuru	Esan Maru	Nakhodka	31 July	3 August	Amoebic Dysentery	6 August	1	-
Maizuru	Esan Maru	Nakhodka	31 July	3 August	Bacillary Dysentery	6 August	1	-
Nagasaki	Heian Maru	Amami Oshima	7 August	9 August	Amoebic Dysentery	9 August	1	-

Weekly Summary. Week ending 26 July

Port	Pratiques		Passengers Detained	Rat Tot.	Autopsies Pos.	Fumigations	Immunizations				
	Free	Prov.					Spx.	Ty.	TAB	Plag.	Chol.
Otaru	2	0	0	0	0	0	0	0	0	0	0

Moji	4	6	96	0	0	6	4	56	71	165	448
Nagasaki	3	18	0	22	0	1	194	397	303	0	305
Haneda	31	(Planes)	0	0	0	0	145	118	111	0	90

Venereal Disease Control

Where public health nurses are not available for contact tracing etc., the health bureaus should employ health department investigators who will be auxiliary personnel in the V. D. division. The duties of investigators should consist of: interviewing patients for contact information; encouraging the cooperation of patients by explaining venereal disease and how it can be controlled; locating and bringing in for examination named contacts

and other suspects; following up delinquent cases; interpreting the control program to community agencies and to the general public; and securing their cooperation.

Investigating personnel should be individuals who have basic educational requirements, and should be given a short course of instruction by the V. D. C. O. Following the orientation and instruction they should be assigned to work with a more experienced investigator before being allowed to work alone.

In addition to the basic educational requirements, these persons must have the ability to deal tactfully with the public, exercise good judgment in evaluating situations and making decisions; ability to express ideas clearly, concisely and convincingly; and a sincere, enthusiastic interest in venereal disease control.

SECTION VII SOCIAL SECURITY DIVISION

General

In a conference with the Japanese Committee for the Investigation of Social Insurance, the Welfare and Social Security Divisions, PHW, discussed the coordination of the various relief programs and the social insurances into a comprehensive unified Social Security Program. Of particular concern were the family allowances, allowances for children under 16 years of age and destitute people. Emphasis was also given to the need for the development and education of qualified full time salaried social workers.

With the dissolution of various zaibatsu and purged organizations, attempts are being made to dispose of some property through private sales. This is particularly true for hospitals and dispensaries. Several approaches have been made to the Social Insurance Bureau, Ministry of Welfare through the Prefectural Government to use the reserve funds in the Health Insurance and Welfare Pension programs for the purchase of hospitals and dispensaries. It is important these incidents be brought to the attention of PHW, GHQ, SCAP for coordination with the overall program.

SECTION VIII MEDICAL SERVICE DIVISION

The Civilian Hospital Strength Report was not received for this period but will be included in the next issue of the Weekly Bulletin.

SECTION IX MEMORANDA TO THE JAPANESE GOVERNMENT

None.

CRAWFORD F. SAMS
Colonel, Medical Corps,
Chief, Public Health and Welfare Section

Incl: Weekly Summary Report of Cases and Deaths from Communicable Diseases in Japan, week ending 26 July 1947 w/digest.

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
Public Health and Welfare Section**

WEKKLY BULLETIN

17 August – 23 August

1947

Number 34

SECTION I - Welfare
SECTION II - Veterinary Affairs
SECTION III - Nursing Affairs
SECTION IV - Supply
SECTION V - Preventive Medicine
SECTION VI - Social Security
SECTION VII - Medical Service
SECTION VIII - Consultants
SECTION IX - Memoranda to Japanese Government

SECTION I
WELFARE DIVISION

Reports received from Japanese Red Cross chapters indicate they are becoming increasingly effective in disaster activities altho their responsibilities have not been fully recognized in the prefectural governments. Pending release of the new disaster program, the Japanese Red Cross chapters have been urged to improve their services for emergency medical and nursing care in time of disaster, and to coordinate their efforts in these areas with the prefectural authorities.

SECTION II
VETERINARY AFFAIRS DIVISION

General

Veterinary Officers have been assigned to Military Government Teams for duty as follows:

Major Hans J. Magens Hokkaido Military Government District
Major Karl H. Willers Kinki Military Government Region
1st Lt. Roy S. Nagakura Kyushu Military Government Region

Monthly Meat Inspection Report for June 1947

Following is a summary of the Monthly Meat Inspection Report for June 1947 submitted by the Ministry of Welfare.

	<u>Cattle</u>	<u>Calves</u>	<u>Sheep & Goats</u>	<u>Swine</u>	<u>Horses</u>
No. Slaughtered	11,969	951	354	6812	3388

Weekly Animal Disease Report

The Ministry of Agriculture and Forestry (Bureau of Animal Industry) reported the following new outbreaks of animal diseases during the period 17-23 August 1946:

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Iwate	Swine Erysipelas	10

SECTION III NURSING AFFAIRS DIVISION

Demonstration School

Student nurses will now receive their Pediatric training at the Red Cross Hospital.

SECTION IV SUPPLY DIVISION

Distribution

With the shipment of 179, 50-gallon drums of pyrethrum emulsion to Hokkaido in the period 6-19 August the assigned quota of a total of 605 drums was filled for this prefecture. Except for Shiga and Wakayama prefectures, quotas have already been completely filled; and no further receipts of emulsion can be expected. Of a total of 13,690 drums (684,500 gallons) assigned to this programs, 13,605 drums (680,250 gallons) have already been distributed under Ministry of Welfare supervision. When supplies are made available, the additional 85 drums will be shipped, 18 to Shiga and 67 to Wakayama. Weekly Bulletin No. 30 (20 - 26 July) page 3 contains a tabulation of quantities allotted each prefecture for this program.

During the period of 10 through 16 August, distribution of dusting and spraying equipment, 5,722 periods, was made to the prefectures as follows:

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsack Sprayer</u>	<u>Semi-automatic Sprayer</u>	<u>Hand Sprayer</u>
Tokushima		51	51	
Fukuoka		100		
Kumamoto		60	60

Stocks of VD control drugs available for prefectures, as of 10 August.

Mapharsen .06	4,418 amp.
Maphasen 0.06	4,308 amp.
Bismuth subsal. 1.8cc	244,130 amp.
Bismuth subsal. 18cc	23,000 amp.
Bismuth subsal. 60cc	996 bottles
Sulfathiazole	2,800,960 tablets
Penicillin 30,000 units	4,186 vials

Assay was completed on out-dated penicillin sold to the Japanese Government for VD control and other purposes. The result of the assay is most satisfactory and shows practically no serious loss of potency.

6,020 vials containing 200,000 units
17,239 vials containing 200,000 units

a total of 23,359 vials passed the test and are now available for distribution.

Production

Surveillance of current Japanese production of unsatisfactory sulfa compounds and other unsatisfactory drugs under present Japanese law and the limited laboratory assaying capacity has been extremely difficult. Local prefectural officials have authority to correct violations of the Japanese law but it is realized that at present most prefectures do not have adequate laboratory facilities for conducting necessary assays. In an effort to improve this situation plans have been made for inspection teams, comprised of technically qualified personnel of the Ministry of Welfare, to conduct inspections and investigations in all prefectures to reduce production of unsatisfactory drugs, and where necessary, initiate legal action against manufacturers. The Ministry of Welfare has authority to stop production of unsatisfactory drugs when such production is prohibited by law and/or products do not meet standards now established by law. Inspection teams will begin inspection tours of the Kanto and Shinetsu regions on 1 September 1947 and it is expected that these tours will extend through the months of September and October 1947. In addition, meeting will be conducted in all regions of Japan with prefectural officials to outline necessary action and impress on prefectural officials the need for active participation in a corrective program.

Production of x-ray film during July 1947 reached a new high of 36,000 square meters.

Production X-Ray Film July 1947

<u>Size</u>	<u>Quantities</u>
14 x 17	33,192 each
10 x 12	228,912 each
8 x 10	31,752 each
6-1/8 x 8 1/2	5,940 each
4-3/4 x 6 1/2	17,880 each
Dental film	5,112 each
35 mm film	54,429 each

The Ministry of Welfare has completed a study of domestic requirements for x-ray film. This study indicates the need for increased production of the domestic program. Beginning with the month of September 1947 production to meet domestic requirements will be increased approximately 40% over previous schedule.

Total output of medicines continued to increase during July. Production of sulfathiazole, mapharsen and bismuth subsolycylate showed further increases. Production of anesthetics (ether and chloroform) showed a very large increase over all previous monthly outputs.

Production Medicines Yen Value July 1947

Controlled medicines	130,335,947
Non-controlled medicines	94,305,030
Patent medicines	176,374,690

Releases of the following DDT products and typhus vaccine were approved for the period 17 - 23 August 1947.

<u>Prefecture</u>	<u>10% DDT Dust</u>	<u>5% DDT Residual Effect Spray</u>	<u>Typhus Vaccine</u>
Hokkaido		13,000 gals.	
Niigata	15,000 lbs.	900 gals.	
Yokohama Quar. Station	300 lbs.	100 gals.	
Nagoya Quar. Station	200 lbs.	100 gals.	
Kobe Quar. Station	300 lbs.	100 gals.	
Moji Quar. Station	500 lbs.	300 gals.	
Nagasaki Quar. Station	200 lbs.	100 gals.	
Fukuoka		400 gals.	310 vials
Ishikawa	2,000 lbs.	350 gals.	
Fukushima	4,800 lbs.		
NIH-Min. of Welfare	22 lbs.		
Shizuoka		4,620 gals.	
Nagasaki	5,000 lbs.	2,100 gals.	
Nara	4,000 lbs.		
Aomori	2,000 lbs.	2,000 gals.	1,000 vials
Tokyo Nat'l Sanatorium	50 lbs.		
Gifu		<u>1,000 gals.</u>	
Total	34,372 lbs.	25,070 gals.	1,310 vials

The 19th weekly report of production of DDT dusters and spraying equipment for mosquito and fly control program for 1947 indicates the following data:

	Total To date 9 Aug.	No. mfgd. 10-16 August	Total to date 16 Aug.	Total Shipped to date 16 Aug.	Balance on Hand	To ##### mfgd.
DDT Dusters	43,546	6,000	49,546	37,250	12,296	40,454
Sprayer, knapsack type, 3gal. capacity	32,463	1,760	34,223	11,090	23,133	-
Sprayer, pump type semi-automatic	22,108	600	22,708	7,323	15,385	-
Sprayer, hand type 1/2 gal. capacity	<u>33,936</u>	<u>2,674</u>	<u>36,610</u>	<u>19,364</u>	<u>17,246</u>	<u>890</u>
	132,053	11,034	143,087	75,027	68,060	41,344

The manufacturing quota for the sprayer, knapsack type, 3 gallon capacity was completed during this reporting period. The quota for sprayer, hand type, 1/2 gallon capacity is expected to be completed by the end of the next reporting period.

Production of insect and rodent control supplies continued according to plan, during July. July production of DDT products was sufficient to provide a sizable reserve stock of 10% DDT dust and 5% DDT residual effect spray. Production program of pyrethrum emulsion (X30), for mosquito and fly control program during 1947, was completed during July. Production of DDT dusting and spraying equipment during July was increased substantially over that accomplished during June.

Quantitative production of insect and rodent control supplies during July was accomplished as follows:

Antu (rat poison)	1,970,725 (3 gm pkgs)
Nekoirazu (rat poison)	3,051 kgs.
Rat Traps (spring type)	2,000 each
Pyrethrum emulsion (X30)	14,700 gallons
DDT dusters	14,500 each
Sprayer, knapsack type, 3 gal.	14,110 each
Sprayer, pump type, semi-automatic	6,300 each
Sprayer, hand type, 1/2 gallon	16,900 each
10% DDT Dust (utilizing American furnished DDT concentrate)	835,190 lbs.
5% DDT residual effect spray (utilizing Amer. Furn.DDT Con.)	204,712 gallons
10% DDT Dust (utilizing Japanese DDT concentrate)	112,090 lbs.

SECTION V
PREVENTIVE MEDICINE DIVISION

Typhus Fever

Comparative Scores (includes figures of 20 August)

1946 - 31,782

1947 - 1,136

Scrub Typhus

A total of 25 cases of scrub typhus has been reported from Niigata Prefecture during the current season.

Typhus Vaccination Program in Hokkaido

Reports from Hokkaido as of 11 August are as following:

Persons vaccinated 1st dose -	991,803
Persons vaccinated 2nd dose -	638,857
Estimated number of persons to be vaccinated -	1,283,875

78% of the estimated total of persons in the selected areas have received one dose of vaccine, while 69% have received two doses.

Tuberculosis

In a survey of tuberculosis control, inspections of national sanatoria in the various prefectures, indicated a lack of knowledge on control of acute intestinal diseases which may easily complicate the tubercular conditions. "On the spot" corrections can be made. Japanese reserve stock of mosquito nets can be used to screen windows, metal screening for doors should be provided. Particular attention must be paid to ceiling ventilation to keep out birds which were flying about some of the kitchens. Spraying with DDT should be done once a month in all kitchens and latrines. It is also necessary to check the water supply, particularly the subsurface drainage from the latrines as many of these hospitals use well water. It is advisable to have wooden covers made for the Japanese style of latrine and also insist on spraying and screening in these rooms.

This type of survey can be done during a visit to a tuberculosis sanatorium and spot checking is of equal importance at irregular intervals to be sure of cooperation.

Part Quarantine

Concurrence was given G-3 repatriation in a plan to close the repatriation center at Ujina, in the Kure area, by 25 October. By that time major shipments from South East Asia will have ceased. Numbers arriving after that date will be processed at Sasebo, with the exception of some very small shipments (less than 20 individuals) which may be processed at Kure.

Mosquito Control

Emphasis should continue on mosquito control, as malaria and Japanese B Encephalitis continue to be a serious threat. Mosquito breeding is going on in burned-out areas, and semi-agricultural sections adjacent to cities and towns. These burned-out sections are usually abandoned except for scattered huts. There are invariably pools of water, clogged drainage ditches and various types of containers and reservoirs, sometimes completely hidden by weeds. These cannot be efficiently controlled with larvicides alone as many are fed by open water hydrants and leaks from the water mains, generally hidden by weed growth, so that control teams cannot readily find them. These breeding areas must be eliminated by filling low places, cleaning ditches and stopping free flowing faucets. This program should extend through the winter, and makes an excellent public works project.

In the meantime intensive larvicidal control should be carried on in these areas -- using pyrethrum emulsion, or DDT dust. Good field supervision is necessary, otherwise the work will be spotted and ineffective.

SECTION VI

SOCIAL SECURITY DIVISION

General

Copies of a preliminary report describing the various social security programs now operating in Japan, their functional relationships, anomalies and inadequacies, and a summary of problem areas that should be considered in formulating recommendations for basic SCAP policies has been forwarded to Washington D. C. for review by the members of the Social Security Mission prior to their scheduled September arrival in Japan.

Social Insurance Legislation

Two Cabinet Orders effectuating recent amendments to the social insurance laws to insure the application of democratic principles in the administration of such laws were:

1. Cabinet Order for Insurance Referee, Appeal Board of Social Insurance, and Local Appeal Board of Social Insurance.
2. Cabinet Order of Official Organization of the Social Insurance Committee.

These Orders will become effective 1 September 1947. In general, they provide:

1. Full-time, paid referees will be employees on the prefectural level and will be of the same qualifications and rank as the chief of the prefectural social insurance office.
2. A notice of right of appeal will be given with each determination of benefits.
3. The appeal may be made either orally or in writing. The appeal ruling will be a written decision and will include the factual information supporting such decision.
4. An appellant will be permitted to utilize a representative as advisor or to appear in his stead in emergency circumstances.
5. Travelling expenses will be provided appellant and witnesses when required to travel outside their home communities to testify at the hearing.
6. The appeals referee will have authority to subpoena witnesses and documents.
7. The referee is required to hold a hearing promptly, generally an open hearing, at which the interested parties will give oral testimony. Exceptions to such procedure are permitted only in unusual circumstances involving considerable hardship on the claimant.
8. Prefectural appeals referees will be concerned with Health and Welfare Pension Insurances, and appeals from their decisions will be taken to central (national) appeals boards for the respective programs and thence to courts of law. Under National Health Insurance, prefectural appeals boards instead of referees will hear original appeals, and secondary appeals will go directly to courts of law. It is anticipated that the appeals systems for Workers' Accident Compensation and Seamen's Insurances will be the same type as that provided for Health Insurance when pending legislation is passed.
9. The central appeals boards shall consist of nine members appointed for terms of three years, one-third to be appointed each year, and they shall be selected in equal numbers from representative of insured workers, employers, and the public interest. The prefectural appeals boards for National Health Insurance shall be appointed for similar terms from representatives of insured members, the public interest, and the associations or their affiliated corporations or the staff of the Federation of National Health Insurance Associations.
10. Advisory committees will be created for Health and Welfare Pension Insurances and, at a later date, for Workers' Accident Compensation and Seamen's Insurances.
11. There shall be 18 members in equal numbers from representatives of the insured workers, employers, and the public interest, to be appointed by the Minister of Welfare for terms of two years half to be appointed each year.

12. The committees may initiate their own studies as well as consider matters referred by the Minister of Welfare.
13. They shall meet at least every three months and shall make an annual written report to the Minister of Welfare.

Conferences were held in conjunction with the Labor Division, ESS and Japanese officials, in which an agreement was reached as to legislation providing unemployment insurance and unemployment allowance protection for most workers.

Recent prefectural surveys indicate that many National Health Insurance Associations which are classed as semi-active really have discontinued providing medical care benefits for all insured members, but carry on a preventive medicine program and provide medical and welfare care only for babies.

SECTION VII MEDICAL SERVICE DIVISION

The Weekly Japanese Civilian Hospital Strength Report for period ending 27 June shows 3,363 hospitals with a capacity of 218,614 beds, 109,525 of which were occupied. During this same period 342,297 outpatients were treated. For the week ending 4 July report shows 3,362 hospitals with a capacity of 215,285 beds of which 112,544 were occupied, out-patients treated during this same period numbered 339,427.

SECTION VIII CONSULTANTS LEGAL

Questions have come up recently concerning the responsibility for rendering medical care and granting of sick allowances to Japanese Nationals employed by Occupation Forces. The applicable law and regulations follow:

1. Employee's Relief Ordinance Number 382 is interpreted as follows:
 - a. Injuries and disease incurred in the line of duty and during duty hours.
 - (1) Cost of medical care and medication will be paid by Japanese Government.
 - (2) Other benefits enumerated in the ordinance, such as sick benefits, etc., will be made available to him.
 - b. Accidental injuries in line of duty and during duty hours.
 - (1) The cost of medical care and medication will be paid by Japanese Government.
 - (2) If, however, the injury was received as a result of willful negligence on the part of the employee, he is not entitled to the benefits in the act, nor to the free medical care.
 - c. Accidental injuries and diseases incurred outside line or hours of duty.
 - (1) Cost of medical care and medication will be borne by individual employee. Treatment may be received at clinics and hospitals established and designated to give required physical examinations at a minimum cost to the employee, as ruled by Ministry of Welfare in May 1946.
 - (2) Employees will receive full salary or wage for a period not to exceed 90 days, provided he gives his employer written notice of reasons for his absence, and submits a medical certificate in explanation. This benefit is provided by CLO memorandum entitled, "Salaries, Wages, and Allowances of Permanent Employees for the Allied Forces", issued 1 June 1947, retroactive to 16 March 1947.

2. Medical care referred to above is available to Japanese Nationals employed by Occupation Forces in those clinics and hospitals designated to perform required physical examinations.

3. It is to be further noted that many employees belong to National Health Insurance groups, and when injuries or diseases are incurred they are eligible to benefits as provided by his group coverage. In those instances where an injured employee is not entitled to benefits under Ordinance 382 he may belong to National Health Insurance, in which event he may be reimbursed anywhere from 40% to 80% of the cost of medical care. These benefits are of considerable importance, particularly in non-occupational injuries and diseases.

Disaster Relief Law

The National Disaster Law for Japan has been approved by the Cabinet and is now before the Diet.

Minsei-iin

The Minsei-iin system of welfare administration in Japan is one of the most interesting and important phases of the entire welfare program. The Minsei-iin are officials responsible for carrying out the provisions of the Daily Life Security Law and to insure that eligible persons in the community receive benefits to which they are entitled. Formerly there was a Homen-iin system which was established in Japan about 30 years ago. The translations of these terms Homen-iin and Minsei-iin has caused some confusion and are rather difficult to accurately express in English. Frequently Homen-iin is translated as block committeemen since it has the idea of volunteer welfare worker who is responsible for providing aid within a designated area or block. The newer term Minsei-iin may be literally translated as Peoples Life Committeeman. The purpose of changing the term was apparently to indicate that a new system of welfare administration was being established.

The most recent figures indicate that there are approximately 123,000 Minsei-iin in Japan of which 12,000 or approximately 10% are women. With the establishment of the Minsei-iin system the number of Minsei-iin has been gradually increased. Studies have been made to determine the formal education, age and occupation of the Minsei-iin. These figures have been tabulated as of 31 December 1946. This analysis indicates that 60% of the Minsei-iin have primary school education, 30% middle school, while about 10% are college and university graduates. Analysis of age of Minsei-iin indicates that they are older persons usually: 36% of the total are in the age group 50 to 59; 31% are from 40 to 49; 17% are from 60 to 69; 1% are seventy years of age or older. This means that only 15% of the total are under the age of forty.

Analysis of the occupations of Minsei-iin indicates that about 50% hold some other public office in addition to acting as Minsei-iin although public office may not be the primary occupation. Many of the Minsei-iin are members of prefecture, city, town and village assemblies or officials of town and villages. About one-half of the Minsei-iin report that farming is their primary occupation, while 10% are merchants. The remaining Minsei-iin are fairly evenly divided among other occupations. Various reports submitted show that less than one-third, about 30% of the present Minsei-iin have had previous experience as Homen-iin.

Community Welfare Fund Raising

Recent studies of private welfare agencies and their operations, indicates that increasing difficulties are being experienced by them in continuing the maintenance and operation of their facilities.

This situation is due in part to the disappearance of sources of private donations made by the Zaibatsu, Imperial Family and the Government in the form of gifts, grants and subsidies. The legal limitations surrounding governmental subsidies and the break-up of the great monied "family" companies plus the freezing of certain accounts has resulted in a sharp drop, in many cases to zero, in the private income formerly received by private welfare agencies.

To offset this drop in large gifts and grants, a nation-wide effort will be made in the winter of 1947-48 to raise by voluntary contributions and solicitations, a sufficient community fund in each prefecture to carry on approved private agency enterprises and welfare programs.

SECTION II VETERINARY AFFAIRS DIVISION

The Ministry of Agriculture and Forestry (Bureau of Animal Industry) reported the following new outbreaks of animal diseases during the period 24-30 August 1947:

<u>Prefecture</u>	<u>Disease</u>	<u>No. of cases</u>
Shizuoka	Swine Erysipelas	3
Tokyo	Swine Cholera	1
Kochi	Swine Cholera	2
Kochi	Equine Encephalomyelitis	18

SECTION III NURSING AFFAIRS DIVISION

Demonstration School of Nursing

Miss Suzu Iuzuka has been appointed Director of Central Red Cross Hospital, School of Nursing.

SECTION IV SUPPLY DIVISION

Distribution

A shipment of DDT products which included spraying and dusting equipment, was made to the Ryukyus from Japan, 25 August, to meet an emergency requirement for insect control supplies and equipment, pending arrival of items scheduled on the regular import program.

Visit was made by supply representatives to a prefecture which claimed hospitals and doctors were not receiving alcohol, sulfa drugs or x-ray film. After checking with the prefectural and medicine distributing company officials, it was found that that stocks of alcohol, both American and Japanese produced, were distributed at a recent date. U.S. produced sulfathiazole and sulfadiazine had been available for over one month but a number of doctors and hospitals had not called for their allocations. X-ray films in the amounts necessary to meet requirements were available but the responsible official only procured half the amount needed due to failure to contact all supply sources.

Close liaison must be maintained with the prefectural officials in charge of medical supply distribution and the local wholesalers in order to have full knowledge of supplies distributed and amounts available for distribution.

The Social Affairs Bureau, Ministry of Welfare, reported that 3,375 kgs. of former Japanese Navy canned biscuits and 9,201 kgs. of canned food were discovered in Aomori Ken and have been allocated for distribution in Hokkaido.

Distribution of insect spraying equipment for the week 11-17 August amounted to 3,653 pieces.

<u>Prefecture</u>	<u>DDT Hand Duster</u>	<u>Knapsack Sprayer AD2</u>	<u>Knapsack Sprayer AD3</u>	<u>Hand Sprayer AD4</u>
Hiroshima	1184			
Okayama	984			
Yamaguchi			100	
Saga				580
Kagoshima				480
Nagano		30		25
Miyagi		270		
Total	2168	300	100	1085

Production

Releases of the following DDT products and typhus vaccine were approved for the period 24-30 August 1947.

<u>Prefecture</u>	<u>10% DDT Dust</u>	<u>5% DDT Residual Effect Spray</u>	<u>Typhus Vaccine</u>
Yamanashi		1,000 gals.	
Shiga	500 lbs.	500 gals.	
Okayama	8,000 lbs.	600 gals.	
Tokushima		3,000 gals.	
Kochi		300 gals.	
Kagoshima		2,630 gals.	
Kyoto	42,000 lbs.	26,280 gals.	
Kyoto (Ministry of Justice)	1,500 lbs.		
Fukui	2,200 lbs.		
Hakodate Quar. Station	15,130 lbs.	500 gals.	
Maizuru Quar. Station	2,165 lbs.	50 gals.	
Sasebo Quar. Station	2,240 lbs.	660 gals.	
Ujina Quar. Station	1,280 lbs.	100 gals.	
Osaka	20,000 lbs.	24,180 gals.	
Fukushima	3,980 lbs.	500 gals.	
Niigata	20,000 lbs.		
Ministry of Agriculture	<u>5,370 lbs.</u>	<u>1,310 gals.</u>	
Total	124,365 lbs.	61,610 gals.	--

Mixing of DDT products from American furnished DDT concentrate continued according to plan. A total of 3,815,405 lbs. of 10% DDT Dust and 339,984 gallons of 5% DDT residual effect spray, kerosene base, represents stocks in wholesale warehouses of the Ministry of Welfare as of 23 August.

The 20th weekly report of production of DDT dusters and spraying equipment for mosquito and fly control program for 1947 indicates the following data:

	Total To date 16 Aug.	No.Mfgd. 17-23 August	Total to date 23 Aug.	Total Shipped to date <u>23 Aug.</u>	Balance On <u>Hand</u>	To be <u>Mfgd.</u>
DDT Dusters	49,546	950	50,946	38,090	12,406	39,504
Sprayer, knapsack type, 3 gal. cap.	34,223	3,870	38,093	12,164	25,929	-
Sprayer, Pump-type semi-automatic	22,708	-	22,708	8,513	14,195	-
Sprayer, hand type 1/2 gal. capacity	<u>36,610</u>	<u>1,000</u>	<u>37,610</u>	<u>19,647</u>	<u>17,963</u>	<u>-</u>
Total	143,087	5,820	148,907	78,414	70,493	39,504

The manufacturing quota for the sprayer, hand type 1/2 gallon capacity was completed during this reporting period. With the quotas completed for the three types of sprayers, only the DDT duster remains to be manufactured to complete the production program as originally planned.

Narcotics

In the past few weeks several petitions for clemency have been received by the Narcotic Control Officers, from defendants in cases of narcotic violations throughout Japan.

The policy followed by the Narcotic Control Officers permits no interference with the Japanese Courts carrying out their duties relative to trials and sentences meted out to Narcotic violators; except to review the results of such trials and sentencing to insure that no favoritism is shown by Japanese officials.

SECTION V PREVENTIVE MEDICINE DIVISION

Typhus Immunization Program

TAB vaccine distribution is progressing in accordance with plans previously announced. Approximately 1/3 of the required amount of vaccine has already been distributed and the remainder will be distributed in the next few weeks. Military Government Health Officers are urged to maintain close liaison with prefectural health officers, and to exercise surveillance over the typhoid immunization program. A well planned and properly executed local publicity campaign carried on before and during the time immunizations are actually being done, will increase the number of persons reporting for immunization. The success of the program will, to a large extent, depend upon the number of persons receiving a full course of vaccine.

Health Officer Training

The first refresher courses for Health Officers and Sanitarians currently being held at the Institute of Public Health in Tokyo will be completed on or about 15 September. The next similar courses are scheduled to being on 24 September. Invitation from the Institute of Public Health to the prefectures have already been dispatched. Health officers have been instructed to notify Military Government Health Officers when these invitations are received, and to consult the Military Government Health Officers in selecting persons to attend. Military Government Health Officers are urged to give the matter their careful attention to insure that proper personnel are sent to Tokyo for this refresher training.

In the past, prefectures have not always sent their best representatives. Also, in some cases, they have not made adequate financial provision for students attend the courses. Military Government Health Officers can do a great deal to insure the future public health programs, by ascertaining that prefectures send qualified personnel and that necessary financial provisions are arranged.

Tuberculosis Control

The retraining program for individuals active in the control of tuberculosis, requires stimulation. Tuberculosis care committees are to be trained by the Prefectural Health Officers in the health centers. This is a particularly important factor because it is through these groups that the simple basic principles of the control of tuberculosis in the home reaches the people of Japan. Practical application of these principles should be made. The material for this work is found in the last two pages of the "Manual on The Control of Tuberculosis". (TB-PH//2-Prev.Med.)

The retraining of physicians and nurses is also planned, and include the physicians in the community. The instructors are physicians who already have had such a course given to them, in the six larger cities of Japan, by the central Government. This material is to be transmitted to other physicians and nurses in their home prefectures.

Port Quarantine

<u>Quarantine Station</u>	<u>Name of Vessel</u>	<u>Port of Departure</u>	<u>Date of Departure</u>	<u>Date of Entrance</u>	<u>Diagnosis</u>	<u>Date of Diagnosis</u>	<u>Cases</u>	<u>Deaths</u>
Ujina	Bogota Maru	Rangoon	8/4/47	8/22/47	Malaria	8/22/47	1	0
Hakodate	Unzen Maru	Maoka	7/15/47	7/27/47	Bacillary Dysentery	8/18/47	1	0
Hakodate	Unzen Maru	Maoka	7/15/47	7/27/47	Typhoid Fever	8/23/47	1	0
Hakodate	Mamiya Maru	Maoka	7/24/47	7/27/47	Bacillary Dysentery	8/22/47	1	0
Hakodate	Hakuryu	Maoka	7/24/47	7/27/47	Paratyphoid Fever	8/22/47	1	0
Sasebo	Choran Maru	Singapore	8/8/47	8/19/47	Malaria	8/19/47	5	0
Sasebo	Kaio Maru	Singapore	8/12/47	8/23/47	Malaria	8/23/47	1	0

himizu, Sasebo and Miike have been declared ports of entry by SCAP. This brings the number of seaports of entry for Japan to 11. The establishment of proper quarantine processing at these new ports awaits the

assignment and training of more personnel. In the interim, only established ports will be used, except in specific instances where special arrangements for processing may be effected through Eighth Army Military Government Quarantine authorities.

A preliminary report from the Sasebo Repatriation Center indicates that approximately 3% of tuberculin positive repatriates show x-ray evidence of active pulmonary tuberculosis. The Tuberculosis screening and immunization program as well as the syphilis detection program are both in full operation at all active repatriation centers. The "Ide" test, which is being used by the Japanese as a screening test for syphilis, has been criticized as being an unreliable test. A summary evaluation of this test is now being undertaken.

SECTION VI SOCIAL SECURITY DIVISION

General

Plans have been proposed by the Insurance Bureau of the Ministry of Welfare to extend and expand the activity of the Investigating Committee for Social insurances. The name would be changed from "Social Insurances" to "Social Security" expanding all the committee's functions to matters related to social security. Membership will be revised, in an endeavor to get a more comprehensive representation of interested groups.

Agreement was reached on the provisions of the Seamen's unemployment insurance and unemployment allowance programs. They will be similar, as to eligibility requirements and amount and duration of benefits, to those provided under proposed legislation for land workers.

The Diet has passed legislation establishing a new Ministry of Labor to become operative 1 September 1947. It will include the transfer of function and personnel of two Bureaus of the Ministry of Welfare: the Labor Administration and the Labor Standards. The new Ministry will administer the two social insurance programs of workmen's compensation and unemployment insurance.

SECTION VII MEDICAL SERVICE DIVISION

Japanese Civilian Hospital Strength Report for the period ending 11 July 1947 shows 3,364 hospitals with a capacity of 218,176 beds of which 111,283 were occupied. During this same period 328,058 out-patients were treated.

SECTION VIII VITAL STATISTICS DIVISION

The numbers and rates contained in the attached tables are based upon the regular monthly schedule reports prepared by the statistics office of the Premier's Board. Population estimated as of 1 July 1947 was used in the computation of the rates.

Births. There were 197,747 births in June, almost 100,000 less than the number reported in January. The relative decrease in number is a little below normal. During the quinquennial period 1942-1946, the June figure averaged approximately 40% below that for January; for 1947, it was 33%. The birth rate was 30.8 per 1,000 population, practically the same as in the preceding month. However, it was considerably in excess of the rate (21.7) recorded one year ago.

The birth rate for all "shi" was 34.0 -- all "gun" 29.5. There was considerable variation in the rates among the prefectures, ranging from the highest (37.2) in Tokyo to the lowest (24.0) in Yamagata.

Deaths. Deaths totaled 85,920, a reduction of almost 9% below the figure for the preceding month. The death rate (13.4 per 1000 population) was lower than the corresponding rate (17.1) for June a year ago. Rates for the rural areas (below 30,000 population) (13.2) were a little less than for the cities of 30,000 or more (13.9).

Among the prefectures having high monthly death rates were the following: Kagoshima (16.2) , Saga (15.8) , Oita (15.7) , Shimane (15.7) and Toyama (15.7) . Correspondingly the three prefectures having the lowest ratio were the following: Kanagawa (11.2), Gumma (11.3) and Tokyo (11.3).

Death and death rates per 100,000 population from the ten leading causes were as follows: tuberculosis (12,723) (198.5) , cerebral hemorrhage, embolism and thrombosis (7,117) (111.0) , pneumonia, all forms (6,140) (95.8) , senility (4,953) (77.3), diarrhea and enteritis, under 2 years (4,286) (66.9) , over two years (3,425) (53.4) , congenital debility (2,207) (34.4) , nephritis (3,339) (52.1) , accidents (2,893) (45.1) , and bronchitis (2,485) (38.8) . Data for cancer and other malignant tumors was not available on a monthly basis and therefore it was not listed among the leading causes given above.

Infant Deaths. Deaths of infants under one year totaled 13,987, compared to 15,293 in the preceding month. The rate per 1,000 live births was 70.7.

Stillbirths. The number of stillbirths decreased to 9,251 from 9,971 in May. The stillbirth rate per 1,000 live births was 46.8 compared 42.1 for June of 1946.

Marriages. There were 81,913 marriages a sharp reduction from the number reported in the preceding month (112,978) . The marriage rate was 12.8 per 1000 population.

Divorces. Divorces totaled 6,070. The rate 0.9 per 1000 population was the lowest of record thus in 1947.

SECTION IX CONSULTANTS

Nutrition

The following conclusions of the Nutrition Consultant ##### the result of a recent review of nutrition surveys and nutrition in the western part of Honshu and Kyushu:

- a. There is a shortage of milk for infants and the need for special review of the allotment of milk to infants.
- b. Information in institutions was generally insufficient to judge the adequacy of the dietaries supplied. Data of variable value was sometimes available on caloric consumption and protein. There was practically no data on calcium and quantities of leafy green and yellow vegetables with fish and soy bean products, which are important supplementary foods.
- c. There is a need to check the polishing of rice to be sure that it is not more than 70% polished (94% extraction). Such information is important for all institutions and especially so for children's homes. Information on nutritional accounting and the proper records should be available in the Sanitary Bureaus of Prefectures.
- d. Evaluations of food or caloric consumption for Children's homes or essential industries where there is a mixed population of various ages and/or sex or in dormitories in essential industries with different ration allowances should be related to a weighted average of the allowances for the particular population group.

SECTION X MEMORANDA TO THE JAPANESE GOVERNMENT

PHMJG-37 26 August 1947 Release of 10% DDT Dust for Coal Mines.

CRAWFORD F. SAMS

SECTION I - Welfare
SECTION II - Veterinary Affairs
SECTION III - Supply
SECTION IV - Preventive Medicine
SECTION V - Social Security
SECTION VI - Medical Service
SECTION VII - Memoranda to Japanese Government

SECTION I
WELFARE DIVISION

Social Affairs Bureau. Ministry of Welfare

The Bureau of Social Affairs (Shakai Kyoku) of the Ministry of Welfare (Keseisho) has been assigned the primary responsibility in the field of welfare administration, within the Japanese Government. There is now a total of six bureaus and one board within the Ministry of Welfare.

- a. Social Affairs Bureau
- b. Childrens Bureau (Established March 1947)
- c. Social Insurance Bureau
- d. Repatriation Relief Board
- e. Public Health Bureau
- f. Medical Affairs Bureau
- g. Prevention Bureau

Historical Background: The Social Affairs Bureau was established in August 1920 in the Ministry of Home Affairs and became responsible for all social work activities on the national level. The creation of this bureau was the outgrowth of a relief section which was established in 1917 as a part of the Local Government Bureau and renamed the Social Affairs Section in 1919.

The Social Affairs Bureau was included in the newly created Ministry of Welfare in 1938. In 1941 the name of the Social Affairs Bureau was changed to Living Bureau apparently as a part of the general program of reorganizing the welfare programs to meet the needs of the military. Early in 1943 the Living Bureau and the Population Bureau of the Ministry of Welfare were merged into the Peoples Health Bureau. In the fall of 1945 after the termination of hostilities the Social Affairs Bureau was re-established. The responsibilities of the Bureau in the field of child welfare were transferred from the Social Affairs Bureau in March 1947, when a Childrens Bureau was established.

Organization and Functions: The work of the Social Affairs Bureau is carried out through four sections: General Affairs, Protection, Welfare and Supply.

The responsibilities of the Bureau are divided among the four sections of the Bureau as follows:

1. General Affairs Section.
 - a. Overall planning for social welfare
 - b. Investigations and statistics concerning welfare
 - c. Minsei-iin organization
 - d. Social welfare training and education
 - e. Matters not assigned to other sections
2. Protection Section
 - a. Administration of Daily Life Security Law
 - b. Disaster Assistance
3. Welfare Section
 - a. Special program for disadvantaged group such as Eta.
 - b. Aid for physically handicapped
 - c. Special assistance program for Germans in prefecture: of Kanagawa, Hyogo, Nagano, Tokyo, Yamanashi.
 - d. Programs for "street-girls."
 - e. Public pawnshops, bathhouses, barbershops, markets and dining halls.
 - f. Other programs such as recreation.
4. Supply Section Note: Busshi-ka is also translated as commodities or material section.
 - a. Work shops.
 - b. Goods and materials required for relief and assistance.

Relief Supplies

For the information of personnel concerned the following is quote from Memorandum for Japanese Government, AG 311.1 (26 Aug. 47) CCS (SCAPIN 1768) dated 26 August 1947, subject: International Mail Service.

“8. Parcel Post. a. Parcel Post Service will be to Japan only. Parcels will be limited to 22 pounds in weight, and contents will be restricted to relief items such as non-perishable foods, mailable medicines in non-commercial quantities, soap, clothing and other relief items, in quantities which reasonably can be used by the addressee and/or his immediate family. The following specific limitations apply to each parcel:

- (1) Only one of the following tobacco items can be included in a single parcel: Cigarettes - not more than 200 pieces; cigars - not more than 50 pieces; pipe tobacco - not more than one-half pound.
- (2) Not more than 200 saccharine tablets in a single parcel

b. Gift articles, as distinguished from relief items, such as watches, fountain pens, etc., will not be permitted entry.

c. Only one relief parcel per week may be mailed by any single sender to any one addressee.

d. Relief parcels which are undeliverable will not be returned to senders but will be turned over to designated relief agencies for disposition.

e. Excessive quantities of permitted items, that is, quantities in excess of the reasonable needs of the addressee and/or his immediate family, will be extracted by the Japanese Customs Service and delivered to the appropriate agency of the English Army for distribution to recognized relief agencies.”

JAPANESE RED CROSS SOCIETY

Directors of all Prefectural Chapters of the Japanese Red Cross attended a 3 day conference at National Red Cross Headquarters in Tokyo, during the first week in September, to discuss plans for the fall membership and fund campaign to be held throughout Japan 15 October through 15 November. Among the important announcements made were

a. Although the National Headquarters and the Chapters will cooperate will and assist in the organization and promotion of Community Chests, they will not participate at this time in federated fund raising.

b. The campaign goal of 300,000,000 yen is based on the amount of money estimated as necessary for traditional as well as new Red Cross services, including, particularly, disaster relief.

c. The percentage of funds collected in the prefectures to be turned over to National Headquarters has been increased from 10 to 20% in order to meet the increased obligations of Headquarters for assistance to and supervision of Chapter activities.

d. While no basic changes have been made in the old mode of fund raising and membership solicitations, the Chapters have been urged to also enlist the support and cooperation of volunteers throughout the period of the campaign.

e. An intensive publicity drive, under the guidance of an American Red Cross publicity advisor, will introduce for the first time modern publicity methods in urging public support of the campaign.

f. American Red Cross consultants will closely follow the progress of the campaign and analyze its results in an effort to better understand the entire problem of voluntary fund raising for non-governmental Welfare Agencies.

Public Assistance

Under the provisions of regulation 95 issued by Social Affairs Bureau, Ministry of Welfare on 8 August 1947, the amount of payments for administrative expenses for persons receiving Daily Life Security payments and living in institutions was increased. Previously under provisions of paragraph 10 of regulation 114 dated 18 September 1946, the Ministry of Welfare agreed to reimburse local governments in the sum of 1.33 yen per day per person for those recipients residing in institutions. These payments are made under authority of Article 24 of the Daily Life Security Law. The new regulation issued 8 August 1947 increases the maximum payments for administrative expenses to institutions, such as orphanages and homes for aged, which provided assistance for needy persons. The new maximum payments are Y-8 per day for children and Y-6 for other persons. Administrative payments for recipients living in other institutions is changed from 1.33 yen to 1.35 yen per day. These payments are maximum payments and it is not required in the regulation that they be made to the institution unless justified by expenditures. These payment for administrative or office expenses are in addition to the regular assistance allowance under the Daily Life Security Law.

The entire matter of payments under the Daily Life Security Law for persons who reside in institutions is under study by the Social Affairs Bureau, Ministry of Welfare and the Welfare Division, PHW, SCAP. It is expected that further changes in the regulations may be made. Payments for administrative expenses are not to be made to institutions for persons who are not eligible for benefits under the Daily Life Security Law. Attention is called to the fact that at the present time, of all persons receiving benefits under the Daily Life Security Law, only approximately 5% are residing in institutions.

Licensed Agencies for Relief in Asia (LARA)

The following additional relief supply shipments have been received by LARA:

21st Shipment: Arrived in Yokohama aboard the SS China Victory on 27 Aug 47 and contained 31 tons of food and 7.9 tons of clothing.

22nd Shipment: Arrived in Yokohama aboard the SS China Bear on 3 September 47 and contained 14.56 tons of clothing (including shoes), 54 tons of food and .23 tons of miscellaneous times.

23rd Shipment: Arrived in Yokohama aboard the SS Mount Rogers on 31 Aug 47 and contained 19 tons of powdered milk (whole), and 17.19 tons of food stuffs.

SECTION II VETERINARY AFFAIRS DIVISION

The Ministry of Agriculture and Forestry (Bureau of Animal Industry) reported the following new outbreaks of animal diseases during the period 29 August to 5 September 1947.

Prefecture	Disease	No. of cases
Niigata	Swine Erysipelas	3
Iwate	"	3
Iwate	Texas Fever	5

The Veterinary division, Public Health Section, Tokyo-To reported the following outbreak of animal disease:

<u>Area</u>	<u>Disease</u>	<u>No. of Case</u>
Tokyo	Rabies	7 (4 are suspects)

SECTION III SUPPLY

Distribution

Further shipments of spraying and dusting equipment for use in the insect and rodent control program were made to the prefectures under supervision of the Ministry of Welfare. In the period 18 through 24 August distribution of a total of 12,743 pieces were made as follows.

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsack Sprayer</u>	<u>Semiautomatic Sprayer</u>	<u>Hand Sprayer</u>
Iwate			400	
Miyagi			200	
Gumma				360
Kanagawa				1,200
Niigata	840	540	40	228
Fukui		140		
Nagano	1,184		20	460
Aichi	4,888			30
Mie				300
Nara	984			
Okayama		164	300	
Kagawa		30	10	5
Saga		50	50	
Kagoshima		150	150	20
Totals	7,896	1,074	1,170	2,603

Many complaints are received from the field pertaining to the difficulties the dentists are experiencing in purchasing dental instruments and materials. A conference was held with members of the Ministry of Welfare, producers, wholesalers and retailers to discuss and find the answer to the dentists' problems in purchasing their instruments and materials. Agreement was reached by the different representatives to study the situation and work

out an operating plan in which production and distribution would be coordinated in order to meet requirements. In some instances, as brought forth by a representative from the retailers group, the dentist would ask for an instrument or item manufactured by a particular company, and would not purchase a similar item manufactured by another manufacturer, which was available for sale by the retailers. This may soon be remedied to some extent when standardization and specification of all dental instruments and materials come into effect. It was planned that further conferences will be called for from time to time in order to #### difficulties experienced by the manufacturers, wholesalers and retailers in the flow of supplies from the manufacturer down to the ultimate consumer.

An emergency shipment consisting of 800 cc hog cholera virus and 4000 cc of hog cholera serum was made to Okinawa.

Production

Releases of the following DDT products and typhus vaccine were approved for the period 31 August - 6 September 1947.

<u>Prefecture</u>	<u>10% DDT Dust</u>	<u>5% DDT Residual Effect Spray</u>	<u>Typhus Vaccine</u>
Kanagawa	50,000 lbs		
Niigata		4,000 gallons	
Ministry of Transp.		25,000 "	
Kochi	3,000 "		
Kanagawa		3,000 "	
Iwate	10,000 "	2,500 "	
Miyagi	3,000 "	3,000 "	
Akita	<u>5,000 "</u>	<u>5,000 "</u>	
Total	71,000 lbs	42,500 gallons	--

Mixing of DDT products from American furnished DDT concentrate continued according to plan. A total of 3,772,125 lbs. of 10% DDT Dust and 359,734 gallons of 5% DDT residual effect spray, kerosene base, represents stocks in wholesale warehouses of the Ministry of Welfare as of 31 August 1947.

The 21st weekly report of production of DDT dusters and spraying equipment for mosquito and fly control program for 1947 indicates the following data:

	Total To date 23 Aug.	No.Mfgd. 24-31 August	Total to date 31 Aug.	Total Shipped to date <u>31 Aug.</u>	On Hand	Balance To be Mfgd.
DDT Dusters	50,496	4,000	54,496	46,970	7,526	35,504
Sprayer, knapsack type, 3 gal. cap.	38,093	800	38,893	13,130	25,763	-
Sprayer, pump-type semi-automatic	22,708	300	23,008	8,513	14,195	-
Sprayer, hand type, 1/2 gal. capacity	<u>37,610</u>	<u>-</u>	<u>37,610</u>	<u>22,437</u>	<u>15,173</u>	<u>-</u>
Total	148,907	5,100	154,007	91,050	62,657	35,504

Narcotics

The Japanese Government report for July 1947 shows a total of 85,474 registered persons licenced to handle narcotics, a total of 84 registered persons and 63 unregistered persons apprehended for violations of the narcotic regulations, and the conviction of 7 registered and 37 unregistered violators, a total of 37 thefts of narcotics and one fire resulting in the loss of narcotic stock.

The Marihuana (Taima) report for July 1947 shows a total of 34,833 registrants, with violations to date of one registered person and 81 unregistered persons for the illegal cultivation of Marihuana. To date there have been no convictions of registered persons and two convictions of unregistered persons.

SECTION IV PREVENTIVE MEDICINE DIVISION

Japanese B. Encephalitis Control

The possibility of a Japanese B Encephalitis outbreak during the current season was considered probable and, with this in view, every effort was made to discover suspect cases early and to obtain clinical and laboratory confirmation at the earliest possible date.

Thus far, there have been reported approximately 50 suspect cases of Japanese B. Encephalitis. The diagnosis has been confirmed by the laboratory in only four cases, all of which were in Kochi Prefecture. The majority of suspect cases have been reported from Kagawa Prefecture, with a few suspects being reported from Ehime, Okayama, Tottori and Hiroshima Prefectures. To date, no cases have been confirmed in any prefecture other than Kochi. It is of the utmost importance that all suspect cases be reported promptly and blood for laboratory confirmation be promptly collected and sent to the 406th Medical Laboratory in Tokyo.

Any suspect cases of Japanese B. Encephalitis should be carefully followed and when there is a change of diagnosis or reasonable evidence that the diagnosis is not Japanese B. Encephalitis, this fact should be reported in order that PHW, GHQ, SCAP may have an accurate picture of the current situation at all times.

Diphtheria Control

Although a national immunization program was carried out the latter part of 1946 and early part of 1947, the diphtheria rate still remains at a high level. This matter has been given careful consideration. Conferences between officials of the Ministry of Welfare and PH&W Section, GHQ SCAP have been held and a plan for a nationwide re-immunization program has been evolved. The plan calls for a booster dose (1 cc) for each child 10 years of age and under, with the exception of those children who are now more than six months of age and less than 24 months of age, who were not immunized last year. These children will receive a course of three inoculations.

Inquiries have been made by both prefectural and MG Health Officers as to when diphtheria toxoid will be available. In this connection, a program is under way to produce and assay the diphtheria toxoid. Considerable quantities of toxoid are already in stock, but the assay has not yet been completed. Some delay in delivery of toxoid is anticipated. It is felt, however, that it would be better to delay the program for a short time, rather than give additional inoculations with material of unknown potency. MG Health Officers are urged to communicate this information to the Japanese Prefectural Health Officers and to enlist their cooperation in carrying out the program when the vaccine becomes available.

Tuberculosis Control

Tuberculosis surveys of the prefectures have revealed that there are certain tuberculosis sanatoriums especially for teachers. Many of the beds in these sanatoria are not filled. Teachers are afraid to enter these institutions lest they lose their jobs or become socially ostracized. These teacher sanatoria in Japan can be developed into one of the best sources of education in control of tuberculosis. The teacher patients are usually minimal cases with excellent prospects of being cured. Through contacts with their pupils on their return to a community, they have a splendid opportunity for instruction in control of tuberculosis in the home, where a student is the best teacher. The prefectural Health Officers should be informed of this opportunity and should be assisted in preparing such a program.

Venereal Disease Control

Enclosed with this week's bulletin, number 36, is the pamphlet, "Challenge to Community Action". The Military Government Health Officer will find this material useful in the educational, social, and medical aspects of venereal disease control. Sections of this pamphlet will be useful for translation.

SECTION V SOCIAL SECURITY DIVISION

An intensive survey of the Japanese social security program and related matters is being conducted during the next 60 -90 days by a special mission from the United States. The mission, composed of men with international experience in public health services and social security administration, is surveying the information and statistics compiled by PHW, SCAP, as well as the history of social insurance development in Japan. In addition, it will confer with other Sections of SCAP as well as those organizations in the Japanese Government interested in the over-all program. From the results of the survey, recommended policies and procedures will be made for the strengthening and improvement of the existing social security program in Japan.

SECTION VI MEDICAL SERVICE DIVISION

Japanese Civilian Hospital Strength Report for period ending 18 July 47 shows 3,367 hospitals with a capacity of 216,358 beds of which 107,588 were occupied. During this same period 349,081 out-patients were treated.

The constitution of the New Japan Medical Association has been approved and adopted and an act of the Diet will soon formally dissolve the old organization.

In order to build up confidence in the new organization, the present officers have voluntarily offered to tender their resignations and refuse to stand for re-election to office.

New elections will be held about November of this year, affording time for the national and prefectural societies to advise all members in matters regarding the coming election.

As the new constitution states that elections will be held each March the organization will be operated by a receiving committee and newly elected officers will be appointed to fill these positions until March when their term of office officially begins.

SECTION VII - Nutrition
SECTION VIII - Memoranda to Japanese Government

SECTION I WELFARE DIVISION

Social Work Education

A series of meetings have been held by the Social Work Education Committee to consider the development of a social work curriculum in Japanese universities and colleges. This committee consists of representatives of Japanese educational institutions, who in the past have been interested in providing education for persons intending to enter the social service field. Under the 6-3-3-4 program, it is expected that more universities will be interested in providing social work education. The Social Work Education Committee has drawn up a series of recommendations which may be used as a guide by the universities in developing the curriculum for the next school year, which begins in April 1948. These recommendations have been submitted to various Japanese education and welfare officials concerned and will be subject for discussion at a subsequent meeting to be held in Tokyo on 20 September 1947.

Welfare Training Programs

A welfare training institute was held in Tottori Prefecture 25-31 August 1947, attended by 50 persons from the prefectures of Shimane, Yamaguchi, Okayama, Hiroshima and Tottori. This is one in the series of training conferences which are being conducted by the Japan Social Work Association under the sponsorship of the Social Affairs Bureau, Ministry of Welfare. Plans have been made to hold the next conference in Fukui Prefecture during the latter part of October.

Monthly activities reports submitted by the Military Government Teams indicate that meetings are being held throughout the nation, primarily for the purpose of providing information to minsei-iin concerning the proper administration of the Daily Life Security Law.

Social Work Assembly

Plans to hold a national social work conference in Tokyo, during the first three days of October 1947 have been completed.

General conferences will be held at which officials of the National Government are expected to attend and present their problems. Conferences on special programs such as child welfare, and juvenile delinquency will also take place. Attention will be directed to the difficulties encountered in Japan at the present time and the necessity of developing welfare programs to meet these needs. The assembly is being sponsored by five of the already established national welfare agencies: Japan Social Work Association, Japan Welfare Workers Federation, National Relief Association, Mothers and Children Welfare Society, and Association for Protection of Juvenile Delinquents. Other national welfare organizations are cooperating in the program.

Japanese Red Cross

Thirty six editors and publishers of national and local news agencies met with representatives of the Japanese Red Cross and the American Red Cross Consultant staff in Tokyo on 11 September, to discuss plans for the release of national and local publicity in connection with the Japanese Red Cross fund and membership campaign starting 15 October. Plans for continuing publicity aimed at improved public understanding of Red Cross services, was also discussed.

During the week instructions were released from National Japanese Red Cross informing the Prefectural Chapters on the method of distribution of American Junior Red Cross supplies. The Chapters have been instructed to consult with the Prefectural Education authorities in the selection of the schools to which materials and gift parcels will be distributed. While the Ministry of Welfare will be responsible for supervising the distribution of the supplies by the Japanese Red Cross, the schools are to be selected in consultation with education authorities. The distribution is to be made during the month of October according to present plans.

Chiefs of Nursing Education from 41 Japanese Red Cross Schools of Nursing attended a two-day conference in Tokyo, 10 and 11 September at National Red Cross Headquarters. Among the important topics discussed were:

a. The necessity of placing nursing education and nursing administration in the Red Cross Hospitals and schools of nursing under the direction of qualified nursing personnel.

- b. The necessity of improving the standard of nursing education and ward supervision of the nurse in training.
- c. The new nursing law and its implications for all schools of nursing.

Military Government Team Reports - June

Hyogo MG Team reports that brief reviews disclosed a pattern of uneven administration of the Daily Life Security Law is developing. Four apparent reasons are: the high decentralization of responsible offices and records, the lack of supervision given by the central offices (Ken and City), the large number of individuals responsible for determining grants who have not been adequately briefed on the law, and lack of precise instructions for determining grants when special factors exist, for example, income from employment.

The Ministry of Welfare will be advised that a trained and qualified field staff is a “must” on both levels of government. Ministerial officials recognize a lack of good administration.

Similar to this problem is the relationship of the minsei-iiin to local welfare officials and the overall value of the use of volunteers for such services. Lack of adequate funds prohibits paid workers at present, but PHW and Ministerial officials are studying the entire problem with a view toward strengthening this extremely important phase of the welfare program.

SECTION II
VETERINARY AFFAIRS DIVISION

Weekly Animal Disease Report

The Ministry of Agriculture and Forestry (Bureau of Animal Industry) reported the following new outbreaks of animal disease during the period 6 Sept - 11 Sept 47:

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Shizuoka	Swine Erysipelas	1
Kumamoto	Texas Fever	3
Ishikawa	Encephalomyelitis	14

Personnel from the Ministry of Agriculture and Forestry were sent to the Ishikawa district to secure laboratory specimens and to assist in setting up control measures. Telegraphic contact will be kept with this office by the field representatives.

SECTION III
NURSING AFFAIRS DIVISION

A representative of Nursing Affairs Division attended the Kochi Prefectural Meeting for the organizing of the Kochi Branch Association of the Japan Midwives, Clinical Nurses, and Public Health Nurses Association.

The Chief of Nursing Affairs Division attended the Meeting of the Chief Nurses of the U. S. Army Nurse Corps which was held in Kyoto.

SECTION IV
SUPPLY DIVISION

Distribution

Distribution of dusting and spraying equipment progresses, with a total of 7,952 pieces shipped to the prefectures listed below in the period 25 through 31 August, under the supervision of the Ministry of Welfare. Detailed breakdown follows:

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsack Sprayer</u>	<u>Semi-automatic Sprayer</u>	<u>Hand Sprayer</u>
Gumma	984			
Saitama	1,016			
Kanagawa		276		240
Niigata	840	540		688
Toyama	984			360
Fukui		144		
Yamanashi	984			
Nagano			200	
Aichi		6		2
Shiga				300
Kyoto	388			
Totals	5,196	966	200	1,590

A conference was held with representatives from the Ministry of Welfare, manufacturers, wholesalers and retailers of medical rubber goods, such as ice bags, ice pillows, surgeons rubber gloves, etc. to determine cause for their maldistribution and production.

Invitation was given to the representatives present to air their views in order to come to an understanding on the present difficulties now being experienced by the hospitals and other using agencies in procuring, by purchase through normal trade channels, their medical rubber goods.

The influx of raw material and price fixing seem to be the main factor for the lack of sufficient production and distribution of these supplies. The representative from the Rubber Manufacturers Cooperative Union stated that raw material has been imported, and 70 tons of rubber has been allocated for the manufacturing of medical rubber goods, plus lastex, which should be of great aid in meeting the demand. Further conferences will be held by these people in order to coordinate the production and distribution of these supplies.

Report received on sales of former Japanese Army-Navy surgical instruments and appliances during August amounted to 415,965.69 yen, which is a substantial increase of 330,639.34 yen to July's sales.

Production

The 22nd weekly report of production of DDT dusters and spraying equipment for mosquito and fly control program for 1947 indicates the following data:

	<u>Total to date 30 Aug.</u>	<u>No.Mfgd. 31 Aug. to 6 Sep.</u>	<u>Total to date 6 Sept.</u>	<u>Total shipped to date 6 Sept.</u>	<u>On Hand</u>	<u>Balance To be Mfgd.</u>
DDT Dusters	54,496	3,800	58,296	50,342	7,954	31,704
Sprayer, knapsack type, 3-gal. cap.	38,893	-	38,893	13,130	25,763	-
Sprayer, pump type semi-automatic	23,008	300	23,308	9,227	14,081	-
Sprayer, hand type 1/2 gal. capacity	<u>37,610</u>	<u>-</u>	<u>37,610</u>	<u>23,557</u>	<u>14,053</u>	<u>-</u>
Total	154,007	4,100	158,107	96,256	61,851	31,704

Releases of the following DDT products and typhus vaccine were approved for the period 7 - 13 September 1947.

Prefecture	10% DDT Dust	5% DDT Residual Effect Spray	Typhus Vaccine
Tokyo		9,000 gallons	
Nagano	13,000 lbs.	2,100 gallons	
Chiba		2,000 gallons	
Total	13,000 lbs	13,100 gallons	

Narcotics

During the current session of the Diet, a bill amending Imperial Ordinance #528 of 1923 was enacted, designating to Narcotic Inspectors, under the Ministry of Welfare, power of arrest in Narcotic violations. This form of Judicial Police Power will be effective on the date of promulgation, which is set for 15 September 1947.

SECTION V PREVENTIVE MEDICINE DIVISION

Typhoid Immunization Program

Approximately 120,000 liters of TAB vaccine have passed the assay tests. This represents 4/5 of the amount of vaccine necessary for the nationwide immunization program. Most of this vaccine has already been distributed to the prefectures. The remaining vaccine necessary for the nation wide immunization program will be available in the very near future.

Reports on the immunization program will be published as soon as available.

Military Government Health Officers are urged to see that the prefectural health departments conduct a vigorous publicity program stressing the importance of the inoculations with special emphasis upon the necessary for having the second and third inoculations. Health officers are also urged to see that adequate records are kept and prompt reports are rendered.

Japanese B. Encephalitis Control

Reference is made to Section VII PH&W Weekly Bulletin No. 20. Recently a sizable number of suspected Japanese B. Encephalitis cases have been reported from the inland sea area of Japan and a few suspect cases have been reported from other prefectures.

It is important that the diagnosis of Japanese B. Encephalitis be definitely proven or disproven whenever possible. This can often be done on the spot without a serological laboratory test. When there is any likelihood that the suspect is in reality a Japanese B. Encephalitis case, blood specimens should be collected and promptly dispatched to the 406 Medical General Laboratory in Tokyo. It is usually not possible to confirm the clinical diagnosis with a single blood specimen since it is necessary to show a rise in titer. For this reason at least two specimens should be sent on every case. One early (when the case is first seen) and one within 10 to 14 days and not later than six weeks after onset. It is preferable to have several specimens, one at onset, one 10 to 14 days later and one every 10 days thereafter until full recovery.

Serologic specimens received by the 406 Medical General Laboratory have enabled them to make a positive diagnosis on three cases in Kochi prefecture. Two other specimens, one from Tottori and one from Kagawa prefecture, showed low titers and were therefore suspicious, but the laboratory has not been able to confirm the diagnosis because second specimens have not been received. Military Government Health Officers are urged to see that at least two blood specimens, taken at least 10 days apart, are forwarded for testing. The roster of suspects should be rechecked and if the diagnosis of Japanese B. Encephalitis has not already been ruled out, a second blood specimen should be taken.

Specimens often contain no clinical data and are not properly identified. This should be corrected. The difference in translation of the same Japanese name on different specimens sometimes makes it impossible to identify the specimen as belonging to the same individual.

Although the peak of the Japanese B. Encephalitis season has probably already been passed, suspect cases may continue to appear. Where there is reason to believe these cases may be Japanese B. Encephalitis, mosquito control procedures should be intensified.

Tuberculosis Control

The Japanese Prefectural Health Officer in one prefecture calls a monthly meeting of the chiefs of his health centers. These men present their individual problems at this meeting. Attendance of the Military Government Health Officer at these meetings presents an excellent opportunity to listen to the problems which these men must face and solve, and to obtain information concerning the progress in these centers. It could also be an opportunity to discuss cooperation of the various activities within the health centers, and cooperation between the health centers and the national sanatoria. The presentation of a single new point on the subject of tuberculosis or its control, might stimulate interest and attendance and be of educational value to these men who need such information.

Laboratory Control

Included with the Weekly Bulletin (No. 37) are copies of Minimum Requirements for the manufacture of diphtheria toxoid. These minimum requirements were written by the Ministry of Welfare in consultation with members of the Preventive Medicine Division, PH&W, SCAP.

The English translation is distributed as an aid to Military Government Health Officers in exercising surveillance over the manufacture of safe, sterile and potent anti-diphtheria products. Military Government Health Officers are urged to acquaint themselves with the contents of the inclosed circular. Anti-diphtherial products must meet the above requirements before they can be distributed for use. It should be stressed that no anti-diphtherial product should be used in the immunization program which does not have the seal of approval of the National Assay Laboratory.

Venereal Disease Control

It has been demonstrated that a venereal disease control program is primarily dependent on the interest and work of the Military Government Health Officer and the quality of Japanese Venereal Disease officials available. Some Military Government Health Officers took prefectural officials with no training and by intensive personal teaching developed these prefectural officials into interested, active V.D. clinicians who are improving continuously. Originally, there was no area in Japan having physicians who understood public health venereal disease control.

The prefectural health departments are the official agencies primarily charged with developing the V. D. control program. They do this through the prefectural Venereal Disease Control Officer. Being a physician and the need for medical personnel in V. D. work being acute, this doctor's time should not be taken up with clerical duties. He should conduct the model V. D. clinic himself or train other clinicians in modern methods. To do this the V.D.C.O. must have some personal background of modern clinical V. D. work. Clinicians who are conducting other clinics must receive continuous corrections and guidance from the V.D.C.O. Only in this way can we be assured that these clinics will be conducted according to the principles taught by the Military Government Health Officer. Many clinics are now being operated ostensibly by the prefectural health departments, although actually little or no clinical and epidemiologic guidance and supervision is being given to these clinicians by the prefectural V.D.C.O. In some cases the V.D.C.O. is not being trained in our clinical methods by the Military Government Health Officer.

The experiences of the Military Government Health Officers demonstrate that original intense training of the prefectural V.D.C.O. is highly rewarded in the initiation of a V.D. control program which will improve continuously with subsequent periodic supervision by the Military Government Health Officer.

Port Quarantine Control

The repatriation station at Ujina in the Kure area has been ordered reduced from the status of a major repatriation port. The big lift from South East Asia having been completed Ujina facilities will be prepared to receive 50 repatriates daily until further notice.

Quarantine Vessel	Name of Vessel	Port of Depart.	Date of Depart.	Date of Entrance	Diagnosis	Date of Diagnosis	Cases	Deaths
Sasebo	Kisan Maru	Singapore	8/23	9/5/47	Malaria	9/5/47	13	0
Sasebo	Nippon Maru	Singapore	8/25	9/5/47	Malaria	9/5/47	1	0
Hakodate	Chitose Maru	Maoka	8/16	8/18/47	Bacillary Dysentery	9/31/47	1	0
Hakodate	Takakura-Sen Maru	Maoka	8/20	8/22/47	Para-typhoid	9/1/47	1	0
Hakodate	Soya Maru	Maoka	8/22	8/24/47	Diphtheria	9/5/47	1	0

SECTION VI MEDICAL SERVICE DIVISION

The weekly hospital strength report for the period ending 25 July 1947 shows 3,371 hospitals with bed capacity of 216,472 of which 110,560 are occupied. During this same period 449,693 out-patients were treated.

SECTION VII NUTRITION CONSULTANT

The results of nutrition surveys conducted in August are beginning to be reported with the following data received.

NUTRITION SURVEYS - August 1947

<u>Cities</u>	Protein Grams			Total	Calories
	Animal	Vegetable			
Nagoya	9.5	50.6		60.1	1724
Osaka	11.4	48.2		59.6	1768
Kure	12.6	41.9		54.5	1597
Sendai	14.6	47.8		62.4	2185
Matsuyama	12.3	37.6		49.9	1396
Av. 8 Cities May 1947	19.5	43.5		63.0	1822
<u>Rural</u>					
Kyoto	9.7	55.4		65.1	2130
Gumma	1.7	53.5		55.2	1914
Tochigi	2.1	54.3		56.4	2103
Kanagawa	4.2	61.5		65.7	2234
Okayama	7.3	48.9		56.2	1905
Hyogo	5.0	55.1		60.1	2073
Iwate	5.2	54.6		57.6	2096
Av. Rural May 1947	8.1	49.4		57.5	2052

The nutrients consumed according to previous nutrition surveys are given in the attached tables.

These data indicate the low intake of calcium and vitamin B₂ in Japan. The fairly high values for vitamin B₂ in August and November are the result of increased consumption of leafy green vegetables and potatoes during these periods.

Japanese Use of Imported Foods

Reports have been received indicating the need of the Japanese housewife for information on methods of preparing imported foods such as corn, milo and soya flour.

Methods of preparing imported foods have been developed jointly by the Ministries of Agriculture and Forestry and Welfare, and published in the form of a booklet, also as posters. Copies of this material have been sent to the Prefectural governments. The Prefectures have been advised to post such material at ration points and to utilize the press and radio in order to give the public adequate information. Military Government Teams should stimulate the Japanese to utilize the material made available, or develop their own publicity programs with the aid of their nutritionists.

SECTION VIII

SECTION I TECHNICAL BULLETINS

The following Public Health and Welfare Technical Bulletins were mailed with the Weekly Bulletin, as follows:

Title: Licensed Agencies for Relief in Asia
Short Title: TB - PH - WEL 3
Mailed: With Weekly Bulletin No. 36 on 12 September 1947

Title: Financing Community Welfare Activities in Japan
Short Title: TB - PH - WEL 4
Mailed: With Weekly Bulletin No. 38 on 26 September 1947

Title: Glossary of Welfare; Terms Used in Japan
Short Title: TB - PH - WEL 5
Mailed: With Weekly Bulletin No. 38 on 26 September 1947

Welfare

Attention is called to the issuance in August 1947 of a Public Health and Welfare Technical Bulletin (TB-PH-WEL 2) Subject: Japan Social Work Association and in September 1947, Training Bulletin (TB-PH-WEL 3) Subject: Licensed Agencies for Relief in Asia (LARA). One copy of each of these training bulletins has been sent to each Military Government Region and Team.

SECTION II GENERAL

Flood Disaster - Typhoon "Kathleen"

The flood that occurred in the wake of the Typhoon "Kathleen" is one of the major disasters to hit the nation since the turn of the century.

Surveys show the flood embraces 23 prefectures, with the heaviest damages occurring in the Kanto region among the prefectures of Miyagi, Ibaraki, Tochigi, Gumma, Saitama and Tokyo.

Reports of flooded areas started to trickle in to Public Health and Welfare Section early on the 16th, but the scope of this disaster did not make itself fully known until the evening of the 16th, and the morning of the 17th, when the nature of the reports indicated that severe floods existed. The Ministry of Welfare was alerted and at 0900 on the 18th of September an emergency relief committee was formed at Cabinet level, which included the Vice-Minister of each Ministry plus the Japanese Red Cross, whose responsibility was to coordinate all relief and rehabilitation measures. The Japanese Red Cross was directed and accepted the responsibility for coordinating relief measures by all private voluntary agencies, working in cooperation with the National Emergency Relief Committee.

To supervise and assist Military Government Teams in directing relief operations and in order to coordinate supplies of food, clothing and medicinals at the national level, PH&W section dispatched three relief teams to the Kanto region. These teams traveled by jeep and trailer and carried emergency gasoline and rations so as not to prove a burden on any Military Government units. Reports from these teams which were dispatched to the most affected areas in the Kanto region were coordinated in determining requirements at the national level.

As soon as it was learned that the extent of the flood would necessitate supply action at the national level, Ministry of Welfare officials took immediate action in organizing supply activities. Reserve stocks were released in the affected areas and action was taken to earmark stocks of medical and sanitary supplies, clothing and food for distribution to supplement these released stocks. Initial shipments of water purification materials and cresol were made to the various prefectures. In anticipation of dysentery outbreaks, sulfadiazine and sulfathiazole were also supplied. Ample supplies of vaccines were available in the prefectures but priority was established, principally for typhoid vaccine, if required for replenishing prefectural stocks. The Pharmaceutical Affairs Section were allocated four vehicles for direct shipments of medicinals and sanitary supplies and made deliveries to prefectural health authorities.

The need for water purification materials was recognized early and stocks of Halozone tables, which had been purchased by the Japanese Government from surplus U. S. Army stocks, were shipped to critical areas, supplemented by Japanese stocks of purification materials.

It is anticipated that considerable amounts of DDT will be required in the rehabilitation of the effected areas. Stocks of DDT are plentiful and can be supplied on short notice, if existing prefectural stocks are insufficient. Necessary spraying equipment is also available upon request. An emergency requisition for surgical dressing can be met. Preventive health control measures are being stressed, as it water purification.

Latest reports indicate the follows:

Dead 839, injured 1556, missing 1196, houses destroyed 11,413, houses flooded 255,042, roads washed out (breaks) 1702, river bank and dike breaks 1744, bridges damaged 1766, railroad lines broken 88, rice land destroyed 81,067 cho, rice land flooded 147,091 cho, other farm land destroyed 3232 cho, and other farm land flooded 4659 cho (Note: 1 cho equals 2.45 acres).

Waters are receding in all the affected areas with the exception of Tokyo Prefecture, which is experiencing the foreseen development of high waters being carried into Tokyo Bay. The situation is under control and close attention is being exercised to prevent possible outbreaks of disease.

The Military Government teams who operated in the affected areas, especially in the prefectures in the Kanto region, which suffered heavily, are to be commended for the excellent emergency steps taken and the coordination of relief activities in the rescue work and the supplying of food, clothing and medicinals to the flood victims. Japanese prefectural officials and disaster teams were very active and in some cases had highly organized relief teams which performed commendable work in aiding the unfortunates.

SECTION III WELFARE DIVISION

Kinki Region Welfare Conference

A conference was held in Kyoto on 15 September which was attended by Welfare Officers from the seven prefectures of the Kinki Military Government Region. Other personnel participating in the meeting included the Commanding Officers of the Kinki MG Region, (I Corps); the Welfare Officers from MG Section, Headquarters Eighth Army; the Kinki MG Region (I Corps); and a representative of the Welfare Division, Public Health and Welfare Section, SCAP. This was the second regional conference held in I Corps area during the past few months.

During this conference the importance of administrative review of public assistance was emphasized by personnel of the Kinki MG Region. Increasing emphasis is being given in this area to the need of reviewing the situation of persons receiving outdoor relief (assistance in their own homes) to determine if they continue to be eligible and if proper action has been taken to adjust grants in accordance with the new schedules of assistance rates issued recently by the Social Affairs Bureau, Ministry of Welfare. In this area, as in other sections of Japan, about 95% of all persons receiving aid under the Daily Life Security Law are receiving outdoor relief, while only 5% are receiving indoor relief (institutional care). Increasing emphasis is being given by MG welfare personnel to the outdoor relief programs.

Japanese Red Cross

A meeting of all Red Cross Hospital Directors was held in Tokyo 18 and 19 September for the principal purpose of instructing them on their responsibilities for disaster nursing and medical services under the new disaster program being formulated by the National Red Cross Society. Consultants from the Section also spoke to the Directors on improved standards of hospital administration and areas of public health service in which Red Cross might develop needed public health programs in cooperation with the Ministry of Welfare and local health authorities.

National Headquarters of the Japanese Red Cross alerted all of its Prefectural Chapters on 16 September ordering them to stand by for disaster services and to render all possible aid to prefectural authorities in meeting medical and nursing needs in affected areas. Preliminary reports indicate that Red Cross relief teams were

employed effectively in some areas, while in others Red Cross personnel was not fully utilized nor their services well coordinated with prefectural authorities.

Dates of the Japanese National Red Cross campaign have been changed to earlier dates (previous dates 15 Oct - 15 Nov) and call for their fund drive to be held between 22 Sept - 1 November 1947. Note: This supersedes announcement contained in Weekly Bulletin 1 Sept - 7 Sept 1947.

South East Asia Social Welfare Conference

A representative of the Welfare Division, Public Health and Welfare Section, attended the South East Social Welfare Conference which was held in Singapore from 19 to 23 August 1947. Delegates from the following countries attended the conference: Hongkong, Indo-China, Malayan Union, Netherlands East Indies, North Borneo, Sarawak, Siam and Singapore. Observers present included representatives from Australia, China, India, New Zealand, World Health Organization, the United Nations and voluntary (private) welfare agencies. Matters considered included: government responsibility for social welfare programs, juvenile delinquency, social research, international traffic in women and children, and the need of recruiting and training social welfare workers.

The delegates attending the conference from South East Asia, including the observers from voluntary (private) agencies, were those responsible for the direction, administration and operation of social welfare activities in their respective departments or agencies. These delegates and observers were persons with high academic and experience qualifications.

The conference recommended that efforts be continued to raise the standards of social welfare practices and to coordinate welfare practices, in the territories toward uniformity wherever possible. It was decided to request the Special Commissioner in South East Asia to sponsor the establishment of a permanent South East Asia Social Welfare Conference and for the conferences to recommend that the South East Asia Social Region be recognized by the Social and Economic Council of the United Nations.

SECTION IV VETERINARY AFFAIRS DIVISION

Field Survey

A survey of veterinary affairs in Kochi, Ehime, Tokushima, Kagawa and Okayama Prefectures was completed.

Eighteen cases of Equine Encephalitis resulting in eight deaths, had been reported from Kochi Prefecture during the period 24-31 Aug 1947. Six cases resulting in five deaths were also reported from Okayama Prefecture. The survey disclosed that control measures were effective and new cases had ceased to appear. It must be emphasized that these are clinically diagnosed cases which have not been confirmed by laboratory procedures. Specimens were collected and forwarded to laboratories for that purpose.

In Ehime and Kagawa Prefectures sun-stroke cases with central nervous system involvement were reported. The survey revealed that the development of new cases had ended with the advent of cool weather. Specimens were collected from recovered cases for laboratory study.

Programs for the testing of daily cows for tuberculosis and anti-rabies vaccination of dogs are progressing in a satisfactory manner.

Slaughterhouses were found to be in good condition but milk plants and dairy farms are generally below Japanese standards in sanitation.

Weekly Animal Disease Report

The Ministry of Agriculture and Forestry reported the following new outbreaks of animal diseases for the period 14-20 September 1947:

<u>Prefectures</u>	<u>Disease</u>	<u>No. of Cases</u>
Yamanashi	Swine Erysipelas	1
Kanagawa	"	6
Okayama	Equine Encephalitis	6

Monthly Animal Disease Report for August 1947

Following is a summary of the monthly Animal Disease Report for August 1947 submitted by the Ministry of Agriculture and Forestry:

<u>Disease</u>	<u>No. of Cases</u>
Brucellosis	12
Trihomoniasis	21
Texas Fever	6
Equine Infectious Abortion	6
Swine Erysipelas	28
Swine Plague	6
Swine Cholera	3
Strangles	148
Rabies	4
Equine Infectious Anemia	141
Equine Encephalitis	24
Pullorum Disease	447

Monthly Meat Inspection Report for July 1947

Following is a summary of the monthly meat inspection report for July 1947 submitted by the Ministry of Agriculture and Forestry:

	<u>Cattle</u>	<u>Calves</u>	<u>Sheep & Goats</u>	<u>Swine</u>	<u>Horses</u>

Under butterfat standards (3.0 percent)	9

SECTION V NURSING AFFAIRS DIVISION

The Chief of the Division visited Kofu for meeting of the Yamanashi Prefectural Branch Association of Japanese Midwives, Clinical Nurses and Public Health Nurses Association on 16 September.

SECTION VI SUPPLY DIVISION

Distribution

Reports from the field still indicate a shortage of x-ray film in distribution channels. Hospitals appear to be having particular difficulty. The production of film has now reached a point where it is possible to supply at least minimum requirements for all agencies and stocks are available for shipment to retail outlet. Any acute shortages in prefectures which cannot be supplied locally should be reported to Public Health and Welfare Section through channels, in order that expeditious action may be taken to furnish the required x-ray film.

Production

Releases of the following DDT products and typhus vaccine were approved for the period 14 - 20 September 1947.

Prefecture	10% DDT Dust	5% DDT Residual Effect Spray	Typhus Vaccine
Yokosuka Quar. Sta.	120 lbs.	180 gallons	
Nagasaki			1,500 vials
Kanagawa		20,000 gallons	
Wakayama	2,000 lbs.		
Total	2,120 lbs.	20,180 gallons	1,500 vials

Narcotics

The Narcotic Control Officer returned from temporary duty in the United States Conferences with Bureau of Narcotic officials in Washington and inspections of records and facilities of the principal pharmaceutical companies dealing in narcotic preparations in the United States, revealed the system of records, reporting and security now established in Japan compares favorably with the United States. Bureau of Narcotic Officials were pleased with the progress made in Japan by SCAP Narcotic Control Officers and with the periodical reports which have been received. The Narcotic Control Officer received an informal and incomplete report on 50 grams of cocaine hydrochloride seized in Seattle, Washington. The cocaine originated in Japan. A request was made for the complete modus operandi of the two persons involved in the smuggling operation when the investigation is finished. This is the first smuggling operation reported from Japan since the beginning of the occupation. Necessary action is being taken in cooperation with the Office of the Provost Marshal to prevent further narcotic smuggling.

Crude and semi-processed narcotics were transferred from the custody of the 5th Medical Depot, Yokohama, to pharmaceutical companies in Tokyo by the Japanese Government under the supervision of Narcotic Control Officers. The narcotics will be processed under close supervision of SCAP Narcotic Control Officers and used for the medical needs of the Japanese people.

SECTION VII PREVENTIVE MEDICINE DIVISION

Disease Control in Flooded Areas

Diseases which are expected to present the greatest problems in recently flooded areas are the enteric diseases. Proper food and water sanitation would, of course, prevent these diseases and every effort has been made to provide safe potable water and safe food during the acute stages of the flood. Supplies of hyperchlorite were provided for chlorination of wells and other local water supplies. Proper instructions concerning the chlorination of wells and water supplies and sanitation of food were disseminated both through the Japanese and Military Government sources.

Great danger still exists in some areas where the water has partially or completely receded. In these areas, sanitary teams should be used to the greatest possible extent in cleaning up the area, chlorinating all wells and other water supplies, filling, draining, spraying and dusting for insect control. Disease problems will be held at a minimum if these procedures are carefully carried out. Typhoid immunization procedures started during the early stages of the flood should be continued until all persons in the flooded areas have received a complete course (three inoculations) of TAB vaccine. Since the nation wide typhoid immunization program is now in progress Military Government Health Officers should take advantage of this opportunity to see that all eligible persons in the affected prefectures are immunized at this time. Sufficient vaccine is available for this program.

Certain other communicable diseases, particularly smallpox, diphtheria and typhus may present special problems in the flooded area. These will have to be handled on an individual basis. If smallpox cases appear all persons in the affected area should be immunized promptly. Focal immunizations should be done whenever typhus or diphtheria appear. It is important that concentrations of people in refuse camps and other places be dusted with DDT, as a precautionary measure in typhus control. It is particularly important that cases of dysentery, typhoid, smallpox, diphtheria, typhus, etc., be recognized and promptly isolated. Disinfection of stools and other body discharges are always important, but are particularly so at this time due to the interruption of normal disposal procedures.

Sanitation

Sanitation problems will be greatly aggravated by the recent heavy rains and subsequent flooding of water supplies and low areas that will breed mosquitoes. A survey should be made to locate the areas flooded and take immediate action on the following:

- (1) Check on the number of sanitary teams that are actively engaged in insect and rodent control.
- (2) Check on materials and equipment.

An investigation of private and public water supplies should be made with particular attention to the need for sterilization. A check should be made on the available chlorine supplies and where an adequate amount is not available, it should be procured immediately. If difficulty is met in obtaining these supplies and materials through normal civilian channels, it should be immediately referred through proper command channels to Public Health and Welfare Section.

Tuberculosis Control

Recently a local Japanese physician made inquiry concerning the management of tuberculous patients after their discharge from prisons in America. This inquiry has led to consideration of a similar problem here in Japan. This type of individual would, as a rule, return into that group of the population in which ignorance, superstition, carelessness over crowding, and poverty create an ideal situation for the spread of tuberculosis.

These cases, before release, should be interviewed by a visiting nurse from the health center and a member of the welfare organization. The patient and his contacts should be guided into the proper channels for control and further treatment. Prefectural, city, town and village health officials should be notified of the patient's discharge. They in turn should make provisions for subsequent supervision and treatment.

As a source for case finding, the prison population is ideal in that they are under control. An investigation of the conditions in the prisons, the number of tuberculous prisoners in the prefectures, and the location of contacts made both before and after commitments presents a rich source for case finding.

SECTION VIII SOCIAL SECURITY DIVISION

Health Insurances

A bill presently under consideration by the Diet which may affect the administration of National Health Insurance at local levels is the proposed legislation for the abolition of the Agricultural Association (Nogyo Kai). In many towns and villages, National Health Insurance activities are conducted, not by an independent National Health Insurance Association, but by a department of the local "Nogyo Kai".

If these Nogyo Kai are dissolved, the farmers of various communities may elect to organize local agricultural cooperative associations for carrying on cooperative buying and selling activities. In such an event, National Health Insurance subscribers in a town or village may choose to delegate the responsibility for National Health Insurance administration to the new organization, or they may prefer to separate National Health Insurance activities by establishing an independent National Health Insurance Association.

SECTION IX MEDICAL SERVICE DIVISION

Japanese Civilian Hospital Strength Report for period ending 1 August 1947 shows 3,366 hospitals with a capacity of 216,515 beds of which 109,075 were occupied. During this same period 322,158 out-patients were treated.

Japanese Civilian Hospital Strength Report for period ending 8 August 1947 shows 3,367 hospitals with a capacity of 216,338 beds of which 108,478 were occupied. During this same period 320,385 out-patients were treated.

Japanese Civilian Hospital Strength Report for period ending 15 August 1947 shows 3,374 hospitals with a capacity of 216,516 beds of which 109,041 were occupied. During this same period 317,253 out-patients were treated.

GENERAL

Flood Disaster - Typhoon "Kathleen"

Activities in the flooded areas have now passed from an emergency phase into a rehabilitation phase. 564,000 pieces of women's and children's clothing, underclothing and blankets were distributed to the eight prefectures most seriously damaged and stocks of insecticides, spraying equipment and medicinals continue to be made available. The Ministry of Welfare organized 86 medical teams, 40 vaccination and case-finding teams, 18 insect and rodent control teams, 2 water purification teams and 1 medical supply team to work in the flooded areas. The Japanese Red Cross dispatched 29 medical aid teams into the flood region and are now completing arrangements to provide for 90 additional medical aid teams for relief and rehabilitation activities. Preventive health control measures remain in effect, water purification is being stressed, all persons in the flooded area are receiving typhoid immunization and insect and rodent control teams are active in spraying these areas where the water have fully subsided. Close attention is being given to the possibility of epidemics.

Latest statistics show 1,712,416 persons affected by the flood, 979 dead, 1,616 injured, 984 missing, 10,100 homes destroyed, 430,787 homes flooded, 3,547 roads washed out (breaks), 4,221 river bank and dike breaks, 2,436 bridges damaged, 219 railroad line breaks, 6,484 cho rice fields destroyed, 148,705 cho rice fields flooded, 4,682 cho other farm lands destroyed and 80,134 cho other farm lands flooded. (Note: One cho equals 2.45 acres).

SECTION II
WELFARE DIVISION

Public Assistance Report

The Social Affairs Bureau, Ministry of Welfare, advised they have not been able to complete the report of expenditures for the month of August under the Daily Life Security Law, as reports have not been received from all prefectures. It is now definitely agreed that the calendar month should be used as the reporting period. Delays are due to difficulties experienced in the prefectures in securing accurate reports from the cities and other local sub-divisions and to problems in transportation and communications. Efforts are being made for the prefectures to receive these statistics as promptly as possible after the close of the calendar month and to submit the report to the Ministry of Welfare in Tokyo as soon thereafter as possible. (Note: Although it is desirable that prefectural reports be submitted as rapidly as possible, emphasis is also being placed on the necessity of reporting the facts and figures accurately.)

Licensed Agencies for Relief in Asia (LARA)

LARA relief supplies were made available for use in these areas in need of emergency relief as a result of the recent flood disaster (Typhoon "Kathleen"). The emergency needs were determined by the Japanese Central Committee of LARA (this committee includes representatives from LARA, SCAP, Hqs 8th Army, Ministry of Welfare and private agencies) and after careful consideration of the reports covering disaster conditions in the various prefectures the following supplies were released for disaster relief distribution:

Whole milk (powdered)	24,000	lbs.
Skimmed milk (powdered)	39,560	"
Canned food (baby)	34,500	"
Cereal	20,700	"
Flour (wheat)	42,500	"
Flour (rice)	24,300	"
Flour (soya)	56,500	"
Rice	40,100	lbs.
Spaghetti	13,500	"
Canned goods	14,290	"
Noodles	5,000	"
Salt	73,400	"
Soap	18,300	"
Clothing	500	bales

The 24th overseas shipment of LARA relief supplies arrived in Yokohama, 18 September 1947, aboard the SS Marine Leopard and consisted of the following:

Clothing (including shoes)	6.806	tons
Food	2.214	"
Medicine	.75	"
Total (net) weight	9.770	tons

Japan Red Cross

American Junior Red Cross supplies from the United States are to be distributed by the Japanese Red Cross Chapters in their prefectures. Plans developed by the Ministry of Welfare and the Japanese Red Cross covering the distribution, have been approved by the Public Health and Welfare Section. Supplies have been allocated to prefectures on the basis of war and disaster damage. Each prefectural chapter of the Japanese Red Cross has been instructed to consult Japanese prefectural education and welfare authorities in the selection of schools in which the supplies are to be distributed. English translations of the instructions have been sent chapter managers by their National Headquarters to facilitate discussions with Military Government Welfare and Education Officers.

Supplies are of two kinds: (1) Junior Red Cross Gift Parcels to be distributed to children in the first four grades, each parcel to be divided among three children; (2) school supplies, including pencils, erasers and pencil pads, to be distributed to children in the fifth and sixth grades, each child to receive one pencil, eraser and pencil pad. One important instruction is that every eligible child in a selected school is to receive his or her share of the items distributed. Cooperation of the MG Education Officers is necessary, particularly in assisting the local chapters and education officials in the selection of these schools where the supplies are to be distributed. Every effort is being made to ship the supplies promptly and to expedite their distribution on arrival in the prefectures. The allocation of supplies by prefectures is given below for the information of Welfare and Education Officers:

Allocation of American Junior Red Cross Gift Parcels and School Supplies to Prefectures

Prefecture	(1) No. of Gift Parcels	(2) No. of Sets School Supplies
Hokkaido		5,760
Tokyo		164,000
Osaka		81,360
Kanagawa		15,540
Hyogo	2,402	45,000
Nagasaki	4,148	7,200
Niigata		3,600
Saitama	2,500	2,200
Gumma	2,500	4,000
Chiba		2,400
Ibaraki	2,500	4,000
Tochigi		3,400
Mie		3,600
Aichi		33,000
Shizuoka		17,400
Yamanashi		3,600
Gifu		4,800
Fukushima		2,400
Miyagi		7,200
Iwate		2,400
Aomori		3,360
Fukui		5,400
Toyama		3,000
Tottori		2,400
Okayama	3,666	3,600
Hiroshima	4,500	5,400

Wakayama	7,670	3,600
Oita		3,600
Saga		1,200
Kumamoto		3,000
Yamaguchi		6,900
Fukuoka		15,600
Kagoshima		5,520
Miyazaki		3,000
Tokushima	1,584	2,400
Kagawa	4,498	2,400
Ehime		3,960
Kochi	6,139	3,000
Akita		3,000
Yamagata		3,000
Nagano	1,259	
Tochigi	2,500	
Orphanages in Tokyo	729	

(1) Each Gift Parcel consisting of from 10 to 14 individual gift items is to be distributed among three children in the first four grades of schools selected.

(2) Each set of school supplies is to consist of one pencil, one eraser and one pencil pad and will be distributed by sets to children in the fifth and sixth grades of schools selected. Care should be taken that all eligible children in the schools selected participate in the gift distribution.

July Military Government Team Reports

Hiroshima reports: "There is serious complaint that people on public relief in their own homes have no way of getting clothing." Note: This matter has been discussed with the Social Affairs Bureau, Ministry of Welfare. It is hoped that the Welfare Division of PHW will be able to release the Japanese plan through the Weekly Bulletin at an early date.

"Discrimination. Japanese Military Government Welfare staff question whether there is not too much discrimination in favor of repatriates. They urge that the criteria for relief be based entirely and solely on need." Comment: Present policy prohibits preferential treatment to repatriates or any other groups. It is recognized that repatriates are needy, however, their "organizational ability" and vociferousness should not be permitted to result in preference. Any such preferential treatment should be reported through channels in order that PHW, SCAP may take appropriate action.

Nagano reports: "This office has inspected 32 village public assistance programs. ****The corrective action taken by this office was similar to that of the previous months, namely by having the Local or Prefectural Welfare Officials accompany us during these inspections, we were able to show and explain each deficiency. Also we were able to observe what corrective action the Japanese Welfare Officials themselves recommended and what action had been taken."

SECTION III VETERINARY AFFAIRS DIVISION

Weekly Animal Disease Report

The Ministry of Agriculture and Forestry reported the following new outbreaks of animal diseases for the period 21-27 September 1947:

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Gifu	Equine Encephalitis	15
Tottori	"	3
Akita	"	13

SECTION IV

NURSING AFFAIRS DIVISION

Publications (Procedure Manual)

Orders are now being taken for the new Nursing Procedure Manual. This book was prepared, through the joint efforts of the American and Japanese Nurses at the Tokyo Demonstration School, to serve as a text book in schools of nursing. It is desired that all nursing schools be urged to obtain them at once. They can contact:

Dr. Chizuo Ohta
Office- No. 40 Momozono-cho, Nakano-ku, Tokyo-to
Telephone- Nakano (38) 2882

SECTION V SUPPLY DIVISION

Distribution

Impounded radium amounting to 112.1 milligrams was released to the Ministry of Welfare on a loan basis to treat cancer infected patients in Japan. The Cancer Research Institute, Osaka Imperial University, was delegated as the main distributing point for this radium. Hospitals requiring radium for therapeutic use will apply to the Ministry of Welfare for the amount needed, who in turn will designate the Cancer Research Institute to deliver the radium to the requesting hospital. Upon completion of therapeutic use, the radium will be returned to the distribution point for safe keeping, until released to another requesting hospital.

Due to emergency needs for water purification supplies, U. S. Army surplus water purification tablets amounting to 747,000 bottles (100 tablets in bottle) and 300,000 tubes of calcium hypochlorite were sold to the Japanese Government, and immediately distributed to the prefectures affected by the flood.

There are sufficient V. D. control drugs available to meet normal immediate requirements of prefectures. Prefectures that have requested amounts in excess of immediate requirements and received a reduced amount should reapply as necessary since the Ministry of Welfare does not use a "back-order" system. There are at present over 20,000 vials of outdated U. S. penicillin available for distribution and more is being added to the stock pile in the very near future.

During the first two weeks of September a total of 10,982 pieces of insect and rodent control equipment was shipped, under Ministry of Welfare supervision, to 10 prefectures. A detailed breakdown for this period (1 September-15 September) follows:

Prefecture	DDT Duster	Knapsack Sprayer	Semiautomatic Sprayer	Hand Sprayer
Miyagi	1,000			544
Yamagata			400	
Gumma			400	
Kanagawa		24	114	
Fukui			400	
Aichi		54	42	
Shiga			300	
Kyoto		240	150	272
Hyogo	4,888	320	200	450
Hiroshima	1,184			
Totals	7,072	638	2,006	1,266

Production

Production of biologicals during August continued to be excellent. Approximately 40% of the planned production of 150,000 liters of triple typhoid vaccine was produced during August. Production of this quantity during August combined with previous productions during June and July represented approximately 90% of the total planned program. Production of diphtheria toxoid vaccine was accomplished according to plan.

<u>Vaccine</u>	<u>Production (August)</u>		<u>Stock on Hand 31 Aug '47</u>	
	<u>Crude Vaccine</u>	<u>Finished Vaccine</u>	<u>Crude Vaccine</u>	<u>Finished Vac.</u>
Cholera	5,661,510 cc	9,372,560 cc	2,934,400 cc	8,492,520 cc
Typhus	-	11,362 cc	-	6,785,797 cc
Triple Typhoid	15,942,900 cc	60,667,600 cc	6,461,300 cc	17,812,950 cc
Diphtheria Toxoid	1,290,000 cc	1,973,000 cc	2,382,200 cc	2,685,245 cc
Smallpox	-	3,100 ds.	15,728,000 ds.	1,355,475 ds.
Diphtheria Antitoxin		4,800 cc		225,746 cc

Note: ds.: doses

Production of x-ray film during August showed a slight decrease in total output. A total of 33,783 square meters was produced as compared to 36,213 square meters during July. This decrease is attributed to lack of production of size 14 X 17 required by occupation forces. Sizable stocks of 14 X 17 were on hand at the beginning of August and production to meet occupation force requirements for 14" X 17" during August was therefore not necessary. Total output of sizes 10" X 12" and 8" X 10" for domestic consumption was increased by approximately 40% over any previous monthly production in order to meet accelerated Japanese requirements.

<u>Size</u>	<u>July</u>	<u>August</u>
4-3/4" X 6 1/2"	1,490 doz.	3,850 doz.
6 1/2" X 8 1/2"	495 "	614 "
8" X 10"	2,646 "	6,306 "
10" X 12"	19,076 "	26,298 "
14" X 17"	2,766 "	0 "
Dental	426 "	836 "
35 m/m film	54,429 "	46,602 "

Narcotics

The arrest of a Japanese national, an addict posing as a nisei doctor, culminated an investigation begun in March 1947, when reports were received that a nisei woman accompanied by other persons was obtaining narcotics from Japanese doctors by fraud and force. Since the report received involved Allied Nationals, investigators from the Provost Marshal's office cooperated with Tokyo narcotic agents in the investigation. The woman who was maintaining a "habit" of 10 cc morphine hydrochloride daily will be tried in Provost Court.

Inspections of licensed compounders and producers in Tokyo by the Narcotic Control Officer revealed no action had been taken toward the production of Tincture of Opium from January, when the materials were released from former Japanese military narcotics, until the end of August this year. It was established that the delay in production was caused by lack of coordination between Japanese Government officials and pharmaceutical company officials. Corrective action was taken to ensure compounders and producers and central wholesalers maintaining a satisfactory stock level. Tincture of Opium is available from compounders and producers in Osaka at the present time. Supply will be augmented by production in Tokyo in October.

The Japanese Government is issuing instructions to each prefecture not to destroy any narcotics of any kind. All seized narcotics and all damaged or deteriorated narcotics are to be salvaged for morphine and codeine content and properly accounted for in accordance with instructions given by the Narcotic Control Officer.

Pending the selection of complete personnel to receive police power for narcotic enforcement under the Ministry of Welfare, instructions are being issued to prefectures, by the Ministry of Welfare, that the chief of prefectural narcotic divisions be granted this police power before 1 October 1947. This will ensure there are no lags in narcotic enforcement under the narcotic enforcement act.

Preliminary conferences have been held regarding prefectures with allotted areas to grow marihuana for fiber purposes in 1948.

SECTION VI PREVENTIVE MEDICINE DIVISION

General

Surveys of the flooded areas of the Kanto Region show no alarming increase in the incidence of communicable diseases. Some areas show an increase in the number of cases of dysentery but no wide spread epidemics have occurred. It is still too early, however, to make any prediction with regard to typhoid fever and other diseases which have a moderately or lengthly incubation period. Health officers in the effected areas are urged to continue utmost vigilance in this regard.

Public Health Train

The mobile public health exhibit will definitely begin its initial journey through the Kanto Region on 1 November 1947. Military Government Teams concerned will be notified well in advance of the expected date of its appearance. Over 50 models of proper housing construction, etc., have been procured. Posters, photographs and leaflets have been prepared and will be ready for installation in the cars by 15 October.

Typhus Fever

The incidences rate of typhus fever has dropped to the lowest level since 1945. Military Government Teams should prepare for the new typhus season which will soon be here. It would be well to check DDT 10% dust supplied and condition of dusting equipment.

A new national education and information program concerning typhus fever is to begin in early October and will continue through 7 April 1948. Local prefectural programs should be stimulated and encouraged at this time. There is a tendency evident among Japanese health authorities to minimize the threat of typhus. Where lice, fleas and mites occur, typhus fever must always be considered and, now that the incidence rate is low, control measures should not become lax.

Sanitation

On 24 September new classes were started at the Institute of Public Health for public health officers and sanitarians respectively.

The sanitarians' course has an attendance of 43 students from 42 prefectures. These men are chosen mainly because of their importance to the future public health program. The course is patterned after the University of California Sanitarians' Course and is very comprehensive. It embraces the following subjects which are thoroughly covered:

- Water purification
- Waste disposal
- Insect and rodent control
- Housing and industrial hygiene
- Environmental sanitation

Emphasis is put on the inspections necessary to carry on these practices.

As those men complete the course and return to the prefectures, their assignments should be followed up to make sure that the best use is being made of the individuals.

The class preceding the present one consisted of forty students which were graduated and returned to their prefectures on 15 September.

Many of the things they have been taught are revolutionary compared with the customary Japanese methods, therefore they will require a good bit of moral support and backing from the Military Government in the inauguration of their progress.

Tuberculosis Control

With the oncoming of winter, a survey of the status of the extra ration allocated to the national sanatoria would be in order. It will be recalled that this extra ration was allocated to induce the return of such patients who, because of the lack of food in the sanatoria during the winter of 1946 and 1947, went back to their homes. A maintenance of the ration status should result in no loss of patients during this coming winter and induce other patients to be hospitalized. A monthly check on the amount of the ration, the date of delivery or any delay of such delivery, the increase or decrease of number of patients hospitalized or leaving the institutions would be of interest.

Some of the patients are objecting to certain staple foods. Foods such as corn and peas present a problem in preparation and use for the Japanese. In the ration boards there are, however, charts showing the preparation of these particular foods. This information should be obtained by the dieticians of the national sanatoria from the Ministry of Welfare or Ration Boards.

Port Quarantine

Report of incoming communicable diseases at repatriation centers.

Quarantine Station	Name of Vessel	Port of Depart.	Date of Depart.	Date of Arrival	Diagnosis	Date of Diag.	Cases	Deaths
Sasebo	Kizan Maru	Singapore	8/23/47	9/5/47	Bacillary Dysentery	9/12/47	1	0
Ujina	Dorsetshire	Singapore	8/31/47	9/11/47	Amoebic Dysentery	before embarkation	25	0
"	"	"	"	"	Malaria	"	14	0
Maizuru	Takasago Maru	Nahodka	9/5/47	9/8/47	Amoebic Dysentery	9/11/47	2	1

SECTION VII SOCIAL SECURITY DIVISION

The transfer of administrative responsibility of the Seamen's Insurance Law from the Ministry of Welfare to the Ministry of Transportation, as previously reported, has been delayed for the purpose of conducting further study regarding the desirability of such a move. The Seamen's Insurance, membership of approximately 100,000, is the most comprehensive social insurance program now operating in Japan and will have considerable effect on the coordination of an over-all social security plan.

With the Workmen's Compensation Insurance Law, effective 1 September, amendments to the Health Insurance and Welfare Pension Insurance Laws also became effective. The principal changes in the above amendments were the difference in coverage as to occupational and non-occupational disabilities. The new law will cover occupational and the amended laws will cover non-occupational disabilities, except Welfare Pension which will continue to cover pensions and permanent disabilities, regardless of cause.

SECTION VIII MEDICAL SERVICE DIVISION

Japanese Civilian Hospital Strength Report for week ending 22 August 1947 shows 3,377 hospitals with a capacity of 215,531 beds, of which 106,729 were occupied. During this same period 306,559 out-patients were treated.

Japanese Civilian Hospital Strength Report for week ending 29 August 1947 shows 3,382 hospitals with a capacity of 214,520 beds, of which 114,386 were occupied. During this same period 309,594 out-patients were treated.

Japanese Civilian Hospital Strength Report for week ending 5 September 1947 shows 3,388 hospitals with a capacity of 214,409 beds, of which 110,724 were occupied. During this same period 351,317 out-patients were treated.

SECTION IX
NUTRITION CONSULTANT

Date on food Consumption for August 1947 in Sendai, Nagoya, Osaka and Kure and the surrounding rural areas of each city are contained in the attached tables.

SECTION X

Rehabilitation Following Disaster

The need for long range rehabilitation programs following the occurrence of disaster is indicated by statements contained in the monthly activities reports submitted by the Wakayama and Kochi Military Government Teams. These two prefectures were the hardest hit in the earthquake and tidal wave which occurred in December 1946. The Monthly Activities Report for July 1947 from Wakayama states:

“A vigorous construction program was undertaken to provide homes for families whose homes were destroyed during the December earthquake and fire, and though houses were constructed rapidly they could not be occupied owing to lack of floor mats and glass for windows. If mats could be obtained, possibly homes could be occupied during the summer and glass installed in windows later on when available. Construction of additional housing is still underway.”

The following statement is from the July monthly activities report submitted by the Kochi Military Government Team:

“The Kochi Prefecture Welfare Department distributed during the month of July 1947, a total of two hundred and eighty (280) sets of tools to earthquake sufferers who are carpenters. Each set contained thirty-five (35) items of carpenters tools. The plan of distribution was submitted to this headquarters for suggestions. Some suggestions were offered and the distribution has been carried out satisfactory.”

The experience of these two prefectures may be beneficial to other prefectures in which rehabilitation programs following disaster have recently been commenced.

National Disaster Law.

The National Disaster Law was passed by the Diet on 2 October 1947. Under this law the National Government is responsible for mobilizing immediate relief to victims of a disaster. Relief activities are the responsibility of a National Disaster Board on a Cabinet level headed by the Prime Minister.

All Cabinet Ministers as well as the President of the Japanese Red Cross and other civic leaders will be members of the board.

In the time of disaster, the National Disaster Board will make available at prefecture levels, the monetary financial assistance, supplies, and services to enable the prefecture to take immediate relief action. The national government therefore, assumes the role of the facilitating agency, but will not inject itself into the operating phase unless the local government breaks down.

The law provides for the recognition of the Japanese Red Cross Society as a quasi-government agency in the field of disaster relief. The Red Cross will provide medical facilities, services, and personal, and will be the coordinator of voluntary relief groups who offer their services in time of disaster.

Prefectural Disaster Boards will be organized similarly to the National Board and will be required to maintain up-to-date disaster plans designed to cope with the types of disaster which are peculiar to their areas. In addition, prefectural governments will have Operating Teams composed of six sections responsible for the following duties:

1. Police Section - Law and order, survey and report, rescue work, traffic control, guard duty, black market prevention and liaison.
2. Fire Section - Fight fires, fore rescue, public fire hazards, liaison.
3. Health Section - Medical relief squads, first aid, hospitalization of the injured, coordination of Red Cross activities, sanitation and water chlorination, epidemic control, medical supply points, coordinate requests for medical supplies, and liaison.
4. Welfare Section - Emergency relief, food, clothing, bedding, shelter, fuel, burial expenses, administration of daily life, security law, and liaison.
5. Economics Section - Coordinate supply, normal rationing, building materials, gas and oil, fishing equipment, farming equipment, submit estimates of long term supply, cooperate with police in checking black

market activities, and liaison.

6. Engineering Section - Repair of highways, bridges, harbors, water systems, organize temporary and permanent repairs, restoration of railways, electric power, postal services, telephone and telegraph service and communications.

Foreign National Ration

A letter of instruction was issued by the Director of the General Affairs Bureau, Ministry of Agriculture and Forestry to prefectural governors on 1 October 1947 concerning foreign national supplementary food rations. It was pointed out in this letter that the supplementary food ration for purchase by foreign nationals is not being satisfactorily provided. The following points were mentioned specifically:

1. The butter is to be delivered promptly.
2. Oil and fat included in the basic Japanese ration must be provided for the foreign national as well as that included in the supplementary ration.
3. The Japanese woman married to a German has no right to receive the foreign national ration for Axis nationals unless she is able to prove German citizenship. The same principle applies to Japanese woman married to any foreign national.

A telegram was sent out to the governors of Saitama, Chiba, Gumma, Tochigi, Ibaraki prefectures ordering the immediate delivery of the foreign national ration for September and October to Chinese nationals in the flood area through the Chinese Association. The use of domestic canned food allocated to the prefecture for flood relief was authorized to be used for the September ration for Chinese nationals.

National Social Work Assembly

National Social Work Assembly was held 1, 2 and 3 October in Tokyo (Reference: PHW Weekly Bulletin #37 for period 7-13 September 1947). The conference held on Wednesday, 1 October was attended by representatives from the five national agencies sponsoring the conference, 2200 delegates from all prefectures in Japan, as well as the Emperor and Empress and other Japanese officials. The conference was held at this time to observe the first full year of operation of the Daily Life Security Law and to discuss future welfare plans. During the various meetings of the Assembly attention was also called to the fact that Community Chest Drives are scheduled to be held throughout the country from 25 November to 25 December 1947.

The second day of Assembly was to four group conferences in which the delegates discussed: (1) general problems concerning social work (2) child welfare work (3) juvenile delinquency (4) Daily Life Security Law and responsibilities of the Minsei-iin. Observers at these smaller conferences report that many of the existing welfare problems were discussed thoroughly and various view points were presented.

The third day of the conferences was devoted to receiving reports from the four specialized meetings held the previous day and to the adoption of resolution which are to be presented to the responsible Departments of government. One outstanding point of the conference was the joint participation of the Ministry of Welfare and the Ministry of Justice. Members of the Welfare Division, PH&W presented papers at several of the sessions of the conference.

SECTION II VETERINARY AFFAIRS DIVISION

The Ministry of Agriculture and Forestry reported the following new outbreaks of animal diseases for the period 28 September - 4 October 1947.

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Nagasaki	Texas Fever	1
Saitama	Swine Erysipelas	1
Aichi	Swine Erysipelas	1
Shiga	Equine Encephalitis	2
Niigata	Equine Encephalitis	20
Chiba	Equine Encephalitis	6

SECTION III
NURSING AFFAIRS DIVISION

Personal

Two American Public Health Nurses have arrived for assignment in the Prefectures.

Mrs. G. Roller - Saitama Military Government Team.

Miss R. Johnson - I Corps, Regional Headquarters

Model Demonstration School

On 1 October 1947, 20 St. Luke's and 29 Red Cross first year students received their caps. On 2 October they were assigned to medical and surgical wards only under supervision of the clinical nursing instructors.

SECTION IV
SUPPLY DIVISION

Distribution

Ministry of Welfare officials report the production of bismuth subsalicylate exceeds the requirements of venereal disease clinics and that manufactures are unable to dispose of stocks due to the fact that some prefectures will not authorize sale to private hospitals and physicians. In order to correct this situation prefectural distributing officials are being advised by the Ministry of Welfare to permit sales to private institutions and physicians. First priority will continue to be given venereal disease clinics.

In that period 16-29 September, a total of 8,074 pieces of dusting and spraying equipment were shipped to prefectures under Ministry of Welfare supervision. A detailed breakdown follows:

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Semi-automatic Knapsack Sprayer</u>	<u>Hand Sprayer</u>	<u>Sprayer</u>
Miyagi		470		
Saitama	24	6		12
Kanagawa	120			
Niigata	92			
Ishikawa	984			84
Fukui	48	60		30
Nagano		100		
Shizuoka			200	300
Aichi				169
Kyoto		270		
Osaka	2,000			299
Fukuoka		200		10
Saga		290		
Nagasaki	984			3
Kumamoto				10
Oita		75	100	
Miyazaki	984	70	60	
Kagoshima		10	30	
Total	5,216	1,551	390	917

Production

Releases of the following DDT Products and Typhus Vaccine were approved for the period 28 September – 4 October.

<u>Prefecture</u>	<u>10% DDT Dust</u>	<u>5% Residual Effect DDT Spray</u>	<u>Typhus Vaccine</u>
Gumma	-	5,000 gallons	-
Nat'l. Inst of Health	100 lbs.	-	-
Totals	100 lbs.	5000 gallons	

A total of 3,767,982 lbs of 10% DDT Dust and 211,999 gallons represents stocks in wholesale warehouses of the Ministry of Welfare, Japanese Government, as of 27 September 1947.

The 25th weekly report of production of DDT duster and spraying equipment for mosquito and fly control program for 1947 indicates the following data for the period 21-27 September 1947.

	Total to date <u>20-Sep</u>	No.Mfgd 21-27 <u>Sept.</u>	Total Mfgd to Date <u>27 Sept.</u>	Total Shipped to Date <u>27 Sept.</u>	<u>Balance</u>	
					<u>On Hand</u>	<u>To be Mfgd</u>
DDT Dusters	64,796	100	64,896	62,630	2,266	25,104
Sprayer, knapsack type, 3 gal. cap.	39,443	-	39,443	15,249	24,194	-
Sprayer, pump type semi-automatic	23,808	-	23,808	11,179	12,629	-
Sprayer, hand type 1/2 gal. capacity	<u>37,610</u>	<u>-</u>	<u>37,610</u>	<u>25,670</u>	<u>11,940</u>	<u>-</u>
Totals	165,657	100	165,757	114,728	51,029	25,104

Narcotics

Transfer of all crude and semi-processed narcotics from the 5th Medical Depot in Kobe to pharmaceutical company warehouses in Osaka, by the Japanese Government under the supervision of Narcotic Control Officers, on 2 October places all such stocks in the hands of licensed narcotic dealers dealers for processing as the medical needs of the Japanese people require. It is estimated the supply will be sufficient for a three to four year period at least. Production of codeine which is now in short supply will begin in February 1948 after the plants are reconstructed to provide necessary security for the narcotics during the entire process. Incomplete and inaccurate monthly narcotic reports furnished by the Japanese Government have been determined to be the result of various prefectures preparing inaccurate reports and submitting them to the Ministry of Welfare after the due date, the 10th of each month.

Corrective action has been taken at the national level. Narcotic Section, Ministry of Welfare, officials are to furnish the Narcotic Control Branch a list of list of prefectures who are habitually late with the monthly reports. Pending receipt of this information Military Government officers should determine that narcotic officials in the prefectural governments are preparing accurate reports and forwarding them promptly. These reports are the basis of all action taken with regard to narcotic activities in Japan relative to licensed dealers, and are worth if inaccurate. The Japanese Government will suspend the license of any dealer who dose not prepare and forward reports promptly as required by the narcotic law, and take any necessary action in regard to prefectural narcotic agents who do not come with institutions issued by the Narcotic Section, Ministry of Welfare.

SECTION V PREVENTIVE MEDICINE DIVISION

Typhus Fever

The 1947-1948 typhus fever season is present. Sanitary Teams now in operation should be retrained in typhus control procedures and be ready to take necessary steps to prevent typhus fever from becoming a major problem this year. Case-find and vaccination teams should be re-organized and properly oriented for typhus control work.

Typhus conferences for Japanese Public Health officials and civilian doctors, nurses and other interested parties will begin in late October. The first in the series, will be held in Sapporo, Hokkaido. It is planned to conduct such meeting in the various administration regions of Japan as was done in previous years. Exact dates will be announced.

Sanitation

There is a general feeling that the insect breeding season is over for this year and there is not further need for the Sanitary Teams.

Many communities still do not have adequate permanent organizations to maintain proper environmental sanitation. The daily load of garbage and refuse is the same now as it was in the summer and fly and mosquito breeding, while not as heavy, will continue. It is highly desirable to prevent the accumulations of this refuse for economy of operation, as well as public health reasons.

It is also important to carry on residual spraying of homes at this time as they contain many adult mosquitoes that have had the optimum amount of time to become infected.

Tuberculosis control

Repeated inquiry should be made concerning the supply of x-ray films and its use in mass examination of school children, employees of factory groups etc. While the film may be available according to the film companies and supply sections, its purchase is often delayed by the authorities because of the apparent lack of fun. This will bear inquiry if the work in prevention and control of tuberculosis is to be continued.

Port Quarantine

Report of coming communicable disease at repatriation centers.

Quarantine Station	Name of Vessel	Port of Departure	Date of Departure	Date of Entrance	Diagnosis	Date of Diagnosis	Cases	Deaths
Hakodate	Sinyo Maru	Nakhodate	9/12/47	9/15/47	Baccillary Dysentery	9/20/48	1	0
Maizuru	Esan Maru	Nakhhodate	9/20/47	9/22/47	Bacciliary Dysentery	9/27/47	1	0

SECTION VI SOCIAL SECURITY DIVISION

On a recent prefectural survey of social insurances it was found that Health and National Health Insurance Hospitals may encounter difficulty in obtaining fulltime doctors due to the low salaries paid.

National Health Insurance in some prefectures has exhibited an increase in activity and interest, which is indicated by the reorganization and increased membership of a few former suspended associations.

SECTION VII MEDICAL SERVICE DIVISION

Japanese Civilian Hospital Strength Report for week ending 12 September shows 3,387 beds with a capacity of 214,865 beds, of which 109,420 were occupied. During this same period 341,931 out-patients were treated.

SECTION VIII NUTRITION CONSULTANT

Data on food consumption for August 1947 in Tokyo, Kanazawa, and Sapporo cities with the surrounding areas are given in the attached tables.

SECTION MEMORANDA TO JAPANESE GOVERNMENT

TECHNICAL BULLETINS

The following Public Health and Welfare Technical Bulletins were mailed with the Weekly Bulletin, (#41, 17 October 1947):

Title: Meat Inspection
Short Title: TB-PH-VET 3 Sections 6 & 7 (Sections 1 through 5 mailed with Weekly Bulletin 7 February 1947)

Title: Duties and Functions of Welfare Officers Military Government
Short Title: TB-PH-VEL 6

SECTION II
WELFARE DIVISION

Social Work Education

On 6 October the first graduation ceremonies were held by the Japan Social Work School in Tokyo. Thirty-nine persons, including three women, completed a one-year course of study. Students graduated range in age from 21 to 45. Nine of the students had college or university education before entering the School of Social Work while the remaining thirty had secured about fourteen years of education before entering.

Most of the students have already made arrangements concerning employment. One student has been employed by the Welfare Section in each of the following prefectures: Kanagawa, Tottori, Miyazaki, Kagoshima, Miyagi, Akita, Toyama, Ishikawa, Gumma, and Hiroshima. Two students will work in Nagoya Prefecture and one for the City of Yokohama. Three students have been employed by the Labor Bureau of the City of Tokyo. Three have secured employment in the Childrens Bureau, Ministry of Welfare and Ministry of Labor, respectively. Three students will work with the Research Institute of the Japan Social Work Association and one has been employed by the Japanese Red Cross. Other students have been employed by various other institutions and social welfare agencies.

A second group of students will complete the one-year course of study in the spring of 1948. According to present plans new students will be admitted to the school in April 1948.

Relief Packages for Japanese Nationals

Some questions have arisen concerning the application of the present policy permitting relief parcels being sent from the United States and other countries to Japanese nationals. Present regulation covering the matter is Memorandum for Japanese Government AG 311.1 (26 Aug 47) CCS (SCAPIN 1786). Paragraph 8 of this memorandum was quoted in Weekly Bulletin No.36.

A recent ruling indicates it is not a violation of existing FEC regulations for Occupational Force Personnel to use APO facilities for the transmittal of check, money order or cash with an order to mail order houses or any other source in the United States for relief gift articles for Japanese Nationals providing the contents and weight are in accordance with relief package shipments allowable through International Mails and such shipments are made to the Japanese National through International Mails.

Subsidies to Private Welfare Agencies

On 7 October a notification was sent out by the Social Affairs Bureau, Ministry of Welfare to each prefectural governor concerning subsidies for private social work establishments. This notification attempts to clarify previous Japanese institutions issued on 7 November 1946. (Ministry of Welfare Hatsu-sha #143). The basic policy concerning this matter is set forth in Memorandum for Japanese Government dated 7 November 1946, subject: Information of General Application Pertaining to SCAPIN 775 (Ind 3 to Operational Directive No. 9, Hq Eight Army, 14 January 47).

“a. National Government funds will not be used to provide lump-sum grants to private welfare institutions except as stated in c., below.

“b. No grants will be made by national, prefectural, or local governments for the establishment or re-establishment of private welfare institutions.

“c. Government funds, national, prefectural, or local, may be used for the restoration, repair, or expansion of existing private welfare institutions providing care for indigent persons, only if such projects are found to be the most economic and feasible means of providing for these persons in a given locality. In no case will government funds be expended for such purpose where other public or private institutions exist which can adequately meet the need.

“d. Wherever possible, priority in the allocation of funds for projects mentioned in c. above, will be given to public welfare institutions.”

If appears that in some cases subsidies have been made to private agencies where conditions and requirements are not in accordance with the Ministerial Order issued 7 November 1946. In the future it will be necessary for a responsible Japanese official to certify that the conditions have been met when any request for a subsidy is submitted to the Ministry of Welfare.

Releases of Imported Food Stuffs for School Lunch Program

Releases of imported food stuffs for the school lunch program for October, November and December 1947 are as follows: Powdered skimmed milk 4,714 metric tons, released 16 September 1947. Canned foods including protein content foods, vegetables, fruits and fruit juices total 4,750 metric tons, releases 21 August 1947.

These releases will provide basic school lunch supplies for 3,250,000 school children and teachers for grades one through six, in selected areas. To date, supplies available do not permit extension of the school lunch program into all primary schools, nor into kindergartens, middle schools or high schools.

Children of families, receiving Daily Life Security grants; attending schools where a school lunch program is in operation, may be provided for within the family grant, by a special budget item for school lunch payment. In some instances the family head has not permitted the yen budgeted for school lunch to go for that purpose but has utilized the amount in general family expenses. Certain localities have obviated this possibility by paying the school lunch budget sum to the school head for each child concerned, the child then receiving daily, the necessary yen from the school head and paying the lunch room supervisor at the time he receives his lunch.

Whether the local school lunch program is governmental in sponsorship and supply, or entirely volunteer in content, a sufficient sum should be included in the Daily Life Security grant of the family on relief to provide payment by the child for the lunch provided.

Public Assistance

The Ministry of Welfare submitted the following totals on Public Assistance for the month of August. Totals of July 1947 and August 1946 are shown for purpose of comparison.

	<u>August 1947</u>	<u>July 1947</u>	<u>August 1946</u>

*Decrease from Preceding Month
Source: Ministry of Welfare

A study recently completed by the Ministry of Welfare indicates that one of the reasons for poor statistical reporting from the Prefectural Welfare Officer has been the early date such reports were required to be submitted to the Ministry.

As a result of the study it has been determined that prefectures shall have such statistical reports in the mail by the 20th of the month following the month to be reported on. The report shall cover the calendar month. The names of prefectures whose reports do not reach the Ministry of Welfare by the 25th of the month will be reported in the Weekly Summary.

SECTION III
(VETERINARY AFFAIRS DIVISION)

The Ministry of Agriculture and Forestry reported the following new outbreaks of animal disease for the period 4 October - 10 October 1947.

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Kumamoto	Texas Fever	50

The Chief, Veterinary Affairs Division, departed for Okinawa 8 October 1947 and will investigate Okinawa veterinary affairs for an approximate period of two weeks.

Outbreaks of Equine Encephalitis are still occurring, although diminishing in number, but at present, official figures are not available.

SECTION IV
SUPPLY DIVISION

Distribution

A total of 1579 pieces of dusting and spraying equipment have been distributed to three prefectures under Ministry of Welfare supervision in the period 30 September through 6 October. The following shipments were made:

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsack Sprayer</u>	<u>Semiautomatic Sprayer</u>	<u>Hand Sprayer</u>
Saitama	500	300		
Osaka				229
Fukuoka	—	<u>250</u>	<u>300</u>	—
Total	500	550	300	229

Continual efforts are being made to clarify and facilitate the distribution of x-ray film to consumers. Ofttimes faulty distribution is caused by lack of information at the consumer end regarding the exact locations of dealers who sell this film. It was arranged by Ministry of Welfare officials to request the two x-ray film manufacturing companies to designate agencies in each prefecture who will act as retail outlets to consumers who are authorized to operate x-ray equipment. It is understood these agencies are required to make full reports of sales in efforts to prevent film reaching unauthorized buyers. Each of the agencies has received shipments of films. A publicity campaign will be instituted by the manufactures to acquaint professional men and women of these outlets, by advertisements in newspapers, periodical and professional journals, as well as circulars to be distributed to individuals. The Ministry of Welfare will notify prefectural health officials of these agencies. PH&W is taking this opportunity to inform Military Government officials where the film may be purchased.

Production

Releases of the following DDT Products and Typhus Vaccine were approved for the period 5-11 October 1947.

<u>Prefecture</u>	<u>10% DDT</u>	<u>5% DDT Residual Effect Spray</u>	<u>Typhus Vaccine</u>
Yamaguchi			1,200 gallons
Aomori	15,000 lbs.	1000 "	
Ministry of Transportation		25000 "	
Hokkaido	77000 "	6000 "	
Gumma	16000 "		
Ministry of Welfare	<u>10000 "</u>		
Total-	118,000 lbs.		33,200 gallons

A total of 3,791,232 lbs of 10% DDT Dust and 231,437 gallons of 5% DDT Residual Effect Spray represents total stocks in wholesale warehouses of the Ministry of Welfare. Japanese Government, as of 4 October.

The 26th weekly report of production of DDT duster and spraying equipment for mosquito and fly control program for 1947 indicates the following data for the period 28 September to 4 October.

	Total To Date <u>27 Sep.</u>	No.Mfgd. <u>28 Sep.- 4 Oct.</u>	Total Mfgd. to Date <u>4 Oct.</u>	Total Shipped to Date <u>4 Oct.</u>	Balance <u>On Hand</u>	To be <u>Mfgd.</u>
DDT Dusters	64,896	-	64,896	63,130	1,766	25,104
Sprayer, knapsack type, 3 gal. cap.	39,443	-	39,443	15,799	23,644	-
Sprayer, pump type semi-automatic	23,808	-	23,808	11,479	12,329	-
Sprayer, hand type 1/2 Gal.capacity	<u>37,610</u>	<u>-</u>	<u>37,610</u>	<u>25,899</u>	<u>11,711</u>	<u>-</u>
Total	165,757	-	165,757	116,307	49,450	25,104

Narcotics

The August report on Narcotic Control from the Japanese Government contains the following information:

Total Registrants	86,711
Arrests-	

Registered persons	72
Unregistered "	59
Convictions	
Registered persons	5
Unregistered "	8
Theft of Narcotics	35
Losses by fire	1

Penalties assessed by Japanese Occurs ranged from 200 yen fine narcotic trafficking to four years penal servitude.

The increase in the number of arrests for registrants is attributed to the increased pace of inspections which has reached a level of approximately 3,500 per month. If this level is maintained each registrant in Japan will be inspected at least once every years.

The August Marihuana report contains the following information:

Registered persons - no arrests of convictions	
Unregistered "	
Arrests	10
Convictions	3

Penalties assessed by Japanese Courts varied from 200 yen to 2000 yen fine.

Prior to the Occupation, Tropococaine was used extensively as a lumbar anesthetic in Japan. From the consumption rate at that time of approximately 35 kilograms per years, computed from production figures, consumption has dropped to approximately 8 kilograms per year following the classification of Tropocaine as a narcotic since it is a derivative of coca leaves. Stocks are now available in licensed registered dealers' hands for the legitimate medical needs of the Japanese people.

SECTION V PREVENTIVE MEDICINE DIVISION

Health Centers

Reference is made to memorandum for the Ministry of Welfare, Japanese Government, (PHMJG 16) (dated 7 April 1947) subject: Expansion and Improvement of Activities of Health Centers. The Ministry of Welfare is implementing this directive to the best of their ability, however, this is a long range program which will require patience, understanding and close cooperation between officials of the Ministry of Welfare, prefectural health departments and Military Government. In order for the program to succeed, a common understanding of the basic problems involved and the basic program to be followed in the expansion and improvement of health centers is essential.

In order to effect coordination of the program and to insure Military Government Health Officers do not issue instructions at variance with those issued by SCAP and the Ministry of Welfare, PH&W will endeavor to keep the Military Government informed on basic policies and the current status of the health center project. It is the intention of PH&W Section to prepare a technical bulletin on health centers for the guidance of Military Government Health Officers and Japanese public health officials. This will not be forth coming immediately, however, and in the meantime Military Government Health Officers are urged to concentrate upon improvement of the physical facilities of the health centers and rendering of services already provided for. Investigations have shown that the quantity and quality of health services rendered in health centers is poor. Much valuable time will be saved if MGHO's will endeavor to clean up the health centers and see that the physical facilities, such as x-ray and other laboratory equipment, are in operating condition. Also maximum use should be made of the personnel already employed in the health centers. If this is done the reorganization and improvement of health center activities will be much more easily accomplished when specific instructions are published.

Typhoid Fever Immunization Program

Reference is made to sections on Preventive Medicine in Public Health & Welfare Weekly Bulletin Nos.20, 31, 33, 35 and 37 of the current series. Sufficient TAB vaccine has been prepared and is now either in the hands of prefectural health departments, or can readily be made available by the Ministry of Welfare.

Officials of the Ministry have been acquainted with the benefits to be derived from this program and the necessity for through and complete immunization of the entire population between the ages of five and sixty years.

Although the program is being carried out in all parts of Japan, it is not being done as rapidly or as completely as it should be. The Ministry officials have been instructed to take necessary corrective action and to issue instructions to the prefectures to complete this program without delay. Publicity is necessary in order to insure completeness. It is emphasized that this program is necessary to protect the health of the people of Japan.

MG Health Officers are urged to exercise surveillance to observe that this program is completed promptly. The desired results will be obtained only if a full course of three inoculations is given to every individual in whom vaccination is not contra-indicated. Ministry officials have been advised to report to this office weekly the status of the number of people immunized.

Typhus Fever

The Ministry of Welfare has announced that typhus training conferences for Japanese public health officials, physicians, nurses, sanitarians and other interested persons are to be held in three different localities during the next few weeks. The first in the series, is to be held in Sapporo, Hokkaido, on 23 and 24 October for Japanese personnel in Hokkaido. The second meeting is planned for Fukushima City on 28 and 29 October for benefit of public health workers from the following prefectures; Aomori, Akita, Iwate, Miyagi, Fukushima, Ibaraki, Tochigi, Gumma, Saitama, Chiba, Tokyo, Kanagawa, Niigata, Yamanashi, Nagano. The third in the series is tentatively scheduled for Kyoto with exact dates as yet undecided. It is requested that MG Teams urge their respective public health officers to attend these meetings in order to become oriented on the latest developments in the field of typhus fever and typhus fever control.

Public Health Train

On 1 November the Public Health Train mobile exhibit will begin its tour of the Kanto region. A great deal of interest has developed and it is felt this exhibit will serve to during to Japanese civilians valuable information concerning health and welfare. The three-car exhibit will contain models, pictures, posters, charts, leaflets, etc., pertaining to public health and welfare. In addition, the crew will erect tent booths to further extend the usefulness of this exhibit. It is urged that MG Teams simulate their respective health officers and health nurses to cooperate with this mobile exhibit by conducting a "Health Week" in coordination with the visit of this train. The itinerary for visits of the train in the Kanto region is as follows:

<u>City</u>	<u>Station</u>	<u>Date</u>	<u>Period (day)</u>
1.Tokyo	Tokyo-Akihabara-Ikebukuro-Kinshicho	1-16 Nov.	16
2.Chiba	Honchiba	17-20 Nov.	4
3.Choshi	Anaoi	21-23 Nov.	3
4.Mito	Mito	25-28 Nov.	4
5.Utsunomiya	Utsunomiya	30-2 Dec.	4
6.Kiryu	Kiryu	4-6 Dec.	3
7.Maebashi	Maebashi	7-10 Dec.	4
8.Taksaki	Takasaki	11-13 Dec.	3
9.Omiya	Omiya	14-17 Dec.	4
10.Kawaguchi	Kawaguchi	18-20 Dec.	3
11.Tachikawa	Tachikawa	22-24 Dec.	3
12.Hachioji	Hachioji	25-27 Dec.	3
13.Yokohama	Higashikanagawa	5-9 Jan.1,148	5
14.Kawasaki	Kawasaki	10-12 Jan.	3
15.Yokosuka	Zushi	14-16 Jan.	3

Tuberculosis Control

Many of the mass examinations of school children are conducted in the fall. Negative tuberculin reactions are found at that time and BCG inoculations are done based upon these negative readings. It should be emphasized that care should be exercised and accurate study of these cases carried out before the BCG vaccine is given. It would also be advantageous to check upon the study of BCG vaccine in each prefecture so that it would be available for proper usage as the necessity arises.

Sanitation

Rodent control programs should be intensified at this time. As the grain is harvested and natural food for rats decreases and when the weather becomes increasingly colder, rats are driven into houses in search of food and warmth.

Grain and food supplies should be stored in metal containers with covers. Piles of poles, brush and other litter should be stacked on supports 12 inches above the ground and away from buildings. Garbage and refuse should be removed and disposed of regularly. Supplies of Antu should be obtained in quantities sufficient to bait entire villages.

It is desirable to cover complete areas either at one time, or progressively so the entire rat population will be challenged with one effective dose of bait.

Programs, to be successful, must be conducted by trained sanitary teams. An effective campaign cannot be carried out by individuals or groups of individuals, as the timing and thoroughness of baiting entire areas cannot be effected in this manner. However the individual can assist in the policing of private premises by cooperating in putting out the bait and collecting the dead rats.

Where there is evidence of Typhus fever, plague or any other rat borne disease, the rat runs, burrows and harborage should be DDT-ed thoroughly with 10% dust -- a week prior to baiting -- in order to kill the -----parasites and prevent their transfer to humans.

Port Quarantine

Tuberculosis study and control, 15 March to 31 July.

Procedure:

- a. All repatriates under 30 years are skin-tested with 1-2,000 tuberculin, while on shipboard in passage to Japan.
- b. Tuberculin negatives receive BCG.
- c. Tuberculin positives and those over 30 receive 35 mm chest x-rays.
- d. Follow-ups are made as indicated, including notifications to the prefectures of destination.

Result: 100,555 persons were examined between 15 March and 31 July.
(Approximately 190,000 were repatriated to Japan during this period).

- a. Tuberculin reactions:
Positive.....31,485
Weak positive.....7,641
Negative.....23,060(BCG)
TOTAL.....62,186
- b. x-ray examinations of the chest:
Positive.....6,801
Negative.....70,694
TOTAL.....77,495

Of the 6,801 with morbid findings on x-ray 1,161 were recommended for hospitalization, 2,436 were referred to clinics for treatment, and 3,204 were classified as "requiring cautions" by the Japanese workers.

It has been suggested to the Japanese officials that all suspect cases be followed closely in the prefectures. The prefectural health offices are supposed to receive immediate notice of such cases. If such notices and follow-ups are not made, the program becomes useless.

Analysis: No analysis is indicated on the basis of these incomplete statistics. It should be noted again that, of approximately 190,000 persons repatriated to Japan during this period, only 100,555 were reached by this study.

Report of Communicable disease at repatriation centers.

<u>Quarantine Station</u>	<u>Name of Vessel</u>	<u>Port of Departure</u>	<u>Date of Departure</u>	<u>Date of Entrance</u>	<u>Diagnosis</u>	<u>Date of Diagnosis</u>	<u>Cases</u>	<u>Deaths</u>

SECTION VII - Memoranda to Japanese Government

SECTION I WELFARE DIVISION

Selection, Appointment and Removal of Minsei-iin

Recently more attention is being given to the policy and procedure concerning the appointment of Minsei-iin. The basic policy concerning this matter is set forth in Imperial Ordinance No.426 dated 12 September 1946 which is known as the Minsei-iin Ordinance. This ordinance provides that the number of Minsei-iin shall be determined by the prefectural governor after receiving the opinion of the heads of the cities, towns and villages in the prefecture. The Minsei-iin are commissioned by the Ministry of Welfare upon the recommendation of the prefectural governor.

Although the final appointment of Minsei-iin is made by the national government the selection is actually the responsibility of the local communities. Article 4 of the Minsei-iin Ordinance provides for the establishment of a Minsei-iin Nomination Committee (Minsei-iin Suisen-iin kai) in each city, town and village. This nomination committee, appointed by the head of the city, town or village, is responsible for submitting the name of proposed Minsei-iin to the prefectural Minsei-iin Selection Committee. The establishment and organization of the Minsei-iin Nomination and Selection Committees is controlled by Ministerial Ordinance No. 41 issued by the Ministry of Welfare on 27 September 1946. After the Selection Committee (Minsei-iin Senko-iin Kai) approves, the names are submitted to the prefectural governor. As far as can be determined, however, in actual practice the recommendations of the Nomination Committee are usually final.

Minsei-iin Ordinance, Article 5, provides that the tenure of office for Minsei-iin shall be two years. Minsei-iin may, however, be removed for cause before the expiration of their two year period. It is reported that in some prefectures action is being taken to recommend the removal of certain Minsei-iin who have been guilty of improper conduct or have not been discharging their responsibilities. (this entire matter of appointment and removal of Minsei-iin is being given further study in order that the procedure may be improved) Since all present Minsei-iin have been appointed since the promulgation of the Minsei-iin Ordinance in September 1946 the terms of office of the Minsei-iin will expire in the fall of 1948.

School Lunch Program

A number of inquiries from Military Government Units have been directed to Welfare Division, PHW, suggesting a prefectural diversion of a portion of the imported skimmed milk from the local school lunch program to other uses. For the information of all concerned, the prefectural allocations of skimmed milk have been worked out to assure a sustained program through to the end of the school year 30 June 1948. Diversions to other programs no matter how worthy are not possible.

In addition to the allocations of imported skimmed milk for school lunch programs, (12,000 metric tons) additional allocations of imported and indigenous dried skimmed milk have been made for nursing and pregnant women, infants to 12 months, and pre-school children 1-6 years, found to be suffering from certain food deficiencies. These later allocations will be available through normal rationing channels on a special "health allowance" basis when special need is indicated.

Japanese Red Cross Society

Reference is made to Weekly Bulletin, Public Health and Welfare Section, No.39, for period 21-27 September, Section II, subject Japanese Red Cross, describing American Junior Red Cross supply distribution. Reference is also made to PHMJG-42, issued 8 October, to Ministry of Welfare, Japanese Government, subject Distribution of American Junior Red Cross Supplies to School Children in Japan, and pertinent Memorandum of General Application.

On 15 October, shipment of the supplies was completed from Yokohama to all prefectures except the following: Yamanashi, Chiba, Kanagawa, Fukui and Tokyo. The following four prefectures have received gift parcels but have not received school supplies at this time: Hyogo, Saitama, Gumma and Ibaraki. Balance of supplies to remaining prefectures are now in transit from the U.S. and will be shipped to remaining prefectures on arrival.

Fund Campaign: The regular membership and fund campaign of the Japanese Red Cross Society and its prefectural chapters was formally launched 15 October. All prefectural chapter managers met in Tokyo on 14 October at the Annual Meeting of the Society to receive last minute instructions concerning the drive. General optimism prevailed among the managers, that they would be able to meet their quotas of the total of 300 million yen to be raised.

Disaster Plans: At the meeting of chapter managers on 14 October, they were instructed by National Headquarters concerning their responsibilities under the new Disaster Law and were advised to immediately contact prefectural government authorities concerning the integration of their disaster plans in the master plans for the prefectures. A number of prefectural chapters have prepared plans, in consultation with prefectural authorities, which seem to be fairly complete. Outstanding of the plans reviewed by the American Red Cross Consultant Staff is that prepared by the Mie prefectural chapter.

Volunteer Services: Miss Margaret Gooch, American Red Cross, International Activities, was assigned to the section, 17 October as a Consultant to the Japanese Red Cross in the development of Volunteer Services. Until her present assignment she has been a Field Director, Services to the Armed Forces, American Red Cross, serving during the past eighteen months in the Philippines and Korea and has a professional social work background. With her assistance it is hoped that the Japanese Red Cross can lay a firm foundation for the development of essential volunteer services in prefectural Red Cross programs.

Licensed Agencies for Relief in Asia (LARA)

The 25th overseas shipment of LARA relief supplies arrived in Yokohama, 3 October aboard the SS Swarthmore Victory.

The above shipment consisted of the following relief supplies:

Clothing	24.37 tons
Food	17.99 tons
Medicine	.25 tons
Miscellaneous	.56 tons
Total (net) weight	43.17 tons

Kyusyu Region Welfare Conference

A conference of Military Government Welfare personnel in Kyusyu region was held on 13 October at Fukuoka, Kyusyu, and was attended by representatives of Kyusyu MG Region, the seven prefecture MG teams in Kyusyu, MG Section I Corps and the Welfare Division, Public Health and Welfare Section, SCAP. This was the third regional welfare conference in the I Corps area.

Emphasis was given to the necessary of closely analyzing the public assistance program of each prefectural welfare section and the record keeping procedure employed in controlling the expenditure of funds. The need conducting more intensive training programs for Minsei-iin, so they will better understand their responsibilities, was discussed. The procedure being followed in the prefectures for conducting administrative reviews of the public assistance program by Military Government personnel was reviewed by Lt. Col. C. A. Brock, Welfare Officer, MG Section, I Corps.

Disaster Law

Ministry and Cabinet officials have approved of the following procedure for implementation of the Disaster Law:

- a. Ordinance to be promulgated on 20 October when the law becomes effective.
- b. Welfare Ministerial Instructions setting up the duties and organization of prefectural Operating Teams.
- c. Welfare Ministerial Instructions on the operation of the Disaster Relief law.

Ordinance a. above will be promulgated as of this date making the law in full effect as of 20 October.

Organization of prefectural Operating Team, b. above, will be coordinated with all Prefectural Governors in conference on 20 October. Teams will be organized not later than 31 October and report made to the Ministry of Welfare that this has been accomplished.

Ministerial Instructions will be handed to Governors 20 October which completely orients the Governors as to the workings of the law and what is expected of them. (c. above). Each prefecture must submit a plan to the Ministry of Welfare not later than 31 December, containing the following:

- a. Study of disasters peculiar to their prefecture.
- b. Their plans of utilizing their Operating Teams.
- c. What preparations are now in effect to handle disasters in their prefecture.
- d. Any stockpiles of supplies located in their prefecture that could be used for disaster.
- e. Their financial status as it relates to disaster. What funds are available?

These plans will be studied by the National Disaster Board which will, in consultation with the Ministry of Welfare, make such deletions and additions as are necessary.

SECTION II NURSING AFFAIRS DIVISION

Personnel

Mrs. Sweetser, Civilian Public Health Nurse, has been assigned to the Kanagawa Military Government Team. The 6-weeks refresher course, given at Nippon Medical University, to assist nurses in meeting the new nursing standards, was completed 15 October. Sixty nurses attended. Course included explanation of the new nursing legislation.

The Midwives Section of the Association will give their first refresher course in Tokyo, beginning 20 October.

SECTION III VETERINARY AFFAIRS DIVISION

The Ministry of Agriculture and Forestry reported the following new outbreaks of animal diseases for the period, 12 October-18 October 1947:

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Tokyo	Swine Erysipelas	1

SECTION IV SUPPLY DIVISION

Distribution

X-ray film distribution is still receiving attention in order to assure adequate supply. A conference among film manufacturers, Ministry of Welfare representatives and Supply Division personnel was held to discuss procedures. Film companies have designated agencies within the prefectures who are authorized to sell x-ray film to consumers. Detailed information regarding names and locations of these agencies was contained in the previous issue of the Weekly Bulletin. In order to prevent x-ray film from purchase by those not authorized to operate x-ray equipment, a check system of reports will be required from these designated agencies. Detailed reports of quantities received and sold will be submitted to Prefectural Health Officers, and through them to Ministry of Welfare officials concerned with distribution of this item. It must be noted, however, that no automatic delivery will be made to agencies. These agencies are required to order quantities they desire from the film manufacturing companies. Thus it seems the consumer, hospital, doctor, or dentist, must make his needs known to these retailers. The following revised price scale issued by the Ministry of Finance 14 October 1947 governs maximum prices of x-ray films.

	Size	Unit	Nitrate Base	Acetate Base
5 x 7	Kabine	dozen	Yen 315.90	Yen 401.70
6 1/2 x 8 1/2	Yatsugiri	dozen	481.40	626.10

8 x 10	Mutsugiri	dozen	655.80	861.70
10 x 12	Yotsugiri	dozen	923.00	1,225.00
11 x 14	Daiyotsugiri	dozen	1,165.40	1,550.00
14 x 17	Hansetsu	dozen	1,729.60	2,313.80
Other films:	35mm, 3 rolls per can, 170.20 yen			
	6cm X 6 cm (2B), per roll, 54.30 yen			
	Dental film, 2 dozen per box, 201.80 yen			

The address of the Osaka branch office of the Konishi-roku Photo Industrial Co., omitted from the previous issue of the Weekly Bulletin, is 26, Tenjinbashi-suji, 1-chome, Kita-ku, Osaka-shi.

Production

Release of the following DDT Products and Typhus Vaccine were approved for the period 12 - 18 October 1947:

Prefecture	10% DDT Dust	5% DDT Residual Effect Spray	Typhus Vaccine
Tottori	9,250 lbs.		
Hokkaido			3,900 gallons
Shizuoka	10,000 lbs.		5,000 gallons
Wakayama	8,000 lbs.		
Mie	12,250 lbs.		7,105 gallons
Mie(Nat'l Hospital)	20 lbs.		30 gallons
Yamagata	15,000 lbs.		
Fukushima	13,560 lbs.		4,300 gallons
Fukushima(coal Mines)	4,100 lbs.		1,200 gallons
Ehime	21,500 lbs.		750 gallons
Osaka	500 lbs.		500 gallons
Akita	10,000 lbs.		
Total	104,380 lbs.		22,785 gallons

A total of 3,860,577 lbs. of 10% DDT Dust and 195,027 gallons of 5% DDT Residual Effect Spray represents total stocks in wholesale warehouses of the Ministry of Welfare, Japanese Government, as of 11 October 1947.

The 27th Weekly Report of production of DDT duster and spraying equipment for mosquito and fly control program for 1947 indicates the following data for the period 5 - 11 October 1947.

	Total To Date 4 Oct.	No. Mfgd. 5-11 Oct.	Total Mfgd.to Date 11 Oct.	Total Shipped to Date 11 Oct.	<u>Balance</u> On Head	To be Mfgd.
DDT Dusters	64,896	64,896	63,230	1,666	25,104
Sprayer, knapsack type, 3 gal. capacity	39,443	39,443	16,119	23,324
Sprayer, pump type, semi-automatic	23,808	23,808	11,719	12,089
Sprayer, hand type, 1/2gal. capacity	37,610	37,610	26,059	11,551
Total	165,757	165,757	117,127	48,630	25,104

Narcotics

A Japanese narcotic agent, inspecting a doctor whose abstract showed four purchases of narcotics since May of 1947, found the doctor had carefully removed the narcotic strip stamps, sealing the bottles, had emptied the

narcotic contents, refilled the bottles with quinine and other non-narcotic substances, than again affixed the seals. The narcotics had been used for addiction purposes. The case illustrates the results of training given to Japanese narcotic agents.

Recently two prefectures have reported the arrest of prefectural pharmaceutical affairs officers for possession of narcotics. One of these officials was a narcotic agent for a short period of time. The Ministry of Welfare is instructing all prefectural narcotic agents that only narcotics which have been seized and are being held as evidence or awaiting disposition instructions from the Narcotic Section, Ministry of Welfare, and which have been properly recorded and reported may be held in custody by prefectural officials. The Ministry of Justice has been instructed to direct local procurators to demand maximum penalties for any narcotic official who is guilty of malfeasance in office.

Preliminary work has been done toward consolidating SCAP narcotic directives and the present Japanese narcotic ordinance into a draft of one law for presentation to the Diet by the Ministry of Welfare. The draft will include a provision for the incarceration of any person who is found to be addicted to narcotics.

SECTION V PREVENTIVE MEDICINE DIVISION

Typhus Fever

The Ministry of Welfare announced a change in the dates scheduled for typhus training conferences. The meeting at Sapporo, Hokkaido will be held as scheduled on 23 and 24 October. Due to conflicting dates the meeting originally scheduled for 28 and 29 of October in Fukushima has been cancelled; instead, the meetings will be held in Tokyo at an early date in November (date to be announced).

Attention is invited to TB - PH - Prev. Med.3 (Public Health and Welfare Technical Bulletin) dated February 1947, subject, Rickettsia diseases in Japan and Korea. This bulletin deals with louse-borne typhus, murine typhus and scrub typhus. Control methods remain essentially as outlined but with more emphasis on the control of fleas, especially against rat fleas, the active vectors of murine typhus. Flea control procedures must precede rat control measures as noted in the Weekly Bulletins for 18 July, 25 July and 2 August.

Workers and leaders of sanitary teams must be trained and retrained at periodic intervals concerning dusting and spraying techniques. This training procedure played an important part in the efficiency of operation of teams engaged on typhus control work in past typhus seasons and should be emphasized again this year.

Tuberculosis

During the spring months, a manual on the diagnosis of tuberculosis was prepared, translated into Japanese and copies distributed to the prefectural health officers for distribution among the officers in charge of the health centers. It would be a matter of much interest to check on this distribution and the application of the material therein, particularly, the diffusion of information at large in the prefectures regarding control of tuberculosis in the home.

Sanitation

There is still much confusion in the minds of the Japanese as to the proper use of DDT. Prefectural officials should be advised that the following simple rules be translated, mimeographed and distributed with the DDT, in an effort to correct this misunderstanding.

1. DDT is a chemical -- originally in a crystalline form and pulverized into a fine powder -- it is very stable -- its chief value over other insecticides is that its toxic properties are retained for as much as 90 days, or until it is physically removed or changed by washing dilution or rubbing off.

2. It is used in two forms -- powder and liquid.

- a. The powder (10% DDT) is used for crawling insects and applied to clothes, futon, tatami, rugs, etc. It is also used for human louse and flea control by dusting over the hair, clothes and all parts of the body. It can be used for fly and mosquito control by dusting surfaces of the liquid where the Larvae are found. Indiscriminate use for this purpose results in a tremendous loss of this material; it should be used only as a last resort.

b. Liquid 5% DDT solution in oil is for spraying or painting with a brush on surfaces where adult flies and mosquitoes rest. Mosquitoes prefer dark cool places inside of dwellings or other enclosures where they are protected from the weather and are near their blood meal. The places to coat with liquid DDT insecticide are the dark corners and ceilings of the room, the inside of closets, undersides of tables, furniture and shelves; light cords, pictures or ornamental bric-a-brac where signs of flies are found; the walls of the benjo, dining room and kitchen (except in the proximity of the fire place.)

3. Do not waste DDT powder or insecticide by spraying or dusting indiscriminately on the ground or along ditches or other places out of doors. This type of control should be done under close supervision and after field investigation to determine types and rates of breeding. These places should be cleaned up and maintained so as not to be guilty of insect breeding -- and treated with insecticides only when this is impossible of accomplishment. DDT is not to be used as a substitute for sanitation.

SECTION VI
MEDICAL SERVICE DIVISION

Japanese Civilian Hospital Strength Report for week ending 26 September 1947 shows 3,386 hospitals with a capacity of 214,053 beds of which 108,045 were occupied. During this same period 311,010 out-patients were treated.

SECTION I GENERAL

PHMJG's (Public Health and Welfare Section Memorandums to the Japanese Government)

Due to many requests having been received, officially and informally, from Military Government teams for copies of PHMJG's which they have not received, next week's bulletin will carry, as a supplement, a review and summary of all PHMJG's issued to date.

Due to the necessity for utmost conservation of paper materials it has been necessary to restrict distribution of PHMJG's to directives which require surveillance activities. Where surveillance activities are not required, distribution has been made solely to Military Government, Hq. Eighth Army.

This summary will permit each Military Government team to review their files and determine if they possess all directives requiring surveillance.

In the future PHMJG's, issued by the Section, will be summarized in the following Weekly Bulletin, thereby enabling Military Government teams to keep fully informed on current directives. Distribution in bulk, to Military Government, Hq. Eighth Army, for redistribution to all M. G. Teams of those PHMJG's requiring surveillance and which have a supporting "Letter of General Application", will continue without change.

SECTION II WELFARE DIVISION

Demonstration Education Projects in Reformatories and Juvenile Training and Education Institutions

As the result of conferences between Staff Sections and interested Japanese Ministries, two demonstration education projects are in the process of being set up in Juvenile Correction Institutions. The discussions also resulted in setting up a National, as well as Prefectural councils, on Education and Training in Prisons, Reformatories and Juvenile Institutions. The National Council "shall be for the purpose of contributing to the reformation and demonstration of education and training for the Juvenile inmates in corrective institutions and shall investigate or deliberate the matters which might be proposed by local (Prefectural) councils as well as to have contact with government authorities or others regarding their decisions.

Prefectural councils "shall study the individual institutions and shall act in an advisory capacity to heads of institutions, acting as a group or as individual experts, recognizing, however, that the institutional head is responsible for the operation of the institution." These councils shall be made up of members of prefectural government as well as professional experts and lay people.

At present two projects have been authorized, one at Kawagoe, Saitama Prefecture and one at Hagiya, Tokyo-to. It is expected that local councils will soon be in operation in these prefectures and that studies will be made of the selected institutions to determine what types of education and training may best be used. Interested Ministries involved will pass information on to prefectural officials. It is probable that MG Teams will be asked for assistance and guidance in these projects.

Licensed Agencies for Relief in Asia (LARA)

Licensed Agencies for Relief in Asia (LARA) have received their 26th, 27th and 28th overseas shipments of relief supplies. These shipments were as follows:

a. 26th Shipment: Arrived in Yokohama aboard SS Philippine Transport, on 15 October, from U.S. and contained 15.31 tons (clothing, including shoes 13.75 tons - soap .56 tons - food 1.00 tons).

b. 27th Shipment: Arrived in Yokohama aboard SS General Gordon, on 17 October, from U.S. and contained 25 tons (food).

c. 28th Shipment: Arrived in Yokohama aboard SS China Bear, on 24 October, from U.S. and contained 8.3 tons (clothing).

Foreign National Food Ration

Official Japanese Government Prices for food stuffs to be purchased by foreign nationals.

National Public Assistance Recertification Plan

Tentative plans have been developed by the Social Affairs Bureau, Ministry of Welfare for a review and recertification of all persons receiving funds through the Daily Life Security Law.

According to present plans this recertification program will begin 1 December. Further information will be contained in subsequent weekly bulletins.

Delay in Monthly Public Assistance Reports

The Ministry of Welfare reported on 27 October that the following prefectures had failed to get their monthly statistical reports to the Ministry on 25 October: Miyagi, Tochigi, Hyogo, Tottori, Hiroshima, Tokushima and Kumamoto.

SECTION III
VETERINARY AFFAIRS DIVISION

The Ministry of Agriculture and Forestry (Bureau of Animal Industry) reported the following new outbreaks of animal diseases for the period 19-25 October:

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Ibaraki	Equine encephalitis	3

Meat and Dairy Inspection

The following is a summary of meat and dairy inspection reports for August 1947:

MONTHLY MEAT INSPECTION REPORT

	Cattle	Calves	Sheep & Goats	Swine	Horses

SECTION IV SUPPLY DIVISION

Distribution

Shipments of dusting and spraying equipment to the prefectures under Ministry of Welfare supervision accounted for a total of 2,658 pieces during the period 7 October through 20 October. These were distributed to the prefectures as follows:

Prefecture	DDT Duster	Knapsack Sprayer	Semi-automatic Sprayer	Hand Sprayer
Hokkaido	590	504		
Aomori		60		60
Saitama	100			
Aichi			240	
Kyoto			150	
Osaka		320		160
Hiroshima		157	67

September's Shipments of VD drugs and sulfathiazole and penicillin were made to the prefectures during the first week of October. Outline of distribution follows:

Mapharsen	4,413 grams
Bismuth Subsalicylate Inj.	887,404.8 cc
Sulphathiazole	460,160 tablets
Penicillin	1,520,056,000 Oxford units

Shipments of four items of U.S. Army surplus stocks purchased by the Japanese Government were approved for distribution to all 46 prefectures on a basis of population figures, as follows:

<u>Item</u>	<u>Unit</u>	<u>Quantity</u>
Soft Soap	1 lb	8,208
Plaster of Paris, orthopedic	4 lb	13,725
Patrolatum liquid heavy	1 qt	1,816
Doxtrose 5%	1,000 cc	5,965

Production

Production of biologicals during September continued to be excellent. The planned production of 150,000 liters of triple typhoid vaccine was completed during September. Production of diphtheria toxoid vaccine continued to gain momentum.

	<u>Crude Vaccine</u>	<u>Finished Vaccine</u>	<u>Crude Vaccine</u>	<u>Finished Vaccine</u>
Cholera	886,530 cc	4,020,000 cc	1,013,830 cc	3,893,920 cc
Typhus	6,785,797 cc
Triple Toxoid	3,699,100 cc	41,858,400 cc	5,861,500 cc	44,375,300 cc
Diph. Toxoid	4,409,140 cc	160,700 cc	3,592,780 cc	286,850 cc
Smallpox	1,060,000 doses	1,397,975 dos.	15,650,650 dos.	1,224,200 dos.
Diph. Antitoxin		31,900 cc		178,603 cc

SOURCE: Ministry of Welfare, Japanese Government

Production of x-ray film during September showed some decrease in total output. A total of 26,222 square meters was produced as compared to 33,783 square meters during August. This decrease is attributed to the critical shortage of raw materials, specifically acetone used for the base and amyl and butyl acetate used for the solvents. Acetate bases for x-ray film are essential if the non-inflammable type of film is to be manufactured, as opposed to the nitrate bases to produce the inflammable type of film. Plans have been made to continue the production of the

non-inflammable type high quality film and sacrifice somewhat on production quotas to be accomplished rather than emphasize quantity of production thereby sacrificing quality.

Size	Quantity (Unit - dozens)		
	July	August	September
4 3/4" × 6 1/2"	1,490	3,850	152
6 1/2 " × 8 1/2"	495	614	452

Releases of the following DDT products and typhus vaccine were approved for the period 19-25 October:

Prefecture	10% DDT Dust	5% DDT Residual Effect Spray	Typhus Vaccine
Hokkaido (prisons)	750 lbs.		
Hyogo		5,000 gallons	
Miyazaki		3,735 gallons	
Nagasaki	37,600 lbs.	10,300 gallons	
Kumamoto		6,615 gallons	
Tottori			60 vials
Aichi	50,000 lbs.		
Saga	50,000 lbs.		
Total	138,350 lbs.	25,650 gallons	60 vials

The 28th weekly report of production of DDT duster and spraying equipment for mosquito and fly control program for 1947 indicated the following detailed data for the period 12-18 October:

	Total To Date 11 Oct.	No. Mfgd. 12-18 Oct.	Total Mfgd. To Date 18 Oct.	Total Shipped To Date 18 Oct.	On Hand
DDT Dusters	64,896	...	64,896	63,820	1,076
Sprayer, knapsack type, 3 gal. capacity	39,443	...	39,443	17,015	22,428
Sprayer, pump type, semi-automatic	23,808	...	23,808	12,011	11,797
Sprayer, hand type, 1/2 gal. capacity	37,610	...	37,610	26,119	11,491
Total	165,757	...	165,757	118,965	46,792

Shikutani Mfg. Co., largest producer of the DDT duster, has recently received a delivery of 22 tons of brass and tin plate which will be sufficient to complete the manufacture of the remaining quota of 25,104 dusters. The completion of the DDT Duster production will complete the entire duster and spraying equipment program for 1947.

A total of 3,819,227 lbs. of 10% DDT dust and 205,227 gallons of 5% DDT Residual Effect Spray represents total stocks in wholesale warehouses of the Ministry of Welfare, Japanese Government, as of 18 October.

Narcotics

Finished narcotic imports consisting of codeine phosphate and dionine have been received. The codeine, in one-kilogram packages, is scheduled to be shipped immediately to registered compounders and producers in the Tokyo and Osaka areas for repackaging, tableting and labeling.

In national tuberculosis sanatoriums and hospitals as well as private institutions, the use of morphine is strongly discouraged where codeine is the indicated drug. All these institutions should maintain an adequate supply of codeine and all registered local wholesalers should replenish immediately their stocks of codeine powder and tablets to a six months supply level.

The Narcotic Section, Ministry of Welfare, has been instructed to circularize all local wholesalers and national tuberculosis sanatoriums and hospitals that codeine stocks are available and must be kept up to the required level to supply the medical needs of the Japanese people.

SECTION V
PREVENTIVE MEDICINE DIVISION

Sanitation

Chlorination of Water Supplies The types of chlorine available for sterilizing water are: Liquid Chlorine, calcium hypochlorite and chlorinated lime. The strength of the later two will decrease with age and methods of handling, but for the purpose of estimating quantities the following strengths may be used:

Liquid chlorine	100%	available	chlorine
Calcium Hypochlorite (US)	75%	"	"
Chlorinated Lime (US)	30%	"	"

Liquid chlorine (Gas under pressure) comes in 200 pound and one ton cylinders. The chlorine is piped from these cylinders to a chlorinator, which feeds the gas into a chamber through which water is circulating, putting the chlorine gas into solution. This solution is fed continuously into the water supply. Rates of application are regulated automatically by a system of gauges and valves. It is possible (as an emergency measure only) to bypass the control valves and pressure gauges and operate the rates of application manually, however, this requires very close supervision of the dosages being effected and is not to be recommended.

Calcium hypochlorite and chlorinated lime should be made into a stock solution and then added to the water.

The amount of chlorine required to sterilize water varies widely with the amount of organic matter in the water and in the distribution system. Systems that have not been chlorinated for long periods of time will require high dosages, (as much as 4 PPM) as there is usually an accumulation of various types of organic material, algae, plankton, etc. in the pipes that require "burning out" before a constant residual with reasonable dosages can be held. Usually after a system has been chlorinated continuously for several months the dosages can be cut to as low as 1.0 PPM depending on the quality of the water and amount of contamination entering the system after chlorination.

The "burning out" phase of chlorination is usually accompanied by unpleasant tastes and odors that usually diminish with time and the lowering of the initial dosages. This can be helped by flushing the system (through fire plugs) and cleaning mains when necessary.

The chlorination of individual supplies, particularly wells, presents a problem that often must be solved by crude methods. To be safe, however, chlorine must be applied in known quantities and the amount of chlorine residual checked after a retention period of 24 hours. It is desired to have a residual of not less than 0.2 P.P.M. at the end of the distribution system.

Calculation of amount of chlorine required to treat a given amount of water at any given rate, expressed in parts per million, can be done by the following equation--

$$\text{Pounds of chlorine Required} = \frac{\text{gals. of water} \times 8.34 \times \text{dosage in PPM}}{1,000,000}$$

SECTION VI

MEDICAL SERVICE DIVISION

Japanese Civilian Hospital Strength Report for period ending 3 October 1947 shows 3,385 hospitals with a capacity of 213,952 beds of which 105,847 were occupied. During this same period 315,835 out-patients were treated.

SECTION VII SOCIAL SECURITY DIVISION

General

Available figures indicate 1,921,000 government employees have health insurance coverage under provisions of the various government Mutual Aid Societies. The government Pension System does not cover the same number as it is restricted to certain grades of government officials. When this number is added to the number covered by the Health Insurance Law for industrial workers, the total is approximately 6,000,000 employees who have health insurance coverage.

The Ministry of Welfare reports an increase of 20% since July 1946, of employer participation in Health Insurance due to reorganized industries.

The Allowance Bureau, Ministry of Finance, has submitted a proposed law to provide a workmen's compensation program for all government employees. In its present form, considerable revision is necessary with reference to contributory negligence because of coordination with other programs and in providing for appeal rights. It will integrate, under one law, the present limited protection furnished by the provisions of various Imperial Ordinances (one dated in 1886) and extend comprehensive protection to all employees.

SECTION VIII NUTRITION CONSULTANT

Nutrition

The November nutrition surveys will be conducted in the usual cities and rural areas of Japan. Physical examinations are to be made in some rural areas in the last week of October. Food consumption studies will all be made in November. The Sanitary Bureaus, of the city and prefectural offices, have been instructed by the Ministry of Welfare to inform the Military Government Teams of the time of the surveys.

Military Government Public Health Officers should observe the surveys, for the purpose of determining the character of observations made and to lend prestige to the nutrition surveys.

Average results of the August nutrition surveys are contained in the attached table.

SECTION IX MEMORANDA TO JAPANESE GOVERNMENT

None.

CRAWFORD F. SAMS
Colonel, Medical Corps
Chief

Incl. (2) :

1. Weekly Summary Report of Cases and Deaths from Communicable Diseases in Japan, week ending 18 October 1947.
2. Number and Rate of Births, deaths, infant deaths, stillbirths, marriages and divorces reported according to prefecture with digest, August 1947.

SECTION VI - Medical Service
SECTION VII - Social Security
SECTION VIII - Memoranda to Japanese Government

SECTION I
WELFARE DIVISION

Welfare Training Conference

Another in a series of social work training conferences was held in Fukui Prefecture from 13 - 19 October. The conference was similar to previous weekly classes sponsored by the Japan Social Work Association. A total of 53 persons, including 7 women, attended the meetings. Most of the officials attending were from welfare offices of the Prefecture cities, towns and villages. Prefectures sending people to the meeting were: Osaka (9), Kyoto (10), Shiga (3), Hyogo (5), Nara (3), Wakayama (6), and Fukui (17).

Next training conference to be held by the Japan Social Work Association is scheduled for 15 - 22 November at Izu, Nagaoka Onsen, Shizuoka Prefecture. It is expected this conference will be attended by welfare officials from the Tokai-Hokuriku Region.

Social Work Education

A national Social Work Education Committee (Shakai Jigyo Kyoiku Konwa Kai) met in Tokyo on 27 October. Meeting was attended by representatives of the Ministries of Education and Welfare, Universities, colleges, and private welfare agencies. At the meeting, consideration was given to problems of establishing social work training programs in the universities. Action was taken to establish a formal committee which will be a permanent organization to consider the entire matter of social work education in Japan. The permanent committee will consist of official representatives of colleges and universities which are interested in the field of social work education and other interested individuals. Consideration is also being given to the creation of a similar social work education committee for the Kansai District. Many of the colleges and universities in the Kyoto-Osaka-Kobe area have indicated an interest in social work education but because of distance have been unable to participate in the meetings which have been held in Tokyo.

SECTION II
VETERINARY AFFAIRS DIVISION

Weekly Animal Disease Report

The Ministry of Agriculture and Forestry reported the following new out-breaks of animal diseases for the period 26 October - 1 November.

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Hokkaido	Swine Plague	2
Fukushima	" "	5
Kanagawa	Swine Erysipelas	1
Miyagi	Swine Cholera	8
Hiroshima	Blackleg	1
Yamanashi	Equine Encephalitis	6
Yamagata	" "	10

SECTION III
SUPPLY DIVISION

Distribution

Under supervision of Ministry of Welfare, shipments of a total of 958 sprayers were made for use in the insect and rodent control program, in the period 21 October to 27 October. Details of shipments follow:

<u>Prefecture</u>	<u>Knapsack Sprayer</u>	<u>Semiautomatic Sprayer</u>	<u>Hand Sprayer</u>
Fukushima	162	0	0
Aichi	66	0	0
Osaka	0	0	270
Hiroshima	85	120	0
Oita	130	125	0
Total	443	245	270

No DDT dusters were shipped during this period.

Reports from several prefectures indicate the allocation and distribution of U.S. Army surplus vehicles, purchased by the Japanese Government, showed some instances of injustice. National hospitals, already possessing vehicles, received additional while municipal institutions were left with no transportation. When the distribution was made, time did not allow a complete study of requirements in all hospitals in Japan. The allocation was planned on advice from Ministry sections responsible for the various public health services.

A survey is being conducted by the General Affairs Section of the Ministry of Welfare requiring health sections of the prefecture governments to submit information on each installation as follows:

Size of facility
 Number of beds
 Average monthly in-patients
 Average monthly out-patients
 Vehicle status

From this information a plan of redistribution for utmost utility of these vehicles will be instituted:

Production

The 29th weekly report of production of DDT duster and spraying equipment for mosquito and fly control program for 1947 indicates the following data for the period 19-25 October:

	Total To Date 18 Oct.	No. Mfgd. 19-25 Oct.	Total Mfgd. To Date 25 Oct.	Total Shipped To Date 25 Oct.	Balance On Hand	To be Mfgd.
DDT Dusters	64,896	...	64,896	63,820	1,076	25,104
Sprayer, knapsack type, 3 gal. capacity	39,443	...	39,443	17,458	21,985	...
Sprayer, pump type, semi-automatic	23,808	...	23,808	12,256	11,552	...
Sprayer, hand type, 1/2 gal. capacity	37,610	...	37,610	26,389	11,221	...
Total	165,757	...	165,757	119,923	45,834	25,104

A total of 3,994,917 lbs of 10% DDT dust and 174,297 gallons of 5% DDT Residual Effect Spray represents total stocks in wholesale warehouses of the Ministry of Welfare, Japanese Government, as of 25 October.

There were no requests for shipments of DDT products received during the period 26 October - 1 November and hence, no releases were given.

Narcotics

An inspection trip through some of the outlying prefectures revealed that many narcotic agents are not making investigations on their own initiative, but are turning all information received over to prefectural police for investigation and report. The Narcotic Section, Ministry of Welfare, has been directed to instruct prefectural narcotic officials that they, as a specialized narcotic enforcement agency, are to make their own, investigations and to use the police for assistance only when necessary. Further, it is the duty of prefectural narcotic agents to follow-up and make thorough investigation of all police cases which terminate upon the arrest of an individual narcotic violator in order to determine the source of supply and to apprehend all persons involved.

As an example of the proper procedure, in Tokyo recently, the Military Police picked up a foreign national in a state of unconsciousness. It was found he had considerable narcotics on his person. The case was investigated further by Tokyo narcotic officials who in one day learned the man in possession of the narcotics was an addict, had been assisting a doctor from whom he was taking regular injections, the doctor falsifying his records to indicate other patients were receiving the narcotics.

The inspection trip further revealed that some hospitals still have stocks of narcotics far beyond their requirements, while local wholesalers in the vicinity are in short supply of the same narcotics. Removal of excess stocks from practitioners (including hospitals) and retailers have been accomplished in most prefectures during the past year. Corrective action is being taken at the national level to complete the project.

SECTION IV NURSING AFFAIRS DIVISION

Public Health Refresher Course

The next four-months course will begin in Tokyo 8 December for Public Health Nurses. One, well qualified Public Health Nurse is being requested to attend from each Prefecture. Notices are being sent to each Prefecture directed to the Japanese doctor in charge of Public Health.

The Public Health Nurses boxes are completed and the nurses are being taught the use and care of the box.

The Midwife section of Tokyo-To, sponsored a short course for midwives at Keio University Hospital from 20 to 30 October. Eighty-four midwives attended the 30 hours of instruction. Outstanding Japanese obstetricians and pediatricians, and nurses from Nursing Affairs Division of Public Health and Welfare conducted the teaching.

A moving picture on Nursing in Japan titled "Lady of Science", has been completed and will soon be ready for the Japanese nurses.

SECTION V PREVENTIVE MEDICINE DIVISION

Rodent Control

The following is a conservative estimate on food consumed by the rat population in Japan which is estimated at 28,000,000.

Surveys over period of years show large fluctuations in the rat population in various places. But by actual catches and results of poison campaigns, the average has been two (2) per house. This number does not include some species of field rats and sewer rats that do not come into the vicinity of human dwellings.

The amount of food consumed per rat is 20 gms per day.

Total amount by weight:

Consumed	560,000,000 <u>ozs</u> per day
or	1,235,000 <u>lbs</u> per day
or	617.5 <u>tons</u> per day
or	225,387.5 <u>tons</u> per year
or	32 <u>shiploads</u> (Liberty type) per year

Population figures and weight of foods consumed are from surveys and actual studies of feeding habits made by Dr. Masami Kitaoka, Japanese National Institute of Health, Tokyo. In his opinion this estimate is low. The usual offhand estimates are one (1) rat per person, which will roughly triple these figures. This does not include the incidental cost of damage to property such as destruction and spoilage of stored goods, fires etc.

No reduction can be made of the rat population until wide scale extermination programs by trained personnel, are carried out on a nation wide basis. The old system that has prevailed, of selling to the individual a packet of rat poison with instructions on its use, only serves to keep the rat population at a healthy level.

There is at the present time sufficient Antu available for each prefecture to put on an adequate program. Local officials generally are not interested in expending their budgets and facilities to include a program that can be placed on the individual. Constant pressure is therefore necessary to insure active Prefectural participation in rodent extermination campaigns.

Typhus Fever

The first in the series of typhus control conferences was held on 23 and 24 October at Sapporo, Hokkaido. The meeting was attended by 110 persons interested in the field of public health. The program was planned and arranged by the Ministry of Welfare in cooperation with the Hokkaido prefectural Military Government Team.

The second conference in the series will be held in Tokyo on 13 and 14 November for the benefit of the Japanese prefectural health authorities and other representing the prefectures lying in the northern half of Honshu.

Residual spraying of railway cars, etc.

Now that the typhus season is present, it is urged that residual effect DDT spray schedules for railway cars, ferries, street cars, buses, be rigidly adhered to. It is also of great importance that proper spray application be made at intervals of not more than 30 days, in jails, orphanages, hospitals, theaters, public bath houses, railway stations, etc, for the control of typhus fever.

Public Health Train

The schedule for the appearances of the Public Health Train in various localities within the Kanto Region of Japan is published for the information of those concerned.

SECTION VI
MEDICAL SERVICE DIVISION

Japanese Civilian Hospital Strength Report for week ending 10 October 1947 shows 3,380 hospitals with a capacity of 212,501 beds of which 104,655 were occupied. During this same period 316,582 out-patients were treated.

SECTION VII
SOCIAL SECURITY DIVISION

Recent negotiations between the Ministry of Finance, the Ministry of Welfare and the Cabinet resulted in additional appropriations for the National Health Insurance program. Emphasis has been placed on certain portions of the appropriations that will be definitely used for establishing and equipping more adequate medical facilities in those areas, first, where the need is the most urgent and second, where the organization can assume the responsibility.

Inquiries continue to arrive regarding medical care for Japanese Nationals on duty with the Occupation Forces. Investigations of various cases frequently indicate that the individuals have not been informed as to their eligibility for free medical care, for injury or illness incurred as a result of duty, or for non-occupational disabilities at moderate rates. The employees have not been informed as to where they should report for assistance, or for entering their claim. The fault seems to lie with the labor relations officer of the Central Liaison Office at prefectural levels, for not having disseminated this information.

SECTION VIII
MEMORANDA TO JAPANESE GOVERNMENT

See attached supplement.

CRAWFORD F. SAMS
Colonel, Medical Corps
Chief

SECTION I
WELFARE DIVISION

Recertification of Eligibility of all Public Assistance Recipients in Japan

The Ministry of Welfare has submitted an approved plan for a review of all public assistance cases in the nation. The review will start 1 December and will continue for approximately 50 days, Purpose of the review is to:

1. Insure proper administration in cities, towns and villages by correcting accounting, statistical, and case handling procedures.
2. Assist in the training of these 70% of the present Minsei-iin, who are comparatively new to their jobs, by a system of field supervision from the Ministry, the prefectural and branch offices, as well as from the higher ranks of the Minsei-iin.
3. To assure that the expenditures for public assistance programs are justified insofar as the eligibility of the present recipients is concerned.

To assure uniformity, the forms to be used for the review will be provided by the Ministry of Welfare. Additional forms will be provided for recapitulation purposes and the review form will remain in the local office as a part of the family record.

The Ministry of Welfare has secured the services of seven men to be used as field supervisors for the remaining months of the present fiscal year. These men will be available in the fields to assist prefectures with this plan and will, it is proposed, form the nucleus of a permanent field staff operating from the Ministry. Funds were also secured for travel expenses for prefectural staff who will be expected to assist and supervise the work in cities, towns and villages.

The actual review of individuals and families will be the responsibility of the regular Minsei-iin but will be assisted by a Minsei-iin from an adjacent area and will be closely supervised by Minsei-iin officials, and by branch and prefectural welfare officials. The recertification form includes family make-up, earnings and incomes, occupational history and potential need for special training or medical care, the family plan for its own rehabilitation, plan of the Minsei-iin for the family, and the total public assistance needs of the family. Ministry officials have been cautioned that instructions to prefectural offices should be clear and concise and that all participants should clearly understand that the review is not for the purpose of trying to determine how many persons can be cut off the public assistance rolls.

The recertification plan should provide excellent for Japanese officials including those in the Ministry of Welfare. The review form has been so constructed that it should call for constructive thinking on the part of Minsei-iin as well as the families involved.

Licensed Agencies for Relief in Asia (LARA)

The 29th, 30th and 31st overseas shipments of relief supplies have been received by LARA. These shipments contained the following supplies:

<u>29th shipment</u>		<u>30th shipment</u>		<u>31st shipment</u>	
Clothing	15.20 tons	Clothing	6.10 tons	Clothing	1.67 tons
Soap	2.50 "	Foods	15.50 "	Foods	3.75 "
Total	17.70 "	Medicine	5.33 "	Medicine	39.50 "
		Total	26.43 "	Total	44.92 "

Cooperative for American Remittances to Europe and the East (CARE)

CARE, Inc., is a non-profit agency subsidized by private relief, foundational, religious and benevolent organization within the United States.

Their plan of operation is to accept dollar payments from any donor for a specific type of relief gift package to be sent to a foreign country to a designated recipient. A representative of CARE, Inc. in each foreign country (or near) receives the packages and supervises distribution through indigenous agencies or facilities.

The recipient, upon receiving a CARE package, is required to sign a receipt which is then returned to the donor as a notification of delivery.

In the past CARE, Inc., has utilized War Department surplus "10 in 1" packages and has delivered a complete packages to countries in which they operate at a total cost of only \$10.00 to the donor. They have now exhausted the surplus supply of "10 in 1" and have prepared their own food package which is similar in nature and contents to the "10 in 1". In addition to the food package they have prepared three other types of packages, namely: cotton package, woolen package and blanket package. They are now considering the preparation of two other types of packages, namely: medicine package and infant care package.

CARE, Inc., made a request to extend their operations into Japan and were given permission to send a representative to Japan for the purpose of making negotiations for their operations in this theater.

CARE, Inc., has now been licensed by SCAP to extend their operations into Japan and the necessary plans to effect its establishment are in the final phase.

Complete information covering CARE, Inc., operations in Japan will be set forth, in brief, in a subsequent bulletin and in detail though a Public Health and Welfare Technical Bulletin, as soon as the CARE program is ready for operation.

Public Assistance Report (September 1947)*

The Ministry of Welfare reports the following totals for September. Figures for August 1947 and September 1946 are given for purposes of comparison.

	<u>Sept. 47**</u>	<u>Aug. 47</u>	<u>Sept. 46</u>
Persons non-institutional	2,987,123	2,542,006

Increase in Public Assistance Grants Effective 1 November

The Ministry of Welfare has recommended to the prefecture governors that they increase public assistance grants to the maximum which is now authorized. This plan has been approved by PH&W Section and is expected to result in the increase of public assistance payments from 1 November 1947. The increase is based on the official increase in the cost of rice. (The maximum payments authorized are set forth in parenthesis in the table of allowances, Weekly Summary #31, dated 27 July 1947).

SECTION II VETERINARY AFFAIRS DIVISION

Weekly Animal Disease Report

The Ministry of Agriculture and Forestry reported the following new outbreaks of animal diseases for the period 2-8 November

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Hokkaido	Svine Erysipeles	46
Hokkaido	Texas Fever	11
Saitama	Equine Encephalitis	7
Miyagi	" "	10

SECTION III SUPPLY DIVISION

Production

The 30th weekly report of DDT duster and spraying equipment for mosquito and fly control program for 1947 indicated the following data for the period 26 October and November.

Total to Date 25	No. Mfgd. 26 Oct. - 1	Total Mfgd. To Date 3	Total Shipped To	Balance On Hand	Balance To Be Mfgd.

	Oct.	Nov.	Nov.	Date 1 Nov.		
DDT Dusters	64,896	1,630	66,526	65,246	1,280	23,474
Sprayer, knapsack type, 3 gal. capacity	39,443	--	39,443	17,678	21,765	--
Sprayer, pump type, semi-automatic	23,808	--	23,808	12,491	11,317	--
Sprayer, hand type, 1/2 gallon capacity	37,610	--	37,610	26,699	10,911	--
Total	165,757	1,630	167,387	122,114	45,273	23,474

Releases of the following DDT Products and Typhus Vaccine were approved for the period 2-8 November:

<u>Prefecture</u>	<u>10% DDT Dust</u>	<u>5% Residual Effect Spray</u>	<u>Typhus Vaccine</u>
Hokkaido	14,000 lbs	19,000 gallons	
Iwate	300 "	200 "	
Akita	1,500 "	100 "	
Yamagata	3,000 "		
Ibaraki	8,000 "	1,500 "	
Miyagi	250 "	50 "	
Okayama	570 "	100 "	
*Tokushima	200 "	15 "	
Saga	8,000 "	3,000 "	
Kyoto	300 "	30 "

Kochi			500 vials
Aichi			7,500 "
Osaka	50,000 "	5,000 "	
Tokushima	5,100 "		
Tokyo(prisons)	1,200 "		
Total	92,620 lbs	29,025 gallons	8,000 vials

A total of 3,873,467 lbs. of 10% DDT dust and 156,732 gallons of 5% DDT Residual Effect Spray represent, total stocks in wholesale warehouses id the Ministry on Welfare, Japanese Government, as of 1 November.

*Note: 200 lb. release to used specifically in Tokushima Coal Mines.

Narcotics

The September monthly report on narcotics from the Ministry of Welfare contains the following information

Total Registrants	87,508
Arrests	
Registered persons	64
Unregistered persons	50
Convictions	
Registered persons	7
Unregistered persons	7
Theft of narcotics	37
Losses by fire	None
Losses by flood	1

Penalties ranged from 15 yen fine to 1 year 6 month period servitude. Ministry of Justice officials, Ministry of Welfare official and district procurators were called into conference as a result on the 15 yen fine.

According to the present schedule, all narcotic dealers who apply for re-registration will have the 1948 narcotic registration certificate by 15 January 1948.

The following prefectures are authorized to produce marihuana for fiber purposes only during 1948 under SCAPIN 4773-A, 25 October 1947 and SCAPIN 3203-A, 11 February 1947: Aomori, Iwate, Fukushima, Tochigi, Gumma, Niigata, Nagano, Shimane, Hiroshima, Kumamoto, Oita, Miyazaki, Ishikawa, Fukui, Yamanashi, Hyogo, Okayama and Saga. Production will be as authorized under Ministries of Welfare and Forestry Ordinance No.1, dated 23 April 1947. Registration and acquisition of seed by marihuana producers must be completed early in 1948 to permit preparation of the fields and planting at the proper time.

As of 6 November, all but seven prefectures have at least one narcotic official with judicial police authority for narcotic violations. Ninety-five narcotic agents have already been commissioned with this authority by the Ministry of Welfare. Every effort is being made at the national level to expedite the commissioning of 55 more narcotic agents.

Distribution

Shipments of dusting and spraying equipment for insect and rodent control use during the period 28 October through 3 November amounted to 2,191 pieces. Three prefectures were supplied as following:

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsack Sprayer</u>	<u>Semiautomatic Sprayer</u>	<u>Hand Spryer</u>
Hokkaido	1,426	0	0	0
Aichi	0	0	235	310
<u>Hyogo</u>	<u>0</u>	<u>220</u>	<u>0</u>	<u>0</u>
Total	1,426	220	235	310

Reference is made to Weekly Bulletin Number 41, 5 October - 11 October. Agencies have been established by Konishiroku Photo Industrial Co. Ltd. in the Osaka area for the sale of x-ray film to consumers. Names and addresses of these additional agencies are listed below:

<u>Prefecture</u>	<u>Agent</u>	<u>Address</u>
Hyogo	Yamada Photo Shop	Oseki-dori, Tooyoka-machi, Shirozaki-gun
Okayama	Asano Photo Shop	No.34, Nakano-mashi, Okayama City
Yamaguchi	Norichika Photo Shop	Shin-machi, Tokuyama City

Kochi	Kitamura Shokai	No.19 Sakai-machi, Kochi City
Hiroshima	Yamamoto Photo Shop	No.1025, Yokogawa, 1-chome, Hiroshima City

The Ministry of Welfare has issued instructions dated 1 November, file YAKU 1312, from Chief, Pharmaceutical Section, Medical Affairs Bureau, to Chief, Health Department; Chief, Civil Welfare Department and Chief, Education and Civil Welfare Department of each prefecture. Subject is "Regarding Establishment of X-ray Film Agencies". This document contains detailed information, with names and locations of the agencies of the two film manufacturing companies. In addition, the same information has been furnished by the Ministry of Welfare to the Japan Doctors' Association and the Japan Dentists Association.

During September the following quantities of VD Control drugs have been distributed:

	<u>Item</u>	<u>September Distribution</u>	<u>On Hand 30 Sept.</u>
Mapharsen	0.6 g	3,090 ampules	1,472 ampules
"	0.06 g	24,260 "	188 "

"	0.04 g	27,600	"	1,400	"
Bismuth subsalicylate injection	18.0cc	23,000	"	0	
"	1.8cc	261,136	"	464,801	"
"	60.0cc	56	"	0	

Following is the distribution in September of sulfathiazole and penicillin:

<u>Item</u>		<u>September Distribution</u>		<u>On Hand 30 Sept.</u>	
sulfathiazole		5,151,360	tablets	460,160	tablets
penicillin	200,000 Ox.U.	3,480	vials	2,540	vials
"	100,000 Ox.U.	7,810	"	9,429	"
"	30,000 Ox.U.	14,352	"	4,079	"

SECTION IV NURSING AFFAIRS DIVISION

Weekly Status Report

The four-months National T.B training course for nurses opened 4 November at the Toin School, Nakano-ku, Tokyo. 25 nurses from 20 prefectures are register for this course. Two staff nurses from Nursing Affairs Division are assisting in this program.

A four-week refresher course sponsored by the National Association will open the 10th of November in Fukushima Prefecture. (P.H. Nurses, Clinical Nurses and Midwives). Two American nurses will assist in the teaching program.

The pamphlet "We Grow Up" has been completed in Japanese and will be on sale soon.

A well qualified Japanese Public Health Nurse will be expected from every prefecture 8 December for the next four months Public Health Nurses Course to be held at the Institute of Health, Tokyo.

SECTION V PREVENTIVE MEDICINE DIVISION

Typhus Fever

The Ministry of Welfare has submitted a plan for typhus control for the winter and spring months of 1947-48. The plan is based on experiences gained from former typhus control activities in Japan during the past two years and upon previously issued directives to the Japanese Government. The essential points of the plan include: a close physical check of repatriates, early cases, discovery, early reporting of suspect cases, early hospitalization of all cases, laboratory diagnostic procedures using the complement fixation test on sera of all suspect cases, control of lice, fleas and rat-mites by use of DDT (10%) insecticide power and DDT(5%) residual effect spray, preventive inoculation with Cox-type typhus vaccines, publicity and educational campaigns and training courses for public health officers, physicians, nurses and sanitary team personnel.

Attention is invites to SCAPIN 1523 dated 12 February 1947 -- Prevention and Control of Typhus Fever in Japan and to Public Health and Welfare Technical Bulletin "No.3 Rickettsial Diseases in Japan and Korea ", February 1947.

Public Health Train

An impressive and colorful ceremony was held 1 November at Harajuku Station, Tokyo, Japan, in commemoration of the opening of the Public Health Train exhibits. The train then moved out to its first three day stand at Tokyo Central Station and was host to more than 15,000 persons during this period.

Sanitation

Sewer Systems: Plans are underway to set up a sanitation commission to study and evolve ways and means of solving Japanese Sanitation problems.

One of the most important problems is to improve methods of collecting and disposing of night soil. It is anticipated that with the development of plants to manufacture ammonia synthetically, the use of raw night soil for fertilizer can be eliminated.

The two methods for collection of fecal matter commonly used are (1) the water carriage and (2) the dry nail system.

The water carriage system has proven the best type both from an economic and public health view point. However, it has not been practical for Japan as it raises the water content of the material, thereby creating a dehydrating problem. During the past 30 years several sewage treatment plants were installed in the large cities of Japan but for all practical purposes they are of little value, as the sewer collection systems were not installed, and very little sewage other than storm and waste water reaches the treatment plant.

Due to the fact that sewer construction utilizes a great deal of hand labor and comparatively small amounts of building material it makes an excellent work project, and will be a start toward the eventual elimination of the manual handling of night soil in Japan. Therefore, cities should be encouraged to work up sewer projects.

Initial projects should be in the congested city areas. Before any work is started, however, completed plans covering entire communities should be made. Trunk lines, should be installed first-collection stations and treatment plants must be incorporated in the original plans and should be installed during the primary stage of construction. Good original design is fundamental to the success of a sewer system.

Work that can usually be undertaken immediately is the cleaning and repairing of existing sewers and drains.

Laboratory Control

Unassayed Vaccines: Several factors have delayed production and assay of typhoid-paratyphoid vaccine and diphtheria toxoid. Assay constitutes the present bottleneck. There have been some very fundamental reasons why assay of biologicals has been slow:

(1) Chief among these is the fact that biologicals assay on a national scale was never attempted until this year. It was necessary to establish a national assay laboratory and to organize a system of prefectural inspectors.

(2) In addition to this, the Tone River floods destroyed most of the laboratory animals.

(3) Minimum requirements were written which required drastic changes in production methods and equipment in most of the laboratories.

The section is well aware of these discouraging factors and of the fact that immunization programs were tardy because vaccine could not be obtained. However, unassayed vaccine should not be used as a stop-gap measure when certified vaccine is unavailable. Specific instances of this sort of improvisation have been found. Such a compromise can only lead to the breakdown of the entire immunization program.

On a recent inspection trip a prefecture was visited and random samples were collected from the immunization teams. These samples proved to be representative of vaccine which was far out-dated and which did not meet the minimum requirements. Those of the five specimens showed saprophytic contamination; relative potency is now being determined.

Refrigeration: Recent inspection trips have shown that there is still in##### refrigeration of vaccines.

Rejected Vaccine: Information has been received that rejected vaccine is being used in the immunization program. On a recent inspection trip to a large laboratory great quantities of vaccine were found stored which had been rejected by the National Assay Laboratory. Vaccine rejected by assay should be discarded immediately. Military Government health officers are urged to exercise surveillance of such laboratories to determine that rejected vaccine is being discarded.

Inspectors: Much of the difficulty being encountered in the enforcement of minimum requirements seems to be directly attributable to the inadequacy of the prefectural inspectors. Many times these men are poorly trained. Often they have no clear conception of the duties and responsibilities of their jobs. Others are closely related as friends or relatives to the owners of vaccine laboratories and they fail to do their duty as inspectors for fear of losing face, either for themselves or for the manufacturer.

Ministry Government health officers should consider it part of their responsibility to instill into the prefectural inspectors the ethics and responsibilities of their positions.

SECTION VI MEDICAL SERVICE DIVISION

Japanese Civilian Hospitals Strength Report for week ending 17 October 1947 shows 3,384 hospitals with a capacity of 212,588 beds of which 105,315 were occupied. During this period 285,836 out-patients were treated.

SECTION VII SOCIAL SECURITY DIVISION

General

Under provisions of the now Constitution, Imperial Ordinances, which previously provided for the enforcement of many social insurance provisions for government employees, will become ineffective as of 1 January 1948. In order to continue the effectiveness of these protective provisions, the Ministry of Finance has proposed a new law, "The National Public Servants Compensation Law", for submission to this session of the Diet. This new law will provide a single legal basis for the enforcement of social insurance protection of government employees.

Indications of increased public interest in National Health Insurance continue to arrive on the form of petitions. The basic desires are for uniformity of contribution and benefit rates and also for more personnel and medical facilities.

SECTION VIII MEMORANDA TO JAPANESE GOVERNMENT

None.

CRAWFORD F. SAMS
Colonel, Medical Corps
Chief

Incl. (2): 1. Revised Annual Case and Death Rates from Communicable Diseases, Japan and each prefecture.
2. Weekly Summary Report of Cases and Deaths from Communicable Diseases in Japan, week ending 1 November 1947.

SECTION II - Veterinary Affairs
SECTION III - Supply
SECTION IV - Nursing Affairs
SECTION V - Preventive Medicine
SECTION VI - Medical Service
SECTION VII - Social Security
SECTION VIII - Memoranda to Japanese Government

SECTION I
WELFARE DIVISION

Social Welfare Education

On 12 November a meeting of persons interested in Social Welfare Education was held in Osaka, resulting in a decision to form a Kansai Social Welfare Education Committee. This committee will be organized independently of the Social Welfare Education Committee, which has been formed in Tokyo, but will work closely with the central committee. It is expected that representatives of educational institutions in the Kansai Area will participate in the committee, as well as public welfare officials and representatives of welfare agencies. It will be the purpose of the committee to determine what is now being done to adequately prepare persons who wish to enter the welfare field upon the completion of these studies. Many of the educational institutions in this area (Osaka, Kyoto, Hyogo, Nagoya) have indicated an interest in making social service a part of their curriculum but little progress has been made. This committee will develop recommendations to submit to the universities. Questions to be considered include: (1) what social service courses should be included in school curricula; (2) in what years of schooling should such training be included; (3) can field work be given to teach the students the practical application of principles; (4) what action can be taken to develop welfare literature and libraries containing information concerning welfare problems and programs.

Those attending the meeting included: the Governor, Osaka Prefecture; and representatives of the: Public Welfare Dept, Osaka Pref. University of Commerce; Osaka Prefecture: Girls' College; Hyogo Prefecture Medical College; Welfare Section, Kyoto Prefecture; Social Work Section, Asahi Press; Social Work Section, Mainichi Press; Otani Girls' College, Osaka; Doshisha University, Kyoto; Kansai Gakuin University, Hyogo Prefecture; Kyoto University; Nagoya Medical University; Naniwa Higher School; Kyoto Social Work Association; Osaka MG Team; and Welfare Division, PH&W.

The next meeting of the Committee is scheduled to be held 5 December in the Osaka-fucho Bekkan.

Childrens Bureau, Ministry of Welfare

It is expected that the National Diet will pass the Childrens Welfare Law within the next few days. The administration of this law will increase the importance of the work of the Childrens Bureau of the Ministry of Welfare. This bureau was established within the Ministry of Welfare on 1 March and has been engaged in completing its organization.

The functions and administrative structures of the Childrens Bureau are controlled by Articles 26 - 29 of the Regulations Governing the Departmental Organization of the Ministry of Welfare. The following three sections have been authorized:

Planning Section
Foster Care Section
Mothers and Childrens Health Section

Plans are being developed to organize a fourth section which will take over some of the duties now assigned to the Planning and Foster Care Sections. The present responsibilities of each of the three existing sections are as follows:

1. Planning Section
 - a. Overall planning concerning children
 - b. Children Welfare Committee
 - c. Nursing facilities
 - d. Protection of Mothers and Children
 - e. Responsibility for child welfare for which other agencies are not responsible.
2. Forester Care Section
 - a. Protection of orphans, waifs and weak-minded children
 - b. Prevention of cruelty to children
 - c. Education and care of children
3. Mothers and Children's Health Section

- a. Health of pregnant women, maternity, sucklings and infants.
- b. Special nutrition for pregnant women, maternity, sucklings and infants.
- c. Health of feeble minded and disabled children.
- d. Health of children under school age and other children.
- e. Early birth, miscarriage and still-births.

National Interdependence Campaign (Community Chest)

The first united fund campaign for the purpose of attempting to finance recognized private welfare and relief agencies in Japan, has been in the process of organization for approximately six (6) months and is now completed with the subject campaign to be held between the dates 25 November - 25 December.

The campaign is under a tri-name for purposes of clarity to all concerned and these names will be used simultaneously throughout the campaign. Campaign name "Community Chest" will appear in Romaji, campaign names "Help Each Other" and "Interdependence" will appear in Nihongo.

The national goal, set for the subject campaign, is 686,800,000 yen with each of the prefectures participating having a quota to attain, to meet the national goal. All of the funds raised by each prefecture will be used within the prefecture for financing recognized private welfare and relief agencies who are members of the united fund effort. The only exception to this will be the use of certain of these funds for campaign costs. The quotas for each prefecture are given below:

Prefecture	Quota	Prefecture	Quota
Hokkaido	Yen 35,000,000	Mie	Yen 10,000,000
Aomori	3,000,000	Shiga	10,000,000
*Iwate	None	Kyoto	20,000,000
Miyagi	15,000,000	Osaka	50,000,000
Akita	5,000,000	Hyogo	50,000,000
Yamagata	13,000,000	Nara	6,500,000
Fukushima	15,000,000	Wakayama	5,000,000
Ibaraki	8,000,000	Tottori	6,000,000
Tochigi	5,000,000	Shimane	7,800,000
*Gumma	None	Okayama	15,000,000
*Saitama	None	Hiroshima	25,000,000
Chiba	3,000,000	Yamaguchi	10,000,000
Tokyo	50,000,000	Tokushima	8,000,000
Kanagawa	50,000,000	Kagawa	5,000,000
Niigata	13,000,000	Ehime	10,000,000
Toyama	10,000,000	Kochi	5,000,000
Ishikawa	7,500,000	Fukuoka	50,000,000
Fukui	10,000,000	Saga	10,000,000**
Yamanashi	5,000,000	Nagasaki	15,000,000
*Nagano	None	Kumamoto	15,000,000
Gifu	15,000,000	Oita	15,000,000
Shizuoka	10,000,000	Miyazaki	6,000,000
Aichi	50,000,000	Kagoshima	10,000,000
Total (National Goal)		Yen 686,800,000	

*Note: Prefectures not participating this year due to condition pursuant to recent flood disaster (Typhoon Kathleen)
 **10,020,000 yen raised 1 Aug 47.

The central committee for the campaign is making available, at cost, the following basic supplies and service (necessary supplemental supplies are the responsibility of each prefectural committee):-

Posters 250,000

Pins	5,000,000
House stickers	10,000,000
Publicity Film	(not less than 2 for each prefecture 1,000 ft in length with showing time of approximately 10 minutes)
Radio Broadcasts	National broadcasts will be held at intervals, yet to be announced, during the campaign. No Cost.
Newspaper mats	Campaign emblem for use with news stories, etc.

Funds derived from this campaign and allocated to those participating private welfare and relief agencies are the funds of said agencies and are to be administered by them as they desire without interference from any source unless there is evidence of defalcation or unwarranted use.

The responsibility of the government in caring for all indigent persons is not to be relaxed as a result of private welfare and relief agencies receiving an allocation of funds as a result of the National Interdependence Campaign (Community Chest). In other words, these funds are not to be expended where government funds are obligated but are to be used for raising standards of care, improving personnel practices, and for the repair and/or procurement of physical properties necessary for efficient administration and operation.

SECTION II VATERINARY AFFAIRS DIVISION

General

Dr. Hendrick Versluis, Veterinarian, has been assigned to IX Corps Military Government duty.

Weekly Animal Disease Report

The Ministry of Agriculture and Forestry reported the following new outbreaks of animal diseases for the period 9-15 November 1947:

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Tokyo	Swine Erysipelas	1

SECTION III SUPPLY DIVISION

Distribution

Insect and rodent control equipment was shipped to five prefectures under direction of the Ministry of Welfare. During the period 4 November through 10 November a total of 2,773 pieces were distributed as follows:

Prefecture	DDT Duster	Knapsack Sprayer	Semiautomatic Sprayer	Hand Sprayer
Hokkaido	0	0	0	480
Aichi	0	90	30	0
Hiroshima	0	190	15	0
Oita	984	0	0	0
Kagoshima	984	0	0	0
Total	1,968	280	45	480

An emergency air shipment left Japan for Okinawa 11 November consisting of 3,000 cubic centimeters of antiserum for the treatment of Weils disease in Northern Ryukyus. A request for 4,000 pounds of Antu rat poison is now in process for shipment by the first available water transportation from Japan to Okinawa, for use in the rodent control programs in the Ryukyus.

A distribution of 93,000 ounces of imported absorbent cotton in one-ounce packages was made to three prefectures during the latter part of October, as follows:

Osaka	35,200 ounces
-------	---------------

Kyoto	27,000 ounces
Hyogo	30,800 ounces

During a recent field trip into Chugoku Region complaints were registered in reference to shortages in specified medical and sanitary supplies. In instances when definite figures on receipts were presented, it was found that these figures do not agree with records of shipments submitted by Ministry of Welfare officials. The Ministry of Welfare is now making a thorough investigation of these complaints and efforts will be made to remedy any irregularities which are discovered.

In addition to lists of agencies for sale of x-ray film to consumers, the following agencies have been designated by the Fuji Photo Film Co., Ltd., as representatives in the prefectures indicated.

<u>Prefecture</u>	<u>Agent</u>	<u>Address</u>
Osaka	Osaka Branch of Nippon Medical Instrument Co. Ltd.	No. 3-12 Awaji-cho, Higashi-ku, Osaka City
"	Osaka Branch of Goto-Fundo	No. 4-6 Doshu-cho, Higashi-ku, Osaka City
"	Osaka Branch of Misuzu Shokai	No. 2-90 Kitahama, Higashi-ku, Osaka City
"	Osaka Branch of Asanuma shokai	4 chome Junkei-cho, Minami-ku, Osaka City
Kyoto	Osawa Shokai	Nishi-iru Sanjo-Kobashi Chukyoku, Kyoto City
Fukushima	Kanno Shokai	No. 114 Yatsurugi-cho, Fukushima City
Gifu	Tanaka Photo Shop	No. 2 No. 3 Kanda-cho, Gifu City

Production

The 31st weekly report of DDT duster and spraying equipment for mosquito and fly control program for 1947 indicates the following data for the period 2 - 8 November:

	Total To Date 1 Nov.	No.Mfgd. 2-8 Nov.	Total Mfgd. to date 8 Nov.	Total Shipped to date 8 Nov.	Balance On Hand	To be Mfgd.
DDT Dusters	66,526	1,900	68,426	67,214	1,212	21,574
Sprayer, kampsack type 3 gal.capacity	39,443	...	39,443	17,958	21,485	...
Sprayer, pump type, semi-automatic	23,808	...	23,808	12,536	11,272	...
Sprayer, hand type, 1/2 gal.capacity	37,610	...	37,610	27,179	10,431	...
Total	167,387	1,900	169,287	124,887	44,400	21,574

Releases of the following DDT products and typhus vaccine were approved for the period 9 - 15 November:

Prefecture	10% DDT Dust	5% DDT Residual Effect Spray	Typhus Vaccine
Hyogo	65,000 lbs.	5,000 gallons	...
Yamagata		500 "	...
Ministry of Welfare	200 "	35 "	...
Total	65,200 lbs.	5,535 gallons	...

A total of 3,812,307 lbs. of 10% DDT Dust and 176,382 gallons of 5% DDT Residual Effect Spray represents total stocks in wholesale warehouses of the Ministry of Welfare, Japanese Government, as of 8 November.

Narcotics

Reports from the Narcotic Section, Ministry of Welfare, reveal that, in some prefectures, Japanese narcotic agents are making considerable progress in criminal investigations of narcotic violators. In one case, the Japanese narcotic agent posing as a black-marketeer on his own initiative, maneuvered an introduction through an underworld character to a trafficker in narcotics. Arrangements were made for the purchase of 300,000 yen of

narcotics. Other narcotic agents covering the transaction arrested the violator upon delivery of the narcotics to the agent.

In another case, and informant working for a narcotic agent, purchased 0.5 gram of cocaine hydrochloride for 300 yen from a registered physician who had been supplying cocaine to a group of street girls. The doctor fainted when the agents appeared with the cocaine and recovered the 300 yen.

The Narcotic Section, Ministry of Welfare, has been instructed to direct all prefectural narcotic agents to forward a summary report immediately to the Ministry of Welfare upon the completion of any unusual narcotic investigation. These reports will be relayed to the Narcotic Control Officer by the Enforcement Division Narcotic Section, Ministry of Welfare.

SECTION IV NURSING AFFAIRS DIVISION

Weekly Status Report

1. Personnel (P.H.N.)

Mrs. N. Glossner, Misses Hubbard and Panessa, Public Health Nurses, have arrived for duty with Military Government Teams. They are on TDY to Nursing Affairs Division for orientation, before being assigned.

2. Refresher Courses

Members of the Nursing Affairs Division have been giving lectures on T.B. Nursing for the National T.B. Association refresher course. Demonstrations have been made on the care of the patient.

The one-month refresher course for Public Health, Midwives and Clinical Nurses, under the auspices of the National Association opened 10 November in Fukushima.

SECTION V PREVENTIVE MEDICINE DIVISION

Typhoid Fever Immunization Program

Reference is made to Preventive Medicine Section in the Public Health & Welfare Bulletin Nos. 20, 31, 33, 35, 37, and 41. Reports, as to the status of the Typhoid Fever Immunization Program, have been very slow. Sufficient TAB vaccine has been delivered to all prefectures and the program should either be completed or nearing completion at this time. MG Health Officers are urged to determine whether or not these programs have been completed in their respective prefectures, and if they have not, necessary corrective action should be taken. MG Health Officers are also urged to observe that prefectural officials render the required reports to the Ministry of Welfare promptly.

Tuberculosis

There are many Public Health Officer replacements among Military Government Teams. These new men would find it of great value if they would review the articles written on tuberculosis, which have appeared in the back issues of Weekly Bulletin. Many points for discussion and correction have been presented. Material for lectures, to both physicians and lay groups, to be given in popular form or short articles for local newspapers and magazines would greatly aid in the campaign of education for the control of tuberculosis, which is so vitally necessary to the health of the Japanese people. In the manual (TB-PH-Prev. Med. 2) on pages 26 and 27, there is material which should reach every household, through the media of press, the health centers and sanatoria.

Rodent Control

Use of Antu as a Rat Poison: Antu, (Alphanaphthyl Thiourea) has been used extensively in the U.S. for city-wide rat extermination programs. The City of Baltimore used it over a period of a year and found it to be ideal for this purpose.

From experience it has been determined that the following general principles must be adhered to:

1. Poisoning operations are ineffective when undertaken on a small scale. It is useless to bait one house that is surrounded by rat infested buildings.

2. In community programs, in urban areas, it is recommended that no less than an entire block be treated with poison at one time. It is likewise desirable to cover entire villages and towns at one time.

3. A city block can be treated with poison bait in a few hours, by two to four men, at small cost. Surplus seasonal foods such as sweet potatoes and fruit can be used.

4. In rural areas entire farm settlements should be baited at one time.

5. In a large scale poisoning program, involving large parts or all of a town, preparations must be made for a well planned attack. Workers should be organized and an effective publicity campaign launched to inform and arouse all citizens.

6. The work can be done by paid crews or volunteer personnel from the Sanitary Association, but expert supervision must be provided.

7. Permanent surveillance is of utmost importance--rats multiply very rapidly and constant effort must be exerted in order to accomplish permanent results.

SECTION VI MEDICAL SERVICE DIVISION

Japanese Civilian Hospital Strength Report for period ending 24 October 1947 shows 3,382 hospitals with a capacity of 212,000 beds of which 104,063 were occupied. During this same period 284,438 out-patients were treated.

SECTION VII SOCIAL SECURITY DIVISION

General

Inquiries have been received regarding pension rights held by disabled ex-servicemen with particular reference to medical care. All ex-servicemen are now civilians, and their previous military service gives them no priority. By SCAPIN 338 dated 12 November 1945, all disabled ex-servicemen are, however, eligible for disability pensions at benefit rates no higher than civilians would receive for the same percent of disability. The disability pension settlements is made under the same condition as any other social insurance for civilians, and upon its receipt the provision for medical care is discontinued. Ex-servicemen as civilians, however, are eligible to participate in those social insurance programs which provided medical care on a prepayment basis.

SECTION VIII MEMORANDA TO JAPANESE GOVERNMENT

None.

CRAWFORD F. SAMS
Colonel, Medical Corps
Chief

Incl. (1) Weekly Summary Report of Cases and Deaths from Communicable Diseases in Japan, week ending 8 November 1947.

SECTION IX - Memoranda to Japanese Government

SECTION I WELFARE DIVISION

Child Welfare Law

The Child Welfare Bill became law 21 November, and will become effective 1 January 1948 (with the exception of certain articles which become effective 1 April 1948). Copies of the law in English, when available, will be furnished Military Government Teams. Most important provisions of the law are:

1. The establishment of Child Welfare Stations in each prefecture for temporary care, mental, psychological and physical examinations, and placement.
2. Provision for paid full-time child welfare officials who will work directly with children in cities, towns and villages.
3. National and prefectural Child Welfare Boards for the purpose of investigating and discussing the problems of welfare of children and expectant and nursing mothers.
4. Provision of Maternal and Child Handbooks to pregnant women which will provide certain additional ration privileges.
5. Free medical examinations for children whose parents are unable to pay for such service and a program for physical rehabilitation of crippled children.
6. Free parental, post-natal, and delivery for those unable to pay for such service.
7. Free hospital services for those of special need.
8. Prevention of abuse and exploitation of children.
9. Matching funds for maternity homes, infant homes, homes for weak children (municipally or prefecturally owned and operated).
10. Minimum standards, licensing and official supervision of all children's agencies including Mother's and Children's institutions, with provision that licenses will be withdrawn when agencies fall below minimum standards.
11. Provision of penalties for illegal acts.

The law is based on a proposed Bill submitted to the Ministry of Welfare by the Japan Social Work Association. It provides certain essential requirements and will form a basis for an adequate child welfare program.

Licensed Agencies for Relief in Asia (LARA)

The 32nd, 33rd and 34th overseas shipments of relief supplies have been received by LARA. The relief items contained in this shipments were as follows:

- 32nd Shipment: Clothing 13.13 tons - Food 4.20 tons
- 33rd Shipment: Clothing (including shoes) 1.42 tons
- 34th Shipment: Food 5 tons

Office Expenses Provided to Institutions

Monthly reports from Military Government Teams indicate that the policy allowing payments to institutions for persons receiving aid under the Daily Life Security Law continues to cause difficulty. A Summary of the regulation setting forth the basic policy is contained in Public Health and Welfare Weekly Bulletin No. 36 for period 30 August - 6 September.

The Ministry of Welfare has issued three pertinent orders on this subject. They are Hatsu-sha No. 103, dated 12 December 1946; Hatsu-sha No. 95 dated 8 August 1947; and Hatsu-sha No. 110 dated 15 September 1947. No.110 states in part with reference to "protective institutions which provide merely accommodation" that, "the matter seems to suffer a loose interpretation and in some of these institutions the entire inmates are considered as receiving protection under the present law. The purpose of the communication was to urge you to ascertain with each individual family the concrete facts that these persons are barely able to support themselves without receiving money assistance for living if the accommodation is provided free of charge, but that they would need assistance for rents as soon as the free accommodation is deprived. You are requested to fully understand this point, to study the family under this category carefully before deciding them eligible, and to continually study their living conditions, in order to reserve this provision only for those truly falling under this category."

Military Government Welfare Officers

The following list of Welfare Officers has been provided by Military Government Section, Eighth Army:

REGIONAL WELFARE OFFICERS

Hokkaido District	Mr. John Conway
IX Corps	Capt. Howard B. Dow
Tohoku Region (see IX Corps)	
Kanto Region	Capt. Robert Nerrie
Tokai-Hokuriku Region	Mr. Daniel Britton
Chugoku Region	Capt. Eugene H. Cantley
I Corps	Lt. Col. Charlie Brock, Mr. Max Meyer
Kinki Region (see I Corps)	
Shikoku Region	1st Lt. John Mikkelson
Kyusyu Region	Capt. Walter C. Robbins
Tokyo-Kanagawa MG District	Mr. Fred Carr

PREFECTURE WELFARE OFFICERS

Aichi	Mr. Tomas Nelson	Miyazaki	1st Lt. John C. Vallengy
Akita	Capt. Charles W. Hawker	Nagano	Capt. Julian Marcinkowski
Aomori	Mr. Herbert Bergstrom	Nagasaki	1st Lt. Robert E. McDonnell
Chiba	Capt. James C. Ulmer	Nara	
Ehime	Mr. Jacob L. Risk	Niigata	Mr. Peter Croes
Fukui		Oita	1st Lt. Owen Nichols
Fukuoka	Mr. Edmund Radzuk	Okayama	Capt. Clifford Penrose
Fukushima	Mr. John Rourx	Osaka	Capt. Marion Vickers
Gifu	1st Lt. Thad R. Kaitis	Saga	Capt. Harry D. Gilpin
Gumma		Saitama	Mrs. Lucille Chamberlin
Hiroshima	Miss Dorothy Dessau	Shiga	Capt. John B. Stephens
Hyogo	Mr. Philip Borish	Shimane	Capt. Milton Waiss
Ibaraki	Capt. Raymond A. Shuart	Shizuoka	1st Lt. Robert E. Grishkat
Ishikawa	Capt. John W. Burrows	Tochigi	Capt. John Silva
Iwate	1st Lt. Lester C. Holmquist	Tokushima	Mr. Edward Mueller
Kagawa	Capt. James A. Geyar	Tokyo	Mrs. Edna K. Callow
Kagoshima	Capt. John Pemberton	Tottori	1st Lt. Tom Ewing
Kanagawa	Mrs. Cors J. Baker, Miss Jeanne Fuller	Toyama	Capt. Kenneth Spess
Kochi	W.O. John Nelson (Aust)	Wakayama	Capt. John M. Gates
Kumamoto	1st Lt. Jay B. Martine	Yamagata	1st Lt. Clayton E. Ellison
Kyoto	Mrs. Emilie Putnam	Yamaguchi	Mr. Herbert Mosher, Jr.
Mie	Capt. John E. Orr	Yamanashi	Miss Andrea Magnus
Miyagi	2nd Lt. Jack Silbaugh		

SECTION II NURSING AFFAIRS DIVISION

Personnel

Miss Kikue Shimizu, Chief of Public Health Nursing Division of the Institute of Public Health was promoted from 3rd class to 2nd class official on 30 October. She is the first Japanese Nurse to be appointed to this position, which is a very important step in the history of nursing in Japan.

SECTION III VETERINARY AFFAIRS DIVISION

General

A physical examination on 58 head of riding horses was made prior to their shipment to Korea on 19 November 1947.

Weekly Animal Disease Report

The Ministry of Agriculture and Forestry reported the following new outbreaks of animal diseases for the period 16 - 22 November 1947.

<u>Prefectures</u>	<u>Disease</u>	<u>No. of Cases</u>
Niigata	Swine Erysipelas	1
Tochigi	Swine Erysipelas	1

SECTION IV SUPPLY DIVISION

Distribution

Information has been received to the effect that in one prefecture Japanese-produced penicillin must be purchased through the Penicillin Association in Tokyo. This matter is now being investigated since the Penicillin Association is organized as a typical trade association and does not have authority to engage in distribution of finished products or allocation of raw materials.

Under present distribution policies, penicillin is allocated to prefectures by the Ministry of Welfare and distribution at the prefectural level is the responsibility of local prefectural officials.

Insect and rodent control equipment was shipped to seven prefectures in the period 11 - 17 November. A total of 1,302 pieces were distributed as follows:

Prefecture	DDT Duster	Knapsack Sprayer	Semiautomatic Sprayer	Hand Sprayer
Hokkaido	888	0	0	0
Fukushima	0	85	85	0
Saitama	0	0	6	0
Aichi	0	30	0	0
Kyoto	0	0	0	40
Wakayama	0	12	0	12
Hiroshima	24	60	36	24
Total	912	187	127	76

During the recent flood disaster, a total of 3,439,011.30 yen value of medical supplies was furnished to seven affected prefectures: Tokyo, Chiba, Saitama, Tochigi, Ibaraki, Gumma and Iwate.

The problem of maintenance of U.S. Army surplus vehicles which were released to the Ministry of Welfare and distributed by them to prefectures for use in public health activities has been raised. The importance of proper and adequate maintenance cannot be overemphasized, if these vehicles are to continue to be of benefit. Policies and procedures which will govern this maintenance are to be established as soon as possible and information will appear in subsequent Weekly Bulletins.

Recently it was discovered that some installations are still ordering x-ray film through the Anti-Tuberculosis Association. Neither this association nor any of its branches are recognized distribution agencies. Lists of authorized film agencies have been published in recent issues the Weekly Bulletin. The Ministry of Welfare has issued an official letter to all prefecture health sections, file YAKU 1409, dated 19 November, which reiterates current x-ray film distribution procedure, but allows the Anti-Tuberculosis Association to dispose of any stocks they may have on hand. At the same time a letter was dispatched to the central Anti-Tuberculosis Association, file YAKU 1409, dated 19 November, requesting that they inform their branches of the present film distribution procedure.

Production

The 32nd weekly report of DDT duster and spraying equipment for mosquito and fly control program for 1947 indicates the following date for the period 9 - 15 November:

	Total to date 8 Nov.	No.Mfgd. 9-15 Nov.	Total Mfgd.to date 15 Nov.	Total Shipped to date 15Nov.	On Hand	To Be Mfgd.
DDT Dusters	68,426	2,050	70,476	68,126	2,350	19,524
Sprayer, knapsack type, 3 gal. capacity	39,443	...	39,443	18,145	21,298	...
Sprayer, pump type, semi-automatic	23,808	...	23,808	12,663	11,145	...
Sprayer, hand type, 1/2 gal. capacity	37,610	...	37,610	27,255	10,355	...
Total	169,287	2,050	171,337	126,289	45,148	19,524

Release of the following DDT Products and Typhus Vaccine were approved for the period 16 - 22 November:

<u>Prefecture</u>	<u>10% DDT Dust</u>	<u>5% DDT Residual Effect Spray</u>	<u>Typhus Vaccine</u>
Shimane (coal mines)		50 gallons	
Niigata	20,000 lbs.		
Kanagawa			25,000 vials
Shizuoka			735 vials
Hokkaido (ferry boat)	10,670 lbs.		
Hokkaido	36,000 lbs.		
Osaka	50,000 lbs.	5,000 gals.	
Ishikawa	3,400 lbs.		
Aichi		5,000 gals.	
Ministry of Labor	3,300 lbs.		
Ministry of Transportation		25,000 gals.	30,000 vials
Total	123,370 lbs.	35,050 gals.	55,735 vials

A total of 3,727,761 pounds of 10% DDT Dust and 146,870 gallons of 5% DDT Residual Effect Spray, 493,594 vials of Typhus Vaccine represents stocks in wholesale warehouses of the Ministry of Welfare Japanese Government, as of 15 November.

Narcotics

SCAPIN 1821, dated 18 November 1947, subject: "Disposition of Heroin", directs that heroin will not be delivered to Occupation Forces for destruction, but will be confiscated and delivered to prefectural narcotic officials who will report the seizure to the Ministry of Welfare, forwarding the heroin to a registered narcotic dealer in Tokyo, (designated by the Ministry of Welfare) for salvaging and conversion into medicinal narcotics.

No difference in procedure by Occupational Forces is intended as a result of the directive except that seized Japanese narcotics, when they are no longer needed as evidence, will not be stored in custody or destroyed but will be properly disposed of through Japanese narcotic officials. The present organization of Japanese narcotic enforcement personnel throughout Japan, whereby all narcotics are strictly accounted for, make this procedure possible with the result that all illicit narcotics will be salvaged for the medical needs of the Japanese people.

Report has been received that a quantity of blank narcotic forms were confiscated by Tokyo narcotic agents who found the forms being used to wrap merchandise in a Tokyo store. Preliminary investigation indicates the forms were taken from the warehouse of the Ministry of Welfare during the moving of three Bureaus from their

present location to a new building. It is imperative that all prefectures, from an economic as well as from a security point of view, store official papers and forms with adequate security.

SECTION V PREVENTIVE MEDICINE DIVISION

Typhus Fever

Typhus Control Conference. The second in the series of conferences relating to typhus fever was held in Tokyo on 13 and 14 November. Representatives from 18 prefectures of northern Honshu were in attendance. The third conference is scheduled to convene in Kyoto on 2 and 3 of December for prefectural health officials from southern Honshu.

Complement fixation test. Of the two laboratory tests (Weil Felix and Complement Fixation) useful in the diagnosis of typhus fever, the complement fixation test is the more specific. During the 1946 - 1947 typhus season an attempt was made to clarify the typhus picture in Japan. A total of 646 serum samples from suspect cases were tested with the following results:

Epidemic (louse-borne)	103
Murine (flea-borne)	278
Undetermined type	167
Negative	98
	646

This figure 646 represents slightly over 50% of the total of 1178 cases reported between 1 January to 18 November 1947. More samples were received but could not be used because of contamination of specimens.

In order to clarify further the picture of type and distribution of typhus fever it is suggested that serum samples be obtained from each case during the coming typhus season and shipped as soon as possible under ice to the 406th Medical General Laboratory in Tokyo. Complement-fixation anti-bodies begin to appear in the blood stream during the second week of the disease. Blood samples for this test should be drawn from about the tenth to fourteenth day of illness.

Data accompanying each sample should include the name, age and sex of patient, locality, (town and prefecture) date of onset; date of blood sample, and date of vaccination against typhus(if any). The facilities of the RTO should be used in shipment of samples.

The Weil-Felix agglutination test using Proteus OX-19 should continue to be used. This test is positive after the 6th day of the disease. However, a series of 2 - 3 samples should be taken in order to determine a definite rise in titre. This test is indicative of typhus but will not serve to differentiate between the epidemic and murine types.

Immunization

Based on results of complement fixation tests performed on submitted serum samples from reported cases of typhus during the past 1946 - 1947 season, epidemic typhus is the type encountered in the prefectures of Hokkaido, Akita, Miyagi, Yamagata, Fukushima and Tochigi. Murine Typhus was the predominant type in the remaining prefectures from which cases were reported. Epidemic typhus fever can be eradicated or at least reduced to a low level of incidence in Japan. It is suggested that large scale immunization on programs be instituted in the denser centers of population of the northern foci mentioned above. Hokkaido has an extensive program underway. Programs are also being setup in Yamagata and Miyagi prefectures through the Ministry of Welfare and prefectural health authorities. 10,000,000 cc of U.S. Cox-type vaccine are available for this immunization program. Since this U.S. imported vaccine is nearing its expiration date, it should be used during the next two or three months.

The recommended course of immunization is 2 cc given subcutaneously at a seven to ten day interval, followed by a third booster dose of 1 cc in six months. It has been shown that the booster dose following the initial doses stimulates a higher degree of immunity in the individual than do the original 2 cc. In addition to the imported vaccine, approximately 5,000,000 cc of Japanese manufactured and assayed typhus vaccine are also available. This vaccine could serve for handling routine immunization as cases develop, as well as for administering a third booster

dose. Administration of 1 cc of vaccine may be the only way in some instances and is better than no vaccine at all. Cases certainly will be more mild and the fatality from typhus cases greatly reduced.

Tuberculosis Control

During the past month an inspection trip was made into four of the western coastal prefectures. Lectures and demonstrations given in each prefecture stimulated the interests to organize the efforts of the general population to control tuberculosis.

People are now becoming vitally interested and want to know "what may I do to help prevent the spread of tuberculosis?" With that general attitude on the part of the public, their education in tuberculosis control is progressing.

Port Quarantine

The attention of port quarantine officers is called to the fact that the cholera epidemic in Egypt is still continuing, although the incidence of the disease is decreasing at the present time.

There exists apparently some difference of opinion among the quarantine officers at the several repatriation centers regarding methods of cleaning and disinfecting of repatriation ships and the proper applications of materials. In order to avoid confusion among masters and crews, port quarantine officers are requested to come to an agreement among themselves as to requirements and standards for cleaning and disinfection and the use of DDT preparations for that purpose.

Rodent Control

Method of Using Antu

Antu comes in the form of a fine bluish-gray powder. It is high insoluble, stable to heat, and deteriorates very little if at all during several years dry storage. It has no perceptible odor, and only a very transient bitter taste.

Antu mixes evenly with all kinds of food or ground grain and adheres well to dry or wet foods when dusted on them. It sticks to the feet and hair of rats when the rats run through it. It dusts ##### from insect dust sprayers and pump guns such as used for cyanogas powder.

Antu kills through the stomach, not through contact with the skin. Rats die when they lick it off their feet or eat it in their food. Antu acts chiefly on the lungs. Within a few hours after poisoning the lungs and the thoracic cavity become filled so that the rats drown in their own fluid. They die usually within 10 to 24 hours. Their breathing difficulty tends to drive them to the outside.

Antu is a single shot poison. It is not an accumulative poison. Everything depends on getting a fatal amount of poison into the rats at the first meal, since after eating a sublethal dose they develop a tolerance which lasts about 30 days and an aversion which may last several months.

How to Use Antu

a. In ground baits

Thoroughly mix 2 or 3 parts of Antu with 100 parts of finely ground grain, preferably a high grade yellow corn. Distribute in small shallow piles.

b. Dusted on baits.

Place freshly ground yellow corn or other grains in small piles on floor or earth and smooth out to a flat thin layer about 1/4 inch in thickness. Dust the grain and surrounding areas for 6 inches with Antu, using a small spray gun, duster, or shaker. Use diced apples, sweet potatoes, tomatoes, cantaloupes, watermelons, ground meat, and the white and yolk of eggs, fish or chicken heads in the same manner.

Dust Antu on fresh ears or corn, the kernels of which may have been slit by running a sharp knife lengthwise along the cob. Cut the cob into 1 inch sections and distribute. (Very useful for distribution in inaccessible places.)

c. Dusted on floor and on runaways without baits.

Spread a 50 percent mixture of Antu and flour over ground in areas which rats frequent, especially along runways and near openings.

d. Pumped in burrows.

Pump Antu powder (or flour-Antu mixture as in No. 3) into openings of rat burrows with foot or hand duster until floor of burrow is well coated.

e. Dusted on water or mixed with water.

Use small shallow cups or dishes. Dust Antu on water until it forms a thin film on surface; or put 1 to 2 parts of Antu with 100 parts of water in a bottle, shake well, and pour into a shallow dish. After being shaken up with water tends to settle within a few hours so that repeated shaking or stirring may be necessary.

For best results use several methods (at least Nos. a, b and e) at the same time. Try to provide an excess of bait for all suspected rats, but do not throw bait around carelessly. Make the rat's first poisoning its last meal.

Use those baits that are most attractive to local rats during the season of poisoning operations. Yellow corn is practically a complete food and is almost universally attractive, used either when fresh ground or fresh on the cob.

In grocery stores or other places where food is available at all times make liberal use of poisoned water.

SECTION VI MEDICAL SERVICE DIVISION

Civilian Hospital Strength Report for period ending 31 October 1947 shows 3,389 hospitals with a capacity of 212,100 beds of which 97,991 were occupied. During this same period 238,196 out-patients were treated.

SECTION VII SOCIAL SECURITY DIVISION

The Diet passed on Unemployment Allowance Law and the Unemployment Insurance Law to become effective as of 1 November. The initial claim will be paid by the Unemployment Allowance Law and will become valid after 1 November 1947 for unemployment wage losses on and after 1 October 1947. The unemployment Insurance Law begins collecting contributions as of 1 November 1947 and claims under this become valid on and after 1 April 1948.

The above mentioned laws add another Social Insurance in the over all Social Security program for Japan. The new Ministry of Labor will have the administrative responsibility of these two laws.

SECTION VIII NUTRITION

Data on the proportion of certain foods or food groups obtained from the ration, free market, home production and gifts, in Tokyo and the average of eight cities during the Rice-Year 1946-1947, are contained in the accompanying tables. The data include total staple foods and rice, other grains, sweet potatoes and other potatoes which constitute the staple foods as well as legumes, fish, meat, poultry, eggs and milk, leafy green and yellow vegetables and other vegetables.

SECTION II
WELFARE DIVISION

National and Prefectural Disaster Relief Planning Boards

Under the provisions of the recently adopted National Disaster Relief Law, it is required that a National Disaster Relief Planning Board and similar prefectural boards be established. It is provided by Article 6 of the law that the Prime Minister will be president of the National Board and the Welfare Minister will be Vice-president. Regulations issued by the National Government provide for the appointment of the following additional officials to the National Board: Home Minister; Finance Minister; Agriculture and Forestry Minister; Commerce and Industry Minister; Transportation Minister; Communications Minister; Labor Minister; President of Economic Stabilization Board; President of War Calamity Rehabilitation Board. In addition under Article 7 of the law, the President of the Japan Red Cross Society is a member of the board.

It is provided by Article 16 that the prefecture governor shall be president of the Prefectural Disaster Relief Planning Board. Other members of the prefecture board are the directors of the following administrative bodies: Chief of Branch Office of Civil Engineering; Home Ministry; Director of Regional Financial Bureau; Chief of Branch Office of Medical Affairs Bureau, Welfare Ministry; Chief of Foodstuff Office; Chief of Charcoal Office; Chief of Control Office of Materials, Agricultural and Forestry Ministry; Director of Commercial and Industrial Bureau; Director of Railway Bureau; Chief of Motor-Car Office; Director of Marine Transportation Bureau (Chief of Marine Transportation Superintendent Department); Director of Communication Bureau; Director of Regional Economic Stabilization Board; Chief of Branch Office of Construction, Board of Reconstruction. The President of the Prefecture Chapter of the Red Cross is also a member of the board under the provisions of the national law. The national law also requires the appointment of a worker committee of the national board and the prefecture boards. The members of the national board have been appointed by an order issued 20 November.

Clothing Distribution Program

A program for the distribution of bedding and clothing to repatriates and needy persons has been established by the Repatriation Relief Board and the Social Affairs Bureau, Ministry of Welfare. It is planned that the recipients will be repatriates who have returned to Japan since December 1946, and other needy persons. The total amount of materials to be distributed are as follows: coats - 250,000, trousers - 250,000, shirts - 550,000, underpants - 550,000 and socks 550,000.

Amounts allocated each prefecture are set forth below:

	<u>Coat</u>	<u>Trousers</u>	<u>Shirts</u>	<u>Underpants</u>	<u>Socks</u>
Hokkaido	22,760	22,760	47,050	47,050	47,050
Aomori	4,880	4,880	10,560	10,560	10,560
Iwate	4,010	4,010	8,960	8,960	8,960
Miyagi	5,310	5,310	11,720	11,720	11,720
Akita	4,130	4,130	9,260	9,260	9,260
Yamagata	4,820	4,820	10,680	10,680	10,680
Fukushima	6,820	6,820	15,080	15,080	15,080
Ibaraki	4,190	4,190	9,480	9,480	9,480
Tochigi	2,320	2,320	5,180	5,180	5,180
Gumma	3,190	3,190	7,380	7,380	7,380

Saitama	4,010	4,010	9,060	9,060	9,060
Chiba	3,870	3,870	8,500	8,500	8,500
Tokyo	16,880	16,880	36,960	36,960	36,960
Kanagawa	4,490	4,490	9,940	9,940	9,940
Niigata	6,060	6,060	13,820	13,820	13,820
Toyama	2,820	2,820	6,440	6,440	6,440
Ishikawa	3,870	3,870	8,400	8,400	8,400
Fukui	3,750	3,750	8,760	8,760	8,760
Yamanashi	1,810	1,810	4,080	4,080	4,080
Nagano	6,430	6,430	14,360	14,360	14,360
Gifu	3,990	3,990	9,140	9,140	9,140
Shizuoka	4,500	4,500	10,100	10,100	10,100
Aichi	6,740	6,740	15,340	15,340	15,340
Mie	2,940	2,940	6,620	6,620	6,620
Shiga	2,370	2,370	5,400	5,400	5,400
Kyoto	6,250	6,250	13,600	13,600	13,600
Osaka	9,250	9,250	20,300	20,300	20,300
Hyogo	8,430	8,430	18,960	18,960	18,960
Nara	2,190	2,190	4,880	4,880	4,880
Wakayama	2,510	2,510	5,660	5,660	5,660
Tottori	1,750	1,750	4,000	4,000	4,000
Shimane	2,190	2,190	5,080	5,080	5,080
Okayama	3,400	3,400	7,710	7,710	7,710
Hiroshima	4,280	4,280	9,460	9,460	9,460
Yamaguchi	6,180	6,180	13,260	13,260	13,260
Tokushima	2,260	2,260	5,160	5,160	5,160
Kagawa	2,810	2,810	6,220	6,220	6,220
Ehime	3,500	3,500	7,800	7,800	7,800
Kochi	2,380	2,380	5,260	5,260	5,260
Fukuoka	16,550	16,550	35,560	35,560	35,560
Saga	5,930	5,930	12,960	12,960	12,960
Nagasaki	5,560	5,560	12,160	12,160	12,160
Kumamoto	7,810	7,810	16,520	16,520	16,520
Oita	5,070	5,070	10,640	10,640	10,640
Miyazaki	4,620	4,620	9,940	9,940	9,940
Kagoshima	10,120	10,120	22,600	22,600	22,600
TOTAL	250,000	250,000	550,000	550,000	550,000

In addition to the clothing listed above it is planned that a total of 40,000 sets of bedding and 630,000 blankets will be distributed. The bedding is to be provided without cost while the blankets will be sold at fixed prices to persons certified as eligible to purchase.

This clothing is now stored at repatriation centers located in Hakodate, Sasebo and Taura (Kanagawa Prefecture). The allocation of clothing for the prefectures in Kyusyu, Chugoku and Shikoku regions will be provided from the Sasebo Repatriation Center; Nagasaki Prefecture; the allocation for Hokkaido from Hakodate Center; while the allocation for the remaining prefectures will be shipped from the Repatriates Relief Board, Taura, Kanagawa Prefecture. Distribution will begin as soon as the clothing can be transported, from where it is now stored, to distribution points. Instructions have been issued by the Ministry of Welfare concerning the distribution.

Welfare Budget, Fiscal Year 1947 - 48

The following information is provided concerning the budget for relief and welfare programs carried on by the Ministry of Welfare for the current fiscal year (The Japanese fiscal year begins 1 April 47 and closes 31 March 47). Total budget of the Ministry of Welfare for the year amounts to 12,717,594,000 yen of which 8,141,601,000 yen was in the original budget and 4,575,993,000 yen was in supplemental budgets.

The total amount of the budget for the Daily Life Security Act for the current year is 5,387,582,000 yen which is the largest item in the ministry's budget. Other appropriations for the current fiscal year for welfare programs are:

	Yen
Childrens Bureau	55,458,000
Repatriates Relief Board	1,338,981,000
First Demobilization Bureau	2,19,009,000

The total budget for the Social Affairs Bureau for the current year is as follows:

Investigation & Planning of social work	849,000
Social Work Committee	40,000
Social Work School	956,000
Aid under Daily Life Security Law	5,387,582,000
Minsei-iin	11,188,000
Personnel - D.I. Security	2,451,000
Operation of Social Agencies	750,000
LARA	52,161,000
Protection of Women	3,012,000
Blind	441,000
Special Aid Programs	6,791,000
Disaster Relief	400,000,000

It is to be noted that these are amounts which have been made available and do not represent expenditures.

October Public Assistance Reports

The Ministry of Welfare has reported that as of 26 November the public assistance statistical reports for the month of October had not been received from the following nine prefectures: Hokkaido, Miyagi, Ibaraki, Niigata, Aichi, Wakayama, Tottori, Saga and Kagoshima. Telegrams have been sent to each of the prefectures to determine why the reports have not been received. Under the present regulations it is required that the Daily Life Security reports be mailed by the 20th of the following month (ref: Weekly Bulletin #41 dated 5 Oct. - 11 Oct. 47).

Reappointment of Minsei-iin

Under the provisions of Article 12 of the Child Welfare Law (Jido Fukushi Ho) recently passed by the National Diet, Minsei-iin appointed under the provisions of the Minsei-iin Ordinance are to assume duties of Child Welfare workers (Jido-iin). It is also provided by Article 64 that the term of office of present Minsei-iin appointed under the Minsei-iin Ordinance is to be regarded as expiring within three months from the date of enforcement of the Child Welfare Law. Date of enforcement of the law is 1 January, 1948. This means that the term of office of all present Minsei-iin will expire by 31 March, 1948. A Plan has been developed by the Ministry of Welfare for the reappointment and selection of Minsei-iin. The purpose of this new plan is to select persons as Minsei-iin who will be capable of carrying out responsibilities under the new Child Welfare Law as well as their duties under the Daily Life Security Law and other statutes.

National Meeting of Women Minsei-iin

On 24, 25 and 26 November the first national conference of women Minsei-iin was held in Tokyo under the sponsorship of the All Japan Minsei-iin Federation. The meeting was attended by approximately 200 persons representing the Minsei-iin federations in each prefecture. This national meeting followed the series of "study conferences" held in each prefecture for the training and guidance of women Minsei-iin. The agenda of the conference included discussion of: vocational guidance, development of facilities for aiding mothers and children, juvenile guidance programs and general problems of welfare administration. Persons who attended the conference

were selected by the president of each prefecture, Minsei-iin Federation. At the present time about 10% of all Minsei-iin in Japan are women.

SECTION III VETERINARY AFFAIRS DIVISION

Weekly Animal Disease Report

The Ministry of Agriculture and Forestry reported the following new out-breaks of animal diseases for the period 23-29 November:

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Aichi	Swine Erysipelas	1
Shizuoka	Swine Erysipelas	2
Kanagawa	Swine Cholera	1
Nagano	Swine Encephalitis	1

Monthly Meat Inspection Report

Following is a summary of the monthly meat inspection report for September 1947, submitted by the Ministry of Welfare:

	Cattle	Calves	Sheep Goats	Swine	Horses
Number of slaughtered	21,467	662	486	6,010	5,913
Live weight (kgs)	7,531,108	59,143	13,842	561,212	1,982,177
Condemned ante-mortem	0	1	0	0	6
Condemned post-mortem					
Total	16	1	0	2	10
Partial	209	15	0	77	390
Viscera	4,598	56	0	2,169	814

Monthly Dairy Inspection Report

Following is a summary of the monthly dairy inspection report for September 1947, submitted by the Ministry of Welfare:

Special Milk

Farm Inspections	3
Sample examined	7
Over bacterial standards (50,000 per cc)	1
Under butterfat standards (3.3 percent)	1
Plant Inspections	6
Over bacterial standards (50,000 per cc)	0
Under butterfat standards (3.3 percent)	3

Ordinary Milk

Monthly Animal Disease Report

Following is a summary of the animal disease report for October 1947, submitted by the Ministry of Agriculture and Forestry:

Disease	No. of Cases
Blackleg	1
Brucellosis	1
Trichomoniasis	224
Texas Fever	71
Equine Infectious Abortion	13
Swine Erysipelas	89
Swine Plague	2
Swine Cholera	8
Strangles	235
Rabies	9
Equine Infectious Anemia	202
Equine Encephalitis	662
Pullorum Disease	3547

SECTION IV SUPPLY DIVISION

Distribution

Dusters and spraying equipment were shipped to five prefectures during the period 18-24 November. A total of 2,189 pieces were distributed under Ministry of Welfare supervision as follows:

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsack Sprayer</u>	<u>Semiautomatic Sprayer</u>
Hokkaido	1,992	0	0
Aichi	0	0	30
Wakayama	0	0	12
Hiroshima	0	0	35
Ehime	0	120	0
Total	1,992	120	77

Mapharsen, bismuth subsalicylate injection, sulfa drugs penicillin were distributed during October as follows:

<u>Item</u>	<u>Unit</u>	<u>Distributed</u>	<u>On Hand 31 Oct.</u>
Mapharsen	gram	22,680.6	388.6
Bismuth subsal. inj.	cc	480,469.8	471,178.2
Sulfathiazole	tablet	3,050,800	301,820
Sulfadiazine	tablet	2,888,000	8,318,000
Penicillin	ox.u.	2,174,410,000	1,004,310,000

Recent information reaching the Supply Division indicates there is a certain amount of confusion regarding the machinery for the disposal of former Japanese Army and Navy medical supplies. In particular is this so for such supplies in the custody of national hospitals. If instructions issued by the Ministry of Welfare had been carried out, no excess of former Japanese Army or Navy supplies should be on hand at any national hospital. Official letter from Ministry of Welfare to each prefectural governor, file EIHATSU 16, dated 10 January 1946, gave detailed instructions regarding stock levels of such supplies and ordered any excesses to be turned over to prefecture health authorities for distribution. Any supplies, with a few specified exceptions, in excess of level to meet requirements to the end of April 1946 were to be so disposed of. A second letter, file EIHATSU 540, dated 27 June 1946 issued further instructions regarding this transfer of excesses. Official letter to each governor from the Ministry, dated 4 November 1946, gave authority and instructions to dispose of former Army and Navy stocks by means of normal distribution channels as well as by means of public bazaars. Further authority from the Ministry of Welfare is not necessary for disposition of these supplies.

On suggestion from Supply Division, the Ministry of Welfare is sending inspectors into the field to investigate irregularities and complaints in public health supply as received through Military Government channels and by PH&W field inspections. Such an inspector left for Hokkaido 27 November. Another such will leave for

Chugoku region approximately 1 December. Reports will be submitted in detail to the Supply Division. Pertinent information deemed helpful to Military Government officers will be published in the Weekly Bulletin.

Narcotics

All of the codeine phosphate recently imported will be repackaged, labelled and ready for sale to registered wholesalers by 1 January 1948. The supply of codeine thus made available will enable central wholesalers, in Kyushu and other outlying areas as well as in Tokyo and Osaka, to maintain adequate stocks to supply 214 registered local wholesalers throughout Japan.

An inspection in Kyushu revealed the narcotic central wholesaler in Fukuoka city has secure storage facilities equal to those of central wholesalers in Osaka and Tokyo. This central wholesaler will maintain adequate stocks of narcotics to supply the local wholesalers in Kyushu and lower Honshu thereby eliminating the difficulties these local wholesalers have experienced, under present shipping conditions, in traveling to Osaka for narcotics.

Officials from the 18 prefectures authorized to grow marihuana for fiber purposes in 1948 met in Tokyo. The Narcotic Control Officer emphasized a large number of unlicensed farmers found growing marihuana (taima) in 1948 would be attributed to improper dissemination of information regarding the marihuana law.

At a conference with narcotic officials from 12 prefectures, it was learned some prefectures have submitted requests that some officials whose duties are not entirely narcotic enforcement be commissioned with judicial police power for narcotic enforcement. The Ministry of Welfare is now again screening personal history sheets of all agents and any who are assigned duties other than narcotic enforcement will have their commissions revoked immediately.

Production

The yen value of production of medical supplies (medicines, biologicals, dental materials, dental instruments, medical instruments and surgical dressings) for October totaled 732,353,544 yen. This represents an increase of 122,803,286 yen. This very substantial increase would indicate an apparent spurt in production during October. However, in some instances, production has remained somewhat static or even decreased, but a new schedule of increased prices of medical supplies makes an amount of production, equivalent to previous months' production, appear as much as double in yen value. Production of controlled and non-controlled medicines during October increased 63,709,315 yen over that reported for September. This can be considered a true production increase. Production of patent medicines however, actually decreased, although the yen value of that production, compared to September, increased 53,465,679 yen. Bacteriological production remained approximately the same in yen value; the same for medical instruments; dental instruments and materials, an increase in yen value of production from an increase in prices.

Production of critically needed items, bismuth subsalicylate and mapharsen, has improved to the point where sufficient quantities of both drugs are now available to provide more than minimum requirements of venereal disease control public clinics.

Production of sulfathiazole during October showed a decrease of 118 kgs., as compared to September production. A total of 1,814 kgs. was produced during October.

Production of biologicals during October continued to be satisfactory. Revised assay testing procedures will make available larger quantities of diphtheria toxoid than have hitherto been available for distribution. Sufficient stocks of typhus vaccine are on hand at present to take care of all possible requirements. Plans are being formulated however, to provide sufficient typhus vaccine for the entire 1948 season.

Production of insect and rodent control supplies during October was satisfactory. While settlement of financial difficulties is still pending, the flow of necessary petroleum supplies has continued with resulting production of satisfactory amounts of 5% DDT residual effect spray. The balance of DDT dusters, remaining on the 1947 production program of dusting and spraying equipment for mosquito and fly control activities, will be completed shortly and plans are being made to set up production quotes for each type of equipment to be made in 1948.

Production of medical instruments in October totaled 1,653,485 pieces and 11,983,185 yen, representing a decrease of 73,901 pieces with yen value of 1,834,003 yen compared to September production.

Production of rubber sanitary goods totaled 5,454,115 pieces and 11,538,925.42 yen value during October. This represents, compared to September production, a decrease of 2,778,788 pieces but an increase in yen value of 5,956,766.55 yen. The increase is attributed in part to the recent increase in pieces of rubber sanitary goods and in part to the reporting of some production hitherto not reported until the new increase in prices went into effect.

Production of dental instruments and dental materials continued, with increases in equivalent yen values of 8,483,739.50 yen for dental instruments and 3,580,604.95 yen for dental materials compared to the September production. A new schedule of increased prices of dental instruments and materials went into effect 4 October which accounts for the substantial increases of yen values of production of both dental instruments and dental materials over any of the production reported for previous months.

Production of glass syringes for domestic use is being reported for the first time in October. Four types are being manufactured: (1) hypodermic, sized 2 cc - 100 cc., (2) tuberculin, sized 1 cc, 2 cc, (3) dental, sized 2 cc, (4) enema, sized 20 cc, 30 cc, 100 cc. A total of 359,380 syringes, all types and sizes, was manufactured in October.

Production of gauze and bandage cloth and absorbent cotton from stocks of American raw cotton continues to be hampered by the extreme general shortage of electric power. Newly revised schedules of increased prices for the three types of textile sanitary goods should expedite the deliveries of finished products in sufficient quantities to help meet minimum requirements of hospitals, doctors, clinics, and other claimants. Concerted efforts have been made to speed up the varied and many steps in the process of manufacturing finished gauze, bandage cloth, and absorbent cotton from stocks of imported raw cotton. With the establishment of the new price schedule, and with the improvement in supplies of electric power to the sanitary goods manufacturing factories and mills, Ministry of Welfare officials predict resulting increases to be gained in production.

Production of absorbent cotton during October totaled 309,485 lbs. as compared to 301,917 lbs. produced during September. Production of gauze totaled 68,692 lbs. for October; September production, 63,425 lbs. Production of bandage cloth totaled 57,172 lbs. for October; September production, 40,117 lbs.

Production of penicillin during October totaled 1,605,450,000 Oxford Units. This represents an increase of 1,085,790,000 Oxford Units over September production and is the largest output in any month since the initiation of penicillin production. The Meiji Seika Company, at Kawasaki, has been consistently the largest producer of penicillin. Their achievement is particularly outstanding considering the fact that the firm has accomplished their production by the surface process method. The company has installed and placed in operation 28 October, a pilot plant so ##### greater yields of penicillin may definitely be expected. Other manufacturers who have been completed pilot plants and initiated the tank process method of penicillin production during October include the Banyu Seiyaku Company at Aichi, the Riken Eiyo Company at Tokyo, the Toyo Rayon Company at Otsu, and the Takeda Yakuhin Company at Osaka.

Production of laboratory animals received a very bad setback in September. Prior to that time, sizable increases in quantities supplied laboratories had been made since February 1947. The present critical shortage of medical laboratory animals is due directly to the loss of appreciable numbers of animals during the flood in Saitama Prefecture, which was central breeding, collecting, and distributing point. Concerted efforts have been made since the flood to replace the stocks of feedstuffs and animal cages lost or damaged from the flood waters. Further efforts are being made to recoup the loss of animals in the minimum amount of time, not only to bring Japanese production back to the July-August 1947 level but to exceed the hitherto top level of production reached during these two months.

Production of x-ray film during October increased 6,728 square meters over that reported for September total output. A total of 32,950 square meters was produced as compared to 26,222 square meters produced during September.

Production of x-ray and physiotherapy equipment in October totaled 500 units. September production reported was 565. Thus, a decrease of 65 units, actually, must be reported. Initial production of six electrosurgical units in October, however, is noted here. Continuing production of this type of electro-therapy equipment is expected.

The following tables indicate production of medical, dental and sanitary supplies and equipment:

YEN VALUE OF PRODUCTION

	<u>August</u>	<u>September</u>	<u>October</u>
Production Controlled Medicines	100,657,279	123,299,583	145,341,864
Non-controlled Medicines	222,207,489	246,162,084	287,829,118
Patent Medicines	193,920,204	137,726,851	191,192,530
Biologicals	58,597,220	54,342,165	53,402,259
Dental Instruments	7,817,101	9,076,812	17,560,551
Dental Materials	3,632,290	4,159,515	7,740,120
Rubber Sanitary Goods	6,074,832	5,582,158	11,538,925
Sanitary Materials (surgical dressings)	8,728,928	15,383,202	5,764,992
Medical Instruments	<u>11,618,817</u>	<u>13,817,888</u>	<u>11,983,185</u>
Total	613,254,160	609,550,258	732,353,844

BIOLOGICALS

	Production (October)		Stock on Hand	
	Crude Vaccine	Finished Vaccine	Crude Vaccine	Finished Vaccine

The 33rd weekly report of DDT Duster and Spraying Equipment for mosquito and fly control program for 1947 indicates the following date for the period 16-22 November:

	Total to Date 15 Nov.	No. Mfgd. 16-22 Nov.	Total Mfgd. to Date 22 Nov.	Total Shipped to Date 22 Nov.	Balance On hand	to be Mfgd.
DDT Dusters	70,476	2,030	72,506	70,118	2,388	17,494
Sprayer, knapsack type, 3 gal. cap.	39,443	...	39,443	18,265	21,178	...
Sprayer, pump type, semi-automatic	23,808	...	23,808	12,740	11,068	...
Sprayer, hand type, 1/2 gal. capacity	37,610	...	37,610	27,255	10,355	...
Total	171,337	2,030	173,367	128,378	44,989	17,494

Releases of the following DDT products and typhus vaccine were approved for the period 23-29 November:

Prefecture	10% DDT Dust	5% DDT Residual Effect Spray	Typhus Vaccine
Tokushima			100 vials
Okayama (Nat'l Hospitals)	105 lbs.	300 gallons	
Okayama		500 gallons	
Nagano			80 vials
Maizuru Quarantine Station			3,600 vials
Hakodate " "			1,500 vials
Ujina " "			2,500 vials
Yokohama " "			200 vials
Kagawa " "			100 vials
Aichi			7,500 vials
Saga			20,000 vials
Fukushima (coal mines)	10,000 lbs.	1,000 gallons	
Gumma	3,000 lbs.	50 gallons	
Miyagi			1,000 vials
Total	13,105 lbs.	1,850 gallons	36,580 vials

A total of 3,595,360 lbs. of 10% DDT Dust and 133,645 gallons of 5% DDT Residual Effect Spray represents total stocks on hand in wholesale warehouses of the Ministry of Welfare, Japanese Government, as of 22 November.

SECTION V NURSING AFFAIRS DIVISION

Education

The second four-months refresher course for Public Health Nurses held at the Institute of Public Health in Tokyo, has been completed. Graduation exercises were held on 26 November with 51 receiving certificates. The third course will open 5 December. Conferences have been held to improve the students' field work, with doctors

and nurses cooperating to secure the best possible training for these students. Two new health centers will be used in the next course.

The clinical nurses Procedure Manual has been completed and is now on sale. This will aid the student nurses in the hospital.

SECTION VI PREVENTIVE MEDICINE DIVISION

Venereal Disease Control

Lectures were given by the VD control officer to two conferences of prefectural health officers, held in Tokyo and Yamagata, respectively. One more such conference is to be held in Kyoto during the coming week.

Special emphasis was laid upon the following points: (a) Necessity for a coordinated VD control program directed toward the public as a whole, with the elimination of prostitutes as a separate group. (b) Adequate treatment of the individual patient with available drugs rather than an attempt to spread medicine too thin, with the consequence of inadequate treatment of all patients. (c) Full utilization of standard drugs currently available; explanation of the fact that penicillin is not the solution of all problems. (d) Payment, at least in part, by those able to pay, particularly payment by prostitutes, most of whom are financially in a position to do so. (e) The importance of case finding, case holding and contact tracing as parts of the coordinated program, in addition to mere treatment. Recommendations were made by which these phases of the program could be started now, without great expense and without waiting for the arrival of trained social workers or public health nurses who, it is hoped, will be available in the not too distant future. (f) The non-issuance of health cards for the purpose of prostitution or of any medical certificates specifically relating to the presence or absence of venereal disease.

Public Health Train

During the period 1 November to 24 November, more than 80,000 persons viewed the exhibits in the Public Health Train at scheduled stops in Tokyo, Chiba and Choshi.

The tentative schedule of the train from 19 January to 10 November 1948 is as follows:

- | | |
|----------------------------|--------------------------|
| a. Kyushu | 19 January to 3 March |
| b. Kinki, Shikoku, Chugoku | 8 March to 23 June |
| c. Tohoku-Hokkaido | 26 June to 26 August |
| d. Chubu-Hokuriku | 20 August to 10 November |

Typhus Fever Immunizations

The Ministry of Justice, in cooperation with the Ministry of Welfare, will begin an extensive vaccination program on 15 December to include all prison and reformatory officials and inmates. The full schedule of 2 doses of 1 cc each will be given.

It is suggested that vaccination of all policemen and inmates of jails, detention rooms, orphanages, etc. be completed at the earliest possible time.

Incidence of Disease Among Repatriates

Since the beginning of the repatriation program, the Japanese Government has kept in operation a system of reporting disease incidence among repatriates. Disease statistics are no better than the methods used in examining patients and their accuracy therefore depends upon both the ability of the doctors engaged in the work as well as upon the facilities available to them. In the Bulletin for the week ending 11 October, some preliminary statistics were published in connection with the tuberculosis case finding and control program. While these figures are certainly not as exact as present knowledge would permit them to be, they are none the less of some value in that the former summary examination of the chest has been replaced by a thorough physical examination, a Mantoux test, and a 35 mm. "Screening type" x-ray of the chest.

Similar improvements have been made in other diagnostic methods. A seriological test is now used for the detection of syphilis; laboratory methods are used for the detection of gonorrhoea, and all stations are now equipped to provide a laboratory differentiation between bacillary and amebic dysentery. While these examples do not

establish that complete modernization has been attained, they indicate that at least a state of awareness has been realized, wherein, we may reasonably expect that the statistics presented herewith are worthy of scrutiny and interest. The period is from 15 March 1946 to the end of July 1947, during which time 4,880,611 persons were repatriated to Japan. Of these; 511,066 persons received medical attention aboard repatriation vessels; 419,749 persons in repatriation centers, and 193,565 in transit in Japan to their homes. The following table covers the medical treatment rendered at repatriation stations:

DISEASE	FIRST AID	IN-PATIENTS*	DEATHS	TOTAL	% OF TOTAL NO. PATIENTS	**PATIENT RATE
War-Wounds	2,075	7,836	5	9,911	2.36%	24.24
Outer wounds	22,650	5,743	13	28,393	6.76%	69.44
Infectious diseases	2,623	8,777	399	11,400	2.72%	27.88
Tuberculosis	4,858	19,749	395	24,607	5.86%	60.18
Malnutrition	7,783	8,639	911	16,422	3.91%	40.16
Beriberi	4,932	8,917	60	13,849	3.30%	33.87
Malaria	9,061	16,448	72	25,509	6.08%	62.39
Veneral Diseases	5,624	3,139	2	8,763	2.09%	21.43
Pregnancy	3,791	2,011	10	5,802	1.38%	14.19
Other	<u>198,162</u>	<u>76,931</u>	<u>1,593</u>	<u>275,093</u>	<u>65.54%</u>	<u>672.82</u>
TOTAL	261,559	158,190	3,460	419,749	100.00%	1,026.60

* Quarantine station hospitals, state hospitals and state sanatoria.

** Number of patients per 10,000 repatriates.

Rodent Control

Where to Use ANTU Baits

1. Place poisoned baits near feeding places, especially garbage pails and food-storage places, or in sheltered spots where rats can eat without being disturbed.
2. Near sources of water for rats.
3. Near burrow entrances and harborage sites.
4. Along runaways.
5. Distribute bait liberally wherever rats have been seen or suspected at any time.

When to Use ANTU

1. Distribute poisoned baits, particularly poisoned water, late in afternoon if possible.
2. Winter and early spring appear to be the most favorable times of the year for poisoning operations as the rats are attracted into houses in search of warmth and food.

How to Prepare for Use of ANTU

1. Make a survey of the area to be poisoned --the buildings, houses, cellars yards and alleys, for signs of rats.
2. Especially when yellow corn or equally attractive baits are not available, it may be desirable to pre-bait with unpoisoned baits for several days to make certain that rats will eat the bait freely.
3. See that all food available to rats is removed if possible 24 hours before ANTU-treated baits are distributed.

Precautions to be Observed

1. Warn all individuals within areas to be poisoned, to keep children away from baits and to leash dogs.
2. Coloring baits with an insoluble pigment (such as du Pont chrome green G-550-D) will reduce the possibility of poisoned baits being mistaken for food.
3. When poisoning operations are over, take up all uneaten baits and dispose of them in places inaccessible to pets.

How to Check Results

1. Look for dead rats for several days following poisoning. In cold weather few rats die on the surface.
2. On the third day close all rat holes with dirt or stones and sweep up or stamp out all fresh droppings. If any rats remain the holes will be reopened within a few days.
3. Look for fresh droppings on runways.
4. Dust chalk on runways to show up fresh tracks.
5. Have everyone watch for rats and report to local rat inspectors.

Schedule for Poisoning an Entire Block, a Group of Blocks, or a Farm

Preliminary work. Discuss situation with all people who are involved, organize workers, plan your attack. (See instructions)

FIRST DAY

1. Notify and caution all persons within the area and tell them the approximate time of the poisoning.
2. Make survey to locate all infested places, indoors and outdoors.
3. See that all uncovered garbage, ##### food, and sources of water are removed.

SECOND DAY

Distribute poison.

FOURTH DAY AND THEREAFTER

1. Remove poison; close burrows. Sweep up droppings.
2. Check for fresh rat signs. Recheck at monthly intervals.
3. If rats remain or reappear, trap or kill with other means. Keep after them and try to eliminate the last rat.
4. Repeat ANTU treatment once every three months if necessary.
5. Institute sanitary measures insofar as possible to eliminate rat harborage and sources of food for rats.

In Case of Accidental Poisoning of Human Beings or Pets

1. Call a doctor or veterinary.
2. Induce vomiting or pump out stomach.
3. Treat for shock.
4. Keep warm.
5. Use positive pressure oxygen inhalation available.

SECTION VII MEDICAL SERVICE DIVISION

Japanese civilian Hospital Strength Report for period ending 7 November 1947 shows 3,389 hospitals with a capacity of 212,126 beds of which 97,688 were occupied. During this same period 268,529 out-patients were treated.

SECTION VIII SOCIAL SECURITY DIVISION

Unemployment Insurance

Approval has been given to the final draft of the amendments to the Seamen's Insurance Law to provide Unemployment Allowances and Unemployment Insurance, and will now be presented to the Diet. The above amendments will provide the same protection for seamen as the recently passed Unemployment Insurance Law does for land workers.

Old Age Benefits

In reply to inquiries regarding old age retirement benefits the following information describes the provisions under present laws:

Old age retirement benefits are provided under the Welfare Pension Act, the Seamen's Insurance Law, the Government Pension System and the Government Enterprise Mutual Aid Societies. The qualification and benefit provisions vary. It should be noted that old age pensions are not now being made under the Welfare Pension Act.

The first payments under this law will not be made until 1955 the earliest date at which any worker will have served the minimum qualifying period since the enactment of the law in 1941, and no appreciable volume of payment can be made until 1962. These systems make no provision for those engaged in agriculture, domestic employment, self-employment, or in establishments in commerce an industry with less than five employees.

Licensed Agencies for Relief in Asia (LARA)

The 35th overseas relief shipment of LARA arrived in Yokohama aboard the SS Philippine Bear, 3 December, and contained 12 Tons of food Supplies.

The Brethern Service Committee (member agency of LARA) made available, as a gift to Japan 193 goats which arrived in Yokohama from the United States on 25 November.

The shipment is composed of the following milking breads:

<u>BREED</u>	<u>SEX</u>		<u>TOTAL</u>
	<u>BUCK</u>	<u>DCE</u>	
Saanen	50		50
Toggenburg	44	3	47
Nubian	46	8	54
Alpine	6	13	19
Crossbred	23		23
	169	24	193

As determined by the Public Health and Welfare and Natural Resources Sections SCAP, 61 goats were allocated to the Ministry of Agriculture (for experimental and breeding purposes) and 132 to the Ministry of Welfare (for allocation and distribution to welfare institutions).

The Ministry of Welfare's allocation plan was approved and authorized on 3 December. Distribution as indicated below is expected to be completed on or before 6 December:

<u>Institution</u>	<u>Number of Goats</u>	<u>Address</u>
<u>Tokyo</u>		
Megro Koseiryō	4	Kamimeguro, Meguroku
Itabashi Yoikuin	4	Itabashicho, Itabashiku
Boshi Aiikukai	1	Hiroocho, Minatoku

Increase in Food Rations to Children's Institutions

The Children's Bureau of the Ministry of Welfare has announced that arrangements have been completed with the Ministry of Agriculture and Forestry to increase rice and rice substitute rations to children's institutions. The increase decided upon was a 40 gram (3 shaku) increase for children from 1 to 5 years of age and an 80 gram (6 shaku) increase for those from 6 to 19 years of age. The increase approximates 25% and will be effective for 25 days of the month. It is expected that this increase will help to keep children from running away from institutions as reports from Military Government Teams indicate lack of food as a major reason for running away.

The regulations authorizing this increase were sent out in a letter of instructions, dated 25 November 1947, from the Ministry of Welfare - Ji Otsu Hatsu No.41.

Regulations and Information Concerning Minsei-iin

The Social Affairs Bureau, Ministry of Welfare, has sent to the prefectures a compilation of documents and instructions concerning Minsei-iin which have been issued during the past year. The compilation is entitled Minsei-iin Ordinance and Regulations (Supplement) and is dated October 1947. Documents included in the compilation are the Ministry of Welfare Ordinance No. 17, dated 18 November 1946: communications from the Chief, Social Affairs Bureau, Ministry of Welfare to prefecture governors concerning Minsei-iin; case illustrations and reference material. It is hoped that by gathering together these various regulations concerning Minsei-iin a better understanding of the current requirements will be secured.

Social Welfare Education

The second meeting of the Kansai Social Welfare Education Committee was held in Osaka on 5 December and was attended by approximately 50 persons. (Reference: Weekly Bulletin No. 46, for period 9 - 15 November). Persons attending the meeting included representatives from welfare agencies; sixteen educational institutions; Osaka Military Government Team, Hyogo Military Government Team; Military Government Section, I Corps, and Welfare Division, PH&W. The organization of the Committee was finally decided upon and various committees appointed to consider problems of curricula and policy. The next meeting of the committee will be held on 14 January 1948 at 1300 in the Osaka-fucho Bekkan.

SECTION II NURSING AFFAIRS DIVISION

Tokyo-To clinical nurses, midwives and public health nurses viewed showings of the following nursing films at the Japanese Red Cross Headquarters, 5 December:

Lady of Science	Florence Nightingale
Journey into Medicine	Morning and Evening Care of Patient
Your Friend the Public Health Nurse	Jimmy Beats Rheumatic Fever

There were over 500 present at the two showings provided and several hundred more were turned away. This was a definite aid to the teaching program and was sponsored by the Tokyo-To Nursing Association.

The Midwifery Manual has been completed through the efforts of many outstanding doctors in Midwifery, under the guidance of Nursing Affairs Division. It may be obtained by ordering from

Miyajima Book Store
No.52, 2 Chome, Shimoma-Cho
Setagaya-ku, Tokyo
Price: 45.00 yen

SECTION III VETERINARY AFFAIRS DIVISION

Weekly Animal Disease Report

The Ministry of Agriculture and Forestry reported that no new outbreaks of animal diseases occurred during the period 30 November - 6 December 1947.

SECTION IV SUPPLY DIVISION

General

Reports are being received from Military Government Public Health Officers advising of severe shortages of electric power for hospitals. The supply of electricity will vary in different districts throughout Japan, however in general shortages are expected to be severe.

Two directives have been issued by the Japanese Government outlining a priorities structure and detailed method of submitting applications for desired revisions in supply. Economic Stabilization Board Instruction No.15, dated 13 September outlined broad policies, and Commerce and Industry Ministry Ordinance number 6, dated 30 September outlines detailed priorities and policies. Copies of these directives have been furnished prefectural agents of the Commerce and Industry Ministry.

All essential industries been placed in category 1 and hospitals have been placed under classification 1, category 2. This priority, although not ideal is considered adequate in-view of the critical supply of electricity and the heavy demand by essential industries.

Prefectural health officials should maintain close liaison with prefectural allocation officials and advise using agencies of current procedures and policies concerning allocation of electricity.

Distribution

A total of 512 pieces of spraying and dusting equipment was distributed to four prefectures in the period 25 November to 1 December. Under Ministry of Welfare supervision these shipments were made as follows:

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsack Sprayer</u>	<u>Semiautomatic Sprayer</u>	<u>Hand Sprayer</u>
Aichi	0	0	0	120
Hyogo	0	150	0	0
Tottori	192	0	0	0
Kagoshima	0	0	50	0
Total	192	150	50	120

Reports have been received that anthelmintics are in very short supply. Santonin distribution has been allocated by Ministry of Welfare distribution officials, based on population figures, to all prefectures. Shipment are made monthly from available stocks. Over the four month period August through November, totals of 130,000 grams of powder and 9,000,000 tablets of santonin have been shipped to all prefectures, allocated as listed below:

<u>Prefecture</u>	<u>August</u>	<u>September</u>	<u>October</u>	<u>November</u>	<u>Total</u>
	Powde r	Powde r	Powde r		

	<u>Gram</u>	<u>Tablet</u>	<u>Gram</u>	<u>Tablet</u>	<u>Gram</u>	<u>Tablet</u>	<u>Tablet</u>	<u>Gram</u>	<u>Tablet</u>

At the present time production of anthelmintics in Japan is not sufficient to meet minimum requirements. An import program has been scheduled to supply the deficiency. A small shipment of santonin has already received on this program. This powder will be processed into tablet form, and will then be distributed for use. A much larger import of this drug is expected within the next few months. Efforts are also being made to import large quantities of digeniasimply which have been scheduled as an import requirement.

Reference is made to Weekly Bulletin No.41 for period 5-11 October which listed names and addresses of X-ray film distribution agencies. Additional information is furnished below on three agencies for Fuji Photo Film Co., Ltd.

Prefecture	Agency	Address
Okayama	Kawanisi Iryoki-ten	Hamada-Cho, Okayama City
//	Yamamoto Photo Shop	No.39 Sakae-cho, Okayama City
Isikawa	Sakurai Iryo-Shokai	No.37 Shimonaka-cho, Misokuramachi, Kanazawa City

Production

The 34th weekly report of DDT Duster and Spraying Equipment for mosquito and fly control program for 1947 indicates the following data for the period 23-29 November:

	Total to date 22 Nov.	No. Mfgd. 23-29Nov.	Total Mfgd. 29 Nov.	Total Shipped to date	Balance on Hand	to be Mfgd.
DDT Dusters	72,506	1600	74,106	70310	3,796	15,894
Sprayer, Knapsack type, 3gal. Capacity	39,443	-	39,443	18415	21,028	-
Sprayer, pump type, semi-automatic	23,808	-	23,808	12790	11,018	-
Sprayer, hand type, 1/2gal. Capacity	37,610	-	37,610	27375	10,235	-
	173,367	1600	174,967	128890	46,077	15,894

Releases of the following DDT products and typhus vaccine were approved for the period 30 November - 6 December:

<u>Prefecture</u>	<u>10% DDT Dust</u>	<u>5% DDT Residual Effect Spray</u>	<u>Typhus Vaccine</u>
Yamagata			4,200 vials
Miyagi			10,000 vials
Kagawa			50 vials
Yamanashi (Kofu Nat'l Hospital)	10 lbs.	40 gallons	
Total	10 lbs.	40 gallons	14,250 vials

A total of 3,657,990 lbs. of 10% DDT Dust, 223,765 gallons of 5% DDT Residual Effect Spray, and 831,412 vials of Typhus Vaccine represents total stocks on hand in wholesale warehouses of the Ministry of Welfare, Japanese Government, as of 29 November.

Narcotics

The October monthly report on narcotics from the Ministry of Welfare contains the following information:

Total registrants	88,147
Arrests - Registered persons	20
Unregistered persons	45
Convictions - Registered persons	6
Unregistered persons	23
Thefts of Narcotics	30
Losses by fire	2 (small quantities)

Penalties for registrants varied from 2,000 - 5,000 yen fine, and for unregistered persons from 300 yen fine to five years penal servitude. In addition to the arrested persons, 35 registered persons and 8 unregistered persons were admonished by prefectural officials either for small technical violations or for other acts which were not deemed sufficient for prosecution.

Three of the convictions were for crimes committed during the month, which indicates an improvement in bringing narcotic violators into court soon after the arrest.

Five persons were arrested for illegal cultivation of marihuana and 1 conviction resulting in a 500 yen fine was obtained. Most of the cases in which illegal cultivation of marihuana was charged during 1947 have been dismissed since cultivation resulted from improper dissemination of information regarding the Marihuana Law. Steps have been taken to provide thorough dissemination of information regarding this law before the planting season of 1948.

A report has been received of an investigation in Fukuoka prefecture which resulted in breaking up a narcotic ring in which 28 persons were involved. Investigation began when a suspected thief was arrested and found to be a narcotic addict. Suspects include 13 students of a University medical department, three physicians, one pharmaceutical company director, ten with no occupation, and one the wife of a former director of a state hospital. Of these 28 persons, 12 are being prosecuted, four are fugitives, one is dead and one in jail for theft. The balance are under investigation. Five of the defendants are addicts.

SECTION V PREVENTIVE MEDICINE DIVISION

Public Health Refresher Training Courses

Reference is made to Section I, Weekly Bulletin #12: Section 5, Bulletin #35; and Section 4, Bulletin #44, 1947. The Institute of Public Health in Tokyo is now conducting short, intensive refresher training courses for personnel on duty in the various branches of the prefectural health organization. Key personnel employed and on duty in the prefectural Health Department and Health Centers, especially the Health Center Directors and other technical personnel, should attend these courses as soon as possible. The courses are designed to give as much practical training as permissible, to as many people as possible in the minimum amount of time. Because of limited facilities and personnel, only 50 students can be currently accepted for each course. It is planned that subsequently two or more classes can be conducted concurrently.

The third refresher class for Public Health Officers (Doctors) and the third class for Public Health Sanitarians will begin on 9 January 1948. The first classes for two new courses, one for Public Health Veterinarians and one for Public Health Pharmacists, will also begin on 9 January 1948. For the time being, all four courses mentioned above will be of 12 weeks duration. Some of these courses may be lengthened or shortened in the future depending upon the circumstances. The current class for nurses began on 8 December and is of 16 weeks duration.

The urgent need for training in public health of those currently on duty in the nation's public health organization is well known. The Japanese have been lax in sending persons for refresher training. Military Government Health Officers should determine that the Japanese prefectural officials do send students to each of these courses, that the students selected are the best available, and that necessary financial provisions are made for those selectees. The future possibilities of these students and their intention of remaining in public health work should receive careful consideration.

On or about 25 November the Institute of Public Health sent out to the governor of each prefecture, letter containing invitations and information relative to these courses. The Institute of Public Health has also notified the prefectural health officers that they are expected to consult the Military Government Health Officers in making the selection of students to attend these course. Military Government Health Officers can render a valuable service to present and future health programs by giving this matter their careful attention.

Amendment to Local Autonomy Law

The amendments to the Local Autonomy Law passed the Diet 7 December. As amended, the law now provides for separate Public Health Departments and Public Welfare Departments in each prefectural government on an equal basis with all other governmental Departments. This will solve the previously existing problem of the status of prefectural health and welfare organizations and will now permit the establishment of sound and efficient Public Health Departments and Public Welfare Departments.

Directives from the Ministry of Welfare, implementing this amendment, may be expected in the immediate future. Upon receipt, by each prefecture, Military Government Public Health Officers and Public Welfare Officers

should closely observe that contents of the directives are placed into effect with the least practicable delay. Details of model organization to be used as a guide in the organization of these Departments will be published in next week's bulletin and will be the same as that published by the Ministry to the Prefectures.

Tuberculosis Control

As result of a survey made in five prefectures during the past month it has become increasingly evident that constant education is necessary along the following lines:

1. That the fallacies of superstition and custom have served to increase the problem of tuberculosis control.
2. The early and through examination of everyone for possible active tuberculosis is imperative.
3. That early diagnosis means prompt treatment and recovery.
4. That early treatment is best accomplished by early hospitalization.
5. That early hospitalization means shorter hospitalization and earlier protection from tuberculosis in the family by removal of the source of infection the open case.
6. The adequate protection of a group means wise and complete cooperation of all members of that group.
7. That legislation without education is futile.

Typhus Fever Control Conference

The third in the series of typhus fever control conferences for the benefit of Japanese prefectural health authorities was held in Kyoto on 3 and 4 December. The conference was attended by representatives from the prefectures of the southern half of Japan, including Kyushu. Following the lectures and discussions the following recommendations were made: (These recommendations are applicable to other sections of Japan)

1. That an early and late serum sample be taken from each Typhus suspect case and submitted to the 406th Medical General Laboratory in Tokyo for complement fixation and reckettisial agglutination tests. A 10 to 15 cc blood sample should be drawn and serum separated. Each specimen should be shipped under ice as soon as possible.

2. That strict enforcement of Articles 2 & 3 of the regulations for Infectious Diseases Reporting, dealing with early case reporting be observed.

3. That Vaccination Programs (adequate supplies are available) be instituted during December 1947 in:

a. Prisons, reformatories, jails, detention rooms, orphanages, vagrant homes (camps) etc., to include all inmates and other personnel, including policemen.

b. Railway employees (particularly conductors, ticket gatemen and others coming in contact with masses of people).

c. Commuters (holders of "season" tickets) in Osaka, Kobe area, Kyoto, Nagoya (similar programs are to be undertaken in Tokyo, Yokohama and Sendai areas).

d. Doctor, nurses and personnel of infectious disease hospitals and health centers, including sanitary team personnel.

4. That DDT residual spray operations be continued and intensified for prisons, jails, reformatories, detention rooms, orphanages, vagrant homes, theaters, public bath houses, railway stations, railway passenger cars and other public conveyances.

5. That DDT dusting programs include:

a. Establishment of a dusting station in each health center to care for any person found infested with lice or fleas.

b. An extensive program against head lice of school children and families of infested children. Rural areas should receive more attention.

6. That a minimum of one permanent well paid operating sanitary team be included as an integral part of each and every health center in Japan.

7. That training and re-training sanitary teams concerning typhus control procedures be undertaken at periodic intervals during the typhus season.

8. That education and publicity campaigns be extended and intensified.

9. That lectures and demonstrations be presented to various Japanese Women's clubs and organizations in an attempt to secure the full cooperation of the Japanese women.

10. That great emphasis be placed on rodent control on well planned and well organized basis including:

a. Informative education and publicity campaigns well in advance of anticipated control programs.

b. Large scale operations covering definite areas to be worked progressively.

(1) Place of operation: definitely determined area, that is a city wide, Ku wide, block wide, etc.

(2) Assignment of sanitary Team: Assignment of each team or working unit of each team to a definite area.

(3) Time of operations: Pre-dusting within control area against fleas one week prior to rat control program.

(a) Definite starting date for each area

(b) Definite completion date for each area

(4) Rat control program (Antu poisoning)

(a) Definite starting date for each area

(b) Definite completion date for each area

(5) Collection and destruction of dead rats.

(6) Survey of results and submitting of necessary reports.

SECTION VI MEDICAL SERVICE DIVISION

Japanese Civilian Hospital Strength Report for period ending 14 November 1947 shows 3,391 hospitals with a capacity of 212,012 beds of which 98,872 were occupied. During this same period 299,512 out-patients were treated.

SECTION VII SOCIAL SECURITY DIVISION

Health Insurance

The Ministry of Welfare has released some of the funds appropriated for the establishment of medical treatment facilities by National Health Insurance associations. Each grant-in-aid is to finance one-third of the cost, with the remaining two-thirds to be the responsibility of the prefecture and local association. Suitable existing facilities are to be rehabilitated, as well as new ones constructed where necessary. Delays experienced by some National Health Insurance associations in procuring permits to build are probably due to priority allocations made necessary by material scarcities.

SECTION VIII MEMORANDA TO JAPANESE GOVERNMENT

None.

CRAWFORD F. SAMS
Colonel, Medical Corps
Chief

Incl. (2)

1. Monthly Summary Report of Cases and Deaths from Communicable Diseases in Japan, period ending 29 November 1947.

2. Weekly Summary Report of Cases and Deaths from Communicable Diseases in Japan, week ending 29 November 1947.

Technical Bulletins

The following Public Health and Welfare Technical Bulletin was mailed with Weekly Bulletin No. 50 on 20 December:

Title: National Welfare Agencies in Japan
Short Title: TB-PH-WEL 8

Prefecture Departments of Health and Welfare

Reference PHW Weekly Bulletin #49, 30 November - 6 December, the following information is furnished:

From time to time questions have arisen in the field concerning the applicability of SCAPIN 945, dated 11 May 1946, subject: Reorganization of Governmental Public Health and Welfare Activities. Paragraph 3 of SCAPIN 945 states the Japanese Government "will cause to be established in prefectural governments a Bureau of Health and a Bureau of Welfare". Paragraph 5 states "the reorganization as a result of this memorandum will be subject to modification by action of the Japanese Diet". The Diet, by means of the Local Autonomy Law (Law No. 67, dated 16 April 1947), has taken action concerning the organization of Prefectural Health and Welfare Departments.

The Local Autonomy Law was amended by the Japanese Diet on 7 December. This amendment becomes effective 1 January 1948. Article 158 of the Local Autonomy Law now provides: "For the purpose of allotting the affairs which fall within the powers of the governor of a metropolis, district or urban or local prefecture bureaus or departments shall be established".

Separate provision is made for the organization of the metropolis (Tokyo-to) government. The prescribed organization for the other prefectures as provided in Article 158 of the Local Autonomy Law is as follows:

1. General Affairs Department
2. Department of Welfare
 - a. Matters relating to Social Welfare
 - b. Matters relating to Social Insurance
3. Department of Education
4. Economic Affairs Department
5. Public Works Department
6. Department of Health
 - a. Matters relating to health and sanitation
 - b. Matters relating to health centers
7. Department of Agricultural Land.

Under the provisions of this amendment "matters relating to labor" are assigned to the Economic Affairs Department.

Japanese officials are now in the process of drafting necessary orders and regulations in order to carry out changes in the organization of the local government. It is expected that required changes will be made between 1 January and 1 April 1948.

The underlying purpose of SCAPIN 945 was to improve the status of health and welfare services in the national, prefectural and local governments by establishing a sound organization at the national level and by establishing similar separate departments of health and welfare in the prefectures. These departments are to be directly under the governor and on an equal footing with the other prefectural government services. The establishment of separate departments has been necessarily a slow process due to limitation of funds and the lack of adequate personnel. The following 18 prefectures have already established separate departments of health (Eisei-bu):

Aichi	Chiba	Fukuoka	Hiroshima	Hokkaido	Hyogo
Kanagawa	Kumamoto	Kyoto	Miyagi	Nagasaki	Niigata
Osaka	Shizuoka	Tokyo	Yamaguchi	Toyama	Wakayama

Separate Departments of Welfare (Minsei-bu) are now established in the following 22 prefectures:

Aichi	Akita	Chiba	Ehime	Fukuoka	Fukushima
Hiroshima	Hokkaido	Hyogo	Kanagawa	Kumamoto	Kyoto
Miyagi	Nagano	Niigata	Okayama	Osaka	Saitama
Shizuoka	Tokyo	Yamagata	Yamaguchi		

SECTION II
WELFARE DIVISION

Public Assistance Report - October

The Ministry of Welfare has submitted the following public assistance totals for the month of October. Figures for September 1947 and October 1946 are shown for purpose of comparison:

	Oct. 1947	<u>Sept. 1947</u>	<u>Oct. 1946</u>
No. of Persons in Institutions	147,734	223,742	
No. of Persons Non-Institutional	<u>2,799,561</u>	<u>2,987,123</u>	
Totals	2,947,295	3,210,865	2,703,439
Cost of Assistance-in Cash	358,731,288	339,125,297	
Cost of Assistance-in Kind	<u>21,824,752</u>	<u>70,371,751</u>	
Totals	Yen 380,556,040	409,497,048	136,995,827

Licensed Agencies for Relief in Asia (LARA)

Rev. Henry J. Felsecker arrived in Tokyo to assume his duties as one of the three representatives of LARA. He replaces Rev. Michael J. Mckillop, who is returning to missionary work with his headquarters in Kyoto. The other two representatives of LARA are Miss Esther B. Rhoads and Dr. G. Ernest Bott.

Additional LARA relief supplies covering shipments 36 and 37 arrived in Yokohama from the U.S. These shipments were follows:

a. Shipment No.36: Arrived aboard the S.S. Louis McHenry Howe on 7 December and contained 198.28 tons of relief supplies (clothing including shoes - 50.37 tons, food - 147.75 tons, medical supplies - .03 tons and miscellaneous - .13 tons).

b. Shipment No.37: Arrived aboard the S.S. New Zealand Victory on 8 December and contained 5.97 tons of relief supplies (clothing including shoes - 5.59 tons, food - .38 tons).

Red Cross Emblem

Law No.159 "Protection of the Emblem and Appellation of the Red Cross" was promulgated on 7 December 1947 and will become effective 1 January 1948.

The law, in brief, contains the following provisions:

a. The emblem of red cross on white ground, the appellation of red cross or Geneva cross, or any emblem or appellation similar to the foregoing shall not be employed without authority.

b. The Japanese Red Cross Society is authorized to employ the emblem and the appellation of red cross.

c. Any person, in order to indicate the place giving free-of-charge aid to the injured or sick, may employ the emblem of red cross on obtaining express authorization of the Japanese Red Cross Society.

d. Any person violating the provisions set forth in sub-paragraph a. above, shall be punished by confinement (not to exceed six months) or by fine (not to exceed 1,000 yen).

Community Chest (National Interdependence Campaign)

To assist the Community Chest in reaching its goal (686,800,000 yen) during the present drive to raise sufficient funds to finance recognized private welfare and relief agencies for the year 1948, provisions have been made through SCAPIN 1829 AG 095 (5 Dec 47) ESS/AC to facilitate participation by Restricted Concerns in the campaign.

The Japanese Government is authorized, by SCAPIN 1829 to establish the following rules with respect to Community Chest donations and subscriptions by Restricted Concerns:

a. Any Restricted Concern may make a cash donation to the Community Chest fund not in excess of 25,000 yen, without prior approval of SCAP. All such donations shall be reported to SCAP through the Minister of Finance.

b. Any Restricted Concern may subscribe a larger amount provided prior approval of SCAP is obtained before payment of the subscription. Such approval will be obtained through the procedure prescribed by the Japanese Government in Ministry of Finance Ordinance No. 97.

c. No Restricted Concern may borrow funds to make payments to the Community Chest fund or use funds borrowed for those purposes. The company's financial condition must be such as to permit donations from its Free Yen Account.

d. All cash donations and subscriptions shall be strictly voluntary on the part of the donor or subscriber.

NOTE: The provisions of SCAPIN 1829 shall be applicable only to the present Community Chest Campaign up to 29 December.

Government interest in the establishment of a Community Chest and the voluntary assistance of public officials, where necessary, is without objection. However, information from the field indicates that in some instances, the interest and assistance of public officials has developed beyond the original intent of all parties concerned.

Public officials' participation in the Community Chest Campaign and the use of Community Chest funds in public relief and welfare organizations was discussed with the Ministry of Welfare and as a result of these discussions the Social Affairs Bureau, Ministry of Welfare, forwarded the following instructions to all prefectural governors on 12 December (Ha-Shatsu 1701); Subject: "Community Chest Campaign".

a. "In view of the fact that this drive is the first attempt on a national scale in Japan, the Ministry of Welfare took the initiative and put all the efforts into fostering interests of the general public in this drive through pamphlets and other source materials. It is requested that you will also extend all possible assistance in publicizing and guiding the drive.

b. "However, it should be borne in mind that this drive is purely a private undertaking, and public officials will not engage in or be responsible for the collection, accounting, safeguarding, allocations or distribution of the funds.

c. "It should also be cautioned that the fund raised by the present drive should under no circumstances be transferred into the accounts of local, prefectural or national public institutions. However, this principle does not prevent private relief or welfare organizations receiving funds from the Community Chest, giving aid, of their own initiative, directly to patients or inmates accommodated in public institutions".

Development of School Lunch Program

The first anniversary of the launching of the School Lunch Program by the Ministry of Education in cooperation with the Ministries of Welfare and Agriculture and Forestry, was observed on 11 December.

On 11 December 1946 the first School Lunch Program was launched in the Tokyo-to, Kanagawa Prefectural Region; 300 schools participating, with a total enrollment of 297,646 children. The school lunch was served twice a week. LARA allocation of 300 tons of powdered skimmed milk constituted the main dietary item.

As of 1 December 1947, 5,062 schools were included in the School Lunch Program (3,504 urban and 1,558 rural). Four million, one hundred five thousand, five hundred and sixty children were benefited through lunch being made available 3-5 times per week.

The following table is included to indicate the scope of the program:

<u>PREFECTURES</u>	NOVEMBER 1947			
	<u>CITIES</u>		<u>TOWNS AND VILLAGES</u>

MIYAZAKI	36	31,812		11,085
KAGOSHIMA	38	32,560	20	20,569

Present Plans call for the inclusion of an additional quarter of a million children during the first quarter of 1948 and an additional quarter of a million during the second quarter of 1948.

The Ministry of Education reports that since the launching of the School Lunch Program, an appreciable increase in the weight of the children has been determined by the nutritional surveys.

The Japanese Government has been asked to develop a plan to increase the budget for the School Lunch Program to include all kindergarden, primary, middle and high school students of the country: a total of more than 18,000,000 children. The new plan is to be effective at the beginning of the 1948 - 1949 school year and carried forward throughout that school year.

SECTION III NURSING AFFAIRS DIVISION

The third four-month Public Health Nurse refresher course is now underway. There are 52 nurses from 42 prefectures enrolled. This course is sponsored by the National Institute of Health and every four months (December - April - August) a new group from the prefectures is enrolled. The four-month curriculum is carefully planned and supervised. During the last six weeks, the students are assigned to health centers for field training where they are taught and supervised in home visits as well as the work in the center.

Public Health Nurses' boxes have been designed and equipped by the nurses. Each nurse has her own box for field work during the training course. It is suggested that each nurse, upon returning to her prefecture, be given the necessary cooperation to enable her to set boxes and equipped for nurses in the centers.

Enclosed diagram (Incl. 1) gives size and articles needed. Each nurse will be given a Japanese copy of all the lectures on public health nursing before returning. It is suggested that prefectures have copies made to enable all the Public Health Nurses to benefit by this course. The nurses are expected to teach other nurses upon returning. All prefectures are represented at the course except the following: Yamaguchi, Fukushima, Akita and Aomori.

SECTION IV VETERINARY AFFAIRS DIVISION

Weekly Animal Disease Report

The Ministry of Agriculture and Forestry reported the following new out-breaks of animal diseases during the period 7-13 December.

Prefecture	Diseases	No. Cases
Hokkaido	Swine Erysipelas	1
Saitama	Swine Erysipelas	1
Oita	Equine Encephalitis	2

SECTION SUPPLY DIVISION

Production

The table below covers allocation of fuel for hospital use for December. Allocation tickets were mailed direct to hospitals on the 5th and 6th of December by the Ministry of Welfare. An increase of approximately 40% will be allocated for the month of January 1948. Allocation tickets for January allotment will be mailed on or about 17 December. (Unit - tons)

	174,967	2,300	177,267	131,768	45,499	13,894

Releases of the following DDT products and typhus vaccine were approved for the period 7-13 December:

<u>Prefecture</u>	<u>10% DDT Dust</u>	<u>5% DDT Residual Effect Spray</u>	<u>Typhus Vaccine</u>
Ibaraki			400 vials
Tottori	500 lbs.		100 vials
Ehime (National Hospital)	40 lbs.		
Yamanashi	1,500 lbs.		
Gifu	30,000 lbs.		150 vials
Okayama (National Hospital)	10 lbs.	5 gallons	
Saga (National Hospital)	200 lbs.	10 gallons	
Toyama			10 vials
Fukushima			250 vials
Okayama	100 lbs.	165 gallons	
Tokyo (National Hospital)	75 lbs.	10 gallons	
Shiga (National Hospital)	60 lbs.	10 gallons	
Nara	500 lbs.	100 gallons	
Hyogo			8,500 vials
Total	32,985 lbs.	300 gallons	9,410 vials

The Ministry of Justice, in coordination with the Ministry of Welfare, has undertaken a study of requirements of typhus vaccine to immunize the inmates and officials of all the prisons, jails, reformatories, houses of detention, and DDT dust for personnel dusting, and DDT residual effect spray for use in the prison buildings and grounds. Detailed data as to the numbers of prisons, juvenile courts, juvenile reformatories and their various branches, and as to the total numbers of personnel, prison inmates and officials, was compiled and analyzed. For

the prison needs for 165,300 people, 16,530 - 20 cc. vials of typhus vaccine was calculated as adequate. This will allow for 2 cc. of vaccine per person. The program is to start immediately and carry through 1 April 1948.

For the 58 main prisons, and 100 branches thereof, the total of 129,300 lbs. of 10% DDT Dust and 41,600 gallons of 5% DDT Residual Effect Spray, sufficient for the entire needs for the year 1948, will be released for 1948, but in quarterly installments of equal 25% portions of the total requirement. For personnel dusting, one dusting per person will use 25 grams. No typhus immunization measures will be done at the Juvenile Courts because of the transient nature of the culprit's stay, only long enough to be processed and then released, or committed to the Juvenile Reformatory, where he will subsequently come up for the 2 - 1 cc. immunizing doses of typhus vaccine.

Total requirements and releases of insect and rodent control supplies for all sections of the Ministry of Justice court and prison system can be summarized as follows:

<u>Section</u>	<u>10% DDT Dust</u>	<u>5% DDT Residual Effect Spray</u>	<u>Typhus Vaccine</u>
Main Prisons & Branches	129,300 lbs.	41,600 gals.	16,530 vials
Juvenile Courts	2,746 lbs.	326 gals.	
Juvenile <u>Remormatories</u> and Branches	1,539 lbs.	5,100 gals.	255 vials
Total	133,585 lbs.	47,026 gals.	16,785 vials

A total of 4,063,219 lbs. of 10% DDT Dust, 176,555 gallons of 5% DDT Residual Effect Spray, and 808,912 vials of Typhus Vaccine represents total stocks on hand in wholesale warehouses of the Ministry of Welfare as of 6 December.

Narcotics

A tour of inspection by the Narcotic Control Officer through Central Honshu revealed that codeine stocks are now reaching local wholesalers in adequate amounts as ordered. The practitioners who were inspected had ample stocks of narcotics but in some instances have not yet provided secure storage commensurate with the stocks of narcotics they are holding. Japanese narcotic agents are endeavoring to have all hospitals store their narcotics in a metal safe with combination locks.

Reports have been received of narcotic violators, who are addicts, being placed on probation. This procedure is being taken up with the Ministry of Justice so that all procurators will be instructed to demand incarceration of addicts, who have violated the narcotic laws, for at least six months in order to remove them from society for a sufficient period of time to effect a cure of their addiction. The Japanese law prohibits the use of narcotics for the treatment of addiction, the approach to the addict problem being that addicts must be placed in an institution without access to narcotics. There are no specific institutions provided for special treatment of addicts since it is felt that pampering an addict will retard rather than further cure of his addiction.

Distribution

Shipments of insect and rodent control dusters and sprayers in the period 2 - 8 December amounted to a total of 2,878 pieces of equipment. Under Ministry of Welfare direction this distribution went to 16 prefectures as follows:

<u>Prefectures</u>	<u>DDT Duster</u>	<u>Knapsack Sprayer</u>	<u>Semiautomatic Sprayer</u>	<u>Hand Sprayer</u>
Akita	360	0	0	48
Niigata	96	0	0	0
Fukui	96	0	0	12
Aichi	144	0	0	72
Kagawa	432	0	0	0
Miyazaki	0	12	6	0
Nagasaki	0	34	12	0
Fukuoka	0	36	18	0

Kumamoto	0	12	56	0
Kagoshima	0	12	6	0
Saga	0	12	116	0
Oita	0	12	6	0
Iwate	0	108	0	0
Tokushima	0	50	24	0
Tottori	816	0	0	96
Fukushima	0	174	0	0
Total	1,944	462	244	228

An air shipment of chaulmoogra oil from Japan is to be made to Okinawa in the very near future, to satisfy the emergency need. 84,000 cc are in the process of purification, to be ready for shipment approximately 22 December.

Effective 4 November a new price schedule for controlled medicines became effective. In coordination with Economic and Scientific Section of SCAP, the Price Board of the Japanese Government formulates these official prices. The new price schedule for 97 of the 124 items under distribution control is listed below. Items omitted are those which are currently not being distributed, such as quinine and quinine derivatives. A further study is being made of certain of these prices, which seem excessive, to determine if reductions can be made.

OFFICIAL PRICES FOR CONTROLLED MEDICINES
Effective 4 November 1947

<u>Drug</u>	<u>Unit</u>	<u>New Price</u>
Acetophenetidin	500 gram	Yen 2054.5
Acetophenetidin Tablets	100 tab	164
Aceto-sulfamine Injection	2 cc 10 amp	68
Acetylsalicylic Acid	25 gram	50
Acetylsalicylic Acid tablets	20 tab	25.5
Albumin tannate	500 gram	383
Alcohol	500 gram	441.5
Alcohol, diluted	500 gram	184.2
Alcohol, disinfectant	500 gram	391.5
Aminopyrine	25 gram	172.5
Aminopyrine tablets	20 tab	30
Atrophine sulfate	5 gram	6,877.50
Barbital	25 gram	217
Bismuth subnitrate	500 gram	474.5
Bismuth subsalicylate	25 gram	42
Bismuth subsalicylate injection	1 cc 10 amp	94
Bitter tincture	500 gram	411
Bromural	500 gram	1,619.00
Bromural tablets	20 tab	17
Caffeine with Sodium Benzoate	25 gram	102.5
Calcium chloride, crystallized	500 gram	92
Calcium chloride, injection	20 cc 5 amp	72.5
Calcium lactate	500 gram	460.5
Carbromal	500 gram	3,627.00
Castor Oil	500 gram	112.5
Castor Oil, aromatic	500 gram	72.8
Chiretta, Japanese	500 gram	142.5
Chloroform for anesthesia	30 gram 5 amp	354
Cresol solution compound	500 gram	167
Dextrose	500 gram	500

Digitalis	500 gram	1,479.00
Digitalis Injection	2 cc 10 amp	69.5
Ephedrine hydrochloride	25 gram	1,720.00
Epinephrine solution	1 cc 50 amp	294.5
Ether, anesthetic	25 gram 5 amp	300.5
Ethyl chloride	50 cc	115
Euipan	25 gram	708
Formaldehyde solution	500 gram	145
Glycerine	250 gram	74.5
Hydrogen peroxide solution	500 gram	81.5
Insulin	1 cc 10 amp	280
Iodine	1000 gram	700.5
Iodine, purified	500 gram	597.5
Iodine, tincture	500 gram	573
Iodine, tincture, mild	500 gram	952.5
Japan wax ointment	500 gram	206.5
Lobeline hydrochloride injection	10 amp	209
Magnesium oxide	500 gram	102.5
Mapharsen	0.04 gram 10 amp	240
Mecuric chloride disinfectant	500 gram	337
Mercurochrome	500 gram	1,834.50
Metigal	500 gram	334
Nupercaine	5 gram	354.5
Nux vomica extract	500 gram	2,160.50
Ointment, simple	500 gram	96.3
Penicillin	30,000 unit 1 amp	400
Phenobarbital	25 gram	532.5
Phenol	500 gram	264
Phenol for disinfection	500 gram	264
Potassium acetate solution	500 gram	161.5
Potassium bromide	500 gram	542
Potassium Iodide	500 gram	645.5
Procaine hydrochloride	1000 gram	16,456.00
Procaine hydrochloride injection	1 cc 10 amp	42.5
Protein silver, strong	25 gram	83
Rivanol	25 gram	348.5
Saccharin, soluble	25 gram	169.6
Santonin	500 gram	51,426.00
Santonin tablets	100 tab	244.5
Scopolamine	5 gram	5,840.00
Scopolie, extract	500 gram	3,848.00
Sesami oil	500 gram	98
Silver, colloidal	100 gram	602.5
Silver, nitrate	500 gram	1,730.00
Sodium bicarbonate	500 gram	29.5
Sodium bicarbonate tablets	100 tab	29
Sodium chloride physiological	500 cc	182.5
Sodium salicylate	500 gram	491.5
Sulfadiazine	100 gram	3,974.00
Sulfadiazine tablets	20 tab	442.5
Sulfaguanidin	500 gram	4,216.00
Sulfaguanidin tablets	20 tab	103
Sufamethylthiazole	500 gram	8,511.50

Sufamethylthiazole tablets	20 tab	207
Sulfamine	25 gram	95
Sulfamine tablets	20 tab	45.5
Sulfapyridine	500 gram	8,308.50
Sulfapyridine tablets	20 tab	193
Sulfapyridine injection	2 cc 10 amp	151.5
Sulfathiazole	500 gram	9,712.00
Sulfathiazole tablets	20 tab	224
Tar and sulphur paste	500 gram	232.5
Theophylline with sodium acetate	25 gram	503
Zinc oxide	500 gram	49
Zinc oxide in oil	500 gram	160.5
Zinc oxide ointment	500 gram	348.5
Zinc sulfate	500 gram	89

Reference is made to previous issue of the Weekly Bulletin, No. 49, 30 November - 6 December, to clarify a possible misunderstanding. The final two columns in the tabulation of santonin distribution are the totals for powder and tablets in the four month period covered. In November no powder was distributed. Distribution for November is the single column headed "Tablets".

SECTION VI PREVENTIVE MEDICINE DIVISION

Sanitary Engineering

Approximately 25% of the Japanese people are served by municipal water treatment plants and distribution systems. The remaining 75% obtain their drinking water from shallow wells, streams, or springs which are, for the most part, liable to dangerous pollution. A large proportion of the urban population supplement the seasonally inadequate public supplies with water from private wells. It is not feasible to routinely chlorinate wells or to sterilize the water obtained from them except as an emergency measure to control epidemics of enteric disease. The only means of insuring a reasonably safe well water supply is by the proper location, construction, and maintenance of the well. The Japanese often rely on a single annual chemical or bacteriological test to ascertain the potability of a well supply. This practice should be discouraged since it provides no assurance of a continuously safe supply and often gives the well owner a false sense of security.

A shallow well, one less than 100 feet in depth, should be located at least 15 meters from nightsoil storage tanks, sewers and other sources of fecal contamination. The well site should be selected so as to provide good surface drainage to prevent puddling within four meters of the well. The well casing should be of an impervious material extending a minimum of three meters below the normal ground surface and approximately one meter above it. The usual Japanese method of construction using several sections of bell and spigot concrete pipe is not satisfactory. The well should be covered and, if possible, a pump provided. The construction of new wells for Health Centers, schools, and other public institutions should be approved by the Prefectural Health Department. It is recommended that the local health department survey existing public well supplies, both from an engineering and bacteriological standpoint, and initiate a program of corrective action.

Interpretation of Laboratory Serologic Tests

The demonstration of specific antibodies by proper serologic technique affords presumptive evidence of past or present infection with specific etiologic agents. Interpretation of results of serologic tests with specimens from patients suspected of various diseases can be made in many instances only in connection with observation of clinical symptoms of the diseases. This is particularly true when single specimens only have been submitted for examination. Unless a definite rise in titer of specific antibodies can be demonstrated during the course of disease, laboratory findings per se may be without value or actually deceiving.

If diagnostic significance is to be attached to results of serologic tests, a minimum of two serum specimens must be examined. The first specimen should be drawn as soon as possible after onset of clinical signs and symptoms and the other 10 days to 3 weeks later (see Circular 96, Headquarters 8th Army, 5 June 1947). Usually

this interval between the drawing of specimens in the acute and convalescent phases is long enough to permit a significant rise in antibody titer to be detected. However, certain neutralizing antibodies frequently appear later than other types of antibodies, and in these cases a third specimen should be drawn 6 to 8 weeks after onset.

Epidemic and Murine Typhus Fevers: Serologic tests available for aid in the diagnosis of typhus fever, either the epidemic or the murine type, include the Weil-Felix reaction, complement-fixation and rickettsial agglutination tests. Each type of reaction may become positive and reach a maximum titer different stages of the disease.

a. Weil-Felix Test: Usually between the 7th and 15th day after initial symptoms, patients suffering from epidemic or murine typhus develop agglutinins capable of clumping or agglutinating Proteus OX19. Proteus vulgaris OX19 is an O (non-motile) variant of Proteus vulgaris, a gram negative bacillus which per se has no connection with the typhus fevers. As an antigen Proteus OX19 is relatively complex. A fraction of its antigen complex apparently is also a component common to the antigen complex of the rickettsiae of epidemic and murine typhus. The consequent result in this case is para-agglutination where the agglutinins formed against a rickettsial antigen cause agglutination of an identical bacterial antigenic component. It might be expected that an antigen as complex as Proteus OX19 might also be agglutinated by antisera specific for its components not common to the rickettsia. Such is often the case. Hence, the Weil-Felix reaction, as these Proteus agglutinations by rickettsial antisera are termed, is not necessarily specific. Patients with F.U.O.'s often develop agglutinins for Proteus OX19. Such agglutinins are usually low in titer (seldom over 1:640) and their presence in the patient's serum is of short duration. Most patients having typhus fever (murine or epidemic) usually do not show complete loss of agglutinins until about the 45th day of the disease or thereafter.

Serum samples in suspected cases of typhus should be taken on or about the seventh, twelfth and sixteenth day of the disease. If the line obtained from plotting these titers shows either a straight ascent or exhibits a rise and fall, and if the clinical symptoms are compatible with a diagnosis of typhus, the Weil-Felix reaction in such a case may be considered as laboratory confirmation.

NOTE: Experience in this theatre has shown that individuals immunized against typhus may attain titers as high as 1:640 and the appearance of such titer is gradual. It should not be assumed from this and the foregoing discussion that only titers above 1:640 are significant. Bona fide cases of typhus have shown a titer line starting at 1:20 proceeding to 1:80 and thence to 1:160 with gradual diminution after the 45th day.

b. Complement-Fixation Test: The typhus complement-fixation test, employing specially purified rickettsial antigens, is specific in the sense that it is not known to give positive results with immune serum from diseases other than typhus fever. In the absence of previous vaccination against typhus fever, a titer even as low as 1:10 can be considered positive. On the other hand, the complement-fixation test may remain positive in low titer for a relatively long period of time after recovery from the disease, so that a single low-titer reaction (1:10 to 1:40) may represent past experience with the disease and not necessarily current infection. Titers of 1:80 or greater can ordinarily be regarded as indicative of recent infection, while demonstration of a rising titer, even though the maximum level is not high, may be considered diagnostic.

In most instances, epidemic and murine typhus fevers can be differentiated from each other on the basis of complement-fixation tests in non-vaccinated individuals. When carefully washed antigens are employed, little or no cross-reaction occurs in the case of epidemic typhus. A greater degree of cross-reaction is often noted in murine typhus sera, but in the majority of cases murine antibody titer is definitely higher than epidemic antibody titer. In what appear to be intermediate cases, titer of epidemic and murine antibodies may be equal or nearly so; these cases seem to be more closely related to murine than to typical epidemic typhus fever.

In the non-vaccinated patient, complement-fixation antibody titers become positive and reach maximum levels more slowly than do either Weil-Felix or rickettsial agglutination antibodies. The reaction seldom becomes positive in less than 10 days after onset and may be delayed as long as 21 to 30 days. Negative complement-fixation results obtained on specimens drawn during the acute stage of disease or in early convalescence, therefore, do not exclude typhus fever as a diagnosis.

In the case of previously vaccinated individuals, the serologic picture may be markedly altered. A titer of 1:10 or 1:20 for epidemic antibody may be found in healthy individuals following a typhus immunization series (commercial American typhus vaccine is prepared from an epidemic typhus strain). When such individuals contract typhus fever, the complement-fixing antibody titer may become positive or show a rise in titer much more rapidly than in non-vaccinated individuals owing to an anamnestic response.

In murine typhus cases occurring in individuals immunized against epidemic typhus, complement-fixing antibody for epidemic typhus has been found often to appear earlier than murine antibody and may reach a titer as high or higher than the latter. In such cases serologic differentiation may be impossible by means of complement-fixation tests alone.

c. Rickettsial Agglutination Test: Rickettsial agglutination reactions have been found to become positive somewhat earlier in typhus fever than the complement-fixation test. The agglutination test is particularly useful in the laboratory diagnosis of murine typhus where the reaction appears to show positive results with greater regularity than is the case with complement-fixation with purified rickettsial antigens. While a cross-reaction is almost invariably found, agglutination titer usually is significantly higher for the specific typhus strain causing the disease; this has been found to be true also in the case of murine typhus patients who have been immunized with epidemic typhus vaccine.

The limiting factor in the use of the rickettsial agglutination test for routine laboratory diagnostic procedures is the relatively large amount of antigen required for the quantitative test as compared with that required for complement-fixation. (To be continued in Weekly Bulletin #51).

SECTION VII MEDICAL SERVICE DIVISION

Japanese Civilian Hospital Strength Report for period ending 21 November 1947 shows 3,400 hospitals with a capacity of 211,183 beds of which 97,218 were occupied. During this same period 309,377 out-patients were treated.

SECTION VIII SOCIAL SECURITY DIVISION

Seamen's Insurance

The Diet on 9 December passed amendments to the Seamen's Insurance Law to provide Unemployment Insurance and Unemployment Allowances for seamen in the same manner as recent legislation accorded protection to landworkers.

National Health Insurance

A survey of National Health Insurance activities was made in Yamagata prefecture. Although the National Health Insurance associations there are beset with financial difficulties, the situation in general compared favorably with that in other areas visited. In only one town in the prefecture have the people voted to dissolve their association. Ninety-four percent of the population enjoys National Health Insurance protection. The average annual premium is about 600 yen per family, which represents approximately 2% of income in rural areas. For this contribution, subscribers are entitled to medical and hospital service of all types, to the extent of half their bills.

SECTION IX VITAL STATISTICS DIVISION

The Ministry of Welfare called a two-day conference at Yugawara on 12 December of all statistical units in the prefectural health offices. Representatives numbering 120 were present from all prefectures, the five largest cities and eight members of the field staff of public health statistics of the Ministry. All prefectural health offices are now expected to have specific public health statistics units.

During the preceding week, more than 100 representatives from health centers gathered in Kyoto from Kyushu, Shikoku and the southern part of Honshu, where they were informed of their part in the nationwide program to obtain better public health statistics.

Budget and personnel matters were discussed. Beginning 1 January 1948, all schedules (transcripts of original registrations) will be routed to the Ministry of Welfare through the health centers and the prefectural health statistics offices. This will make it possible to put this information to work at the local and prefectural levels.

SECTION V NUTRITION CONSULTANT

A revision of the Ministry of Welfare Ordinance on "Regulation for Qualification of Nutrition Specialists", which provides for raising the educational standards for Nutritionists, was passed by the Diet and became a law 7 December.

The Nutrition Society of Japan held their Second Annual convention in Tokyo 10 December. Col. C. F. Sams, Chief, Public Health and Welfare Section, and the Chief Nutrition Consultant, PH&W, SCAP, addressed the group of over 900 members. Both officers stressed the need for sound training in the field of nutrition so as to use their technique for making the best use of food production and distribution to satisfy nutritional needs of the Japanese, not only for calories, but for vitamins and minerals necessary for health.

SECTION XI
MEMORAMDA TO JAPANESE GOVERNMENT

None.

CRAWFORD F. SAMS
Colonel, Medical Corps
Chief

Incl: Weekly Summary Report of Cases and Deaths from Communicable Diseases in Japan, week ending 6 December 1947.

SECTION V - Supply
SECTION VI - Preventive Medicine
SECTION VII - Medical Service
SECTION VIII - Social Security
SECTION IV - Memoranda to Japanese Government

SECTION I GENERAL

The 1948 Budget

The beginning of the Japanese government fiscal year is 1 April. Prefectural Health Departments should be encouraged at this time to complete the planning of their 1948 health programs and to make estimates of the funds required to carry out their projects. During the 1947 fiscal year the percentages of the prefectural budgets allocated to public health varied from a fraction of 1% to 2% with only a few prefectures exceeding this latter figure. Surveys show that well-rounded health programs cost a minimum of 5% of the total budget with 10% a desirable level. Now is the time to plan! Military Government Health Officers should use their influence to determine that at least 5% of the total prefectural budget is allotted to public health programs.

SECTION II WELFARE DIVISION

Proposed Organization of Prefecture Welfare Departments

In order to carry out the provisions of Article 158 of the Local Autonomy Law which was recently amended by the Japanese Diet, the Ministry of Welfare will dispatch instructions to the prefecture governors. These instructions will set forth the organization of the Welfare Department (Minsei-bu) which is to be organized in each prefecture when the amendments to the Local Autonomy Law become effective on 1 January 1948. The change in the law will not effect the organization of the Welfare Department in Tokyo and a few other large prefectures such as Osaka where a separate Welfare Department has already been created.

In all of the prefectures other than Tokyo, Osaka, Hyogo, Aichi, Kanagawa and Fukuoka the Welfare Department will consist of at least four sections: Welfare (Kosei-ka), Children (Jido-ka), Insurance (Hoken-ka) and Demobilization (Sewa-ka). The duties assigned to each of these four sections are as follows:

1. Welfare Section (Kosei-ka)
 - a. Survey and planning of social work
 - b. Training and education of those concerned with social work.
 - c. Guidance and supervision of social work organization and institutions.
 - d. Welfare Committeemen (Minsei-iin).
 - e. Administration of Daily Life Security Law.
 - f. Repatriates relief.
 - g. Disaster relief.
 - h. Public pawn shops, bath houses, dining halls and welfare institutions.
 - i. Protection of the physical handicapped.
 - j. Problems of socially ostracized groups (such as Eta).
 - k. Supply of relief and aid materials.
 - l. Work shops and home job facilities.
 - m. Matters relating to social work not handled by other divisions.
2. Children's Section (Jido-ka)
 - a. Overall planning on child welfare.
 - b. Child Welfare Law administration.
 - c. Cultivation and publicizing idea on child welfare.
 - d. Cultural program for children.
 - e. Prevention of delinquency among children.
 - f. Supply of materials required for protection of children.
 - g. Survey and statistics on children.
 - h. Protection of mothers and children.
 - i. Matters relating to children not handled by other divisions.
3. Insurance Section (Hoken-ka)
 - a. Health Insurance
 - b. Seamen's Insurance.
 - c. Welfare Pension Insurance.
 - d. National Health Insurance.

- e. Matters relating to social insurance not handled by other divisions.

4. Demobilization Section (Sewa-ka)

- a. Counseling for ex-servicemen and former civilian employees of Army or Navy.
- b. Salaries and other allowances for “the bereaved families of fallen ex-servicemen” and former civilian employees of army or navy.

In the prefectures of Osaka, Aichi, Kyoto, Hyogo, Kanagawa and Fukuoka, a total of five sections within the prefecture Welfare Department has been authorized as follows: Social Affairs (Shakai-ka), Protection (Hogo-ka), Children, Insurance and Demobilization. In these prefectures the Protection Section will be responsible for administration of the Daily Life Security Law, repatriate relief programs and disaster relief. The Social Affairs Section will be assigned the other responsibilities listed above as assigned to the Welfare Section. The functions of the Children’s Section, the Insurance Section and Demobilization Section remain the same in all prefectures.

There is a definite relationship between the functions of various bureaus within the national Ministry of Welfare and the sections of the prefecture Welfare Department (Minsei-bu):

<u>Bureau of Ministry of Welfare</u>	<u>Section of Prefecture Welfare Department</u>
Social Affairs (Shakai Kyoku)	Welfare (Kosei-ka). In large prefectures: Social Affairs (Shakai-ka) and Protection (Hogo-ka)
Children (Jido Kyoku)	Children (Jido-ka)
Insurance (Hoken Kyoku)	Insurance (Hoken-ka)
Demobilization (Fukuin-Kyoku)	Demobilization (Sewa-ka)

Attention is called to the fact that the amendment to Article 158 of the Local Autonomy Act does not become effective until 1 January 1948 which means that changes in prefecture organization will not be required until after that date. Under the revised organization the labor functions now included in many Welfare Departments will be transferred to the Economic Affairs Department. The combination of education, labor, health and welfare activities within the same department, which is the present plan of organization in some prefectures, will no longer be authorized.

Transfer of First Demobilization Bureau

The Japanese Government was directed to transfer the First Demobilization Bureau (including all local agencies under its operational control, such as Home Depot Bureau, Demobilization Liaison Offices and their branches) intact to the jurisdiction and control of the Ministry of welfare, the transfer to be completed on or before 15 October. Reference: Memorandum for Japanese Government, SCAPIN 1791 dated 4 October, subject: Demobilization Machinery, Reorganization of. The First Demobilization Bureau is now, therefore, a part of the Ministry of Welfare. The bureau is continuing its functions of demobilization and repatriation of the former Japanese Army personnel. The same directive orders the complete elimination of the Second Demobilization Bureau by 1 January 1948 and transfer of remaining functions and personnel to the Ministry of Welfare.

Within the prefectural government the functions of the national Demobilization Bureaus are carried out through Demobilization Sections (Sewa-ka) of the Welfare Department (Minsei-bu). In many prefectures there are two sections carrying on this work, one known as the First Demobilization Section (Dai-Ichi, Sewa-ka) and the Section Demobilization Section (Dai-Ni, Sewa-ka). In accordance with the provisions of SCAPIN 1791 the Japanese government is preparing a detailed plan “for the effective ultimate elimination of separate demobilization agencies and the efficient and gradual absorption of all necessary remaining functions ** into the permanent administrative structure of the Japanese Government”.

Children’s Bureau, Ministry of Welfare

A plan for the reorganization of the Children’s Bureau of the Ministry of Welfare has been developed and will be placed in effect during the current month. This bureau which was established within the Ministry of Welfare in March, previously carried on its work through three sections. (reference: PHW Weekly Bulletin #46, for period 9-15 November). The reorganization plan calls for the expansion of the Bureau to include four sections. It is expected that the reorganized Bureau will be able to more effectively carry out the provisions of the new Child Welfare Law which becomes effective 1 January 1948. The four sections of the Bureau are: Planning, Child Protection, Child Care and National and Child Health.

The responsibilities of the Bureau are assigned to the four sections as follows:

1. Planning

- a. Dissemination of child welfare information and other matters for the promotion of child welfare.
- b. General supervision of the administration of the Child Welfare Law.
- c. Child Welfare Boards.
- d. Child Welfare officials and Child Welfare workers.
- e. Child Welfare Stations.
- f. Surveys and statistics concerning children.
- g. Other matters not belonging to other sections.

2. Child Protection

- a. Orphans and orphanages.
- b. Protection of homeless, mentally handicapped and vagrant children.
- c. Prevention of delinquency; juvenile training and education institution (Kyogo-in).
- d. Foster home program.
- e. Prevention of cruelty to children.
- f. Supplies necessary for child protection.

3. Child Care

- a. Day nurseries and nursery teachers
- b. Foundlings
- c. Mothers homes (Boshi-ryo) and protection mothers with dependent children.
- d. Children's recreational agencies.
- e. Cultural development of children.

4. Maternal and Child Health

- a. Health of Infants and pre-school children, expectant and nursing mothers.
- b. Special nutrition for infants and pre-school children and expectant and nursing mothers.
- c. Prevention of special diseases of the infants and pre-school children and expectant and nursing mothers.
- d. Guidance of work of midwives and maternity agencies.
- e. Health of children not included above.
- f. Health of delicate and crippled children.
- g. Miscarriage and still-birth.

In the prefectures, the responsibilities of the planning, child care and child protection sections are assigned to the children's section of the prefecture Welfare Department (Minsei-bu) while responsibility for the maternal and child health program is assigned to the prefecture Health Department (Eisei-bu).

Vagrant and Homeless Children

Reports received from Military Government Teams indicate the problem of vagrant children continues to require attention. The program providing care for such children was established by the Ministry of Welfare in a directive issued on 15 April 1946, subject: Execution of Emergency Measures for the Protection of Waifs and Other Children (Reference: Inclosure 4 to Operational Directive No.9, dtd 14 January 1947. Hdq. Eighth Army). This program remains in operation until it is taken over under the new Child Welfare Law. The following statements which indicate the nature of the problem are quoted from Military Government Monthly Activity Reports for November:

“A Plan has been adopted for the care of juvenile vagrants found in the streets, railroad stations or other like places. Instructions have been sent to all the police stations to pick up vagrant children and immediately notify the Prefectural Social Welfare Section. If there is a children's institution in the vicinity, the child should be placed there pending further plans; if there is no such place and the child must be held overnight in the police station, he must not be placed with adult criminals. The Welfare Section will make arrangements for him to on the following morning.

“Seven children were picked up during the month and placed in Kosei-en Orphanage. One nine-year old boy was so ill that he died. Three older boys ran away. Two are making a good adjustment in the Home. The

seventh child was returned to his father through the cooperation of the Legal and Public Welfare Sections of Military Government and the Prefecture. He was eight years old and had been held for eight days in Urawa jail by the police because they had difficulty locating his relatives. The Legal Section handled the matter of the police holding a vagrant child in jail so long. The head of the Prefectural Social Welfare Section interviewed both the boy's father, who lives in Tokyo, and the child who previously had lived with adopted parents in Chiba Prefecture. It was decided the boy would return to the home of his father and the Saitama Welfare Section would refer the case to Tokyo Welfare Section for supervision."

"A total of ten children were picked up in front of the Kagoshima Railway Station. These children were sent to the Jimpuryo Orphanage for care and treatment."

"An adoption campaign is being carried on by Doho Engo Kai (a private organization) in Miyagi Prefecture, which is to be a part of a national campaign. Bulletins with pictures of all orphans, and homeless children in institutions, were placed in prominent downtown areas and numerous applications for adoptions were received. Several children were reunited with their families. Social investigations are being made on applications before a child is adopted."

Licensed Agencies for Relief in Asia (LARA)

The 38th overseas shipment of relief supplies to LARA arrived aboard the S.S. Scott E. Hand at Yokohama on 13 December 1947. This shipment contained 29.9 tons of food items.

SECTION III NURSING AFFAIRS DIVISION

Public Health Education (Summary of Details Pertaining to P.H. Course)

Four-month Refresher Courses for Public Health Nurses are given by the Institute of Public Health, Tokyo, with classes starting April, August and December.

Prefecture Health Departments are notified of details prior to beginning of each course. Military Government Public Health Nurse or the Public Health Officer in each Prefecture should supervise the selection of each candidate and their assignment upon return.

Candidates should as nearly as possible meet the following qualifications:

1. A person who has been and will be in a supervisory position in a Health Center, Public Health Nurses training school, or a prefectural health office.
2. A person who is between 23 and 40 years of age and in good physical condition.
3. One who has a Public Health Nurse's certificate.

Cost to prefecture for four-month period averages 7200 yen plus round trip travel expenses. Dormitory accommodations are provided by the Institute for those who do not live in Tokyo.

Courses consist of ten weeks of theory and six weeks of practical training. American nurses are rendering direct assistance and supervising the training programs. Upon the student's return to the prefecture they should be able to provide leadership in the improvement of public health nursing services and nursing schools.

Curriculum	Hours	Instructor
Public Health Nursing	44	P.H. Nurse
Public Health Administration	10	Physician
P. H. Nursing (History & Trends)	4	P.H. Nurse
Introduction to Public Health	4	Physician
Sanitation	8	Physician
Psychology	10	Psychologist
Sociology	4	Sociologist
Social Services	10	Social Worker
Maternity	12	Physician
Maternity Nursing	12	P.H. Nurse
Nursing Procedures	28	P.H. Nurse
Principle & Method of Teaching	10	P.H. Nurse
Vital Statistics	8	Physician
Mental Hygiene	8	Physician
Infant & Preschool	12	Physician
Infant and Preschool Nursing	14	P.H. Nurse
Communicable Disease	16	Physician
Communicable Disease Nursing	8	P.H. Nurse
Health Education	12	Physician and P.H.N.
School Hygiene	4	Physician
School Nursing	10	P.H. Nurse
Oral Hygiene	4	Physician
Nutrition	18	Nutritionist
Tuberculosis	10	Physician
Tuberculosis Nursing	10	P.H. Nurse
Venereal Disease	10	Physician
Venereal Disease Nursing	10	P.H. Nurse
Public Health Nursing Supervision	14	P.H. Nurse
Total hours	314	

The following eight health centers are being used for the students field work; Tokyo Central, Suginami, Adachi, Shinagawa, Setagaya, Shinjuku, Tokorozawa, Urawa.

SECTION IV VETERINARY AFFAIRS DIVISION

Weekly Animal Disease Report

The Ministry of Agriculture and Forestry (Bureau of Animal Industry) reported the following new outbreaks of animal diseases for the period 14 - 20 December:

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Kanagawa	Swine Cholera	1
"	Swine Erysipelas	1
"	Swine Plague	1

Monthly Animal Disease Report

Following is a summary of the monthly animal disease report for November submitted by the Ministry of Agriculture and Forestry.

DISEASE	NO. OF CASES	
	October	November
Blackleg	1	0
Brucellosis	1	16
Trichomoniasis	224	152
Texas Fever	71	0
Equine Infection Abortion	13	66

Swine Erysipelas	89	3
Swine Plague	2	0
Swine Cholera	8	0
Strangles	235	131
Rabies	9	0
Equine Infection Anemia	202	66
Equine Encephalitis	662	25
Pullorum Disease	3547	5570

SECTION V
SUPPLY DIVISION

Production

A breakdown of solid fuel allocation, by prefectures, for hospital use for January 1948 is tabulated below. Allocation tickets covering this quantity were mailed by Ministry of Welfare direct to hospitals on 16th and 17th December. (Unit: Ton)

District	Prefecture	Standard	Substandard	Lignite	Total
Sendai	Aomori	283	600	400	1,283
	Iwate	275	410	300	985
	Miyagi	524	100	405	1,029
	Akita	273	410	300	983
	Yamagata	220	300	305	825
	Fukushima	125	200	300	625
	Total		1,700	2,020	2,010
Tokyo	Ibaraki	369	120	-	489
	Tochigi	105	500	100	705
	Gumma	228	500	-	728
	Saitama	228	400	100	728
	Chiba	539	400	16	955
	Tokyo	2,766	300	310	3,376
	Kanagawa	838	500	10	1,348
	Yamanashi	49	500	-	549
	Nagano	299	200	-	499
	Niigata	479	100	-	579
	Total		5,900	3,520	536
Nagoya	Shizuoka	365	210	400	975
	Aichi	215	510	525	1,250
	Mie	268	110	400	778
	Gifu	243	-	412	655
	Ishikawa	250	300	400	950
	Toyama	224	100	400	724
	Total		1,565	1,230	2,537
Osaka	Shige	188	510	-	698
	Kyoto	732	600	-	1,332
	Osaka	1,492	500	-	1,992
	Hyogo	388	600	17	1,005
	Nara	44	500	-	544
	Wakayama	30	600	-	630
	Fukui	181	400	-	581
	Total		3,055	3,710	17
Hiroshima	Tottori	110	100	-	210
	Shimane	178	100	-	278

	Okayama	537	100	-	637
	Hiroshima	685	170	-	855
	Yamagata	460	200	-	660
	Total	1,970	670	-	2,640
Shikoku	Tokushima	60	140	-	200
	Kagawa	231	-	-	231
	Ehime	230	-	-	230
	Kochi	109	-	-	109
	Total	630	140	-	770
Fukuoka	Fukuoka	1,083	-	-	1,083
	Saga	266	400	-	666
	Nagasaki	412	30	-	442
	Kumamoto	373	-	-	373
	Oita	221	100	-	321
	Miyazaki	120	100	-	220
	Kagoshima	305	500	-	805
	Total	2,780	1,130	-	3,910
	Grand Total	17,600	12,420	5,100	35,120

The 36th weekly report of DDT Duster and Spraying Equipment for mosquito and fly control programs for 1947 indicates the following data for 7 - 13 December:

	Total to date 6 Dec.	No. Mfgd. 7-13 Dec.	Total Mfgd. To date 13 Dec.	Total Shipped to date 13 Dec.	Balance On Hand	To be Mfgd.
DDT Duster	76,106	-	76,106	72,254	3,852	13,894
Sprayer, Knapsack type, 3 gal. cap.	39,443	-	39,443	19,053	20,390	-
Sprayer, pump type, semi-automatic	23,808	-	23,808	13,126	10,682	-
Sprayer, hand type, 1/2 Gal. capacity	37,910	-	37,910	27,703	10,207	-
Total	177,267	-	177,267	132,136	45,131	-

Releases of the following DDT products and typhus vaccine were approved for the period 14-20 December:

Prefecture	10% DDT Duster	5% DDT Residual Effect Spray	Typhus Vaccine 1,000 vials
Mie			
Ishikawa	5,000 lbs.		
Miyazaki (Nat'l Hospital)	125 "		
Tottori (Nat'l Hospital)	21 "		
Tochigi (Na'l Hospital)	90 "	215 gallons	
Chiba (Nat'l Hospital)	3,960 "	330 "	
Kumamoto (Nat'l Hospital)	280 "	240 "	
Kyoto (Nat'l Hospital)	160 "	150 "	
Oita (Nat'l Hospital)	40 "	25 "	
Osaka (Nat'l Hospital)	890 "	20 "	
Hakodate (Quarantine Station)	4,000 "	50 "	
Miyagi	30,000 "		
Ministry of Transportation		25,000 "	
	44,566 lbs.	26,030 gallons	1,000 vials

The Animal Hygiene Section, Livestock Bureau, Ministry of Agriculture and Forestry, in coordination with the Pharmaceutical Affairs Section, Medical Bureau, Ministry of Welfare, has undertaken a study of requirements of DDT dust and spray for dusting of livestock animals and for residual spraying of stables, farms, livestock experiment and quarantine stations. Detailed data as to the numbers of livestock animals, fowl, barns, stables, experiment stations, and as to the diseases prevalent in the livestock and fowl of the various prefectures, was compiled and analyzed.

Responsibility for the accomplishment of this program rests with the Hygiene Section of Wakayama and Yamanashi, the Agricultural Administration Section of Yamaguchi, the Agricultural Section of Tokyo, Toyama, Mie, Fukui, Shimane, Tokushima, and the Livestock Section of the 37 prefectural government other than those stated previously.

Total requirements for the 1948 program were calculated as 131,960 lbs. of 10% DDT dust and 26,125 gallons of 5% DDT residual effect spray. Plans, as formulated, call for dusting and spraying operations to be carried out four times during the year, once per quarter. The necessary DDT products for 1948 will be released to the Animal Hygiene Sections of the Various Prefectures, but in quarterly installments of equal 25% portions of the total requirement.

A total of 3,834,735 lbs. of 10% DDT Dust, 145,445 gallons of 5% DDT Residual Effect Spray, and 794,446 vials of Typhus Vaccine represents total stocks on hand in wholesale warehouses of the Ministry of Welfare as of 13 December.

Distribution

During the period 9 December to 15 December a total of 368 sprayers were shipped under Ministry of Welfare supervision to three prefectures, as follows:

<u>Prefecture</u>	<u>Knapsack Sprayer</u>	<u>Semi-automatic Sprayer</u>	<u>Hand Sprayer</u>
Osaka	0	0	28
Hiroshima	176	12	72
Ehime	0	80	0
Total	176	92	100

No DDT dusters were shipped during this period.

Phenylthiourea is a drug used as an anthelmintic in Japan. It is distributed outside of control channels. In the seven month period April through October 1947 a total of 20,304 kilograms of this drug have been manufactured in Japan. According to Ministry of Welfare officials phenylthiourea is used in the preparation of the following medicines

CHI-O-TAN CHI-O-SIRIN "KONGO" PARASANTE KOI-PAPAJIN APARASIN
 NEO-SANTOCIN PHENYL-THIO-URETHAN ANSEL "NIKKO"-KAICHYUKUJOYAKU

During a recent tour of inspection in Kyushu, a representative of Public Health and Welfare Section, Supply Division, received complaints of shortages in supply of cotton sanitary materials. Ministry of Welfare reports that deliveries to the seven prefectures concerned from June to October 1947 were made as listed below:

<u>Prefecture</u>	<u>Absorbent Cotton</u> <u>Unit : Lbs.</u>	<u>Gauze Unit: Pce.</u>		<u>Bandage Unit: Pce.</u>	
		<u>10 Meter</u>	<u>1-meter</u>	<u>9 Meter</u>	<u>4.5-meter</u>
Fukuoka	50,795	5,900	27,840	8,298	11,790
Saga	14,824	1,350	4,980	5,197	2,920
Nagasaki	14,787	2,200	11,945	6,060	4,752
Kumamoto	5,690	3,250	9,360	6,484	5,086
Oita	12,060	2,500	6,745	5,186	4,068
Miyazaki	9,733	2,150	7,440	3,370	2,644
Kagoshima	9,942	3,200	11,570	5,967	4,680

Narcotics

The procedure of procurators making demands for comparatively slight punishment of narcotic addicts two have been apprehended for violation of the narcotic law will be stopped immediately according to information received from the chief of the Criminal Affairs Section, Ministry of Justice. That addicts and other narcotic violators be dealt with severely was brought to the attention of the Ministry of Justice through a report received that a Japanese, who was a civil engineer contractor and an addict, was arrested in May 1947 for violation of the narcotic laws. He was found guilty and sentenced to six months penal servitude and a fine of 1,000 yen. However, he received a suspended a sentence, being fined the 1,000 yen but was not subjected to penal servitude. In November this same addict sold narcotics to Japanese narcotic agents working in an undercover capacity. The investigation preceding his arrest reveals that he has been selling narcotics in considerable amounts to street girls since receiving the suspended sentence. The Ministry of Justice stated that procurators will be immediately notified to demand heavier sentences for all narcotic violators and to particularly demand that addicts be sentenced to confinement, and that if any probation is provided, it should follow the period of confinement in order to insure that the addict is not free to again violate the narcotic laws.

Reports continue to be received that hospitals are losing comparatively large stocks of narcotics because of their failure to provide steel safes with combination locks. Recent reports show that the mere locking of a cabinet or room is not sufficient since the hospitals are being burglarized by people breaking open windows to reach the narcotic storage space and then using levers to pry open locks. Nothing short of a heavy metal safe with a combination lock will be considered safe storage for hospital narcotics by the Narcotic Section, Ministry of Welfare.

An addict in the Tokyo area was recently arrested an investigation lasting throughout 1947. This addict posed as a doctor and a technician qualified to check and repair prescription scales, and while engaged in this activity he would steal narcotics, usually a 5-gram bottle of morphine. In Tokyo alone the addict has successfully used the ruse to steal narcotics from ten hospitals and had operated in five other prefectures. Hospitals are being warned that only authorized persons should have access to their prescription rooms and that narcotics must be returned to the safe immediately after each narcotic prescription is filled. Thefts of narcotics in Japan can be curtailed only by prefectural narcotic officials issuing strict instructions to registrants, particularly hospitals, and by maintaining close surveillance to determine that these instructions are fully complied with.

SECTION VI PREVENTIVE MEDICINE DIVISION

Typhus Fever

The recent outbreak of typhus fever in Osaka is proof that this disease is far from being eradicated in Japan. Japanese prefectural health authorities have lapsed into the same stage of lethargy exhibited by them in the beginning of the 1945 - 1946 typhus epidemic. Then, as now, they refused to believe that typhus fever could ever reach epidemic proportions. During 1946, nearly 32,000 cases of typhus occurred, which were finally subdued after a great expenditure of effort and money. After a strenuous control program in 1946 and early 1947, only 1200 cases were reported from 1 January to 1 December. Japanese officials have relaxed their efforts in typhus fever control as evidenced by the fact that only 20 persons, previously trained in typhus control work, could be gathered together in Osaka to meet the recent emergency there. Winter has set in nearly a month earlier than last season: with the advent of cold weather the typhus incidence has suddenly increased. Comparative Japanese figures for 1946 and 1947 follow:

	<u>1946</u>	<u>1947</u>
November	152	19
December	105	23 (up to 15 Dec.) 49 (up to 20 Dec.)

Case incidence in 1947 in December is still low as compared to 1946, but close liaison must be kept with prefectural health officers if a severe typhus epidemic is to be averted.

Tuberculosis Control

Upon return from a recent survey trip and reviewing program for the control of tuberculosis it is felt that work of the Health Centers should have special attention.

The physical setups are usually available and there is some personnel already familiar with the work. These people need actual instruction in the development of their clinics. It must be really elementary. Taking it up step by step eg., the contact; the patient; a planned schedule for the patients return; a planned schedule for the various clinics; nurses home visits, etc. There is an assembly room in almost all Health Centers. This space is not used for group meetings as frequently as it should be. Lack of electric power at night, lack of fuel for heating, makes planning for night educational meetings difficult in the winter season. But plans could be made to use this space for demonstrations, exhibition, talks on health and control of diseases.

Typhoid Fever Immunization Program

Reference is made to Section 5, Weekly Bulletin #46. Reports indicate the number of persons who have completed a full course of TAB innoculations is extremely disappointing. The last report received 15 December revealed only 25,000,000 out of 65,000,000 have completed the full course of innoculations. The Preventive Medicine Bureau, Ministry of Welfare sent a memorandum each prefecture (YO HATSU NO.922) on 24 November instructing them to complete their immunization program and to render weekly reports. The Memorandum referred to above indicates that they expect Military Government to exercise surveillance over this program. Either this program is less than 50% completed or reports rendered to the Ministry of Welfare do not indicate the true number immunized. Military Government Health Officers are urged to give this matter their personal attention to determine this program is completed without delay and that proper reports are rendered by the prefectures to the Ministry of Welfare. The new immunization law now nearing completion will require typhoid immunization.

Public Health Refresher Training Courses

Reference is made to Section 5, Weekly Bulletin #49. Military Government Health Officers are reminded that two new refresher training courses, one for Health Officers and one for Sanitarians, will open at the Institute of Public Health in Tokyo on 9 January 1948. The importance of these courses cannot be over emphasized and Military Government Health Officers should surveil the selection of personnel to be sent to Tokyo, also that prefectures make proper financial arrangements for the support of these students while in attendance at these courses.

Health Centers

Reference is made to Section 5, Weekly Bulletin #41. The supplementary budget has now passed the Diet and provides some money for the expansion and improvement of Health Centers. Ministry of Welfare is now in the process of preparing:

- a. An ordinance promulgating the Health Center Law.
- b. Enforcement regulations to the Health Center Law.
- c. Instruction relative to the operation and management of Health Centers.

These documents are being reviewed to make them as clear and complete as possible. When completed, they will be issued to the prefectures by the Ministry of Welfare. In the meantime, Military Government Health Officers can accomplish a great deal by cleaning up and improving the present facilities of Health Centers and properly utilizing personnel now on duty in the Health Centers. In order to avoid confusion, it is suggested that the matter of reorganization be delayed until instructions are received by the prefectures from the Ministry of Welfares. When these instructions are dispatched, English translations will be sent to Military Government teams for their guidance. Military Government reports indicate that Military Government Health Officers are manifesting a keen interest in the Health Center Organization. This is most encouraging. Military Government Teams will be furnished as much information as possible, for their guidance in carrying out the Health Center Program. It is important that each Military Government Health Officer and the Prefectural health officer follow the same basic pattern in the development of the Health Center Program.

Sanitary Teams

A letter from the Preventive Medicine Bureau, Ministry of Welfare, to the Prefectural Governors relative to insect and rodent control in 1947, required that special insect and rodent control teams be organized, one team per 10,000 population. This letter also specified that, where necessary, one other control team should be organized per every 2,000 people. Early in 1947 a policy was established that the special teams should be comprised of six men, employed on a full time basis, for the sole purpose of insect and rodent control. Initially these teams were to operate during the insect season, from May to October, but latter it was recommended that they be employed on a year around basis, carrying out mosquito and fly control during the summer and rodent and louse control during the

winter. The required number of special teams was attained in only a few prefectures during the summer of 1947 due to local financial problems and the inadequacy of the national subsidy. However, a large number of teams were employed and their work was reasonably satisfactory. Inspections made during the months of November and December indicate that the number of special teams has fallen to a dangerously low level and those in existence are far from sufficient to cope with the typhus control problem. In many areas these teams are completely nonexistent, a condition which many Public Health Officers are not fully cognizant.

It is essential that special full time sanitary teams be hired and maintained on a year around basis. This must be done immediately so these teams may serve as a nucleous of the typhus control organization. Furthermore, the prefectural Health Departments should be encouraged at this time to lay plans for the 1948 season in order that sufficient funds be allocated in the 1948 budget to support these year-around teams during the coming fiscal year which begins on 1 April. It should be emphasized that the sanitary team is not a temporary stopgap measure but a permanent integral part of the public health organization and as such their numbers should be within the economic capabilities of a prefecture and not subject to seasonal fluctuations.

Sanitary Association

The Epidemic Prevention Act of 1897 permitted local governors to establish Sanitary Associations within a particular geographical or political unit. After the establishment of such an association all residents within the designated area were compulsory members subject to levy of dues. Upon non-payment of dues, they were subject to the same penalty as for the non-payment of taxes. In 1943 they were incorporated into the Tonari-Gumi neighborhood association becoming the Health Branch or Eisei Kumiai of this organization. As such, their affairs were controlled by the local political chief. The Tonari-Gumi was abolished as of 1 April 1947 by a SCAP Directive and the activities of the Eisei Kumiai suspended. The Ministry of Welfare has reported that as of 28 February 1947, 57,620 such associations were in existence with a total membership of 9,848,545. The activities were coordinated through a federation of sanitary associations that extended from the highest to lowest level of government. These associations were charged and held responsible for the carrying out of mass immunization programs, public health education to encourage the participation in such programs, the reporting of contagious diseases to ward offices, the direction and execution of community cleaning programs, the collection and disposal of garbage and refuse, insect and rodent control, and other functions related to public health and public works. The Tonari-Gumi and the local police departments assisted in enforcing sanitary regulations on the members of the Eisei Kumiai. Subsidies were even given to these associations by the local and national governments.

The history of the Eisei Kumiai would indicate that it was far from a democratic non-political organization. The reactivation of this group is being encouraged by many prefectural health departments in an effort to alleviate some of their financial problems by placing the burden of public health on the people they should be serving. All the phases of public health are the responsibilities of the local and prefectural governments and it is planned that they will become the exclusive functions of the district health center or city health office. Although in many instances these associations have proven to be valuable aids in the control of epidemic diseases they should not be held responsible for or be ordered to carry out any public health or public works programs which should be the responsibility of a governmental organization.

Neighborhood sanitary associations, providing they are a non-political voluntary group organized and operated in a democratic manner, are not illegal and should not be suppressed. However, it is recommended that their formation be discouraged as they cannot assume government functions. Continuous streets must be placed on the necessity of strong prefectural and municipal health organizations capable of carrying the responsibility formerly charged to the Eisei Kumiai.

Interpretation of Laboratory Serologic Tests (Continued from Weekly Bulletin #50)

Influenza: The influenza virus erythrocyte agglutination-inhibition technique is now extensively in laboratory influenza diagnostic procedures. Chicken or human "O" type red cells are most commonly used. Convalescent serum from influenza patients contains specific antibodies which inhibit the ability of the causal influenza virus strain to agglutinate erythrocytes. Duplicate serum specimens (acute phase and convalescent phase) are essential in this test since a large proportion of apparently normal individuals show a relatively high antibody content either as a result of past experience with the disease or following immunization with influenza virus vaccine. Only a four-fold or greater rise in antibody titer can be considered significant for diagnostic purposes (i. e. an increase from 1:64 to 1:256, or from 1:256 to 1:1024 or greater).

Influenza virus agglutination-inhibition tests at present are carried out employing influenza A (PP8 strain) and influenza B (Lee strain) viruses as antigens. Negative reports with these strains (no increase in titer of second specimen over that of first specimen) mean only the disease was not due to infection with influenza virus antigenically related to either of these strains, or that specimens were drawn at the wrong states of illness. Influenza antibodies appear were rapidly in blood serum than many other types of antibodies, and if the acute phase specimen is drawn too long after onset, a significant rise in antibody level in the convalescent phase specimen many not be demonstrable.

Virus Diseases of the Central Nervous System

The most commonly employed serologic tests for laboratory diagnosis of virus diseases of the central nervous system are complement-fixation tests and neutralization (virus inactivation) tests. In both cases, the same general remarks as applied to other serologic tests are also applicable here.

a. Complement-Fixation Tests: Virus antigens employed in complement-fixation reactions are generally purified or partially purified extracts of infected animal or chick embryonic tissues. As controls for antigen specificity, extracts of normal tissues are prepared and used in the same manner, and the test set up with a battery of antigens prepared from related viruses.

Experience has indicated that in the case of Japanese B Encephalitis, ordinary immunization procedures induces only negligible response if any in complement-fixing antibodies, with the possible exception of very young children. However, in endemic areas such as exists in certain parts of Japan and Okinawa, sub-clinical attacks of the disease may be responsible for antibodies demonstrable by means of the complement-fixation test. Here again it should be remembered that serologic evidence of a current infection can be considered conclusive only when a change from negative to positive occurs, or where at least a four-fold increase in antibody contest can be shown during the course of disease.

Complement-fixing antibodies for virus CNS diseases can, in general, not be expected to appear in measurable amounts in serum in less than 10 to 14 days after onset.

b. Virus Neutralization Tests: Specific antibodies which neutralize or inactivate the causal virus agents tend to appear somewhat later and persist for a longer period of time than do complement-fixing antibodies. In lymphocytic choriomeningitis, neutralizing antibodies may not be found in detectable quantity until almost two months after onset of the disease. Again, demonstration of a significant rise in specific antibody content alone can be considered as of conclusive diagnostic value.

Febrile agglutinations

Typhoid: Only O agglutinations should be requested. If a significant rise in titer is obtained in the course of the suspected case of typhoid fever, a Vi agglutination should be requested also. (Typhoid diagnosis is more easily made on blood culture than by agglutination).

Paratyphoids: As above. Confirmation by blood culture.

Brucella: Seldom in chronic cases of brucellosis are agglutinins demonstrable. Repeated blood cultures offer more helpful date.

Cholera: Do not order agglutinations for cholera. When cholera is suspected use bacteriologic methods of laboratory confirmation.

Cheever (New England J. Med. 1947, 237:584-590) has summarized admirably the conclusions which may be drawn from various combinations of reactions, as listed below:

1. Serum drawn during acute phase: NEGATIVE; serum drawn during convalescent phase: NEGATIVE.
CONCLUSION: Disease not due to virus tested.
2. Serum drawn during acute phase: NEGATIVE; serum drawn during convalescent phase: POSITIVE..
CONCLUSION: Disease presumably due to virus tested.
3. Serum drawn during acute phase: POSITIVE; serum drawn during convalescent phase: POSITIVE (significant rise in titer).
CONCLUSION: Disease presumably due to virus tested.

4. Serum drawn during acute phase: POSITIVE; serum drawn during convalescent phase: POSITIVE (no significant rise in titer).
CONCLUSION: (1) Contact with virus tested sometime in the past, with no relation to present illness.
(2) First serum drawn too late in course of disease.
(3) Second serum drawn too early in course of disease.
5. Serum drawn during acute phase: NOT TESTED; serum drawn during convalescent phase: NEGATIVE.
CONCLUSION: Disease not due to virus tested.
6. Serum drawn during acute phase: NOT TESTED; serum drawn during convalescent phase: POSITIVE.
CONCLUSION: Interpretation impossible, unless titer of second specimen is at least as high as that usually found in persons recently recovered from the disease in question; in such cases a presumptive serologic diagnosis may be made on the basis of these suggestive findings.

SECTION VII
MEDICAL SERVICE DIVISION

Japanese Civilian Hospital Strength Report for period ending 28 November 1947 shows 3406 hospitals with a capacity of 211,315 beds of which 95,425 were occupied. During this same period 286,776 out-patients were treated.

SECTION VIII
SOCIAL SECURITY DIVISION

General

No objection was made to the Ministry of Welfare's plan to proceed with their proposals for a Cabinet Order implementing the provisions for appeal referees in Welfare Pension, Health Insurance, and Seamen's Insurance laws, and a similar Cabinet Order for implementing the provisions for an advisory council in the above laws. No objection was made to an amendment to the Enforcement Order of the Health Insurance law changing the maximum taxable wage from 2,000 yen to 5,100 yen per month, which is the same level provided in the Unemployment Insurance law. The basic wage and family allowances are included in the taxable wage, but other allowances, such as transportation and regional, are not included.

Health Insurance

The allotment of cement, a rationed building material, for the repair or construction of clinics and hospitals operated by Health Insurance and National Health Insurance agencies has been made for the first quarter of 1948. Emphasis is on the establishment of clinics and repair of existing hospitals. Study is being given as to the local needs before new hospital construction is approved.

SECTION I
GENERAL

Model Plans for Organization of Prefectural Departments of Health and Prefectural Departments of Welfare.

In order to aid the prefectures in implementing Article 158 of the Local Autonomy Law (as amended by the Diet on 7 December) which becomes effective 1 January 1948, the Ministry of Welfare has prepared model plans for departments of health and departments of welfare in the prefectures. These plans, under date of 27 December, were submitted to the prefectures for their guidance in effecting the necessary reorganization. The plans were developed by the Ministry of Welfare in a series of conferences which were attended by representatives of Public Health and Welfare, SCAP, and officials representing the Vice Minister of Welfare and all bureau chiefs. It must be emphasized that are model plans and it may be necessary to adapt the plan of organization to meet the needs of individual prefectures. Some changes will undoubtedly be necessary particularly in the larger urban prefectures. The suggested organization plan does not apply to Tokyo-To where the governmental structure is established by different legal provisions and regulations. The suggested plan of organization of the prefectural departments of health provides for four sections with the assignment of responsibilities as follows:

1. Public Health Administration Section

- a. Affairs concerning health centers and public health nurses (except affairs which belong to the allotment of the Medical Affairs Section).
- b. Affairs concerning popularization and elevation of public health knowledge.
- c. Affairs concerning examination and statistics concerning public health.
- d. Affairs concerning vital statistics.
- e. Affairs concerning the enforcement of the National Physical Strength.
- f. Affairs concerning eugenics of nation.
- g. Affairs concerning the enforcement of the Food Hygiene Act and other Hygiene of foods.
- h. Affairs concerning nutrition and nutritionists.
- i. Affairs concerning butchers and slaughter.
- j. Affairs concerning graveyards, burial and cremation.
- k. Affairs concerning the enforcement of the Barbers Act.
- l. Affairs concerning bath-houses.
- m. Affairs concerning health preservation of pregnant women, women in childbirth and unweaned and weaned children.
- n. Affairs concerning sanitation of public buildings and other institutions for public use.
- o. Affairs concerning national parks and other parks or areas for recreation.
- p. Other affairs concerning public health.

2. Medical Affairs Section

- a. Affairs concerning personnel, budget and other general affairs in the department.
- b. Affairs concerning culture and training of public health workers.
- c. Affairs concerning the enforcement of the National Medical Treatment Act.
- d. Affairs concerning doctors, dentists and other medical treatment relations.
- e. Affairs concerning hospitals, clinics and maternity homes.
- f. Affairs concerning the enforcement of the Public Health Nurse, Midwife and Nurse Ordinance
- g. Affairs concerning the enforcement of the Law of Business of Massage, Acupuncture, Moxa-Cautery, Judo-Bone-Setting etc.
- h. Affairs concerning health and sanitation not coming under the jurisdiction of other sections.

3. Pharmaceutical Affairs Section

- a. Affairs concerning the enforcement of the Pharmaceutical Affairs Law.
- b. Affairs concerning production and distribution of medicine and other hygienic articles.
- c. Affairs concerning control of poison and powerful agent.
- d. Affairs concerning opium and narcotic.
- e. Affairs concerning cultivation and medical plants and collection and distribution of crude drug.
- f. Affairs concerning medicine not coming under the jurisdiction of other sections.

4. Preventive Medicine Section

- a. Affairs concerning tuberculosis, leprosy, trachoma, parasitic diseases, protozoal diseases and local diseases.
- b. Affairs concerning myopia, decayed tooth and other dental disease.
- c. Affairs concerning cancer and other chronic diseases.
- d. Affairs concerning mental diseases.
- e. Affairs concerning acute epidemic diseases.
- f. Affairs concerning venereal diseases.
- g. Affairs concerning hydrophobia etc.
- h. Affairs concerning supply and sewer.
- i. Affairs concerning cleaning sanitation.
- j. Affairs concerning quarantine.
- k. Affairs concerning insect and rodent control.
- l. Affairs concerning investigation and certification of biological medicine.

Remarks:

1. Laboratories for examination or investigation shall belong directly to the chief of the department and shall be administered synthetically, but affairs concerning personnel, budget and other general affairs of the said laboratories shall belong to the jurisdiction of the Medical Affairs Section.

2. When affairs concerning animal diseases control is under the jurisdiction of the Sanitary Department, it shall belong to the Public Health Section.

3. Each section shall be divided into a proper number of parts concerning the affairs belonging to its jurisdiction taking into consideration the efficiency of dealing of affairs and the number of personnel etc., and chief of each part shall be decided.

Memoranda (Hei 1198 dated 27 December 1947) sent to the various prefectures by the Vice Minister of Welfare recommended reorganization of the departments of welfare in conformance with the above plan in the following prefectures: Osaka, Kyoto, Kanagawa, Hyogo, Nagasaki, Aichi, Shizuoka, Miyagi, Hiroshima, Yamaguchi, Fukuoka, Hokkaido, Niigata. No changes in the Health Departments were recommended for the above prefectures.

Organization or reorganization of both health and welfare departments in conformance with the above plan was recommended for the following prefectures: Saitama, Shiga, Chiba, Toyama, Tottori, Okayama, Kumamoto, Kagoshima, Miyazaki, Saga, Oita, Ehime, Kochi, Kagawa, Tokushima, Wakayama, Shimane, Ishikawa, Fukui, Akita, Yamagata, Aomori, Iwate, Fukushima, Nagano, Gifu, Yamanashi, Nara, Mie, Tochigi, Ibaraki, Gumma.

In the case of Tokyo-To the Vice Minister's memoranda recommended establishment of a Welfare Bureau in accordance with a model plan presented to Tokyo but made no recommendations relative to change in the Bureau of Health, which has been established under previous instructions.

The recommended plan of organization for prefectural departments of welfare provides for five sections with responsibilities to be assigned to each section as follows:

1. Social Affairs Section

- a. Survey, statistics and planning on social work.
- b. Training and education of those concerned with social work.
- c. Guidance and supervision of social work organizations and institution.
- d. Welfare Committeemen (Minsei Iin)
- e. Public pawn shops.
- f. Social benefit and welfare service establishments.
- g. Protection of the physically handicapped.
- h. Problems of socially ostracized groups.
- i. Supply of social relief and aid materials.
- j. Work shops and home job facilities.
- k. Other matters relating to social work not handled by other divisions.

2. Protection Section

- a. Daily Life Security Law administration.

- b. Repatriates relief.
- c. Disaster relief.

3. Children's Section

- a. Overall planning on child welfare.
- b. Child Welfare Law administration.
- c. Cultivation and publishing idea on child welfare.
- d. Cultural programs for children.
- e. Prevention of delinquency among children.
- f. Supply of materials required for protection of children.
- g. Survey and statistics on children.
- h. Protection of mothers and children.
- i. Matters relating to children not handled by other divisions.

4. Insurance Section

- a. Health Insurance.
- b. Seamen's insurance.
- c. Welfare pension insurance.
- d. National health insurance.
- e. Matters relating to social insurance not handled by other divisions.

5. Demobilization Section

- a. Counselling for ex-servicemen and former civilian employees of army or navy.
- b. Salaries and other allowances for the bereaved families of fallen ex-servicemen and former civilian employees of army or navy.

Remarks:

Depending on circumstances, the Protection Section and the Social Affairs Section may be combined to form the Welfare Section. Depending on necessity, the Demobilization Section may be divided into the First and the Second Demobilization Section. However, the two Sections will be fused together as the bulk of business dwindles.

SECTION II WELFARE DIVISION

Delayed Public Assistance Statistical Reports

The Ministry of Welfare reports that the following prefectures had not submitted November statistical reports as of 25 December: Hokkaido, Akita, Yamagata, Fukushima, Ibaraki, Gumma, Toyama, Nagano, Gifu, Shizuoka, Mie, Wakayama, Tottori, Saga, Miyazaki.

Japan Social Work School

Applications to enter the Japan Social Work School for the term beginning 15 April 1948 are now being accepted. Announcements have been sent to all prefecture governors. A one-year course as well as a three-year course will be offered. In order to be eligible to enter the one-year course, applicants must have completed college or university studies and have had three years experience in welfare work. For the three-year course, it is necessary that middle school has been completed. In all cases the applicant should be recommended by the prefecture governor. Tuition will be 500 yen per year for the three-year course and 800 yen per year for the one-year course.

Applicants will be selected on the basis of written examination, oral interview and physical examination. A few small scholarships are available but these will not be awarded until after students have been selected. Applications should be sent to the Japan School of Social Work, 86-3 chome Haramachi, Shinjuku-ku, Tokyo.

Coal for Foreign Nationals

In answer to requests from individual foreign nationals, PH&W Section has secured from the Far East Command Allocation Committee on allotment of 1500 tons of coral for those Foreign Nationals living in western

style housing. The allotment of 1500 tons will be divided as follows: 500 tons for January; 500 tons for February and 500 tons for March.

The amount allocated is for all Japan and will provide heating for one room per household during the months mentioned above. Allocation will be through the Ministry of Commerce and Industry.

The residents of western style houses will be notified by prefectural officials who will determine the need in each individual case. In cases of dispute the local Military Government Team should decide on the need. Other foreign nationals living in Japanese style housing will be provided wood, charcoal or coal through normal rationing channels.

Control of Population Movements

SCAPIN 944 dated 11 May 1946, above subject, and subsequent extensions, expires on 31 December 1947. The Diet, however, has written into law the same provisions as were included in the above SCAPIN.

The new law (Home Ministry Law 221) was passed 22 December, become effective 1 January 1948 and will remain in effect until 31 December 1948. Previous command instructions, on the subject, should be used as a guide is the surveillance of the new law.

Japanese Red Cross Campaign (15 Oct - 15 Nov)

The Japanese Red Cross Society reports a final compilation covering the results of the annual fund campaign, held during 15 October - 15 November, will not be available before 10 January 1948.

Reports covering the progress of the campaign were submitted regularly from urban areas but reports from the rural areas have been slow. In a large number of prefectural rural areas, the farmers had not harvested their crops at the time of the Red Cross Campaign and were not financially able to make cash contributions, however, they gave pledges instead, such pledges to be paid upon the harvesting and marketing of their crops.

Based on available estimates the 300,000,000 yen Red Cross Campaign goal will not be reached, as the amount to date approximates only 200,000,000 yen. Regardless of the total funds raised, the National Headquarters, Japanese Red Cross Society plans to operate in 1948 on a budget of 100,000,000 yen for all programs and services excluding disaster relief, with the balance of funds raised over the 100,000,000 yen being allocated for disaster preparedness and relief.

SECTION III NURSING AFFAIRS DIVISION

Tokyo Demonstration School of Nursing

Formerly, the Red Cross National Headquarters or the Prefectural Chapters have paid the tuition and expenses of the nursing students entering the Demonstration School of Nursing at the Japanese Red Cross Hospital. Upon graduating the nurse had a 12 year service obligation to the Japanese Red Cross Hospital. This year the student will be allowed to pay her own expenses and will not be obligated after graduation.

The new school year opens April 1948. This is a three year clinical nursing course given under the guidance and supervision of SCAP nursing personnel.

One student from each prefecture may enter the school as a representative of the Japanese Red Cross. Other applicants from the prefectures may enter without affiliation with the Japanese Red Cross chapters or hospitals. All applicants must be high school graduates and pass required physical examination. High School transcripts and ratings will be secured from high schools by the hospital.

As the number of students must be limited, it is requested Public Health Officers or Public Health Nurses assist in the selection of these students and observe they send in applications early. Names of applicants may be sent direct to the Japanese Red Cross Hospital, Tokyo, and application blanks will be mailed direct to the students or information may be obtained from the local Japanese Red Cross Chapter in the prefecture.

The Tokyo Demonstration School of Nursing is endeavoring to train nursing teachers and leaders and it is extremely important that the best qualified students from each prefecture be selected.

SECTION IV
VETERINARY AFFAIRS DIVISION

Weekly Animal Disease Report

The Ministry of Agriculture and Forestry (Bureau of Animal Industry) reported the following new outbreaks of animal diseases for the period 21 - 27 December:

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Niigata	Equine Encephalitis	1
Tochigi	Swine Erysipelas	1

Monthly Meat Inspection Report for October

Following is a summary of the monthly meat inspection report for October, submitted by the Ministry of Welfare:

	<u>Cattle</u>	<u>Calves</u>	<u>Sheep & Goats</u>	<u>Swine</u>	<u>Horses</u>
Number slaughtered	27,041	633	425	8,131	7,177
Live weight (kgs)		66,116	12,042	712,690	2,673,960
Condemned ante-mortem	1	0	0	3	2
Condemned past-mortem					
Total	8	1	0	3	9
Partial	455	19	0	39	384
Viscera	5,038	43	0	2,860	954

Monthly Dairy Inspection Report for October

Following is a summary of the monthly dairy inspection report for October, submitted by the Ministry of Welfare:

Special Milk

Farm Inspections	3
Samples examined	7
Over bacterial standards (50,000 per cc)	2
Under butterfat standard (3.3 percent)	1
Plant Inspections	2
Over bacterial standards (50,000 per cc)	0
Under butterfat standard (3.3 percent)	0

Ordinary Milk

Farm Inspection	8,355
Samples examined	22,018
Over bacterial standards (2,000,000 per cc)	825
Under butterfat standard (3.0 percent)	1,251
Plant Inspections	3,379
Over bacterial standards (2,000,000 per cc)	294
Under butterfat standard (3.0 percent)	596

Goat Milk

Farm Inspection	51
Samples examined	83
Over bacterial standards (2,000,000 per cc)	10
Under butterfat standard (3.0 percent)	12

SECTION V
SUPPLY DIVISION

Narcotics

The Narcotic Section, Ministry of Welfare, received a petition to remove Demerol (known in Japan as opistan, neo-morphine and operidin), a synthetic drug, from its present classification as a narcotic under the Japanese narcotic law. Since the drug is habit forming and is capable of sustaining a morphine habit, the Ministry of Welfare is informing the petitioners that Demerol will remain classified as narcotic.

Any synthetic preparation which is habit forming or is capable of sustaining narcotic addiction will be designated a narcotic by the Minister of Welfare as provided for under the Japanese narcotic law. No preparation so classified may be used to treat narcotic addition.

The balance of codeine phosphate requisitioned for import during 1947 has been received. This shipment will supply all necessary demands for codeine and will serve as a reserve until the processing of codeine begins in Japan sometime during the first quarter of 1948.

Some criticism has been made of the present system which requires practitioners to obtain order forms from prefectural narcotic officials before making purchases of narcotics from local wholesalers. One of the greatest sources of diversion under the old system in Japan was that practitioners could purchase narcotics in any amount from retailers. Under the present system purchases can only be made from local wholesalers by use of an officials order form. All these purchases are reported monthly by local wholesalers to prefectural authorities who in turn forward reports to the Ministry of Welfare. No change will be made in this procedure. To make local wholesalers more accessible to rural areas, local wholesalers may be licensed in convenient cities of the prefecture, but only if the company applying for licenses as a local wholesaler provides secure storage which is burglar and fire proof.

Production

Releases of the following DDT products and typhus vaccine were approved for the period 21-27 December:

<u>Prefecture</u>	<u>10% DDT Dust</u>	<u>5% DDT Residual Effect Spray</u>	<u>Typhus Vaccine</u>
Osaka	150,000 lbs.	10,000 gallons	35,000 vials
Nara	10,000 "		2,000 "
Yamanashi			200 "
Okayama			6,000 "
Gifu		3,000 "	
Tottori		400 "	
Shimane		1,000 "	500 "
Aichi			1,500 "
Wakayama			100 "
Hyogo			4,000 "
Hokkaido (Nat'l Hosp.)	30 "	25 "	
Gumma (Nat'l Hosp.)	75 "	55 "	
Aomori (Nat'l Hosp)	502 "	5 "	
Kagoshima (Nat'l Hosp)	885 "	300 "	
Ishikawa (Nat'l Hosp)	40 "	55 "	
Hiroshima (Nat'l Hosp)	210 "	85 "	
Fukuoka	50,000		5,000
Total	211,742	14,925	54,300

A total of 3,928,235 lbs. of 10% DDT Dust, 262,311 gallons of 5% DDT Residual Effect Spray, and 671,885 vials of Typhus Vaccine represents total stocks on hand in wholesale houses of the Ministry of Welfare as of 20 December.

The 37th weekly report of DDT Duster and Spraying Equipment for mosquito and fly control programs for 1947 indicates the following date for 14-20 December:

	<u>Total Mfgd. To</u> <u>date 13 Dec.</u>	<u>No. Mfgd.</u> <u>14-20Dec.</u>	<u>Total Mfgd. To</u> <u>date 20 Dec.</u>	<u>Total Shipped</u> <u>to date 20</u> <u>Dec.</u>	<u>Balance</u> <u>On Hand</u>	<u>To be</u> <u>Mfgd.</u>
DDT Dusters	76,106	2,800	78,906	72,758	6,148	11,094
Sprayer, knapsack type, 3 gal cap.	39,443	-	39,443	19,557	19,886	-
Sprayer, pump type, semi-automatic	23,808	-	23,808	13,276	10,532	-
Sprayer, hand type 1/2 gal. capacity	37,910	-	37,910	27,772	10,138	-
	<u>177,267</u>	<u>2,800</u>	<u>180,067</u>	<u>133,363</u>	<u>46,704</u>	<u>11,094</u>

The Ministry of Welfare has taken necessary action to assure adequate supplies in the Osaka area for the augmented typhus control program. One official of the Pharmaceutical Affairs Section, and one official of the Nippon Yakuin Co. (commercial company handling DDT products and typhus vaccine) have been sent to Osaka for the purpose of coordinating supply activities.

Production

The yen value of production of medical supplies (medicines, biologicals, dental materials, dental instruments, medical instruments and surgical dressings) for November totaled 712,318,431 yen. This represents a decrease of 20,035,413 yen below October production reported as total 732,353,544 yen. The increase of 174,349,224 yen for controlled medicines reflects not so much an increase in production, but rather more directly the newly increased price schedule revised on 4 November. Actually, non-controlled medicines decreased in yen value for November production 85,348,377 yen; patent medicines, 61,928,707 yen; bacteriological production, 40,547,354 yen; dental instruments, 5,586,299 yen; dental materials, 1,524,768 yen; sanitary materials, 2,061,951 yen. Medical instrument production, however, increased in November 2,497,748 yen over that reported for October. The general decrease of overall production of medical supplies is a reflection of the acute shortage of electric power for the medical supply industry during November similar to the decrease reflected in other industries suffering from short supplies of electricity.

Production of the critically needed items, bismuth subsalicylate and mapharsen, continued to show great improvement. During November, a total of 131 kgs. of pure mapharsen and a total of 1,237 liters of bismuth subsalicylate was manufactured. This is the largest amount of production as yet reported during any one month.

Production of sulfathiazole during November showed an increase 286 kgs., as compared to October production. A total of 2,100 kgs. was produced during November.

Production of biologicals during November continued to be satisfactory. The revised assay testing procedures have made available larger quantities of diphtheria toxoid than have hitherto been available for distribution. At the present time, plans are being formulated to provide sufficient triple typhoid vaccine to meet all requirements for the entire 1948 season. Sufficient typhus vaccine will also be on hand to meet needs for 1948.

Production of insect and rodent control supplies during November showed some increase over that reported for October. Settlement of financial difficulties has finally been accomplished. The flow of necessary petroleum supplies has continued with resulting production of satisfactory amounts of 5% DDT residual effect spray. Production of Japanese DDT concentrate increased 1,176 kgs. DDT spray production increased 73,581 gallons.

Production of medical instruments in November totaled 1,412,790 pieces and 14,480,933 yen, representing a decrease of 240,695 pieces, but an increase in overall monthly production of 2,497,748 yen compared to October production. The decrease in the total number of pieces manufactured is not significant since more of the larger items of medical instruments were made than in the previous month and not as great a number of the minor item of medical instruments. The total of 14,480,933 yen, actually, represents the largest amount of medical instrument production ever reported for any month.

Production of rubber sanitary goods totaled 11,441,176 pieces and 11,654,296.82 yen value during November. November production, compared to that of October, shows, therefore, an increase of 5,986,061 pieces and 115,371.40 yen. Further, this is largest production ever reported since the initiation of this program. The increase in yen value of production, November over October, is not significant. The large increase in number of pieces produced, November over October, while numerically significant, is actually of minor significance in the overall production program since the large increase was effected in the small, readily replaced, and easily manufactured item of eye dropper rubber caps.

Production of dental instruments and dental materials continued, but with decreases in equivalent yen values of 5,586,299.50 yen for dental instruments and 1,524,768.01 yen for dental materials compared to the October production. The decrease in November production is due primarily to the short supply of electric power needed for the manufacturing process which prevented manufacturers from operating their plants at peak capacities.

Production of glass syringes for domestic use increased during November 77,620 pieces over that reported for the October production of 359,380 pieces. November production totaled 437,000 syringes, all types and sizes.

Production of gauze and bandage cloth and absorbent cotton from stocks of American raw cotton continues to be hampered by the extreme general shortage of electric power. Newly revised schedules of increased prices for the three types of textile sanitary goods, expected to expedite the deliveries of the finished products in sufficient quantities to help meet minimum requirements of hospitals, doctors, clinics, and other claimants, have been established, but as yet have not been published in the official gazette for the information of all concerned.

Continued concerted efforts have been made to speed up the varied and many steps in the process of manufacturing finished gauze, bandage cloth and absorbent cotton from stocks of imported raw cotton. With the final establishment of the new price schedule and its dissemination to all spinning, weaving, and finishing mill operators, whit resolution of the financial difficulties and transportation problems, and with the improvement in supplies of electric power to the sanitary goods manufacturing plants, Ministry of Welfare officials predict resulting increases to be gained in production and delivery of the finished materials.

Production of absorbent cotton during November totaled 261,874 lbs. as compared to 309,485 lbs. produced during October. Production of gauze totaled 59,310 lbs. for November; October production 68,692 lbs. Production of bandage cloth totaled 34,883 lbs. for November; October production, 57,172 lbs. Production of penicillin during November totaled 3,977,880,000 Oxford Units. This represents an increase of 2,892,090,000 Oxford Units over October production and 3,458,220,000 Oxford Units over September production. This is the largest output in any month since the initiation of the penicillin production program. Slow but continued progress can be reported in penicillin production by the tank process method.

The Sanyo Yushi Company at Aichi, after a prolonged layoff of production due to contamination in their pilot plant, has resumed production by the tank process, reporting 61,350,000 Oxford Units produced during November. No companies, other than those listed in the previous month's report, have as yet completed their pilot plant construction and placed the plants in operation.

Production of laboratory animals during November showed no particular progress. The number of animals supplied to medical laboratories closely approximated the same numbers supplied during October. While the monthly needs for laboratory animals may vary according to the fluctuating volume of vaccine assay testing activities or to the varying research projects, concerted efforts will be continued to provide adequate amounts of feedstuffs and adequate numbers of animal cages so as to accomplish the maximum in laboratory animal reproduction.

Production of x-ray film during November totaled 25,040 square meters, as compared to 32,950 square meters produced in October or 26,222 square meters produced in September. This decrease in production is attributed to the shortage of electric power. While the supply of coal was adequate for the x-ray film industry, the supply of electric power for the manufacturing process was not.

Production of x-ray and physiotherapy equipment in November totaled 381 units. This is a decrease of 119 units, compared to October production, and 184 units, compared to September production, and a drop back to the production level reported for May of 389 units. This decrease is attributed, by the representatives of the Japan Electro Medical Machine Association and the Ministry of Welfare, directly to the lack of electric power to carry on the manufacturing processes.

The following tables indicate production of medical, dental, and sanitary supplies and equipment:

YEN VALUE OF PRODUCTION

	<u>September</u>	<u>October</u>	<u>November</u>
Production Controlled Medicines	123,299,583	145,341,864	319,691,088
Non-Controlled Medicines	246,162,084	287,829,118	202,480,741
Patent Medicines	137,726,851	191,192,530	129,263,823
Biologicals	54,342,165	53,402,259	12,854,905
Dental Instruments	9,076,812	17,560,551	11,974,252
Dental Materials	4,159,515	7,740,120	6,215,352
Rubber Sanitary Goods	5,582,158	11,538,925	11,654,296
Sanitary Materials (surgical dressings)	15,383,202	5,764,992	3,703,041
Medical Instruments	13,817,888	11,983,185	14,480,933
Total	609,550,258	732,353,844	712,318,431

SECTION VI PREVENTIVE MEDICINE DIVISION

Typhus Fever

The importance of obtaining early and convalescent serum samples from suspect case of typhus fever reported in Japan should be impressed on the minds of Japanese doctors and health officials. If this disease is to be effectively controlled, the type or types present in a given locality must be known. This can be determined only through the use of the complement-fixation test or by specific rickettsial agglutination tests.

All serum samples should be shipped under ice to Major T. O. Berge, 406 Medical General Laboratory, Tokyo, Japan, as such as possible after separation.

Public Health Train

During the period 21 November to 13 December, 116,495 persons visited the mobile exhibit in Araoi, Mito, Utsunomiya, Kuriu, Maebashi and Takasaki in the Kanto Region.

For the benefit of the Military Government Teams concerned the tentative schedule of the train for the period 19 January to 10 November 1948 is repeated:

- a. Kyusyu - 19 January to 3 March
- b. Kinki, Shikoku, Chugoku - 8 March to 23 June
- c. Tohoku - Hokkaido - 26 June to 26 August
- d. Chubu - Hokuriku - 30 August to 10 November

In Kyushu stops will be made at Moji, Fukuoka, Saga, Nagasaki, Omura, Kumamoto, Kagoshima, Miyazaki, Oita and Beppu. Detailed schedules will be presented as soon as completed.

It is suggested Military Government Teams urge prefectural health officials to take full advantage of the opportunities this train offers for public health education when visiting the various prefectures. Encouragement should be given in arranging for opening ceremonies, erecting and staffing consultation booths on Tuberculosis, Venereal Diseases, Nutrition, DDT Dusting, Immunization, etc. Health officials can be assisted in conducting Health Week Programs, with lectures and demonstrations by doctors and nurses and other authorities on health.

Health education can be stressed through use of radio programs, motion pictures, newspapers and contests. Emphasis should be placed on the value and importance of Health Centers.

SECTION VII
MEDICAL SERVICE DIVISION

Civilian Hospital Strength Report for week ending 6 December shows 3,407 hospitals with a capacity of 211,093 beds of which 96,473 were occupied. During this same period 250,374 out-patients were treated.

SECTION VIII
SOCIAL SECURITY DIVISION

No objection was offered to proposal by the Ministry of Welfare to increase the Insurance Office personnel at national and prefectural levels to handle the Seamen's Unemployment Allowances and Insurance program.

SECTION IX
MEMORANDA TO JAPANESE GOVERNMENT

None.

Structure of Health Department in Local Prefecture

26 December 1947

SECTION I
GENERAL

Model Plans for Organization of Prefectural Departments of Health

Reference is made to Section #1 Weekly Bulletin #52, 21 December - 27 December 1947. The above reference gives a model plan for organization of prefectural departments of health. However, this plan gives only the Section and the affairs falling within each section. No divisions or subsections were indicated in that plan. Below is a further breakdown of that plan as recommended jointly by Bureau Chiefs of the Public Health Bureau and the disease Prevention Bureau of the Ministry of Welfare:

Allotment of business of each division of sections in the Health Department of local prefecture

I. PUBLIC HEALTH ADMINISTRATION SECTION

- A. Public Health Division
 - 1. Affairs concerning health centers and public health nurses (except affairs which belong to the allotment of the Medical Affairs Section)
 - 2. Affairs concerning the enforcement of the National physical strength act.
 - 3. Affairs concerning eugenics of nation.
 - 4. Affairs concerning national parks and other parks or area for recreation.
 - 5. Other affairs concerning public health.
- B. Public Health Education Division
 - 1. Affairs concerning popularization and elevation of public health knowledge.
- C. Statistics Division
 - 1. Affairs concerning examination and statistics concerning public health.
 - 2. Affairs concerning vital statistics.
- D. Nutrition Division
 - 1. Affairs concerning nutrition and nutritionists.
- E. Food and Practical Business Division
 - 1. Affairs concerning the enforcement of the Food Hygiene. Act and other Hygiene or food.
 - 2. Affairs concerning graveyard, burial and cremation.
 - 3. Affairs concerning the enforcement of the Barbers Act.
 - 4. Affairs concerning bath-houses.
 - 5. Affairs concerning sanitation of public buildings and other institutions for public use.
- F. Veterinary Division
 - 1. Affairs concerning butchers and slaughter.
 - 2. Affairs concerning hygienic of milk and products made of milk.
- G. Mother and Baby Division
 - 1. Affairs concerning health preservation of pregnant women. Women in childbirth and unwed children.

II. Medical Affairs SECTION

- A. General Affaires Division
 - 1. Affairs concerning personnel, budget and other general affairs.
 - 2. Affairs concerning culture and training of public health workers.
 - 3. Affairs concerning health and sanitation not coming under the jurisdiction of other sections.
- B. Medical Affaires Division
 - 1. Affairs concerning the enforcement of the National Medical Treatment Act.
 - 2. Affairs concerning doctors, dentists, etc.
 - 3. Affairs concerning hospitals, clinics and maternity homes.
 - 4. Affairs concerning the enforcement of the Law of Business of Massage, Acupuncture, Moxa-cautery, Judo-bone-setting, etc.
- C. Nurses Division
 - 1. Affairs concerning the enforcement of the Public Health Nurse, Midwife and Nurse Ordinance.

III. PHARMACEUTICAL AFFAIRES SECTION

- A. Pharmaceutical Affaires Division

1. Affairs concerning the enforcement of the Pharmaceutical Affairs Law.
 2. Affairs concerning control of poison and powerful agent.
 3. Affairs concerning medicine not coming under the jurisdiction of other sections.
- B. Distribution of Medicine Division
1. Affairs concerning distribution of medicine and other hygienic articles.
 2. Affairs concerning collection and distribution of crude drug.
- C. Production of Medicine Division
1. Affairs concerning production of medicine and other hygienic articles.
 2. Affairs concerning cultivation and medical plants.
- D. Narcotics Division
1. Affairs concerning opium and narcotic.

IV. PREVENTIVE MEDICINE SECTION

- A. Anti-tuberculosis Division
1. Affairs concerning tuberculosis.
- B. Disease Prevention Division
1. Affairs concerning leprosy, trachoma, parasitic disease, protozole disease and local disease.
 2. Affairs concerning myopia decayed tooth and other dental disease.
 3. Affairs concerning cancer and other chronic disease.
 4. Affairs concerning mental diseases.
- C. Venereal Diseases Control Division
1. Affairs concerning Venereal diseases.
- D. Epidemic Control Division
1. Affairs concerning acute epidemic diseases.
 2. Affairs concerning hydrophobia, etc.
 3. Affairs concerning quarantine.
 4. Affairs concerning certification and inspection of biological medicine, etc.
- E. Sanitary Engineer Division
1. Affairs concerning water supply and sewer.
 2. Affairs concerning cleaning sanitation.
 3. Affairs concerning insect and rodent control.

Remarks:

1. In each division shall be set a specially appointed division chief in principle. However, if there is no personnel suitable for the post. Chief of other division may set on his place, temporary.
2. Under the Prefectural circumstances, if it is necessary, the Governor may take necessary steps, such as to join division into one or to divide one division into subdivision. For instance, the Assay Division may be put in the Preventive Section, and in this case the allotted business of the same Division shall be the business mentioned in Item 4 of the allotted business of the Epidemic Control Division.

SECTION II WELFARE DIVISION

Future Welfare Programs

During the year 1947 definite action was taken concerning the following essential welfare programs which will serve as a basis for activity during 1948:

- a. 19 March: Children Bureau established in the Ministry of Welfare
- b. 2 October: National Disaster Relief Law was passed by the Diet and become effective 1 January 1948.
- c. 6 October: First class of students of the Japan Social Work School was graduated after completing one year course.
- d. 21 November: Diet passed the Child Welfare Law which became effective 1 January 1948.
- e. 25 November: First Community Chest Campaign in Japan was initiated.
- f. 1 December: Recertification plan for recipient of aid under the Daily Life Security Law was inaugurated and is now in effect.
- g. 7 December: Local Autonomy Law amended to provide, effective 1 January 1948, a separate Department of Welfare and ##### separate Department of Health in each prefecture.
- h. Relief payments under the Daily Life Security Law were adjusted on several occasions so they were more in line with increased living costs.

- i. Standards were developed for the establishment of social welfare curriculum in university and colleges.
- j. The programs of the Japanese Red Cross were strengthened and broadened.

The year 1948 offers a great challenge. The projects mentioned above will develop in the new year and require further attention. At the present time it appears that the following projects will be of major importance.

- a. Further development of the Japan School of Social Work and academic preparation for social welfare pursuits within universities and colleges.
- b. Continuing review of all assistance grants to determine need and adequacy of payments.
- c. Screening and appointment of all Minsei-iin.
- d. The development of standards of care for public and private welfare institutions.
- e. The development of supervisory programs at the national and prefectural levels.
- f. The development of personnel standards for welfare personnel at national, Prefectural and local levels.
- g. Review and further study covering the financing of charitable works, including public and private endeavors.

There are other projects and problems which will require attention during the year but the projects mentioned above offer an opportunity to strengthen indigenous welfare activities.

Licensed Agencies for Relief in Asia (LARA)

Reference: Public Health and Welfare Weekly Bulletin #49 dated 30 November-6 December 1947.

The 193 goats made available to Japan, as a gift, from the Brethern Service Committee (member agency of LARA) were incorrectly reported as to sex and the information contained in reference above should be corrected to read as follows:

	Sex	
<u>Breed</u>	<u>Buck</u>	<u>Doe</u>
Saanen		50
Toggenburd	3	44
Nubian	8	46
Alpine	13	6
Crosabred		<u>23</u>
	24	169

Private Charitable Medical or Benevolent Enterprises

Some discrepancies as well as misunderstandings relative to the use of government funds (Public Money or property) for financing the administration and operation of private enterprise prevails. Some Military Government Teams have indicated in their Monthly Activities Reports, that the policy of government subsidies to private relief or welfare enterprise is in need of further definition and/or interpretation for the guidance of Japanese Government officials and Military Government personnel.

The whole matter of financing private welfare and relief activities is under study Article 89, Constitution of Japan, states “no public money or property shall be appropriated for the use, benefit or support of any system of religion, or religious institution or association, or for any charitable or benevolent purposes not under the control of public authority”.

When the full intent and meaning of the terminology “not under the control of public authority”, has been definitely established, any necessary additional instructions will be issued relative to the participation of national, prefectural and/or local government in private relief and welfare endeavor through use of public money.

Child Welfare Problems

Monthly Activities Reports, submitted by Military Government Teams, indicate an increasing awareness of child welfare problems in most prefectures. The following statements are quoted from November reports:

MIE: "As yet no "Children's Bureau" has been established within this prefectural government. It is hoped that the proposed Child Welfare Law will be enacted at an early date so that a start in this very important field of endeavor can be effected. ***A committee for the prevention of Juvenile delinquency consisting of prefectural officials, with also a few private child welfare leaders was organized this month".

KAGAWA: "The prefectural Juvenile Welfare Section picks up one or two vagabond children almost every day who are traveling for the winter. They come across the Inland Set on the ferry and then are lost as to where to go. Most of them congregate at the ferry pier and form gangs. ***most of the children are war orphans and badly in need of medical treatment. When they are picked up they are taken to the reformatory, fed, shaved and bathed and put to bed. About 10% of them leave the reformatory within a week. The rest of them will stay until spring then run away and return north where they can engage in blackmarketing".

KANAGAWA: "The Child Protection Section of the Kencho sent to this office a plan for surveying the city for child vagrants. A form had been mimeographed and will be completed for each child interviewed. The figures will then be compiled and a report sent to this office. This will show the actual number of children who are vagrants, and those who have homes but look like vagrants. It will also show whether or not the children are enrolled in school. The survey team will be composed of five persons from the prefecture welfare section, five from the city, and four policewomen. The team will concentrate in Nakaku, Nishi-ku and Kanagawa-ku but will cover the entire metropolitan area. Five teams composed of five people each, made the survey on 1 November. They found 61 vagrant children, the majority of them on "Black Market" Street. Half of the children were orphans and the remaining 50% were those who had run away from their homes. All those who were orphans had been institutionalized at one time or another and had run away. The teams found that all of these children belong to one gang or another, and that each gang has a leader. Each child in the gang pays the leader 100 yen per day from his earnings. The survey team located the leaders of these gangs and talked with them. They took no action with any of the children, the survey was informational only".

It is expected that the new Child Welfare Law, which become effective on 1 January, will provide a more adequate legal basis for establishing child welfare programs to meet existing needs. More adequate appropriations have been made available to prefectures for the carrying out of this work. Attention is called to the fact that the creation of a Children's Section (Jido-ka) within each prefecture Department of Welfare is authorized and recommended. In addition, the Child Welfare Law calls for the establishment of prefectural Child Welfare Boards, consisting of not more than 20 persons appointed by the prefectural governor. Japanese welfare officials regard these prefectural boards as an integral and important part of the Child Welfare program. An effective board will serve to develop Child Welfare programs and public interest in all phases of the development. The Child Welfare Law also authorizes the establishment of a Child Welfare "Station" in each prefecture which will serve as a central agency to provide services to children.

SECTION III VETERINARY AFFAIRS DIVISION

Weekly Animal Disease Report

The Ministry of Agriculture and Forestry reported no new outbreaks of animal diseases occurred during the period 28 December 1947 – 3 January 1948.

Statistics on Equine Encephalitis

The following is a summary of the Equine Encephalitis outbreak as reported by the Ministry of Agriculture and Forestry on 31 December 1947:

PREFECTURE	MAY		JUNE		JULY		AUG		SEPT		OCT		NOV		DEC		TOTAL

SECTION IV SUPPLY DIVISION

General

Several enquiries have been received lately concerning procedures and policies governing the manufacture, distribution and sale of DDT products.

Although DDT concentrate is being manufactured in Japan, the amounts are insufficient to meet minimum requirements and it has been necessary to import substantial quantities. Only DDT concentrate is being imported. Processing of the concentrate into spray and dust is being handled by Japanese agencies.

All DDT manufactured in Japan is being purchased by the Ministry of Welfare and distributed in the same manner as imported DDT. The Japanese Government requires reimbursement from prefectures for 50% of the cost of DDT products. Cost of transportation from regional warehouses to prefectures is borne by prefectural funds.

The amount of DDT available in Japan is not sufficient to permit sale to the general public and for this reason the Ministry of Welfare has issued instructions to all prefectures that DDT is to be used only for the purpose of carrying out disease control programs and is not to be sold to the general public. These instructions were dispatched under date of 31 July 47, file reference Yaku #797.

Prefectures requiring DDT have been instructed to submit application direct to the Ministry of Welfare, attention: Pharmaceutical Affairs Section. Instructions concerning the amount approved are dispatched to regional warehouses for direct shipment to prefectures. Copies of the orders dispatched to regional warehouses are furnished prefectures as a matter of information in order that officials may be informed as to the action taken upon their request.

There have been reports that coal mine operators are not able to secure DDT for the purpose of carrying out comprehensive disease control programs in coal mines. It is intended that the present DDT distribution system be utilized in supplying requirements for coal mines. In ordering DDT the Ministry of Welfare should be advised as to the specific amounts required for coal mine use. Financing has been one of the limiting factors in supplying of DDT

to coal mines. There is no objection to coal mine officials reimbursing prefectural funds for the cost of DDT furnished specifically for the use of coal mines and it is expected that DDT will be so utilized in carrying out organized disease control programs.

The new rationing system for medical supplies is scheduled to be placed in full operation 1 February. Initially 124 items of medicines, eight items of surgical dressings and three items of so-called baby nourishment foods will be rationed. It is anticipated that the number of items under control will be progressively reduced as production increases.

Physicians, dentists, veterinarians, hospitals, clinics and other users of medical supplies will be provided with a purchasing passbook issued by prefectural governors which will permit purchase of rationed items in specified quantities from dealers authorized to handle rationed items. The value of the coupons will be determined by prefectural governors based on information furnished the prefectures by the Ministry of Welfare as to the total amount of supplies available during a given period.

Following are the main features of the new ration systems compared to the distribution system in effect since the start of the Occupation:

a. Central and prefectural distributing companies will be dissolved. Central companies actually were dissolved on 31 December 1947 and prefectural companies are scheduled for dissolution prior to the end of January 1948.

b. Control companies will be replaced by licensed commercial dealers. The Ministry of Welfare will license central wholesalers and the prefectural governor is charged with designating local sellers.

c. The Ministry of Welfare will issue purchasing allotment certificates to central wholesalers based upon estimated national production. Prefectural governors will issue purchasing allotment certificates to local sellers based upon information furnished by the Ministry of Welfare as to the amount of materials that will be available.

d. Responsibility for operation of the ration system will be vested entirely in the hands of government officials as distinguished from industrial and professional groups which were delegated authority to represent the government under the old system.

At the national level the Ministry of Welfare proposed to establish a committee composed of representatives of groups interested in the distribution of medical supplies for the purpose of advising on rationing policies. This committee is an advisory body only and will take no part in actual distribution. There is no objection to similar committees being appointed at the prefectural level providing prefectural authorities assume complete responsibility for the rationing system and do not allow committees or associations to engage in actual distribution or to profit there from.

Narcotics

Recent reports received from prefectural narcotic agents indicate many doctors who have supplied narcotics to addicts are not being prosecuted because of lack of evidence and are escaping with merely an admonition by the procurator in the prefecture concerned.

The Narcotic Law of Japan specifically prohibits the supplying of narcotics to addicts and it is not intended that any physician shall escape prosecution merely by claiming he did not know the person to be addicted to narcotics.

The Ministry of Welfare has been advised to inform narcotic agents throughout Japan that in the future careful questioning and taking of a sworn statement from the doctor is the least that will suffice in lieu of the usual procedure of using undercover addicts to purchase narcotics from physicians who are dealing in the illicit traffic. The mere statement of a doctor that he did not know the person to be an addict, when accepted at face value, is amateurish since the addict invariably tells the doctor he must have morphine to relieve his suffering, and since with the proper examination and diagnosis, any physician can easily determine whether or not a patient is an addict.

Strict surveillance is being maintained for any future repetition of this failure to prosecute since such physicians constitute a regular source of supply for addicts in Japan.

Production

The following is a list of proposed basic prefectural allotments of 10% DDT Dust and 5% DDT Residual Effect Spray for 1948. This material is now allocated by the Ministry of Welfare and delivered to prefectures periodically or automatically. Procurement is only obtained by prefectural health officials by open requisition from the Pharmaceutical Affairs Section, Ministry of Welfare. Some of the prefectures during 1947 have received very little, while others drew more than their share. As this material is the most valuable single insecticide, it is recommended that each prefecture avail itself of the opportunity of getting the maximum amount possible.

The 5% DDT Residual Effect Spray should be used primarily indoors and applied to surfaces on which adult insects light and never as a mosquito or fly larvacide. Using this valuable insecticide for larvaciding is wasteful. It must be used properly as an integral part of the insect control program, by the regular insect control teams, and not distributed to the individual, this restriction applying to the 10% DDT Dust as well.

The prefectural allotments should be used as a guide, but definitely not as an entirely determining factor, in planning insect and rodent control activities for the individual prefectures. Distribution has been planned on a population and necessity basis, including provisions made for adequate supplies for coal mining regions and areas throughout Japan. Additional quantities will be made available if and when justification is received for additional requirements.

Adequate reserve stocks are being maintained to meet the needs of any emergency, flood, or disaster.

DDT Allotments to Prefectures – Jan. Dec. 1948

Prefecture	10% DDT Dust	5% DDT Residual Effect Spray

Distribution

During the period 16-27 December a total of 2,291 dusters and sprayers were shipped to ten prefectures under supervision of Ministry of Welfare, as follows:

Prefecture	DDT Duster	Knapsack Sprayer	Semiautomatic sprayer	Hand Sprayer
Miyagi	24	132	0	24
Fukushima	0	114	0	0
Aichi	0	0	150	0
Osaka	0	220	0	45
Hyogo	0	0	0	60
Hiroshima	120	0	0	0
Kagawa	0	80	120	0
Ehime	6	56	0	6
Fukuoka	480	150	0	0
Saga	504	0	0	0
Total	1,134	752	270	135

The Ministry of Welfare has issued instructions to 108 manufactures of cotton sanitary materials to ship directly to 82 agencies, a total of 3,868,715 50-gram packages of absorbent cotton. The agencies had been designated by all but six prefectures to accept deliveries for distribution direct to consumers, under prefecture government supervision. This is a stop-gap arrangement to cover the short period until the ration plan of

distribution of controlled items becomes effective 1 February. Below is the distribution as specified by Ministry of Welfare. Prefectures indicated by a zero are those which failed to designate agencies at the request of the Ministry:

<u>Prefecture</u>	<u>Quantity 50-gram pkg.</u>	<u>Prefecture</u>	<u>Quantity 50-gram pkg.</u>
Hokkaido	225,797	Kyoto	62,941
Aomori	0	Osaka	173,701
Iwate	108,427	Hyogo	99,612
Miyagi	0	Nara	44,727
Akita	123,449	Wakayama	32,092
Yamagata	71,489	Tottori	29,036
Fukushima	150,528	Shimane	19,450
Ibaraki	131,525	Okayama	93,162
Tochigi	54,719	Hiroshima	112,544
Gumma	56,014	Yamaguchi	60,295
Saitama	140,587	Tokushima	50,563
Chiba	0	Kagawa	63,143
Tokyo	228,598	Ehime	98,590
Kanagawa	86,591	Kochi	44,223
Niigata	89,101	Fukuoka	161,723
Toyama	75,921	Saga	64,170
Ishikawa	71,797	Nagasaki	106,535
Fukui	0	Kumamoto	125,853

Nagano	0	Miyazaki	68,413
Gifu	83,005	Kagoshima	106,649
Shizuoka	118,999	Aichi	262,820
Mie	0	Shiga	23,587
TOTAL			3,868,715

The items listed below are part of the U. S. Army surplus medical items turned over to the Japanese Government for civilian use. Distribution to all 46 prefectures will be made on a basis of population. Quantities approved for distribution at this time are indicated below. Items are listed as they appear in ASF Catalog MED 3, 1 March 1944, and changes thereto. Where quantities to each prefecture are too small for wide distribution, it is understood they will be used in such facilities as Public Health Centers.

	<u>Item</u>	<u>Unit</u>	<u>Quantity</u>
1001000	Acacia , 1 lb.	Bottle	420
1006000	Acetophenetidin, 1000 tablets	Bottle	595
1011000	Acid, boric, 1 lb	Can	2,400
1012200	Acid, boric, ointment, 4 oz.	Jar	9,186
1111000	Calamin, prepared, 1 lb.	Can	1,976
1117500	Calcium gluconate injection, 12 ampules	Box	1,260
1165000	Dextrose, 5% in physiological sodium chloride solution, 1000cc	Bottle	5,965
1174905	Ephedrine sulfate, 500 3/8 gr. Capsules	Bottle	990
1180000	Ethyl chloride, 3 oz	Tube	2,345
1204000	Foot powder, 1/4 lb.	Can	9,450
1336000	Petrolatum, liquid, heavy, 1 qt.	Bottle	1,816
1412000	Soap, soft, 1 lb.	Jar	8,208
1413715	Sodium amytal, 500 capsules	Bottle	1,890
1413720	Sodium amytal, 1 ampule	Ampule	35,854
1418000	Sodium bicarbonate and peppermint, 1000 tablets	Bottle	1,214
1462000	Sulfadiazine ointment, 1 lb	Jar	1,810
1463700	Sulfanilamide, 1000 tablets	Bottle	690
1477500	Tincture belladonne, 1 pt.	Bottle	930

2034000	Plaster, adhesive, surgical, 1-inch by 5 years	Spool	6,020
2037000	Plaster of Paris, crthopedic, 4 lb.	Can	13,725
9101000	Acid, boric, ointment, 1 oz.	Tube	18,196
9108000	Cresol, saponated solution, 1 qt.	Tin	3,974
9111800	Iodine, 2 cc	Vial	75,800
9112200	Iodine swab, 10-minim, 10	Pkg.	11,430
9116500	Petrolatum, two 1/2 oz, tubes	Pkg.	1,980
9120150	Shell natron, 20 oz.	Can	860
9121100	Sulfanilamide, crystalline, 5, 5#gm. Envelope	Box	44,540
9209000	Plaster, adhesive, field brown, 1 inch by 5 years	Spool	158,175

The Ministry of Welfare has ordered the distribution of Santonin for December. Shipments will be made of 5,506,000 tablets to the 46 prefectures as follows:

<u>Prefecture</u>	<u>Quantity, tablets</u>	<u>Prefecture</u>	<u>Quantity, tablets</u>
Hokkaido	247,800	Aomori	82,600
Iwate	82,600	Miyagi	137,600

Sanitary Engineering

Laboratory Control of Water Quality: Routine laboratory analysis of drinking water is a necessary adjunct to the uninterrupted production of a hygienically safe water. This principle applies whether the supply under consideration is a large treated municipal one, a small institutional well supply, or simply the shallow well of an individual householder. At present many of the cities in Japan are adequately filtering their water and are attempting to initiate more modern chlorination practices. But, for the most part, they have neglected the development of their water laboratories. The water laboratory is one of the few controls the Public Health Officer has over the municipal engineer in the operation and maintenance of the water system. Recent examinations of private and institutional supplies, including that of a Health Center, indicate that few of these sources meet the minimum Japanese standards. Each prefectural health department should make available to the cities, the institutions, and the individual adequate laboratory facilities to carry out routine bacteriological and chemical examinations of their drinking water. This may be accomplished by a central prefectural laboratory, by aiding the cities in establishing their own water laboratories, by setting up laboratories in centrally located Health Centers, and by developing a sound sampling system by which samples may be sent to the central prefectural laboratory.

Article I of the Home Department Ordinance No. 22, 1921, a supplement to the National Waterworks Law, sets forth the various constituents that should be examined in a drinking water. These included the odor, sediment or turbidity, reaction, nitrates, nitrites, ammonia, hardness, chlorides and the permanganate consumed, a test measuring the organic matter in the water. The total bacteria count was also included. Recently more modern standards of bacterial purity have been added but great emphasis is still placed on the out-dated chemical analysis. The standards of bacterial purity state that 20°C - 48 hour count should not exceed 100 per 1cc nor 50 in a 1cc portion incubated at 37°C for 24 hours. No Endo Bacteria (dysentery bacilli) should be found in 1cc portions nor should coliform bacteria (B-coli) be present in 10cc portions.

The so called "presumptive, confirmed, and completed tests" for the coliform group of bacteria represent the simplest and most accurate means we have of determining the presence of fecal pollution in drinking water. These tests are recommended by the United States Public Health Services and have been adopted by a majority of U.S. state health departments. Most prefectural laboratories are acquainted with and equipped to carry out the coliform testing procedures but have been reluctant to adopt them. They should be encouraged to give first preference to the bacterial tests, particularly those for the coliform group, and to rely less on the chemical analysis which are considerably less accurate and often are not a measure of fecal pollution. Water laboratories exist in all prefectures but their general lackadaisical mode of operation has prevented them from becoming an effective part of the public health organization.

Tuberculosis Control

Every effort must be made to control tuberculosis in the home because of the many and various factors which are present in Japan at the present moment which interfere with early diagnosis and early hospitalization.

In the student population tuberculosis has a high incidence and tuberculosis is still regarded as an incurable disease and a fatalistic attitude is adopted. It is a matter of pride that a student remains "on his feet" as long as possible to relieve his family of the burden of a long illness. This student group is one in which it is necessary to encourage frequent examinations, early diagnosis and early hospitalization. Their education in control of tuberculosis is a matter of enormous importance for the welfare of Japan. Upon these educated men and women falls the burden of the future planning; educated minds must not be lost because of tuberculosis.

Public Health Education Program

A detailed Public Health Education Program has been submitted by the Bureau of Public Health, Ministry of Welfare. The plan is based on the need for a well planned, well-organized, and well-executed health education

program, and on the necessity for the coordination of all existing health education programs conducted by several of the Ministries of the Japanese Government as well as other agencies.

The essential points of the program include:

a. Planning at the Ministry level

- (1) Establishment of necessary working committees.
- (2) Establishment of the Health Week Movement
- (3) Coordination of the publicity and educational activities of the Press (Newspapers and Magazines) relating to health education.
- (4) Preparation of health educational materials
- (5) Organization of Public Health conventions in the six larger cities of Japan.
- (6) Continuation of the Public Health Train exhibit.

b. Planning at the Prefectural level

- (1) Addition of health education personnel to staff of prefectural health offices.
- (2) Improvement in the methods for the advancement of health education.
- (3) Dissemination of information concerning health and welfare.
- (4) Cooperation in the work of the public health train.
- (5) Organization of lecture courses for health officials and others engaged in health work.
- (6) Establishment of a health education team at each Health Center.

This plan marks the initial step in the establishment of a public health education program for the people of Japan with guidance at national level. The plan is a long-range project. Directives will be issued to prefectural governments by the Ministry of Welfare when specific portions of the program are to be effected.

PHMJG-51, supplemented by a Memorandum of General Application, is now being issued and outlines the detailed provision of this program.

Health Centers

Reference is made to Section 6, Weekly Bulletin #51, 14-20 December 1947. The enforcement regulations and instructions implementing the Health Center Law referred to in Weekly Bulletin #51 have been prepared by the Ministry of Welfare. It is expected that these documents will be dispatched to the governors of each prefecture in the very near future. When the official translations are received, PH&W will forward them to each Military Government Team for their information.

Nutrition

Results of the November Nutrition Survey Consumption Studies are attached, for the cities of Tokyo, Nagoya, Osaka, Kure, Fukuoka, Sapporo, Sendai, Kanazawa, and Matsuyama, with corresponding regions, Kanto, Tokai, Kinki, Sanyo, Kyushu, Hokkaido, Tohoku, Hokuriku and Shikoku.

SECTION VII
SOCIAL SECURITY DIVISION

General

On recent survey trips many health and welfare Officers, who are new in their assignments, requested information regarding the social insurance programs in Japan. For initial information attention is invited to Public Health and Welfare, GHQ, SCAP, Weekly Bulletin No.8, dated 16-22 February 1947, which carries a compilation of the mission and functions of this Division plus a brief outline of existing social insurance programs.

Other PHW Weekly Bulletins which carry reference information are:

- No.14 dated 30 March to 5 April 1947
No.19 dated 4 May to 10 May 1947

No. 24 dated 8 June to 34 June 1947
No.25 dated 15 June to 21 June 1947

SECTION I
WELFARE DIVISION

Supplementary Food Ration for Purchase by Foreign Nationals

SCAPIN No.1841 dated 9 January 1948, Subject: Ration for United Nations' Nationals, Neutral and Enemy Nationals and Stateless Persons, has been issued to the Japanese Government, which rescinds SCAPINs 1969 dated 19 July 1946, 1094 dated 30 July 1946, 1112 dated 7 August 1946, 1143 dated 20 August 1946 and 1207 dated 17 September 1946. All of these SCAPINs provided for the issue of food rations on nationality basis. SCAPIN No.1841 changes this basic policy; now Foreign Nations will be treated as a group rather than by nationality.

Subject SCAPIN directs the Japanese Government to make available for purchase at official prices, or grant in the case of indigent persons, the United Nations ration (either the "A" or "B" dietary supplementary ration according to individual choice, in addition to the full Japanese ration) equally and without discrimination to all foreigners residing in Japan with the exceptions of:

- (a) Korean nationals who have elected to remain in Japan and receive the same ration as Japanese nationals.
- (b) Persons of Japanese descent who claim nationality of an Allied or neutral country and who have not received their Certificate of Registry from their respective diplomatic or consular representatives.
- (c) Affecting instructions issued to Occupation Force personnel prohibiting or restricting purchases of foodstuffs indigenous to Japan.

The composition of the supplementary rations is as follows:

	A	B
Sugar	1 kin	1.5 kin
Butter	-	2 lbs
Wheat Flour	600 momme	500 momme
Canned Goods	5 lbs	7 lbs
Soy	3 go	-
Rice	4.4 kg	-
Edible oil	3 go	3 go
Potatoes	1 kan	3 kan
Beef	-	200 momme

The main effect of the directive will be to raise, to the occidental ration, some 865 Germans, cleared to remain in Japan. The caloric value of the "A" dietary is 2510 calories and the "B" dietary is 2590 calories.

The purpose of this directive is to provide the same care and treatment for foreign nationals as relates to food.

Dissolution of Kyojo Kai

The following is a release by Government Section, SCAP, on the dissolution of the Kyojo Kai. Information concerning Kyojo Kai is contained in TB-PH-WEL 8, issued in December 1947.

It is contemplated that Kyojo Kai (Mutual Aid Society), a welfare organization formed primarily for the benefit of disabled soldiers, will be dissolved by the Japanese Government under the general provisions of SCAPIN 548 in the near future.

This organization is the successor to Shoi Gunjin Kai (Wounded Soldiers Society), an organization providing some relief and more "spiritual guidance" to injured veterans of the Imperial Japanese Army. As an organization "providing benefits greater than similar civilian benefits, or special representation for persons formerly members of the Army or Navy" Shoi Gunjin Kai would inevitably have been dissolved under paragraph if, SCAPIN 548, had it not anticipated such action and dissolved itself. It reappeared practically intact as the Kyojo Kai, a welfare organization ostensibly providing equal benefits to both injured soldiers and injured civilians. Actually Kyojo Kai, like its predecessor, is still devoted almost entirely to the relief of soldiers, and its membership is held together by former military ties. This is proved by the fact that many of the society's members who are no longer incapacitated in any way by their wounds nor in need of relief, continue to participate in the organization's

benefits. Kyojo Kai has also existed in defiance of SCAPIN 775 which prohibits the formation of quasi-governmental relief agencies.

The dissolution of Kyojo Kai will involve freezing of assets, property, etc. and seizure thereof by the Government, the transfer of all welfare functions and property necessary therefor to the Ministry of Welfare, and the reporting of all officers and members.

Military Government Teams can assist in the dissolution of this extremely undesirable organization which maintains branches in every prefecture of Japan by assuring that the local Japanese authorities carry out the dissolution order in good faith, that Kyojo Kai officials do not dissipate or misappropriate the Society's assets for their own use, and by reporting any irregularities in the administration of this order.

While Legal Officers will no doubt survey the dissolution proceedings in each prefecture, Welfare Officers will watch this program with great interest due to their legitimate interest in all welfare institutions and agencies. Welfare Officers can be of assistance to team Legal Officers in giving them any information that is known by them and their constant surveillance to see that the officials of the dissolved organization do not move over on block to other welfare institutions, agencies or societies in their prefecture.

Appointment of Child Welfare Personnel

Welfare Officers may wish to interest themselves in the following important appointments to be made in the near future within the prefectures. The Child Welfare Law (Article 11) provides for the appointment of Child Welfare Officials (Jido Fukushi-shi) to work for the promotion of the welfare of children and expectant and nursing mothers, acting as their councillors for their care, health and general welfare. Officials are to be "appointed from among these who are experienced in, or educated in welfare work, such as care, health, etc". These are to be paid officials who will devote full time to child welfare work. A total of 373 such child welfare officials have been approved for appointment. The following appointments have tentatively been approved:

Hokkaido	17	Kyoto	16
Aomori	3	Osaka	34
Iwate	3	Hyogo	19
Miyagi	5	Nara	3
Akita	3	Wakayama	4
Yamagata	4	Tottori	3
Fukushima	4	Shimane	3
Ibaraki	3	Okayama	4
Tochigi	4	Hiroshima	9
Gumma	4	Yamaguchi	10
Saitama	6	Tokushima	3
Chiba	7	Kagawa	3
Tokyo	50	Ehime	6
Kanagawa	23	Kochi	3
Niigata	6	Fukuoka	19
Toyama	4	Saga	3
Ishikawa	5	Nagasaki	7
Fukui	3	Kumamoto	6
Yamanashi	3	Oita	5
Nagano	6	Miyazaki	3
Gifu	4	Kagoshima	4
Shizuoka	9	Aichi	20
Mie	7	Shiga	3

Article 8 provides for the appointment of prefectural Child Welfare Boards composed of 20 members. The Board is for the purpose of investigating and discussing the problems of welfare of children and expectant and nursing mothers. Members are to be appointed by the governor from public officials concerned, those who are engaged in the care of children, children's health and welfare services and those who have the knowledge of and experience in work with children.

The Ministry of Welfare expects that present prefectural Children's Boards or Committees may necessarily be dissolved. There is no reason, however, why individuals who have demonstrated ability may not be appointed to

the new Board. The Child Welfare Law also provides for appointment of additional temporary members for specific purposes which would allow for use of going committees as subcommittees of the Board. Evaluation of similar Japanese committees indicates that: (a) Such committees are often dominated by government officials, thereby losing independent initiative and action with consequent loss of ability to criticize official activity or inactivity. (b) Individual members often lack sufficient stature to command respect from officials and from the public in general.

In order that Child Welfare Boards may overcome these difficulties and maintain a critical yet constructive attitude toward the program, it is hoped that Boards will have active participation from members such as newspaper publishers, industrialists and others of like stature. It is believed that initial meetings of the Board will perhaps set the pace and tenor for future operations.

It is expected that prefecture welfare officials will consult with Military Government Welfare Officers concerning the membership, organization and activities of these Boards.

Appointment in Children's Bureau

The recent appointment of Mrs. Shizue Yoshima as Chief of the Child Care Section, Children's Bureau, is the first time a woman has been appointed to a major position in the Ministry of Welfare. It is hoped this appointment of a highly qualified person will increase the effectiveness of the work of the Bureau and will also give additional recognition to the advisability of appointing qualified women to more responsible positions.

Mrs. Yoshima, a trained and experienced social worker, completed her college work in 1919 and taught in women's normal schools and colleges until 1927 when she departed for the United States to study at the New York School of Social Work. Upon completion of her studies in 1929, she returned to Tokyo and for the following 18 years headed the Kobokan Settlement located in Tokyo.

Mrs. Yoshima has not previously been engaged in political activity nor held a government appointment. She has served on various boards and committees which has given her an opportunity to secure a wide knowledge of both public and private welfare programs in Japan. Her primary interest has been in the field of child welfare. She has been active in the work of the Japan Social Work Association, the National Conference of Christian Social Workers, the All Japan Minsei-iin Federation as well as the Kobokan Foundation.

Licensed Agencies for Relief in Asia (LARA)

Shipments 39, 40 and 41 LARA overseas relief supply shipments have arrived in Yokohama and are listed below:

- a. Shipment No.39: Arrived in Yokohama from the United States aboard the S. S. China Bear on 17 December 1947 and contained 21.60 tons of relief supplies (clothing including shoes - 21 tons, and food - .60 tons).
- b. Shipment No.40: Arrived in Yokohama from Argentina aboard the S. S. Lighting on 27 December 1947 and contained 35.17 tons of relief supplies (food).
- c. Shipment No.41: Arrived in Yokohama from the United States aboard the S. S. President Monroe on 29 December 1947 and contained 147.49 tons of relief supplies (food - 131.03 tons, clothing including shoes - 16.11 tons, medicine - .05 tons and miscellaneous - .30 tons).

Community Chest (National Interdependence Campaign)

The first nation-wide united fund campaign in Japan, for funds to finance recognized private welfare and relief agencies, officially closed on 25 December 1947. Several prefectures, however, are extending their campaign efforts from one to four weeks longer for the purpose of attempting to reach all persons within their prefectures.

It is estimated that the complete and final results of the fund campaign will not be known until on or about 1 February. A progress report on Community Chest subscriptions (donations) will be published in this Bulletin as available. The first report, compiled as of 9 January, is given bellow:

<u>Prefecture</u>	<u>Goal</u>	<u>Collected</u>	<u>Reported</u>	<u>Percent</u>	<u>Remarks</u>
Hokkaido	35,000,000	35,000,000	1 Jan.	100.0%	
Aomori	5,000,000				
Miyagi	15,000,000				

Akita	5,000,000				
Yamagata	13,000,000				
Fukushima	15,000,000	30,521	10 Dec.	2.0%	
Tochigi	14,000,000	9,200,000	9 Jan.	65.7%

Note. 1. Iwate, Gumma, Saitama, Nagano, Ibaraki Prefectures did not undertake campaign.
2. Goals are those finally adjusted as set quotas.

SECTION II NURSING AFFAIRS DIVISION

A program to use 200 Japanese nurses as nurses aides in the various U. S. Army Hospitals in Japan has been initiated. Each Nurse will receive 160 hours of instructions and supervised ward demonstrations etc, as a further means of a training Japanese nurses in modern nursing technique.

It is requested these nurses be recruited from the unemployed and those in minor positions in the prefecture. Assistance to locate the unemployed nurses can be obtained from the leaders of the Branch Nurses Association in each Prefecture, the Chief Nurse in the Prefecture Health Department or the doctor in charge of Nursing Affairs in the Prefecture. These agencies will be most helpful in locating the desired number of nurses for the hospital.

The overall program will be under the supervision of the Chief Nurse, Medical Section, Headquarters 8th Army. A qualified Japanese nurse will be sent to each Army Hospital to assist American nurses in teaching and interpreting.

The following hospitals are currently scheduled for the indicated number of Japanese nurses aides:

5th	Station	Hospital	Johnson Field	8
28th	"	"	Osaka	40
35th	"	"	Kyoto	10
49th	General	Hospital	Tokyo	20
118th	Station	Hospital	Fukuoka	20
155th	"	"	Yokohama	15
128th	"	"	Zama	10
161st	"	"	Sapporo	10
172nd	"	"	Sendai	10
361st	"	"	Tokyo	25
376th	"	"	Tachikawa	15
395th	"	"	Nagoya	10
407th	"	"	Kobe	7
Total				200

Personnel

Miss L. Kincaid, Public Health Nurse has been assigned to the Model Demonstration School of Nursing, Japanese Red Cross Hospital, Tokyo, to head the Public Health Nursing Program.

SECTION III VETERINARY AFFAIRS DIVISION

Weekly Animal Disease Report

The Ministry of Agriculture and Forestry reported the following new outbreaks of animal diseases for the week 4-10 January:

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Aichi	Swine Erysipelas	1
Tokyo	Swine Erysipelas	4
Nagano	Swine Erysipelas	1
Osaka	Swine Cholera	3
Nagasaki	Texas Fever	1

SECTION IV SUPPLY DIVISION

Distribution

A review of Military Government Monthly Activities Reports indicates some prefectures are still having difficulty in securing an adequate supply of DDT. Several informal reports also have been received during the past month concerning inability to procure necessary typhus vaccine.

The supply of DDT in Japan is entirely adequate to meet all demands. At present, stocks of 10% DDT dust and residual effect spray aggregate 4,000,000 pounds and 250,000 gallons, respectively.

Stocks of typhus vaccine also are adequate to meet all requirements. As a matter of fact, sizable amounts must be utilized during the present typhus season in order to obviate outdating.

The Supply Division has followed up on all reported deficiencies in the supply of DDT and typhus vaccine. In most instances, the Ministry of Welfare has reported that all requests received from prefectures have been acted

upon and that there are no outstanding orders remaining unfilled. In a few cases the Ministry of Welfare has requested further justification for DDT requests. For example, one prefecture requested 100,000 pounds DDT dust which was followed by an additional request in approximately 10 days asking for another sizable sum. The practice of submitting repeated orders for DDT without reference to previous requests, which remained undelivered, only leads to confusion. The proper procedure is to follow up on undelivered orders.

In order that the Supply Division may be able to check on supply deficiencies, any failure to deliver DDT or typhus vaccine within a reasonable time should be reported through channels with specific information as to date of order and amount requested. To permit expeditious action it is suggested that this information be transmitted by telephone whenever practicable.

During the period 28 December 1947 - 3 January 1948 a total of 2,964 DDT dusters were shipped to three prefectures, as listed below, under Ministry of Welfare supervision, for use in the insect and rodent control programs. No sprayers were shipped in this period.

<u>Prefecture</u>	<u>DDT Duster</u>
Osaka	1,500

The Ministry of Welfare is planning to distribute to all 46 prefectures, as listed below, the 5,000 kg, Hydrous Wool Fat (Lanolin) which has been received from the United States on approved import program. The allocations to prefectures have been made on the basis of population figures. This item is packaged in bottles of 250 grams capacity:

<u>Prefecture</u>	<u>Number 250 gm Bottles</u>	<u>Gross Quantity Kilograms</u>	<u>Prefecture</u>	<u>Number 250 gm Bottles</u>	<u>Gross Quantity Kilograms</u>
Hokkaido	1,000	250	Mie	380	95

			Total	11,080	2,770

Particular attention is now focused on the distribution of penicillin. Study is being made to determine what steps are necessary to remedy conditions which are tending to prevent a speedy flow from the manufacturer to the ultimate consumer. Results of this study and the remedial actions taken will be made known to Military Government Teams as soon as possible through the medium of the Weekly Bulletin. The Ministry of Welfare has

been instructed to allow no interference with distribution of available stocks from manufacturer to the prefectures in the interim. During November distribution was ordered as listed below, a total of 66,617 vials of 30,000 oxford units each. The December allocation of approximately 160,000 vials has been made and instructions issued to manufacturers to ship to the prefectures. Detailed breakdown of this distribution has as yet not been furnished the Supply Division. It will be published in a future issue of this Bulletin.

NOVEMBER ALLOCATION OF PENICILLIN DISTRIBUTION

		Reserve for stringent needs	1,407
		Total	<u>38,810</u>

In response to a request from RYKOM, large quantities of Smallpox Vaccine and Typhoid Vaccine are being shipped to Okinawa from Japan. These vaccines are required in order to carry out immunization programs to protect the entire civilian population of the Ryukyus. Usual procedures of export have been drastically streamlined in order to supply the demand as quickly as possible. Shipments were arranged on an emergency basis. 865,000 doses of smallpox vaccine were flown to Naha airport in Okinawa aboard military craft departing Tokyo 6 January, 2,162,500 cc typhoid-paratyphoid vaccine will leave Yokohama by military surface transportation aboard USAT Admiral Mayo, scheduled to depart early part of the week of 12 January.

Narcotics

The Wakayama Opium Case, in which 17 defendants were charged with smuggling 7 1/2 tons opium into Japan and were arrested in February 1946, was brought to a successful conclusion 27 December 1947. The Tokyo Higher Court refused to consider the case of 12 defendants who had appealed from the Osaka Appeals Court thereby upholding the sentences imposed by the Osaka Court. The sentences ranged from eight months imprisonment to three years imprisonment. The other five of the original 17 defendants did not appeal from the Wakayama District Court decisions were handed down 31 October 1946.

Following inspection tours of the Narcotic Control Officer in which it was found that some prefectures had inadequate personnel in the Narcotic Division for proper enforcement of the Narcotic Law, the Ministry of Welfare has been able to obtain increased personal in some of the prefectures mentioned. This is particularly true in those

prefectures where there is a concentration of population thereby requiring specialized activity to stamp out illegal narcotic trafficking in the underworld, in addition to the registration and inspection of registrants.

Production

The 39th weekly report of DDT Duster and Spraying Equipment for mosquito and fly control programs for 1947 indicates the following data for 28 December 1947 - 3 January 1948:

	Total Mfgd. To date 27 Dec.	No. Mfgd. 28 Dec 47- 3 Jan 48	Total Mfgd. To Date 3 Jan 48	Total Shipped to date 3 Jan 48	Balance On Hand	To be Mfgd.
DDT Dusters	79,926	-	79,926	76,352	3,574	10,074
Sprayer, Knapsack type, 3 gal. cap.	39,443	-	39,443	19,805	19,638	-
Sprayer, pump type, semi-automatic	23,808	-	23,808	13,396	10,412	-
Sprayer, hand type, 1/2gal. Capacity	37,910	-	37,910	27,838	10,072	-
Total	181,087		181,087	137,391	43,696	10,074

Releases of the following DDT products and typhus vaccine were approved for the period 4 -10 January:

<u>Prefecture</u>	<u>10% DDT Dust</u>	<u>5% DDT Residual Effect Spray</u>	<u>Typhus Vaccine</u>
Yamaguchi	50,000 lbs.		
Aomori	71,800 "		
Nagasaki			17,500 vials
Wakayama			400 "
Tokushima			1,000 "
Gifu			500 "
Ishikawa			100 "
Aichi		2,500 gallons	
Ibaraki	500 "	50 "	
Mie	40 "	10 "	
Kagoshima	10,000 "		
Okayama			300 "
Kagawa			1,500 "
Total	132,340 lbs.	2,560 gallons	21,300 vials

A total of 3,691,657 lbs. of 10% DDT Dust, 206,008 gallons of 5% DDT Residual Effect Spray, and 527,942 vials of Typhus Vaccine represents total stocks on hand in wholesale houses of the Ministry of Welfare as of 3 January.

SECTION V PREVENTIVE MEDICINE DIVISION

Typhus Fever

The recent outbreak of typhus fever has brought out certain important points in the general typhus control program which should be emphasized:

1. The necessity for immediate reporting of any suspect case of typhus fever. According of Japanese reports the outbreak in Osaka centered around an elderly Japanese woman in a pear crowded section of the city. The Japanese physician attending her failed to report this case as a suspect, as required by Japanese Law, and diagnosed the case as meningitis. He also neglected to report the state of lousiness this woman suffered.

2. The necessity for immediate delousing of the suspect and delousing and vaccination of all contacts, no matter where they are located. Several cases were discovered among persons who had attended the funeral of this primary case.

3. The necessity for residual DDT spraying of bath houses used by the Japanese civilians, whether privately owned or operated by the town or city. Some cases were traced back to the public bath house frequented by this infected and infested woman.

4. The necessity for maintenance of at least one permanent well trained sanitary team in each Health Center and Ku office. The value of Sanitary Inspector, from each Health Center or Ku office is also apparent.

5. The value of obtaining early and convalescent serum samples from each suspect case to determine the type of typhus present. For example, in Osaka, single samples taken early in the course of the disease were shown to be negative, while the second and third samples demonstrated the desired rise in titre and the differentiation between murine and epidemic typhus.

A few cases are cited:

<u>Onset</u>	<u>Date of Specimen</u>	<u>Epidemic</u>	<u>Murine</u>
(1) 7 Dec.	15 Dec.	Negative	Negative
	23 "	1.160	Negative
	29 "	1.160	Negative
(2) 7 Dec.	15 Dec.	Negative	Negative
	23 "	Negative	Negative
	29 "	1.160	Negative
(3) 9 Dec.	15 Dec.	1.10	Negative
	23 "	1.320	Negative
(4) 16 Dec.	19 Dec.	Negative	Negative
	29 "	1.320	Negative
(5) 12 Dec.	21 Dec.	Negative	Negative
	29 "	Negative	Negative
(6) 7 Dec.	16 Dec.	1.160	1.160
	24 "	1.160	1.160

This latter case will be tested by the rickettsial agglutination test using specific rickettsial antigens in order to determine the type of typhus.

SECTION VI MEDICAL SERVICE DIVISION

Japanese Civilian Hospital Strength Report for week ending 12 December 1947 shows 3,415 hospitals with a capacity of 212,078 beds of which 103,736 were occupied. During this same period 245,854 out-patients were treated.

Japanese Civilian Hospital Strength Report for week ending 19 December 1947 shows 3,409 hospitals with a capacity of 212,184 beds of which 103,695 were occupied. During this same period 246,032 out-patients were treated.

SECTION VI SOCIAL SECURITY DIVISION

General

Technical advice was forwarded to the Insurance Bureau, Ministry of Welfare, that immediate attention should be given to the following subjects: The administration of the unemployment insurance for seamen; establishment of close liaison with the unions, employer organizations, Ministry of Labor, and Ministry of Transportation in formulating general policies regarding Seamen's Insurance; perfection of an efficient and adequate statistical reporting program for all social insurances; and submission of proposals for amending the present laws so as to include certain substantive provisions now applicable only through Cabinet Orders.

SECTION VIII
MEMORANDA TO JAPANESE GOVERNMENT

<u>PHMJG</u>	<u>DATE</u>	<u>SUBJECT</u>	<u>SURVEILLANCE</u>	<u>DISTRIBUTION</u>
#50	16 December 1947	Distribution of Clothing and Bedding for Winter Relief to Repatriates and Needy Persons	Yes	All MG Teams

Note: Directive to Ministry of Welfare, approving a plan for distribution of clothing and bedding as a part of the winter relief program.

SECTION I GENERAL

The following address was given at a meeting of Japanese Prefectural Health Officials at the Institute of Public Health on 9 January, by Colonel C. F. Sams, Chief, Public Health and Welfare Section, GHQ, SCAP:

PUBLIC HEALTH IN JAPAN

“This discussion will be about the new public health organization in Japan, in order that you may have an over-all picture, so you can see where you fit into this picture.

A good public health program is dependent on four foundation stones. In the past years public health has rested upon a single foundation stone, instead of four. In the old days public health was considered to be the application of preventive medicine to a group by means of an organization. That is a very limited and narrow view of public health. That is like trying to build a house with one wall. In modern public health we consider there are four walls or four foundation stones in a well organized public health program. We consider these four major field as; first, the preventive medicine aspects of public health, second, the medical care aspects of public health, third, the public assistance or welfare aspects, and fourth, the social security aspects. Let me illustrate what is meant by the necessary integration or interdependence of these four aspects in any successful public health program.

“Take a single problem-the problem of tuberculosis control, to use as an illustration. It is foolish to talk about controlling tuberculosis in a country which has a highly integrated industrial social structure such as Japan by the application of preventive means alone. The known means of prevention of tuberculosis, as formerly applied in public health, are the mass x-rays of people, and tuberculin tests to see if children had tuberculosis. They also consisted of advice to known cases and instruction as to how they should keep from spreading their disease to someone else.

“Let us look at this problem and see if those preventive measures are sufficient. Assume that mass x-rays have been completed and we find a number of cases who have tuberculosis. Those cases are the sources for passing on infection to other people and therefore they are dangerous from a public health standpoint to every one with whom they come in contact, so we are faced with the problem of what shall we do with these sick people. The only sensible thing to do is to put these people in tuberculosis sanatoria, where they will not infect other people and for their own good of course they should be put there where they can be treated and made well, at least their cases should be arrested. That leads us to the conclusion that we must have a good medical care program for those that are sick if we are going to control this disease and that is the second cornerstone of our foundation, the medical care program.

“Let us assume that having established a good preventive program, we have also established a good medical care program with good hospitals, well trained doctors, to take care of the sick people, so that they cannot spread their diseases to others, but that happens to these people that are too poor to use these facilities, even though they are sick and must go to the hospital for treatment. That brings us to the third foundation stone of this problem. It is not good enough to have good preventive facilities, and good medical care facilities, if the people cannot afford to use them, so we come to our third cornerstone -- we must provide a means through public welfare for public assistance to those families who need medical care or who need other treatment and cannot afford it. If the sick person is the head of the family we must provide means for taking care of his family while he is being treated in the medical care program. If the sick person is a Mother of the family we must provide means for taking care of her children. No one can get well in the finest hospital in the world so long as they are worrying about what is happening to their family. It is also very foolish to have a public health nutritionist go to a family and say that a child is under-nourished and must have milk if they do not have the money to buy the milk, so our public health program must provide assistance to buy the milk for people that are in need. So we conclude that we must have a good public assistance program if we are going to control disease.

“Let us assume that we have a good preventive program, a good medical care program, and a good public assistance program, we have provided hospitals, x-ray machines, public health nurses, we have provided good tuberculosis sanatoria for treatment of these cases, we have provided a good medical assistance program where people can get the proper assistance they need, but we are faced with the fourth problem -- how are we going to pay for it? Medical care, particularly, is expensive. That is where our fourth corner stone enters the picture of public health.

“Social Security is a scheme or a system, which is applied to an industrial country, such as Japan has become; to provide the means for paying for some of these essential services. The average man who is working for wages cannot have accumulated enough money to pay the costs of medical care and to support his family if he becomes sick and loses his wages. That situation is characteristic of an industrial society.

“There are two ways in which you can finance the costs of controlling disease, specifically, one of them, having direct taxes in which the people pay high taxes and the government furnishes all the services free. Under such system we have what is called state medicine in which the government owns and operates all hospitals, health centers and welfare activities. All the doctors and all the nurses and welfare workers work for the government. That kind of system is what we have in communist or police states. We don't think that kind of a system has any place in a democratic country such as Japan is becoming.

“The other means of providing payment for these services, which we all recognize as essential if we are going to improve the health of a country, is by the insurance plan. Under such a plan people pay premiums for insurance against the risks of death, or the risks of fire, or the risks of sickness and then when they become sick, for instance, such as these cases of tuberculosis, we have used as an illustration, the health insurance fund pays the cost of their medical care and under the unemployment insurance it pays part of their wages so their families will not starve. That is the kind of a system that here in Japan I think is a sound system, because the actual provisions for medical care, the actual operation of hospitals, and clinics can be done by free enterprise. You have had for many years the elements of a social security system.

“Tuberculosis has been used only as an illustration of the need for what is considered the four essentials for any good health program. I would like to tell you how we have integrated those four essentials in the programs in Japan.

“First, the Ministry of Welfare has been recognized and now contains bureaus which provide for integration of coordination as a team of these four essential cornerstones of any health program. Certain now laws have been passed in Japan and certain amendments to old laws have been made which cover all of these four important fields, so that they are all now integrated by law in Japan.

“We are in the process of completing the reorganization of the prefectural governments, so far as they pertain to health and welfare activities. The new law which has been passed recently, requires that every prefecture shall establish a health department and a welfare department equal in authority with any other department in the prefecture government. In the case of the health department there will be five major divisions if you want to call them that, first is public health administration, second, medical affairs or medical care division, third, preventive medicine, fourth, pharmaceutical affairs division, and the fifth, laboratory division. In the welfare department will be included administration of the Act for public assistance, known as “The Daily Life Society Act”, “The Social Security and Health Insurance Act”, the “Child Welfare Act”. Within these two departments of the prefectural government will be included all of the functions that pertain to all of the all the four foundations of a good public health program.

“We have still the third echelon, if you want to call it that, of this now organization in Japan, and that is the establishment of health centers throughout Japan in every health center district. Every prefecture will be divided into health center districts, which will be headed by a district health officer who will be directly responsible to the prefectural health department chief. This district health officer will be responsible for all health activities among the people in his district. He will also be in charge of the health center and the branch health centers within his district. The health center district will be made up of about 100,000 people. Within that district the health officers of cities and towns will be under the technical supervision of the district health officer. In the case of large cities whose population is such that there will be more than one health center established within the city there will be established a city health department. This city health department will then supervise the district health officers within that city. However, the city health department itself will be under the technical supervision of the prefectural health department.

“The new health center law requires the reorganization of all health centers in Japan and the establishment of health centers in each of the health center districts. This reorganization of health centers will provide for 12 essential functions. Some of those functions are already being carried out by health centers in Japan, but so far as I know and have been able to find, no health center in Japan yet carries out all of the functions. We hope by the end of this year that the complete reorganization of all these health centers will be accomplished. The following is a list of these twelve functions:

1. Public Health Nursing
2. Maternal and Child Hygiene
3. Vital Statistics
4. Diagnostic Laboratory
5. Dental Diagnostic Treatment
6. Nutrition
7. Sanitation and Hygiene
8. Public Health Education
9. Medical Social Services
10. Communicable Disease Prevention
11. Tuberculosis Control
12. Venereal Disease Control

“A model health center properly staffed and properly functioning is being established in Tokyo, as we hope to have all the health centers organized throughout Japan. Prefecture health department chiefs will be shown how this model health center works. They will return to their respective prefectures and establish similar models in each prefecture. The district health officers in the prefecture will be shown how the model works in their prefecture and will then establish their own health centers in the same way. So we hope by the end of the year to have all health centers properly reorganized throughout Japan. I believe that when this health organization from the top to the bottom is completed and fully staffed with the many thousands of properly trained people required, Japan will have as fine a public health organization as any country in the world. Each of these echelons will require trained personnel. We shall need public health medical officers, sanitary officers, public health nurses, and nutritionist, dentists, pharmacists and veterinarians in every one of these echelons.

“All of these people constitute a team. They must work together because unless all of these teams are properly integrated none of them can succeed. The training of the people to make up these teams is a tremendous job. You are here as part of that training program, as part of the team. When you get back to your prefectures I want you to be thoroughly familiar with this organization so you can explain to your fellow workers what this is all about and where they fit into the pictures. I hope that you are able to impress them with the necessity for their own attendance of future courses here so each can be properly trained to carry out the program that Japan needs.”

Technical Bulletin

The following Public Health and Welfare Technical Bulletin is accompanying Weekly Bulletin No.55:

Title: Licensed Agencies for Relief in Asia (LARA)
Short Title: TB-PH-WEL 3 (revised)

SECTION II WELFARE DIVISION

Public Assistance Report - November

The Ministry of Welfare has submitted the following public assistance totals for the month of November. Figures for October 1947 and for November 1946 are shown for purposes of comparison.

	<u>Nov. 1947</u>	<u>Oct. 1947</u>	<u>Nov. 1946</u>
No. of persons in institutions	138,596	147,734	
No. of persons non-institutional	<u>2,582,720</u>	<u>2,799,561</u>	
Total	2,721,316	2,947,295	2,658,769
Cost of Assistance in Cash	366,094,622*	358,731,288	
Cost of Assistance in Kind	<u>50,782,811</u>	<u>21,824,752</u>	
Totals	416,877,433	380,556,040	130,908,379

*Total cash grants before deducting repayments.

Prefectural Monthly Public Assistance Report

** Figures are not after deductions for repayments.

Expenditures under the New Disaster Law #118

The expenditures listed in attached tables (Incl. #1) have been paid prefectures by the National Government under its responsibility to provide relief in time of disaster. This expenditure includes the Kanto Flood

in which the Government obligated itself under the terms of Law #118 before the law had been passed by the Diet. The flood occurred 16 September and Law #118 was effective on 20 October 1947.

Licensed Agencies for Relief in Asia (LARA)

The 42nd shipment of LARA relief supplies arrived in Yokohama aboard the S.S. Pacific Bear on 10 January 1948. This shipment contained the following supplies:

Food	40.45 tons
Clothing	10.15 tons
Miscellaneous	<u>.14 tons</u>
Total	50.74 tons

Community Chest (National Interdependence Campaign)

The Community Chest Campaign, which originally was to be held between the dates, 25 November - 25 December 1947, has been extended in several prefectures until the latter part of January 1948. It is estimated that the final results of the campaign will not be known until on or about 1 February 1948.

A summary of the progress of the campaign as of 16 January 1948, shows 436,115,772 yen raised towards a goal of 681,500,000yen, or 63.9% of quota. Forty-one (41) prefectures are participating in the campaign, (Iwate, Gumma, Saitama, Nagano and Ibaraki not participating due to recent flood disaster) with 12 prefectures reaching quota, 27 prefectures making partial reports and 2 prefectures not #####.

Prefectural Community Chest Returns (as of 16 January 1948)

<u>Prefectures</u>	<u>Goal</u>	<u>Amount Collected</u>	<u>Date Reported</u>	<u>Percent</u>	<u>Remarks</u>

SECTION III VETERINARY AFFAIRS DIVISION

Weekly Animal Disease Report

The Ministry of Agriculture and Forestry reports no new outbreaks of animal diseases occurred during the period 11-17 January.

SECTION IV NURSING AFFAIRS DIVISION

Model Demonstration School

A recruiting program has been started in the high schools of Tokyo-To to acquaint the fourth year (girl) students, in nursing as a profession. Six high schools are visited each week by three members of the Demonstration School Staff. The "Lady of Science" picture is shown, a short talk given and a question period allowed.

Qualifications of the applicant are stressed and they are invited to consider nursing as a profession and enter the April 1948 class. The schools have been notified by the Tokyo office and have been very interested in the program.

The Educational Committee of Tokyo Branch Association of Nurses has completed plans for a refresher course for the general staff nurses. Beginning 27 January, it will run for 20 days, three days a week at the Japanese Central Red Cross Hospital.

SECTION V SUPPLY DIVISION

Distribution

A preliminary study has been made of the penicillin distribution system with a view to determining the factors delaying distribution. In one prefecture visited, the health officials reported that price was the main difficulty. On investigation, however, it was learned only one company had been designated to distribute penicillin in the entire prefecture. It was apparent this lone retail outlet could not give expeditious service in the delivery of penicillin.

Penicillin is becoming available in increasing amounts and it is particularly important that sufficient retail outlets be provided so that doctors may be able to purchase penicillin as required. Under the present system, which appears to be somewhat standard throughout Japan, doctors are required to buy considerable stocks at one time. This procedure is unsatisfactory due to the finances involved and the lack of refrigeration on the part of individual

doctors. In order to solve this problem, dealers must be immediately available and prepared to supply doctors on short notice.

When the new ration system goes into effect 1 February, doctors will be given coupons authorizing the purchase in given amounts over a stated period. However, this will not entirely solve the problem unless there is a corresponding increase in the number of dealers authorized to stock and sell penicillin. Penicillin as a controlled item may be handled by any dealer authorized to sell controlled items and prefectures have complete authority to designate those dealers. At least some of the dealers should be prepared to give 24-hour service.

The December allocation of penicillin amounted to 98,406 vials of 30,000 Oxford Units each.

DECEMBER ALLOCATION OF PENICILLIN DISTRIBUTION

<u>Prefecture</u>	<u>Vials. 30.000 Units</u>	<u>Prefecture</u>	<u>Vials. 30.000 Units</u>
Hokkaido	5,665	Shiga	900

		TOTAL	98,406

Shipments of insect and rodent control equipment totaling 1,290 pieces were made to three prefectures under Ministry of Welfare supervision during period 4-10 January, as follows:

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsack Sprayer</u>	<u>Semiautomatic Sprayer</u>	<u>Hand Sprayer</u>
Osaka	500	0	0	0
Hyogo	0	0	0	110
Saga	<u>680</u>	<u>0</u>	<u>0</u>	<u>0</u>
Total	1,180	0	0	110

Below is listed a resume of the distribution of diphtheria toxoid. At the request of the Preventive Medicine Section of the Ministry of Welfare, each prefecture submitted figures representing requirements of toxoid. This survey was conducted in August-September 1947. These figures are listed below in the column headed "Required Amount". The column headed "Sum Total" indicates the total quantities distributed to the end of December. In addition to the figures below, notification was made 14 January by telegram to three prefectures in Kyushu to expect shipments as follows:

Nagasaki	100,000 cc
Miyazaki	70,000 cc
Kumamoto	100,000 cc

DISTRIBUTION OF DIPHTHERIA TOXOID

Narcotics

The November report on narcotic control activities, Ministry of Welfare, contains the following information:

Total registrants	88,364
Arrest - Registered persons	14
Unregistered persons	46
Convictions - Registered persons	3
Unregistered persons	35
Thefts of narcotics	26
Losses by fire	1
Losses by flood	1

Penalties for registrants varied from 500 yen fine to six months penal servitude; for unregistered persons from 200 yen fine to three years penal servitude. In addition to the arrested persons, 85 registrants were admonished for minor technical violations. Charges against 22 nonregistrants were dropped because of lack of evidence.

Three persons were arrested during the month for illegal cultivation of marihuana. One person was warned by the prefectural agents and one marihuana violator was sentenced to a 5,000 yen fine for illegal cultivation.

The Provost Marshal Section will furnish to PH&W reports of all narcotic violations on the part of Occupation Forces personnel and foreign nationals in Japan. This information will enable Narcotic Control Officers to improve the enforcement of narcotic laws in Japan by giving proper supervision and direction to Japanese Government narcotic officials.

Production

Reference is made to PH&W Weekly Bulletin, No.53, 28 December 1947 - 3 January 1948, Section IV, Supply Division, Production Branch. The second sentence, "This material is now allocated by the Ministry of Welfare and delivered to prefectures periodically or automatically", should be corrected to read. "This material is not allocated by the Ministry of Welfare and is not delivered to prefectures periodically or automatically."

The 1947 program of production of DDT Duster and Spraying Equipment has been completed with the exception of a small quantity of DDT dusters, this exception being attributed to the lack of sufficient tinplate and the general lack of sufficient electric power to complete the manufacturing process. Adequate quantities of this equipment, however, have been manufactured and adequate reserve stocks are on hand to meet all requirements. Plans are being formulated for continuing production during 1948 to take care of the needs of all prefectures for dusting and spraying equipment for insect and rodent control activities.

The practice of listing in this Bulletin the weekly releases of insect and rodent control supplies, DDT products and typhus vaccine, has been discontinued. Henceforth, a monthly consolidated list of actual shipments made to the various prefectures will be included.

A total of 4,078,441 lbs. of 10% DDT, 253,979 gallons of 5% Residual Effect Spray and 595,374 vials of Typhus Vaccine represents total stocks on hand in wholesale warehouses of the Ministry of Welfare as of 10 January.

Inclosure #2 is a table which indicates allocation of liquid chlorine for chlorination of water by prefectures and water treatment plants for the period January - March 1948. Allocation tickets will be mailed to prefectures on or about 20 January. It is realized that the total quantity allocated is not sufficient to maintain desired level of chlorination. Efforts are being made at this level to increase this supply and subsequent announcements will be made. Prefectural health officials should assist water treatment plants to obtain liquid chlorine in accordance with the allocations made.

SECTION VI
PREVENTIVE MEDICINE DIVISION

Sanitary Engineering

Municipal Water Chlorination: Reference is made to Inclosure #2 listing chlorine allocations to each prefecture for the period January - March 1948. It is considered good municipal chlorination practice to maintain residuals of 0.1 and 0.2 ppm in the extremities of the distribution system. An initial chlorine dose at the treatment plant of 0.6 to 1.0 ppm is usually sufficient for this purpose. Higher residuals provide little additional protection against the contamination of drinking water at the household tap and cannot be justified at this time. The present chlorine allocations are not sufficient to chlorinate all Japanese water systems to U.S. Army standards. It should be noted that, with the exception of certain designated municipalities, tactical units and Military Government Teams are required to rechlorinate all drinking water. Reference is made to Eight Army OD No.68, dated 20 July 1946. In most cases a safer supply can be provided by reducing leakage in the distribution system and by increasing the output of water treatment plants than by applying an excessive chlorine dosage.

Sanitary Associations: Reference is made to Sec.VI, PH&W Weekly Bulletin No.51 in which the history of the Sanitary Association was related. Recent investigations of the activities of the Eisei Kumiai in three prefectures indicate that it is rapidly gaining strength and is being actively encouraged and organized by the local Health Departments. The three prefectural health chiefs interviewed considered this association an essential part of their public health organization and necessary for the solution of their immediate health problems. The Eisei Kumiai is organized in units of one block of approximately 100 families. In one city 92 such block associations had been organized and in each association the membership, within the geographical block unit, was unanimous. This fact alone demonstrates that the Eisei Kumiai is not being organized entirely within democratic principles and should warrant considerable surveillance. In another instance, packages of DDT dust and Antu were being sold through the Sanitary Associations. Such methods of distribution are highly unsatisfactory and should be vigorously discouraged. A Ministry of Welfare directive dated 31 July 1947 prohibited the sale of DDT to the individual or the sale to a private organization for resale to the individual.

The Sanitary Association has existed in Japan for over 40 years but has accomplished little in the improvement of environmental sanitation and the promotion of public health. The people of a community should look to their Prefectural Health Department and district health office for public health services and should not be required to ban together as a separate organization to solve their health problems. The Eisei Kumiai, wherever they exist, should only support the local governmental health agency and be used by this agency as a medium for the dissemination of health information. With proper supervision, the Sanitary Association could become a very useful adjunct to the Health Center System. Without proper supervision, such associations are likely to be highly detrimental to the development of a governmental health organization.

Venereal Disease Control

Reference is made to PHMJG-45, dated 5 November 1947, offering no objection to Ministry of Welfare's plan entitled "Essentials of the Counterplan for Prevention of Venereal Disease" which is an interim plan of financing venereal disease drugs to meet the present emergency.

The essential points of the subject plan include:

- a. Estimation of existing venereal disease cases in Japan to be about 1,530,000, of which 750,000 cases are expected to be treated this year.
- b. Compulsory treatment of every reported case to be the responsibility of each prefecture.
- c. Reporting of cases and issuance of final report on completion of treatment will be responsibility of medical practitioners.
- d. Expenses for treatment will be imposed on the patient when he is able to pay.
- e. One-half the amount in exempted or reduced expenses for treatment will be subject to compensation by Governmental subsidy.

Subject memorandum offers no objection to the overall plan submitted provided that:

- a. All venereal disease patients will be recognized as cases of infectious disease endangering the public health and will be accepted and given prompt and complete treatment accordingly without reference to their ability or willingness to pay.

b. The governmental subsidies referred to in subject plan will be supplemented if necessary to provide the treatment outlined in subject plan.

c. Subsidies are made available in such a manner as to permit the purchase of necessary drugs at a reasonable price as required by clinics and physicians to provide for uninterrupted treatment of all patients.

d. In case subject plan is found ineffective, the Ministry of Welfare will act promptly to make necessary corrections in the plan and will endeavor to obtain the necessary funds to carry out the program.

In accordance with subject counterplan, 30,000,000 yen has been appropriated by the Ministry of Finance as a subsidy to the prefectures to finance the Venereal Disease Control Program for the three months of January, February and March 1948. One-half of the amount was distributed during the latter part of December 1947 to the prefectures according to the population and load of venereal disease patients. The other half is held in reserve by the Ministry of Welfare to be drawn upon as necessary. An equal amount, 30,000,000 yen, is put up by the prefectures making a total of 60,000,000 yen which is to be used as a revolving fund for the purchase of venereal disease drugs so that all patients can be treated, regardless of their ability to pay. As collections are made from patients who are able to pay, they are turned back into the fund.

This counterplan is based upon the assumption that 90% of the patients will be able to pay while it may be shown as the program continues that the above percentage will more correctly apply to the group that cannot pay. Although this is a temporary plan it is a step in the right direction and it should be impressed upon the population that inability to pay is no reason not to seek treatment. The government has recognized venereal diseases as communicable diseases endangering the public health and has subsidized this program for the control of venereal diseases.

SECTION VII SOCIAL SECURITY DIVISION

General

Mr. Leonard R. Anton, former Chief of the Social Insurance Branch, has been appointed Chief of the Social Security Division and Mr. Peter M. Sullivan, formerly Social Insurance Analyst, has been appointed Chief of the Social Insurance Branch.

The Ministry of Welfare reports that appeal referees for the Welfare Pension and Health Insurance programs, to implement recent legislation assuring the democratic right of fair hearing to all interested parties, have been appointed in all prefectures except Shiga and Fukushima. It was also reported informally that several appeals have been filed but only one officially reported, which was related to the degree of disability determined by the administrative office.

No objection was offered to the Ministry of Welfare's plan to establish a separate section for the administration of Seamen's Insurance in the Insurance Bureau. In the past, Seamen's Insurance has been administered by the Pension Section of the Insurance Bureau, and with the addition of Unemployment Insurance it was felt that the program was of sufficient magnitude to be handled by a separate Section.

SECTION VIII MEDICAL SERVICE DIVISION

Civilian Hospital Strength Report for week ending 26 December 1947 shows 3,390 hospitals with a capacity of 212,256 beds of which 96,621 were occupied. During this same period 342,576 out-patients were treated.

Nutrition

Physical symptoms and weight deviations in Tokyo, Eight Cities, Twenty-seven prefectures, Four Coal Mines, Akita Copper Mine and Tokyo Railway Workers for the November 1947 Nutrition Survey are attached (Incl.#3).

SECTION IX MEMORANDA TO JAPANESE GOVERNMENT

<u>PHMJG</u>	<u>DATE</u>	<u>SUBJECT</u>	<u>SURVEILLANCE</u>	<u>DISTRIBUTION</u>
#55	9 January 1948	Amendment to Local Autonomy Law, Law No.67, 16 April 1947	Yes	All MG Teams

Note: Directive to Ministry of Welfare, offering no objection to the plan which provides for organization of separate departments of health and separate department of welfare in each prefecture as directed by SCAPIN 945, dated 11 May 1946, subject; "Reorganization of Governmental Public Health and Welfare Activities".

CRAWFORD F. SAMS
Colonel, Medical Corps
Chief

5 Incl:

1. Expenditures Under the New Disaster Law #118.
2. Allocation of Liquid-chlorine for January, February, March, 1948 for Water-works and Sewerage.
3. Nutrition Surveys - Deficiency Symptoms and Weight Deviations - November 1947.
4. Weekly Summary Report of Cases and Deaths from Communicable Diseases in Japan, week ending 3 January 1948.
5. Monthly Summary Report of Cases and Deaths from Communicable Diseases in Japan, four week period ending 27 December 1947.

**GENERAL HEADQUARTERS
SUPREME COMANDER FOR THE ALLIED POWERS
Public Health and Welfare Section**

WEEKLY BULLETIN

**For Period
18 January - 24 January
1948
NUMBER 56**

SECTION I - Welfare
SECTION II - Nursing Affairs
SECTION III -Veterinary Affairs
SECTION IV - Supply
SECTION V - Preventive Medicine
SECTION VI - Medical Service
SECTION VII - Social Security
SECTION VIII - Memoranda to Japanese Government

SECTION I WELFARE DIVISION

Social Welfare Education

The January meeting of the Kansai Social Welfare Education Committee was held in Osaka on 14 January. (Reference: Weekly Bulletin #46 for period 9 - 15 November and Bulletin #49 for the period 30 November - 6 December 1947). Representatives of the universities and colleges and welfare agencies in Kyoto, Hyogo, and Osaka Prefectures attended the meeting. Although several universities are planning to expand their curricula to include courses on Social Welfare subjects, it appears that it will be some time before universities are able to provide personnel with adequate training for teaching welfare work.

Consideration was given to the advisability of establishing a separate welfare training program in the Kansai Area. Such a program would provide a six-month to a year course for welfare personnel. The problem of financing such a program presents difficulties but attempt will be made to establish definite plans. Such training programs will be regarded as a temporary expedient. The next meeting of the committee will be held in Kobe on Tuesday, 17 February.

Japan School of Social Work

The building formerly occupied by the Japan School of Social Work has proved to be entirely unsatisfactory. Recently the school moved to the new location which will provide more adequate facilities. The new address of the school is: 226 3 chome, Harajuku, Shibuya-ku, Tokyo. It is planned that the Japan Social Work Association as well as the library which it maintains will move into the same building at a later date.

Child Welfare Activities

Previous Bulletins have set forth the provisions of the Child Welfare Law which became effective 1 January, and suggested plans for reorganizing the prefecture departments of public welfare which improve the administration of child welfare programs. The following actions by the prefecture government have been authorized by the national government:

1. Establishment of separate Child Welfare Section (Jido-ku) within the prefectural department of welfare.
2. Establishment of prefectural Child Welfare Boards and the appointment of the best qualified personnel available as members of the board.
3. Appointment of Child Welfare officials.
4. Establishment of Child Welfare Centers (stations) as authorized by the Child Welfare Law.

Copies of the translation of the Child Welfare Law have been sent to the MG Section, Headquarters Eighth Army for transmittal to Military Government Terms.

Ministerial orders regarding the Child Welfare officials and boards are inclosed with this Bulletin. (These copies are for the use of the welfare officers.) They are not numbered as yet and have not been officially issued by the Japanese Government. Copies of the cabinet orders and ministerial regulations will be sent out when available. All these translations have been provided by the Ministry of Welfare as approved translations.

Tokai-Hokuriku Region Welfare Officers Conference

Representative of PH&W, SCAP and Officers, enlisted men and Japanese social workers of the Region attended this well-planned and conducted conference. Those attending from outside the Region were representatives from Military Government, Welfare Division, Eighth Army; Military Government, I Corps; and Kinki MG Region.

The agenda included: Administrative reviews and Monthly Activities Reports; The Social Insurance program; The place of the Public Health Nurse in the welfare program; Cross index filing system of public assistance cases; The Child Welfare Law and Ministerial Ordinance; Coordination of Welfare programs with other section's programs; Round table discussion of public assistance and other problems.

Licensed Agencies for Relief in Asia (LARA)

The 43rd shipment of LARA relief supplies arrived in Yokohama aboard the S. S. General Gordon on 19 January 1948. This shipment contained 12.5 tons of food.

Community Chest (National Interdependence Campaign)

It is estimated that the final results of the Community Chest Campaign will not be known until on or about 1 February 1948.

A summary of the progress of the campaign, as of 23 January 1948, shows 466,215,772 yen raised towards a national goal of 681,500,000 yen or 68.4% of quota. Forty-one (41) Prefectures are participating in the campaign (Iwate, Gumma, Saitama, Nagano and Ibaraki not participating due to recent flood disaster) with 12 prefectures reaching or exceeding quota, 28 prefectures making partial reports and 1 prefecture (Tokushima) not reporting.

Japanese Red Cross Society

Mr. Paul Hyer, American Red Cross, International Activities, has been attached to the Public Health and Welfare Section, SCAP, as a consultant to assist in the development of Disaster Relief and Fund Raising Activities of the Japanese Red Cross Society.

SECTION II NURSING AFFAIR DIVISION

A National training program for clinical nurse instructors will begin in February 1948 in Tokyo.

The three months course has been approved and will be sponsored by the Ministry of Welfare Medical Bureau. This Course will give the clinical nurse a background for teaching in her own school of nursing. Further details of the course will be furnished as they become available.

SECTION III VETERINARY AFFAIR DIVISION

Weekly Animal Disease Report

The Ministry of Agriculture and Forestry reports no new outbreaks of animal diseases occurred during the period 17 January to 23 January 1948.

SECTION IV SUPPLY DIVISION

Narcotics

A tentative program for the training school for Japanese narcotic agents to be held in Tokyo from 15 to 22 March inclusive, has been completed by the Narcotic Control Officer and Narcotic Section, Ministry of Welfare.

The Ministry of Justice has been allotted 12 hours for lectures and discussions which will be broken down as follows:

- | | |
|--|---------|
| a. Court procedures | 6 hours |
| Arrests, searches, procuring warrants, etc. | |
| b. Preparation of case reports | 3 hours |
| Form and contents of report to be submitted to procurator | |
| c. Criminal Law | 2 hours |
| Relation of narcotic violations to burglary, theft, robbery, forgery and other forms of law violations | |
| d. Economic Law | 1 hour |
| Price control | |

The time allotted to SCAP Narcotic Control Officers will be utilized as follows:

- | | |
|--|---------|
| a. Narcotic Control Officer | |
| (1) Opening address | 1 hour |
| (2) Narcotic enforcement and registrants | 2 hours |

(3) Closing address	1 hour
b. Assistant Narcotic Control Officer	
(1) Questioning of defendants	
Taking statements from witness, etc.	2 hours
(2) Addicts	
Use of informers, surveillance, etc.	2 hours
(3) Axioms for guidance of law enforcement officers	2 hours

The time allotted to the Ministry of Welfare will be divided as follows:

a. Japanese Narcotic Law	3 hours
b. Japanese Marihauna Law	2 hours
c. Narcotic Supply	1 hour
d. Reports from prefectural agents to Ministry of Welfare	1 hour

The time allotted for practical training will be divided as follows:

a. Court procedure	3 hours
Attendance at courts in Tokyo (observation)	
b. Metropolitan Police Board of training	3 hours
Instruction in scientific investigation	
including finger printing (observation)	
c. Practical training in undercover work	3 hours
(Program to be devised by Narcotic Control Officer)	

In addition, one hour has been allotted to a member of the Narcotic Squad of the Metropolitan Police Board who will discuss the effectiveness of coordinating the work of police with that of narcotic enforcement agents. Since the school will be held for a total of either 44 or 48 hours, instructive talks of other individuals will be interspersed in the program. The first school will be attended by the chief narcotic agent in each prefecture and other schools will be held during the first part of 1948 for the remaining agents. Every effort is being made to eliminate unessential discussions and make the school practical. A summary of the topics discussed at the school will be mimeographed and distributed to each agent along with other reference aids in narcotic enforcement.

After a series of conferences with the Narcotic Control Officer, the Narcotic Section, Ministry of Welfare, has prepared a schedule for manufacturing narcotics during the year 1948. The schedule, in addition to showing the amounts to be manufactured, also lists the raw materials necessary for manufacturing and compounding. All of those raw materials are in adequate supply at the present time. The manufacturing schedule is tentative and will be adjusted through authorizations which have to be obtained from the Ministry of Welfare in accordance with the monthly reports of consumption and stock levels which are received.

Narcotic agents in Tokyo have completed an investigation which resulted in the arrest of a director of a pharmaceutical company. This pharmaceutical company was prohibited from dealing in narcotics in 1945, soon after the Occupation began. The Narcotic Agent made arrangements for the purchase of 3,000 ampules of morphine for 66,000 yen and the director of the pharmaceutical company was arrested upon delivery of the morphine ampules. A search of his home resulted in the seizure of an additional quantity of morphine. The investigation of other persons involved in the illegal possession and sale of this morphine is being continued.

In some prefectures law enforcement detachments of Occupation Forces, in investigating information of possible narcotic violations which come to their attention, have been using Japanese prefectural narcotic agents to great advantage. The Occupation detachments as a general rule utilize some Japanese enforcement agency in conducting their investigations involving Japanese or foreign nationals, and utilization of Japanese narcotic agents who are familiar with the narcotic laws had produced good results and at the same time has furnished the Japanese narcotic agents with valuable training in proper investigative procedure. It is believed Occupation Forces detachments in other prefectures will adopt the same procedure by establishing liaison with Japanese narcotic agents through MG Teams.

Distribution

In the period 11 - 17 January, one prefecture was designated by the Ministry of Welfare to receive shipment of 300 sprayers for insect and rodent control as follows:

<u>Prefecture</u>	<u>Knapsack Spryer</u>	<u>Semiautomatic Sprayer</u>
Nagasaki	150	150

No hand sprayers or DDT dusters were distributed in this period.

Santonin distribution for the month of January has been directed by the Ministry of Welfare as listed below. The total of 2,000,000 tablets represents the entire quantity available for distribution.

JANUARY ALLOCATION OF SANTONIN DISTRIBUTION

<u>Prefecture</u>	<u>Quantity Tablets</u>	<u>Prefecture</u>	<u>Quantity Tablets</u>
Hokkaido	90,000	Aomori	30,000
Iwate	30,000	Miyagi	50,000
Akita	30,000	Yamagata	40,000
Fukushima	40,000	Ibaraki	40,000
Tochigi	40,000	Gumma	40,000
Saitama	50,000	Chiba	50,000
Tokyo	100,000	Kanagawa	70,000
Niigata	60,000	Yamanashi	30,000
Nagano	60,000	Shizuoka	60,000
Toyama	30,000	Ishikawa	20,000
Fukui	20,000	Gifu	40,000
Aichi	80,000	Mie	40,000
Shiga	20,000	Kyoto	50,000
Osaka	80,000	Hyogo	80,000
Nara	20,000	Wakayama	30,000
Tottori	20,000	Shimane	30,000
Okayama	40,000	Hiroshima	50,000
Yamaguchi	40,000	Tokushima	30,000
Kagawa	30,000	Ehime	40,000
Kochi	20,000	Fukuoka	80,000
Saga	20,000	Nagasaki	40,000
Kumamoto	40,000	Oita	30,000
Miyazaki	30,000	Kagoshima	40,000
		Total	2,000,000

VD control drugs, sulfa drugs, penicillin and santonin distributed in December 1947 reached totals listed below. The reduced quantities of mapharsen and bismuth subsalicylate injection represent a decided drop in requests for supplies from the prefectures.

DECEMBER DISTRIBUTION MISCELLANEOUS ITEMS

<u>Item</u>	<u>Unit</u>	<u>Quantity</u>
Mapharsen	gram	2,442
Bismuth Subsalylate Injection	cc	43,200
Sulfathiazole	tablet	5,023,560
Sulfadiazine	tablet	2,437,500
Penicillin	Oxford Unit	2,952,180,000
Santonin	tablet	5,506,000

SECTION V PREVENTIVE MEDICINE DIVISION

Tuberculosis Control

The conditions in the local jails, lock-ups and houses of detention create an excellent breeding ground for disease. It is an ideal place for contact with tuberculosis, particularly in the adolescent group in which this disease

plays so prominent a role in increasing the morbidity and mortality rates. No attempt is made to divide these individuals in age groups or to separate the ill from the well in these local institutions.

Young people are constantly and intimately exposed to cases of open tuberculosis. It would pay to investigate the local jails and places of detention in the various prefectures - keeping the problem of control of tuberculosis uppermost in the mind of the investigator. This is certainly a step forward in tuberculosis control.

It would be a definite advantage to invite the Japanese health officer in charge of tuberculosis control to accompany the Military Government Public Health Officer, on these visits and emphasize the problem of control of tuberculosis in this group who, as a rule, return to the poorest living conditions where ignorance prevails and there to spread this and other infections.

Typhus Fever

Reports indicate the incidence of typhus fever is low throughout Japan. The only way to keep it low is to encourage the Japanese doctors to immediately report all suspect cases to the proper public health authorities, so that adequate control measures may be instituted at once. To redefine a suspect case of typhus: any person experiencing an elevated temperature and headache of sudden or gradual onset. If the case is known to be suffering from some other diseases (boils, severe cold, pneumonia, tuberculosis, broken leg or arm, or other definitely recognizable disease) such a case need not be considered a suspect, Confirmed case of typhus - a case in whom the Weil-Felix, complement fixation and rickettsial agglutination tests, or autopsy findings support the clinical diagnosis. Confirmation is done after the patient has been isolated in the hospital - not in the home.

In several instances cases have been reported directly as epidemic typhus. Differentiation between epidemic typhus and murine typhus requires laboratory confirmation. The Weil-Felix reaction, in high or rising titre, is only presumptive evidence of typhus fever but is not sufficient for differentiation between the two types. In order to determine the type present it is necessary to employ the complement fixation test or the rickettsial agglutination test. Serum samples from each and every suspect should be sent to Major T. O. Berge, 406 Medical General Laboratory in Tokyo, Japan, APO 500 (see Weekly Bulletin #50).

In order to save later expensive and hard work in combating typhus, it is suggested that public health officials, conduct periodic louse surveys through the crowded slum areas of cities and if lice are found, to conduct a delousing campaign in those infested areas. It was at approximately this date, (23 January 1946), that the severe typhus outbreak in the City of Osaka began.

Sanitary Engineering

Water Works Records: It is of utmost importance that adequate and accurate records be kept at all water treatment plants. The number and kind of individual recordings will depend in a great measure upon the type of plant, the degree of treatment, and on the capabilities of the plant operator and the city water engineer. In most small Japanese water works the records kept are far from adequate and of questionable accuracy since these records are seldom inspected by the prefectural health department. It would be an excellent policy to develop a standard record form within each prefecture and to stress the importance of systematic record keeping in frequent inspection by prefectural officials.

Records of general application to all types of treatment plants include:

The daily air and raw water temperatures.

The daily rain fall.

The daily, stage (gauge height) of water supply whether stream or reservoir. This does not apply to a well source.

The total amount of water filtered, the number of filter units in operation, and the rate of filtration in meters per day.

The total weight in kilograms of each kind of chemical employed and the dosage rate in parts per million (milligrams per liter)

The daily averages of those chemical and bacteriological tests performed either at the plant or in an affiliated laboratory. Usually these determinations will include the turbidity, chlorine residual at the plant, and certain bacteriological test (see Weekly Bulletin No.53) all of which are direct measurements of the efficiency of the water treatment. Rapid sand filter plants treating a surface water should perform routine tests for alkalinity, pH, and turbidity to determine the proper chemical dosage for prefiltration treatment.

Records kept at rapid sand filter plants, in addition to those listed above, should include:

The length of filter runs between washings, average, maximum and minimum.

The length of time required for washing, the quantity of wash water used, and the rate of application of wash water in meters per day.

The initial head loss when filter was placed in service after washing and the final head loss prior to washing. In most Japanese plants such readings will necessitate the repair of loss of head meters.

Records may be used as an index of good water works operation since variations in plant operation can be detected and corrected and a general improvement in technique achieved.

SECTION VI MEDICAL SERVICE DIVISION

Japanese Civilian Hospital Strength Report for week ending 2 January shows 3,407 hospitals with a capacity of 212,201 beds of which 93,734 were occupied. During this same period 271,041 outpatients were treated.

SECTION VII SOCIAL SECURITY DIVISION

General

Recent prefectural conferences revealed that administrative procedures for reporting on social insurances are being formulated by the Military Government Teams, and translations of the various social insurance laws are being made. As the translating by each Team would be a duplication of efforts, PH&W in the near future is sending each MG Team a compiled chart digest of all existing social insurance laws. In addition, full translations of the laws, with recent changes, will be sent at a later date. Under this arrangement the translations will be uniform and will tend to reduce misinterpretations.

While basis administrative provisions are being set up in the prefectural governments for the newly created appeals and fair hearing requirements, instances have been found where information has not routinely been given directly to the claimant concerning his right to appeal. Cabinet Orders now in effect (described in the Weekly Bulletin #34, 17-23 August 1947) prescribe that a notice of right of appeal will be given with each determination of benefits.

A need exists for greater activity on the part of prefectural insurance offices in putting into operation the recently enacted unemployment insurance provisions for seamen. This entails, among other things, establishing a close working relationship between maritime employment exchanges and the Employment Security Officers.

Technical Bulletins

The following Public Health and Welfare Technical Bulletins are enclosed with this Weekly Bulletin:

Title: Foreign Nationals Ration	Short Title: TB - PH - WEL 9
Title: National Disaster Law No.118	Short Title: TB - PH - WEL 10

SECTION II
WELFARE DIVISION

Area Increases in Public Assistance Rates

Article 10 of Imperial Ordinance No.438, subject: "Ordinance for the Enforcement of the Daily Life Security Law" states that "the standard of expenses to be disbursed for protection --- shall be determined by the local governor with the approval of the Minister of Welfare".

In practice, the governor, when requested by a city other than the largest class or a town or village, will submit to the Ministry supporting evidence to show that living costs in such areas are comparable to those in the next higher bracket of assistance. The Ministry weighs such evidence and may approve a city, town or village being scheduled in higher bracket.

As of 1 January 1948, 11 Intermediate cities and 9 towns and villages have been reclassified by the Ministry. The cities which have been recognized after consultation with the Ministry of Welfare, as meriting a similar rating as Tokyo Metropolis and five largest cities are as follows: Kawasaki City and Yokosuka City in Kanagawa Prefecture; Sakai City, Fuse City, Suita City and Mariguchi City in Osaka Prefecture; Moji City, Kokura City, Yawata City, Tobata City and Wakamatsu City in Fukuoka Prefecture. The towns and villages which have been recognized as under similar circumstances as cities (other than five largest cities) are as follows: Kanuma-machi, Koyama-machi and Nikko-machi in Tochigi Prefecture; Yashiro-mura, Higashi-Fujishima-mura, Nishi-Fujishima-mura, Naka-Fujishima-mura, togo-mura and Awano-mura in Fukui Prefecture.

Minsei-iin

A conference of representatives of prefectural Minsei-iin organizations was held in Tokyo on 27 and 28 January. The conference was held under the sponsorship of the all-Japan Minsei-iin Federation. At this conference resolutions were adopted concerning the future of the Minsei-iin. The Prefecture representatives were of the opinion that the present Minsei-iin Nomination Committees (Minsei-iin Suisen-iin Kai) should be appointed and organized on a different basis, also that the national government should bear a larger percentage of the cost of Minsei-iin work (at the present time national government pay 50% of the cost and prefectures pay 50%). They recommended the term of office be extended from two years to four years with one-half of the Minsei-iin being appointed every two years.

Those resolutions were presented to the Ministry of Welfare and will be considered in the formulation of a revised plan for the appointment and activities of the Minsei-iin. Release of any plan by the Ministry is being delayed until it is definitely determined whether the Diet will adopt further legislation concerning Minsei-iin. Present plans which are not finally approved call for a decrease in the number of Minsei-iin; and an increase in the number of full-time paid employees.

Community Chest (National Interdependence Campaign)

A summary of the Community Chest returns, resulting from the recent campaign for funds, as of 30 January, shows 502,524,900 yen raised towards a national goal of 681,500,000 yen, or 73.7% of quota. It is estimated that the final results of the Community Chest Campaign will be available on or about 15 February.

The Central Committee of the Community Chest held a conference in Tokyo on 29 January to review their recent fund campaign experiences and to formulate preliminary plans for the next Community Chest Campaign which will be held in the winter 1948 or Spring 1949.

Forty-two prefectures were represented at the conference with no representation from Nagasaki, Ibaraki, Ishikawa and Aomori Prefectures. It was of interest to note that five prefectures that did not participate in the recent Community Chest Campaign (Iwate, Gunma, Saitama, Nagano and Ibaraki Prefecture) only one prefecture (Ibaraki) did not have representation at this conference. The main topics discussed at the conference were: Purpose of the Community Chest, Responsibilities of the Community Chest, Budget Determination, Government Cooperation and Community Chest Conferences.

Licensed Agencies for Relief in Asia (LARA)

The 44th, 45th, 46th, 47th and 48th shipments of LARA relief supplies have arrived in Yokohama. These shipments were as follows:

- a. 44th Shipment: Arrived aboard the S. S. Washington Mail on 17 January and contained 36.05 tons (clothing, including shoes, 26.81 tons - food, 9.24 tons)
- b. 45th Shipment: Arrived aboard the S. S. President Polk on 19 January and contained 62.55 tons (clothing, including shoes, 12.31 tons - food, 50.24 tons)
- c. 46th Shipment: Arrived aboard the S. S. China Transport on 28 January and contained 14 tons (clothing, including shoes, 13 tons - food, 62 tons - medical supplies, 0.38 tons)
- d. 47th Shipment: Arrived aboard the S. S. Mount Davis on 29 January and contained 37.5 tons (clothing, including shoes, 20.73 tons - food, 2.27 tons - medical supplies, 14.5 tons)
- e. 48th Shipment: Arrived aboard the S. S. Philippines Bear on 30 January and contained 12.54 tons (clothing, including shoes)

Japanese Red Cross Society

The National Headquarters of the Japanese Red Cross Society has established a Volunteer Service Section and before making plans for specific Volunteer Services to be carried on throughout every Chapter (Prefecture), has prepared a questionnaire, as a guide, for all chapters to follow in surveying community needs for a Red Cross Volunteer Service Program (English translation - Sec Inclosure #1).

The chapters have been requested to complete the survey and return it to the National Headquarters not later than 20 February. When all the chapter surveys are received they are to be carefully reviewed by the National Volunteer Service Section and a National Volunteer Service Group Advisory Committee as a basis upon which to formulate Volunteer Service projects.

The responsibility for the survey on Volunteer Services rests with the Japanese Red Cross Chapters. However, Military Government Welfare Officers may be contacted for advised and every assistance possible is encouraged.

SECTION III
VETERINARY AFFAIRS DIVISION

Weekly Animal Disease Report

The Ministry of Agriculture and Forestry reports the following outbreak of disease for the period 24 -30 January:

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Fukushima	Swine Plague	14

SECTION IV
SUPPLY DIVISION

Narcotics

The strict enforcement of the Narcotic Law in Japan, which has made illicit narcotics very hard to obtain, has resulted in narcotic traffickers resorting to methods which are found in all countries in which there is strict narcotic enforcement. As an example, a report has been received that two persons with physician's license certificates registered with Tokyo-To narcotic officials 1 December 1947. On 5 December 1947 these two persons purchased a comparatively large quantity of narcotics from local wholesalers in Tokyo-To. Investigation by narcotic officials disclosed that the two persons had given a fictitious business address and are probably in

possession of forged medical certificates. The persons who are Koreans by the name of Ko So Kei and Kin So Shuku are planning on returning to Korea according to the Tokyo Branch of the Korean Association of Japan. Through close liaison with the Tokyo Metropolitan Police Board these men are now being sought throughout Japan and their apprehension is expected momentarily.

Reports received from local prefectures indicate the strict instructions issued by the Ministry of Justice regarding penalties to be demanded for narcotic violators are being heeded by local procurators, but that in some instances even the most willful violators of the narcotic law against whom there is conclusive and substantial evidence are being acquitted in the Appeal Courts. This matter has been taken up with the Ministry of Justice in order to determine the corrective action that must be taken.

Distribution

Sprayers and Dusters for use in insect and rodent control were shipped under Ministry of Welfare direction to seven prefectures during the period 18 - 24 January. A total of 1,626 pieces were shipped as follows:

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsack Sprayer</u>	<u>Semiautomatic Sprayer</u>	<u>Hand Sprayer</u>
Akita	0	12	0	12
Aichi	0	0	0	50
Hyogo	0	180	0	0
Shimane	1,008	102	0	0
Ehime	0	0	0	60
Kochi	72	0	0	0
Miyazaki	0	50	80	0
Total	1,080	344	80	122

Mapharsen is a trade name for 3-Amino-4-hydroxyphenylarsinexide Hydrochloride. This drug is listed in the new Joint Army-Navy Catalog of Medical Material as Oxophenarsine Hydrochloride. Since mapharsen is a trade name, it is not possible for manufactures in Japan to label their product as mapharsen. The Japan Pharmacopoeia uses the term Mapharsol to designate this drug. Chemically, mapharsen and mapharsol are identical.

A distribution plan for U. S. Army surplus Sulfadiazine turned over to the Japanese Government for civilian use was approved. This distribution was planned on a population basis. The item is listed in ASF Catalog MED 3, 1 March 1944, as stock number 9120400 Sulfadiazine, 8 tablets. Distribution was made as listed below:

<u>Prefecture</u>	<u>No. Pkgs.</u>	<u>No. Tab.</u>	<u>Prefecture</u>	<u>No. Pkgs.</u>	<u>No. Tab.</u>
Hokkaido	4,510	36,080	Aomori	1,340	10,720
Iwate	390	3,120	Miyagi	1,630	13,040

			Total	96,000	768,000

Air shipment of 30 liters of Antivenom Serum (Habu) is scheduled to leave Tokyo for Okinawa 3 February. This is a portion of the serum which is being produced in Japan from Habu snake venom shipped several months ago from Okinawa. Future shipments will be made as the antivenom serum is produced.

Production

Production of biologicals during December 1947 continued to be satisfactory, with an increase in equivalent total yen value of 5,586,767 yen over November production, reported as 12,854,905 yen. December production totaled 18,441,672 yen. A substantial increase during December of finished diphtheria toxoid was accomplished. Sufficient typhus vaccine will be on hand to meet needs for 1948. Concerted efforts are being made at the present time to accomplish, according to schedules, sufficient triple typhoid vaccine production to meet all requirements for the entire 1948 season.

	<u>Production (December)</u>		<u>Stock on Hand</u>	
	<u>Crude Vaccine</u>	<u>Finished Vaccine</u>	<u>Crude Vaccine</u>	<u>Finished Vaccine</u>
Cholera	9,000 cc	9,000 cc	914,300 cc	4,428,270 cc
Typhus		670,740 cc		1,177,107 cc
Triplo Typhoid	120,000 cc	2,203,900 cc	2,161,500 cc	6,878,500 cc
Diphtheria Toxoid	5,347,700 cc	2,623,700 cc	5,957,600 cc	1,580,380 cc
Smallpox	2,574,525 doses	655,925 dos.	16,830,095 dos.	1,096,070 dos.
Diphtheria Antitoxin		30,000 cc		220,007 cc

Production of x-ray film during December 1947 totaled 34,507 square meters, as compared to the November production of 25,040 square meters. This represents an increase of 9,467 square meters. Substantial increases in monthly production of x-ray film since the initiation of the program have been accomplished, as evidenced by the following interesting statistics:

- a) X-ray film production monthly average in 1947 - 24,760 square meters.
- b) Monthly 1947 quarterly averages - 1st quarter - 10,144 square meters.

2nd quarter, 25,990 sq. meters, 3rd quarter 32,073 sq. meters, 4th quarter, 30,832 sq. meters. Further reliable comparison of x-ray film production during 1947 is the increased monthly production average accomplished during the second half of the year, 31,453 sq. meters, compared to the first half, namely 18,067 sq. meters.

<u>Size</u>	<u>Production December</u>
4-3/4" x 6 1/2"	418 dozens
5" x 7"	1,674 "
6" x 6"	1,821 rolls
6 1/2" x 8 1/2"	1,630 dozens
8" x 10"	5,690 "
10" x 12"	17,223 "
11" x 14"	2,038 "
14" x 17"	4,966 "
Dental	602 "

Production - Insect & Rodent Control Supplies & Equipment - December 1947

Antu (rat poison)	2,822 kgs.
Nekoirazu (rat poison)	2,452 kgs.
DDT concentrate	16,862 kgs.
5% DDT Residual Effect Spray (utilizing American furnished DDT concentrate)	155,378 gallons
10% DDT Dust (utilizing American furnished DDT concentrate)	368,000 lbs.
10% DDT Dust (utilizing Japanese DDT concentrate)	116,820 lbs.
10% DDT Dust distributed 1 Jan - 31 Dec 1947	4,047,315 lbs.
5% DDT Spray distributed 1 Jan - 31 Dec 1947	919,754 gallons

SECTION V PREVENTIVE MEDICINE DIVISION

Sanitary Engineering

Coordination of Insect and Rodent Control Campaigns: In order for insect and rodent control campaigns to be fully effective in all areas of a municipality, it is necessary that local commanders coordinate their programs with those of the Japanese Health Departments and that this coordination be accomplished through the Military Government Public Health Officer. It should be remembered, however, that such programs, instituted at the suggestion of the Public Health Officers, and executed by the local Japanese Health Department, are designed primarily to serve the Japanese population of the community. It is suggested that Public Health Officers discuss with local commanders the nature of the Japanese sanitary program and inform them of the dates that the various phases of program are to begin. This is particularly important in the case of rodent control. It is recognized that in most areas the degree of control established by the Japanese Sanitary organization will not meet U. S. Army standards for sanitation but the coordination of these efforts will facilitate the execution of such programs by tactical commanders who are faced with a difficult control problem.

Tuberculosis Control

It is necessary to constantly emphasize the necessities of early discovery and diagnosis of tuberculosis and early hospitalization. It would be of much help if every national sanatorium would establish one wing into which only early cases were admitted. This program should be supervised and followed closely, both in the institution and by those in the Health Centers upon their discharge, and the result be made a local subject of comment in the public press and through the various medical and nursing associations. Particular effort should be made to bring these points to the attention of every student in the various colleges and medical schools so this educated group could be of assistance in disseminating this information as widely as possible.

SECTION VI MEDICAL SERVICE DIVISION

Nutrition

August and November nutrition survey result on the degrees of activity for Tokyo, Eight Cities, Twenty-seven prefectures, Four Coal Mines, Akita Copper Mine and Tokyo Railway Workers are submitted in the attached table (Incl #2).

A talk, followed by an open discussion on "Nutrition and Food Problems in the Field" was given on 26 January to the Japanese Health Officers attending the refresher course, at the National Institute of Health, Tokyo.

Japanese Civilian Hospital Strength Report for week ending 9 January, shows 3,410 hospitals with a capacity of 212,295 beds of which 90,203 were occupied. During this same period 250,037 out-patients were treated.

Japan Medical Association

At a recent talk to the regional Public Health Officers, the following information regarding the election of officials of the newly organized country, prefectural and national medical associations was given:

"Those officials of the new Japan Medical Association, who are, or may be, elected prior to the official election date in March 1948, will continue in office, until their term expires, as though they were all elected in March 1948, regardless of the length of the term of office as set forth in the new constitution"

Subsequent conferences relative to these elections revealed there has been a misunderstanding by the Japanese of this convention and over 90% of the country and prefectural societies have already elected officials with the understanding that regardless of the term of office called for in the constitution, the tenure of office would terminate in March, 1949 when elections of all now officials will be held.

In view of this misunderstanding and the confusion which will ensue were the plan to be changed, it is deemed advisable to permit the interpretation as understood among the Japanese and as stated above.

Therefore, there is no objection to the holding of complete new elections in March, 1949 in the country, prefectural and national medical associations.

SECTION VII SOCIAL SECURITY DIVISION

No objection was made to the proposal of the Medical Fee Calculation Council of the Ministry of Welfare to raise the fee-for-service charge per point 1.50 yen for medical care for all social insurance programs in the middle-sized and large cities, effective 1 February, with the charges in the rural areas remaining the same. This will make the range of charges vary between 3.50 yen and 6 yen per point of medical service. The National Health Insurance, which is applicable to the rural areas, will retain the present scale pending another conference by the Council in the latter part of March. The reason for the decision regarding National Health Insurance was that many associations would be adversely affected by an increase before the end of the fiscal year, which will be 31 March, and that it would be better to have a change in rate become effective on and after 1 April when the now premium scale and budget are announced. The Council meeting scheduled for March will consider increasing the rate.

Particular emphasis is being given by the Insurance Bureau of the Ministry of Welfare in its budget proposal for the ensuing year to an increase in personnel for administration and supervision of National Health Insurance on the prefectural level, also a larger program for establishing medical care clinics in the rural areas. More inspection and supervision of local associations have been found to be necessary.

SECTION VIII MEMORANDA TO JAPANESE GOVERNMENT

1. Survey of Communities to determine need for Japanese Red Cross Volunteer Projects.
2. Nutrition Survey - August and November 1947.
3. Weekly Summary Report of Cases and Deaths from Communicable Diseases in Japan, week ending 17 January 1948.

4. Weekly Summary Report of Cases and Deaths from Communicable Diseases in Japan week ending 24 January 1948.

January 23, 1948

To: All Chapters
From: Mr. Tadatsugu Shimazu, President, Japanese Red Cross.
Subject: Survey of Communities to determine need for Japanese Red Cross Volunteer Projects.

Your National Headquarters, in its reorganization, has established a Volunteer Service Section. The purpose of this section is that of maintaining in every chapter, its branches and sub-branches, volunteers who are trained for prompt and efficient service and are prepared to give their services to promote the health and welfare of the Japanese people. The Volunteer Service Section will be responsible for a program survey, recruitment, training, referral and supervision of the volunteers.

We are all aware that the needs of our nation and our people are great at this time, therefore the Japanese Red Cross has a great responsibility to plan, organize, and operate programs which will alleviate hardships and contribute towards building a healthier and happier nation of people.

We at Headquarters, before making plans for specific Volunteer projects to be carried on throughout Japan, must have information about conditions in every prefecture and only the chapters can supply this material for us. In order to have the information gathered and compiled in a similar manner, we have prepared a questionnaire as a guide for all chapters in making the community survey. The questionnaire is attached, accompanied by instructions.

You are requested to have this survey completed and mailed in time to reach this Headquarters Office not later than February 20, 1948. When all chapter surveys are received they will be carefully reviewed by the Headquarters Volunteer Section Staff and a National Volunteer Service Group Advisory Committee.

On the basis of this information it is hoped that we will have valid and reliable information with which to plan volunteer projects.

Before final plans are made for specific projects, a Leadership Training Conference for Chapter Volunteer Service personnel will be conducted at National Headquarters, at which time the organization of Volunteer Service Groups will be fully presented and discussed in detail. The material obtained through the survey will also be used at the conference. You will be notified later regarding the date of the conference and the persons who will be asked to attend.

Please give your immediate attention to the attached instructions and surveys so that the Headquarters staff will have the material by February 20th.

If you have any questions about the attached materials, please let us know immediately.

Instructions for making survey of community needs in relation to possible services to be provided by the Japanese Red Cross Volunteer Service Groups.

The attached questionnaire has been made up as a guide to help in securing certain information about your community, both in the immediate vicinity of the prefectural chapter and also the outlying territory covered by your branches and sub-branches.

After you and your staff have studied this letter and attachments carefully, you should call a meeting of your Prefectural Governor, the Military Government Welfare Officer and the heads of the Welfare, Education and Health Ministries in the prefectures and, in addition, representative citizens who are key people in your community. You should present to this group the purpose of the survey and request their cooperation in initiating your contacts. This group should be able to assist you by supplying immediately some of the information which you will need and if they can be sufficiently interested, they can continue to help until the survey is completed.

We of course know that it will be impossible for you to contact all schools, hospitals and institutions in your prefecture and therefore realize that your answers to many of the questions will be based on information from limited contacts. However, it will be helpful to you later and to us, at National Headquarters, if you will list names of persons and institutions whom you contact personally. We know that this survey will require a great deal of

effort on your part and since we are requesting that you have it completed and in the mail in time to reach the headquarters office by February 20, we urge you to give this survey your immediate attention.

We are certain that you will receive cooperation from the prefectural Military Government Welfare Officers, as they have been notified about the survey and have English translations of the materials which we are sending to you. The welfare officers understand that it is the responsibility of the Japanese Red Cross chapters to complete the survey but at the same time, you may feel free to contact them for advice and consultant service.

After you have completed the survey we want you to evaluate your findings and give us your recommendations in a narrative report as to the projects most needed and the ones which you feel that your chapter is best suited to sponsor. We would like to have you list the projects in priority order. This will be very helpful to us in planning at Headquarters.

We also urge you to bring to our attention any special projects (not covered in the survey) that are peculiar to your community and which you feel might well be sponsored by volunteers.

You should complete the survey forms in triplicate. Two copies, together with your narrative report, should be sent to Headquarters and one complete copy should be kept in your chapter files.

SURVEY OF COMMUNITY NEEDS

I. Chapter Survey

1. Name of chapter.
2. Address of chapter.
3. Branches: (Names).
4. Do you have paid chapter workers assigned to the Volunteer Service section? Yes. (How many) No.
Do these workers have additional duties? Yes. No.
(Give any additional comments about coverage of service in branches and sub-branches.)
5. Has your chapter attempted to organize Volunteer Service Groups?
If so, have you used any volunteer leadership on chapter level; on branch and sub-branch levels?
(Discuss separately).
Discuss when and what type of project has been set up.
6. What was accomplished and is there a current volunteer program?
If so, describe briefly.
7. Have the citizens of your community manifested any interest in working in Red Cross Volunteer Service Groups?
Approximately how many have made inquiries at your chapter headquarters?
8. Will space be available for Volunteer Service projects which might be set into operation at the chapter office?
(Describe size).
9. Can you use trained Volunteers in your headquarters office to assist at information desk, to do clerical work and to assist with general duties? If so, how many?
10. What is the housing condition of your Chapter Headquarters, its branches and sub-branches. If repair work or redecorating or beautifying of grounds is needed, could this be done by Volunteer units, both men and women?
(Discuss)

II. Survey On Medical Institutions

1. How many hospitals are located in your prefecture?
How many dispensaries?
How many of these are operated by the Japanese Red Cross?
2. Do these hospitals and dispensaries have gauze and sheeting supplies which need to be prepared, folded or sewn, and would hospital authorities desire to have Red Cross Volunteers perform a production service?
(Designate what is available).
3. If such supplies are not on hand at the hospitals or dispensaries, are hospital funds available to purchase gauze and sheeting when materials become available through prefectural allocation?
4. If such a service is needed, could the hospitals provide adequate space for a production project?
If not, can your chapter secure space?
5. How many hospitals would be interested in other types of volunteer service such as clerical workers, etc?
Do the hospitals and dispensaries have waiting rooms for patients?
If not, is space available and would the staffing and supervision of waiting rooms by Red Cross Volunteers be desirable? (comment).
Do the hospitals and dispensaries have nurseries which take care of children whom the visitors and patients bring?
Do the hospitals need this service to be given by Red Cross Volunteers?
6. Do any of the hospitals have central kitchens or are they interested in experimenting with such a plan?

If so, would they be interested in using a Red Cross Volunteer Canteen Group to supplement regular kitchen staff?

7. Is there need for Red Cross Volunteers to plan entertainment for convalescent patients, both on an individual and group plan, such as quiet games arts, crafts and musical and theatrical programs?

8. Are there any special hospitals such as leprosariums or feeble minded homes in your prefecture? If so, how many, and are they in need of any type of Red Cross Volunteer Service, such as program entertainments, recreational materials, etc? (list names and addresses and types of such institutions.)

List of Contacts

<u>Name of Hospital</u> (public) (private)	<u>Address</u>	<u>Name of Person Contacted</u>
--	----------------	---------------------------------

III. Survey on Children's Institutions

1. How many children's institutions are there in your community?

(Give number of public and private institutions separately.)

Public	Private
--------	---------

2. What types of institutions are there?

Designate type and number, such as orphanages, reformatories, institutions for the blind, deaf and dumb.

(Designate also whether public or private).

3. Is there a need for supplementary service in these institutions which could be rendered by Red Cross Volunteers?

(Such as supervision or recreation, supplying materials: games, toys, books, etc., organizing and directing educational trips, etc.)

List of Contacts

<u>Name of Institutions</u> (public) (private)	<u>Address</u>	<u>Name of Person Contacted</u>
--	----------------	---------------------------------

IV. Survey of Needs in Educational Institutions

1. How many universities are located in your prefecture?

2. What are the housing and feeding facilities for university students who do not live at home?

3. Do any of the universities have a central kitchen or dining room?

If so, could a Canteen Unit of Red Cross Volunteer Service Group be of assistance in this program by helping to improve the kitchen facilities and the preparation of food?

If no central kitchens or dining rooms are operating, are the universities interested in such a project being sponsored by a Red Cross Volunteer Service Group?

4. Are any classes in social education (Shakai Kyoiku) being given in your prefecture?

5. If so, what groups are the lectures given for?

What subjects are covered and by what organization or group are the courses sponsored, and is any charge made for the courses?

6. What is your opinion concerning the need of nutrition classes, with particular emphasis on the use of rationed foods? (State your reasons, and name persons interviewed regarding this question.)

7. Can you locate persons in your community who have had special training in foods and nutrition who would be willing to give, on a volunteer basis, training classes in nutrition and food preparation? (List names and address)

8. Do you feel that nutrition classes, including demonstrations and covering discussions of preparation of food in the home, preparation of school lunches and mass feeding for disaster purposes, would be well received in your community if sponsored by the Japanese Red Cross Volunteer Service Groups?

List of Contents

V. Survey on General Needs

1. Do the railroad stations in your prefecture provide waiting rooms? Yes. No.
2. Approximately how many stations have adequate space for waiting rooms?
3. Is there a need for waiting rooms to be sponsored at the stations by Red Cross Volunteer Groups who provide trained volunteer personal on duty at all times?
4. Are there play grounds (other than those located at schools) for the children in your community and do they need better care and supervision?
Is there a need for play grounds to be sponsored by Red Cross Volunteer Groups?
5. Are there factories and industries in your community where large numbers of women are employed and are there apartment houses for these workers?
If so, are there day nurseries for pre-school age children in the vicinity of the factories and housing areas?
6. If not, is there need for such a nursery and is it a project which might be sponsored by the Red Cross Volunteer Groups?
If there are nurseries, are Red Cross Volunteers needed to assist in their operation?
7. Are public libraries available? If so, for what age groups?
Is there a need for additional libraries and could such be sponsored by Japanese Red Cross Volunteers?
8. Are there blind schools in your community? If so, how many?
Are Braille books available in an adequate number?
Do you think that it is advisable to have Red Cross Volunteers trained to print in Braille?

Additional comments about the needs peculiar to your community with your recommendations for meeting these needs, if practicable, through Red Cross Volunteer Groups. (Example: farming communities may need day nurseries and community kitchens during the planting and harvesting seasons. These might be sponsored by Red Cross volunteers).

SECTION I GENERAL

Technical Bulletin

The following Public Health and Welfare Technical Bulletin is enclosed with this weekly Bulletin.

Title: The Child Welfare Law
Short Title: TB PH WEL 11

SECTION II WELFARE

Japan School of Social Work

Informal reports submitted by the Japan School of Social Work indicate they have received a total of 256 inquiries concerning the School during the past few months. A total of 43 inquiries were received from women. (Note: these are inquiries and not applications for admission to the school). The largest number of inquiries, 45, were received from Tokyo Prefecture. Other prefectures from which a rather large number of inquiries have been received are Shizuoka, 36; Saitama, 16; Hokkaido, 14; Nagano, 13. Very few inquiries were received from Kyushu, Shikoku and Chugoku areas which are some distance from Tokyo. The School is anxious to receive applications from qualified personnel.

Some confusion has arisen concerning the requirements to enter the one-year graduate course. In order to be eligible for this course, the applicant must have completed university or college or have had at least three years' experience in welfare work. Since it is hoped that a high level of work can be maintained for this one-year course, it is desired that students be secured who have sufficient academic background or work experience.

Reappointment of Minsei-iin

In accordance with the provision of Article 67, Child Welfare Law, all Minsei-iin must be reappointed prior to 31 March. Instructions have been issued by the Ministry of Welfare to the prefectural governors setting forth the policy and procedure to be followed in this reappointment. (Hatshu-sha, No.17 dated 6 February 1948). A translation of these instructions is being sent out as an inclosure #1 to this Weekly Bulletin.

The plan for reappointment of Minsei-iin is basically the same as the existing plan; that is, the machinery for appointment remains the same. It is desired however, that the reappointment of Minsei-iin will secure a group of persons who are better qualified to do this work than is evidenced in current appointments. Various studies of the work of Minsei-iin have been made by Military Government Teams and submitted to PH&W Section, SCAP either as a special report or as a part of the regular Monthly Activity Report. These special studies have been used in connection with conferences, studies and analysis by and with the Ministry of Welfare in an attempt to work out a more effective basis of operation. Additional plans have been developed under which the Minsei-iin will be provided more adequate supervision. Because of financial limitations and lack of properly trained personnel it is obvious, however, that the Minsei-iin will continue to be responsible for many important phases of welfare administration. The total number of Minsei-iin in any one prefecture is decided by the prefectural authorities and not by the Ministry of Welfare. It is expected, however, that in the reappointment of Minsei-iin, the total current number will not be increased, with the plan that in the future, greater reliance can be placed upon full-time employees.

Attention is called to TB - PH - WEL 7, subject: "Minsei-iin", issued in November 1947, which sets forth information concerning the history and operations of Minsei-iin. Translations of the Minsei-iin Ordinance and related ministerial directives are included as inclosures to this Technical Bulletin. It is suggested that this Bulletin be used to secure additional information concerning Minsei-iin.

The problem of reappointment of Minsei-iin has been discussed with representatives of Military Government Section, Eighth Army, and it has been agreed that during the period 16 February - 1 April 1947, Welfare Officers of Military Government Teams should give particular consideration to this matter. Since the appointment of qualified Minsei-iin is important in the administration of the Daily Life Security Act, Child Welfare Law and other welfare programs, it is suggested that consideration be given to the following matters: (1) Organization and membership of the prefectural Minsei-iin selection committee; (2) Organization and membership

of the Minsei-iin nomination committees, particularly in the cities: (3) The total number of Minsei-iin needed in the prefecture and in each of the governmental subdivisions of the prefecture; (4) The basis of calculating the number of Minsei-iin needed in any particular prefecture.

Attention is called to the statement in the Japanese instructions (Inclosure #1) that the nomination committee should understand that when suitable candidates are not found they should leave the quota partially filled until they are able to find suitable persons to nominate.

Salary of Child Welfare Officials

Inquiry has been made concerning the amount of salary to be paid Child Welfare officials. The following explanation has been provided by the Children's Bureau, Ministry of Welfare.

Child welfare officials receive the salaries of second class public officials as prescribed in the Cabinet Order, Article 9 of Child Welfare Law. The salary for the second class officials is, according to Public Officials Compensation Ordinance, 1,150 yen per month (base regulated by the Government) to which is added 790 yen (temporary additional pay); 474 yen (addition to the temporary additional pay); temporary family allowance (150 yen per person) and additional pay for "work location" (30% of the total base pay, temporary additional pay and its addition and temporary family allowance). All additional pay, other than the base, are paid by the prefecture out of money contributed by Local Apportionment Tax Law.

For example, the pay of a child welfare official in Tokyo Metropolis is computed as follows;

Base	Yen	1,150
Temporary addition		790
Addition of the above (60% of 790 yen)		474
Temporary family allowance (for 2 persons)		300
Addition for work location (30% - 1,150 - 790 - 474 - 300)		<u>814</u>
Total (sum to be paid worker)	Yen	3,528

The example is in accordance with the condition of December 1947 and changes may be expected.

Remarks: (1) The temporary additional pay is determined according to the base pay, and for 1,150 yen base it is 790 yen. (2) The percentages for the addition for work location varies according to: (a) Location of public office is in the special area - 30%; (b) Wards of Tokyo Metropolis, Kyoto, Osaka, Yokohama, Kobe, Nagoya and others similar to them - 20%; (c) Areas other than the above (a) and (b) are set by the Finance Minister.

Monthly Public Assistance Report - December

The Ministry of Welfare has submitted the following public assistance totals for the month of December. Other figures are shown for purposes of comparison.

		Dec. 1947	Nov. 1947	Dec. 1946
No. of Persons in Institutions		138,623	138,596	
No. of Persons Non-Institutional		<u>2,702,650</u>	<u>2,582,720</u>	
Total		2,841,273	2,721,316	2,837,207
Assistance in Cash*	Yen	399,638,024	366,094,622	
Assistance in Kind		<u>39,704,857</u>	<u>50,782,811</u>	
Total	Yen	439,342,881	416,877,433	206,121,565

*Total reflects totals previous to deduction for assistance repayments.

Total	138,623	2,702,650	39,704,857	399,471,191

*Total assistance in cash reflects deductions for repayments to the government for assistance granted.

Supplementary Food Ration for Purchased by Foreign Nationals

The Japanese Government (General Affairs Section, Ministry of Agriculture and Forestry) has issued instructions to all Prefectural Governors dated 22 January 1948 to make available to all Foreign Nationals either the "A" or "B" ration and to eliminate the "C" ration, effective 1 February.

These instructions are the plan for implementation of SCAPIN-1841 AG 430 (9 Jan 48) PH subject: "Ration for United Nations' Nationals, Neutral and Enemy Nationals and Stateless Persons".

Nothing in the directive mentioned above will be construed:

(a) To change the food ration for Korean Nationals who have elected to remain in Japan and receive the same ration as Japanese Nationals.

(b) To affect instructions issued to Occupation Force personnel prohibiting or restricting purchase of foodstuffs indigenous to Japan.

Persons of Japanese descent who claim nationality of an allied or neutral country and who have not received their Certificate of Registry from their respective diplomatic or consular representative will receive the same ration as Japanese Nationals.

Only those persons who are certified by Missions or Diplomatic Representatives are entitled to the ration. Those countries that have no mission or diplomatic representatives are certified by the Diplomatic Section, SCAP.

Community Chest (National Interdependence Campaign)

As of 6 February all 42 prefectures participating in the Community Chest fund drive have made complete or partial reports. These reports reflect that 526,792,000 yen has been raised towards the National goal of 681,500,000 yen or 77.3% of quota.

The following sixteen prefectures have reached or exceeded their quotas:

Hokkaido	Aomori	Nara	Wakayama	Akita	Okayama
Niigata	Hiroshima	Toyama	Kagawa	Gifu	Saga
Kyoto	Miyazaki	Osaka	Kagoshima		

SECTION III NURSING AFFAIRS DIVISION

Refresher course that is being sponsored by the Ministry of Welfare and the National Nurses Association will be held from 1 March - 24 April instead of three months as had been planned. The course will be held in the Red Cross Hospital, Tokyo and will be supervised by Nursing Education staff of Demonstration School Notice have been sent to the Prefectures giving details regarding expense, travel and qualifications of the nurses to be sent. Only 50 nurses can be accommodated in this course; therefore the schools that will become Class A this year will have first choice of sending nursing instructors.

The required number of nurses for the U.S. Army hospital program have been obtained and the cooperation of the Military Government Teams is much appreciated.

Conferences have been held regarding the school of nursing that is to open in Okayama. This school will be a three year clinical nurse program. The refresher course to be given in the same school will be to assist the graduate nurses in raising standards and prepare them for teaching. Details of the plans for these two programs will follow later.

The recruiting program that was held in Tokyo-To High Schools has been completed and had a very good response. Twenty-four high schools were visited and the picture "Lady of Science" was shown.

SECTION IV VETERINARY AFFAIRS DIVISION

Weekly Animal Disease Report

The Ministry of Agriculture and Forestry reports the following outbreak of diseases for the period 31 January to 6 February.

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Kumamoto	Blackleg	1
Chiba	Swine plague	3
Kumamoto	Anthrax	2

SECTION V SUPPLY DIVISION

Narcotics

Japanese narcotic agents, after one week's search, arrested one of the two Korean physicians who purchased large quantities of narcotics under fraudulent circumstances.

The Ministry of Welfare is advising prefectural narcotic agents to require complete identification of registrants or their representatives before delivering official order forms for the purchase of narcotics. Recent investigations have revealed several instances in which addicts, principally nurses, have obtained official order forms, forged the signature of a registrant, and purchased narcotics.

Distribution

Sprayers for use in insect and rodent control were shipped to six prefectures during the period 25 - 31 January. A total of 1,890 sprayers were distributed, as listed below. No DDT dusters were shipped in this period.

<u>Prefecture</u>	<u>Knapsack Sprayer</u>	<u>Semiautomatic Sprayer</u>	<u>Hand Sprayer</u>
Hokkaido	504	0	1,008
Aomori	60	0	0
Miyagi	180	0	0
Akita	0	18	36
Hiroshima	12	0	12
Ehime	60	0	0
Total	816	18	1,056

Production

Concerted efforts of the Drug Manufacturing Section, Ministry of Welfare, Japanese Government, toward the production of high quality essential medicines of improved standards have resulted in the establishment of the following standards for the production of sulfa drugs.

Nomenclature of Essential Drugs

Sulfamine	Sulfaguanidine	Acetosulfamine	Sulfadiazine	Sulfathiazole
Sulfamethyldiazine	Sulfamethylthiazole	Homosulfamine	Sulfapyridine	

Unit Standards

A. Tablet		0.5 gms.
B. Injection	Acetosulfamine	10% 5cc
		30% 5cc
		30% 10cc
	Sulfathiazole	10% 5cc
		10% 10cc
	Sulfamethylthiazole	10% 5cc
		10% 10cc

The above standards have been approved by the Japan Pharmacoposia Investigation Committee. Ministry of Welfare has sent out official letters to disseminate this information to all prefectural governors, drug manufacturers, and physicians.

Distribution of DDT products during the year 1947 totaled 4, 047,315 lbs. of 10% DDT Dust and 899,754 gallons of 5% DDT Residual Effect Spray.

The following is a detailed breakdown of the distribution during 1947 to prefectures and various governmental departments.

<u>Prefecture or Department</u>	<u>10% DDT Dust</u>	<u>5% DDT Spray</u>
Hokkaido	188,965 Lbs.	47,365 Gallons
Aomori	50,800 "	6,985 "
Iwate	70,150 "	14,350 "
Miyagi	93,935 "	21,440 "
Akita	89,600 "	16,840 "
Yamagata	20,810 "	3,810 "

SECTION VI
PREVENTIVE MEDICINE DIVISION

Typhoid Immunization Program

Progress reports on the Typhoid Immunization Program indicate that approximately 33,000,000 individuals have received the full course of inoculations. This is slightly more than half of those falling within the age group 5-60 years. The action taken by Military Government officers as indicated by Military Government monthly Activities Reports was very encouraging. However, the objective of the program has not yet been

obtained. Therefore, Military Government Health Officers should continue to exert every possible effort to complete the Immunization Program as soon as possible. The now infectious disease law now in process of passage will include this vaccination as a required immunization.

Venereal Disease Control

Public Health and Welfare Technical Bulletin (TB PH Prev. Med.4) entitled, "The Principles of Venereal Disease Control" was translated into Japanese and distributed to the prefectures by the Ministry of Welfare in December 1947. It should be brought to the attention of all Japanese Health Officers and that there is a gross error in the translation of the treatment schedule for syphilis on page 21 of the Japanese copy. The ditto marks under the mapharsen column should have been omitted from the 26th week on to the 40th week. In this 40th week schedule mapharsen should be discontinued after the 25th week, instead of continuing on to the 40th week as indicated by the ditto marks.

In the "Outline of Technical Standards and Procedures in the Diagnosis and Treatment of the Venereal Disease" (November 1945) the 24 week schedule was presented. The essential difference between the two schedules is that 10 additional bismuth injections are given in the 40 week schedule while prolonging the treatment by 16 weeks. Although the 40 week schedule gives a longer course of treatment, the 24 week schedule is considered adequate for the average early and latent cases of syphilis. In view of the fact that case-holding is very difficult in Japan and that the great majority of patients do not receive complete treatment, it would seem advisable to give preference to the shorter 24 week schedule. At the recent conference of Regional Military Government Health Officers at Yokohama the 24 week schedule was outlined by this office as the method of choice for the routine treatment of early and latent syphilis.

Model Health Centers

In connection with the Health Center Law (Law No.101), it is desired that reorganization and improvement of Health Centers be accomplished as rapidly as possible. In order to insure the accomplishment of this objective Public Health and Welfare Section, SCAP has worked very closely with the Ministry of Welfare in the establishment of a Model Health Center in Tokyo and the demonstration of its functions to Military Government Health Officers and key Japanese Public Health personnel. Plans are progressing and when the Health Center has been properly organized, staffed, and is functioning smoothly, invitations will be extended to Military Health Officers to come to Tokyo and witness the demonstration of the Model Health Center's activities. After the Military Government have witness of the demonstration at least two prefectural health officials from each prefecture will come to Tokyo for the same purpose.

It is expected that the Health Center will be demonstrated to the first group beginning on or about 10 March. After witnessing the demonstration, the officials from each prefecture are expected to establish a similar model Health Center in each prefecture and demonstrate its functions to appropriate public health personnel in each prefecture. Following this, each prefecture is expected to reorganize and improve Health Centers along the lines outlined in the demonstration. This is a long range program which will require coordinated efforts of both the Public Health Officials and the people in order to achieve a high degree of success.

SECTION VII MEDICAL SERVICE

Japanese Civilian Hospital Strength Report for period ending 16 January shows 3,409 hospitals with a capacity of 212,280 beds of which 87,196 were occupied. During this same period 248,980 out-patients were treated.

SECTION VIII SOCIAL SECURITY DIVISION

Insurance Bureau Submits Budget Estimates for the Fiscal Year 1948-49

Hearings were held on the estimates submitted to SCAP showing a total request of roundly 1,700,000,000 yen for appropriations to the Insurance Bureau in the coming fiscal year, beginning 1 April. This total does not include allowances payable to government workers. When these are added the total may reach 2,200,000,000 yen. There totals amount to three and four times respectively the amount appropriated this year.

The increase is due to the following causes;

1. Higher cost of services and supplies.

2. Increases in personnel due partly to new functions added by recent legislation (reference and appeals procedure in all social insurance program, new unemployment insurance and allowance programs for seamen).

3. The attempt to obtain reimbursement from the government of a higher share of the cost of administering Health Insurance, thus making the distribution of government funds between the several compulsory programs more nearly equitable.

4. Increased effort: to counter the disintegration of the National Health Insurance system apparent over the past two years through added subsidies to this program covering on a voluntary basis more people than all the compulsory programs combined. (See below for further details).

National Health Insurance

The Insurance Bureau of the Ministry of Welfare reports that more than 3,500 villages and towns which have had National Health Insurance associations are now in definite need of clinics to provide adequate medical care to the population in their respective areas. This situation prompted the inclusion in the current budget request for the ensuing year of a substantial amount for the purpose of establishing clinics for National Health Insurance. It constitutes the largest single item in the Insurance Bureau's budget estimates. The present program calls for 1,000 clinics each year for the next three years in an effort to overcome the difficulties in providing adequate medical care. Each prefecture is making a further survey regarding the need for additional hospitals under the National Health Insurance program.

Conferences have been held with government officials and representatives of the medical associations in an endeavor to arrive at a mutually acceptable solution regarding the fee-for-service (unit) rate at which medical services shall be paid for by the National Health Insurance Associations. As previously stated, the rates for National Health Insurance will not increase in any case until 1 April. In the current negotiations stress is laid on the doctors' participation in the operation of National Health Insurance to enlist their cooperation to the greatest possible degree on the national level, in the prefectures, and locally. Further studies are to be made with a view to improving the system of paying doctors who purvey medical care under all social insurance programs providing therefor.

SECTION IX MEMORANDA TO JAPANESE GOVERNMENT

None.

SECTION ?
WELFARE

Dobo Engo Kai

The Ministry of Welfare on 7 February directed the Prefectural Governors to take the following measures in regard to their relationships with the National Relief Association (Dobo Engo Kai).

1. To avoid misunderstanding all governors and public officials will immediately resign from any post held by them in the Dobo Engo Kai.

2. All Dobo Engo Kai office space held by them in prefectural buildings will be vacated.

3. Welfare officials and governors will investigate closely, various institutions and functions under the branch of the Dobo Engo Kai to see that needy persons are treated equally without preferential treatment regardless of whether those persons are special groups or ex-service personnel.

All officials of the Ministry of Welfare who held posts in the Dobo Engo Kai as members of boards, auditors or councilors, etc., have tendered their resignations as of 2 February.

Minsei-iin

A meeting of the Chiefs, Welfare Sections, of the prefectural Departments of Welfare was held in Tokyo on 13 February. While other matters were considered at this meeting, it was held at this time for the primary purpose of considering instructions recently dispatched concerning the reappointment of Minsei-iin (reference statement in PH&W Weekly Bulletin No.58, subject: Reappointment of Minsei-iin, which sets forth a summary of instructions issued). A translation of this directive issued by the Ministry of Welfare Hatsu-Sha No. 17, was sent out as an inclosure to above-mentioned Bulletin.

At this meeting it was emphasized that only qualified persons were to be appointed as Minsei-iin. In the future Minsei-iin will have responsibility under the Child Welfare Law and it is, therefore, necessary to secure persons who have some interest and ability in Child Welfare work. The importance of establishing effective prefectural Minsei-iin Selection Committees and Nomination Committees in cities, towns and villages was also stressed. It is expected that during March, prefectural welfare officials will be giving a great deal of attention to this matter.

The attached table (inclosure 1) sets forth the most recent data available concerning the number of Minsei-iin actually appointed in the various prefectures in Japan.

SECTION II
VATERINARY AFFAIRS DIVISION

Personnel

Dr. C. T. Beechwood arrived at PH&W, GHQ, SCAP, to assume the position of Assistant Chief, Veterinary Affairs Division.

Weekly Animal Disease Report

The Ministry of Agriculture and Forestry reports the following outbreak of diseases for the period 7 - 13 February:

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Nagano	Swine Erysipelas	1
Kanagawa	Swine Cholera	3

SECTION III
SUPPLY DIVISION

Production

The 44th weekly report of DDT Duster and Spraying Equipment for mosquito and fly control programs indicates the following data for 1 - 7 February:

	Total Mfgd. to date 31 Jan.	No. Mfgd. 1-7 Feb.	Total Mfgd. to date . 7-Feb	Total Shipped to date . 7-Feb	Balance On Hand	To be Mfgd.
DDT Dusters	84,696	1,650	86,346	78,756	7,590	3,654
Sprayer, knapsack type, 3 gal. capacity	39,443	-	39,443	21,419	18,024	-
Sprayer, pump type, semi-automatic	23,808	-	23,808	13,724	10,084	-
Sprayer, hand type, 1/2 gal. capacity	37,910	-	37,910	29,324	8,586	-
Total	185,857	1,650	187,507	143,223	44,284	3,654

A total of 4,005,536 lbs. of 10% DDT Dust, 359,468 gallons of 5% DDT Residual Effect Spray, and 348,569 vials of Typhus Vaccine represents total stocks on hand in wholesale houses of the Ministry of Welfare as of 7 February.

Distribution of DDT Products and Typhus Vaccine during January 1948 totaled 315,956 lbs. of 10% DDT Dust, 76,240 gallons of 5% DDT Residual Effect Spray, and 298,356 vials of Typhus Vaccine.

The following is a detailed breakdown of the distribution during January 1948 to prefectures and various governmental departments.

Prefecture of Department	<u>10% DDT Dust</u>	<u>5% DDT Spray</u>	<u>Typhus Vaccine</u>
Hokkaido	-	10,000 gal.	-
Aomori	71,800 lbs.	-	-

Totals	315,956 lbs.	76,240 gals.	298,356 vials

Distribution

Insect and rodent control equipment distributed during the period 1 - 7 February totaled 726 pieces. Shipments to four prefectures were made under Ministry of Welfare direction as follows:

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsack Sprayer</u>	<u>Semiautomatic Sprayer</u>	<u>Hand Sprayer</u>
Fukushima	0	174	0	48
Fukui	144	0	0	0
Osaka	0	0	0	150
Kochi	0	130	80	0
Total	144	304	80	198

The distribution of controlled medical supplies was placed under the new ration system effective 1 February, as previously announced in issues of the Weekly Bulletin. It may be of interest to Military Government Officers to have for reference the following list of official documents and communications which have been issued to date.

1. Official Gazette, No.485, dated 11 November 1947 (English Edition)
 - a. Ministry of Welfare Ordinance No.30 promulgates the new plan of distribution (pp.4-12).
 - b. Ministry of Welfare Notification No.70 and No.71 list the items which are designated as the "designated rationed goods" (pp.20-21).
2. File IHATSU No.183, dated 26 November 1947.

From: Vice Minister of Welfare
To: Each Urban or Prefectural Governor
Subject: Regarding the Enforcement of the Ordinance on Distribution of Medicines and other Medical Supplies.
3. File YAKU No.1583, dated 27 December 1947

From: Chief, Pharmaceutical Affairs Section, Ministry of Welfare
To: Each Urban or Prefectural Governor

Subject: Regarding the Enforcement of the Ordinance on the Distribution of Medicines and Other Medical Supplies.

4. File YAKU No.1590, dated 29 December 1947
From: Chief, Medical Affairs Bureau, Ministry of Welfare
To: Tokyo-To, Hokkaido and Other Prefectures
Subject: The Distribution of the Permitted Quotas for the Local Sellers and the Distribution of the Quotas for the Fourth Quarter Period (February and March) of 22 Years of Showa.
5. File IHATSU No.24, dated 17 January 1948
From: Chief, Medical Affairs Bureau, Ministry of Welfare
To: Each Urban or Prefectural Governor
Subject: Regarding the Ordinance on Distribution of Medicines and Other Medical Supplies.
6. File YAKU No.145, dated 3 February 1948
From: Chief, Pharmaceutical Affairs Section, Medical Affairs Bureau, Ministry of Welfare
To: Chief, Sanitary Section of Urban or Prefecture
Subject: Regarding the Ratio of Allocated Amount of Distributed Medicines and Other Medical Supplies.
7. File YAKU No.185, dated 5 February 1948
From: Chief, Pharmaceutical Affairs Section, Medical Affairs Bureau, Ministry of Welfare
To: Competent Chief of Urban or Prefecture
Subject: The Registration of Central Sellers on the Basis of the Ordinance on Distribution of Medicines and Other Medical Supplies.

This is a critical period in distribution of controlled medical supplies. Many technical problems are sure to arise which will require a knowledge of the details and procedures which are contained in the documents cited above.

It should be noted that all medicines which are designated as controlled are to be distributed in like manner, namely, through the use of the purchasing pass book. Thus drugs such as mapharsen, bismuth subsalicylate injection, sulfathiazole, sulfadiazine and penicillin are to be placed on the purchasing pass books in like manner to other rationed medicines. The prefectural officials are, however, to apportion and allocate quantities of these drugs so as to insure that the Health Centers and other public and private institutions which treat venereal disease are amply supplied for this purpose.

SECTION IV NARCOTIC CONTROL DIVISION

The December report of narcotic control activities, Ministry of Welfare, contains the following information:

Total registrants	88,420
Arrests - Registered Persons	10
Unregistered Persons	36
Convictions - Registered Persons	10
Unregistered Persons	21
Thefts of narcotics	42
Losses by fire	13

Penalties for registrants varied from 100 yen to 5,000 yen fine and for non-registrants from 400 yen fine to one year six months penal servitude. Charges against 37 non-registrants were dropped because of lack of evidence. As a result of inspections by narcotic agents, 81 registrants were admonished for minor technical violations. One person was fined 3,000 yen for illegal cultivation of marihuana.

498,786 grams codeine phosphate, more than half the import received in October, were packaged and 423,838 grams were immediately sold to central wholesalers to relieve the critical short supply of this drug. The central wholesalers sold 120,585 grams of the codeine, approximately two and one-half times the amount of their

stocks at the beginning of the month, to local wholesalers. 77,442 grams of codeine reached doctors, hospitals etc. in addition to 327,560 tablets of codeine.

Consumption rates of morphine hydrochloride and cocaine hydrochloride, being in plentiful supply, were continued at approximately the same level as during the past two years of strict accounting and control.

Morphine hydrochloride		16,705 grams
Morphine hydrochloride	1% 1cc	120,628 ampoules
Cocaine hydrochloride		12,473 grams

SECTION V PREVENTIVE MEDICINE DIVISION

Venereal Disease Control

No objection has been offered by PH&W, GHQ, SCAP, to publication of a "Guide to the Medical Treatment for Venereal Disease", submitted by the Ministry of Welfare.

The schedules for mapharsen and neoarsenobenzol (neoarsphenamine) are outlined in this guide, but the latter should be used only when the former is unavailable. The supply of mapharsen will, in the near future, be sufficient to meet the demand minimizing the use of neoarsenobenzol. Under the new distribution system for controlled drugs, which became effective 1 February, mapharsen should be available to all Japanese doctors who are treating venereal diseases. It should be brought to their attention that mapharsen is the drug of choice in the routine treatment of early and latent syphilis. As compared with neoarsenobenzol, mapharsen has the following advantages:

1. Adaptable to foreshortened 24 week treatment schedule. (Ref: Weekly Bulletin No.58 for period 1-7 February, Venereal Disease Control).
2. Greater therapeutic effect with smaller doses of arsenic (one-tenth that of neoarsenobenzol).
3. Practically complete freedom from producing nitritoid reactions; lowest cutaneous toxicity and general reaction incidence of any trivalent arsenical.
4. Aeration does not increase toxicity.
5. May be injected rapidly.

Mapharsen and mapharsol are different names for the same drug, oxyphenarsine hydrochloride, which chemically is 3-amino 4-hydroxyphenylarsinoxide hydrochloride. Since mapharsen is a trade name protected by patents, the Japan Pharmacopoeia and Japanese manufacturers use the name mapharsol to designate this drug.

This "Guide to the Medical Treatment for Venereal Diseases" has been distributed to the prefectures by the Ministry of Welfare to be used as a basis for treatment in the current "Counterplan for the Prevention of Venereal Diseases". (Ref: Weekly Bulletin No.55, for period 11 - 17 January 1948, Venereal Disease Control).

It should be impressed upon both the doctor and the patients that to receive the optimum benefits of modern drugs, the treatment of venereal disease must be instituted as soon as the diagnosis is established and the schedule must be strictly adhered to until the outlined plan is completed.

SECTION VI MEDICAL SERVICE

Civilian Hospital Strength Report for week ending 23 January shows 3,413 hospitals with a capacity of 210,906 beds of which 81,477 were occupied. During this same period 229,193 out-patients were treated.

Nutrition

A revised plan for the Nutrition Surveys of the civilian population will be applied in the February 1948 surveys. Date schedules for conducting the surveys in the 12 large cities (Tokyo, Osaka, Nagoya, Kure, Fukuoka, Sapporo, Sendai, Kanazawa, Matsuyama, Yokohama, Kyoto and Kobe) and the prefectures throughout Japan has not as yet been submitted.

Military Government Teams will receive through regular channels copies of PHMJG number 58, dated 5 February 1948, subject: Revised Nutrition Surveys of the Civilian Population for 1948, with the Letter of General Application pertaining to the above mentioned plan.

The Nutrition Section, Ministry of Welfare informed the Japanese Health Officers of the revised Nutrition Survey plan at a meeting held in Tokyo on the 13th and 14th of February.

SECTION VII SOCIAL SECURITY DIVISION

Health Insurance

Field surveys have revealed that costs for medical care under the government-managed phase of the Health Insurance program are being paid in two ways. One, the patient presents his identification card of insurance privilege to the medical facility or doctor giving the service who in turn sends the bill to the prefectural office for payment, which is made at the official rate. The other method, which is apparently being used because of dissatisfaction of the doctors with the official fee rate and believed necessary by the insured to obtain adequate service, is for the patient to conveniently forget to bring his card pay for the service in cash at the rate desired by the doctor or facility. The insured then takes the bill to the prefectures office and obtains reimbursement at the official rate which is understood to approximate 80% of the total bill. The difference is an additional cost to the insured. This latter procedure is authorized by law but was expected to be used only in emergency situations. The extent of the utilization of this second procedure is not known, but it is planned to obtain further information regarding this method. Its extensive use would circumvent the intent of the present law to pay for the full cost of medical care to the insured.

Welfare Pension Insurance

In the process of formulating amendments to transfer substantive provisions of the program from the Enforcement Ordinance, which is an action only of the Cabinet, to the Welfare Pension Act and thereby reflect the opinions of the Diet, the Ministry of Welfare was advised to eliminate to the present inequity in the contribution base of taxing only the initial 600 yen earned a month. It was suggested that the cut-off be raised to 5,000 yen in line with provisions in the Unemployment Compensation law and proposed for the Health Insurance Act.

Pending study of a possible over-all revision of the benefit structure and a concomitant change of contribution rates, contributions will be collected temporarily at such lowered rates as will produce approximately the same total revenue on the new tax basis, including wages and salaries up to 5,000 yen per month, as under the old, excluding all those above 600 yen.

This change is recognized to be of a provisional nature. The problem must be settled definitely before old-age and survivors' benefits become payable under the law. Meanwhile, however, the broadening tax base will insure that contributions toward future benefits are paid on an equitable basis. At present, due to general rise of wages and salaries considerably above 600 yen per month, the low cut-off at that point had made contributions to Welfare Pension Insurance virtually uniform for all insured regardless of earnings, thus introducing into that insurance system an undesirable and unintended element of regressive taxation.

Seamen's Insurance

The Insurance Bureau, Ministry of Welfare, has submitted a report that the Japan Seamen's Relief Association, initially supported by employers, has six hospitals with a total of 441 beds, two sanatoriums with 222 beds, and two clinics at various locations in Japan. These are primarily for use by seamen who are covered by Seamen's Insurance. While seamen have priority, the hospitals and clinics will render service to other social insurance members.

SECTION VII - Preventive Medicine
SECTION VIII - Medical Service
SECTION IX - Social Security
SECTION X - Memoranda to Japanese Government

SECTION I
GENERAL

Beginning with next week's Bulletin, an English translation of the previous weeks directives issued by the various Bureaus in the Ministry of Welfare to the Prefectures, will be published for the information and guidance of Military Government personnel. Any of these directives that are considered pertinent to the implementation of a current program will be amplified and the important parts extracted for subsequent information of Military Government.

A complete review of all Ministry of Welfare Bureau instruction from 1 January through 14 February will be published in the Bulletin as soon as the information has been compiled by Public Health and Welfare Section.

SECTION II
WELFARE DIVISION

German Nationals

The relief roll of needy German Nationals has dropped to 14 individuals located in the following areas:

Tokyo	6
Karuizawa	2
Matsumoto	1
Kobe	4
Kanagawa	1

The drop was expected due to the fact that all remaining after repatriation had certified that they were able to care for their own needs.

The Japanese Government has been instructed by SCAP that no German persons will be added to the relief rolls in the future until a case history is prepared on each individual showing their resources, their efforts expended in trying to secure employment and until they have made every effort to support themselves from their known assets.

The procedure for prefectural officials, in the future, will be for them to submit to the Ministry of Welfare the case history mentioned above and secure from the Ministry of Welfare permission before additional German Nationals are placed on the relief rolls. All future needy German Nationals cases will be referred to PH&W Section, GHQ, SCAP by the Ministry of Welfare for review before relief is granted.

Social Work Education

The Kansai Social Work Education Committed held their monthly meeting in Kobe, Hyogo Prefecture, on 17 February. Persons attending the meeting included: public and private welfare officials, representatives of educational institutions in the area, Welfare Officers of the Kyoto, Osaka and Hyogo Military Government Terms and a representative from Welfare Division, PH&W Section, GHQ, SCAP.

Subjects considered at the meeting included: (1) standards of the social work curricula proposed for universities; (2) the establishment of a register of qualified social welfare workers in the Kansai Area; (3) plans for establishing a one year training course in Osaka; (4) the establishment and development of more adequate research facilities in the area. Reports were submitted indicating that definite plans have developed by Doshisha University, Kyoto, and Kobe Women's College, Hyogo prefecture, for the establishment of social welfare curricula beginning 1 April. Definite plans have been formulated for a welfare training course, to be established in Osaka, but plans for financing have not been arranged.

Reappointment of Minsei-iin

Basic instructions concerning the procedures for reappointment of Minsei-iin are set forth in directive issued by the Ministry of Welfare on 7 February. (Sha-hatsu No.17). A translation of these instructions was inclosed with PH&W Weekly Bulletin No.59.

Additional instructions are contained in a dispatch from the Chief, Social Affairs Bureau to Prefectural Governors (Koseisho Sha-Otsu-Hatsu No.30) dated 13 February, subject: Reappointment of Minsei-iin. These

instructions emphasize that the maximum number of Minsei-iin in a prefecture is not to be increased. In determining the number of Minsei-iin needed consideration is to be given to the number of needy families as well as the population. Minsei-iin who have been appointed as “specialists” in child welfare work will not be reappointed as “specialists” but as regular Minsei-iin since all Minsei-iin will have new responsibilities under the Child Welfare Law. It is permissible to appoint members of the staff of institutions as Minsei-iin.

In determining the number of Minsei-iin needed, it appears that undue emphasis is given to total population and geographical area and insufficient consideration to the number of families requiring aid under the Daily Life Security Law and needing other welfare services.

Payment of Salaries of Welfare Officials

There have been questions raised concerning the payment of salaries of welfare officials employed in the prefectural Department of Welfare. As a general rule the total base salary of the Chief of the Prefectural Department of Welfare is paid by the National Ministry of Welfare. Information concerning this matter was recently sent to prefectural governors, “Instructions to Prefectural Governors from Chief, Social Affairs Bureau (Koseisho Sha-Otsu-Hatsu No.33) dated 18 February subject: Grants for salaries and expenses of Chief of Prefectural Department of Welfare.” In addition to the grant for salaries the Ministry of Welfare also makes some allowances for travel and office expense of these officials.

The Ministry of Welfare does not participate in the payment of salaries of all officials of the prefectural Department of Welfare but there is in each prefecture a number of such officials for whom the Ministry pays a portion of salaries and other expenses. The percentage of payment by the Ministry is not uniform but varies from 50% to 100%, depending upon the employee. The number of employees for which grants-in-aid are paid by the national government varies according to the size of the prefecture but the average is a total of nine for each prefecture (there second-class officials and six second-class officials).

The national Ministry of Welfare also provides grants-in-aid for the payment of salaries of some welfare officials in larger cities and in prefectural district office.

Licensed Agencies for Relief in Asia (LARA)

Overseas shipments, numbers 49, 50 and 51 respectively, to LARA have arrived in Yokohama. Those shipments were as follows:

- a. 49th shipment: Arrived aboard the S.S. Luxembourg Victory on 3 February and contained 15.26 tons (food).
- b. 50th shipment: Arrived aboard the S.S. Mount Rogers on 13 February and contained 159.70 tons (clothing, including shoes, 92.22 tons - food, 64.58 tons - miscellaneous, 2.9 tons)
- c. 51st shipment: Arrived aboard the S.S. Chins Bear on 18 February and contained 76.40 tons (food, 70 tons - clothing, 6.40 tons).

Community Chest (National Interdependence Campaign)

The participation of public officials in the Community Chest and the use of Community Chest funds in public relief and welfare organizations was set forth in SHA-HATSU No.1701, dated 10 December 1947, from the Social Affairs Bureau, Ministry of Welfare, reference Public Health and Welfare Section Weekly Bulletin No.50 (period 8 - 14 December 1947).

SHA-HATSU No.1701, mentioned above, has been implemented for purposes of clarification, by SHA-HATSU No.32, dated 14 February 1948, from the Social Affairs Bureau, Ministry of Welfare to the Prefectural Governors. Note: The contents of SHA-HATSU No.32 are misleading in content and the Social Affairs Bureau is now preparing another SHA-HATSU resending same.

Many prefectures have yet to complete their collections for the Community Chest campaign and it has been decided not to officially close (for reporting purposes) the campaign until March.

The progress report of the campaign, as of 21 February shows 558,260,046.1919 yen raised toward the goal of 683,500,000 yen or 81.6% of quota attained. Note: The original national goal of 681,500,000 yen has been

adjusted and is now 683,500,000 yen. This adjustment was necessary to meet prefectural quotas that have been lowered and raised in some instances.

Japanese Red Cross Society

Nursing: A four weeks' Nurse Instructors' Course has been completed at the Japanese National Red Cross Headquarters on 20 February. Forty-six nurses attended the course representing 31 Red Cross Schools of Nursing. The course consisted of nursing arts, history of nursing, hygiene, and nursing ethics.

Two adult classes in Red Cross Home Nursing have been completed in the Tokyo Chapter this past week. Another class is being organized this coming week.

Junior Red Cross: Five Junior Red Cross Albums have been completed during the month by the following schools: Takami Primary School, Nagoya, Aichi Prefecture: Grades 1-6; Okosi Dai 3- Primary School, Aichi Prefecture 6th Grade; Yuda School, Yamaguchi City, Yamaguchi Prefecture Grades 1-6; Misima School, Okasaki City, Aichi Prefecture Grade 6; Misima School, Okasaki City, Aichi Prefecture Grade 5.

The above albums have been shipped to Junior Red Cross at the American National Red Cross Headquarters and will be distributed to American Junior Red Cross groups in American Schools.

On February 13th a four day Junior Red Cross leadership training conference was completed at Gohra, Kanagawa prefecture. Forty-two delegates from the following eight prefectures attended:

Tochigi	Chiba	Ibaraki	Gumma	Tokyo
Saitama	Kanagawa	Nara		

The conference was a successful one, as much interest was shown by the delegates and there was a considerable amount of informal discussion. Expressions from the delegates indicated that they were getting a very clear understanding of the way in which Junior Red Cross fits into the educational system.

The Junior Red Cross handbook, which has been in the process of preparation since the summer of 1947, has been completed. The handbook went to the printers on February 16 and should be off the ##### April 1. In the meantime, an English translation is being prepared and will be sent, in the near future, to all Military Government Teams.

SECTION III
VETERINARY AFFAIRS DIVISION

A visit was made to the farm area surrounding Hamamatsu, Hamana-gun, Shizuoka, to select 70 purebred Berkshire hogs for shipment to Okinawa. Of this group 48 were gifts ranging in age from 3 months to 12 months and 22 were Boars ranging in age from 3 months to 13 months. All were in fine condition and immediately were vaccinated against Hog Cholera and Swine Erysipelas. Shipment will be made to Okinawa during March from the quarantine station located in Yokohama.

Weekly Animal Disease Report

The Ministry of Agriculture and Forestry reported the following outbreak of diseases for the period 14-20 February:

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Tokyo	Swine Cholera	8
Yamaguchi	Anthrax	1

SECTION IV
NURSING AFFAIRS DIVISION

The National Midwifery Course program planned by the Ministry of Welfare to be held in the following eight cities of Japan, namely Sapporo, Akita, Niigata, Nagoya, Kyoto, Kobe, Hiroshima and Kumamoto, will be inaugurated in Kumamoto on 16 March. Dates for the courses to be held in the remaining seven cities will be announced later. The Ministry of Welfare has forwarded details of these courses to Midwives throughout Japan. A

representative of Public Health and Welfare will attend each course and present a series of lectures on Midwifery. Lectures are currently being prepared in Japanese with sufficient copies available for distribution to each student.

The School of Nursing in Okayama, with a capacity for forty students will open 1 May. The results of the recruiting program have been favorable and application blanks as well as other entrance forms have been prepared and distributed. Prefectures in the immediate surrounding area have been given a quota based on the current enrollment capacity. Personnel from Public Health and Welfare Section plan to initiate refresher courses sometime in March and for the Nurses currently working in the school of nursing hospital, and will also prepare a program for the new students enrolling in the school of nursing 1 May.

The Model Demonstration School in Tokyo is now planning to increase the size of the nursery to 80 cribs. This Nursery opened in 1946 with six cribs and currently has 30.

SECTION V SUPPLY DIVISION

Distribution

Spraying equipment for use in insect and rodent control was shipped to four prefectures during the period 8-14 February. A total of 360 sprayers was distributed under Ministry of Welfare supervision as listed below. No. DDT dusters were shipped during this period.

<u>Prefecture</u>	<u>Knapsack Sprayer</u>	<u>Semiautomatic Sprayer</u>	<u>Hand Sprayer</u>
Kagoshima	120	70	0
Kochi	0	40	0
Osaka	0	0	60
Hyogo	0	0	70
Total	120	110	130

Reference is made to the list of official documents and communications which have been issued covering the ration plan of distribution of controlled medical supplies now effective. This list was published in the previous edition of the Weekly Bulletin, Number 59, 9 - 14 February. The following is added:

File EIHATSU No. 67, dated 5 February 1947

From: Chief, Medical Affairs Bureau, Ministry of Welfare.

To: Urban or Prefectural Governor

Subject: Regarding the Enforcement of the Ordinance on the Distribution of Medicines and Other Medical Supplies.

To properly communicate ideas an understanding of the definition of terms is necessary. Quoted below is Article 2 of Ministry of Welfare Ordinance No. 30 dated 11 November 1947, on the distribution of medicines and other medical supplies. This article defines the terms used throughout the ordinance.

”Article 2. In this Ordinance:

“By “dealers” are meant hospitals, clinics, veterinary hospitals, pharmacies, retailers of medicines and other medical supplies and any others who use medical supplies by trade and whom the governor of a metropolis, district or urban or rural prefecture designates.

“By “Designated Consumers” is meant any one who consumes the medical supplies of the designated rationed goods which the Minister of Welfare especially designates from the health and sanitary point of view and whom the governor of a metropolis, district or urban or rural prefecture designates.

“By “sellers” are meant ones who are engaging in sale of the designated rationed goods.

“They are classified into two characters; “Local sellers” and “Central sellers.”

“By a local seller is meant a seller whose business area is within the metropolis, district or urban or rural prefecture where he has his business office and who engaging in sale of the designated rationed goods to the dealers and designated consumers.

“By a central seller is meant one who is engaging in sale of the designated rationed goods to the local sellers or other central sellers.

“By “Manufacturers” or “Importers” are meant ones who are engaging in the production or importation of the designated rationed goods.”

Production

The weekly report of production of DDT Duster and Spraying Equipment for mosquito and fly control programs indicates the following data for 8 - 14 February.

	Total Mfgd. to date <u>7-Feb</u>	No. Mfgd. <u>8-14 Feb</u>	Total Mfgd. to date <u>14-Feb</u>	Total Mfgd. to date <u>14-Feb</u>	Balance <u>on Hand</u>
DDT Dusters	86,346	1,550	87,896	78,756	9,140
Sprayer, Knapsack type, 3 gal. capacity	39,443	1,550	40,993	21,539	19,454
Sprayer, pump type, semiautomatic	23,808	900	24,708	13,834	10,874
Sprayer, hand type, 1/2 gal. capacity	37,910	1,000	38,910	29,454	9,456
Power Dusters	-	7	7	-	7
Total	187,507	5,007	192,514	143,583	48,931

Initial production of DDT Duster and Spraying Equipment for the 1948 program is being reported during this period 8 - 14 February. A quota of 100 power dusters is included in the 1948 program. Two companies, in addition to the three manufactures used in the 1947 program, have received quotas for manufacturing this equipment.

A total of 4,153,556 lbs. of 10% DDT Dust, 314,940 gallons of 5% DDT Residual Effect Spray, and 341,069 vials of Typhus Vaccine represents total stocks on hand in wholesales houses of the Ministry of Welfare as of 14 February.

SECTION VI NARCOTIC CONTROL DIVISION

Reports received reveal that a large amount of narcotics burglarized from a Tokyo hospital in 1947 were recovered three months later when the arrest of eight persons, attempting to sell the narcotics illegally, resulted in the seizure of the narcotics. The narcotics were identified by the seal of the hospital pharmacist on the packages of narcotics. Ministry of Welfare and Tokyo-To narcotic officials had attributed little significance to the fact that the source of supply of the narcotics was determined. Ministry officials are being instructed to “direct that source of supply” be made an important and integral part of all investigations and that this information be furnished in all future reports of investigations resulting in the seizure of narcotics.

Efficient methods of conducting a narcotic investigation have been discussed with the Tokyo Procurators' Office and with officials from the Prosecution Bureau, Attorney General's Office (formerly the Ministry of Justice). These officials were informed the purchase of narcotics, by narcotic agents in an undercover capacity or by informants working under their direction, in order to obtain evidence for presentation in Court proceedings, is considered the most effective and conclusive method of conducting a narcotic investigation. They were also informed narcotic agents are receiving instruction in this procedure which will be used more and more to obtain evidence in order to eliminate defendants being brought to trial for violations in which the only evidence is statements of witnesses or of defendants.

SECTION VII PREVENTIVE MEDICINE DIVISION

Typhus Fever

Comparatives Score (Includes figures 1 January - 16 February)

Reported Cases	1946	1,299
	1947	384
	1948	124 (of this number 90 have been confirmed as typhus including epidemic and murine).

Spray Schedule

Even through the reported incidence of typhus fever is comparatively low at the present time, we cannot afford to relax our vigilance and our efforts in the typhus control program. Reports filtering in from the field indicate that the spray program for jails, theaters, public bath houses, orphanages, railway stations, railway coaches, street cars, buses miscellaneous public conveyances, is being neglected in areas where epidemic typhus fever has been endemic for several years. DDT residual spray treatment of the places mentioned above is not only an important part of the typhus control program but invaluable in the general control program of flies, mosquitoes and other insects which may live, or find harborage in jails theaters, etc, or which may secure transportation by means of public conveyances including trains, coaches, ships and vessels. Military Government Health Officers should determine that the responsible Japanese officials carry out the spray program.

DDT, 10% residual effect spray should be applied every 30 days and used at the rate of one quart for each 250 square feet of surface.

Venereal Disease Control

At the conference of Regional Military Government Health Officers held at Yokohama on 30 January, it was reported that some prefectures still require the carrying of health certificates by prostitutes, as required by Article 6 of Ministry of Welfare Regulation No.45, dated 22 November 1945, subject: "Complementary Regulation for the Venereal Disease Prevention Law".

A directive dated 16 February 1946 was sent to prefectural governors by the director of the Bureau for Infectious Diseases, Ministry of Welfare, stating that "carrying the health certificates shall be suspended for the time being. The certificates shall be kept in the hospitals or consultation rooms in which the medical examination takes place and shall be made available as records of medical examinations".

Since this directive rescinds article 6 of Regulation No.45, the practice of issuing health certificates, or requiring them to carry them, is a violation of this directive. This directive should be brought to the attention of prefectural health authorities, and surveillance should be exercised to insure the discontinuance of the practice of issuing health certificates.

Sanitary Engineering

Municipal Water Shortages: During unusually dry years, such as we are now experiencing, the problem of municipal water shortages becomes a critical one throughout Japan. The only ultimate solution to the problem is a sound national program of water works construction and extension. Such a program is being planned by the Ministry of Welfare and the Construction Board. However, we are faced with the immediate problem of the effect of water shortages and water conservation programs on the public health during the spring and summer of 1948. A water conservation program will influence the incidence of enteric diseases in two ways: The overall quality of city waters as received by the consumer at the household tap will suffer greatly due to the development of negative or suction pressures which may draw contaminating matter into the mains. The shortage of water may cause the consumer to supplement the municipal supply from other sources, such as wells, which are for the most part polluted and highly unsatisfactory from the public health stand point. A sharp rise in the incidence of enteric diseases will accompany these shortages unless all water is either boiled or chlorinated by the individual consumer.

The municipal water bureau should increase the chlorine dosage at the treatment plant so that active chlorine residuals reach the extremities of the distribution system. The recommended standard municipal chlorine residual of 0.1 to 0.2 ppm should be maintained as a very minimum and, if chlorinating equipment and supplies of liquid chlorine permit, higher residuals should be provided. In order that a closer surveillance of water quality may be maintained a greater number of bacteriological tests should be performed by the local hygiene laboratory. These determinations will indicate these portions of the distribution grid that are subjected to back-siphonage. A marked decrease in chlorine residuals in a particular section of the system also provides an excellent indication of contamination. Local health offices and Health Centers should be capable of supplying chlorinated line and

instructions for its use to all persons within their districts. Local Health Departments should make a special effort to develop close Liaison with the municipal water bureaus since in many instances water works personnel are concerned only with the adequacy of the supply and give little attention to the public health aspects of water conservation.

SECTION VIII
MEDICAL SERVICE DIVISION

Japanese Civilian Hospital Strength Report for week ending 30 January shows 3,412 hospitals with a capacity of 211,101 beds of which 89,886 were occupied. During this same period 227,088 out-patients were treated.

SECTION IX
SOCIAL SECURITY DIVISION

General

The Insurance Bureau, Ministry of Welfare, reported that the numbers of appeals filed had increased rapidly during the month of January under the Health Insurance, Welfare Pension Insurance and Seamen's Insurance programs. It is believed that this increase will continue as the insurance beneficiaries become better informed concerning their rights under social insurance laws.

The membership of the central appeals boards for the social insurance has been reorganized to exclude government officials engaged in the administration of the programs. The boards, as originally set up under the recent amendments, included personnel regularly employed in the Insurance Bureau and actually responsible for the determinations upon which appeals are based. The advisory councils as distinguished from the appeals boards and created under each of the social insurance laws, count the Chief of the Social Insurance Bureau among their respective memberships but he is barred from serving as chairman and his participation is limited to providing technical assistance as requested by the councils.

National Health Insurance

In recent prefecture survey it was revealed that only one out of 40 suspended National Health Insurance Associations had a doctor on their board either as a member as medical consultant. It was further found upon inspection of several active associations in the prefecture that each has a doctor either as a full time employee or as a member of their board. This confirms the opinion that many doctors do cooperate and are doing so at the official rate of charges per point of treatment.

It was further indicated by the survey that premium rates by the associations are expected to increase after 1 April in order to meet the rising cost of medical care.

The following Public Health and Welfare Technical Bulletin is enclosed with this Weekly Bulletin.

Title: Administration of Health, Welfare and Social Insurance in Japan (Section I)
Short Title: TB-PH-ADM-3

SECTION II WELFARE DIVISION

Cost of Living Study

The Social Affairs Bureau of the Ministry of Welfare has completed a brief survey made of household expenses of recipients of public aid under the Daily Life Security Law. It was the purpose of the study to determine the actual cost of living representative families receiving assistance. A two-month period was covered - from 1 September to 30 October 1947. Following areas were included: City of Osaka; Ueda City, Nagano Prefecture and Komaki-mura, Kamikawakuchi-mura, Gumma Prefecture.

Since only 96 families were included in the study (48 families in Osaka, 24 in Ueda and 24 in Komaki) it cannot be assumed that the sample used is representative of all cases in Japan. An attempt was made, however, to select a representative sample. The heads of household in 70% of the cases included in the study were women. In over half of the cases some member of the family, usually the mother, had employment of some kind. The study indicated that the total amount received under the Daily Life Security Law was less than the families found necessary to expend to purchase food. The amount of the Daily Life Security grant was usually sufficient to meet the cost of food available in the regular ration. Other expenses, such as rent and clothing, were met from other sources usually employment.

Public Assistance Reports

The Ministry of Welfare has reported that submission of the report of activities under the Daily Life Security Law for the month of January has been delayed because reports have not been received from the following five prefectures: Gumma, Saitama, Fukui, Shiga and Fukuoka.

Publications concerning Welfare

Inquires have been received concerning the need for literature on social welfare subjects for use by Military Government personnel. Various attempts have been made to secure such literature but to date only a small amount has been made available. Military Government personnel who wish to purchase books and periodicals concerning social welfare in the United States may find the following suggestions to be helpful:

American Public Welfare Association, 1313 East 60 Street, Chicago 37, Illinois. This Association issues a monthly publication entitled Public Welfare which is sent to all members. Membership is available to all interested persons. The annual fee is three dollars for initial membership (persons not previously a member). The association issues various publications on welfare subject, a list of which will be sent upon request.

Russel Sage Foundation, 130 East 22nd Street, New York 10, New York. The following publications may be purchased from the Foundation: (A complete list of publications available will be sent upon request).

Social Work Yearbook, 1947. Price \$3.50. This is probably the most useful single book available containing information concerning the welfare programs and organizations in the United States.

Social Work as a Profession by Esther Lucille Brown. Price \$1.00. University of Chicago Press, 5750 Ellis Avenue, Chicago 37, Illinois.

Social Service Review. A quarterly. Annual subscription - \$4.00.

Community Organization for Social Welfare by Wayne McMillen. Price \$4.75.

Supplemental Food Ration for Purchase by Foreign Nationals.

Question has arisen concerning eligibility of foreign nationals to purchase food rations for previous months. Regulations concerning this question are contained in instructions issued to prefecture governors by Director, General Affairs Bureau, Ministry of Agriculture and Forestry, in May 1947 (Service Order No.460, 1947).

Regulations provide that request to purchase supplemental food ration retroactively, will be denied. In other words, the ration must be purchased during the month for which it is intended. In case the ration is not available for purchase during the month because of the failure of the government, then the ration for the preceding month or months is to be made available.

Conference of Military Government Welfare Officers

Military Government Welfare personnel of I Corps Area met in conference at I Corps Headquarters, Kyoto, 24 - 25 February. The agenda included: Public Assistance Administrative Reviews; Reappointment of Minsei-iin; Child Welfare Law and Regulations; Proposed Organization for a Community Committee; Social Insurance Programs; team reports; and a discussion of individual team problems.

In addition to the Welfare personnel from teams and regions the Welfare Officer, MG Section, Hqs. Eighth Army and a representative, Welfare Division, Public Health and Welfare Section, GHQ, SCAP, attended the conference.

Treatment of Income in Public Assistance Families (Hatsu-sha #7. 1948. Ministry of Welfare).

Conferences with Military Government Team Welfare Officers indicate that there is a misunderstanding concerning "the limit necessary for minimum living" discussed in Social Affairs Bureau Instructions (Hatsu-sha #7) issued to prefecture governors on 23 January. Attention is called to paragraph 2 of the instructions, as well as to paragraph 3 and paragraph 4, sub-paragraph (1), which states in part that "therefore the said standard amount of assistance serves as a measure for determining the limit necessary for a minimum living, and in most cases the standard amount of assistance and the limit necessary for a minimum living should coincide. When circumstances force a marked difference between the two in many cases, the standard amount of assistance should be revised". This revision is a matter for the central government to determine. Sub-item (3) of paragraph 4 further states that "therefore, in determining the amount of payment for living assistance for each household, the standard amount of assistance will be used as a measure (so that the actual assistance will not deviate markedly from it)".

Paragraph 6 gives the committee authority to approve minimum living expenses for a family with income above the standard amount of assistance in certain cases however, the limitations of paragraph 4 should obtain for the great majority of cases.

Cases in which the public assistance paid is above the standard allowance requires the approval of the governor for amounts up to 10% overpayment and from the Ministry of Welfare for increases over 10%.

Community Chest (National Interdependence Campaign)

The progress report of the Chest Campaign, as of 27 February, shows 561,469,323.61 yen raised towards the goal of 678,200,000 yen or 82.7% of quota attained. The final adjustment in the national goal has been made and it now stands, as adjusted at 678,200,000 yen, instead of the original 681,500,000 yen. As set forth in previous Weekly Bulletins, the national goal adjustment was necessary to meet certain adjustments made in prefectural quotas.

Several prefectures are still in the process of completing their campaign collections and the official closing date (for reporting purpose) has been extended until 31 March.

Ministry of Welfare, Social Affairs Bureau, Instructions #32 (Sha-Hatsu #32) dated 14 February, to the prefectural governors was misleading in content as previously stated, reference PH&W Section Weekly Bulletin No.60 (period 15 - 21 February 1948). Ministry of Welfare, Social Affairs Bureau, Instructions #39 (Amended) (Sha-Otsu-Hatsu No.39) dated 27 February 1948, to the prefectural governors (Inclosure 1) rescinds Instruction No.32.

Japanese Red Cross Society

The Distribution of American Junior Red Cross school supplies was completed as given bellow, during the past week, to the following prefectures in accordance with the plan for distribution previously announced, reference, Public Health and Welfare Section Bulletins No.39 (period 21 - 27 September 1947) and No.42 period 12 - 18 October 1947).

Yamanashi	3,600 units
Chiba	2,400 "
Kanagawa	15,540 "
Tokyo	164,000 "
Hyogo	45,000 "
Saitama	2,200 "
Gumma	4,000 "
Ibaraki	4,000 "
Fukui	5,400 "

A meeting of all chapter directors was held in Tokyo, 22 February, for the purpose of discussing the recent Red Cross Fund Campaign. Preliminary discussions are going on between the National Japanese Red Cross and Community Chest officials as to their mutual experiences during the 1947 Fall Campaigns and plans are being formulated to avoid conflicts in the 1948 Campaigns. The chapter directors were also advised concerning the changes in nursing education provided in the new Nursing Law so that they may more intelligently cooperate with the prefectural Red Cross Schools of Nursing in the recruitment of student nurses.

A four-day institute on modern public health procedures was held in Tokyo during the week by the Medical Services Section of the National Red Cross. The institute was attended by 50 doctors representing the prefectural and branch Red Cross hospitals. Similar professional institutes are planned at frequent intervals in the future for the purpose of raising the professional standards of medical and hospital services administered by the Red Cross facilities.

Reports from the prefectural Red Cross Chapters indicate that they have been working closely with prefectural authorities in developing initial agreements as to Red Cross responsibilities in time of disaster. In the meantime, discussions are progressing between the Ministry of Welfare and the National Red Cross as to the specific disaster relief Red Cross responsibilities under the National Disaster Law, and after a firm agreement has been reached the Japanese Red Cross will proceed to develop a disaster organization and related programs at the national, prefectural and community levels.

SECTION III
VETERINARY AFFAIRS DIVISION

Weekly Animal Disease Report

The Ministry of Agriculture and Forestry reports the following outbreaks of diseases for the period 21 - 27 February:

<u>Prefecture</u>	<u>Diseases</u>	<u>No. of Cases</u>
Tokyo	Swine Cholera	11
Chiba	Swine Plague	10

SECTION IV
NURSING AFFAIRS DIVISION

The four month National Public Health Nurses program at the Institute of Public Health will be completed this month. This group of students are the first to have received a complete set of lectures published in Japanese.

Public Health Officers can assist in obtaining copies of the lectures for the other nurses in the prefecture, as well as determine that the public health nurses who complete these programs are allowed to do a constructive piece of work in public health. New students from the 46 prefectures will be expected in April for the next course concerning which notices have been mailed to the prefectures.

The National Tuberculosis nursing course under the auspices of the National Tuberculosis Association will be completed in three weeks. Nurses will be returned to their respective prefectures to assist in the tuberculosis program.

SECTION V SUPPLY DIVISION

Distribution

Dusting and spraying equipment for use in insect and rodent control programs shipped to eight prefectures in the period 15 - 21 February totaled 710 pieces. This distribution was made under Ministry of Welfare supervision, as follows:

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsack Sprayer</u>	<u>Semiautomatic Sprayer</u>	<u>Hand Sprayer</u>
Tokyo	24	0	6	12
Ishikawa	0	6	0	12
Aichi	0	0	0	50
Hiroshima	480	0	0	0
Tokushima	0	50	0	0
Kochi	0	0	20	0
Fukuoka	0	30	0	0
Miyazaki	0	30	0	0
Total	504	116	26	74

In January there was a marked increase in distribution of drugs for VD control, sulfa drugs and penicillin. A decrease in santonin distribution reflects a smaller quantity which was available for distribution in January.

DISTRIBUTION MISCELLANEOUS ITEMS

<u>Items</u>	<u>Unit</u>	<u>December 1947</u>	<u>January 1948</u>
Mapharsen	gram	2,442	23,012
Bismuth Subsalicylate Inj.	cc	43,200	573,918
Sulfathiazole	tablet	5,023,560	4,913,600
Sulfadiazine	tablet	2,437,500	5,549,700
Penicillin	oxford unit	2,952,180,000	5,756,160,000
Santonin	tablet	5,506,000	2,000,000

All the drugs listed in the above table are now being distributed under the ration system which became effective 1 February. Attention is called to Public Health and Welfare Weekly Bulletin No.55, 11 - 17 January, Section V, first three paragraphs under "Distribution", in which certain problems in the distribution of penicillin were discussed. In Weekly Bulletin No.59, 9 - 14 February, Section III, final paragraph under "Distribution", the current method of distribution of mapharsen, bismuth subsalicylate injection, sulfathiazole, sulfadiazine and penicillin was outlined. In recent field trips it has been noted that prefectural officials do not always fully understand the change in the method of distribution of these drugs. The Ministry of Welfare makes no allocation to prefectures exclusively for VD control purposes. Although needs for this purpose are considered in the ministry's allocations, the whole responsibility for apportioning sufficient stocks for VD control lies with the prefecture.

It is also the prefecture's responsibility to assure that stocks are made available to all practitioners for other than VD control purposes. Supplies of these drugs are available now in sufficient quantities to permit purchase by all authorized facilities and practitioners who require them for other than VD control. It is desired that these drugs be made available to all who are authorized to use them. Production of the purely VD treatment drugs, mapharsen and bismuth subsalicylate injection, has so improved to allow removal of these from distribution control. This action will be taken within the next few weeks.

Shipments of diphtheria toxoid have now been made to all prefectures, it is reported by the Ministry of Welfare. Following is a summary of shipments to the end of January.

<u>Prefecture</u>	<u>January Distribution</u>	<u>Total Distribution</u>
Hokkaido	94,000 cc	661,000 cc
Aomori		50,000 cc
Iwate		70,000 cc
Miyagi	35,000 cc	35,000 cc
Akita		62,060 cc
Yamagata		50,000 cc
Fukushima		30,000 cc
Ibaraki	20,000 cc	45,000 cc
Tochigi		20,000 cc
Gumma		33,000 cc
Saitama		50,000 cc
Chiba	70,000 cc	270,000 cc
Tokyo	13,000 cc	113,000 cc
Kanagawa	29,320 cc	102,040 cc
Niigata		109,000 cc
Yamanashi	73,400 cc	73,400 cc
Nagano	100,000 cc	100,000 cc
Gifu	100,000 cc	100,000 cc
Shizuoka		31,460 cc
Aichi	20,000 cc	140,000 cc
Mie	100,000 cc	100,000 cc
Toyama		145,260 cc
Ishikawa		148,000 cc
Fukui		100,000 cc
Shiga	100,000 cc	100,000 cc
Kyoto	105,000 cc	270,000 cc
Osaka	100,000 cc	400,000 cc
Hyogo	50,000 cc	159,000 cc
Nara	100,000 cc	100,000 cc
Wakayama	44,000 cc	94,000 cc
Tottori		80,000 cc
Shimane		90,000 cc
Okayama	80,000 cc	180,000 cc
Hiroshima	200,000 cc	250,000 cc
Yamaguchi	100,000 cc	205,700 cc
Tokushima	100,000 cc	100,000 cc
Kagawa	100,000 cc	148,000 cc
Ehime	250,000 cc	300,000 cc
Kochi	50,000 cc	100,000 cc
Fukuoka	150,000 cc	333,200 cc
Saga	20,000 cc	170,000 cc
Nagasaki	100,000 cc	100,000 cc
Kumamoto	160,000 cc	160,000 cc
Oita	80,000 cc	80,000 cc
Miyazaki	70,000 cc	70,000 cc
Kagoshima	160,000 cc	160,000 cc
Total	2,673,720 cc	5,308,620 cc

Production

The value of production of medical supplies (medicines, biologicals, dental materials, dental instruments, rubber sanitary goods, medical instruments and surgical dressings) for January, totaled 1,119,413,584.70 yen. In comparison to the 1947 production monthly averages attained, a general increase in medicine production is noted. Controlled medicines increased approximately 220,000,000 yen; non-controlled medicines, 330,000,000 yen; patent medicines, 100,000,000 yen; biologicals, 4,000,000 yen; dental materials, 3,000,000 yen; dental instruments,

600,000 yen; rubber sanitary goods, 6,000,000 yen medical instruments, 3,000,000 yen; surgical dressings, 5,000,000 yen.

While these large increases are in part a reflection of the newly revised increased price schedules effected in December, the increases at the same time reflect the additional quantities of coal and electricity made available to the medical supply industry. As additional quantities of fuel and power become available in the 2nd Quarter, 1948, further increases in production may be expected.

YEN VALUE OF PRODUCTION OF MEDICAL SUPPLIES AND EQUIPMENT

		Monthly Averages <u>1947 Production</u>		January 1948 <u>Production</u>
Production Controlled Medicines	Yen	122,575,138	Yen	338,378,442
Non-Controlled Medicines		145,154,863		477,720,726
Patent Medicines		138,329,888		224,559,906
Biologicals		22,009,946		26,485,195
Dental Instruments		8,915,947		9,567,089
Dental Materials		4,224,578		7,540,385
Rubber Sanitary Goods		6,756,005		12,747,790
Sanitary Materials (surgical dressings)		5,855,477		9,405,379
Medical Instruments		<u>10,223,865</u>		<u>13,008,972</u>
Total	Yen	464,045,707	Yen	1,119,413,584

Production of biologicals evidenced a general increase during January over December of 8,043,523 yen. Triple typhoid vaccine production showed the greatest increase of all the biological production. Increased quantities of completed diphtheria toxoid were produced. January biological production was approximately four million yen above the monthly 1947 production average.

PRODUCTION OF BIOLOGICALS - JANUARY 1948

	<u>Production</u>		<u>Stock on Hand</u>	
	<u>Crude Vaccine</u>	<u>Finished Vaccine</u>	<u>Crude Vaccine</u>	<u>Finished Vaccine</u>
Cholera	—	—	914,300 cc	4,422,970 cc
Typhus	—	—	—	684,947 cc
Triple Typhoid	6,473,000 cc	9,156,000 cc	147,500 cc	12,825,650 cc
Diphtheria Toxoid	3,174,900 cc	4,041,500 cc	5,442,500 cc	3,320,800 cc
Smallpox	1,678,050 doses	2,605,735 doses	15,902,410 doses	1,677,485 doses
Diphtheria Antitoxin	—	35,585 cc	—	186,981 cc

Production of x-ray film during January totaled 22,467 square meters. This is a decrease of 12,040 square meters below December production but a decrease of only 2,293 square meters below the monthly average of production attained in 1947. This decrease was the anticipated reflection in production from the previous month's acute shortage of fuel and electric power.

PRODUCTION OF X-RAY FILM - JANUARY 1948

<u>Size</u>	<u>Quantity</u>
4-3/4"×6 1/2"	934 dozens
5"×7"	540 dozens
6 1/2"×8 1/2"	788 dozens
8"×10"	1,514 dozens
10"×12"	14,386 dozens
11"×14"	684 dozens
14"×17"	1,826 dozens

Production of insect and rodent control supplies and equipment during January showed a decrease below production reported for December 1947. Antu production decreased 953 kgs.; nekoirazu (rat poison) 724 kgs.; DDT concentrate (indigenous production) 2,726 kgs. These decreases can be attributed in part to the short working

period in January due to the long Japanese New Years holiday. Adequate stocks, however, of all insect and rodent control supplies and equipment are on hand to meet necessary requirements.

PRODUCTION - INSECT & RODENT CONTROL SUPPLIES & EQUIPMENT
JANUARY 1948

Antu (rat poison)	1,869 kgs.
Nekoirazu (rat poison)	1,728 kgs.
Rat traps (spring type)	1,000 each
DDT Dusters	4,770 each
DDT Concentrate	14,136 kgs.
10% DDT Dust (utilizing American furnished DDT concentrate)	161,100 lbs.
5% DDT Spray (utilizing American furnished DDT concentrate)	100,000 gallons
10% DDT Dust distributed 1-31 Jan 48	319,956 lbs.
5% DDT Spray distributed 1-31 Jan 48	76,240 gallons
Typhus Vaccine distributed 1-31 Jan 48	298,356 vials

The weekly report of production of DDT Duster and Spraying Equipment for mosquito and fly control program indicates the following data for 15 - 21 February:

	Total Mfgd. <u>to date 14 Feb.</u>	No. Mfgd. <u>15-21 Feb.</u>	Total Mfgd. <u>to date 21 Feb.</u>	Total Shipped <u>to date 21 Feb.</u>	Balance <u>on Hand</u>
DDT Dusters	87,896	3,120	91,016	79,260	11,756
Sprayer, knapsack type, 3 gal. capacity	40,993	2,950	43,943	21,655	22,288
Sprayer, pump type, semi-automatic	24,708	1,240	25,948	13,860	12,088
Sprayer, hand type, 1/2 gal. capacity	38,910	1,300	40,210	29,528	10,682
Power Dusters	7	8	15	—	15
Total	192,514	8,618	201,132	144,303	56,829

The following companies have been selected by the Ministry of Welfare to manufacture subject equipment for the 1948 production programs:

1. Shukutani Seisakusho Co., 1, Yamakamajima-cho, Taito-ku, Tokyo, Phone Shitaya (83) 1356, 2449; Odawara Factory, 470, Renshoji, Phone Odawara 870; Obata Factory, Obata-machi, Kita-Kanbugun, Gumma ken, Phone Obata 9.

2. Shibazaki Seisakusho Co., 1, 1-chome, Kanda-Nishiki-cho, Chiyoda-ku, Tokyo, Phone Kanda (25) 1781; Factory 324, Shibasaki, Jindaimura, Kita-tamagun, Tokyo, Phone Musashi Chofu 326.

3. Ushida Funmuki Kojo Co., 157, Shirokane-Sanko-cho, Minato-ku, Tokyo, Phone Mita (45) 1023; Factory phone, same.

4. Murayama Seisakusho Co., 1, 2-chome, Kanda-Kaji-cho, Chiyoda-ku, Tokyo, Phone Kanda (25) 4331, 4333; Factory 1304, Inage-machi, Chiba, Phone, same.

5. Hatsuda Kogyo Co., Ltd., 1, 3-chome, Edobashi, Chuo-ku, Tokyo, Phone Nihonbashi (24) 2023; Factory 1441, Owada-cho, Nishiyodogawa-ku, Osaka, Phone Yodogawa 1716, 1819.

A total of 4,252,558 lbs. of 10% DDT Dust, 338,156 gallons of 5% DDT spray, and 327,674 vials of Typhus Vaccine represents total stocks on hand in wholesale houses of the Ministry of Welfare as of 21 February.

SECTION VI
NARCOTIC CONTROL DIVISION

Recent arrests indicate there is considerable traffic in heroin particularly in those prefectures having a fairly large foreign national population. The Ministry of Welfare has been instructed to direct prefectural narcotic chiefs to designate capable agents who will devote full time to obtaining information concerning such traffic, and to have each prefectures report to the Ministry of Welfare any information concerning suspected traffic in any other prefecture in order to coordinate the effort to stamp out such traffic.

Any information and subsequent investigation involving foreign nationals must be coordinated with occupation enforcement personnel who have authority to arrest any foreign national involved. Special emphasis is being placed on determining the source of supply of the heroin.

Inspection of local wholesalers has resulted in certain wholesalers, who have inadequate storage facilities, receiving instructions to either provide safe storage for narcotics or have their narcotic licenses cancelled. From a security standpoint there is imminent danger of loss of large quantities of narcotics stored in wholly inadequate places.

Reports to the Ministry of Welfare for the month of January were late from various prefectures, and the reports from Fukushima, Tochigi, Hyogo and Nara were not received in time for inclusion in the monthly report to SCAP. Telegrams to the above-mentioned prefectures failed to produce the very necessary and required reports. The Ministry of Welfare has been requested to advise the prefectures that reports from prefectures must be forwarded when due.

SECTION VII PREVENTIVE MEDICINE DIVISION

Model Health Center

Public health administration in Japan has undergone a great change during the past two years. Reorganization of the Ministry of Welfare and of the prefectural health departments is now virtually complete.

The third stage of reorganization of public health administration involves reorganization, expansion and improvement of all health centers in Japan. This program is now in process, and as a means of expediting this reorganization a Model Health Center has been established in Sugunami Ward in Tokyo. This health center was selected because its facilities are such that it can be copied by any health center in Japan, and its organization and operation are among the best. Reorganization has been accomplished and on 15 March a demonstration of its organization and functions will begin.

The Ministry of Welfare will invite two health officials from each prefecture to witness the model health center demonstration in Tokyo. These two officials will be the prefectural health officer himself and a district health officer. The district health officer should be chief of the health center that is selected for development as a model health center in the prefecture.

The facilities of the health center can accommodate for the demonstration only about 30 people at one time and since each demonstration period will cover one week, there will be five demonstration period as follows:

15 - 20 March - Military Government Health Officers
22 - 27 March " " " "
29 March - 3 April - No demonstration
5 - 10 April - Prefectural Health Officers
12 - 17 April - " " "
19 - 24 April - " " "

Attendance of the above officials at this demonstration is of the utmost importance and Military Government Health Officers are urged to determine that this is explained to the Japanese officials and that the proper Japanese officials, as mentioned above, come to Tokyo for the demonstration. Ministry officials will inform prefectural officials of the time they are expected to arrive in Tokyo.

Following the demonstration, prefectural Health Officers will return to their respective prefectures and establish a model health center, similar to the one in Tokyo, by 1 July 1948. All district Health Officers within the prefecture will be called in to witness the demonstration of the model, after which all health centers within the prefecture will be similarly reorganized as rapidly as possible.

Public Health Train

For the information of Kyushu Military Government Teams concerned, the schedule of appearances of the Public Health Train is as follows:

Arrive	Kumamoto	1858	29 Feb
Leave	"	0518	5 March
Arrive	Kagoshima	1117	5 March
Leave	"	1451	10 March
Arrive	Miyazaki	1916	10 March
Leave	"	0500	15 March
Arrive	Oita	1050	15 March
Leave	"	0345	20 March
Arrive	Beppu	0403	20 March
Leave	"	1946	22 March

The Mayor of Tagawa City requested that the train visit that city on 23 March before proceeding to Tokyo. This has been made possible and the train will now return to Tokyo on or about 26 March. A tour of the Kinki region will begin in early April. The entire schedule for the remainder of the year as noted in the Public Health and Welfare Weekly Bulletin #52, 21 December - 27 December 1947, had to be revised. This revised schedule will be published in the next issue of the Weekly Bulletin.

Typhus Fever

A great deal of needless effort can be saved if regular louse surveys of the crowded areas of cities are made. If lice are found to be rather prevalent a DDT dusting should be started at once. The tendency among Japanese Health Officials seems to be one of waiting--waiting for typhus fever to appear--then followed by frenzied efforts to control the outbreak. Such louse surveys constitute part of the work of sanitary teams and can be done in the homes on rainy days, so there is no need for sanitary teams to be out of a job. A simple cursory examination can be made by loosening the clothing around the neck of the suspected infested person, turning the clothing back and examining the seams around the neck, over the shoulders and in the arm pits. If lice are present indications of their presence can usually be detected. Such an examination can quickly be made.

SECTION VIII MEDICINE SERVICE DIVISION

Civilian Hospital Strength Report for week ending 6 February shows 3,416 hospitals with a capacity of 211,635 beds of which 91,283 were occupied. During this same period 287,028 out-patients were treated.

Information has been received that supplies of radium have been turned in or recovered by Japanese, necessitating further handling by both Japanese and Occupation personnel. The radium in question has been handled carelessly and with unnecessary hazard to personnel concerned.

Public Health Officers should take every precaution in instructing both Japanese and Occupation agencies in the hazards involved and carefully instruct those concerned in safe methods of handling, such as the use of lead shielding and leaded clothing. If such means are not available, the substance in question should be left until such a time as equipment for proper handling is available, remembering that unshielded, one gram of radium is dangerous if the handler approaches within 14 meters and that such an amount requires a lead shield four inches thick to be handled with safety.

SECTION IX SOCIAL SECURITY DIVISION

National Health Insurance

The Insurance Bureau of the Ministry of Welfare reported that the Diet has received numerous petitions from various sections of the country regarding the need for National Health Insurance. The petitions have emphasized the responsibility of the national and local governments in assisting to provide an adequate health insurance program.

The Insurance Bureau has been asked to obtain from the National Income Tax District Offices the total income of those towns in which National Health Insurance associations are actively operating. This information will be compared with the total expenditures for medical care of those associations.

Recent field surveys have revealed that the activities of the visiting nurses for National Health Insurance associations are not being adequately coordinated with the public health programs in some prefectures. This is specially true where associations are having financial difficulty or have suspected operations.

Ministry of Welfare Directives:

As announced in Public Health and Welfare Weekly Bulletin #60 for period 15 February - 21 February the following is a list of directives issued by various Bureaus of the Ministry of Welfare for the period 15 February - 21 February.

19 February (Hatsu-Yo, No.172)	From: Chief, Disease Prevention Bureau Subject: Investigation of number of motor vehicles and vessels for sanitary works.	To: All Prefectural Governors
19 February (Hatsu-Yo, No.176)	From: Chief, Disease Prevention Bureau Subject: National Subsidy on Construction of VD Hospital.	To: Governor of Kanagawa Prefecture
19 February (Hatsu-Yo, No.177)	From: Chief, Disease Prevention Bureau Subject: Report on condition of Payment of Government Employee.	To: All Prefectural Governors
20 February (Hatsu-Yo, No.190)	From: Chief, Disease Prevention Bureau Subject: Preventive work for Infectious Disease and Venereal Diseases at health centers.	To: All Prefectural Governors
20 February (Hatsu-Yo, No.194) Fiscal	From: Chief, Disease Prevention Bureau Subject: National Subsidy for Infectious Disease Prevention and VD Prevention for year of 1948.	To: Governor, Kumamoto Prefecture
20 February (Hatsu-Yo, No.205)	From: Chief, Disease Prevention Bureau Subject: Procedure of Handling certificate issued according to Art.6 of Venereal Disease Prevention Law.	To: All Prefectural Governors
18 February (Hatsu-Koho, No.9)	From: Chief, Public Health Bureau Subject: Distribution of Budget for Fiscal year of 1947.	To: All Prefectural Governors
21 February (Hatsu-Koho, No.107)	From: Chief, Public Health Bureau Subject: Information on the establishment of National Park Department in the Ministry.	To: All Prefectural Governors
21 February (Hatsu-I, No.87)	From: Chief, Medical Affairs Bureau Subject: Appointment of Narcotic Control Directors according to Imperial Ordinance No.528.	To: All Prefectural Governors
18 February (Hatsu-Ji, No.66)	From: Chief, Children's Bureau Subject: Business Conference for Chiefs of Children's Sections in the Prefectural Offices.	To: All Prefectural Governors
17 February (Hatsu-Gyo, No.158)	From: Chief, Relief Bureau Repatriation Board Subject: Treatment of Properties Belonging to Okinawans who repatriated from Japan after the Termination of War.	To: All Prefectural Governors

SECTION II
WELFARE DIVISION

Procedure for Securing "Gift Books" for Japanese

The following information is based upon a press release from CI&E Section, GHQ, SCAP, dated 28 August 1947, concerning the procedure to follow to provide literature to Japanese nationals.

Organizations, institutions and individuals in the United States may mail books, magazines and other publications to SCAP and designate the Japanese who are to receive them. The books or other publications must be addressed to: Chief, Civil Information and Education Section, GHQ, SCAP, APO 500, c/o Postmaster, San Francisco. In a corner of the address label should be entered: "For Military Agency: Gift Publications". Inner labels in the packages may indicate the intended recipients. To the Chief, CI&E Section, the donor should write a letter listing the publications sent, naming the Japanese who are to receive them and giving any special instructions.

Gift subscriptions to magazines may be given in the same way. The donor is to give instructions as to the recipient in a letter which should arrive before the first copy of the magazine.

CI&E, unless there is reason to believe they might negate the objectives of the Occupation, passes the gift publications on to the Ueno Imperial Library, Tokyo, which has undertaken to see that they are delivered to the designated recipients.

The same channel is open to Occupation personnel desiring to give books and publications to Japanese nationals.

Program for Physically Handicapped Persons

Public Health and Welfare Section has recently reviewed a plan submitted by the Ministry of Welfare for the vocational training of physically handicapped persons. The plan has also been studied by SCAP's Labor Division, ESS and Adult Education Division, CI&E, and will represent a cooperative effort on the part of the Ministries of Labor, Education and Welfare.

Generally, the government plan includes all physically handicapped persons. Present vocational training and educational facilities will emphasize training for these persons, while national and local committees will study the problem in all its phases. Labor, industry, education, social work and other fields will be represented on these committees. Their work will include studies of resources for training; publicity to assure interest in the program and to assist in overcoming the reticence of industry toward hiring the retrained handicapped, encouragement of the handicapped, etc.

The Ministry of Welfare has secured funds for grants-in-aid to implement a small part of this program in a limited number of prefectures, Ministry of Welfare, Social Affairs, Instruction #1580 (Sha-Hatsu #1580) has been issued to Governors of Tokyo, Kanagawa, Aichi, Osaka, Niigata, Hyogo, Hokkaido, Kyoto and Kagawa Prefectures. (Inclosure 1). This particular phase of the program will primarily effect seriously physically handicapped persons, who, for various reasons, will not be particularly effective in a retraining program. It will, however, relieve some hospitals of care for that group of persons well beyond the treatment stage who now form such a large percentage of hospital patients, but who need only terminal care.

It is expected that the program will be augmented considerably during the coming fiscal year (1948-49). (Note: Because of the difficult housing situation at present, it is expected that these institutions will not have a rapid turnover of trainees. Also, because of the nature of some of the handicaps involved, it is possible that such institutions will be providing long time and terminal care for some of the individuals.

It should also be noted that the Japanese Government has been criticized for delaying the provision of a program for physically handicapped persons. This delay resulted from the reluctance of the government to provide a program for physically handicapped persons, since by its nature this group is made up largely of veterans. This factor has been weighed by SCAP and the program is without objection, if conducted on a non-prefectural or non-discriminatory basis).

Family members will be allowed to live in institutions where space is available.

Publications Concerning Welfare

In Public Health and Welfare Section II, Weekly Bulletin #61, for period 22 - 28 February the statement on "Publication Concerning Welfare" is not clear as to the publishers of the material listed. Russell Sage Foundation, 130 East 22nd Street, New York 10, New York, publishes: Social Work Yearbook, 1947 and Social Work as a

Profession by Esther Lucille Brown. The University of Chicago Press, 5750 Ellis Avenue, Chicago 37, Illinois, publishes: The Social Service Review and Community Organization for Social Welfare by Wayne McMillen.

Japanese Red Cross Society

Chapter Expansion:

At a meeting of all Red Cross Chapter Directors from every prefecture on 22 February, at National Headquarters, the officials of the Japanese Red Cross presented their new plans for extending Red Cross services below the chapter level. Up until this time, the Japanese Red Cross has not been organized below the prefectural headquarters level to administer Red Cross services to the communities of Japan. The only organization below the prefectural level has been that of the government heads who have served as Red Cross branch and sub-branch contacts and the service of these persons to the Japanese Red Cross has been limited primarily to that of fund raising. The plan of extending the administration concerns the development of volunteer advisory committees for each service at every level. This was the first presentation of the new plan and it was announced that the first service program to be introduced on a nation-wide basis will be that of Volunteer Services.

Volunteer Services:

The training conference for the Volunteer Services program has been set for the latter part of April, exact date to be announced later. Chapter directors have been urged to contact community leaders and were requested to appoint a Volunteer Service Chairman from each prefecture to attend the training conference in April. They were instructed to select a woman for this position, if the services of a suitable woman could be secured.

In Public Health and Welfare Bulletin No.57 (period 25 - 31 January) there was attached an English translation of a "Volunteer Services" questionnaire survey sent out to all Japanese Red Cross chapters. Of the 46 sent out, 38 have been returned and these are now being reviewed by Japanese Red Cross officials at National Headquarters. English translations are also being made and these will be studied, findings compiled and information presented to an advisory group at headquarters. This information is expected to provide a sound basis for the development of volunteer projects by the Japanese Red Cross Volunteer Service Section. The information will also be used in the program of the Volunteer Leadership Training Conference. Any material from the survey which may be useful to other agencies, will be made available to them.

A group of 30 women leaders of the Tokyo area were invited to attend an informal meeting at Japanese Red Cross Headquarters for the purpose of learning about plans regarding the new Volunteer Service program and other services as well. Thirty women were invited and 24 attended the meeting or sent representatives. Presentations of the Volunteer Service program, Home Nursing and Junior Red Cross were made by Japanese Red Cross officials.

Members of the group participated in an animated discussion and appeared enthusiastic and interested. They stressed the fact that there must be nation-wide and well planned publicity to inform the Japanese public of the new aims and objectives of the Japanese Red Cross. Those attending the meeting indicated that they would be willing to serve in advisory capacities on committees both at the national and chapter level in helping to develop the new programs. It is hoped that from this group, the nucleus of a national advisory committee on Volunteer Service will be appointed.

This was the first meeting of its kind ever to be held at Japanese Red Cross Headquarters, and undoubtedly was helpful in pointing out to Japanese Red Cross officials, the potential use of volunteers, particularly in an advisory capacity. It is hoped that this will lend impetus to the plans for making the Japanese Red Cross an organization to serve the people of Japan.

Tokyo Chapter Conference

On 4 and 5 March, the Tokyo Chapter held meetings for the branch and sub-branch heads to inform them of the new plan to extend service program throughout all the communities. Specific emphasis was given to the Volunteer Service program. There was excellent attendance (170 persons in attendance) at these meetings and interest was manifested on the part of the branch and sub-branch heads. However, the meetings clearly revealed that the Japanese Red Cross is faced with the same problems of every other agency in Japan - those of defining new concepts, clarifying responsibilities and informing its own staff members of its aims and objectives.

Home Nursing:

A course for Instructors of Home Nursing started March 1st and will continue for a ten-day period. This course will approximate 100 hours of instruction and practice teaching. The Nagoya Chapter is acting as host for this training course. The following chapters have sent 14 nurse representatives and if they complete the course satisfactorily, they will be authorized as instructors to teach home nursing to lay people: Nara, Mie, Aichi, Gifu, Toyama, Ishikawa, Fukui, and Kyoto.

SECTION III
VETERINARY AFFAIRS DIVISION

Weekly Animal Disease Report

The Ministry of Agriculture and Forestry reports the following outbreak of disease for the period 28 February - 5 March.

<u>Prefecture</u>	<u>Disease</u>	<u>Number of Cases</u>
Hyogo	Anthrax	1

SECTION IV
NURSING AFFAIRS DIVISION

A booklet entitled "We Grow Up", (Educational Health Circular No.102 by U.S. Public Health Service, Washington D.C.) has been translated into Japanese and published. Copies may be ordered from Mr. Masaru Takisawa, 20 Tokumochi, Ikegami, Ohtaku, Tokyo at 35.00 yen per copy. This booklet deals with the fundamental material on Sex Education and can be used in many groups.

The Chief Nurses meeting of Eight Army was held at Zama this week and a representative from this Division was present to speak on Nursing Affairs. A report was furnished from those hospitals sponsoring the training program that was held for Japanese nurses. The reports indicated that as the Japanese nurses were learning rapidly and would be very valuable in the hospitals. This program has created a great interest in all prefectures. Many of the commanding officers attended the closing of the formal course and presented the certificates.

SECTION V
SUPPLY DIVISION

Distribution

In the period 22 - 28 February a total of 1,020 pieces of spraying and dusting equipment for use in insect and rodent control measures were shipped to nine prefectures under supervision of Ministry of Welfare, as follows:

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsack Sprayer</u>	<u>Semiautomatic Sprayer</u>	<u>Hand Sprayer</u>
Aomori	120	0	0	0
Iwate	0	0	504	0
Nagano	0	30	12	0
Aichi	48	0	0	0
Osaka	0	0	0	120
Ehime	24	6	6	12
Saga	0	18	0	0
Nagasaki	0	30	30	0
Kagoshima	0	24	0	36
Total	192	108	552	168

Reference is made to Weekly Bulletin No.53, 28 December 1947 - 3 January 1948, Section IV, second paragraph under "Distribution". The plan of distribution of absorbent cotton for use until the ration plan of distribution became effective was discussed. Quantities of 50-gram packages to be shipped to each prefecture were listed. Actual shipments, differing somewhat from these figures, were as listed below:

JANUARY DISTRIBUTION OF ABSORBENT COTTON

Quantity

Quantity

<u>Prefecture</u>	<u>(Kilograms)</u>	<u>Prefecture</u>	<u>(Kilograms)</u>
Hokkaido	6,163.75	Kanagawa	3,054.65

SECTION VI NARCOTIC CONTROL

A registered physician, who proved to be a narcotic addict, has purchased narcotics on numerous occasions using the name and registry number of other doctors. The Narcotic Section, Ministry of Welfare, is advising all prefectural narcotic agents to carry out the following instructions:

1. To require full identification of the physician before supplying official order forms.
2. To compare the signature on application for order form with that on registration application.
3. To instruct wholesalers to require identification of registrants when purchasing narcotics.

The Ministry of Welfare has advised all prefectural governors that narcotic agents designated to have judicial police power by the Minister of Welfare will not be discharged or transferred to other duties without previous notification to the Minister Welfare. In addition the Minister of Welfare must be notified when any such agents resign. In the past these agents have been transferred to other prefectural sections by prefectural governors although the agents had received extensive training in narcotic enforcement from the Ministry of Welfare. Under the present program it will be possible to build and maintain a capable force of narcotic agents.

SECTION VII PREVENTIVE MEDICINE DIVISION

Public Health Refresher Training Courses

Reference is made to Section V of Public Health and Welfare Weekly Bulletin #49 for period 30 November - 6 December 1947. The fourth refresher class for Public Health Officers (doctors) and the third class for Public

Health Sanitarians will begin on 9 April. These courses will extend over a 12 week period ending 3 July. The second class for Public Health Veterinarians and the second class for Public Health Pharmacists will also begin on 9 April, and will cover an eight week period ending on 12 June. All courses are conducted at the Institute of Public Health in Tokyo.

The urgent need for training in public health of those currently on duty in the nation's public health organization is well known. Military Government Health Officers should determine that the Japanese prefectural officials send students to these courses and that the students selected are the best available and that necessary financial provisions are made for those selected. The future possibilities of these students and their intention of remaining in public health work should receive careful consideration. Invitation and information relative to the above courses have been sent to the prefectures by the Director of the Institute of Public Health.

Public Health Train

The Public Health Train exhibit is due to return to Tokyo on 28 March from its tour of the Kyushu region. Tentative plans call for the exhibit to tour the Kinki region from 12 April - 23 June.

SECTION VIII MEDICAL SERVICE DIVISION

Civilian Hospital Strength Report for week ending 13 February shows 3,416 hospitals with a capacity of 211,291 beds of which 92,787 were occupied. During this same period, 288,117 out-patients were treated.

SECTION IX SOCIAL SECURITY DIVISION

General

As announced in Public Health and Welfare Weekly Bulletin No.56 for the period 18 - 24 January, a set of six charts, constituting a condensed analysis of the social insurances in Japan, has been distributed to Welfare Officers of the Military Government Teams and Regions.

Recent spot checks in the field have revealed a wide-spread lack of understanding on the part of prefectural officials of the newly revised referee and appeals system.

Frequently establishment of the new appeal boards to be created for the purpose of handling appeals under National Health Insurance has been delayed without good cause. Their equivalent one-person organ for the several compulsory social insurance programs (to wit: Health Insurance, Welfare Pension Insurance, and Seamen's Insurance) is the referee (at least one in each prefecture). While these have been appointed in all but one of the places visited, the new appointee frequently has been given other duties. In some prefectures he is holding actually the position of deputy chief of the prefectural Insurance Section.

The result has been doubly unfortunate. Firstly, his duties in the administrative office have kept the referee from devoting the necessary time to his proper function, which is, at this stage, that of advising the insured of their right to appeal, etc., secondly, his independence and initiative in correcting administrative lapses have thus been placed in jeopardy. The prefectural offices in question have been advised to make the necessary changes.

National Health Insurance

The Insurance Bureau, Ministry of Welfare, reports there are a total of 9,136 public health nurses on duty with the National Health Insurance association of the total, 1,966 are probationary nurses, until they have passed a public health nurse test given by the prefectural Health Department and served three months in a public health center. The term probation varies from three to twelve months depending on the individual's initiative and previous training. Many have been midwives before entering the public health nursing field, and their period of required training is less.

The nurses are under administrative control of the Insurance Section in the prefecture through the officials of the association in which they work. Professional supervision and training are the responsibility of the public health service. However, due to lack of personnel, this is usually accomplished through 68 public health nurses, who are employed by the National Health Insurance prefectural federations but work in cooperation with the

Insurance Section and health service. The national federation employs one nurse as general director who is located in the Insurance Bureau in the Ministry.

Difficulties have been indicated in the utilization of the National Health Insurance public health nurse, who continues to be employed by an association which has suspended operations or is not using her in a professional capacity. If the nurse desires to transfer to the prefectural Public Health Department, it can be accomplished in two ways: first, through an agreement with the local association officials and the prefectural officials she can be transferred temporarily; second, the nurse can resign and then make application to the Public Health Department for a position as public health nurse. The first method has been used in more than 500 cases and is considered the most desirable for the future of the National Health Insurance program. Reports reveal that more than 550 associations are operating with only the public health nurse on duty and a considerable amount of her time is used for clerical work. In some cases the town office has employed the nurse following the suspension of the association.

According to the National Health Insurance Law of 1936, as revised, contribution rates of each individual association as fixed by its association council (KUMIAI KAI) need the prefectural governor's approval in order to take effect. Similarly, dissolution of any association, decided by a three-fourths majority of its councilmen, must be approved by the prefectural governor to become effective.

Inspection of several prefectures has revealed that entirely inadequate contribution rates continue to be levied by a majority of associations with the token approval of the prefectural district offices. Consequently, more associations, finding it impracticable to operate on a shoe-string budget, have decided to suspend activities. Prefectural authorities frequently have taken the attitude that suspension, even though it may amount to dissolution in fact, was not in need of approval by the prefectural governor's office.

The Insurance Chiefs in the prefectures visited were advised to take a more active stand in current attempts to preserve and rehabilitate National Health Insurance. The matter will be taken up with the appropriate officials in the Ministry of Welfare.

SECTION X MEMORANDA TO JAPANESE GOVERNMENT

None.

CRAWFORD F. SAMS
Colonel, Medical Corps
Chief

1 Incl: Instructions concerning Assistance for Livings of Physically Handicapped Persons (Sha-Hatsu No. 1580).

NOTE: Publication of the Weekly Communicable Disease Report for the week ending 28 February and the Monthly report for the four-week period ending 28 February will be delayed because of the failure to receive current reports from 24 prefectures. This was in large part due to the recent strike of employees of the Ministry of Communications.

Model Health Center

Col. Crawford F. Sams, Chief of Public Health and Welfare Section, GHQ, SCAP, will officially open the Model Health Center in Suginami Ward, Tokyo, on Monday, 15 March, with a brief lecture on the purpose, function and organization of a health center.

Following the opening address, Public Health and Welfare and Ministry of Welfare officials in addition to the Model Health Center staff, will participate in conducting the initial week long program, designed to show the 12 functions of a health center, by means of lectures and clinical and field demonstrations.

Carefully planned and prepared American and Japanese visual and auditory aid material, depicting the functions and organization of a health center, has been placed throughout the center.

In addition to the demonstration periods, outlined in Section VII, Public Health and Welfare Weekly Bulletin #61 (22-28 February) an addition period, 26 April to 1 May, has been planned for Japanese Public Health Officials.

Every effort has been made to make these demonstrations as complete as possible. The value and importance the Model Health Center holds in the reorganization, expansion and improvement of all health centers in Japan cannot be over emphasized.

SECTION II WELFARE DIVISION

Foreign Nationals

Every prefectural governor was informed on 9 March by the Ministry of Agriculture and Forestry that canned goods for the foreign residents will be distributed on the 10th of every month, effective as of 10 March. Some delays may be anticipated but it is desired that foreign nationals accept their ration on the day designated by local officials.

On 9 March all governors of prefectures were requested by the Ministry of Agriculture and Forestry to inform the Ministry on the following:

- a. What kinds of canned goods were being offered foreign nationals.
- b. What action is being taken by prefectures to make available assorted kinds of canned goods.

The Ministry desires that prefectural officials offer a variety of choice in canned goods.

Kure and Hiroshima have been directed to furnish the Ministry information on - what kinds of canned goods have been received by them during the last six months and why only Bean Soup and Corn Starch has been offered to foreign nationals.

Distribution of Child Welfare Officials

The Ministry of Welfare has authorized the following number of Child Welfare officials. Totals in the first column were previously mentioned in Public Health and Welfare Weekly Bulletin #54, for the period 4-10 January.

DISTRIBUTION OF CHIEF WELFARE OFFICIALS

Prefecture	Officials Authorized in 1947	Increasing Number of Officials prearranged in 1948	Total
Hokkaido	17	11	28
Aomori	3	3	6
Iwate	3	2	5
Miyagi	5	2	7
Akita	3	1	4
Yamagata	4	2	6

Technical Bulletin on Welfare Subjects

Public Health and Welfare Technical Bulletin concerning welfare subjects carry the Symbol PH-TB-WEL, and are intended for the use of the Welfare Officer of the Military Government Team. One copy of a Technical Bulletin is sent to each Military Government Team with the Public Health and Weekly Bulletin. The following Technical Bulletins have been issued concerning welfare matters:

	Subject	Month Issued
TB-PH-WEL-1	Foreign Nationals	January 1947
TB-PH-WEL-2	Japan Social Work Association	August 1947 (Revised)
TB-PH-WEL-3	License Agencies for Relief in Asia	January 1948
TB-PH-WEL-4	Financing of Community Welfare Activities in Japan	September 1947
TB-PH-WEL-5	Glossary of Japanese Welfare Terms	September 1947
TB-PH-WEL-6	Duties and Functions of Welfare Officers, Military Government	October 1947
TB-PH-WEL-7	Minsei-iiin	November 1947
TB-PH-WEL-8	National Welfare Agencies in Japan	December 1947
TB-PH-WEL-9	Foreign Nationals Ration	January 1948
TB-PH-WEL-10	National disaster Law	January 1948
TB-PH-WEL-11	The Child Welfare Law	February 1948

A translation of the Chief Welfare Law was sent out with TB-PH-WEL-11. Also of importance to Welfare Officers is a Technical Bulletin, subject: "Administration of Health, Welfare and Social Insurance in Japan". TB-PH-Atm-3, dated February 1948. Section I, "Ministry of Welfare" and Section II, "Public Welfare and Social Insurance" have been issued.

Information concerning the Social Insurance Programs is contained in TB-PH-SS-1, subject: "Social Insurance in Japan", dated March 1948.

SECTION III DENTAL AFFAIRS DIVISION

The third national dental examination will be held 4 May in Tokyo, Osaka and **Kokure**. Members of the board have been selected by the Ministry of Welfare.

Strict surveillance should be maintained to assure that dental technicians and others without dental license are not practicing dentistry.

SECTION
VETERINARY AFFAIRS DIVISION

A representative of this Division attended a conference in Kyoto for the purpose of revising the present Tuberculosis Eradication Law in effort to stimulate the use of the intradermal method of testing in lieu of the subcutaneous method now employed. A discussion on payment of indemnities was held and received favorable comment from all parties concerned.

Animal Disease Report

The following outbreak of diseases was reported by the Ministry of Agriculture and Forestry for the period of 6 - 12 March.

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Chiba	Swine Plague	1

Quarantine

Seventy head of hogs entered the quarantine station at Yokohama to undergo a period of quarantine prior to being shipped to Okinawa. These hogs were treated with anti-hog cholera and swine erysipelas vaccines.

SECTION V
NURSING AFFAIRS DIVISION

The National Tuberculosis training program for nurses included five months of theory and experience as outlined below.

Theory which included the medical aspects of Tuberculosis was 157 1/2 hours and nursing aspects total of 157 1/2 hours.

The practical training of a two months period was divided into the following subjects and hours:

A. clinical Practice -- Anti-Tuberculosis Association Clinics 18 hours (1/2 week)

- 1) Assisting with Physical Examinations.
- 2) Giving Instruction and Advice.
- 3) Assisting with X-ray and Mass Examinations.

B. Home visiting to Tuberculous Patients 90 hours (2 1/2 weeks)

- 1) Visits to newly diagnosed patients -- teaching isolation technique, nursing care to some member of family, value of sanatorium care and importance of contact examinations. (Nurses gave and read tuberculin tests in the home)
- 2) Follow-up on known cases of tuberculosis who had lapsed in coming to clinic for pneumothorax.

C. Sanatorium Nursing Experience -- Hoseiyen Sanatorium 60 hours (1 week)

- 1) Routine nursing care
- 2) Nursing care to operative patients.
- 3) Observation of Tuberculosis Surgery.
- 4) X-ray practice, fixing and developing.
- 5) Laboratory practice, feces, urine, sputum and blood examination.

D. Observation of programs at Research Institute and Keio Nutrition Institute, 4 weeks.

- 1) Demonstration and practice of use of Tuberculin and BCG Vaccine.
- 2) Demonstration and practice in Laboratory examinations.

- 3) Demonstration and pathological anatomy in TB (case studies).
- 4) Demonstration and practice in food preparation and diet for the Tuberculous patient.

The 25 nurses from 15 prefectures who have just completed this special course are well qualified to assist in the prefectural Tuberculosis program and should be contacted for this work and given supervision. The following were represented in this five-month course: Niigata, saga, Fukuoka, Ishikawa, Tokyo-To, Aichi, Fukushima, Gifu, Akita, Iwate, Oita, Toyama, Chiba, Miyazaki and Hyogo.

SECTION VI SUPPLY DIVISION

Production

The weekly report of production of DDT Duster & Equipment for mosquito and fly control programs indicates the following data for 29 February - 6 March:

	Balance 28 Feb	No.Mfgd. 29 Feb - 6 March	Total on Hand	Total Shipped to Date 6 March	Balance on Hand
DDT Duster	13,194	2,200	15,394	1,344	14,050
Sprayer Knapsack Type 3 gal, capacity	23,380	2,126	25,506	354	25,152
Sprayer pump type semiautomatic	11,936	620	12,556	30	12,526
Sprayer hand type 1/2 gal, capacity	11,014	600	11,614	100	11,514
Power Duster	16	11	27	0	27
	<u>59,540</u>	<u>5,557</u>	<u>65,097</u>	<u>1,828</u>	<u>63,269</u>

A total of 4,531,087 lbs. of 10% DDT Dust, 342,748 gallons of 5% DDT Residual Effect Spray, and 189,450 Vials of Typhus Vaccine represents total stocks on hand in wholesale houses of Ministry of Welfare as of 6 March.

Distribution

In the period 29 February to 6 March a total of 1,828 pieces of spraying and dusting equipment were shipped to ten prefectures under Ministry of Welfare supervision. Details of these shipments follow:

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsack Sprayer</u>	<u>Semiautomatic Sprayer</u>	<u>Hand Sprayer</u>
Aomori	408	0	0	0
Fukushima	0	204	0	0
Kanagawa	240	0	0	0
Niigata	480	0	0	60
Ishikawa	24	0	0	0
Aichi	192	0	0	0
Osaka	0	0	0	40
Hyogo	0	80	0	0
Hiroshima	0	70	0	0
Tokushima	0	0	30	0
TOTAL	1,344	354	30	100

SECTION VII NARCOTIC CONTROL DIVISION

The January report of narcotic control activities, Ministry of Welfare, contains the following information:

Total registrants	76,253
Arrests - Registered persons	17

Unregistered persons	60
Conviction - Registered persons	6
Unregistered persons	24
Thefts of narcotics	53
Losses by fire	6

Penalties for registrants varied from 6,000 yen fine to one year six months penal servitude and for non-registrants from 200 yen fine to two year penal servitude plus 10,000 yen fine. In addition to the above figures, charges against 21 nonregistrants were dropped because of lack of evidence. As a result of inspections by narcotic agents, 19 registrants were admonished and five cases were disposed of administratively for minor technical violations.

The decrease in the number of registrants from 88,420 in December 1947 to the present figure is attributed to:

1. Exempt narcotic dealers who did not re-register because of the scarcity of exempt narcotic preparations.
2. Pharmacies who have stocked no narcotics, filled no narcotic prescriptions, and therefore did not re-register.
3. Narcotic dealers who through negligence or oversight allowed their registration to lapse.

Reports from Tokyo-To indicate 7 to 8 percent of the delinquent registrants in Japan probably re-registered in February. The Ministry of Welfare has been advised as follows:

1. To advise all prefectural narcotic agents to circularize delinquent registrants advising them that penalties will be incurred if registration is not made immediately.
2. To have all registrants notified in November of each year that their registration certificates expire 31 December.
3. To provide penalties to be imposed for late registration.

During the training school for narcotic agents which opens in Tokyo 15 March, preventive measures to curtail thefts will be thoroughly discussed.

Late reports from four prefectures hindered preparations of the January report by the Ministry of Welfare. Headquarters Eighth Army Military Government has advised prefectural Military Government Teams will be instructed to take corrective action to assure that monthly reports are forwarded by Japanese prefectural officials to the Ministry of Welfare before the 10th of each month.

SECTION VIII PREVENTIVE MEDICINE DIVISION

Sanitation Section

Sanitary teams are to be organized on the basis of 1 per 10,000 population. In case of necessity these may be increased to as many as one team per 2,000 people. The Japanese government has set up in its budget, funds to pay to the prefectures, 50% subsidy for the labor costs and 33-1/3% of the cost of sanitary supplies and equipment to finance the Sanitation Program.

The teams will consist of:

- 1 Sanitary inspector and foreman.
- 1 Assistant foreman who will keep record and supervise workers.
- 4 workers.

This is designed as a flexible unit a part of the sanitation section of each health center, that can be adapted to the various operations necessary to environmental sanitation. The teams should be assigned to a specific area within the health center district and are responsible for the control of:

- a. Street sanitation.
- b. Cleaning of open sewers and drains.
- c. The removal and disposal of accumulations of refuse, debris or waste material which might contribute to a public health hazard.

d. The control of flies, mosquitoes, fleas, lice, rodents and any other vector of insect borne diseases, the control to consist of elimination of breeding areas, to make the necessary inspection of private and public premises, water supplies, waste collection and disposal facilities necessary to plan the work program within the district and the procurement of supplies and equipment, necessary in control programs.

SECTION IX SOCIAL SECURITY DIVISION

General

Mr. Dale L. Rose has been appointed Social Insurance Analyst for the Social Security Division, Public Health and Welfare, GHQ, SCAP.

Ministry of Welfare officials reported on the agenda of the meetings held 3 and 4 March in Tokyo which were attended by the chiefs of all prefectural insurance sections and branch offices and all social insurance referees. The conference emphasized: (1) the need for greater efforts in collecting premiums from employers delinquent in reporting or payments and (2) the responsibilities and functions of the referees. It was outlined that the referees should devote themselves to acquainting the public with the right of appeal and appeal procedures pending the period when their time will be consumed with actual hearings.

Medical Care Pavement under Social Insurance

Representatives of a sub-committee of the Social Insurance Investigating Committee presented a verbal report on the surveys they had conducted relative to the cost of medical care under the Health Insurance program. The Medical Fee Calculating Committee of the Insurance Bureau, Ministry of Welfare, of which representatives of the above committee are members, held several meetings regarding the fee-for-service for medical care under all insurances. Similar committees exist in the prefectures.

As previously announced, the national committee did recommend an increase in the fee for medical services for all social insurances except National Health Insurance. Because of a difference of opinion, the fee-for-service rate now is being further surveyed by both the Medical Association and the Research and Statistical Section in the Insurance Bureau relative to the probability of setting a new rate for the ensuing fiscal year. One subject where there is a wide difference of opinion is the cost of medical supplies and the amounts available through official rationing channels. The Sub-Committee has reports that approximately 80% of required medicines are available through the rationing system, and the representatives of the doctors claim only about 20% are available. Upon conferring with the Medical Supply Division of Public Health and Welfare Section, it was learned that the supply of rationed medicines is increasing and that approximately three-fourths of required medicine is being produced and distributed through channels in sufficient quantities to meet needs. The greatest difficulty which undoubtedly influenced the medical representatives' opinion is that doctors frequently fail to follow through on their requests for medicines. For reference regarding the rationing system, refer to Public Health and Welfare Weekly Bulletins No.53 for the period of 28 December 1947 - 3 January 1948, No.59 for the period 9 - 14 February; No.60 for the period 15 -21 February, and No.61 for the period 22 -28 February. As much of the difficulty regarding the fee-for-service rate is affected by the National Health Insurance program, the opinions from the various prefectures have been effective in determining the general recommended rate.

National Health Insurance

In some prefectures officials of the Welfare Bureau's Insurance Section were found to continue holding positions in the prefectural Federation on National Health Insurance Associations in addition to their government positions. In some cases a part of the total pay of such officials was derived from this source. For example, the Chief of the Subsection in charge of National Health Insurance would act simultaneously as representative or executive secretary of this Federation, or the Insurance Chief himself would hold a director's post. Wherever such practices were discovered the officials concerned were advised that, regardless of the alleged "savings" due to such cumulation of offices, they were not in keeping with stated policies. The prefectural Federations of National Health Insurance Associations ought to represent the point of view of the insured; their personnel should be clearly divorced from that of the prefectural Insurance Section.

SECTION X MEMORANDA TO JAPANESE GOVERNMENT

<u>PHMJG</u>	<u>DATE</u>	<u>SUBJECT</u>	<u>SURVEILLANCE</u>	<u>DISTRIBUTION</u>

Subject: Survey on Parasite-egg Carriers and Result of Such Parasite Extermination in 1947-1948 Fiscal Year.

27 February (Yo-Hatsu, No.234) From: Director, Prevention Bureau To: Governor of Every Prefecture
Subject: Survey on Cleaning-workers.

27 February (Sha-B-Hatsu, No.38) From: Conferred with Director of Textile Bureau, Ministry of Commerce and Industry To: Every Local Governor
Subject: Allocation of Clothing for Needy Persons for 1947-48 Fiscal year.

28 February (Sha-B-Hatsu, No.134) From: Director, Public Health Bureau To: Governor of Every Prefecture.
Subject: Special Ration of Staple Food-stuff to In-patients.

28 February (Sha-B-Hatsu, No.88) From: Director, Medical Bureau To: Governor of Every Prefecture.
Subject: Dissemination of Pharmaceutical Knowledge and Technique.

28 February (Repatriation Relief Board. Hatsu-En, No.200) From: Director, Relief Bureau To: Governor of Hokkaido and the 6 Prefectures in Tohoku District.
Subject: The Institutions for Repatriates which are to be Established.

28 February (Hatsu-En, No.202) From: Director, Relief Bureau To: Governor of Hokkaido and the 6 Prefectures in Tohoku District.
Subject: Guidance on the Matter of rehabilitation loans.

1 March (Yo-Hatsu, No.238) From: Chief of Prevention Section To: Governor of Aomori Prefecture and 24 other Prefectures.
Subject: On the Investigation Chart of the Activities of the Tuberculosis Care Committees.

1 March (Yo-Hatsu, No.239) From: Chief of Prevention Section To: Governor of Aomori Prefecture and other 13 Prefectures.
Subject: On the Investigation of the Facilities for Tuberculosis Control in Health Centers.

3 March (Yo-Hatsu, No.250) From: Chief of Prevention Section To: Head of Sanitation Department of the Urban and Local Prefectures.
Subject: Investigation on the Progress of the Formation of the Tuberculosis Control Woman's Association

3 March (Yo-Hatsu, No.256) From: Director of the Disease Prevention Bureau To: Governor of the Urban and local Prefectures.
Subject: The Renewal of the Designated Term of the Substitute Clinics for Venereal Diseases.

3 March (Ji-Hatsu, No.102) From: Director of the Children's Bureau To: Governor of Osaka-fu
Subject: The Training Course for Midwives

3 March (Ji-Hatsu, No.103) From: Director of the Children's Bureau To: Governor of the Urban and local Prefectures.
Subject: National Subsidy on Local Children's Welfare Committee Expenses, Expenses-for founding the Children's Welfare Officials, and Expenses for the Guidance of the Members of Children's Committee in the Fiscal Year of 1947.

4 March (Yo-Hatsu, No.258) From: Director of the Disease Prevention Bureau To: Head of Sanitation Department of the Urban and Local Prefectures.
Subject: Dealing of the Agricultural Lands Owned by Mental Diseases Hospitals, Tuberculosis Hospitals and Leprosariums.

4 March (Yo-Hatsu, No.259) From: Director of the Disease Prevention Bureau To: Head of Sanitation Department of the Urban and Local Prefectures.
Subject: On the Progress Report of the Results of Spot Researches by National Institute of Health.

4 March (Ji-Hatsu, No.104) From: Director of the Children's Bureau To: Governor of the Urban and local Prefecture.
Subject: On the Application for the Allocation of Cement for the Use of Children's Institutions in the 3rd Quarter.

4 March (Ji-Hatsu, No.105) From: Director of the Children's Bureau To: Governor of the Urban and local Prefecture.
Subject: Holding Business Conference of Chief of Children's Sections of the Urban and Local Prefectures.

4 March (Ko-ho-Hatsu, No.150) From: Director of the Public Health Bureau To: Governor of the Urban and local Prefecture.
Subject: Increased Distribution of Food to the In-Patients.

5 March (Yo-Hatsu, No.261) From: Director of the Disease Prevention Bureau To: Governor of the Urban and local Prefecture.
Subject: Allotment of the budget for the payment of Salaries for the Local Preventive Personnel.

5 March (Ji-Hatsu, No.108) From: Director of the Children's Bureau To: Governor of Aichi Prefecture.
Subject: The Application for the Admission to the National Juvenile Correction Institutions.

5 March (Ko-ho-Hatsu, No.155) From: Director of the Public Health Bureau To: Governor of the Urban and local Prefecture.
Subject: On the Use of the Classified Table of Occupations Used at the National Census of 1946.

1 March (Ho-Matsu, No.284) From: Director of the Insurance Bureau To: Prefectural Governor
Subject: National Subsidy for the Establishment of Clinic Facilities fo National Health Insurance in the Year of 1948.

2 March (I-Matsu, No.97) From: Director of Medical Affairs Bureau To: Prefectural Governor
Subject: Business Manager of Agricultural Associations.

2 March (Sha-Matsu, No.39) From: Director of Social Affairs Bureau To: Prefectural Governor
Subject: Participation of Government and Public Officials to Community Chest and Fund Allotment to the Public Institutions.

2 March (Repatriation Relief Board, Hatsu-Gyo, No.210)	From: Director of Relief Board, Repatriation Relief Bureau Subject: Reporting on list of Koreans Permitted to Return to Korea by General Headquarters.	To: Prefectural Governor
3 March (Repatriation Relief Board, Hatsu-Shi, No.214)	From: Director of Relief Board, Repatriation Relief Bureau Subject: Conference on the Loan of Rehabilitation Fund.	To: Prefectural Governor
4 March (I-Hatsu, No.96)	From: Director of Medical Affairs Bureau Subject: Employment Exchange for Nurse.	To: Prefectural Governor
4 March (Sha-Hatsu, No.40)	From: Director of Social Affairs Bureau Subject: Guidance and Supervision of National Relief Association.	To: Prefectural Governor
4 March (Sha-Hatsu, No.41)	From: Director of Social Affairs Bureau Subject: Policy on Cash Assistance under Daily Life Security Law for Persons who have some income.	To: Prefectural Governor
4 March (Sha-Hatsu, No.43)	From: Director of Social Affairs Bureau Subject: Investigation of Progressing Condition of Construction of Facilities Under Urgent Living Relief Work and Daily Life Security Law.	To: Prefectural Governor
4 March (Sha-Hatsu, No.44)	From: Director of Social Affairs Bureau Subject: Nation-wide Investigation of Relief Work for the Indigent Persons under Daily Life Security Law.	To: Prefectural Governor
8 March (Yo-Hatsu, No.270)	From: Director of Prevention Bureau Subject: Additional Research Work on Japanese Encephalitis.	To: Governor of Okayama Prefecture
8 March (Yo-Hatsu, No.271)	From: Director of Prevention Bureau Subject: Putting a Mark for DDT Dusting on Steamship Passengers between Aomori and Hakodate.	To: Chiefs, Health Divisions, Hokkaido and Aomori
8 March (Sha-Hatsu, No.46)	From: Director of Social Bureau Subject: Report on Actual Payment of Disbursement to Indigent Persons under Daily Life Security Law.	To: Governor of the Prefecture
10 March (Yo-Hatsu, No.281)	From: Director, Prevention Bureau Subject: Survey on Isolation Hospitals, and Isolated Wards.	To: Governor of the Prefecture
10 March (Yo-Hatsu, No.282)	From: Director, Prevention Bureau Subject: Custody of Imported Medicines.	To: Governor of Hokkaido
10 March (Hatsu-ken, No.15)	From: Vice-Minister Subject: Subsidies for Expenses of Officials for Improvement of Nutrition for 1947-48	To: Governor of the Prefecture
4 March (Sha-Hatsu, No.42)	From: Director of Social Affairs Bureau Subject: Closing of Community Chest Drive.	To: Prefectural Governor
4 March (Sha-Hatsu, No.45)	From: Director of Social Affairs Bureau Subject: Organization of Local Committee for Assistance to the Handicapped Persons.	To: Prefectural Governor
11 March (Yo-Hatsu, No.288)	From: Director, Prevention Bureau Subject: Monthly Report of Relief for Lepers.	To: Governor of Kagawa Prefecture
11 March (Hatsu-ken, No.17)	From: Minister Subject: National Subsidies for Expenses of Full-time Officials for Health Statistics.	To: Governor of the Prefectures
11 March	From: Director, Public Health Bureau	To: Governor of the Prefectures

(Ko-Hatsu-ken, No.166)

Subject: Change of Standard Fee for Performance of Physical Examination of Japanese Employed in Connection with Occupation Forces.

4 March (Sha-Hatsu, No.47)	From: Director of Social Bureau Subject: National Subsidies for Rehabilitation Fund to Indigent Persons.	To: Governor of the Prefectures
4 March (Repatriation Relief Board, Hatsu-Shi, No.229)	From: Director, Relief Bureau Subject: National Subsidies for Rehabilitation Fund to Indigent Persons.	To: Governor of the Prefectures
11 March (Repatriation Relief Board, Hatsu-Shi, No.234)	From: Director, Relief Bureau Subject: Enforcement of Rehabilitation Fund.	To: Governor of the Prefectures
12 March (Kai-Hatsu, No.181)	From: Chief, Accounts Section Subject: Report on General Accounts for 1947-48.	To: Governor of the Prefectures
12 March (Repatriation Relief Board, Hatsu-Shi, No.236)	From: Director, Relief Bureau Subject: Survey on organization Received Rehabilitation Fund.	To: Governor of the Prefectures
12 March (Repatriation Relief Board, Hatsu-Shi, No.240)	From: Director, Relief Bureau Subject: Procedure of application for Rehabilitation Funds.	To: Governor of the Prefectures
13 March (Kai-Hatsu, No.184)	From: Chief, Accounts Section Subject: Delivery of a Sanatorium and equipments.	To: Governor of Fukushima Prefecture
13 March (Kai-Hatsu, No.187)	From: Chief, Accounts Section Subject: Signature and Number on a Certificate of Mutual Aid Association of Officials of Welfare Ministry.	To: Governor of the Prefectures
13 March (Ko-Ho-Hatsu, No.168)	From: Director, Public Health Bureau Subject: Subsidies for Expenses of Fulltime Officials for Health Statistics at Prefectural Offices.	To: Governor of the Prefectures
13 March (Repatriation Relief Board, Hatsu-Gyo, No.241)	From: Director of Relief Bureau Subject: Additional of Expense Regarding Second Repatriation of Germans and Indonesians.	To: Governor of Kanagawa Prefecture
13 March (Repatriation Relief Board, Hatsu-Gyo, No.242)	From: Director of Relief Bureau Subject: National subsidy for Expense for Rehabilitation Fund for Needy Persons for 1947-48.	To: Governor of the Prefectures
13 March (Repatriation Relief Board, Hatsu-Gyo, No.245)	From: Director of Relief Bureau Subject: Opening of an Exhibition on Industries for Rehabilitation of Repatriates, etc.	To: Governor of the Prefectures
9 March (Ji-Hatsu, No.281)	From: Director, Children Bureau Subject: Method of Allocation of building materials for Child Welfare Institutions.	To: Governor of Shizuoka Prefecture
13 March (Ichi-Fuku, No.1871)	From: Director of Demobilization Bureau Subject: Submitting of Investigation of moners borne by Demobilization Section.	To: Chief-accountant, every Prefecture

SECTION II
WELFARE DIVISION

National Relief Association (Dobo Engo Kai)

Instructions were issued by the Ministry of Welfare on 7 February Prohibiting Prefectural officials from holding office in the prefectural branch of Dobo Engo Kai and directing the Association to secure office space outside the prefecture building. (References: Public Health and Welfare Weekly Bulletin, No.61 for period 22 - 28 February, subject: Dobo Engo Kai and Ministry of Welfare Instruction (Hatsu-sha No.17, dated 7 February). The national office of Dobo Engo Kai issued similar instructions dated 7 February concerning, "Organization of the National Relief Association and Management of its Activities". In compliance with these instructions each prefecture branch of the Association has changed its chief and moved its office. The situation as of 10 March is reported to be as follows:

1. Prefecture branches of the National Relief Association where the Prefectural governors have already been replaced by private citizens as their chiefs: Iwate, Miyagi, Gumma, Saitama, Tokyo, Yamanashi, Shiga, Kyoto, Shimane, Oita, Kagoshima and Ehime. (Total - 12 Prefectures).

2. Prefecture branches of the National Relief Association where the prefectural governors are no longer their chiefs, pending the nomination of their successors from among private citizens: Hokkaido, Yamagata, Fukushima, Ibaraki, Tochigi, Chiba, Kanagawa, Niigata, Toyama, Ishikawa, Fukui, Nagano, Gifu, Shizuoka, Aichi, Mie, Osaka, Hyogo, Nara, Wakayama, Tottori, Okayama, Hiroshima, Yamaguchi, Tokushima, Kagawa, Kochi, Fukuoka, Saga, Nagasaki and Kumamoto. (Total - 31 Prefectures).

3. Prefecture branches of the National Relief Association whose offices which were in the promises of prefectural governments have already been removed to private sites: Hokkaido, Aomori, Iwate, Miyagi, Akita, Yamagata, Fukushima, Ibaraki, Tochigi, Gumma, Saitama, Tokyo, Kanagawa, Niigata, Toyama, Ishikawa, Fukui, Gifu, Shizuoka, Aichi, Mie, Shiga, Kyoto, Osaka, Hyogo, Wakayama, Tottori, Yamaguchi, Kagawa, Ehime, Kochi, Nagasaki, Kumamoto, Miyazaki and Kagoshima. (Total - 35 prefectures).

Public Assistance

Questions have been frequently raised regarding the status of welfare institutions formerly under the Mutual Assistance Association for Disabled (kyojo kai) and similar dissolved organizations. For guidance of the field, institutions from the National Government to the Prefectures state that assets will become the property of the government and will not be dissipated at time of dissolution. Such welfare institutions, if it is necessary that they continue to operate, will do so under the direction of, and as, a national or prefectural (public) agency. (References: Office of Prime Minister and Ministry of Welfare Ordinance #1, dated 31 January 1948 and Ministry of Welfare Ordinance #4, dated 31 January 1948).

In order to clarify the confidential nature of information secured concerning welfare clients, a directive has been issued by the Chief, Social Affairs Bureau, Ministry of Welfare, to the prefectural governors, Social Affairs Bureau Instruction No.399 (Sha-Hatsu #399) subject: Handling of case records of households requiring protection, dated 19 March.

This directive provides that: "In dealing with the protection of needy households, public officials, such as these working with the Local Administrative Office, city town or village and the welfare commissioners (minsei-iin) are required to keep strictly secret the knowledge concerning privacy of persons which has been obtained in the course of performing their duties.

They should not make public such privacy, or allow other persons access to the case records. Care and discretion must be exercised when it is necessary to discuss cases in the welfare commissioner councils so that the needy persons involved will not suffer embarrassment.

You are advised herewith to see to it that the privacy of the persons requiring protection will be kept strictly secret except for official purposes in the handling of cases by officials and welfare commissioner concerned in meting out protective measures".

Tokyo Conference of Prefecture Chief of Children's Sections

Chiefs of Children's of Prefectural Departments of Welfare met in Tokyo, 18 and 19 March for indoctrination in the Child Welfare Program, by Ministry of Welfare officials, This principle discussed at the conference were:

1. Duties of child welfare officials and head of stations.
2. Discussion of duties and aims of child welfare boards.
3. Relationship of child welfare officials and child welfare workers. (Minsei-iin)
4. Discussion of importance of child welfare stations.
5. Definition of nursing teachers and the proposed program for training.

SECTION III VETERINARY AFFAIRS DIVISION

Animal Disease Report

No cases were reported for weekly period ending 19 March. (Source: Ministry of Agriculture and Forestry).

Quarantine

A final inspection was made of 70 head of hogs and their release from quarantine approved for shipment to Okinawa on 22 March.

SECTION IV NURSING AFFAIRS DIVISION

Education

The National Refresher Courses in Tokyo which is being sponsored by the Ministry of Welfare and National Nurses Association for Children nurse instructors is proceeding favorably. These nurses have been selected as leaders from their hospitals and will return to from the teaching nucleus for the class A Schools.

Tokyo Model Demonstration School of Nursing

Entrance examinations were given 15 March. St. Lukes have selected 20 students out of 65 applicants. To date, the Japanese Red Cross has 32 students from the prefectures and others are being selected from Tokyo area.

Enough coal has been secured to allow the nurses bath water once a week.

Okinawa National Hospital School of Nursing

The program for the initial class has met with such favorable response that applications exceed the quota of 40 students that can be accepted. The National Hospitals and the Ministry of Education are endeavoring to secure the services of the excess applicants. This is a real step forward in nursing education.

National Nurses Association

Plans for the National Nurse's Association meeting to be held in Kyoto 26-27-28 April are nearing completion. The buildings for the use of the group as well as section meetings have been arranged: transportation and billeting have been provided. Representatives from Public Health and Welfare, GHQ, SCAP will attend and confer with leaders as they discuss their National problems and plans for the future. Military Government officials are invited to attend any of the meetings. Cooperation and assistance received from all groups has been appreciated. To date there are approximately 20,000 active members.

Personnel

Miss Agnes Des Marais, Public Health Nurse has arrived here for orientation prior to assignment to Miyagi Prefecture as the Public Health Nurse.

SECTION V SUPPLY DIVISION

Production

The weekly report of production of DDT Duster and Spraying Equipment for mosquito and fly control programs indicates the following data for 7 - 13 March:

	Total Mfgd. to date 6 Mar.	No. Mfgd. 7-13 Mar.	Total Mfgd. to date 13 Mar.	Total Shipped to date 13 Mar.	Balance On Hand
DDT Dusters	14,050	1,600	15,650	871	14,779
Sprayer, knapsack type, 3 gal capacity	25,152	1,590	26,742	356	26,386

Miscellaneous	-		250	"	-	
Total	289,090		50,520	gal.	174,970	vials

(*) To replace losses during shipping.

Concerted efforts have been made by the Medical Affairs Bureau, Ministry of Welfare, during 1947 to supervise the quality of essential medicine production and to investigate production method and final products to be assured that essential medicines meet adequate standards. Random samplings of manufacturer, wholesaler, and retailer stocks for subsequent assay tests were made on all types of medicines, injections, sulfa drugs, venereal disease control drugs, anthelmintic, etc. A total of 6,039 samples were tested, of which 3,782 failed assay tests. Companies manufacturing and marketing medicinals without proper license were prohibited from further manufacture. Willful violators were prosecuted and stocks confiscated. Further investigations with no relaxation of effort will be carried out by the Ministry to assure that only top quality medicinal products will be marketed for Japanese consumption.

Distribution

A total of 2,443 pieces of dusting and spraying equipment were distributed to ten prefectures during the period 7 - 13 March under direction of the Ministry of Welfare, as follows:

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsack Sprayer</u>	<u>Semiautomatic Sprayer</u>	<u>Hand sprayer</u>
Aomori	0	0	300	0
Yamagata	0	12	0	0
Fukushima	0	144	0	0
Tokyo	0	50	6	0
Shizuoka	0	0	696	0
Nagoya	367	0	0	0
Osaka	0	0	0	80
Hiroshima	0	0	0	84
Miyazaki	504	0	50	0
Fukuoka	0	150	0	0
Total	871	356	1,052	164

In addition to the x-ray film agencies listed in previous issues of the Weekly Bulletin, the following have been designated by the Konisiroku Photo Industries Company.

ADDITIONAL KONISHIROKU X-RAY FILM AGENCIES

SECTION VI NARCOTIC CONTROL DIVISION

Close liaison between Tokyo-To narcotic agents and the police resulted in the arrest of the criminal and the recovery of all the narcotics on the day following the burglary of a Tokyo hospital by a former employee. In addition, the police reported the arrest of the person responsible for the burglary of two other hospitals. During the Narcotic Training School which is now being held in Tokyo, emphasis has been placed on the necessity of narcotic agents investigating each reported narcotic theft or burglary and the necessity of enlisting the aid of the police in each such instance.

A prefectural pharmaceutical affairs official, who was charged with stealing and selling narcotics while on a mission to receive some X-ray film from a warehouse, was found guilty and given a suspended sentence of three years penal servitude and 5,000 yen fine. The procurator immediately appealed the case to the Tokyo Higher Court since the Prosecution Section of the Attorney General's Office has taken a strong stand against officials who are guilty of malfeasance in office especially with regard to narcotics.

SECTION VII PREVENTIVE MEDICINE DIVISION

Sanitary Engineering

Waterworks and Sewerage Construction: The need for repair and expansion of Japanese water works and sewerage systems is becoming increasingly important both from a public health and economic standpoint. It is expected that greater quantities of construction materials will become available during the coming year. Requests for materials and grants-in-aid from cities, town and villages for waterworks and sewerage projects must be approved by the local governors prior to their submission to the national government. It is important that the governors consult both the Public Works Department (Doboku-bu) as well as the Sanitary Department (Eisei-bu) before approving any project.

Public Health and Welfare Section will screen the requests submitted and set up priority lists of projects to facilitate the most equitable distribution of materials made available. It is recommended that Military Government Team Public Health Officers contact the Military Government Region Sanitary Engineer and request that project designs be reviewed by him prior to sending them to the national government. Team Commanders and Commerce and Industry officers should be advised that Military Government Sanitary Engineers are available. After construction materials have been released to the prefectures further spot checks should be made by Military Government Teams to insure their proper usage. The Public Health officials should encourage the prefectural Sanitary Department to work more closely with the Public Works Department in order that a joint concurrence may be obtained on all public works projects related to public health. A similar procedure of joint approval has been established at the national level between the Ministry of Welfare and the Construction Board.

SECTION VIII MEDICAL SERVICE DIVISION

Civilian Hospital Strength Report for week ending 20 February shows 3,401 hospitals with a capacity of 208,179 beds of which 96,905 were occupied. During this same period, 305,429 out-patients were treated.

Civilian Hospital Strength Report for week ending 27 February shows 3,429 hospitals with a capacity of 208,133 beds of which 98,179 were occupied. During this same period, 203,330 out-patients were treated.

Election of officers to the Japan Medical Association was completed on 9 March, culminating the efforts of two years of reorganization work involving all constituent organizations. Results of the elections were very

satisfactory and reflected the sincere efforts of Japanese and Military Government personnel to produce a truly representative organization of physicians in Japan.

In accordance with the provisions of the new construction, Takahasi Akira, graduate of the Fukuoka Medical College and Director of the Teishiu Hospital, was elected president of the new association and will serve for a term of one year.

Two vice-presidents serving a one year term were elected. They were Kawakita Shintaro, director of the Kawakita Hospital in Tokyo and Izeki Takeo, general practitioner and vice-president of the Osaka Prefectural Medical Association.

Membership of the Board of Directors is represented by a good cross section of prefectures throughout the nation as well as representing special medicinal interests.

SECTION IX SOCIAL SECURITY DIVISION

Health Insurance

Military Government Welfare Officers are advised of the following changes in charts forwarded with PH-TB-SS-1:

- a. Coverage provisions: Under amount of wages taxable for Health Insurance, 2,000 yen has been raised to 5,100 yen.
- b. Benefits for Workers in private Employment Health Insurance:
 - (1) Delivery grant minimums have been raised from 300 yen to 600 yen and from 150 yen to 300 yen.
 - (2) Nursing allowance has been increased from 30 yen to 100 yen.
 - (3) Funeral benefit minimums have been raised from 600 yen to 1,800 yen and from 300 yen to 900 yen.

Appeals System

The following has been issued to prefectural social insurance officials by the Insurance Bureau of the Ministry of Welfare, Insurance Bureau Instructions No.224 (Ho-Hatsu No.224) dated 23 February.

Prefectural governors are requested to advise Chiefs of Insurance Sections and Directors of Health Insurance Societies to take immediate steps to insert the following in all notices to claimants concerning the action taken on their individual claims: "In case the insured person is dissatisfied with the amount of this insurance benefit he may, within 60 days receiving this notification, make application in writing or orally to the insurance referee for a hearing."

National Health Insurance

More than any other social insurance system National Health Insurance has depended on governmental subsidies. On the national level there is a standard grant-in-aid formula for subsidies granted to each operating association. In the local levels, however, great variation has been found to exist, and very little effort seems to be made in some prefectures by either the prefectural government or the towns and village to lend financial support, to this insurance system, although it was designed from the beginning as a community enterprise.

National subsidies to the individual association and composed of up to seven different components, to wit:

1. Clerical and other office expenses;
2. Travel expenses of staff members;
3. Public health nurses' salaries and travel expenses;
4. Salaries for insurance doctors engaged on a part-time contractual basis (whoever such arrangements have been made);
5. Publicity expenses;
6. Expenses for the construction of clinics or hospitals (wherever such are being built);
7. Special costs caused by flood damage.

In all these cases the national government bears a stated part of the cost, namely one-half of (1) above, one-third of (2) - (6), and varying amount under (7) on the basis of standard costs or, in case of (6), prior estimate.

By way of contrast, prefectural and other local subsidies have been made without regard to need and usually without specifications. Supposedly the amount of subsidy granted by the local assemblies is based upon the recommendation of the prefectural governor's office. But frequently no money is given at all. The smallness of local subsidies and the lack of continuity from year to year have proved serious obstacles to a well-planned program of financing. (Comparative data will follow.)

However, a more systematic approach to the problem reportedly is being taken in at least a few prefectures in connection with the preparation of next year's budget.

A recent staff visit revealed that two prefectural governments have announced their subsidy allotments for the 1948 fiscal year for the National Health Insurance program. The particular items for which the subsidies were allotted are: establishment of more medical care clinics; employment of public health nurses; and the information, education, and training program. The last is of considerable importance in order to educate the people in the concept and working of social insurance.

The question of exempting from doctors' income tax the income received from insured patients under National Health Insurance has been raised on several occasions. Such exemption is not possible under the law. The doctors claim their assessment is based on the number of patients they treat and not on their actual net income. The situation which gave rise to the doctors' complaint has been explained by an income tax consultant as follows: It is understood that many tax offices have long used a short-cut method in assessing the amount of tax on doctors by using information supplied by doctors' associations as to the number of patients a doctor treats in a day, month, or year and the average pay received from each patient. This is an out-of-date method, but some tax offices continue to use it because, with their lack of personnel, they consider it a time-saver. Inasmuch as doctors are privileged to deduct all operating expenses from their gross returns, it is possible that net returns are considerably less than those upon which taxes are levied. In the event that a doctor feels he has been overtaxed he should be encouraged to submit an itemized return to the district tax office in the nature of an appeal for readjustment. Where doctors claim that they do not make anything above cost on insured patients they should be encouraged to submit an appeal for an adjustment of their income tax assessment.

The National Health Insurance Statistical Branch has revealed that adequate reports on this program are not available. The reasons given are: All reports accumulated from the beginning of the program in 1938 to the beginning of the war in 1941 were destroyed by fire as a result of bombing; no reports were accumulated during the war; and the restoration of the reporting system since the war has not been rigidly enforced due to unstable financial conditions in many associations and lack of personnel. A few reports of the early activities of the program have been collected from some prefectural offices which escaped the bombing. The above reasons are acknowledged, except for the laxity in enforcing the reporting requirements since the end of the war.

A now and shorter reporting from has been instituted by the Ministry of Welfare with the following schedule: The monthly reports from the associations to the prefectural office are to be submitted on or before the twentieth of the following month, and the prefectural office forwards a compiled summary to the Ministry on or before the tenth of the next month. The annual report from the associations should be submitted to the prefectural office on or before the 31st of May following the end of the fiscal year. The prefectural office submits a compiled summary to the Ministry on or before the 31st of July. The annual reports from the associations accompany the prefecture's annual report. The annual report for 1946, however, has not been completed by many prefectures for reasons previously stated. The slowness of the reporting causes considerable difficulty in properly evaluating the progress of the program, especially during this period of changing economic conditions.

SECTION X MEMORANDA TO JAPANESE GOVERNMENT

None.

CRAWFORD F. SAMS
Colonel, Medical Corps
Chief

3 Incls:

1. Weekly Report of Cases and Deaths from Communicable Disease in Japan - Week Ending 6 March 1948.
2. Weekly Report of Cases and Deaths from Communicable Disease in Japan - Week Ending 13 March 1948.
3. Monthly Report of Cases and Deaths from Communicable Disease in Japan - Period ended 28 February 1948.

SECTION VI - Narcotic Control
SECTION VII - Preventive Medicine
SECTION VIII - Medical Service
SECTION IV - Social Security
SECTION V - Memoranda to Japanese Government

SECTION I WELFARE DIVISION

Glossary of Social Work Terms

The Japan Social Work Association has prepared a Glossary of Social Work Terms which contains Japanese words, phrases and titles most frequently used in translating material concerning welfare. The Glossary is not intended to serve as a dictionary since it does not contain all possible translations of Japanese and English welfare terms. The intention is to provide the most common and acceptable translation.

One copy of the Glossary for each Military Government Welfare Officer is being mailed with this issue of the Public Health and Welfare Weekly Bulletin.

Japan School of Social Work

The second class which graduated from the Japan School of Social Work, Tokyo, on 26 March, totaled 23 students, including four women, who completed the one year course of study.

Of the 23 students graduated a total of 14 have already secured employment. These students will be employed in the following places: Minsei-iin Federation (2) Tokyo; Setagaya Welfare Center, Tokyo; Social Affairs Section, Oita Prefecture; Children's Section, Aichi Prefecture; Children's Section, Kanagawa Prefecture (2); Social Affairs Section, Kanagawa Prefecture; Sanki-Ryo Zenkoji, Nagano Prefecture; Hodo-in, Saitama Prefecture; Osaka Community Chest; Dozen-Kai (Children's Institution) Tokyo; Social Work Association (Shakai Jigyo Kyokai) Tokyo; Maternal and Child Health Section, Children's Bureau, Ministry of Welfare.

The first class that graduated from the school in November 1947 included 39 students. The next term of the school will begin 16 April. The Japan School of Social Work now occupies the former Naval Museum Building located at No.226-2, 3-chome, Harajuku, Shibuya-ward, Tokyo.

Community Chest (National Interdependence Campaign)

The official closing date of the Community Chest Campaign (for reporting purposes) has been set for 31 March.

The previous progress report of the Community Chest Campaign reflected a total of 558,260,046 yen raised towards the national goal of 683,500,000 yen, or 81.6% of the quota. This report included "estimates" for nine prefectures (Hokkaido, Aomori, Tokyo, Kanagawa, Niigata, Ishikawa, Kyoto, Osaka and Kagoshima).

The most recent summary of the progress of the campaign, dated 20 March, includes only one "estimate" (Kanagawa Prefecture) and reflects a reasonably accurate accounting of the current status of the campaign returns based on the revised national quota of 678,200,000 yen. This summary reveals 540,619,045 yen raised, or 79.7% of the quota. The differential in this amount reported as raised in relation to the previous report is the result of "estimates" being higher than actual returns in eight out of the nine prefectures that were included in the reports under "estimated" returns.

Military Government Team Reports

Monthly Activities Reports and Special Reports received from Military Government Teams frequently carry information that is of general interest to all Military Government Welfare Officers and whenever such information is received, it will be briefed, as necessary, and published in the Welfare Division of the Public Health and Welfare Section Weekly Bulletin:

A Special Report from the Kinki Military Government Region, subject: "Community Organization", covering a resume of the Kyoto Military Government Team Monthly Activities Reports for several months, is given below because of its general content and interest.

“Citizen’s Committee”

“The background and need for a Citizen’s Committee grew out of the recognition that a well integrated and successful welfare program called for an informed, interested and responsive community in which, to develop and function. In order to have the public informed and responsive, it was necessary to build an organization representative of all segments of the community; a strong organization which would survive changes of personnel and the passage of time; an organization which would survive the withdrawal of occupation guidance and support; an organization which would be non-partisan and non-political; an organization which would, and could, insist on the maintenance of already established welfare standards and services; an organization not in competition with anyone for public recognition, instead an organization integrating and leading the community into an acceptance of what civic duties and responsibilities are within a democratic society.”

“It was also recognized that the structure and nature of Japanese Society had militated against the development of a social conscience, against the acceptance of social and civic responsibilities. In all countries, not only Japan, community organization has always lagged behind the development for social services, whereas it should have led the way and acted as the spearhead because it had the weight of public opinion behind it. Realizing that Japan had more to overcome than the public indifference which is, in varying degrees, the norm in many countries, something was called for which would stimulate, instruct and afford leadership to the community at large. It is hoped that the interest and leadership thus developed will be the source for maintaining a critical yet constructive attitude toward all welfare programs with emphasis on the public program.”

“With the foregoing in mind, it was decided to form this Citizen’s Committee immediately so that it could develop with the general program for which the foundation was being laid. Contact was made with the head of the Department of Sociology of Doshisha University. With his help a comprehensive committee of representative citizens was formed. The following professions and interests are represented on the committee: teaching, social work, law, medicine, labor, YWCA, City Council, Prefectural Assembly, Diet, the press, business and industry.”

“As a part of the orientation and to acquaint them with some of the pressing social problems, two full days during the summer were spent visiting institutions. The committee went in a body, and from 16 to 20 members visited eight representative prefectural, city and private institutions. These visits plus reports on welfare problems and needs convinced them of the need for such an organization. After the committee was organized and officers selected, the Team Welfare Officer retired to the position of advisor. The committee chairman has been tireless in his efforts, and has been rewarded by excellent response and support from all the committee members. Problems which the committee could understand and cope with have since then presented themselves in quick succession.”

“The first problem of any size was the organization for the Community Chest. In traditional Japanese fashion it was proposed, by the group of citizens who were called together to discuss the organization of the Chest movement, that the Governor, Vice-governor, Mayor and other officials be named as officers, and chairman of the various committees and sub-committees. This was vigorously opposed by those members of the Citizen’s Committee who had been asked to participate in this organizational meeting. Their insistence on an election of officers with the elimination of all officials threw the meeting into an uproar, but they carried the day. Some compromises were called for, on elections, with the result that the Governor was elected honorary chairman, and the Mayor elected one of the four consultants. All other officers were elected from among representative citizens with several members of the Citizen’s Committee being elected to six important committees, including the significant Distribution Committee.”

“The Citizen’s Committee then set itself the task of making a survey of all institutions eligible to share in Community Chest funds. A questionnaire was sent to all institutions. Those institutions not responding were personally visited by a member of the committee. A compilation was made of all the facts and figures collected. This study, financed by the Citizen’s Committee, will be given careful consideration by the Distribution Committee of the Community Chest, and some of their decisions were based on those recommendations presented by the Citizen’s Committee.”

“At a subsequent meeting one of the members summarized and commented on the new Child Welfare Law. Another member had prepared an interesting graph showing child distribution throughout the prefecture, age distribution, and other pertinent factors which will be significant in a good administration of this law. The committee then went on record as being opposed to the Governor’s appointee to the head of the Child Welfare Section. This was followed up by a visit to the Governor by about 15 committee members voicing their opposition to this appointment. They were not satisfied with the reasons set forth by the Governor for supporting his appointment, and they will continue to offer opposition.

At the same time they approached the Governor about buildings in the Imperial Palace Compound which they would like to see used for a Community Center. The Governor's reaction was favorable, and even though there are other requests, he promised them full consideration."

"The newly appointed Kyoto-city, Welfare Chief was invited to attend the Citizen's Committee meetings and has attended and commented on his future plans. He was advised that the committee looked to him for an improved city welfare administration."

"Sub-committees will be named within the Citizen's Committee to further some of the many projects under consideration. One of these projects envisions a study plan for institutional personnel to be made in conjunction with welfare officials, the Social Work Association, as well as institutional staff who should be asked to contribute to such a study. Committee members will assist in instruction. A study will also be made by another of the sub-committees on ways and means to improve the standard of work done by the Minsei-iin."

"Throughout all of this the press members of the Citizen's Committee have given unlimited coverage to developments in the welfare field, news stories with welfare angles, feature stories, round table discussions, pictures, and straight factual reporting on institutional abuses and poor administration. That this coverage is reaching the public is evidenced by the many comments that reach the Military Government Team from the community at large."

"At the time the Citizen's Committee was formed it was planned to use it as the nucleus for an organization which would correspond to the Councils of Social Agencies in the United States. It was hoped before too long to expand it into such an organization. Great impetus will be given to such an organization if the buildings in the Palace compound are made available for a Community Center. This Community Center could also be a study center for all types of community welfare improvement projects. It would embrace such model projects as a nursery, kindergarten, clinic, playground and recreation facilities, children's library, lecture rooms, conference rooms, and be the center, as well, for training projects for welfare officials, Minsei-iin and institutional personnel. If this can be accomplished, then a solid foundation has been laid upon which a worthy community."

Japanese Red Cross Society

Junior Red Cross:

The Junior Red Cross Handbook for the use of teacher personnel, which has been in preparation since the Summer of 1947 is now at press and it is expected that it will be ##### and ready for distribution by the Japanese Red Cross, through the Military of Education, on or about 15 April.

English translations covering the text material in the Junior Red Cross Handbook have been completed for the information and guidance of Military Government personnel and are being distributed with this Bulletin (Inclosure 1).

Statistical Reports

The Ministry of Welfare reports that the following prefectures failed to send monthly statistical reports as of 27 March:

Miyagi, Ibaraki, Chiba, Nagano, Shizuoka, Mie, Shiga, Wakayama, Hiroshima, Tokushima, Fukuoka, Nagasaki and Kumamoto.

The present deadline set by the Ministry of Welfare for the receipt of "Prefectural Monthly Statistical Reports" (statistics of the previous month) is the 25th of the month. There is a tendency, on the part of many prefectures, to be consistently tardy in transmitting their monthly reports and Military Government Welfare Officers are encouraged to make every effort to impress upon prefectural welfare officials the importance of submitting their monthly reports promptly.

SECTION II DENTAL AFFAIRS DIVISION

Election of officers for the reorganized Japan Dental Association was completed 26 March. This is the first meeting held under the provision of the new democratic constitution and by-laws.

A short course designed to train Public Health Nurses as dental hygienists for ultimate employment in Health Centers if being conducted at the Tokyo Medico-Dental College by the Ministry of Welfare.

In a recent Oral Hygiene Essay Contest conducted in Osaka and Tokyo, 230,000 school children submitted entries.

SECTION III VATERINARY AFFAIRS DIVISION

Animal Disease Report

The following animal diseases were reported for the weekly period 20-26 March, submitted by the Ministry of Agriculture and Forestry:

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Saitama	Swine Plague	6
Saitama	Swine Cholera	1
Miyagi	Swine Cholera	7
Kumamoto	Swine Cholera	17

SECTION IV NURSING AFFAIRS DIVISION

Education

Graduation exercises for the 3-year clinical nursing course were held on 24 March, at the Model Demonstration School, Central Red Cross Hospital, Tokyo. Thirty-one St. Lukes students and 68 Red Cross students received diplomas. There were also 23 St. Lukes students who finished the fourth year (Post-Graduate) course and received certificates.

The four-month Public Health Nursing course was completed 27 March and certificates were awarded to 51 students who finished the course.

The five-month National Tuberculosis course sponsored by the National Tuberculosis Association was completed 27 March and graduation exercises were held at Toin Gakuen, with 25 nurses receiving certificates.

SECTION V SUPPLY DIVISION

Production

The yen value of production of medical supplies, (medicines, biologicals, dental materials, dental instruments, rubber sanitary goods, medical instruments, and surgical dressings), for February, totaled 1,054,494,050 yen. In comparison to the 1946 and 1947 production monthly averages attained, a general increase in medicine production is noted.

Compared to the 1946 production monthly average attained, February production of controlled medicines increased approximately 288,000,000 yen; non-controlled medicines, 300,000,000 yen; patent medicines, 250,000,000 yen; biologicals, 2,000,000 yen; dental materials, 5,000,000 yen; dental instruments, 12,000,000 yen; rubber sanitary goods, 11,000,000 yen; medical instruments, 8,000,000 yen; surgical dressings, 12,500,000 yen.

Compared to the 1947 production monthly average attained, February production of controlled medicine increased approximately 170,000,000 yen; non-controlled medicines, 218,000,000 yen; patent medicines, 187,000,000 yen; dental materials, 2,000,000 yen; dental instruments, 7,000,000 yen; rubber sanitary goods, 5,000,000 yen; medical instruments, 7,000,000 yen; surgical dressings, 9,000,000 yen. During February only biological production decreased below the 1947 monthly production average figure.

The decrease in biological production is not significant since adequate stocks of all vaccines are on hand to meet requirements and further production schedules have been established to provide necessary total amounts of vaccines to implement contemplated immunization programs. While the overall large increases in all other types of medical supplies are in part reflections of the revised increased price schedules now in effect, the increases at the same time reflect the additional quantities of coal, electricity, and manufacturing raw materials made available to the medical supply industry. As additional quantities of raw material become available, further increases in production may be expected.

Yen Value of Production of Medical Supplies & Equipment

	<u>Monthly Average</u> <u>1946 Production</u>	<u>Monthly Averages</u> <u>1947 Production</u>	<u>February 1948</u> <u>Production</u>
Production Controlled Med.	Yen 1,734,057	Yen 122,575,138	Yen 290,491,252
Non-controlled Medicines	59,170,511	145,154,863	363,513,917
Patent Medicines	61,168,515	138,329,888	325,794,165
Biologicals	7,746,754	22,009,946	9,282,600
Dental Instruments	2,738,162	8,915,947	15,119,439
Dental Materials	1,058,437	4,224,578	6,765,114
Rubber Sanitary Goods	---	6,756,005	11,580,262
Sanitary Materials (Surgical Dressings)	2,252,291	5,855,477	14,832,289
Medical Instruments	9,452,412	10,223,865	17,115,012
Totals	Yen 145,321,139	Yen 464,045,707	Yen 1,054,494,050

Production of biologicals for February totaled 9,282,600 yen. While there was no production of cholera and typhus vaccines, adequate stocks are on hand. February production represents a yen value of 13,000,000 below the 1947 monthly production average figure.

Production of Biologicals - February 1948

	<u>Production</u>		<u>Stock on Hand</u>	
	<u>Crude Vaccine</u>	<u>Finished Vaccine</u>	<u>Crude Vaccine</u>	<u>Finished Vaccine</u>
Cholera	—	—	875,300 cc.	4,418,470 cc.
Typhus	—	—	—	631,647 cc.
Triple				
Typhoid	3,210,000 cc.	470,000 cc.	1,977,500 cc.	11,038,250 cc.
Diphtheria				
Tox.	1,944,200 cc.	1,550,640 cc.	5,205,600 cc.	2,675,180 cc.
Smallpox	1,530,150 doses	1,640,210 doses	15,035,850 doses	2,331,680 doses
Diphtheria Antitoxin	—	60,000 cc.	—	202,829 cc.

Production of x-ray film during February increased substantially over that production reported for January. An overall increase in all sizes of film was effected. Production of x-ray film during February totaled 28,111 square meters, this representing an increase of 5,644 square meters over the production during January of 22,467 square meters. February production of x-ray film, compared to both the 1946 and the 1947 monthly production averages, is an increase of 4,000 square meters approximately.

Production of X-Ray Film (By Sizes) - 1948

Size of Film	<u>Month</u>	
	<u>January</u>	<u>February</u>
2-1/2"×3-1/2"	—	3,201 doses
4-3/4"×6-1/2"	934 dozens	1,158 dozens
5"×7"	540 dozens	3,376 dozens

6-1/2"×8-1/2"	788 dozens	5,282 dozens
8"×10"	1,514 dozens	3,547 dozens
10"×12"	14,386 dozens	13,111 dozens
11"×14"	684 dozens	422 dozens
14"×17"	1,826 dozens	2,654 dozens
Dental	—	500 dozens

Production of all types of insect and rodent control supplies and equipment during February continued satisfactorily. Adequate stocks of all types are on hand to meet all requirements. Compared to January's production, February production showed an overall increase. While Antu production remained approximately the same due to large inventory stocks presently on hand. Nekoirazu (rat poison) production was doubled, DDT duster production doubled, and all types of spraying equipment were produced in sizable quantities in accordance with the 1948 production program. Large adequate stocks of DDT dust and DDT spray are on hand.

Production - Insect and Rodent Control Supplies and Equipment - February 1948

Antu (rat poison)	1,500 kgs.
Nekoirazu (rat poison)	3,370 kgs.
DDT Dusters	9,000 each
Sprayer, knapsack type, 3 gallon capacity	7,326 each
Sprayer, pump type, semi-automatic	3,160 each
Sprayer, hand type, 1/2 gallon capacity	3,400 each
Engine Duster	27 each
10% DDT Dust distributed 1-29 February 1948	289,090 lbs.
5% DDT Spray distributed 1-29 February 1948	50,520 gallons
Typhus Vaccine distributed 1-29 February 1948	174,970 vials

The weekly report of production of DDT Duster and Spraying Equipment for mosquito and fly control programs indicates the following data for the period, 14-20 March. A total of 5,451 pieces were manufactured.

	Number On Hand <u>14 March</u>	Number Manufactured <u>14-20 March</u>	Total On Hand <u>20 March</u>	Number Shipped <u>14-20 March</u>	Balance On Hand
DDT Dusters	14,779	1,800	16,579	592	15,987
Sprayer, knapsack type, 3 gallon capacity	26,386	1,910	28,296	624	27,672
Sprayer, pump type, semi-automatic	12,244	1,030	13,274	1,074	12,200
Sprayer, hand type, 1/2 gallon capacity	11,950	700	12,650	216	12,434
Power Dusters	38	11	49	...	49
Totals	65,397	5,451	70,848	2,506	68,342

A total of 4,557,364 lbs. of 10% DDT Dust, 515,786 gallons of 5% DDT Residual Effect Spray, and 136,127 vials of Typhus Vaccine represents total stocks on hand in wholesale houses of the Ministry of Welfare as of 20 March.

Distribution

Dusting and spraying equipment for insect and rodent control distributed in the period 14-20 March totaled 2,506 pieces. The ten prefectures listed below received shipments as specified, directed by the Ministry of Welfare.

Prefecture	DDT Duster	Knapsack Sprayer	Semi-automatic Sprayer	Hand Sprayer
Aomori	0	0	300	0
Iwate	0	504	0	0

Tokyo	120	0	0	60
Chiba	288	0	0	96
Shizuoka	0	0	696	0
Aichi	180	0	0	0
Osaka	0	0	0	60
Hyogo	0	120	0	0
Saga	0	0	12	0
Kagoshima	0	0	66	0
Totals	(*)588	624	1,074	216

(*) In addition, 4 DDT dusters were taken for use by the Ministry of Welfare.

A further reduction in the number of medicines under distribution control was made possible by developments in the supply situation. Thirty-nine items were removed control, effective upon publication of Ministry of Welfare Notification No.14 in the Official Gazette dated 10 March 1948. Notification No.14 amends Notification No.70, dated 11 November 1947, by cancellation of 39 items of medicines, and substitution of two items of quinine derivatives in altered form. This leaves a total of 85 items of medicines remaining under control. Cotton sanitary materials and nourishments remain unchanged. Bismuth subsalicylate injection and mapharsen are both removed from control, but are to receive special consideration by public health officials to assure that adequate supplies are made available to public health clinics for venereal disease control. Listed below are the items removed from control.

Medicines Removed from Distribution Control

Acetosulfamin Injection
Alcohol, Diluted
Aminocordin (Pyridincarbonate Diethylamido-Solution)
Aminopyrine Tablets
Aspirin Tablets
Bismuth Subsalyclate
Bismuth Subsalyclate Injection
Calcium Chloride, Crystallized
Calcium Chloride, Injection
Chiretta, Japan, Powder
Chloroform for Anesthesia
Digitalis
Digitalis Injection
Epinephine Hydrochloride (Epirenamin)
Ether for Anesthesia
Ethyl Chloride
Hydrogen Peroxide Solution (Oxydol)
Iodine, crude
Iodine, purified
Insulin
Lobeline Hydrochloride
Lobeline Hydrochloride Injection
Mapharsen
Mercuric Chloride Disinfectant
Metigal (Thiantol)
Potassium Bromide
Procaine Hydrochloride Injection
Procaine Hydrochloride Tablets
Scopolamine Hydrobromide
Scopolia, Extract of
Silver, Colloidal
Silver, Protein
Sodium Bicarbonate Tablets
Sodium Chloride Solution, Physiological
Sulfamin Tablets
Sulfaguanidin

Sulfaguanidin Tablets
Theophylline W/Sodium Acetate (Theofirol)
Zinc Oxide Ointment

Substitutions

In place of "Quinine Iron" and "Quinine Iron Ampules" the following are substituted as items under control:

Quinine and Iron Tablets
Quinine and Iron Pills

Upon publication in the Official Gazette, dated 24 February 1948, of Ministry of Welfare Notification No.7, the new ration plan for distribution of precious metals for dental use became effective. The plan is quite similar to the ration plan of distribution for controlled medicines now in effect. The designated metals will be made available to authorized agencies by allocation at national and prefectural levels. Allocations may be claimed by presentation of ration coupons or certificates to the designated licensed sellers. Following is a list of the designated precious metals.

Designated Precious Metals for Dental Use

Platinum (5-gram plate)
Gold (5-gram plate)
Gold leaf
Gold-platinum alloy
Silver (25-gram plate)
Silver alloy for plates
Silver alloy for casting
Silver solder
Silver solder for silver alloy
Silver-tin amalgam alloy
Nickel chrome alloy solder
Karate metal
Solder metal

SECTION VI NARCOTIC CONTROL DIVISION

The training school for narcotic agents held in Tokyo from 15 to 22 March was attended by 52 narcotic agents with judicial police power. Training included classroom instruction as well as practical demonstrations in which the agents participated. Subsequent schools will be held to provide training for all the narcotic agents in Japan.

Reports have been received of pressure being placed on prefectural authorities to transfer narcotic agents who are carrying out strict enforcement of the narcotic law. Such a procedure would defeat the purpose and effectiveness of the narcotic law. Ministry of Welfare narcotic officials have been advised unjustified complaints will probably increase as illegal traffic in narcotics becomes more difficult and hazardous because of more efficient and effective enforcement.

SECTION VII PREVENTIVE MEDICINE DIVISION

Typhoid Immunizations

As a result of questions by Military Government Health Officers concerning typhoid immunizations, a summary of past instructions and an outline of present plans and policy for the current year are as follows:

Plans made during 1947 and instructions issued by the Ministry of Welfare and Public Health and Welfare implementing those plans called for immunization of all persons (except where contra-indicated) between the ages of five and sixty years, using three inoculations of TAB vaccine at weekly intervals. Said vaccine was to be

Japanese produced and assayed TAB vaccine made from the same strains as those used by the U.S. Army. Plans also called for immunization with a booster dose (1cc) on or about 1 May each year.

Due to production difficulties sufficient vaccine was not made available by 1 June 1947 as anticipated. Vaccine did not become available until September 1947. The delay in starting the immunization program and the inefficiency of execution has resulted in a partially completed program. Approximately 35,000,000 people, or 55% have completed their immunizations as of 31 March 1948.

Because the program has not been completed and because most of the immunizations were done during the last three months of 1947, booster doses will not be required this season for those who have been immunized with three doses of vaccine since September 1947. However, concerted efforts will be made to complete original immunizations (3 inoculations) of all persons falling within the age groups requiring immunization.

The Ministry of Welfare informed the prefectures of original plans in Prevention Bureau Instruction #302 (YO HATSU No.302) 31 May 1947. This plan was reemphasized in Prevention Bureau Instruction #922 (YO HATSU No.922) 24 November 1947. Public Health and Welfare Section outlined the plan in Weekly Bulletin #20 (for period 11-17 May 1947). Other references to the program are to be found in bulletins nos. 31, 33, 35, 37, 41, 46, 51 and 58. It is to be emphasized that immunizations are compulsory. It is expected that an immunization law, now being considered by the Japanese Government, will be enacted soon. When this bill becomes law, it will require immunization against typhoid fever as outlined above.

Excellent results have been obtained as a result of past typhoid immunizations and sanitary programs. The rates have not been reduced to a minimum however, and it is necessary that the immunization program as outlined above be completed without delay. The Ministry of Welfare has been instructed to issue the necessary instruction to the prefectures and Military Government Health Officers are urged to exercise surveillance over this program in order to insure completion as soon as possible and not later than 31 May.

Diphtheria Immunization

Health Officers are reminded that when using alum precipitate toxoid a longer interval is required between doses than when using plain fluid toxoid. An interval of at least three months is considered desirable in order to obtain maximum efficacy of the product and highest immunity levels. It is therefore recommended that toxoid, when it is received, be used entirely for first doses as long as first doses remain to be given and that the material not be held back for the administration of the second dose because of the fear that additional shipments will not arrive in time.

Venereal Disease Control

It has been reported that the Venereal Disease Control program is being hampered by the lack of legal authority to detain "street girls" in hospitals for compulsory treatment. Reference is made to regulation No.45, "Complementary Regulation for the Venereal Disease Prevention Law", issued by Ministry of Welfare 22 November 1945. Article 4, which states: "A local governor shall be empowered to order a person in the infectious stage, whose occupation involves liability of spreading venereal disease, to be admitted to a hospital". Once a diagnosis of venereal disease is established the patient may be compelled, either under the regulation cited above or under the provision of the infectious disease law, to receive treatment until the disease is considered non-infectious.

Tuberculosis Control

Japan has been using BCG vaccine for some years, and the results of that practice are of great value. It must be remembered, however, that proper evaluation of these results requires very careful records of its use. The patient's name, dosage, date of inoculation, age of the individual, address, and the name of the physician or clinic who has given the vaccine should all be accurately recorded. While 23,000,000 or more people have been given this vaccine, the study is far from complete until all these individuals have been rechecked with tuberculin tests to determine their positive state, and revaccinated again if necessary to maintain that state. Every prefecture should make every effort to keep these records up to date and as accurate as possible. Together with this study, it is necessary that very careful records be kept of all tuberculosis cases and deaths, with particular attention to the age at the time of death, and with very close attention being paid to the diagnosis, and age of the patient at onset of the disease.

SECTION VIII

MEDICAL SERVICE DIVISION

Civilian Hospital Strength Report for week ending 5 March shows 3,423 hospitals with a capacity of 207,806 beds, of which 100,204 were occupied. During this same period, 298,666 out-patients were treated.

SECTION IV SOCIAL SECURITY DIVISION

National Health Insurance - Subsidies

(Ref. Weekly Bulletin No.64)

The Ministry of Welfare reports that national subsidies allotted to National Health Insurance associations which were active during the current fiscal year, ending 31 March, **totalled** 377,911,644 yen. This sum was composed of the following items:

1. Clerical and other office expenses	171,362,724 yen
2. Travel expenses of staff members	7,350,000 yen
3. Public health nurses' salaries and traveling expenses	39,600,000 yen
4. Salaries for insurance doctors engaged on a part-time contractual basis	18,400,000 yen
5. Publicity expenses	7,000,000 yen
6. Construction of clinics and hospitals	123,600,000 yen
7. Special subsidies to associations struck by disaster (mainly flood and fire)	10,000,000 yen

The total number of associations subsidized has been reported as 7,276, covering an estimated 29,000,000 insured.

In addition to these subsidies to individual association, the prefectural federations of National Health Insurance association (one in each prefecture) received a national subsidy **totalling** 598,920 yen to pay for one-half their personnel cost, mainly to enable them to attend to their functions of inspecting and tendering advice to the individual associations.

Request for subsidies to be given in the next fiscal year, beginning 1 April, have been roughly tripled in amount in an effort not only to stem but to reverse the downward trend in National Health Insurance. It is expected that, by virtue of an intensified clinics construction program, the number of active associations will be increased by about 1,000, bringing their number approximately to 8,000 with an estimated 32,000,000 insured. At present these subsidy requests are undergoing scrutiny by the Finance Ministry. To date 40 prefectures have submitted their National Health Insurance associations' requirements for clinics to be established in the 1948 fiscal year. A complete report for the entire country depends on the associations' applications being forwarded to the Ministry of Welfare or before 31 April. From the reports received a subsidy is necessary for a total of 874 clinics, which would increase the total number of associations with clinic to 2,562.

The total number of operating associations in the country is recorded as 7,276 out of a total of 10,349 cities, towns, and villages which at one time had a National Health Insurance association. However, a recent survey by the National Health Insurance Section in the Ministry has revealed that in 40 prefectures 1,230 towns or villages do not have a doctor and 2,077 are lacking minimum medical facilities and personnel. Recent petitions addressed to the National Government from various sections of the country in support of National Health Insurance have emphasized the need for subsidies in the establishment of clinics, both by national and prefectural governments, and also for an extensive information and education program as to the value and need for social insurance. There appears to be considerable sentiment in favor of uniform contributions and medical care fees.

SECTION X MEMORANDA TO JAPANESE GOVERNMENT

None.

CRAWFORD F. SAMS
Colonel, Medical Corps
Chief

SECTION VII - Social Security
SECTION VIII - Memoranda to Japanese Government

SECTION I
GENERAL

Training Courses

The attention of all Military Government Health Officers is directed to the opening on or about 7 May of a new 12 weeks course for Sanitary Engineers (7 May to 30 July) and that of an eight weeks course (7 May to 2 July) for Nutritionists. These courses will be conducted at the Institute of Public Health in Tokyo. Those elected to attend should be provided with 2500 yen per month for subsistence -- or 7500 yen for the Sanitary Engineers and 5000 yen for the Nutritionists courses. The official invitations to the prefectures will be sent out by the Institute of Public Health. It is important that suitable candidates be selected and properly provided for financially in order that they may devote full time to their studies.

Salary Scale of Japanese Governmental Officials

Military Government Health Officers have repeatedly expressed concern about the low salaries of Government officials and the inability to secure and retain qualified professional personnel to staff health organizations. Many Military Government Health Officers have asked for information relative to pay and allowances for such personnel. For the information of those concerned a brief resume is given below of the salaries of Japanese Government workers with examples taken from the public health and welfare field. This digest is based on the salary scale applicable to persons employed with the National Government. Government workers employed with the prefectures receive their pay according to scales which, according to the Local Autonomy Law, must be based upon the national scale. Therefore variations are to be expected but should not be appreciable.

SALARIES OF JAPANESE GOVERNMENT WORKERS 1/

1. At present the pay of all persons employed by the national government is made up of five to six different elements:

a. Base pay, as revised in July 1946.

b. Temporary additional pay (Zantei Kakyu), varying in inverse relation to the level of base pay. In the lowest salary and wage groups this temporary additional pay is higher than the base pay; in the higher salary groups it levels off and falls below one-half of the base pay. On the average, it is said to amount to 90% of the base pay.

c. Temporary or emergency increase (Rinji zokyu), amounting to 60% of (b).

d. Family allowance (Kazoku teate), a flat allowance of 150.00 yen for each dependant not earning a major share 2/ of the cost of his upkeep. The following qualify as dependents: the employed person's wife and members of his household if they are either.

- (1) 18 years or below or 60 years or over, or
- (2) disabled.

e. Working area allowance (Kimmuchi teate), computed on the basis of all four items (a) - (d) taken together and graduated as follows:

- (1) In the "special area", comprising the six metropolitan cities, 30% of the sum total of (a) - (d);
- (2) In "area A", comprising all other cities, 20%; and
- (3) In "area B", comprising towns and villages, 10%. 3/

f. Temporary allowance (Rinji teate), a flat one-eighth, or 12.5%, of all the foregoing items (a)-(e) taken together.

2. Within this composite salary or wage scheme the pay of each government worker is determined according to the salary or wage grade which he has. 4/

His civil service classification as a first, second, or third class "official" or as an employee of one type or another - see below (3) - is not necessarily related thereto but is primarily a title indicating differences in status. Nevertheless, the higher service and class therein comprises as a rule the higher paying positions.

3. On the basis of (1) and (2) the following salary scale is in force today:

a. "Official" (Honkan) 5/

- (1) First class officials (Bureau Chiefs and above in the Ministry of Welfare, Chiefs of the Welfare Ministry's Medical Bureau's regional branch offices, Directors of National Hospitals or Sanatoria, etc.) fall, as a rule, in salary grades No. 25 to No.30.

Accordingly the monthly salary of such officials come within the following minimum and maximum:

	<u>No.25</u>	<u>No.30</u>
Base pay	Yen 1,500	Yen 2,000
Temporary additional pay	800	800
Temporary or emergency increase	480	480
Family allowance (depending on number of dependents)		
Working area allowance (depending on place of work)		
Temporary allowance (12.5 percent of the respective totals)		

If we assumed two officials, one in the minimum and one in the maximum grade, to have three dependents each and to be stationed in Tokyo, their total pay (before taxes) would amount to 5,239 yen and 6,061 yen respectively.

- (2) Second class officials (doctors, dentists, chief clerks, occasionally chief nurses, etc. employed in larger medical installations) fall, as a rule, in salary grades No.18 to No.24.

Accordingly their monthly salaries would lie within the following range:

	<u>No.18</u>	<u>No.24</u>
Base pay	Yen 1,000	Yen 1,400
Temporary additional pay	730	800
Temporary or emergency increase	438	480
Family)		
Working area) Allowances - See above (1)		
Temporary)		

Assuming two officials of the above two grades respectively to be stationed in an "area A" city and to have three dependents each, their monthly salaries would be 3,927 yen and 4,695 yen.

- (3) Third class officials (nutritionists, many nurses - including most of the chief nurses, X-ray, dental, and laboratory technicians, statisticians, clerks, etc.) generally comprise salary grades No. 4 or 5 to No.17.

Hence their monthly salaries will range from:

	<u>No.4</u>	to	<u>No.17</u>
Base pay	Yen 390		Yen 950
Temporary additional pay	380		710
Temporary or emergency increase	228		426
Family)			
Working area) Allowances - See above (1)			
Temporary)			

Assuming two officials of the above grades to live in a small village, each having three dependents, their respective salaries will be 1,991 yen and 3,487 yen.

b. Other government employees. 6/

- (1) Koin (nurses and technicians of various types) usually rank from grades No.19 or 20 to No.42 of the "employee" scale or, in terms of pay, from:

	<u>No.20</u>	to	<u>No.42</u>
Base pay	Yen 380		Yen 1,200
Temporary additional pay	370		810

Temporary or emergency increase	222	486
Family)		
Working area) Allowances - computed in the same way as for		
Temporary) "Officials", see above (a).		

- (2) Yonin (janitors, watchmen, maintenance workers) are found, as a rule, to reach into the lower wage brackets, e.g. grade No.13, which carries a monthly bas pay of 240 yen, temporary additional pay of 260 yen, temporary or emergency increase of 156 yen, and the three types of allowances as above. Their top grades are the same as for "Koin" but are seldom reached.
- (3) Shokutaku or "temporary" government workers are non-career officials serving in a full-time or part-time capacity. Some of them are "treated as officials" as regards status and privileges, but all who receive pay - some serve without compensation - are rated according to the pay scale for "employees". Almost any occupation or profession has been represented in this group. It includes social service and welfare workers, statisticians, technicians, clerks, etc. The salary range is the same as that of the other two groups except that their minimum salaries or wages usually start at a higher bracket.

4. Current pay scales for Japanese government workers may thus be summarized as follows (we assume three dependents in all cases):

a. "Officials"

			<u>Minimum</u>		<u>Maximum</u>
(1) First class	("special area"	Yen	5,239	Yen	6,061
	("area A"		4,845		5,596
(2) Second class	("special area"		4,254		5,086
	("area A"		3,927		4,695
	("area B"		3,560		4,304
(3) Third class	("special area"		2,353		4,121
	("area A"		2,172		3,804
	("area B"		1,991		3,487

b. Other government employees.

(1) "Koin"	("special area"	Yen	2,310	Yen	4,787
	("area A"		2,133		4,319
	("area B"		1,955		4,051
(2) "Yonin"	("special area"		1,797		4,787
	("area A"		1,659		4,319
	("area B"		1,521		4,051
(3) "Shokutaku"	("special area"		2,765		4,787
	("area A"		2,553		4,319
	("area B"		2,338		4,051

5. Currently, Government salaries and wages are in the process of renegotiation. The government has proposed to increase the present "standard" salary of 1,800 yen ^{7/} by almost two-thirds to 2,920 yen per month. Pending this revision a temporary increase to 2,500 yen is being offered retroactively as of 1 January 1948. Both increases are expected to benefit low-paid workers to a greater extent than high-paid ones and to favor those with large families.

1/ As of March 1948. Source: Accounting Section, Ministry of Welfare.

2/ Originally no family allowance was to be given on behalf of a dependent whose income from other sources exceeded 200 yen per month. In practice this provision has been disregarded and the above, somewhat vague, formula substituted in its place.

3/ By special ruling of the Ministry of Finance towns and villages adjacent to large cities may be designated as belonging to one of the higher cost areas.

4/ There are two pay-scales, differing in the number of grades and in the compensation attached to them. One applies to the “officials”, the other to all those government workers not classified as “officials”.

5/ This service comprises career civil servants who may be classified as “jimukan” roughly corresponding to our CAF service-or as “gikan”-roughly corresponding to our P service. It contains three classes and thirty salary grades.

6/ Government workers not classified as officials are not considered career civil servants. They form separate services and are paid according to a separate scale of 42 salary or wage grades. There is no proper collective name for them; mostly they are just called “employees”.

7/ The actual income most closely approximating the present “standard” salary of 1,800 yen per month, including all additional payments and allowances, is that of a third class official in grade No.5 (or other government employee in grade No.22) stationed in Tokyo and receiving a dependent’s allowance for one member of his household.

Ministerial Instructions:

The following instructions were forwarded by the designated Bureaus of the Ministry of Welfare to Prefectural Government offices during the period indicated:

March 15, 1948 From: Director of Relief Bureau To: Governor of Hokkaido
(Repatriation Relief Board,
Hatsu-Butsu, No.255)
Subject: Allotment of materials to be used for the construction of accommodation facilities for repatriates.

March 15, 1948 From: Director of Relief Bureau To: Governor of Hokkaido
(Repatriation Relief Board,
Hatsu-Butsu, No.258)
Subject: Allotment of matings to be used for accommodation facilities for repatriates without relatives.

March 15, 1948 From: Director of Demobilization Bureau To: Governors of Urban and local Prefectures
(Ichifuku No.1874)
Subject: Unofficial notification on increase of grants of Demobilization Sections for 1947.

March 15, 1948 From: Chief of Archive Section,
(Ichifuku No.1875) Demobilization Bureau To: Chief of Service Section,
Urban and local Prefectures
Subject: Concerning white cloth to be used to wrap ash boxes.

March 16, 1948 From: Director of Children’s Bureau To: Governor of Saitama, Hiroshima
(Ji-Hatsu, No.128) and Shizuoka Prefectures
Subject: National Subsidy for the establishment of Children’s Welfare Station and Temporary Protection Station for 1947.

March 16, 1948 From: Vice-Director of Repatriation To: Governor of Tokyo, Kanagawa, Shizuoka
(Repatriation Relief Board, Relief Board and Hyogo Prefecture
Hatsu-Gyo, No.265)
Subject: On the 3rd Repatriation of German Nationals.

March 16, 1948 From: Director of Demobilization To: Governor of Urban and Local Prefecture
(Ichifuku No.1878) Bureau
Subject: Inspection of Books and Safes by Accounting Official at the end of Fiscal Year.

March 16, 1948 From: Chief of Archive Section,
(Ichifuku No.1881) Demobilization Bureau To: Chief of Service Station of Urban
and local Prefectures
Subject: Statistics of number of the demobilized as of the date of Landing.

March 16, 1948 (Ichifuku No.1882)	From: Chief of Archive Section, Demobilization Bureau Subject: A Partial Amendment of Ichifukuku No.1552.	To: Chief of Service Station of Urban and local Prefectures
March 16, 1948 (Ichifuku No.1883)	From: Chief of Archive Section, Demobilization Bureau Subject: Payment of Allowance for the Deceased and Wounded in Recruited crews.	To: Chief of Service Station of Urban and local Prefectures
March 17, 1948 (Kai-Hatsu No.1970)	From: Chief of Accounts Section Subject: Transference of Documents concerning the Construction of Sanatorium.	To: Governor of Ishikawa Prefecture
March 17, 1948 (I-Hatsu, No.106)	From: Director of Medical Bureau Subject: Designation of Narcotic Control Officers as Officials to Perform the Duty of Judicial Policies under Imperial Ordinance No.528,1923.	To: Governor and Public Procurator's Officer of Urban and Local Prefecture
March 17, 1948 (Ho-Hatsu, No.356)	From: Director of Insurance Bureau Subject: Concerning Facilities which are kept up by Special Account of Welfare Pension Insurance for Fiscal Year of 1947.	To: Governor and Head of Social Insurance Office Urban and Local Prefecture
March 17, 1948 (Ji-Hatsu, No.134)	From: Director of Children's Bureau Subject: Allotment of Materials for Construction for the Fourth Quarter.	To: Governor of Urban and Local Prefecture
March 17, 1948 (Repatriation Relief Board, Hatsu-Shi, No.269)	From: Director of Relief Bureau Subject: National Grant to be Used for Rehabilitation Funds.	To: Governor of Nagasaki Prefecture
March 17, 1948 (Hatsu-Gyo, No.270)	From: Vice-Director of Repatriation Relief Board Subject: Allotment of expenses needed for sending out of Properties left by Koreans.	To: Governor of Nagasaki Prefecture
March 17, 1948 (Ichifuku No.1885)	From: Director of Demobilization Bureau Subject: Unofficial Announcement for April of Demobilization Section for 1948.	To: Governor of Urban and Local Prefecture
March 17, 1948 (Ichifuku No.1886)	From: Chief of Archive Section, Demobilization Bureau Subject: Gist of making Demobilization Statistics.	To: Chief of Service Section, Urban and Local Prefectures
March 17, 1948 (Ichifuku No.1890)	From: Director of Demobilization Bureau Subject: Disposition of Personnel in the Offices in Relation with the Demobilization in Future.	To: Chief of Service Section, Urban and Local Prefectures
March 18, 1948 (Ji-Hatsu, No.137)	From: Director of Children's Bureau Subject: Expenses Required for the Enforcement of Child's Welfare Law.	To: Governor of Urban and Local Prefecture
March 18, 1948 (Ji-Hatsu, No.135)	From: Director of Children's Bureau Subject: On Inquiry for the Training Course for Nurses.	To: Director of Welfare Dept., Nagano Prefecture
March 18, 1948 (Yo-Hatsu No.307)	From: Director of Prevention Bureau Subject: Notification on Change of Location of Bureau Office.	To: Governor of Urban and Local Prefecture

March 18, 1948 From: Director of Medical Bureau To: Governor of Urban and Local Prefecture
(I-Hatsu No.110)
Subject: Allotment of Designated precious metals to be used by Local Dentists.

March 19, 1948 From: Director of Medical Bureau To: Governor of Urban and Local Prefecture
(I-Hatsu No.111)
Subject: 2nd Distribution of Medical Supply released by U.S. Army.

March 19, 1948 From: Director of Medical Bureau To: Governor of Urban and Local Prefecture
(I-Hatsu No.113)
Subject: Change of Repeal of Designated Items (Controlled Medical Supply).

March 19, 1948 From: Director of Public Health Bureau To: Governor of Urban and Local Prefecture
(Ko-Ho-Hatsu No.184)
Subject: Nutrition guidance in connection with rationing of Sweet Materials for Sick Persons for the Fourth Quarter.

March 19, 1948 From: Director of Public Health Bureau To: Governor of Urban and Local Prefecture
(Ko-Ho-Hatsu No.186)
Subject: Increase of Fresh Fishes, Shells and Fuels for the Patients in Hospitals.

March 19, 1948 From: Director of Public Health Bureau To: Governor of Urban and Local Prefecture
(Ko-Ho-Hatsu No.188)
Subject: Allotment of Local Grant for the Vital Statistics.

March 19, 1948 From: Director of Insurance Bureau To: Chief of Insurance Section and Branch
(Ho-Hatsu No.369) Office of Social Insurance Urban and
Local Prefecture
Subject: Distribution of Funds for Payment from Special Account for Seamen's Insurance and
Unemployment Insurance for 1947.

March 19, 1948 From: Vice-director of Repatriation To: Governor of Urban and Local Prefecture
(Repatriation Relief Board Relief Board
Hatsu-Gyo No.290)
Subject: Repatriation of the Okinawans to Okinawa Islands.

March 19, 1948 From: Chief of Archive Section, To: Chief of Service Section, Urban and
(Ichifuku No.1905) Demobilization Bureau Local Prefecture
Subject: Amendment of Management Expenses Required for Investigation of War Crimes.

March 19, 1948 From: Director of Demobilization To: Chief of Service Section, Urban and
(Ichifuku No.1906) Bureau Local Prefecture
Subject: Amendment of Regulations Dealing with Allowances for Undemobilized persons.

March 19, 1948 From: Chief of Archive Section To: Chief of Service Section, Urban and
(Ichifuku No.1907) Demobilization Bureau Local Prefecture
Subject: Amendment of Gist of Payment and Collection of Revenue for the Expenses for 1947.

March 20, 1948 From: Director of Prevention Bureau To: Governor of Nagasaki Prefecture
(Yo-Hatsu No.313)
Subject: Appointment of Personnel to be used for Epidemic Prevention in Health Centers.

March 20, 1948 From: Director of Prevention Bureau To: Governor of Okayama Prefecture
(Yo-Hatsu No.316)
Subject: On Overall Research Work for Intestinal Parasites.

March 20, 1948 From: Director of Public Health Bureau To: Governor of Urban and Local Prefecture
(Ko-Ho-Hatsu No.191)
Subject: Guidance for Hospital Lunch Program.

March 20, 1948 From: Director of Public Health Bureau To: Governor of Urban and Local Prefecture
(Ko-Ho-Hatsu No.192)
Subject: Cooperation of Butchery Inspectors for the Production of Skin.

March 22, 1948 From: Director, Prevention Bureau To: Governors of all Prefectures
(Yo-Hatsu No.318)
Subject: On Expenses of Chlorine for Chlorination of Water.

March 23, 1948 From: Chief, Accounting Section To: Governor of Chiba Prefecture
(Kai-Hatsu No.218)
Subject: Request for Data for Expansion Work of Sanatorium.

March 23, 1948 From: Chief, Accounting Section To: Governor of Shizuoka Prefecture
(Kai-Hatsu No.223)
Subject: Receipt of Document Concerning “Tenryu-So”, The National Sanatorium.

March 23, 1948 From: Director, Social Affairs Bureau To: Governors of All Prefectures
(Sha-Hatsu No.49)
Subject: Contributed Relief Fund from Ministry of Imperial House-hold.

March 23, 1948 From: Director, Social Affairs Bureau To: Governors of All Prefectures
(Sha-Hatsu No.50)
Subject: National Grants for Guidance of Minsei-iin for Year of 1947.

March 24, 1948 From: Director, Medical Bureau To: Governors of All Prefectures
(I-Hatsu No.116)
Subject: On Allotment of Approved Distribution Quantities.

March 24, 1948 From: Director, Public Health Bureau To: Governors of All Prefectures
(Ko-Ho-Hatsu No.201)
Subject: On Survey of Amusement Places.

March 24, 1948 From: Director, Insurance Bureau To: Governors of All Prefectures
(Ho-Hatsu No.399)
Subject: On Contract for Treatment of Patients by Health Insurance and Seamen's Insurance at National Hospitals and Sanatoriums.

March 25, 1948 From: Director, Prevention Bureau To: Governors of All Prefectures
(Yo-Hatsu No.338)
Subject: Grants for Expenses of Training Courses on Tuberculosis.

March 25, 1948 From: Director, Prevention Bureau To: Governors of All Prefectures
(Yo-Hatsu No.330)
Subject: Grants for Mental Hospitals.

March 25, 1948 From: Director, Social Affairs Bureau To: Governors of All Prefectures
(Sha-Hatsu No.48)
Subject: Allotment for Fourth Quarter of Building Materials in 1947.

March 26, 1948 From: Director, Medical Bureau To: Governors of All Prefectures
(I-Hatsu No.107)
Subject: On Distribution of Released Quinine Derivatives.

March 27, 1948 From: Director, Insurance Bureau To: Governors of All Prefectures
(Ho-Hatsu No.406)
Subject: On Report on National Health Insurance.

March 27, 1948 From: Director, Children's Bureau To: Governors of All Prefectures

(Ji-Hatsu No.145)

Subject: On Accounting Business of Budget for the Execution of Child Welfare Law in 1947.

March 27, 1948

From: Vice-Director, Repatriation Board To: Governors Tokyo, Kanagawa, Hyogo,
Shizuoka

(Hatsu-Gyo No.305)

Subject: On Repatriation of German Nationals.

SECTION II WELFARE DIVISION

Kansai Social Work Education Committee

The monthly meeting of the Kansai Social Work Education Committee was held in Osaka on 17 March. Persons attending the meeting included representatives of public and private welfare agencies, educational institutions and Welfare Officers of the Osaka Military Government Team and Kinki Military Government Region.

It was reported that a total of 13 colleges and universities in the area are to institute courses in sociology and social work during the school year beginning in April. None of the schools, however, have established a complete social work training curriculum. Plans for a one-year training course in Osaka have been established and it is expected that such a course will begin when final plans for financing are completed and approved.

The problem of adequate training for personnel for day nursery and child welfare institutions was reviewed. It was the consensus that incompetency of present teachers is largely due to inadequate training.

The next meeting of the committee is to be held in Kyoto on 14 April.

International Conference on Social Work

The fourth International Conference on Social Work will be held at Atlantic City, New Jersey, during April. Japan was represented at the three International Conference previously held. The first conference was held in Paris, France in 1928; the second in Frankfurt, Germany in 1932 and the third in London, England in 1936. Conferences were not held in 1940 and 1944.

A member of Public Health and Welfare Section will attend the fourth conference as a representative of SCAP in order that the information presented may be made available to Japanese responsible for administering public and private welfare programs.

Licensed Agencies for Relief in Asia (LARA)

The 55th, 56th, 57th and 58th LARA shipments arrived in Yokohama, consisting of the following:

55th Shipment:

Arrived aboard the S.S. President Cleveland on 8 March and contained 91.20 tons (clothing, including shoes, 3.80 tons-food, 87.06 tons-miscellaneous, 0.34 tons).

56th Shipment:

Arrived aboard the S.S. Philippine Transport on 11 March and contained 20.15 tons (food).

57th Shipment:

Arrived aboard the S.S. Capitol Victory on 19 March and contained 18.7 tons (clothing, including shoes).

58th Shipment:

Arrived aboard the S.S. President Taylor on 25 March and contained 85.45 tons (clothing, including shoes, 76.6 - food, 5.14 tons - miscellaneous, 3.71 tons).

Japanese Red Cross Society

Junior Red Cross:

A picture display of Junior Red Cross activities has been completed and will be shown in the Japanese Red Cross Society's exhibit at the Takashimaya Department Store (Tokyo), 6 - 25 April. This exhibit will also be displayed at the Hiroshima Goodwill Festival (3 May) and at Uji Yamada City Peace Exhibition (1 April - 31 May).

The Junior Red Cross Section, National Headquarters, Japanese Red Cross Society, is now considering several sites that have been proposed for the contemplated "Junior Red Cross Leadership Training Center" to be held during the Summer (July or August) 1948. It is tentatively planned to hold two such Leadership Training Centers, each of one week's duration, for the purpose of training boys and girls to become Junior Red Cross leaders within the schools of the particular Red Cross Chapters (prefecture) they are selected to represent and to demonstrate to adult leaders of other youth organizations, how to conduct training centers for developing youth leadership. The proposed Leadership Training Centers have been coordinated with CI&E, GHQ, SCAP, and if they are held, representatives of Public Health and Welfare, CI&E and American Red Cross will participate as advisors on the faculty of the Centers.

Conference of Tohoku Region Welfare Officers

A Public Health and Welfare representative attended subject conference at Sendai, 30 - 31 March. The conference agenda included the following; discussion of the Child Welfare Law and Ordinances and functions of Welfare Officers in its implementation; Public Assistance Program and related Ordinances; administrative reviews and Annex B-2 reports; in-service training for Japanese Welfare Officials and Minsei-iin; "aids" to Public Welfare Officers and a round table discussion of local problems.

Juvenile Training and Educational Institutions (Kyogo-in) under the Ministry of Welfare

The following institutions, sometime called correctional institutions, are not to be confused with those which were operated under the former Ministry of Justice, and now under the Attorney General's Office. With the exception of the first and the last two listed, all are prefectural institutions. The last two are private institutions, that in Hokkaido being the institution from which the idea of such institutions originated, and the one in Yokohama being an institution for girls. According to the Child Welfare Law, children under 18 may be placed in these institutions. Clarification as to types of children to be placed awaits enactment of the Juvenile Court Law (now scheduled for July).

<u>Prefecture</u>	<u>Name</u>	<u>Address</u>
National	Musashino Gakuin	1,030, Daimon Village, North Adachi-gun, Saitama Prefecture
Hokkaido	Onuma Gakuin	Nanae Village, Kameta-gun, Hokkaido
Aomori	Aomori Gakuen	Sinjo Town, East Tsugaru-gun, Aomori Prefecture
Iwate	Toryo Gakuen	27, Aza Kuboyaki, Mitsuware, Morioka City, Iwate Prefecture
Miyagi	Shuyo Gakuen	Osa-machi, Sendai City, Miyagi Prefecture
Akita	Chiaki Gakuen	Nakajima-cho, Akita City, Akita Prefecture
Yamagata	Yotokuen	Mikka-machi Mikkaichi, Yamagata City, Yamagata Prefecture
Fukushima	Kuntoen	Nakamura Town, Soma-gun, Fukushima Prefecture
Ibaraki	Ibaraki Gakuen	Godai Village, Naka-gun, Ibaraki Prefecture
Tochigi	Nasu Gakuen	Nozaki Village, Nasu-gun, Tochigi Prefecture
Gumma	Gumma Gakuen	Amakawa-cho, Maebashi City, Gumma Prefecture
Saitama	Saitama Gakuen	Kamio Town, North Adachi-gun, Saitama Prefecture
Chiba	Seijitsu Gakko	Oihama Town, Chiba-gun, Chiba Prefecture
Tokyo	Seimei Gakuen	Kasumi Village West Tama-gun, Tokyo-To
	Hagiya Jitsumu Gakko	Higashimurayama Village, North Tama-gun, Tokyo-To

Kagoshima	Makinohara Gakko	Sikine Village, Aira-gun, Kagoshima Prefecture
*Hokkaido	Katei Gakko	Engaru Town, Monbetsu-gun, Hokkaido
	Shinabuchi Bunko	
*(Authorized)	Yokohama Katei Gakuen	Kamadai-cho, Hodogaya, Yokohama City, Kanagawa Prefecture

Laws Concerning Delinquency

The Attorney General's Office was established by Law No.193, 1947, effective 15 February 1948, to replace the former Ministry of Justice. This law creates several bureaus within the Attorney General's Office including a Correction and Rehabilitation General Affairs Bureau and an Adult Correction and Rehabilitation Bureau.

Concerning the responsibilities of these bureaus article 10 of the law provides that:

“The Correction and Rehabilitation General Affairs Bureau shall administer the following matters:

1. Matters concerning planning of policies in respect to the prison affairs and the rehabilitation of offenders, and concerning adjustment of the business thereof;
2. Matters concerning prisons, houses of detention, juvenile protection offices, public reformatories and other public institutions for correction and rehabilitation of juveniles;
3. Matters concerning culture and training of the staff for correction and rehabilitation;
4. Matters concerning prison affairs rehabilitation which do not belong to other jurisdictions.
5. Matters concerning prison affairs and rehabilitation which do not belong to other jurisdictions.

“The Adult Correction and Rehabilitation Bureau shall administer the following matters:

1. Matters concerning the execution of penalties and detention of adults;
2. Matters concerning the rehabilitation of adult offenders;
3. Matters concerning the rehabilitation work of adults.

“The Juvenile Correction and Rehabilitation Bureau shall administer the following matters;

1. Matters concerning the execution of penalties and detention of juveniles.

2. Matters concerning the rehabilitation of juveniles placed under correction by the juvenile court;
3. Matters concerning the rehabilitation work for juveniles placed under correction by the juvenile court”.

Article 15 of the statute provides that:

“The Attorney General shall have jurisdiction over private institutions for correction and rehabilitation which have, hitherto, fallen under the jurisdiction of the Minister of Justice, until 31st March 1949 but shall be required, from 1 July 1948, to obtain the advice of and exchange opinions with the Minister of Welfare regarding operation of such institutions, as shall be provided by Cabinet Order.

“The Attorney General shall continue to exercise the same jurisdiction over matters concerning rehabilitation of juveniles as has been exercised by the Minister of Justice until 30 June 1948. From 1 July 1948 jurisdiction over juveniles about whom there is apprehension of delinquency will be transferred to the Minister of Welfare, except over those who have been placed under correction by Juvenile Court.

“The Attorney General will examine the records of all inmates of the institutions mentioned in paragraph one of this article and those juveniles about whom it has been ascertained that they have committed crimes or those who have been placed under correction by the Juvenile Courts will be removed to public reformatories or other public institutions for correction and rehabilitation by 31 March 1949, by which date there are to be no private institutions used for reformatories or for correction and rehabilitation.

“Until removals mentioned in the preceding paragraph have been finished, the Attorney General, in cooperation with the Minister of Welfare, will supervise strictly all private institutions for correction and rehabilitation and all private reformatories to insure maintenance of high standards of conduct and operation”.

Status of Welfare Laws

Inquiries have been received concerning the status of certain welfare laws most of which have been rescinded by the Daily Life Security Law and the Child Welfare Law. The status of eleven such statutes is included in the following list:

1. Law for Protection of Cruelty to Children
Law No.40, 1 April 1933
Rescinded by Article 65 of Child Welfare Law
2. Juvenile Education and Training Law (Shonen Kyogo-ho)
Law No.55, 5 May 1933; amended by Law No.12, February 1941.
Rescinded by Article 65 of Child Welfare Law
3. Poor Relief Law
Law No.39, 2 April 1929
Rescinded by Article 44 of Daily Life Security Law
4. Military Aid Law
Law No.1, 8 July 1917
Amended by Law No.27 of March 1931 and Law No.20 of March 1937
Rescinded by Article 44 of Daily Life Security Law
5. Mother and Child Protection Law
Law No.19, 31 March 1937; amended by Law No.36 of 1941
Rescinded by Article 44 of Daily Life Security Law
6. Medical Aid Law
Law No.36, 6 March 1941
Rescinded by Article 44 of Daily Life Security Law
7. War Time Damage Relief Law
Law No.71, 25 February 1942
Rescinded by Article 44 of Daily Life Security Law

8. Non-Remobilized Persons Relief Law
Law No.182, 15 December 1947
In Effect
9. Law Concerning the Treatment of Sick or Deceased Wayfarers.
Law No.93, 28 March 1899
In Effect
10. Social Work Law (Shakai Jigyo-ho)
Law No.59, 31 March 1938
In Effect
11. Public Pawnshop Law
Law No.35, 31 March 1927
In Effect

Training Institute for Welfare Personnel

The Japan Social Work Association has scheduled a welfare institute to be held from 18 - 24 May at Zenhoji (Temple) Saigo Mure, Nishi Tagawa Gun, Yamagata Prefecture.

The institute will be attended by 50 welfare workers from Aomori, Akita, Yamagata, Iwate, Miyagi, Fukushima, and Hokkaido. Persons to attend the institute will be selected by the prefectural governors.

Administrative Review

Reports from Military Government Teams indicate there is a need for strong field supervision from Ministry of Welfare. At present the Protection Section, Social Affairs Bureau, has a total of seven employees who inspect prefectures concerning "supervision and guidance of business affairs related to the Daily Life Security Law". The following information concerning this administrative review has been provided by the Ministry of Welfare:

"The Ministry of Welfare is sending out field supervisors in order to make clear the actual condition of the business affairs related to Daily Life Security Law and to secure the proper application of the law and to make the further operation of the law as smooth as possible.

1. Guidance and inspection is done concerning the following matters:

- (a) Administration of Daily Life Security Law in prefectures (Management of business affairs, guidance on business affairs and the state of income, expenses and budget). Generally a day is set aside to give guidance and inspection on the business affairs in general relating to the administration of Daily Life Security Law in prefectures.
- (b) The administration of Daily Life Security Law in city, town and village (Management of business affairs, income expenditure and budget management and the operation of the Law). Generally one day is spent in each city, town or village".

2. "Selection of the wards in five large cities which are inspected and of cities, towns and villages, except the cities where the prefectural governments are located, is made by the field supervision upon their arrival in a prefecture.

- (a) Cities where the prefectural governments are located (in 5 large cities; the prefectural government office and 2 wards).
- (b) Besides the cities mentioned above (sites of the prefectural government) one each of city, town and village."

3. "The total number of days spent for guidance and inspection of a prefecture is generally 8 days (10 days are given to large prefectures)."

4. "When necessary, observation may be made of the actual condition of institutions and clients. After an inspection has been completed, the matters reviewed are discussed with the Minsei-iin concerned. Beginning on 28 March a visit was made to Kanagawa Prefectural office and cities in the prefecture. Towns and villages in the area will be visited later. Although no definite date has been decided as to the visit to Kyoto, it is expected to be about the middle of April".

Disaster Relief Law

With this Weekly Bulletin two copies of the Official Gazette, English Edition for Saturday, 18 October 1947 are being sent out to Military Government Teams. This issue of the Gazette contains official translation of the Disaster Relief Law (Law No.118). It is suggested that one copy of the Gazette be made available to the Welfare Officer and one copy be used by the Legal Officer of the Military Government Teams.

SECTION III VATERINARY AFFAIRS DIVISION

Animal Disease Report

The following outbreak of diseases was reported by the Ministry of Agriculture and Forestry for weekly period 27 March-2 April.

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Hiroshima	Blackleg	1
Gumma	Swine Erysipelas	1

SECTION IV SUPPLY DIVISION

Distribution

Dusters and sprayers for use in insect and rodent control distributed during the period 21 - 27 March totaled 1,818 pieces of equipment. Shipments to six prefectures were made by direction of the Ministry of Welfare, as follows:

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsack Sprayer</u>	<u>Semiautomatic Sprayer</u>	<u>Hand Sprayer</u>
Tokyo	600	0	0	0
Tochigi	240	18	0	12
Shizuoka	0	0	608	0
Aichi	0	60	0	0
Osaka	0	0	0	80
Nagasaki	0	150	50	0
Total	840	228	658	92

A production program for dark field microscope apparatus is now in progress. The Ministry of Welfare dispatched requests for present requirements to 19 prefectures whose needs were not fully met in the distribution during 1947. The following prefectures were queried by letter, file Pharmaceutical Affairs Section Instruction #15 (Yaku-Hatsu No.15) dated 12 January:

Hokkaido	Nagano	Aomori (*)	Kyoto	Iwate (*)	Osaka (*)
Tochigi	Hyogo	Tokyo	Nara	Kanagawa	Wakayama
Niigata (*)	Tottori	Ishikawa (*)	Shimane	Yamanashi	Ehime

Chiba was queried under date 23 March, file Pharmaceutical Affairs Section Instruction #336 (Yaku No.336). To date, replies from only five prefectures have been received by the Ministry, those asterisked above.

Production

A total of 4,484,710 lbs. of 10% DDT Dust, 409,601 gallons of 5% DDT Residual Effect Spray, and 137,908 vials of Typhus Vaccine represents total stocks on hand in wholesale houses of the Ministry of Welfare as of 27 March.

A total of 5,731 pieces of the various types of DDT dusting and spraying equipment for mosquito and fly control programs was produced during the period 21 - 27 March. Large stocks of this equipment are on hand to meet all requirement.

SECTION V NARCOTIC CONTROL DIVISION

Tentative plans have been made for the second training school for narcotic agents to be held in Tokyo during May. Definite dates will be announced as soon as plans are completed. To conserve funds all the remaining narcotic agents in Japan with judicial power of arrest will attend the school thereby eliminating the necessity for a third school. Improved enforcement has already been noted as a result of the first school held in March.

Special attention is being given to all cases in which quantities of narcotic particularly crude opium and heroin, are seized in an effort to determine the source. A recent seizure of 6,750 grams of opium revealed the narcotic was processed at a factory operating illegally in 1943. Further investigation is being made of this pharmaceutical plant.

The arrest of a Nisei, with dual citizenship, revealed he was a morphine addict and had obtained narcotics for his addiction from a Japanese physician in 1946 soon after the effective date of the narcotic law. The physician has had his narcotic license suspended for a six-months period. Other sources of narcotics for the addict are being investigated.

SECTION VI PREVENTIVE MEDICINE DIVISION

Refrigeration of Vaccines:

Inspection trips still reveal that considerable amounts of vaccines are being stored without proper refrigeration. Many instances were uncovered in which vaccines were stored without refrigeration of any kind and which has resulted in a natural loss of potency. This has been, on many occasions, brought to the attention of the proper Ministry of Welfare officials and action again is being taken to correct this condition.

Military Government personnel in their routine inspections of manufactures and pharmaceutical distributing agencies can assist by observing that proper steps have been taken to insure proper vaccine refrigeration.

SECTION VII SOCIAL SECURITY DIVISION

General

Recent conversations with Ministry of Welfare officials have brought out that the translations of Article 16, Paragraph 2, of the Welfare Pension Insurance Law; Article 13, paragraph 3, of the Health Insurance Law; and Article 6, paragraph 3, of the Unemployment Insurance Law, concerning persons compulsorily covered by these programs, have been misleading. The articles provide that "offices of individual persons in which not less than five workers are habitually employed" are compulsorily covered. This has been interpreted to mean office or clerical employees in such cases are covered. The true translation is that "offices" means establishments or places of business and that all employees of a corporation or that legal body, as compared to a natural person, which regularly employs five or more workers, are covered. However, as previously indicated, employers of religious bodies are exempted in all cases, as are government employees under the Health and Welfare Pension Insurance Laws. Government employees entitled to equivalent unemployment benefits under other laws are exempted from the Unemployment Insurance Law. This modifies the statement under Health Insurance in the column headed "Industrial Wage Earners" of the chart entitled "Coverage Provisions" which was transmitted to Military Government Teams with PH-TB-SS-1.

1948 - 49 Budget

Budget request by the Insurance Bureau, Ministry of Welfare, as cleared by the Ministry of Finance aggregate 910,256,000 yen. This sum is projected total amount of national government expenditures for the social insurances, other than unemployment compensation in the fiscal year beginning 1 April 1948 and ending 31 March 1949. This total is to be allocated as follows:

1. Overall coat of administration including research and appeals system (social insurance references) - 5,797,000 yen.

2. Cost of administering Health Insurance - both government managed and society managed on the national level and partial cost of administration on the local levels, including Advisory and Fee Calculating Committee - 58,239,000 yen.

3. Total administrative expenses and roughly one-tenth of the expected benefit cost of Welfare Pension Insurance including the Welfare Pension Advisory Council - 182,482,000 yen.

4. Cost of administering National Health Insurance on the national level and subsidies to the prefectural governments, the individual associations and prefectural federations thereof. (The bulk of these subsidies is to be paid to the associations in part-payment of their administrative, doctors, and nurses costs and the expenses of establishing clinics) - 565,958,000 yen.

5. Total administrative cost and roughly one-fifth of the benefit cost (one-third of unemployment benefits) of Seamen's Insurance including Advisory Council and Appeals Committee - 97,780,000 yen.

The total of 910,256,000 yen is less than twice the amount appropriated for the fiscal year 1947 - 48. In view of the general price rise, increase in government salaries, expected upward revisions of benefit scales and an intensified program for the establishment of National Health Insurance Clinics, supplementary requests may be expected in the course of the year. The above figures are awaiting clearance by SCAP.

National Health Insurance

Frequently on prefectural surveys the following reason has been given for the suspension of some National Health Associations and their failure to reorganize: the former chairman was no longer town master or mayor and the newly elected mayor has not taken any initiative because he does not know enough about the National Health Insurance program to serve as chairman of the board which may think is required by law. The law does place the mayor or town master in the position of chairman. However, it also provides that he can authorize another person to act for him under provisions of Article 28, paragraph 2 of the National Health Insurance Law. This point is emphasized because it makes it possible for someone other than the mayor or town master to serve as chairman of the association, an expedient which may prove useful for the purpose of getting many suspended associations reorganized.

SECTION VIII MEMORANDA TO JAPANESE GOVERNMENT

None.

CRAWFORD F. SAMS
Colonel, Medical Corps
Chief

I Inclosure: Number and Rates of Births, Deaths, Infant Deaths, Stillbirths, Marriages and Divorces: Japan and Each Prefecture - January 1948

NOTE: The weekly report of communicable diseases in Japan for the week ended 27 March has been delayed due to the fact that reports have not been received from 13 prefectures.

SECTION I
GENERAL

The following instructions were forwarded by the designated Bureaus of the Ministry of Welfare to Prefectural Government offices during the period 28 March - 3 April:

March 29, 1948 (Sha-Hatsu No.51)	From: Director, Social Affairs Bureau Subject: Procedure for deciding minimum standard of living.	To: All Prefectural Governors
March 30, 1948 (I-Hatsu No.105)	From: Director, Medical Bureau Subject: Form of making death-certificate (Examination certificate of dead-body)	To: All Prefectural Governors
March 30, 1948 (Ji-Hatsu No.150)	From: Director, Children's Bureau Subject: National grant for health guidance of prospective mothers for 1947.	To: All Prefectural Governors
March 30, 1948 (Ho-Hatsu No.420)	From: Director, Insurance Bureau Subject: On Report on governmental Health Insurance enterprise.	To: All Prefectural Governors
March 31, 1948 (Ji-Hatsu No.151)	From: Director, Children's Bureau Subject: On investigation report of feeble-minded children.	To: Governor, Saga Pref.
March 31, 1948 (Ji-Hatsu No.153)	From: Director, Children's Bureau Subject: Allocation of national grant to expenses for temporary detention places and child guidance clinics.	To: Governors
March 31, 1948 (Ji-Hatsu No.155)	From: Director, Children's Bureau Subject: National grant for facilities of staff training for 1947.	To: Governors
March 31, 1948 (Sha-Hatsu No.52)	From: Director, Social Affairs Bureau Subject: On appointment of Minsei-iin.	To: Governors
March 31, 1948 (Repatriation Relief Board Hatsu-gyo No.319)	From: Vice-Director, Repatriation Relief Board Subject: Allocation of expenses necessary for 2nd and 3rd German National repatriation.	To: Governors, Tokyo, Kanagawa, Shizuoka, Hyogo
April 1, 1948 (Ji-Hatsu No.158)	From: Vice-Director, Repatriation Relief Board Subject: Approval of establishment of Juridical Foundation, Sei Juji Gakuen, (Holy Cross School).	To: Governor, Tokyo-to
April 1, 1948 (Ji-Hatsu No.159)	From: Vice-Director, Repatriation Relief Board Subject: Reference to use of dormitory building of Kyojo-kai.	To: Governor, Tokyo-to
April 1, 1948 (Ji-Hatsu No.162)	From: Vice-Director, Repatriation Relief Board Subject: Allocation of 2nd two-quarters of National grant for Juvenile protection for 1947.	To: Governors, All Prefectures
April 1, 1948 (Ji-Hatsu No.164)	From: Vice-Director, Repatriation Relief Board Subject: Appointment of Welfare Officers.	To: Governors, All Prefectures

April 1, 1948 (Repatriation Relief Board Hatsu-shi No.323)	From: Director, Relief Bureau	To: Governors, Hokkaido, 6 Northern District Prefectures
	Subject: Concerning receiving measures of repatriates from Sagalen who have no relations at home.	
April 1, 1948 (I-Hatsu No.117)	From: Director, Medical Bureau	To: Governors, All Prefectures
	Subject: Concerning forwarding of application papers for pharmacists.	
April 2, 1948 (Yo-Hatsu No.377)	From: Director, Prevention Bureau	To: Governors, All Prefectures
	Subject: Concerning preparation designated by Minister of Welfare in Art. 27 Regulation on Asses of Biological Products.	
April 2, 1948 (Ji-Hatsu No.163)	From: Director, Children's Bureau	To: Governor, Nara Prefecture
	Subject: Concerning National grant for execution of Child Welfare Law.	
April 2, 1948 (Ji-Hatsu No.164)	From: Director, Children's Bureau	To: Governors, All Prefectures
	Subject: Announcement of promulgation of Ordinance and Regulation on Child Welfare Law.	

SECTION II WELFARE DIVISION

Child Welfare - Cabinet Order and Ministry of Welfare Regulations.

Inclosed with this Bulletin is approved translation of the Cabinet Order for enforcement of the Child Welfare Law (Seirei No.74, dated 31 March 1948) and the approved translation of the Ministry of Welfare Regulations concerning the law, (Kosei Sho Rei No.11, dated 31 March 1948). Note: Information concerning the national budget, which may limit certain features of the law, will be made available as soon as received.

Determination of Need in a Family with Income and Method of Determining Daily Life Security Law Grant.

The following statement has been prepared in order to clarify the present method of determining the "Limit of need" by Welfare Commissioners (Minsei-iin), with particular reference to Social Affairs Bureau Instruction #7 (Hatsu-sha #7), issued 23 January 1948 and Hatsu-sha #59, issued 29 March 1948. This statement has been reviewed and approved by the Ministry of Welfare and may be considered to represent the official interpretation.

Hatsu-sha #7 was issued in an effort to get a true picture of the family's income and expenses on official record, since the Ministry of Welfare had reason to believe that both families and Welfare Commissioners (Minsei-iin) were concealing resources; and to offer a guide as to determination of the "Limit of need" in all families, but particularly those in which there was income.

Hatsu-sha #59 was issued when it became apparent that further control was necessary. It is expected that these orders will be revoked when the standard allowances are increased to more nearly meet existing conditions and the standard allowance may again be considered to be the "limit necessary for a minimum living". It is not known at present when such increase of the standard allowance will be made.

Hatsu-sha #7 states that while it may be generally accepted that the standard allowance is sufficient to provide a minimum living, it cannot be said to fit the needs of all families, because of differences in age, health condition, nature of employment, instability of rationed items, or other factors. It is suggested that while the "limit of need" may deviate from the standard allowance, such deviation shall not be a marked degree, and that in such instances, where the limit of need is higher than the standard allowances, income shall be deducted from the limit of need, the resultant figure to be the allowance for the family.

Hatsu-sha #7 also attempts to designate certain types of resources which shall not be considered as deductible income. These are designated as follows:

1. LARA goods and other charitable contributions.
2. Temporary remuneration or money or goods received from friends of neighbors.
3. Small sums and unstable income during a period of apprenticeship.

4. Small sums and unstable income from home jobs undertaken in leisure time.

The order also points out that decisions regarding the “limit necessary for a minimum living” concerning individual families shall be made by the Welfare Committee meeting.

Hatsu-sha #59 again points out that the limit necessary for a minimum living will normally not deviate markedly from the standard allowance. The order provides no limitation more definite than that statement, but does provide certain administrative procedures which will tend to provide such limitations. The provisions are as follows:

1. If the Welfare Commissioner (Minsei-iin) and the Welfare Committee determine that a family’s limit necessary for a minimum living exceeds the standard allowance by an amount up to 50% of the standard allowance, approval of such action must be secured from the head of city, town or village.

2. If the limit necessary for a minimum living is determined to be from 50% to 100% higher than the standard, further approval must be contained from the prefecture governor.

3. If the limit exceeds the standard allowance by over 100%, approval must be obtained from the Ministry of Welfare.

Information regarding each case must be submitted on a prescribed form. It will be noted that nothing in these orders alters the prescribed method of securing approval for increasing the amount to be paid more than the standard allowances (by prefecture governor and Ministry of Welfare). Note: Items such as “Aid for Nutrition” or “School Lunch Aid”, when added to the amount to be paid, do not require such approval as above noted.

Those items can be considered to be a part of the standard allowance, and may be provided in addition to the standard allowance. Such items, however, should be properly noted on the official family record.

Hatsu-sha #59 does provide that submission of a request for increase in the amount to be paid more than the standard allowance and increase in limit necessary for a minimum living for a particular family may be submitted on the same form.

Appointment of Welfare Commissioners (Minsei-iin)

The Ministry of Welfare has issued the following notification to prefecture governors concerning appointment of Welfare Commissioners (Minsei-iin):

Ministry of Welfare Instruction #52 (WM/SHA-OTSU-HATSU No.52) 30 March 1948

“In view of the fact that Welfare Commissioners (Minsei-iin) function in charge of designated areas or of special matters and serve the entire community and not a group thereof, and are not allowed to represent special interests of a group, it would not be appropriate to commission as Welfare Commissioners, persons who are not Japanese citizens. You are requested to act accordingly in dealing with this matter, with such an understanding as stated above”.

Licensed Agencies for Relief in Asia (LARA)

Additional LARA shipments, number 59 and 60, of relief supplies for distribution, through official Japanese Governmental welfare channels, under the supervision of Public Health and Welfare Section, SCAP, have arrived in Yokohama. These shipments were as follows:

1. 59th Shipment: Arrived aboard the S.S. General Meiyu on 26 March and contained 3.53 tons (food, 2.4 tons - clothing, 1.13 tons).

2. 60th Shipment: Arrived aboard the S.S. Grete Maersk on 30 March and contained 1.28 tons (food).

Japanese Red Cross Society

Volunteer Services:

All Japanese Red Cross Chapters have completed the survey questionnaire on community needs. The completed reports are being studied by the Volunteer Service Section and other officials at the National Headquarters of the Japanese Red Cross and the compilation of the surveys is being made. Volunteer projects will be planned in relation to needs determined by the survey.

The dates for the Volunteer Leadership Training Conference have been set for 4 and 5 May. At this time there will also be a training conference on disaster relief. The meetings will be held at the National Headquarters office in Tokyo and will be attended by all chapter directors as well as paid staff members from each chapter who are responsible for Volunteer Service and Disaster Service. Each chapter director has been requested to appoint a woman chairman of Volunteer Services for each prefecture and it is hoped that such a chairman will be present from each chapter at the Training Conference.

The first day, the training conference will cover the general plan for the administration and extension of all Red Cross Services at every level—chapter, branch and sub-branch. This will be presented to the total group. The second day the Volunteer Service Section and the Disaster Section will hold separate conferences in which details of these services will be discussed. A handbook on the administration and organization of Volunteer Services is being prepared to be used at the training conference.

Japanese Publications Concerning Welfare

Numerous suggestions and requests have been made concerning publications in Japanese on welfare subjects. One of the difficulties has been that persons are not aware of some of the literature already written in Japanese. The Social Work Research Institute of the Japan Social Work Association issued in April 1947 a short bibliography of publications concerning history of social work in Japan. This pamphlet lists 22 books and indicates briefly the contents of each. Some of the books listed are:

Outline of Relief System by T. Inoue, 1909

History of Japanese Christian Social Work by T. Namae, 1931

Social Work and Buddhism by Z. Tsuji, 1936

Development of Japanese Social Work by M. Yamaguchi, 1938

Social Activities by Early Japanese Christians and Western Medicine by A. Ebizawa, 1944

The Social Work Research Institute is preparing other bibliographies of social work literature. None of this material has been translated into English.

SECTION III VETERINARY AFFAIRS DIVISION

A representative of Public Health and Welfare Section, GHQ, SCAP, inspected the National Veterinary Laboratory in Aomori Prefecture. Recommendations were made to raise the laboratory to a standard basis comparable with United States Laboratories and to set up a program for the submission of samples of each lot of biologicals produced for assay prior to their release for the purpose intended.

Animal Disease Report

The following outbreak of diseases was reported by the Ministry of Agriculture and Forestry for the period 3 - 9 April:

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Kumamoto	Black-leg	1
Miyagi	Swine Cholera	2

SECTION IV
NURSING AFFAIRS DIVISION

Education

The fourth Public Health Nurses' refresher course opened 5 April at the Institute of Public Health, Tokyo. There are 63 students present representing 45 prefectures. This is the largest attendance since the beginning of the courses. The students have all received mimeographed copies of the lectures in order that they may study and prepare for classes. Physical examinations including chest X-rays and serological tests have been done on all students.

On 5 April the Japanese Medical Magazine Ltd. gave 20,000 yen to the National Nurses Association for a Scholarship Fund.

SECTION V
SUPPLY DIVISION

Production

A total of 4,273,555 lbs. of 10% DDT Dust, 403,023 gallons of 5% DDT Residual Effect Spray, and 132,344 vials of Typhus Vaccine represents total stocks on hand in factories and wholesale houses of the Ministry of Welfare as of 4 April.

A total of 6,561 pieces of the various types of DDT dusting and spraying equipment for mosquito and fly control programs were produced during the period 28 March to 3 April. All requirements are being met and large stocks are on hand.

Distribution

Spraying and dusting equipment for use in insect and rodent control was shipped to nine prefectures under direction of the Ministry of Welfare in the period 28 March - 3 April. Total of 2,753 was distributed as follows:

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsack Sprayer</u>	<u>Semi-automatic Sprayer</u>	<u>Hand Sprayer</u>
Yamagata	48	0	0	0
Ishikawa	288	0	0	96
Aichi	240	0	0	240
Osaka	1,008	150	0	204
Kyoto	0	0	0	120
Hiroshima	0	0	0	60
Yamaguchi	0	0	60	0
Nagasaki	0	200	0	0
Fukuoka	0	0	0	24
Total	1,584	350	(*)60	744

(*) In addition Ministry of Welfare received 15 semi-automatic sprayers for use by the Repatriation Board.

Supplemental allocation for February and March of six controlled medicines was made to all prefectures by directive from the Pharmaceutical Affairs Section Instruction #163 (YAKU #163), dated 9 February 1948. The following are the medicines concerned:

1. Sulfamin
2. Mercuric Bichloride for disinfection
3. Procaine-hydrochloride
4. Injection of Acetylsulfamin
5. Alcohol
6. Sulfathiazole tablets

The allocations for the quarter, April, May and June 1948, of controlled medicines were dispatched to the prefectures by the Medical Affairs Bureau Instruction (IHATSU) No.116, dated 19 March 1948.

The February report of narcotic control activities, Ministry of Welfare, contains the following information:

Total registrants	80,019
Arrests- Registered Persons	13
Unregistered persons	58
Convictions-Registered persons	6
Unregistered persons	23
Thefts of narcotics	25
Losses by fire	6

Penalties for registrants varied from 3,000 yen fine to six months penal servitude plus 1,000 yen fine, sentence suspended for two years. Penalties for non-registrants varied from 1,000 yen fine to two years penal servitude. In addition to the above figures, charges against 17 defendants were dropped because of lack of evidence. As a result of inspections by narcotic agents, 48 registrants were admonished and five cases were disposed of administratively for minor technical violations. Five hospitals and 20 clinics lost narcotics through theft and burglary. One hospital and five clinics lost narcotic through fire.

An inspection trip to central and southern Honshu by the Assistant Narcotic Control Officer, Public Health and Welfare Section, for the purpose of coordinating the efforts of all enforcement agencies in Japan, concerned with narcotic control, revealed there is no substantial evidence that narcotics are being smuggled into Japan. Several suspects of general smuggling activities are under surveillance in an effort to detect reported narcotic smuggling.

The arrest of a Japanese female by a narcotic agent for illegal possession of narcotics resulted in the arrest of 20 defendants in another prefecture. The investigation, which is continuing, indicates the foreign national husband of the arrested female was probably the leader of the group of illicit traffickers.

SECTION VII PREVENTIVE MEDICINE DIVISION

Sanitation

A conference of the Ministry Government Regional Sanitary Engineers was held in Yokohama on 8-9 April. Lectures and demonstrations on sanitation problems and control procedures were given. Organization and training of Sanitary Teams and the setting-up the Sanitation Division of the Health Centers were accentuated.

SECTION VIII SOCIAL SECURITY DIVISION

National Health Insurance

Attention is invited to Insurance Bureau Instruction (Ho-Hatsu) No.284 of 1 March concerning "National subsidy for the establishment of clinic facilities for National Health Insurance in the year of 1948", listed in Public Health and Welfare Weekly Bulletin No.64 for the period of 15 to 21 March. The replies of prefectural Insurance Section to this notice should have been important elements in the determination of budget appropriations for the fiscal year of 1948. Since the publication of the notice was so late and the deadline date (30 April) set for replies is a month after the beginning of the fiscal year, the replies were little help in original budget decisions. However, the notice also provides that requests for funds will be given consideration at any time, and it is hoped that data supporting subsequent requests will provide needed information as to the actual requirements and condition of local medical facilities (clinics, general hospitals, and maternity hospitals).

The following standards are prescribed in this notice as basic qualifications for subsidization of medical facilities: (1) There is a definite need for the facility. (2) The facility will be directly controlled by the National Health Insurance Association. (3) The operations of the Associations will be improved by the facility and it is not likely to become a financial burden in the future. (4) The facility is of the nature provided for in the National Health Insurance Law, except in unusual cases. (5) It will be completed within the current fiscal year (1948).

The application for a subsidy is submitted by the Association to the prefectural government which forwards it, with appropriate comments, to the Ministry of Welfare. If the Ministry of Welfare approves the application, the Ministry will determine the amount to be awarded and will inform the Association via the prefectural government.

Ordinarily no part of the subsidy is paid to the Association until construction is completed, but an exception may be made where it is established that the Association cannot proceed with the construction without a partial advance. (See inclosure #1)

Health Insurance

The number of employers participating in government-managed Health Insurance gradually decreased from a peak of 169,896 in 1942 to 82,227 in June 1946. However, the number of workers insured continued to increase until January 1945 when a high point of 4,958,698 was reached. This difference in trends was explained by the combining of small enterprises into large companies for purpose of war-time efficiency. From January 1945 to June 1946 the number of insured workers followed the decrease in number of industries resulting from bombing, and later, dissolutions due to the termination of the war. However, Ministry of Welfare figures indicate that by November 1947 there had been approximate increases of 7% in insured workers over June 1946. As of November 1947 there were 88,226 employers and 2,404,179 employees participating in government-managed Health Insurance.

SECTION IX MEDICAL SERVICE DIVISION

Civilian Hospital Strength Report for week ending 12 March shows 3,430 hospitals with a capacity of 207,571 beds, of which 102,927 were occupied. During this same period, 301,566 out-patients were treated.

Civilian Hospital Strength Report for week ending 19 March shows 3,460 hospitals with a capacity of 208,685 beds, of which 96,838 were occupied. During this same period, 313,915 out-patients were treated.

SECTION X MEMORANDA TO JAPANESE GOVERNMENT

None.

CRAWFORD F.SAMS
Colonel, Medical Corps

3 Inclosures:

1. Data for the National Health Insurance.
2. Weekly Report of Cases and Deaths from Communicable Diseases in Japan - Week ended 27 March 1948.
3. Weekly Report of Cases and Deaths from Communicable Diseases in Japan - Week ended 3 April 1948.

WELFARE DIVISION

Licensed Agencies for Relief in Asia (LARA)

The 61st and 62nd LARA shipments arrived in Yokohama and consisted of the following supplies:

- a. 61st Shipment: Arrived aboard the S. S. Pacific Bear on 5 April and contained 113.62 tons (food)
- b. 62nd Shipment: Arrived aboard the S. S. President Jefferson on 11 April and contained 132.16 tons (food).

Since the first LARA shipment, which arrived on 30 November 1946, total amount received as of 11 April is 4,429.72 tons, consisting of:

Food	3,384.07 tons
Clothing (including shoes)	906.74 tons
Medicine	59.24 tons
Miscellaneous	<u>79.67 tons</u>
*Total	4,429.72 tons
* <u>286.46 tons monthly average</u>	

Heifers for Relief Committee:

This committee, with Headquarters at 30 North Marion Ave., Pasadena 4, California, working through the LARA Committee, has announced plans for the shipment of 2,000 goats to Japan for use in welfare, education and rehabilitation projects.

The goats will be shipped in lots of approximately 300 with the first shipment leaving San Francisco, California, on or about 18 April. Subsequent shipments will be made on or about 1 June, 2 June, 12 July, 3 August, 24 August and 14 September.

A sub-committee on Agriculture of the Central LARA Committee (Tokyo) with representatives from SCAP (PH&W, NRS and ESS), LARA and the Japanese Government (Ministries of Agriculture, Welfare and Education) have held preliminary conferences regarding the receipt, allocation and distribution of the 2,000 goats. It has been tentatively agreed that the allocation would be on the following basis:

- 40% (800 goats) Ministry of Welfare (for public and private institutions)
- 40% (800 goats) Ministry of Agriculture (for goat villages and demonstration projects)
- 20% (400 goats) Ministry of Education (for Agricultural Schools)

The first shipment of 300 goats has been allocated to the Ministry of Agriculture and will be distributed during May, as follows:

Tokyo-to, Nishitama-gun, Nariki-mura	60 goats
Saitama-ken, Iruma-gun, Kanagawa-mura	60 goats
Gumma-ken, Oura-gun, Tarara-mura	60 goats
Kanagawa-ken, Kamigun, Kamihataro-mura	60 goats
Shizuoka-ken, Mishima (& Neighborhood)	<u>60 goats</u>
Total	300 goats

Note: The Ministry of Agriculture has dispatched a field representative into those villages given above and will make the necessary arrangements (goat assignments) for the most effective distribution. The Farmer's Association, within the villages, will be responsible for submitting reports, etc., as required by the Ministry of Agriculture.

Status of Welfare Laws

Public Health and Welfare Section, Weekly Bulletin No.66 (for period 29 March - 4 April) carried a partial list of laws of interest to Welfare Officers. The following additional information completes the list.

1. Regulation concerning Rice Granting to Deserted Children

(Kiji Yoikumai Kyoyo Kata)
Dajokan No.300, 20 June 1871
Rescinded

2. Regulation concerning Assistance of the Poor Family with Newly Born Triplets
(Sanshi Shussan no Hinkonsha e Yoiku Ryo Kyuyo Kata)
Dajokan No.79, 3 March 1873
Rescinded

3. Poor Relief Regulation
(Kyogo Kisoku)
Dajokan No.162, 8 December 1874
Rescinded

4. Disaster Relief Fund Law
(Risai Kyujo Kinki-ho)
Law No.77, 22 March 1899, amended by Law No.36 of 1905
Law No.29 of 1910, Law No.30 of 1916, Law No.19 of 1918,
Law No.33 of 1932, Law No.60 of 1940, Law No. 13 of 1941,
Law No.17 of 1946 and Law No.44 of 1947.
Rescinded by Disaster Relief Law No.118, October 1947.

5. "Hokkaido" Natives Protection Law
(Hokkaido Kyu Dojin Hogo Ho)
Law No.27 of March 1899
In effect

6. Sea Disaster Relief Law
(Suinan Kyogo-ho)
Law No.95 of 29 March 1899
In effect

7. Reformatories Law
(Kanka-in ho)
Law No.37 of 10 March 1900
Rescinded by Juvenile Training and Education Law

8. Disabled Soldiers Home Law
(Shohei-in ho)
Law No.29 of 7 April 1906
In effect

9. State Reformatory Ordinance
(Kokuritsu Kankain Rei)
Ordinance No.108 of 20 August 1917
In effect

10. Juvenile Delinquency Law
(Shonen ho)
Law No.42 of 11 April 1922
In effect

11. Correctional Institutions Law
(Kyosei in ho)
Law No.43 of 17 April 1922
In effect

12. Insane Law
(Seishinbyo Sha Kango ho)
Law No.38 of 10 March 1900

In effect

13. Daily Life Security Law
(Seikatsu Hogo ho)
Law No.17 of 9 September 1946
In effect

14. Disaster Relief Law
(Risai Kyujo ho)
Law No.118 of 18 October 1947
In effect

15. Child Welfare Law
(Jido Fukushi ho)
Law no.164 of 12 December 1947
In effect

16. Juvenile Vagrant Measure
(Furoji Hogo ni Taisuru Ken)
Hatsusha No.115 Welfare Ministry, 15 September 1946
In effect

Schedule of Prefectural Trips for Field Supervisors of the Ministry of Welfare

The Ministry of Welfare has announced the following schedule for its field supervisors for April, May and June:

Osaka	14-23 April
Kyoto	20-19 April
Yamaguchi	5-12 May
Nara	13-20 May
Chiba	24-31 May
Ibaraki	7-14 June
Kanagawa	10-17 June
Fukui	21-28 June

Public Assistance

The Ministry of Welfare has submitted the following report for the month of February. Figures for January 1948 and February 1947 are for the purpose of comparison.

	<u>Feb.1948</u>	<u>Jan.1948</u>	<u>Feb.1947</u>
Persons - institutional	135,684	137,796	98,837
Persons - non-institutional	2,020,410	2,061,798	2,602,670

* After deductions for repayment by families

National Child Welfare Week

National Child Welfare Week, 5-11 May, is being sponsored this year by the Ministry of Welfare, the prefectures, Japan Social Work Association, All Japan Welfare Committeeman's League. (Minsei-iin Renmei), Mother & Child Care Institute (Boshi Aiiku-kai), National Relief Association (Dobo-Engo Kai) and Japan Juvenile

Training and Education Association, and is being supported by the Prime Ministerial Board and all Ministries. Note: Local Communities are authorized to adjust the dates to suit their convenience. Sunday, 9 May, has been declared "Mother's Day".

Dobo-Enko Kai is sending 100 posters to each prefecture and the Children's Bureau is distributing 200,000 pamphlets on the Child Welfare Law. Central Government will publicize the program through the press and radio channels, but prefectures are urged to publicize their own programs. It is suggested that children's institutions may be opened to the Japanese public as a part of the program.

Welfare Officers may wish to assist the prefectures in their planning and operations.

Foreign Nationals

Reference: SCAPIN-1841 (PH) file AG 430 (9 Jan 48) subject: Ration for United Nations' Nationals, Neutral and Enemy Nationals and Stateless Persons.

The above directive was issued to the Japanese Government for the purpose of removing the Foreign National problem from one based on nationality to one of group treatment (Occidental - Oriental) as it related to food.

Outside of making food available for purchase, which is necessary for the health of Foreign Nationals, no other SCAPINS have been issued regarding "Foreign Nationals" treatment with the exception of SCAPIN-775 "Public Assistance" dated 27 February 1946 which provides that the Japanese Government will take necessary action to provide these minimum standards necessary for the health and welfare of all persons residing in Japan. This directive should not be interpreted as meaning that the standard of living enjoyed by Foreign Nationals pre-war time, is to be guaranteed by the Government. The Foreign National must provide, above the minimum need, by his own efforts or arrange with his mission for repatriation to his own country if unable to cope with the post war conditions in Japan. SCAPIN-775 means, if the Foreign National is unable to provide for himself the minimum standard necessary to sustain life, assistance be furnished to the individual in the form of relief in kind by the Japanese Government pending the individuals repatriation to his home country. All foreign nationals now remaining in Japan have certified to their ability to maintain themselves without becoming charges of the Japanese Government and when not able to do so will be considered subject to repatriation.

SCAP assumes no responsibility of assisting Foreign Nationals to solve their housing problems. If a Foreign National is evicted from his abode, it is up to the Foreign National himself to find new quarters without assistance or help from the Occupation Forces. If he feels he has been unjustly evicted, his recourse is through the Japanese courts and not through the Occupation Forces, since interference with the normal functions of the courts would weaken the judicial system of Japan.

The Chinese Association, with the consent of the Chinese Mission has entered into an agreement with the Ministry of Agriculture and Forestry to accept Ration "A" for all Chinese in Japan. This agreement has the approval of SCAP, and precludes individual Chinese from choosing the "B" ration in the future. No attempt should be made by Occupation Force personnel to require Japanese Officials to allow individual Chinese to change their ration.

Persons of Japanese descent who claim nationality of an Allied or neutral country and who have not received their Certificate of Registry from their respective diplomatic or consular representative will receive the same ration as Japanese Nationals. This applies to all Niseis including American and Canadian. A passport showing citizenship is not sufficient as the individual may have voted in this country or in some other way may have lost his citizenship. If the appropriate mission refuses to certify their subjects, then the individual will not receive the Foreign Nationals' ration but only the Japanese ration.

The Certificate of Registry is a document issued by the Consular Officials which certifies that the subject is a citizen and entitled to the protection of his respective country.

Japanese Red Cross

Nursing - (See Nursing Affairs Division)

SECTION II VETERINARY AFFAIRS DIVISION

Animal Disease Report

The following outbreak of diseases was reported by the Ministry of Agriculture and Forestry for the period 10 - 16 April.

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Iwate	Swine plague	8
	Swine erysipelas	12
Ishikawa	Foot & Mouth Disease (Suspected)	2

SECTION III NURSING AFFAIRS DIVISION

Midwifery Courses

The third series of Midwifery Courses was completed 10 April in Takamatsu City, Kagawa Prefecture. A SCAP Midwifery Consultant delivered a series of midwifery lectures, also furnished a complete set of lectures, in Japanese, to each student. There were 327 midwives present for the 10 day course representing all four prefectures in Shikoku.

Tokushima Prefecture		16
Ehime	"	13
Kochi	"	6
Kagawa	"	266
Special students		26
Total		327

Red Cross Nursing Service

A Red Cross Home Nursing Instructors Course was held at Morioka, Iwate Prefecture with Iwate Chapter serving as host. The course was held for two weeks (29 March to 11 April) and 83 hours of practice teaching was given. Fourteen nurses completed the course. This was given under the Supervision of Red Cross Nursing Consultant.

Personnel

Mrs. J. Watterworth, PHN has arrived for duty and will be assigned to Shikoku Region as Regional Nurse.

Training Courses

The National Hospital (Model Demonstration School) in Okayama will hold opening exercise Saturday 1 May. Refresher courses currently being held, are proceeding favorably.

The First National Hospital in Tokyo will have opening exercises for nurses on 3 May. This is to be a Model Demonstration School in connection with the Model Hospital, set up by Medical Services Division of PHW, GHQ, SCAP.

SECTION IV SUPPLY DIVISION

Distribution

Dusters and sprayers for use in insect and rodent control were shipped to ten prefectures at the direction of the Ministry of Welfare in the period 4-10 April. A total of 660 pieces of equipment were distributed as listed below:

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsack Sprayer</u>	<u>Semiautomatic Sprayer</u>	<u>Hand Sprayer</u>
Fukui	72	60	-	48
Kyoto	-	-	-	50

Total	240	180	130	110

A plan for distribution of outdated penicillin released to the Japanese Government by U. S. Army, consisting of 10,801 vials of 100,000 oxford units and 991 vials of 200,000 oxford units was approved. This penicillin is allocated to all prefectures which indicated desire for this type of penicillin in the previous survey. Allocations were made on the basis of population. Distribution will be through normal ration distribution channels. Instructions to the prefecture by the Ministry of Welfare will set up allowable inventories and indicate a deadline for reply on quantities desired. Listed below are the allocations. Hokkaido, Aomori, Iwate and Kyoto received no allocations:

<u>Prefecture</u>	<u>100,000 Unit</u>		<u>200,000 Unit</u>	
Miyagi	241	vials	22	vials
Yamagata	186		17	
Yamanashi	134		12	
Akita	186		17	
Hyogo	421		39	
Tokushima	137		12

Chiba	341	31
Wakayama	156	14
Kagoshima	265	24
Tokyo	962	89
Total	10,795 vials	991 vials

All controlled medicines are now distributed according to the provisions of Ministry of Welfare Ordinance No.30, dated 11 November 1947. This provides for allocation of authorized dealers by prefectural officials, and issue of ration credentials to these dealers which will enable them to purchase allocated amounts from licensed local sellers. The term "dealers" is defined in Ordinance No.30, Article 2, as follows:

"By 'dealers' is meant hospital, clinic, veterinary hospital, pharmacy, retailer of medicines and other medical supplies and any other who uses medical supplies by trade and whom the governor of a metropolis, district or urban or rural prefecture designates."

It will be noted that pharmacies and drug stores are designated as dealers, and are thus authorized and entitled to receive equitable allocations of all controlled medicines, including sulfathiazole, sulfadiazine, penicillin, bismuth subsalicylate and mapharsen. This change in method of distribution of these medicines became fully effective 1 February. Reference is made to this subject in recent issues of the Welfare Bulletin.

Production

A total of 4,141,455 lbs. of 10% DDT Dust, 419,022 gallons of DDT Spray and 132,344 vials of typhus vaccine represents stocks on hand in factories and wholesale depots of the Ministry of Welfare as of 10 April.

Distribution of DDT products and typhus vaccine during March totaled 153,816 lbs. of 10% DDT dust, 81,207 gallons of 5% DDT residual effect spray, and 146,400 vials of typhus vaccine. The stocks on hand as of 1 April were as follows: 4,273,555 lbs. 10% DDT dust, 403,023 gallons of 5% DDT residual effect spray, and 132,344 vials of typhus vaccine. A detailed breakdown by prefectures and governmental departments is as follows:

<u>Prefecture</u>	<u>10% DDT Dust</u>	<u>5% DDT Residual Effect Spray</u>	<u>Typhus Vaccine</u>

Reference is made to Ministry of Welfare Disease Prevention Bureau Instruction (YOHATSU) No.914, subject, "Epidemic Prevention for Eruptive typhus", dated 25 November 1947, and Ministry of Welfare Pharmaceutical Affairs Section Instruction (YAKU) No.240, dated 27 February 1948, from Chief, Pharmaceutical Affairs Section, Medical Affairs Bureau and Chief, Epidemic Prevention Section, Disease Prevention Bureau to Chiefs, Prefectural Sanitation Sections, subject, "Dealing of DDT". Item 6, paragraph 4, distribution of DDT from prefectural stocks to medical practitioners only, for self-dusting use, will be limited to an absolute minimum, the prefectural sanitation section to be held responsible for determining this minimum.

A total of 7,281 pieces of the various types of DDT dusting and spraying equipment for mosquito and fly control programs were produced during the period 4 April - 12 April. An adequate reserve is on hand to meet all needs.

SECTION V NARCOTIC CONTROL

Complaints have been received from narcotic agents that pressure from superior prefectural officials has hindered the narcotic agents in diligently enforcing the Narcotic Law. The Ministry of Welfare has been advised to report each such instance in order to determine the proper action is taken in respect to any officials who exert such pressure.

The draft of the new narcotic law which will be submitted to the Diet has been completed. In addition to the provisions of the Ministry of Welfare Ordinance number 25, dated 19 June 1946, the draft has several new provisions which will aid in strict enforcement.

The second training school for narcotic agents will be held in Tokyo from 15 to 22 June. Conflicting schedules necessitated postponing the school from May to June.

Arrest of a trafficker in narcotics in Tokyo has widened the investigation to include doctors, in several other prefectures, who participated in dividing the narcotics and other medicines of a government hospital in the latter part of August 1945.

SECTION VI
PREVENTIVE MEDICINE DIVISION

Public Health Train

Following is the schedule of the Public Health Train for the Kinki Region:

<u>City</u>	<u>Station</u>		<u>Date</u>		<u>Period</u>
Ujiyamada	Yamada	April	24-29		6
Nara	Nara	May	1-4		4
Wakayama	Wakayama		3-7		3
Tanabe	Kiitanabe		9-10		2
Osaka	Minatomachi		12-15		4
	Umeda		17-20		4
Tokuyama	Tokuyama		22-27		6
Matsue	Matsue	May	30-1	June	3
Tottori	Tottori	June	2-4		3
Maizuru	Nishimaizuru		6-8		3
Kyoto	Umekoji		10-14		5
Otsu	Otsu		15-17		3
Kobe	Minatogawa		19-22		4
Himeji	Himeji		23-25		3

Return to Shinagawa station in Tokyo on June 27.

SECTION VII
MEDICAL SERVICE DIVISION

Civilian Hospital Strength Report for week ending 26 March shows 3,472 hospitals with a capacity of 208,996 beds, of which 106,299 were occupied. During this same period, 335,832 out-patients were treated.

SECTION VIII
SOCIAL SECURITY DIVISION

Health Insurance

Reference is made to Insurance Bureau Instruction (Ho-Hatsu) No. 420 of 30 March, subject "On Report on Governmental Health Insurance Enterprise", listed in Public Health and Welfare Weekly Bulletin No.67 for the period 5-11 April 1948. The Instructions disseminate information on how to file reports concerning the classification of industries covered by government-managed Health Insurance. The reports are requested for the fiscal year 1947 which ended 31 March. (See inclosure No.1) While a suspense date was not noted, it is reasonable to expect that all reports will be made on or before 1 July.

SECTION IX
MEMORANDA TO JAPANESE GOVERNMENT

None.

CRAWFORD F. SAMS

SECTION I
GENERAL

The following instructions were forwarded by the designated Bureaus of the Ministry of Welfare to the Prefectural Government offices during the periods indicated.

4 - 10 April

- April 5, 1948 From: Chief of Accounts Section To: Prefectural Governors
(Kai-hatsu, No.255)
Subject: Request for Payment of Medical Fee.
- April 5, 1948 From: Director of Medical Bureau To: Prefectural Governors
(I-Hatsu, No.134)
Subject: Vested Privileges of Dealers on Poison and Powerful Drugs.
- April 5, 1948 From: Director of Medical Bureau To: Prefectural Governors
(I-Hatsu, No.137)
Subject: Allocation and Approved Distribution of Sanitary Materials for the 1st Quarter of 1948 - 49.
- April 5, 1948 From: Director of Medical Bureau To: Prefectural Governors
(I-Hatsu, No.139)
Subject: Forwarding of a Medal of the Narcotic Control Policemen.
- April 5, 1948 From: Director of Disease Prevention Bureau To: Prefectural Governors
(Yo-Hatsu, No.391)
Subject: Application Form for Assay under Article 10 of Biological Preparation Manufacturing Control Regulations and under Article 4 of Antibacterial Substance Control Regulations.
- April 5, 1948 From: Director of Disease Prevention Bureau To: Prefectural Governors
(Yo-Hatsu, No.391)
Subject: Survey on Conditions of Preventive Measures of Tuberculosis for 1947-48.
- April 6, 1948 From: Chief of Accounts Section To: Every Official responsible
(Kai-hatsu, No.258) for Disbursement
Subject: Budget Distribution under Law No.12, 1948 (Law concerning Pay etc. for Government Personnel) and Regulations for Payment of Temporary Allowance According to the same Law.
- April 6, 1948 From: Director of Public Health Bureau To: Prefectural Governors
(Koho-Hatsu, No.437)
Subject: Distribution of the Temporary Measures for Free Postal System.
- April 6, 1948 From: Director of Children Bureau To: Governor of Ehime Prefecture
(Ji-Hatsu, No.168)
Subject: Application for Approval for the Personnel Training Institution under Child Welfare Law.
- April 7, 1948 From: Director of Public Health Bureau To: Prefectural Governors
(Koho-Hatsu, No.446)
Subject: Special Distribution of Sugar for In-patients in big cities, etc.
- April 7, 1948 From: Director of Medical Bureau To: Prefectural Governors
(I-Hatsu, No.142)
Subject: Prices of Special Medicines.
- April 7, 1948 From: Director of Disease Prevention Bureau To: Governor of Hokkaido
(Yo-Hatsu, No.407)
Subject: Subsidy for Epidemic Prevention Expense at the Time of Disaster.
- April 7, 1948 From: Director of Social Bureau To: Prefectural Governors
(Sha-Hatsu, No.54)

Subject: Survey on Condition of Appointment of Members of Welfare Committee.

April 7, 1948 From: Director of Insurance Bureau To: Prefectural Governors and Chiefs
(Ho-Hatsu, No.462) of Branch Offices of Social
Insurance

Subject: Program for Estimated Disbursement of Business Account, Special Accounts for Welfare
Insurance for 1947-48.

April 7, 1948 From: Director of Insurance Bureau To: Prefectural Governors
(Ho-Hatsu, No.468)

Subject: Methods of Calculation of the Amounts of Expenses that are Necessary for Medical Treatment
under Health Insurance and Seamens' Insurance, and a National Health Insurance Association.

April 7, 1948 From: Director of Demobilization Bureau To: Prefectural Governors
(I-Fuku, No.1946)

Subject: Preliminary Notice of Increase of Money Borne by Service Section for 1947-48.

April 8, 1948 From: Director of Children Bureau To: Prefectural Governors
(Ji-Hatsu, No.177)

Subject: Enforcement of Child Welfare Law.

April 8, 1948 From: Director of Children Bureau To: Prefectural Governors
(Ji-Hatsu, No.178)

Subject: Inquiry concerning Opening of the Short Course for Personnel Training at the Child Welfare
Station.

April 8, 1948 From: Director of Children Bureau To: Prefectural Governors
(Ji-Hatsu, No.179)

Subject: Establishment of the Training Institution for Personnel.

April 8, 1948 From: Director of Children Bureau To: Prefectural Governors
(Ji-Hatsu, No.180)

Subject: Establishment and Management of the Training Institution for Day-nurses.

April 8, 1948 From: Director of Social Bureau To: Prefectural Governors
(Sha-Hatsu, No.55)

Subject: A Conference Concerning LARA Commodities.

April 8, 1948 From: Director of Insurance Bureau To: Prefectural Governors and Chiefs
(Ho-Hatsu, No.477) of Branch Offices of Social
Insurance

Subject: Program of Estimated Disbursement of Business Account, Special Accounts of Welfare Insurance
for 1947-48.

April 8, 1948 From: Director of Insurance Bureau To: Prefectural Governors and Head
(Ho-Hatsu, No.482) of Chiba National Sanatorium,
Health Insurance

Subject: Notification of Program for Disbursement of Annual Expenditure of Business Account, Special
Accounts of Welfare Insurance for 1947-48.

April 8, 1948 From: Director of Demobilization Bureau To: Prefectural Governors
(I-Fuku, No.1952)

Subject: Estimation Concerning Pay for Personnel at Service Section.

April 9, 1948 From: Director of Disease Prevention Bureau To: Prefectural Governors
(Yo-Hatsu, No.431)

Subject: Preventive Inoculation for Typhoid Fever.

April 10, 1948 From: Chief of Accounts Section To: Prefectural Governors
 (Kai-hatsu, No.286)
 Subject: Correction of Classification of Distributed Budget.

April 10, 1948 From: Director of Public Health Bureau To: Prefectural Governors
 (Koho-Hatsu, No.463)
 Subject: Expenditure Necessary for Establishment of the Model Health Center.

April 10, 1948 From: Director of Children Bureau To: Prefectural Governors
 (Ji-Hatsu, No.184)
 Subject: Distribution of Budget for the National Subsidy for Expenses to be Disbursed for the Purpose of Protection under Child Welfare Law.

11 - 17 April

April 12, 1948 From: Director of Medical Bureau To: Prefectural Governors
 (I-Hatsu, No.149)
 Subject: Control of Advertisement Concerning Business of Midwives.

April 12, 1948 From: Director of Medical Bureau To: Prefectural Governors
 (I-Hatsu, No.151)
 Subject: Name of Patent Medicine Parasiticide which do not contain Santonin.

April 12, 1948 From: Director of Children Bureau To: Prefectural Governors
 (Ji-Hatsu, No.186)
 Subject: Standard of Establishment and management of the Day-nurse Training Institution.

April 12, 1948 From: Director of Social Bureau To: Prefectural Governors
 (Sha-Hatsu, No.57)
 Subject: Allocation of Subsidies for Expenses of the Institution for Daily Life Security Law, and for Expenses of Institution for Accommodation of Repatriates and Needy Persons.

April 13, 1948 From: Director of Public Health Bureau To: Prefectural Governors
 (Koho-Hatsu, No.468)
 Subject: Regional Meetings for Execution of Food Sanitation Law.

April 13, 1948 From: Director of Medical Bureau To: Prefectural Governors
 (I-Hatsu, No.153)
 Subject: Administration for Control and Inspection of Narcotic (Cultivation of Hem) in 1948-49.

April 13, 1948 From: Director of Children Bureau To: Governor of Aomori Prefecture
 (Ji-Hatsu, No.187)
 Subject: Application for Reclamation of a Farm for Accommodation of War Ophans and Waifs.

April 13, 1948 From: Director of Children Bureau To: Governor of Tokyo Metro
 (Ji-Hatsu, No.190)
 Subject: Special Distribution of Cotton Goods.

April 13, 1948 From: Director of Children Bureau To: Governor of Tokyo Metro
 (Ji-Hatsu, No.191)
 Subject: Proposed Direction of Approval for Establishment of Zaidan-hojin Doho-no-kai (Compatriots' Association).

April 13, 1948 From: Director of Insurance Bureau, To: Prefectural Governors
 (Ho-Hatsu, No.513) Chief of Accounts Section.
 Subject: Notification of Disbursement Program of General Accounts of Ministry of Welfare.

April 14, 1948 From: Director of Public Health Bureau To: Prefectural Governors
 (Koho-Hatsu, No.477)

Subject: Distribution and Inspection of Soy-bean Meal.

April 14, 1948 (I-Hatsu, No.148)	From: Director of Medical Bureau	To: Prefectural Governors
	Subject: Performance of Medical Care at Medical Institutions.	
April 14, 1948 (Yo-Hatsu, No.445)	From: Director of Prevention Bureau	To: Governor of Hokkaido and Six other Prefecture
	Subject: Renewal of the Designated period for the Substitute Mental Institution.	
April 14, 1948 (Ji-Hatsu, No.192)	From: Director of Children Bureau	To: Prefectural Governors
	Subject: Program for establishment of others' Home and Day-nursery.	
April 14, 1948 (Ji-Hatsu, No.193)	From: Director of Children Bureau	To: Governor of Miyagi Prefecture
	Subject: Inquiry for Approval for Establishment of Child Welfare Station under Article 1 of Enforcement Regulations for Child Welfare Law.	
April 14, 1948 (Sha-Hatsu, No.59)	From: Director of Social Bureau	To: Prefectural Governors
	Subject: Survey of Number of the Physically Handicapped.	
April 14, 1948 (Ho-Hatsu, No.519)	From: Director of Insurance Bureau	To: Prefectural Governors
	Subject: The National Health Insurance Association Designated by Welfare.	
April 15, 1948 (Kai-Hatsu, No.298)	From: Chief of Accounts Section	To: Every Official Responsible for Disbursement
	Subject: Distribution of Budget for Various Disbursements for 1948-49.	
April 15, 1948 (Yo-Hatsu, No.455)	From: Director of Prevention Bureau	To: Prefectural Governors
	Subject: Monthly Report of Relief of Lepers.	
April 15, 1948 (Ji-Hatsu, No.196)	From: Director of Children Bureau	To: Governor of Ibaraki Prefecture
	Subject: Application for Grant of Expenditure for 1947-48.	
April 15, 1948 (Ji-Hatsu, No.198)	From: Director of Children Bureau	To: Governor of Gifu Prefecture
	Subject: Inquiry for Establishment of Child Welfare Station under Article 1 of Enforcement Regulations for Child Welfare Law.	
April 15, 1948 (Ji-Hatsu, No.199)	From: Director of Children Bureau	To: Governor of Niigata Prefecture
	Subject: Inquiry for Establishment of Child Welfare Station under Article 1 of Enforcement Regulations for Child Welfare Law.	
April 15, 1948 (Ji-Hatsu, No.201)	From: Director of Children Bureau	To: Governor of Niigata Prefecture
	Subject: Recommendation of a Successor of the Principal of Niigata Gakuen.	
April 15, 1948 (Ji-Hatsu, No.203)	From: Director of Children Bureau	To: Prefectural Governors
	Subject: Release of 16-mm. Film for Child Culture.	
April 15, 1948	From: Director of Children Bureau	To: Prefectural Governors

(Ji-Hatsu, No.204)

Subject: Distribution of a Pamphlet, Child Welfare Law.

April 15, 1948 From: Director of Relief Bureau To: Governor of Gifu Prefecture
(Repatriation Relief Board, Hatsu-Shi, No.387)

Subject: Service for the Site for the Housing Project.

April 15, 1948 From: Director of Relief Bureau To: Governor of Tokyo Metropolis
(Hatsu-Gyo, No.379) and other 29 Prefecture

Subject: Forwarding of a list of Korean National Approved for Repatriation by GHQ, SCAP.

April 15, 1948 From: Director of Social Bureau To: Prefectural Governors
(Sha-Hatsu, No.58)

Subject: The State Subsidy for Expense Disbursed under the Disaster Relief Law.

April 15, 1948 From: Director of Social Bureau To: Prefectural Governors
(Sha-Hatsu, No.60)

Subject: Business for Protection under Daily Life Security Law.

April 16, 1948 From: Chief of Accounts Section. To: Prefectural Governors
(Kai-Hatsu, No.314)

Subject: A Final Account of Expenditure under the Jurisdiction of Welfare Ministry

April 16, 1948 From: Director of Public Health Bureau To: Prefectural Governors
(Koho-Hatsu, No.486)

Subject: Survey of Status of Destruction Caused by the War of the Public Parks and the Green Place.

April 16, 1948 From: Director of Medical Bureau To: Prefectural Governors
(I-Hatsu, No.157)

Subject: Execution of the Second National Examination for Dentists.

April 16, 1948 From: Director of Social Bureau To: Prefectural Governors
(Sha-Hatsu, No.62)

Subject: Encouragement of Social Work Organizations.

SECTION II WELFARE DIVISION

Licensed Agencies for Relief in Asia (LARA)

The 63rd and 64th LARA shipments arrived in Yokohama and consisted of the following supplies:

- a. 63rd Shipment: Arrived aboard the S. S. New Zealand on 14 April and contained 4.85 tons (clothing, including shoes).
- b. 64th Shipment: Arrived aboard the S. S. President Monroe 19 April and contained 2.8 tons (clothing).

The amount of LARA relief supplies received in Japan now totals 4,437.37 tons, consisting of:

Food	3,384.07 tons
Clothing (including shoes)	914.39 tons
Medicines	59.24 tons
Miscellaneous	<u>79.67 tons</u>
	4,437.37 tons

Japanese Red Cross Society

Junior Red Cross:

The Japanese Junior Red Cross Handbook sets forth the regulations governing Junior Red Cross Groups and rules for Junior Red Cross enrollment. English translations covering the text material in this Handbook were contained in Public Health and Welfare Section Weekly Bulletin No.65 (for period 22-28 March 1948).

The first letter to all Red Cross Chapter Directors regarding Junior Red Cross enrollment procedures was forwarded on 15 April. English Translations of this letter are inclosed for the information and guidance of Military Government personnel (Inclosure 1). Any additional letters or pertinent information on Junior Red Cross forwarded by the National Red Cross Headquarters to Red Cross Chapters will be translated and included in the Public Health and Welfare Weekly Bulletin.

Disaster Relief Law

Reference: Public Health Welfare Section Weekly Bulletin, No.66 (for period 29 March - 4 April 1948).

The Japanese Red Cross Society and the Japanese Government reached an agreement on 13 April regarding Red Cross disaster relief responsibilities under the provisions of the Disaster Relief Law. The agreement (English translation) is quoted below for the information and guidance of Military Government personnel:

“Agreement upon the Co-operation of the Japan Red Cross Society in the Relief in accordance with the Disaster Relief Law

“I. The principle is that inasmuch the relief in accordance with the Disaster Relief Law is rendered under the responsibility of the State, the Prefectural Governor will assume the responsibility for the execution of relief work, and the Japan Red Cross Society should co-operate with the Prefectural Governor. The provision of Article 21, Paragraph 1 gives a summarized and declarative statement concerning the co-operation duty of the Japan Red Cross Society in the relief work by the Disaster Relief Law.

“II. Matters to be entrusted to the Japan Red Cross Society from the government.

(1) Matters to be entrusted to Japan Red Cross Society from the government under the provision of Article 32, Disaster Relief Law, considering the capacity of J.R.C.S. at present, shall be medical and maternity care for the time being.

(2) In order to perform medical and maternity care entrusted from the Prefectural Governor, each Prefectural Chapter of J.R.C.S. shall organize more than five medical care teams composed of the staff J.R.C.S. In case doctors not belonging to the staff of J.R.C.S. are mobilized under contract, because of being shorthanded only with the staff of J.R.C.S., it will be regarded as the activities of J.R.C.S. itself, and all the obligations will be accompanied under the responsibility of J.R.C.S.

J.R.C.S. shall, as the subordinate organization of its own, organize Medical Care Team composed of the medical personnel concerned in that locally for every city, special ward, local administrative, town and village office. J. R.C.S. shall organize J.R.C. Volunteer Service Group consisting of volunteer rescue workers to render first Aid.

(3) In case the above Medical Care Teams are required to go and give aid to other prefectures, it is performed by order of the governor of that prefecture or Welfare Minister, but not among the J.R.C.S. Chapters, or merely by order of the President of J.R.C.S. Efforts should, however, be made to get a close liaison between the J.R.C.S. Headquarters and Prefectural Chapters, and among the J.R.C.S. Prefectural Chapters one another.

(4) The extent to be entrusted, regarding medical and maternity care in view of the actual situation of every prefecture, shall be agreed between the Chief of the Prefectural Red Cross Chapter and the Prefectural Governor concerned, and the agreement shall be approved by the headquarters of J.R.C.S. and Welfare Ministry.

“III. Matters to be connected and coordinated by J.R.C.S.

(1) J.R.C.S. has two positions; one is to do its voluntary relief activities with the same capacity as that of other private organizations or individuals and the other is to have its position to connect them and coordinate their activities. The position to connect private organizations and individuals and coordinate their activities is that which is given only to J.R.C.S. regarding the Disaster Relief Law.

(2) In case of connection and coordination, J.R.C.S. will consult with the Committee. J.R.C.S. will call up the committee meeting in which it shall become a chairman and will get permission from the Prefectural Governor concerning the plan formed by the committee. The Prefectural Governor always has to grasp an accurate active capacity of private organizations and individuals through this committee. "To coordinate" the activities of private organizations and individuals means "giving direction" to their voluntary activities.

(3) As matters to be connected and coordinated, relief articles and fund raising, labor volunteer service, and medical maternity care are now under consideration.

National Child Welfare Board

The initial organizational meeting of the National Child Welfare Board was held on 22 April at The Tokyo Industrial Club. The Chief, Public Health and Welfare Section, SCAP, addressed the members of the Board and emphasized their responsibility in protecting Japanese children from exploitation by untrained, unqualified or unscrupulous persons and the challenge that is their's in safeguarding Japan's children.

The National Child Welfare Board, which is directly responsible to the Ministry of Welfare, was established by the Child Welfare Law passed by the Diet on 21 November 1947. Membership on this Board includes publishers, representatives of both labor and industry, radio and newspaper officials, educational leaders, law enforcement officials and other men and women possessing long experience in social work.

Film for Child Welfare Week

Public Health and Welfare Section, SCAP, has been informed by Civil Information and Education Section, SCAP, that the following films, which may be used in connection with the Child Welfare Week, will be in the Regional Military Government offices (Information Section) by 1 May.

The films are:

- Lets Play Baseball
- Children's Supervised Play
- Everyone's School

The films are Japanese adaptations of American releases. Japanese interested in securing these films and projectors should be referred to the Team Information Officer who will have the films or will be able to secure them from his Regional Information Officer.

SECTION III VETERINARY AFFAIRS DIVISION

Animal Disease Report

The following outbreak of diseases was reported by the Ministry of Agriculture and Forestry for the period 17 - 23 April:

<u>Prefecture</u>	<u>Disease</u>	<u>Number of Cases</u>
Hokkaido	Swine cholera	20

SECTION IV NURSING AFFAIRS DIVISION

A refresher course was held 1 March - 23 April at the Tokyo Demonstration School of Nursing for Directors of Nursing Schools and Instructors of Nursing Arts. It was under the auspices of the Ministry of Welfare and Nursing Affairs Division, Public Health and Welfare Section. Fifty students representing 29 schools of nursing, graduated on 23 April.

Instructions were given on the following subjects:

1. Nursing Arts 81 hours

2. Principles of Nursing Education	39 hours
3. Practice Teaching and Discussion	59 hours
4. Anatomy and Physiology	16 hours
5. Medical Nursing	17 hours
6. Surgical Nursing	24 hours
7. Personal Relations	10 hours
8. School Administration	27 hours
9. History of Nursing	<u>7 hours</u>
Total	280 hours

Following the lectures, practical teaching demonstrations were given in which each nurse was permitted to participate under the observation of the teaching staff. A "Practice Teaching Observation Chart" was maintained on each nurse to permit "on the spot" corrections.

This was the initial refresher course for directors and instructors.

SECTION V SUPPLY DIVISION

Distribution

Dusters and sprayers for use in insect and rodent control were shipped under Ministry of Welfare Direction to ten prefectures during the period 11 - 17 April. A total of 1,200 pieces were shipped as follows:

Prefecture	DDT Duster	Knapsack Sprayer	Semiautomatic Sprayer	Hand Sprayer
Chiba	624	-	-	-
Hiroshima	-	150	-	-
Nara	-	-	40	-
Oita	-	-	86	-
Tochigi	-	-	6	-
Osaka	-	-	96	120
Kumamoto	-	-	6	-
Fukuoka	-	-	60	-
Nagasaki	-	-	6	-
Miyazaki	-	-	6	-
Total	624	150	306	120

Production

A total of 203,000 lbs. of 10% DDT Dust, 11,500 gallons of 5% DDT Residual effect spray, and 17,901 vials of typhus vaccine were received during the period 11 - 19 April. At the same time, 363,329 lbs. of 10% DDT dust, 69,075 gallons of 5% DDT residual effect spray, and 18,310 vials of typhus vaccine were distributed. A total of 4,131,356 lbs. of 10% DDT dust, 355,447 gallons of 5% DDT residual effect spray, and 131,328 vials of typhus vaccine represents total stocks on hand in wholesale warehouses of the Ministry of Welfare as of 19 April.

A total of 7,020 pieces of the various types of DDT dusting and spraying equipment for mosquito and fly control programs were produced during the period 11 - 19 April. All requirements for this equipment are being met and large stocks are on hand.

The following table indicated allocation of liquid chlorine for chlorination of water by prefectures and water treatment plants for the period April - June. Allocation tickets are being mailed to prefectures at the present time. While it is realized that the total quantity allocated for this period, April - June, is an increase over the quantity allocated for the previous period, January - March, further efforts will be made at the national level to increase this supply and subsequent announcements will be made. Prefecture health officials should assist water treatment plants to obtain liquid chlorine in accordance with the allocations made.

Allocation of Liquid-Chloronia for April, May, June 1948 for Water Works and Sewerage (Unit: Kg.)

SECTION VI
NARCOTIC CONTROL DIVISION

Statistics show illicit trafficking in narcotics is greater in those areas of Japan which have a concentration of foreign national population. The areas of greatest concentration is the Osaka, Hyogo, Kyoto area. The next area is Fukuoka and Yamaguchi and the third area is Tokyo and Kanagawa. Illicit trafficking in these areas is being further controlled by the Minister of Welfare assigning in the future additional narcotic agents and by further coordination of the work of custom agents and narcotic agents.

In order to familiarize all personnel with the duties and responsibilities of the Narcotic Section, Ministry of Welfare, officials, with the exception of chiefs of divisions, are being periodically rotated from one division to another. In addition, conferences with the chiefs of divisions are being held at regular intervals and at other times when necessary. This will prevent serious disruption of the work of the Section when there is a loss of key personnel.

SECTION VII PREVENTIVE MEDICINE DIVISION

Tuberculosis Control

Education is the phase of tuberculosis control to emphasize at the present time. In the face of the present economic stress, the physicians of Japan must be challenged to assume the lead in the program for control of tuberculosis upon a voluntary basis. These men need the latest possible information upon the subject of tuberculosis, but more important they must be helped to realize the enormously important part they play, through advice and encouragement to their patients in isolation and prevention of the disease in the home and place of employment. They must realize that a prominent part of this advice must reach those people who cannot pay an office fee. The physician knows, or should know that the "seeding ground" of tuberculosis is among the poor, and that the disease does not remain there, but spreads to families upon the physicians list of patients. It is their professional duty to assist by voluntary personal service and effort in the education of these people, who cannot pay. It is for these people the Health Center exists, and cooperation with these organizations by the physician is a primary step toward control of tuberculosis in the nation-wide effort.

SECTION VIII MEDICAL SERVICE DIVISION

Civilian Hospital Strength Report for week ending 26 March shows 3,472 hospitals with a capacity of 208,996 beds, of which 106,299 were occupied. During this same period, 335,832 outpatients were treated.

SECTION IX SOCIAL SECURITY DIVISION

General

Plans for a comprehensive statistical reporting program on the operation of the social insurances have been worked out and have been brought to the attention of government agencies in charge of the several programs. Present statistics and reporting have been found wanting in many respects, especially as to completeness and timeliness. Final statistical reporting requirements will be determined so as to fill the specific needs of each program with a maximum of uniformity or, at least, coordination among them. Upon completion officials concerned, working in the prefectures, will be notified by their respective Ministries of the new requirements.

The Welfare Section of the Chugoku Regional Military Government Team has initiated a practice of sending through channels to Public Health and Welfare, GHQ, SCAP, brief technical summaries concerning the state of social insurance operations in the several prefectures of the region. They consist of summaries of findings made on field trips to the prefectural capitals and represent, in most instances, the joint efforts of the regional and prefectural Military Government Welfare Officers to establish contact with and regularly obtain information from the (Social) Insurance Section of the prefectural government.

Points covered by Chugoku Region include (1) information on publicity activities of the prefectural Insurance Section to popularize among the insured knowledge of and interest in the insurance system and its benefits; (2) personnel data concerning the newly appointed social insurance referees and reports on their

activities to advise the insured of their rights to appeal local insurance awards appearing to fall short of what beneficiaries are entitled to; (3) the state of the several insurance programs with special emphasis on National Health Insurance, to wit: Number and activity of operating National Health Insurance associations, number of associations made obligatory according to Art. 13, National Health Insurance Law, for all local residents by decision of a majority thereof voluntarily belonging to the National Health Insurance association, number and cause of suspension of associations and efforts undertaken to reactivate them, plans and progress of establishment of National Health Insurance clinics, subsidies received by the individual National Health Insurance associations from the national, prefectural and local governments, if any cooperation between the several health insurances (National Health Insurance, Health Insurance, both government-managed and society-managed, and Seamen's Insurance) and the doctors.

These voluntary informational summaries are useful in evaluating information from the field until such time as regular standardized reporting on social insurance matters can be obtained.

There was no objection to a proposed amendment to the Local Autonomy Law by the Insurance Bureau, Ministry of Welfare, to promote 13 third-grade officials in the Social Insurance Prefectural Branch Offices to second-grade officials.

National Health Insurance Prefectural Appeals Boards

Prefectural appeals boards for the National Health Insurance program were prescribed by Cabinet Order No.240 of 11 November 1947. Insurance Bureau Instruction (Hohatsu) No.1482 of 11 November 1947, directed to all prefectural governors, gave detailed instructions concerning the formation and activities of these boards. On 23 March Insurance Bureau Instruction (Hohatsu) No.383 request all chiefs of prefectural Welfare Departments to report the following information concerning the appeals procedures under the National Health Insurance Law, Cabinet Order No.240, and Hohatsu No.1482:

- a. Names, present occupations, and dates of appointment of members of prefectural appeals boards.
- b. Number of appeals between 11 November 1947 and 10 March 1948.
- c. An account of plans to acquaint the public with facilities available for appeals from local National Health Insurance societies.

Information received up to 22 April 1948 in reply to this inquiry indicates that only 20 prefectures have formed the required appeals board.

SECTION I GENERAL

The Health Center Program

Model Health Center Demonstration: The Sugunami Health Center in Tokyo was the first model health center to be developed in Japan under the current reorganization program. This health center has been reorganized, improved and its functions extended to include all the basic public health services necessary for the administration of a modern public health program. The necessary remodeling of the building, procurement of supplies, equipment and personnel was accomplished between 9 January and 15 March. Reorganization was also accomplished during this period and on 15 March a series of conferences were begun at which the proper organization and operation of a health center was explained and demonstrated to selected group of public health officials.

This series of conferences was designed to coordinate and expedite the program for "expansion and improvement of health centers" by giving key public health officials first hand information, including visual demonstrations, of a health center which has been properly organized and is currently actively engaged in administering the public health program in the local community.

In order to insure coordination of efforts between Public Health and Welfare Section, Military Government and all levels of administration in the Japanese Government, the following plan was followed. Public Health and Welfare Section SCAP, and the Ministry of Welfare officials jointly prepared all explanatory and visual aid material. This was prepared in English and a careful Japanese translation was made. All printed or typewritten material was then mimeographed both in English and in Japanese. Then beginning on 15 March and ending 1 May a series of six courses (each, one week in duration) were held at Sugunami Health Center during which time the proper organization and operation of a health center and all its functions were explained and demonstrated to each group. The same explanatory material was used for each group thereby insuring that the same ideas were conveyed to all. Each group was then given copies of all mimeographed material for their guidance in establishing and operating health centers in their own prefectures.

The first two conferences were attended by Military Government Health Officers and the last four conferences were attended by key health officials from each prefecture in Japan. Each prefecture was represented by:

- (1) The Chief of the prefectural health department
- (2) The Chief of the Section within the health department having supervision over the health centers of the prefecture.
- (3) The Chief of the health center selected for development as a model for the prefecture.

Some prefectures sent additional personnel such as the chief clerk of the health department, resident regional health officials and officials from the health sections of Kobe City, Osaka City, Kyoto City and Yokohama City.

A total of 225 official representatives from 45 prefectures attended the conferences. In addition many visitors from Tokyo and vicinity attended for varying periods. The conference and demonstrations attended by Military Government Health Officers were conducted by PH&W officials while those attended by Japanese Health Officers were conducted by Ministry of Welfare officials. All conferences were constantly supervised by PH&W Section and both PH&W and Ministry of Welfare officers were in attendance at all sessions.

The keen interest manifested by those in attendance was very gratifying. The foundation upon which to build a sound health center program was laid at these conferences. How well the officials learned their lesson will not be known for some time. The manner of performance in establishing and operating health centers in the local prefectures will tell the true story.

One the whole, all group demonstrated a keen interest in the health center program and expressed a desire to cooperate and a determination to see the program through. Public Health and Welfare will advise and assist the Ministry of Welfare in solving these programs. A keen desire on the part of health officers to accomplish this program will go a long way toward solving these programs.

SECTION II WELFARE DIVISION

Licensed Agencies for Relief in Asia (LARA)

School Lunch Program:

Frequent allocations have been made from LARA food relief supplies to supplement available food supplies for the School Lunch Program, which program, by July will reach approximately 4,750,000 school children.

LARA representatives in Japan have been advised of a relief shipment (ETD Philadelphia, Pa., 3 April) consisting of 45,000 bushels of wheat. A series of conferences have been held regarding the wheat (bulk) shipment between representatives of Public Health and Welfare Section, Economic and Scientific Section, and Civil Information and Education, SCAP and the Ministries of Education, Welfare, Agriculture and Forestry.

The decision has been reached to allocate the 45,000 bushels of wheat to the school Lunch Program and it will be processed as follows:

- (a) 200 metric tons into flour (approx)
- (b) 1,000 metric tons into vermicelli
- (c) The Foods Management Bureau, Ministry of Agriculture and Forestry, will advance approximately 1,000 tons of wheat (to be replaced when subject shipment arrives) to expedite the processing and thus make the finished (processed) product available to the School Lunch Program early in July.
- (d) Food Management Bureau will be responsible for all processing, conversion and transportation, not including distribution.
- (e) The Ministry of Education will bear all costs (processing, conversion, transportation and distribution).

National Meeting on LARA:

The representatives of LARA, members of the Central LARA Committee and Japanese Government officials connected with the distribution of LARA relief supplies met on 27 April in the Japanese Red Cross Headquarters (Tokyo).

The meeting was addressed by an official LARA representative, also by the Director, Social Affairs Bureau, Ministry of Welfare and other lesser officials. A full discussion was held regarding the proper handling of LARA relief supplies with a designated representative of the Ministry of Welfare taking item by item, i.e., food, clothing, shoes, medicines, livestock and seeds.

On 28 April those persons attending the "National Meeting on LARA" inspected the LARA warehouse in Yokohama (Mitsui Bussan Kaisha, Ltd. warehouse) and also reviewed the LARA film covering activities in Japan.

Japanese Red Cross Society

Volunteer Services:

Plans and program have been completed for the National Training Conference on Volunteer Services and Disaster Relief to be held at the National Headquarters on 4 and 5 May.

The instructional and informational material for the new Volunteer Services Program has been compiled in the form of a Volunteer Services Handbook with an introduction and a consecutively numbered series of Volunteer Service Information Letters. Six letters will be ready for study, discussion and distribution at the conference. They are as follows:

- *1. The Introduction to the Handbook on Volunteer Services.
- *2. Volunteer Service Information Letter No. I.
General plan of Japanese Red Cross Volunteer Services.
3. Volunteer Service Information Letter No. II.
Procedure for Initiating the Volunteer Service Program in all Prefectures.
4. Volunteer Service Information Letter No. III.
Procedure for Establishing and Operating Volunteer Service
Projects in Local Communities.
5. Volunteer Service Information Letter No. IV.

Selection of Volunteer Service Chairmen and Members of Volunteer Service Committees.

6. Volunteer Service Information Letter No. V.
System of Record Keeping and Reporting.
7. Volunteer Service Information Letter No. VI.
System of Awards.

*Note: Included in this Weekly Bulletin (Inclosure 1). (English Translation of other letters will be inclosed when available, in subsequent Public Health and Welfare Section Weekly Bulletins)

The significance of this National Training Conference is that it will be the first time in the history of the Japanese Red Cross that the Society has developed administrative channels through which Red Cross services will be administered to all the communities of Japan. The initiation of this plan will be made with the Volunteer Service Program and Disaster Relief Program. The other service programs now developed by the Headquarters staff are Junior Red Cross, Home Nursing and First Aid & Water Safety. These will follow the same plan with necessary adjustments to fit each program.

The questionnaire survey of community needs, reference Public Health & Welfare Weekly Bulletin No.57 (for period 25-31 Jan 48) has been completed by all chapters and provided statistics which indicated that Red Cross Volunteer Service Projects were needed in the following specific fields:

1. Clerical Assistance for Red Cross officers
2. Children's Institutions
3. Hospitals
4. Parks and Playgrounds
5. Canteens
6. Institutions for the Blind
7. Seasonal nurseries and community kitchens (planting & harvesting seasons)

In preparation for the compilation of technical information concerning the above named fields, there have been a series of special committee meetings at National Headquarters during the month of April. There was a General Committee meeting first, composed of outstanding persons from the specified various fields. This group was then divided into special committees on each field and they met to begin to prepare special instructional and informational manuals on Volunteer projects in each of the specified fields.

These manuals will include a general introduction, pertinent information about the particular field and instructional information regarding the training of Volunteer workers. These manuals will be mimeographed and sent in adequate numbers to all Red Cross Chapters to guide them in recruiting, training and supervising Volunteer works, and organizing projects. (A total of 75 persons, the majority women, have participated in these Committee Meetings).

Foreign National Ration

The Ministry of Agriculture and Forestry has brought to the attention of SCAP that Foreign National Associations are interfering with the normal distribution channels of the Japanese Government in their insistence upon distributing the foreign national supplementary ration.

Arrangements made between prefectural Governments and Foreign Nationals' Associations are not objectionable, however, no foreign national is to be deprived of the right to draw his individual "Supplementary Ration", if he so elects, through official Japanese channels.

If Foreign National Associations are delivering the "Supplementary Ration" it will be so distributed that no individual foreign national will be charged for any article of food at a price greater than the foreign national would be required to pay through official Japanese ration channels.

Note: This price will not include additions for clerical help, rentals, or fees and will be no higher than the official price set for such rations by the Japanese Government.

Public Assistance

The Ministry of Welfare reports that March statistical reports had not been received by 25 April for the following prefectures:

Yamagata, Ibaraki, Miyazaki, Kagawa, Saga and Nagasaki.

Welfare Officers are urged to determine the reasons for delay and to assist the prefectures in complying with the regulations concerned.

SECTION III VETERINARY AFFAIRS DIVISION

Animal Disease Report

The following outbreak of diseases was reported by the Ministry of Agriculture and Forestry for the period 24 - 30 April:

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Kanagawa	Swine Erysipelas	2
Tokyo	" "	4
Miyagi	" "	1

A Bill of Amendment to the Law concerning the Prevention of Infectious Diseases of Domestic Animals is now under study. This bill has a clause controlling the inter prefecture shipment of livestock other than animals being shipped for slaughter.

A Law on the Control and Eradication of Bovine Tuberculosis has been drafted dealing with the intradermal test, indemnity and quarantine, and intra-prefecture trafficking of dairy cattle on issuance of health certificates.

Regulations in support of the Food Sanitation Act for meat, milk and sea-foods are now under draft.

Official notification has been given to the Ministry of Agriculture and Forestry of the shipment of 260 goats, scheduled to arrive 10 May. The Yokohama quarantine station has completed preparations to receive these goats.

The post-mortem report submitted in conjunction with the Meat Inspection Report to the Ministry of Welfare, regarding the causes for condemnations, disclosed many prefectures to have returned an incomplete report. Every effort should be taken to contact the prefectural official concerned so that reports in the future will be complete and submitted as required.

SECTION IV NURSING AFFAIRS DIVISION

National Nurse's Association Meeting

The annual meeting of the Japanese National Nurse's Association was held in Kyoto on 26, 27 and 28 April. Approximately 2,000 association members, representing every prefecture in Japan, were present. The association which now has an active membership of approximately 44,000 conducted an exceptionally well organized meeting and the committees which had arranged and prepared the programs were highly commended for their efforts.

Many constructive lectures were arranged for the representatives in addition to booth displays of nursing programs and publications. Election of officers, for the association, was also successfully completed.

The conduct of this meeting is a tribute to the members for their efforts in making the association an outstanding organization.

Publications

Two nursing books and one manual have been cleared for translation into Japanese and are scheduled to be published.

Midwifery Lectures

The fourth in the series of midwifery lectures will be given in Nagano next week. These are ten day courses sponsored by the Ministry of Welfare and the Midwifery Section of the National Nurse's Association.

Personnel

Miss E. Jacobs, a newly arrived public health nurse, is scheduled for subsequent assignment to the Kanagawa Military Government Team.

SECTION V SUPPLY DIVISION

Production

A breakdown of solid fuel allocation, standard coal and lignite, by districts and prefectures, for use in National and Public Hospitals, for April, May, and June is tabulated below. Allocation tickets covering this quantity were mailed by the Ministry of Welfare direct to the hospitals concerned. (Unit: Metric Ton)

Allocation of Standard Coal & Lignite For Use in National and Public Hospitals April, May and June 1948 (Unit: Metric Ton)

A total of 80,000 lbs. of 10% DDT dust, 20,000 gallons of 5% DDT residual effect spray were received from the manufacturing plants during the period 19 - 24 April. At the same time, 255,075 lbs. of 10% DDT dust, 27,154 gallons of 5% DDT residual effect spray, and 40 vials of typhus vaccine were distributed. A total of 3,896,281 lbs of 10% DDT dust, 328,441 gallons of 5% DDT residual effect spray, and 131,288 vials of typhus vaccine represent total stocks on hand in wholesale warehouses of the Ministry of Welfare as of 24 April.

A total of 7,987 pieces of the various types of DDT dusting and spraying equipment for mosquito and fly control programs were produced during the period 19-24 April. No difficulty should be encountered in procurement of this equipment since large inventory stocks are on hand to meet all requirements.

The yen value of production of medical supplies (medicines, biologicals, dental instruments, dental materials, rubber sanitary goods, medical instruments and surgical dressings), for March totaled 926,070,204 yen. In comparison to the 1946 and 1947 production monthly averages attained, the general increase in medicine production, noted in the previous two months, remains evident for March.

March medicine production, compared to the 1946 monthly averages, showed the following yen value increases in the categories noted, controlled medicines, approximately 335,000,000 yen; non-controlled medicines, 285,000,000 yen; patent medicines, 77,000,000 yen; biologicals, 9,000,000 yen; dental instruments, 14,000,000 yen; dental materials 9,000,000 yen; rubber sanitary goods, 12,000,000 yen; medical instruments, 9,000,000 yen; surgical dressings, 31,000,000 yen.

Compared to the 1947 production monthly averages, medical supply production during March showed the following yen value increases in the same categories noted. Controlled medicines, 215,000,000 yen; non-controlled medicines, 200,000,000 yen; patent medicines, no increase; biologicals, decrease of 6,000,000 yen; dental instruments, 8,000,000 yen; dental materials, 6,000,000 yen; rubber sanitary goods, 6,000,000 yen; medical instruments, 8,000,000 yen; surgical dressings, 27,500,000 yen.

As additional quantities of coal, electricity, and manufacturing raw materials become available, further increases in production may be expected.

Yen Value of Production of Medical Supplies & Equipment

		Monthly Averages <u>1946 Production</u>		Monthly Averages <u>1947 Production</u>		March 1948 <u>Production</u>
Controlled Medicine	Yen	1,734,057	Yen	122,575,138	Yen	337,559,363

Non-controlled Medicine	59,170,511	145,154,863	343,623,144

Total	Yen 145,321,139	Yen 464,045,707	Yen 926,971,436

Production of bismuth subsalicylate and mapharsen continued, with a decrease of 326 liters of bismuth subsalicylate and 15 kgs. of pure mapharsen being produced, compared to the previous month. During March, a total of 33 kgs. of pure mapharsen and 581 liters of bismuth subsalicylate was manufactured.

Production of sulfathiazole during March totaled 4,111 kgs., this representing an increase of 1,183 kgs. over February production of 2,928 kgs.

Production - Venereal Diseases and Sulfa Drugs - 1948

<u>Month</u>	<u>Pure Mapharsen</u>		<u>Bismuth Subsalsicylate</u>		<u>Sulfathiazole</u>	
Monthly Average						
1st Quarter 1948	55.6	kgs	671.3	liters	3,569	kgs

February 1948		9,282,600
March 1948		16,495,544

Production of all types of insect and rodent control supplies and equipment during March continued satisfactorily. Adequate stocks of all types are on hand to meet all requirements. Compared to February's production March production showed an overall increase. DDT dusting and spraying equipment production showed a substantial increase. DDT dust and DDT residual effect spray showed a similar increase in production during March.

Production - Insect & Rodent Control Supplies & Equipment

Antu (rat poison)	-
Nekoirazu (rat poison)	3,333 kgs
Rat Traps	1,200 pieces
DDT Concentrate	18,407 kgs
10% DDT Dust (American concentrate)	408,980 lbs.
5% DDT Spray (American concentrate)	134,181 gallons
10% DDT Dust (Japanese concentrate)	-
5% DDT Spray (Japanese concentrate)	70,000 gallons
10% DDT Dust distributed 1-31 March 48	153,816 lbs.
5% DDT Spray distributed 1-31 March 48	81,207 gallons
Typhus Vaccine distributed 1-31 March 48	146,480 vials
DDT Dusters	7,000 pieces

Sprayer, pump type semi-automatic	4,150 pieces
Sprayer, hand type 1/2 gallon	3,500 pieces
Engine Duster	24 pieces

Production of x-ray film in March totaled 28,209 square meters, as compared to the 28,111 square meter total produced in February. March production of x-ray films, compared to both the 1946 and 1947 monthly production averages, is an increase of 4,000 square meters approximately. The item "R 120" is a new size of x-ray film being produced at the present time and is a replacement for the 35 mm rolls of film, formerly produced. The R 120 film size is 875 - 890 mm long and 64mm wide.

Production of X-Ray Film (By sizes) - 1948

<u>Size of Film</u>	<u>January</u>	<u>February</u>	<u>March</u>

March 1948	28,209

Distribution

Dusting and spraying equipment for use in insect and rodent control shipped to the prefectures to the prefectures under direction of the Ministry of Welfare in the period 18-24 April totaled 2,612 pieces. Shipments were made to 11 prefectures, as follows:

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsack Sprayer</u>	<u>Semiautomatic Sprayer</u>	<u>Hand Sprayer</u>
Aomori	0	90	0	0
Iwate	0	504	0	0
Tokyo	240	0	0	0
Kanagawa	240	0	0	0
Nagano	6	1,104	92	0
Aichi	0	120	0	0
Nara	0	80	0	50
Osaka	0	0	30	0
Fukuoka	0	12	0	0
Miyazaki	0	12	20	0
Saga	0	0	12	0
Totals	486	1,922	154	50

A second shipment of 300,000cc of diphtheria toxoid is to leave Japan during the first the first week in May for Okinawa, to be used in the immunization of the entire population. A second shipment of 20 liters of Habu snake antivenin serum is also being prepared for shipment to the Ryukyus.

SECTION VI NARCOTIC CONTROL DIVISION

Continuing efforts to educate central and local wholesalers to carry a three six months supply of essential narcotics as their stock level without any direction from the Japanese Government have resulted in satisfactory stocks of codeine phosphate being maintained by most of the narcotic wholesale dealers in Japan. The effect of this system is reflected in the consumption rate of codeine which has increased 50% since imports of codeine were received in October 1947, to near the estimated normal consumption rate for Japan.

Manufacture of codeine phosphate began 1 April in one plant in Tokyo which was licensed by the Minister of Welfare, SCAP offering no objection. Manufacture is scheduled to begin in two other plants during the month of May. The codeine phosphate manufactured by the three plants will provide a quantity sufficient to maintain satisfactory stock levels among all narcotic dealers for the medical needs of the Japanese people.

SECTION VII PREVENTIVE MEDICINE DIVISION

Hexylrecorcinol

Hexylrecorcinol is the anthelmintic of choice in Japan. However, production has started so recently that the output has lagged behind the minimum needs. Information has been received that due to the scarcity of pellets, the liquid form of hexylrecorcinol is being used orally in some prefectures. The attention of Military Government Health Officers is invited to the fact that the liquid form is to be used only with great caution. For your information the following is quoted from "Pharmacological Basis of Therapeutics" by Goodman and Gilman:

"Hexylrecorcinol is a local irritant and damages tissue when applied in high concentration. Oral administration may lead to the irritation of the mouth and gastro-intestinal tract". Solutions of hexylrecorcinol are, "quite irritating to tissue and an occasional individual exhibits marked sensitivity to its local application".

"The drug is most conveniently taken in hard, gelatin capsules containing 2/10 gram each. Great care should be observed that these capsules are swallowed whole, for contact of the chemical with oral mucous membrane may cause painful ulceration".

Sanitation

Starting with the present quarter (April) there will be a basic allocation of cement and other building material to each prefecture. This is a relatively small amount and is designed to take care of repair and renovation of the plant and distribution system so as to immediately increase the quantity of water to the consumer.

Follow up inspections should be made to ascertain that is material is being used primarily for this purpose.

Future allocations will be made on a national priority system based upon recommendations from the local prefectures. These recommendations should be reviewed and screened by the Military Government Regional Sanitary Engineers prior to coming to the National level.

Survey of all public water supply system in the prefecture should be made by the Department of Health, sanitation officials to determine future needs and to set up a priority list.

Standardization of survey forms and the filing in of all information requested on survey forms is necessary to the compilation of information required to plan future program properly.

Port Quarantine

The following extract from SCAP Circular #9, dated 29 March 1948, subject, "Foreign Quarantine Regulations for Japan", is furnished for the information of all quarantine officers:

#10. Immunization Requirements. Vaccination against smallpox and typhoid fever within the preceding 12 months. Persons, however, arriving from epidemic smallpox areas may be required to show evidence of a successful vaccination within the preceding 60 days. Other special immunizations may be required as deemed necessary by competent quarantine authorities on the basis of actual or threatened epidemic in Japan or to prevent the introduction of epidemic disease into Japan. All persons arriving in Japan should have in their possession certificates showing that the required vaccinations have been received. Persons arriving without the required certificates will be given the necessary vaccinations and placed under observation or surveillance for a sufficient period to determine their freedom from those diseases".

Typhus Fever

The outbreak of typhus fever in the Sakai Mental Hospital near Osaka in March and April again presents evidence that control measures must be more stringent, for if given the slightest opportunity, this disease will break out into epidemic proportions. Health authorities, both prefectural and local, should be cautioned not to relax their vigilance in determining that lice are not permitted to breed, especially in mental and isolation hospitals, vagrant homes or camps, orphanages, jails, detention rooms and old people's homes.

There is sufficient DDT available and it is effective if applied correctly using one and one half ounce per person under the clothing and next to the skin of the individual. A second application may be necessary. Routine monthly (or bi-weekly, if necessary) applications of 10% DDT power should be carried out in the places mentioned above, on a year round program.

Immunization of inmate should be conducted with the prescribed two dose series followed by a booster dose every six months.

Efficacy of DDT

Many reports have been received concerning the efficacy of Japanese manufactured DDT 10% power in the control of louse infestations. Samples of reportedly poor power have been obtained from Osaka and Tokyo. These samples were tested in the laboratory of the National Institute of Health in Tokyo using a method similar to the beaker test used by the International Health Division of the Rockefeller Foundation and by the Bureau of Entomology, U.S.D.A. Results of these tests show powder from both sources to be effective against lice, the majority of which were killed within 24 hours. Lice from a normal laboratory reared colony and wild lice collected from clothing of vagrants in Ueno Station subway, Tokyo were used. Further tests of the powders under natural conditions of louse infestation are under way.

SECTION VIII SOCIAL SECURITY DIVISION

General

The Supply Division, Public Health & Welfare Section, SCAP reveals that the cement allocation for construction or repair of medical facilities operated by the various social insurance programs is slightly less for the

second quarter of 1948. This will have an effect on new hospital construction but should not seriously effect the establishment of National Health Insurance Clinics.

SECTION IX
MEMORANDA TO JAPANES GOVERNMENT

None

CRAWFORD F. SAMS
Colonel, Medical Corps
Chief

3 Inclosures:

1. Introduction to Handbook on Volunteer Services
2. Digest and report of communicable and venereal diseases in Japan, for week ended 24 April 1948.
3. Digest and Report of Vital Statistics in Japan and Each Prefecture - February 1948.

Numbering of PH&W Weekly Bulletin

It is requested that all recipients of PH&W Weekly Bulletins make the following corrections in the numbering of past issues of the Bulletin:

Change Weekly Bulletin #68, period 19-25 April, to Weekly Bulletin #69.
Change Weekly Bulletin #69, period 26 April - 2 May, to Weekly Bulletin #70.

Ministerial Instructions

The following instructions were forwarded by the designated Bureaus of the Ministry of Welfare to Prefectural Government officers during the period indicated:

18 - 24 April

April 19, 1948 (Hatsu-I No. 85)	From: Director Medical Bureau	To: Prefectural Governors
Subject: Allotment quantity of sanitary materials for child-birth.		
April 19, 1948 (Ho-Hatsu No. 548)	From: Director of Insurance Bureau	To: Prefectural Governors
Subject: Prompt Payment of medical examination charges on health insurance.

National Disaster Relief

A series of meetings have been held between the officials of the Japanese Red Cross Society and the Japanese Government regarding the responsibilities and functions of the Red Cross in time of disaster.

Inclosed in this Weekly Bulletin for the information of Military Government Welfare Officer, is a chart showing the disaster relief services (prefectural level) to be conducted by the Japanese Red Cross.

Japanese Red Cross Society

General Meeting:

The 56th Ordinary General Meeting of the Japanese Red Cross was held at the National Headquarters, Tokyo, on 7 May. Representatives of SCAP and the American Red Cross addressed the meeting which was officially opened by H. I. M. Empress Nagano, Patroness of the Society:

Training Conference:

A training conference on Volunteer Services and also on Disaster Relief was held at the National Headquarters, Japanese Red Cross, Tokyo, on 4 - 5 May. Chapter Directors, Volunteer Service and Disaster Relief staff members (paid staff) and Volunteer Service Chairman (Volunteers) attended. The most significant feature of the conference was the attendance of 52 women, 41 of whom were from different prefectures and who will act as Chapter Volunteer Service Chairmen.

Note: Although it had been recommended that Chapter Directors appoint a woman as volunteer Service Chairman, it was not expect that so many would comply.

The Volunteer Service Handbook, composed of six information Letters, was used as the basis for instruction and discussion. (The subjects of these letters were listed in the last issue of the PH&W Weekly Bulletin.) The new plan for the administration of all Red Cross Services was discussed and a detailed explanation was given regarding the organization and administration of each service.

Disaster Relief:

The responsibilities of the Japanese Red Cross Society in time of disaster were set forth in general terms in the National Disaster Relief Law, enacted October 1947. The specific disaster relief services that are to be the

responsibility of the Red Cross have been agreed upon between the officials of the Japanese Red Cross and the Japanese Government.

A Japanese Red Cross Handbook on Disaster Relief is being prepared, in the form of letter for the Chapters, by the National Headquarters, Japanese Red Cross. The first series of letters have been prepared and forwarded to the Chapters. For the information and guidance of Military Government Officers, English translations of these letters will be inclosed, as published, in the PH&W Weekly Bulletin. The following letters are inclosed (Inclosure No.1) in the PH&W Bulletin for this week.

Letter No.1, subject: "Introduction to Japanese Red Cross Disaster Handbook"

Letter No.2, subject: "Japanese National Red Cross Disaster Relief Organization"

Letter No.3, subject: "Chapter Disaster Relief Organization"

Children's Bureau Survey of Orphans

The Ministry of Welfare submitted the following figures on the census of orphans recently completed throughout Japan:

<u>Total</u>	<u>Male</u>	<u>Female</u>	<u>Age (Japanese count)</u>				
			<u>1-2</u>	<u>3</u>	<u>4-7</u>	<u>8-14</u>	<u>15-20</u>
123,511	68,478	55,024	554	719	13,213	57,731	51,294
Total number in institutions			12,202				
Total with guardians			107,108				
Those making own way			4,201				

The investigation revealed the following facts in connection with cause of condition and present method of living.

1. War orphans - those orphaned as a direct result of the war: 28,248, of which 4,055 are in institutions.
2. Repatriated orphans: 11,351, of which 1,140 are in institutions.
3. Orphans in general (all other cause): 81,265, of which 5,506 are in institutions.
4. Abandoned or lost children: 2,647, of which 1,501 are in institutions.

Of these totals, the Ministry learned that 7,127, of which 5,534 are in institutions, have spent varying times traveling about the country.

Child Welfare Officials

Budgetary difficulties on the national level, make appointment of the 248 additional Child Welfare Officials mentioned in Weekly Bulletin #63, dated 8-14 March, questionable at present.

While final action has not been taken, there is considerable doubt that the addition will be approved. Public Health and Welfare Section will inform prefectures, through the Weekly Bulletin, as soon as a decision has been reached.

Monthly Public Assistance Figures (March)

The Ministry of Welfare has submitted the following national totals for the month of March 1948. Figures for February 1948 and for March 1947 are shown for purposes of comparison.

	<u>March 1948</u>	<u>February 1948</u>	<u>March 1948</u>
Persons - institutional	137,450	135,684	108,420
Persons - non-institutional	<u>2,077,031</u>	<u>2,020,410</u>	<u>2,773,603</u>
Totals	2,214,481	2,156,094	2,882,023
Assistance in Cash*	Yen 408,285,028	376,219,148	201,012,453
Assistance in Kind	<u>56,131,208</u>	<u>51,971,621</u>	<u>51,951,732</u>
Totals	Yen 464,416,236	428,190,769	252,964,185

* Before Assistance by prefectures

Public Assistance by prefectures

Prefecture Institutional Non-Institutional

* After deductions for repayments by families.

Kagoshima	2,898	64,308	135,572	7,748,496
Total	137,450	2,077,031	56,131,208	408,129,258

SECTION III
VETERINARY AFFAIRS DIVISION

Animal Disease Report

The following outbreak of disease was reported by the Ministry of Agriculture and Forestry for the period 1-7 May:

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Shizuoka	Swine Erysipelas	11
Kagoshima	Swine Erysipelas	1

It is requested that Military Government Public Health Officers notify the Chiefs of the Prefectural Animal Disease Control Sections to report all causes of smuggled cattle so that appropriate action can be taken through police channels. The danger of an outbreak of Cattle Plague (Rinderpest) is imminent and control plans should be ready for instant application. The newly formed Bureau of Maritime Security is the responsible agency for the apprehension and control of smugglers.

SECTION IV SUPPLY DIVISION

Distribution

Dusters and sprayers for insect and rodent control were shipped to six prefectures under Ministry of Welfare supervision in the period 25 April to 1 May. A total of 1,818 were distributed as follows:

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsack Sprayer</u>	<u>Semiautomatic Sprayer</u>	<u>Hand Sprayer</u>
Miyazaki	500	0	0	0
Kanagawa	0	360	0	0
Nagano	288	0	0	84
Ishikawa	216	0	0	0
Osaka	0	150	0	84
Nagasaki	0	100	40	0
	1,004	610	40	168

A total of 11,602,520 cc of diphtheria toxoid for use in immunization of the entire Japanese population have already been shipped to the 46 prefectures. The total requirement for all prefectures is 18,056,000 cc based on information submitted by each of the prefectures. During March 3,003,700 cc was also made. Below are detailed requirement and distribution figures.

DISTRIBUTION OF DIPHTHERIA TOXOID (Unit: cc)

<u>Prefecture</u>	<u>Quantity Required</u>	<u>March Distribution</u>	<u>Total Distribution to 31 March</u>
Hokkaido			
Aomori	300,000	70,000	120,000
Iwate	347,000	70,000	140,000
Miyagi	395,000	116,900	151,900
Akita	325,000	300,000	332,060
Yamagata	144,000	65,000	143,080
Fukushima	443,000	150,000	210,000
Ibaraki	315,000	50,000	145,000
Tochigi	360,000	50,000	120,000
Gumma	866,000	70,000	243,000
Saitama	572,000	130,000	284,280
Chiba	570,000	70,000	340,000
Tokyo	927,000	265,000	508,000

Kagoshima	436,000	150,000	390,000
Japan totals	16,056,000	3,003,700	11,602,520
Ryukus	755,000	200,000	200,000
Grand Totals	16,811,000	3,203,700	11,802,520

Production

A total of 106,961 lbs of 10% DDT dust and 8,600 gallons of 5% DDT residual effect spray were distributed during the period 25 April - 1 May. At the same time, a total of 40,000 lbs of 10% DDT dust, 19,350 gallons of 5% DDT residual effect spray, and 319 vials of typhus vaccine were received from the manufacturing plants. A total of 3,809,230 lbs of 10% DDT dust, 380,173 gallons of 5% DDT residual effect spray, and 131,607 vials of typhus vaccine represents total stocks on hand in wholesale houses of the Ministry of Welfare as of 1 May.

A total of 7,852 pieces of the various types of DDT dusting and spraying equipment for mosquito and fly control programs were produced during the period 25 April - 1 May. Large inventory stocks remain on hand to meet all requirements.

PHMJG 64, dated 1 May, subject: Cement Distribution Plan, 1st Quarter (April - June 1948), Japanese Fiscal Year 1948, refers to the Ministry of Welfare plan for the initial distribution of 1st Quarter, Japanese Fiscal Year 1948 cement allocations. The details of the plan are included in Inclosure #2.

PHMJG 65, dated 4 May, subject: Cement Supplemental Distribution Plan, 1st Quarter (April - June 1948), Japanese Fiscal Year 1948, refers to the Ministry of Welfare plan for the supplemental distribution of 1st Quarter, Japanese Fiscal Year 1948 cement allocations. The details of this plan are included in Inclosure #3.

Allocations tickets for the full amounts of cement have been mailed by the Ministry of Welfare and Construction Board directly to the institutions within the categories concerned. Prefectural health officials should assist the various installations to obtain the cement materials in accordance with the allocations made and should make follow up inspections to be assured that this material is being used for the purpose for which it was allocated.

Inclosure #4 is the detailed breakdown of the 1500 ton cement allocation, under the jurisdiction of the Construction Board, made for the category "Water Works Repair", for the period April, May and June 1948.

SECTION V NARCOTIC CONTROL DIVISION

Narcotic Law

The Narcotic Control Law was approved by the Cabinet 7 May and now awaits Diet approval.

Besides clarifying and strengthening the provisions of narcotic control measures in effect since June 1946, the law provides for commitment of addicts, who are a menace to the public welfare, to designated institutions, and provides penalties for narcotic violators not to exceed five years penal servitude or 50,000 yen fine or both.

Imports

Final imports of codeine and morphine were shipped to licensed compounders and producers in Tokyo and Osaka. The Ministry of Welfare has advised all companies concerned that the morphine hydrochloride is not to be used until all present stocks in Japan are compounded or produced in order that the newest stocks may be held in reserve.

Violations

The attention of the Attorney General's Office was called to a recent case in which narcotic violators were fined approximately one-half the amount which it was proved they had made through illicit narcotic transactions. The attorney General's Office is investigating the circumstances surrounding the case.

SECTION VI PREVENTIVE MEDICINE DIVISION

Examination of Japanese Employees Working for Occupation Forces

Tuberculosis: Reference is made to PHMJG-5, PHMJG-15, PHMJG-35. The Japanese Government is responsible for necessary physical examinations, immunizations and medical care of Japanese Nationals working for occupation forces. The above memoranda define responsibilities and prescribe details in connection with certain especially important matters such as examinations and disposition of persons handling these cases has been performed quite satisfactory. However, investigations have revealed that in some cases proper disposition is not being made of persons found positive for tuberculosis. In some cases employees working in occupation homes have been found to have tuberculosis and have been returned to duty with the advice to "eat plenty of good food and don't work too hard".

This type of advice has been given frequently by the average Japanese physician and should not be permitted to continue. PHMJG-35 prescribes that employees working for the occupation forces who are found to have active tuberculosis will be relieved from duty and will be placed under proper treatment preferably in a hospital. This same principle should apply to all tuberculosis patients and not merely to those working for Occupation Forces. This matter has been brought the attention of officials in the Ministry of Welfare and they have been instructed to take the necessary action to correct these deficiencies.

Military Government Health Officers should exercise the necessary surveillance over Japanese agencies doing physical examinations and providing medical treatment in order to ascertain that physical examinations are being performed properly and that proper disposition is being made of those to have tuberculosis.

Typhoid Immunizations: Reference is made to Section VII Weekly Bulletin #65. All typhoid fever immunizations should have been completed by 1 May. However, the latest report received indicates that 36,000,000 people, or less than 60% of those eligible, have completed the series as of 4 May. Intensive efforts must be made to complete this program without delay in order to obtain maximum benefits during the current season.

The Ministry of Welfare has prepared an immunization bill which would make typhoid immunizations compulsory. This bill will go before the Diet in the near future; however, by the time it is enacted into law and promulgated, the season will be well advanced. Therefore, Military Government Health Officers should make a special effort to observe that this program is completed without delay.

Sanitation

The national budget will continue to operate on a monthly interim basis for June. A temporary budget for insect and rodent control has been approved which sets up funds for subsidy to the prefectures. The amount is

approximately double the May figure, and should be sufficient to meet the 50% subsidy for sanitary teams organized on the 1 to 10,000 basis as outlined at the Health Center conference.

Test for Efficacy of 10% DDT Powder Against Lice Infesting Humans

The common laboratory procedure for testing the efficacy of 10% DDT powder is known as the "beaker test". This method was devised and used by both the U. S. Department of Agriculture and the Rockefeller Foundation to test the effectiveness of various insecticide powders against lice. This test may be used to test any lot of powder which may appear to be ineffective against lice in routine louse control operations.

In brief the method is as follows:

1. Secure, five small glass beakers (50cc) or five small 5mm petri dishes or ordinary table glasses.
2. Cut five pads from old army wool shirt or underwear (50mm in diameter).
3. From local louse infested individuals secure a supply of native wild lice (Last large nymphal stage is the most suitable). These should be captured as near the time of testing as possible.
4. Count out 25 lice onto each of the five cloth pads. (Four pads of 25 lice each for testing, and one pad of 25 lice for control).
5. Place the pads with the lice in the bottom of the glass containers.
6. From the sample of powder to be tested, apply 50mg of powder evenly over both surfaces of each of the four pads. (50mg per pad) Fifty mg is approximately the amount of powder picked up on the end of the small blade of a pocket knife extending back on the blade about 1/4".
7. Place the glasses on a table at ordinary room temperature and examine the lice at intervals of 1, 3, 6, 12, 18, 24, 36 and 48 hours, or more often if desired. Examination is best conducted in strong light using a hand lens or a dissecting scope (if available). Criteria of death when all peristaltic action ceases (easily seen with a lens). All lice under test should be dead within 24 hours.

SECTION VII MEDICAL SERVICE DIVISION

Japanese Civilian Hospital Strength Report for the week ending 2 April shows a total of 3,468 hospitals with bed capacity of 208,943, of which 109,013 were occupied. During this period, 349,769 out-patient treatments were rendered.

Japanese Civilian Hospital Strength Report for the week ending 9 April shows a total of 3,472 hospitals with bed capacity of 209,016, of which 100,580 were occupied. During this period, 295,055 out-patient treatments were rendered.

SECTION VIII SOCIAL SECURITY DIVISION

National Health Insurance

The All-Japan National Health Insurance Reform League held a meeting in Tokyo on the 4th and 5th of May. This League is composed of voluntary representatives from the prefectural federations of associations. There were more than 200 persons present for the conference. Pertinent subjects discussed were: the objectives for rehabilitation of the entire program; improvement in the cooperation between the associations and the medical profession; the standardization of national subsidy; the uniform relationship of contribution rates to community income; the use to the visiting nurse in a professional rather than clerical capacity; inauguration of an extensive information and education program for the benefit of the insured; and the revisions necessary in the National Health Insurance Law.

Health Insurance

The Health Insurance Section of the Insurance Bureau, Ministry of Welfare, managing the affairs of the former Navy Ministry Mutual Aid Association, now known as the Mutual Aid Association, reports that all but one of the hospitals which Formerly belonged to this association now have civilian doctors as head directors.

Government Pension Insurance

Among the social insurance programs for government workers, the government pension system is the oldest and most solidly established. Under this program "officials" are covered with regard to retirement and invalidity and, in case of their death, it protects their dependents. "Officials" as here understood include teachers in the compulsory education system, police, and other career servants engaged in national administration either in Tokyo or the prefectures. They pay small contributions which are withheld from their salary at the source. (See social insurance chart digests accompanying TB-PH-SS-I of March 1948 put out by this Division.) Over 90% of the money disbursed in benefits, however, is contributed by the national government. According to the most recent reports available, total benefit payments were as follows:

	January 1948		February 1948	
	Number of Beneficiaries	Total Benefits Paid	Number of Beneficiaries	Total Benefits Paid
Lump-sum (one-time) payments	2,971	2,389,088.41	2,699	2,158,578.87
Pensions (recurrent)	111,437	20,384,489.08	15,174	4,775,536.20
Total	114,408	22,773,577.49	17,873	6,934,115.07

The discrepancy in pension payments and number of beneficiaries as between January and February is explained by the fact that while lump-sum payments are made at such time as they become payable, pensions are normally paid only four times a year, namely - January, April, July, October. Only unclaimed and over-due pensions are paid in-between. These figures are exclusive of grants-in-aid paid by the national to prefectural governments to finance, in part, pensions paid by them.

SECTION IX

SECTION I
WELFARE DIVISION

Cooperative for American Remittances to Europe, Inc. (CARE)

Several inquiries have been received by Public Health and Welfare Section regarding the status of CARE, Inc., operations in Japan.

CARE, Inc., was issued a license to operate in Japan on 21 August 1947, however, their operation have not been extended to this theatre as of this date.

It is contemplated that the first CARE packages (food only) will arrive in Japan during the next month (ETA 25 June). The contents of the food package (Oriental pack) will consist of the following items:

Flour	2 lbs	Raisins	1 lb
Rice	5 lbs	Egg powder	8 oz
Kidney beans	1 lb	Chocolate	8 oz
Miso	2 lbs	Cocoa	8 oz
Shoyu	1 pint	Milk (powdered)	1 lb
Vegetable oil	24 oz	Sugar	2 lbs
Beef (in natural juice)	15 oz	Salt	2 lbs
Canned fish	15 oz	Soup (concentrate)	1 1/4 oz
Apricots	1 lb	Soap	6 oz
Wash cloth	1 piece		

The cost of this food package is ten dollars (\$10.00). The receipt and acceptance of each ten dollars (\$10.00) remittance by CARE, Inc., (address: 50 Board Street, New York (10), New York) obligates them to effect delivery of the food package to an addressee, in Japan, as named by the remitter, with a signed receipt from the addressee being transmitted to the original donor as evidence of the requested delivery being made. Whenever a food package is undeliverable, the donor will be notified and at the same time his remittance will be returned.

NOTE: CARE, Inc., is not receiving remittances for Japan at this time. As soon as CARE operations are officially extended to include Japan, official notice will be given through the Public Health and Welfare Weekly Bulletin, Stars and Stripes and Japanese press.

Licensed Agencies for Relief in Asia (LARA)

LARA relief supply shipments, numbers 71 and 72, arrived in Yokohama and consisted of the following supplies:

71st Shipments: Arrived aboard the S.S. Princeton Victory on 1 May and contained 1.54 tons (clothing).

72nd Shipments: Arrived aboard the S.S. Philippine Transport on 1 May and contained .57 tons (clothing, including shoes, .14 tons - soap, .08 tons - miscellaneous, .35 tons)

The total LARA relief supply shipments to Japan now amounts to 4,516.98 tons, consisting of the following:

Food	3,396.48 tons
Clothing (including shoes)	971.75 tons
Medicines	59.34 tons
Miscellaneous (including soap)	<u>89.41 tons</u>
Total	4,516.98 tons

Japanese Red Cross Society

Junior Red Cross

Planning and making arrangements for "Junior Red Cross Leadership Training Centers" has been a major activity of the Junior Red Cross. The Junior Red Cross Advisory Committee made the announcement on 13 May that a final decision had been made regarding the camp sites.

There will be two camps (reference Public Health and Welfare Weekly Bulletin No.66 for the period 29 March - 4 April), one at Tamano, Okayama Prefecture, between the dates 25 - 31 July and another at Gora, Kanagawa Prefecture, between the dates 15 - 21 August.

The Junior Red Cross Section, National Headquarters, will transmit, on or before 19 May, a letter to call Red Cross Chapters giving general information regarding these Leadership Training Centers. This letter will give information on camp dates, camp sites, student delegate qualifications, financing, and purpose. An English translation of this letter will be inclosed in the next issue of the Public Health and Welfare Weekly Bulletin.

Junior Red Cross enrollment supplies (certificates, badges and cards) have been sent to all Red Cross Chapters in an amount to cover minimum requirements: Chapters may receive additional supplies, as needed, by initiating a request through the National Headquarters, Japanese Red Cross.

Volunteer Services:

The National Committee on Volunteer Services has held four meetings during the week, beginning 9 May, for the purpose of drafting Volunteer Service Manuals. Manuals are being prepared to cover the following Volunteer Service projects: Children's Institutions, Hospitals, Blind Institutions, Parks and Playgrounds. Considerable time will elapse before the manuals will be completed and ready for distribution.

Volunteer Service Information Letter No.1 (English translation) was inclosed in Public Health and Welfare Weekly Bulletin No.70 (for the period 26 April - 2 May). Letter No. II, subject: "Procedure for Initiating the Volunteer Service Program in all Chapters" (English translation) is inclosed in this Bulletin (Inclosure 1) as a matter of interest, information and guidance to Military Government Officers.

Public Assistance Fund Allocations to Prefectures

As the result of conference between SCAP Sections and the Ministries of Welfare and Finance, the following plan has been approved to alleviate the problem of late arrival of Public Assistance funds in cities, towns and villages. It must be noted, however, that this plan cannot go into effect until formal approval, by the Diet, of the budget for this fiscal year. At present the Diet is approving the budget on a month by month basis only, and funds will necessarily continue to arrive late.

Upon fiscal approval of the budget by the Diet, the Ministry of Welfare will prepare and submit to the Ministry of Finance its prefectural allocation requests 30 days in advance of the month concerned. The Ministry of Finance will approve the allocations, and funds should then reach prefectures within five days and should reach cities, towns and villages in an additional 10 to 15 days. Prefecture governors and heads of cities, towns and villages should be reminded that prompt allocations of their portions of the funds will make certain that assistance can be delivered to the individuals concerned, by the first of each month.

Japanese officials pointed out that although Public Assistance funds sent to prefectures for these purposes were supposedly earmarked, governors often yielded to pressures from other governmental departments and "borrowed" Public Assistance funds temporarily for their functions. Military Government Team Commanders should ascertain that such action does not delay funds reaching cities, towns and villages in the future.

It is also recognized that fiscal and statistical data reaching the Ministry of Welfare is neither adequate nor reliable. Two Ministry of Welfare will attempt to correct these deficiencies during this fiscal year.

Disaster Relief

When a disaster occurs it is not uncommon for large crowds to gather to watch the excitement. (Relief work is impeded by spectators)

To guard against this problem, the Japanese Government has been requested to issue instructions to all Prefectural Governors to include in their disaster plans adequate provisions for the control of traffic in time of disaster.

Control of traffic should include roping off strategic areas during fires and other calamities so as to give Fire Departments and other authorized disaster relief agencies full opportunity to conduct their relief activities with the minimum of interference.

Military Government Officers should determine through their normal surveillance of Japanese Disaster Plans that such steps as are necessary be taken to insure that adequate traffic control measures are included in prefectural disaster relief plans.

SECTION II VETERINARY AFFAIRS DIVISION

Animal Disease Report

The following outbreak of diseases was reported by the Ministry of Agriculture and Forestry for the period 8 - 14 May.

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Gumma	Swine erysipelas	1
Kagoshima	Swine erysipelas	1
Iwate	Swine plague	15
Iwate	Swine erysipelas	16

NOTE: The Nishigahara Laboratory has dispatched serum and vaccine to Iwate to check this outbreak.

A representative of Public Health and Welfare, SCAP investigated Japanese veterinary activities in Hokkaido. The dairy industry in Hokkaido must be preserved, and definite action at national level is being inaugurated, toward stimulation, to realize the minimum health benefit from milk. It was found that considerable blackmarket activities sidestep all sanitary and public health regulations and are upsetting the legal distribution plan for the proper handling of pasteurized milk products.

SECTION III NURSING AFFAIRS DIVISION

Model Demonstration School of Nursing

The Konodai National Hospital at Ichikawa will be used for psychiatric affiliation for student nurses beginning 15 June. The nurses will be sent in groups of ten and will remain for two weeks. This rotation will take approximately five months for the 3rd year students to complete their affiliation. The students are to receive lectures in clinical psychiatry as well as instructions and experience in various types of psychiatric nursing and will attend ward rounds and staff meetings.

The graduate and student nurses will wear the same style of cap beginning 17 May. Graduates will wear the small Red Cross emblem to distinguish them from students.

Miss Iizuka has been officially appointed Superintendent of Nurses and Director of Nursing Education of the Red Cross School of Nursing.

Midwifery

The fourth in a series of midwifery lectures was given in Nagano. There were 208 midwives enrolled in this 10 day course. Definite goals were set up for improvement of maternity care. The Japanese doctors were very interested and cooperative in this area.

SECTION IV
SUPPLY DIVISION

Distribution

A total of 4,073 pieces of dusting and spraying equipment were distributed to 13 Prefectures during the period 2 - 8 May, under the direction of the Ministry of Welfare, as follows:

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsack Sprayer</u>	<u>Semiautomatic Sprayer</u>	<u>Hand Sprayer</u>
Iwate	192	0	0	24
Tochigi	61	0	0	2

Nara	0	0	120	0
Ishikawa	0	0	0	10
Osaka	0	0	0	120
Totals-	1,837	1,030	120	1,086

Reference is made to detailed tabulation of distribution of diphtheria toxoid to the various prefectures during the month of March published in the previous issue of the Weekly Bulletin. Revised requirements have been submitted to the Ministry of Welfare by 22 prefectures. These changes are listed below, and the quantities indicated should be substituted for those published last week.

Revised Requirements for Diphtheria Toxoid
(Unit: cc)

Hokkaido	1,047,500	Nagano	280,000
Aomori	160,000	Gifu	100,000
Iwate	140,000	Shizuoka	291,460
Miyagi	151,900	Aichi	200,000
Fukushima	310,000	Mie	200,000
Ibaraki	405,000	Shiga	200,000
Chiba	340,000	Kyoto	332,100
Kanagawa	202,040	Osaka	608,000
Niigata	465,180	Hyogo	159,000
Fukui	108,000	Nara	100,000
Yamanashi	157,700	Ehime	350,000

The plan of distribution of pyrethrum emulsion for the 1948 season, for use in insect control, has been formulated by the Ministry of Welfare. A total of 382,800 gallons will be made available, packaged in 50-gallon drums. This emulsion is to be diluted 30 times, making a total of 11,484,000 gallons of finished insecticide. The allocations are listed below. The quantities to be shipped to each prefecture were based on calculations by the Ministry of Welfare on a population basis, modified to meet as nearly as possible the individual requirements as submitted by the prefectures.

1948 ALLOCATION OF PYRETHRUM EMULSION 30X
(Unit: 50-gallon drum)

Miyazaki	63
Kagoshima	70
Total	<u>7,656</u>

Information on shipments to the prefectures which are expected to begin in the immediate future will be furnished in the future issues of the Weekly Bulletin.

Production

A total of 7,673 pieces of the various types of DDT dusting and spraying equipment for mosquito and fly control programs was produced during the period 2 - 8 May. Large inventory stocks remain on hand to meet all requirements.

A total of 66,712 lbs. of 10% DDT dust, 68,950 gallons of 5% DDT residual effect spray and 22,750 vials of typhus vaccine were distributed during the period 2 - 8 May. At the same time, a total of 40,000 lbs. of 10% DDT dust, 62,600 gallons of 5% DDT residual effect spray, and 22,122 vials of typhus vaccine were received from the manufacturing plants. A total of 3,748,608 lbs. of 10% DDT dust, 366,987 gallons of 5% DDT residual effect spray, and 130,979 vials of typhus vaccine represents total stocks on hand in wholesale houses of the Ministry of Welfare as of 8 May.

A breakdown of fuel allocation (standard coal and lignite), by prefectures, for use in those hospitals attached to Universities, Medical Colleges, and other educational institutions under the jurisdiction of the Ministry of Education, for April, May and June, 1948, is included in Inclosure II. Ministry of Education officials mailed allocation tickets directly to the hospitals concerned on 17 April. (Unit: Ton).

Cognizance has been taken of the approaching season of warm weather and accompanying increased prevalence of mosquitoes, flies, and other insects. To implement scheduled mosquito and fly control program in 1948, a detailed study has been made of national requirements of wire screening materials to be used in equipping public sanitary facilities, slaughter houses and dairies, national and private hospitals, health centers, welfare institutions, etc. Further announcements will be made shortly in future issues of this Bulletin.

SECTION V NARCOTIC CONTROL DIVISION

The draft of the Narcotic Control Law approved by the Cabinet 7 May has a provision under which narcotic addicts will be committed to designated institutions for a cure.

An interesting example of an investigation which points to the need of such a provision in the law, is the case of a Nisei with dual citizenship who has been addicted to narcotics since 1942.

This person, who developed a high tolerance to narcotic injections of Morphine, on three occasions tried voluntary cures at institutions, ranging from 25 days on the first occasion to 15 and 10 days on the following occasions. The successively shorter periods show the futility of voluntary treatment of an addict who has lost the power of self control.

Of three licensed physicians apprehended during the course of this investigation for supplying the addict with narcotics, the investigation disclosed that one physician has been a narcotic addict since 1913.

SECTION VI PREVENTIVE MEDICINE DIVISION

Epidemic of Infectious Diarrhea

Investigations in Niigata, Saitama and Gumma prefectures have brought to light an epidemic of infectious diarrhea, etiology not yet firmly established, which began in January and has extended into May with new cases and foci still developing. Bacteriological findings, for the most part negative for pathogens, have been inconclusive. Presumptive evidence indicates a virus as the causative agent in the Niigata area, studies are still underway. Since the period of illness is in most instances brief, it has been difficult to obtain sufficient fresh material, vomitus and stools, for study. For satisfactory virus study the fresh material should be immediately frozen with salted ice, or dry ice, with complete bacteriological studies performed on samples of the same material prior to freezing. In the Saitama-Gumma-Tochigi area the cultures distributed for field rodent extermination have been suspected and their further use for such purpose has been ordered discontinued. Salmonella typhi murii was cultured from one human case of infectious diarrhea with symptoms apparently typical of this epidemic.

Initial reporting has been generally poor. Private physicians are usually aware of many more cases than are reported to health authorities through usual channels, and a house-to-house survey in an affected village ordinarily

multiplies case-numbers many fold. Funerals and weddings with their attendant feasts have in certain localities resulted in clusters of new cases.

In general, symptoms consist of a sudden onset of nausea, diarrhea and vomiting with little or no fever, from three to five days following exposure. Stools are usually watery with no blood or mucous, tending to become green. The vomitus also becomes bile colored. Recovery in two or three days is the rule, but a number of deaths have occurred among old people. All possible leads should be followed in obtaining complete epidemiological information, with inquiry to finding the extent of hitherto unreported illness. The term "infectious diarrhea" has been adopted by Japanese health authorities as a provisional name for this epidemic illness.

SECTION VII MEDICAL SERVICES DIVISION

Civilian Hospital Strength Report for the week ending 16 April shows a total of 3,472 hospitals with bed capacity of 209,085, of which 101,051 were occupied. During this period, 311,752 out-patient treatments were rendered.

Civilian Hospital Strength Report for the week ending 23 April shows a total of 3,499 hospitals with bed capacity of 210,237, of which 100,843 were occupied. During this period, 292,110 out-patient treatments were rendered.

SECTION VIII SOCIAL SECURITY DIVISION

General

Pending the current revision of social insurance statistical reporting requirements and procedures, an effort is being made to assemble and digest all pertinent statistics now available. Owing to a number of gaps in exact date, estimates have to be resorted to in several instances.

The subsequent selected data are believed to reflect coverage and over-all finances with reasonable accuracy. These totals include both the programs covering workers in private industry (Health Insurance, Welfare Pension Insurance, Seamen's Insurance, and National Health Insurance) and those covering government workers (Government Pension Insurance and Government Mutual Aid schemes) in operation in the given years.

1. Total coverage under the Japanese social insurances before, during, and after the war: (In millions of yen)

	<u>Primary Insured</u>	<u>Dependents (estimated)</u>	<u>Total</u>
Fiscal year 1941 (last pre-war year)	8.8	24.2	33.0
Fiscal year 1944 (highest point during the war)	19.0	49.4	68.4
Fiscal year 1946 (first complete post-war year)	12.3	39.8	52.1

2. Total collections for social insurances in the fiscal year 1946: (In millions of yen)

Contributions	2,999
National subsidies	544
Prefectural subsidies (estimated)	16
Total	3,559

3. Total disbursements under the several social insurance programs in the fiscal year 1946:

(In millions of yen)

Temporary disability and medical care	1,298
Health and welfare services	77
Retirement and old-age, survivors' and funeral benefits	296
Capital outlay (estimated in part)	271
Administrative expenses (estimated in part)	238
Total	2,180

4. Total reserves of all the social insurances combined at the end of the fiscal year 1946:

(In millions of yen)

Total: 4,203

As the current drive for more complete and more accurate reporting, both locally and by the Ministry of Welfare, is effective, more recent and detailed annual summaries as well as monthly operations reports for the several programs should become available.

National Health Insurance

A number of inquiries have been received as to how the National Health Insurance associations will continue to conduct their public health activities in conjunction with the newly organized public health program. The reorganized program now comes under the direct supervision of the district public health officer. Therefore, participation by the associations or those juridical persons exercising the National Health Insurance in the public health program is a responsibility of the direct health officer. In the early history of National Health Insurance many associations independently conducted their own public health programs which were found to be lacking in coordination and uniformity. The new public health program is designed to bring about uniformity and efficiency on a national scale with increased local responsibility in complying with minimum standards. This revised procedure needs dissemination and clarification in many National Health Insurance associations.

SECTION IX
MEMORAMDA TO JAPANESE GOVERNMENT

None.

CRAWFORD F. SAMS
Brigadier General, Medical Corps
Chief

3 Incls:

1. Procedure for Initiating the Volunteer Service Program in all Prefectures.
2. Fuel Allocation (Standard Coal and Lignite) for Use in Ministry of Education Hospitals for April, May and June 1948.
3. Digest and Report of Cases and Deaths from Communicable and Venereal Diseases in Japan for week ended 8 May 1948.

Ministerial Instructions

The following is a list of instructions issued by the various Bureaus of the Ministry of Welfare to the prefectural governments for the period 2 - 8 May:

- May 3, 1948 From: Director of Prevention Bureau To: Prefectural Governors
(Yo Hatsu No.543)
 Subject: National subsidy to the communicable disease prevention expenses etc.
- May 4, 1948 From: Chief of Accounts Section To: Director of Bureau & Division
(Kai Hatsu No.388)
 Subject: Operation of Law No.171, 1947
- May 4, 1948 From: Chief of Accounts Section To: Director of Bureau & Division
(Kai Hatsu No.390)
 Subject: Partial amendment of Calculation Certification Regulation.
- May 4, 1948 From: Chief of Accounts Section To: Wakayama Prefectural Governor
(Kai Hatsu No.405)
 Subject: Result of assessment concerning lost articles.
- May 4, 1948 From: Chief of Accounts Section To: Governor of Tokyo Metropolis
(Kai Hatsu No.408)
 Subject: Concerning national property ownerships in connection to unification of health centers.
- May 4, 1948 From: Chief of Accounts Section To: Every Disbursing Official
(Kai Hatsu No.410)
 Subject: Special provision for the time limit of final account of revenue and expenditure for 1947 fiscal year under the provision of para 1, Art. 1, The Financial Law.
- May 4, 1948 From: Director of Demobilization Bureau To: Prefectural deputy governor
(Ichi Fuku No.2028)
 Subject: Fixed number of personnel for 1948.
- May 4, 1948 From: Director of Demobilization Bureau To: Chief of Prefectural service section
(Ichi Fuku No.2029)
 Subject: Elimination of former regular officers engaging in demobilization business.
- May 4, 1948 From: Director of Demobilization Bureau To: Prefectural deputy governor
(Ichi Fuku No.2030)
 Subject: Elimination of former regular officers engaging in demobilization business.
- May 4, 1948 From: Director of Demobilization Bureau To: Prefectural Governor
(Ichi Fuku No.2031)
 Subject: Unofficial announcement of provision estimate (for May) of Treasury's share to Service Section for 1948.
- May 4, 1948 From: Director of Social Affairs Bureau To: Nagasaki Prefectural Governor
(Sha Hatsu No.696)
 Subject: Consultation concerning the approval of protection facilities under the Daily Life Security Law.
- May 4, 1948 From: Director of Social Affairs Bureau To: Wakayama Prefectural Governor
(Sha Hatsu No.697)
 Subject: Consultation concerning the approval of protection facilities under the Daily Life Security Law.
- May 4, 1948 From: Director of Social Affairs Bureau To: Akita Prefectural Governor
(Sha Hatsu No.698)

Subject: Over payment over standard amount of living aid expenses under the Daily Life Security Law.

May 4, 1948 From: Director of Relief Bureau To: Saga Prefectural Governor
(Repatriation Relief Board, Repatriation Relief Board
Hatsu Gyo No.459)

Subject: Sending of list of Koreans who are approved to return home by GHQ, SCAP.

May 4, 1948 From: Director of Medical Affairs Bureau To: Prefectural Governor
(I. Hatsu No.166)

Subject: Distribution of medicines for medical treatment for babies and infants.

May 4, 1948 From: Director of Children Bureau To: Kagawa Prefectural Governor
(Ji Hatsu No.236)

Subject: Approval of establishment of Child Welfare Station

May 4, 1948 From: Director of Children Bureau To: Yamagata Prefectural Governor
(Ji Hatsu No.237)

Subject: Approval of establishment of Child Welfare Station

May 4, 1948 From: Director of Children Bureau To: Prefectural Governor
(Ji Hatsu No.240)

Subject: Securing children accommodated for protection under Child Welfare Law and its necessary expenses.

May 5, 1948 From: Director of Children Bureau To: Prefectural Governor
(Ji Hatsu No.241)

Subject: Forwarding English version of Child Welfare Law.

May 6, 1948 From: Director of Children Bureau To: Prefectural Governor
(Ji Hatsu No.243)

Subject: Allotment of papers

May 6, 1948 From: Director of Children Bureau To: Aomori Prefectural Governor
(Ji Hatsu No.244)

Subject: Reply to the inquiry for the appointment of persons in charge of welfare of children.

May 6, 1948 From: Director of Children Bureau To: Okayama Prefectural Governor
(Ji Hatsu No.245)

Subject: Approval of establishment of Child Welfare Station

May 6, 1948 From: Director of Children Bureau To: Prefectural Governor concerned
(Ji Hatsu No.249)

Subject: Distribution of hygienic band to the personnel accommodated for the welfare facilities for children.

May 6, 1948 From: Director of Children Bureau To: Prefectural Governor
(Ji Hatsu No.250)

Subject: The second lecture meeting for recognition of qualification of nurse.

May 6, 1948 From: Director of Relief Bureau, To: Saitama Prefectural Governor
(Repatriation Relief Board, Repatriation Relief Board
Hatsu Gyo No.483)

Subject: Sending of list of Koreans permitted to return home by GHQ, SCAP.

May 6, 1948 From: Director of Social Affairs Bureau To: Governors of Gumma
 (Sha Hatsu No.707) & Fukuoka Prefecture
 Subject: Allotment of printing paper for the social works

May 6, 1948 From: Director of Social Affairs Bureau To: Osaka Prefectural Governor
 (Sha Hatsu No.710)
 Subject: Payment of living and expenses for the supply of bedding to be used in winter for the repatriates in distress under the Daily Life Security Law.

May 6, 1948 From: Director of Social Affairs Bureau To: Kochi Prefectural Governor
 (Sha Hatsu No.712)
 Subject: Payment of living and expenses for the supply of bedding to be used in winter for the repatriates in distress under the Daily Life Security Law.

May 6, 1948 From: Director of Social Affairs Bureau To: Aichi Prefectural Governor
 (Sha Hatsu No.713)
 Subject: Illegal distribution of commodities for protection

May 6, 1948 From: Director of Social Affairs Bureau To: Toyama Prefectural Governor
 (Sha Hatsu No.714)
 Subject: Sending of lecturers for lecture meeting.

May 6, 1948 From: Director of Prevention Bureau To: Prefectural Governor
 (Yo Hatsu No.560)
 Subject: Mass cases of acute diarrhea patients in Niigata and other prefectures.

May 6, 1948 From: Director of Insurance To: Prefectural Governor Chief of
 (Ho Hatsu No.655) Branch Office of Social Insurance
 Chief of National Health Insurance
 Sanatorium
 Subject: Notification of paying plan of State expenditure in special business account of Welfare Insurance for 1948.

May 7, 1948 From: Director of Demobilization Bureau To: Chief of Prefectural Service Section
 (Ichi Fuku No.2042)
 Subject: Amendment of Home Business Regulation for Demobilization

May 7, 1948 From: Director of Children Bureau To: Prefectural Governor
 (Ji Hatsu No.251) (except Kagawa Prefecture)
 Subject: Allotment of rubber hose to be used for welfare facilities for children for the second quarter, 1947 fiscal year.

May 7, 1948 From: Director of Public Health Bureau To: Prefectural Governor
 (Ko Ho Hatsu No.528)
 Subject: Additional distribution of foodstuffs for inmates of hospitals.

May 7, 1948 From: Director of Insurance Bureau To: Prefectural Governor
 (Ho Hatsu No.667)
 Subject: Operation of Health Insurance Hospitals and Clinics

May 7, 1948 From: Director of Social Affairs Bureau To: Osaka Prefectural Governor
 (Sha Hatsu No.716)
 Subject: Areas in which standard amount of living aid is being applied under the Daily Life Security Law.

May 8, 1948 From: Director of Social Affairs Bureau To: Kanagawa Prefectural Governor
 (Sha Hatsu No.719)
 Subject: Additional distribution of relief commodities of LARA (Foodstuffs)

May 8, 1948 From: Director of Medical Affairs Bureau To: Prefectural Governor
 (I Hatsu No.177)

Subject: Allotment of designated precious metal and gold to the districts for the use of dental treatment.

SECTION II
WELFARE DIVISION

Licensed Agencies for Relief in Asia (LARA)

The 73rd, 74th and 75th LARA shipments arrived in Yokohama and consisted of the following supplies:

- a. 73rd Shipment: Arrived aboard the S.S. President Polk on 10 May and contained 50.74 tons (food, 31.6 tons - clothing, 17.9 tons - garden seeds, 1.24 tons)
- b. 74th Shipment: Arrived aboard the S.S. Marine Flyer on 14 May and contained 6.7 tons (food, 1 ton - clothing, 5.7 tons)
- c. 75th Shipment: Arrived aboard the S.S. Pacific Bear on 15 May and contained 50.72 tons (food, 44.52 tons - clothing, 5.5 tons - miscellaneous, .7 tons)

The total LARA relief supply shipments to Japan now amounts to 4625.14 tons, consisting of the following:

Food	3473.60 tons
Clothing (Including shoes)	1000.85
Medicines	59.34
Miscellaneous (Including soap & seeds)	<u>91.35</u>
Total	4625.14 tons

Japanese Red Cross Society

Junior Red Cross:

The Public Health and Welfare Weekly Bulletin has set forth in previous issues the planning and programming in the redevelopment of the Junior Red Cross.

The Akasaka School (Tokyo-to) was visited this past week to determine the helpfulness of the new Junior Red Cross Handbook (English translation was inclosed in Public Health and Welfare Weekly Bulletin No.65, for period, 22 - 28 March). This school has been used as an experiment for testing the suggestions contained in the Handbook and it was observed that it had been helpful in guiding the teachers in the integration of Junior Red Cross programs into classroom work.

The following Junior Red Cross activities have been accomplished by the Akasaka School:

- a. Prepared three school correspondence albums (for exchange with an American School and 2 for domestic exchange).
- b. Two boxes of gifts prepared for an orphanage.
- c. Bulletin boards constructed for each classroom.
- d. Social studies activities group has visited several orphanages (in one instance flower seeds were contributed to an orphanage for the children to plant and make the surroundings more attractive).
- e. Home Economics activities group did mending for one orphanage.
- f. Sponsored a fire prevention campaign in cooperation with the Ministry of Education officials.

For the information and guidance of Military Government Officers, there is inclosed with this Weekly Bulletin the following Junior Red Cross information (English translation):

- a. The Constitution of the Junior Red Cross Corps (Inclosure 1).
- b. Instructions for Preparing International and Domestic School Correspondence Albums of the Junior Red Cross (Inclosure 2).

Volunteer Services:

The instructional and informational material for the Volunteer Services Program has been compiled in the form of "Volunteer Service Information Letters" which, in bound form, will constitute the Volunteer Services Handbook. Volunteer Service Information Letters, No. I and II (English translation) were included in Public Health and Welfare Weekly Bulletin, No.70 for the period 26 April - 2 May.

Volunteer Service Letter No. III, dated 30 April (English translation) subject: "Procedure for Establishing and Operating Volunteer Service Projects in Local Communities", is included in this Weekly Bulletin (Inclosure 3).

There are seven Volunteer Services Letters, reference Public Health and Welfare Weekly Bulletin No.70 (for period 26 April - 2 May). The remaining letters, numbers IV to VII, will be included in subsequent Public Health and Welfare Weekly Bulletins, when the English translations are completed.

Proposed Relief-in-Kind Plan for 1948-49 Fiscal Year

The Ministry of Welfare has developed the following proposed plan for: (1) distribution of clothing to needy persons; (2) in-kind distribution to repatriates; (3) in-kind distribution for disasters.

While a definite appropriation has been secured by the Repatriation Relief Board to purchase clothing and other items for free distribution to repatriates arriving subsequent to 1 April, no appropriation has as yet been secured by the Ministry of Welfare for bulk purchase of clothing for needy persons. The present proposed plan, therefore, cannot be considered final but is being released at this time primarily because of interest indicated by Military Government Team Welfare Officers. Further notifications will be released through the Weekly Bulletin as developments occur.

The clothing listed below comes from current production and will be released probably at four periods, beginning in August or September. The allocations listed below represent 6.55 lbs per needy person to be added to a proposed general distribution of 1.06 lbs per person; therefore, a needy person may receive 7.61 lbs. Present stocks of former Japanese Army-Navy clothing may be used in addition to these allocations.

<u>Item</u>	<u>Allocation</u>	<u>Average Price (15 May)</u>	<u>Remarks</u>
Towel	1,000,000 pcs	16.80 yen	
Japanese Towel	1,000,000	10.20	
Suit	4,000,000	379.60	Women's one piece -174.2 Men's suit 585.
Cotton underwear	2,822,000	62.14	Pants 41.10 Slip 81.00
Knit underwear	1,488,000	133.00	Drawer 75.00 Silk 225.00
Bedding	374,000	3,200.00	One set of quilts made of rayon
Blanket	758,000	1,175.00	Wool 1,400 Mixed with staple fibre 950
Tabi (Japanese socks)	1,000,000	45.00	
Socks	1,000,000	20.22	Rayon 20.80 Staple fibre 19.65
Mosquito Net	143,000	1,200.00	
Total	13,585,000 yen		

Note: The above is the total allocation and includes the new clothing listed below for repatriates and for disaster sufferers.

Plan (1). Distribution to needy persons. Clothing distribution to needy persons will be by two methods: (a) Free distribution by prefectures from funds or in goods allocated by the Ministry of Welfare (not as yet secured); (b) Distribution for purchase at official prices through regular retail channels. Free distribution it has been agreed, will be limited to families receiving public assistance grants. It is assumed that in the event of insufficient allocations, only the most needy of that group will receive free clothing. Determination of recipients in this case will be made by the heads of cities, wards, towns and villages on the recommendation of Welfare Commissioner (Minsei-iiin) Committees.

A ticket system will be used and recipients will receive free goods in exchange for their tickets. Distribution to needy families at official prices through retail channels will be controlled on a ticket basis, the tickets to be issued by Heads of cities, wards, towns and villages, on the recommendation of the Minsei-iiin Committee. It is expected that the greatest bulk of the program will be through this source. It may be possible that the needier families will receive Daily Life Security Law funds with which to make such purchases.

Plan (2). In-kind distribution to repatriates. All of the clothing issued under this plan is for free distribution and are purchased from funds allocated by the Diet for that purpose. While clothing is issued at the part to all persons family members expected this year.

<u>Item</u>	<u>To be Issued After Settling Down</u>	<u>Per Capita Allocation</u>
Towel or Japanese towel	180,000	1
Cotton underwear	360,000	2
Tabi (Japanese socks)	90,000	1 or
Socks	<u>90,000</u>	<u>1</u>
Total	550,000	4

Note: -The articles listed above come from current production.

Only repatriates who will have arrived since 1 April will be eligible for this clothing. In addition to the clothing listed above, repatriates will receive some household articles such as pots, kettles, dippers, frying pans and kitchen knives. In addition, need repatriates might be eligible for clothing under plan(1).

Other material issued the repatriates at the ports is as follows:

<u>Classification</u>	<u>Item</u>	<u>Quantity</u>
Clothing (Per Person)	Suit	2
	Cap	1
	Underwear	2
	Blanket	1
	Shoes	1
	Socks	2
	Pants or Drawers	1
	Japanese Towel	1
Food (Per Person per day)	Rice	500 gr
	Miso (Bean paste)	24 gr
	Shoyu	0.016 lit.
	Fish	130 gr
	Vegetables	520 gr
	Pickle	100 gr
	Cooking oil	0.007 lit.
	Vinegar	0.005 lit.
	Canned goods	700 gr
	Salt	8 gr
	Tea	20 gr
Daily Articles (Per Person)	Tobacco	60 cig
	Wine	5 shaku
	Match	2 bxs
	Tooth powder	1 bag
	Tooth Brush	1
	Soap	1
	Post Card	5
	Pencil	1
	Cake	2 bags
	Toilet paper	60

Note: 1. The bulk of the clothing listed above is former Army-Navy clothing held at the ports, but the following amounts of clothing will come from current production.

<u>Item</u>	<u>Amount of Production</u>	<u>Per Capita Allocation at Ports</u>
Japanese towel	450,000	1
Cotton underwear	100,000	2

2. The food listed above is cooked at the repatriation camps.
3. Babies receive no other food than 200 gr of milk product per day.
4. Patients receive 20 gr of sugar and 20 gr of butter per day in addition to the food listed above.

Plan (3). In-kind distribution for disaster.

Clothing or other materials for persons who may suffer from some kind of disaster this year are included in the overall plan.

The Ministry of Welfare anticipates that in most cases free distribution of clothing and other items will be made available for this group. Generally, this distribution will be made through existing relief channels. The Ministry of Welfare will stokpile for emergency purposes, a minimum amount of clothing at Kyusyu, Hokkaido, Tokyo

SECTION III VETERINARY AFFAIRS DIVISION

Animal Disease Report

The following outbreak of diseases was reported by the Ministry of Agriculture and Forestry for the period 15-21 May.

<u>Prefecture</u>	<u>Disease</u>	<u>No. of cases</u>
Niigata	Swine erysipelas	3
Toyama	" "	1
Aichi	" "	1
Tokyo	Texas Fever	1

New regulations based on the "Food Sanitation Act" are now being formulated. Complete coverage will be made on meat, meat-foods, milk, seafood and canning establishments.

SECTION IV SUPPLY DIVISION

Distribution

Dusters and sprayers for use in insect and rodent control were shipped to 17 prefectures at the direction of the Ministry of Welfare in the period 9-15 May. A total of 1,698 pieces of equipment were distributed as listed below:

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsack Sprayer</u>	<u>Semiautomatic Sprayer</u>	<u>Hand Sprayer</u>
Tokyo	200	180	—	100
Tochigi	24	—	—	24

Hyogo	—	—	50	20
Fukuoka	—	72	—	—
Kumamoto	—	6	—	—
Oita	—	6	—	—
Nagasaki	—	6	10	—
Miyazaki	—	18	—	—
Yamaguchi	50	—	—	—
Kagoshima	—	—	24	—

Ehime	—	—	300	—
Total	274	588	462	374

The Ministry of Welfare reports that 1,481,300 tablets of santonin have been distributed in April to all prefectures. Below is a detailed resume of this distribution. These figures represent shipments from central sellers to local sellers in the prefectures.

April Distribution of Santonin (Unit: tablet)

Hokkaido	30,880	Mie	27,620
Aomori	9,570	Shiga	9,360
Iwate	16,960	Kyoto	1,200
Miyagi	33,680	Osaka	50,590
Akita	33,940	Hyogo	31,170
Yamagata	7,650	Nara	24,180
Fukushima	53,580	Wakayama	25,940
Ibaraki	43,480	Tottori	9,650
Tochigi	48,200	Shimane	53,140
Gumma	18,570	Okayama	51,840
Saitama	36,960	Hiroshima	26,100
Chiba	62,110	Yamaguchi	25,650
Tokyo	80,360	Tokushima	7,030
Kanagawa	70,440	Kagawa	35,130
Niigata	10,200	Ehime	12,050
Yamanashi	60,820	Kochi	24,180
Nagano	20,360	Fukuoka	39,960
Shizuoka	47,250	Saga	10,470
Toyama	25,900	Nagasaki	147,600
Ishikawa	27,850	Kumamoto	19,560
Fukui	13,700	Oita	12,140
Gifu	5,520	Miyazaki	9,090
Aichi	8,620	<u>Kagoshima</u>	<u>61,100</u>
		Total	1,481,300

An emergency air shipment is to leave Tokyo for Okinawa 25 May consisting of 10,000 cc hog cholera vaccine to help combat an outbreak of hog cholera in Northern Ryukyus.

Production

A breakdown of solid fuel allocation, substandard coal, by districts and prefectures, for use in National and Public Hospitals, for April, May and June is listed below. (Unit: Metric Ton) Allocation tickets mailed direct to hospital.

District	Prefecture	Allocation substandard coal	District	Prefecture	Allocation substandard coal
Hokkaido	Hokkaido	400	Osaka	Shiga	420
	Total	<u>400</u>		Kyoto	860
Sendai	Aomori	410		Osaka	1,090
	Iwate	200		Fukui	270
	Miyagi	140		Hyogo	860
	Akita	200		Nara	390
	Yamagata	150		Wakayama	510
	Fukushima	100		Total	<u>4,400</u>
	Total	<u>1,200</u>			
Tokyo	Ibaraki	125	Hiroshima	Tottori	80

	Total	<u>1,300</u>		Kagoshima	570
				Total	<u>2,200</u>
			GRAND TOTAL		<u>15,000</u>

A total of 5,492 pieces of the various types of DDT dusting and spraying equipment for mosquito and fly control programs was produced during the period 9 - 15 May.

A total of 102,820 lbs. of 10% DDT dust, 83,265 gallons of 5% DDT residual effect spray and 11,200 vials of typhus vaccine were distributed during the period 9 - 15 May. At the same time, a total of 100,230 lbs. of 10% DDT dust, 66,550 gallons of 5% DDT residual effect spray, and 10,000 vials of typhus vaccine were received from the manufacturing plants. Total stocks on hand in wholesale houses of the Ministry of Welfare as of 15 May include 3,515,788 lbs. of 10% DDT dust, 335,522 gallons of 5% DDT residual effect spray and 129,779 vials of typhus vaccine.

SECTION V NARCOTIC CONTROL DIVISION

The March Report of narcotic control activities, Ministry of Welfare, contains the following information:

Total Registrants	81,536
Arrests - Registered persons	14
Unregistered persons	59
Convictions - Registered persons	6
Unregistered persons	16
Thefts of narcotics	22
Losses by fire	2

Penalties for registrants varied from three months penal servitude plus 500 yen fine to three years penal servitude plus 5000 yen fine. Penalties for non-registrants varied from 300 yen fine to two years penal servitude plus 5000 yen fine. Charges against 15 defendants were dropped because of insufficient evidence. Thirty-five registrants were admonished and three minor violations were disposed of administratively.

The report also reveals the present scope of narcotic enforcement in Japan through the following summation:

Inspections of registrants	2,927
Investigations originated	200
Investigations concluded	130
Investigations not concluded	285

There was no important fluctuation in the price of narcotics in the illicit traffic. Information was obtained relative to 107 additional narcotic addicts.

SECTION VI PREVENTIVE MEDICINE DIVISION

Tuberculosis Control

During a recent visit in several of the prefectures it was noted that the greatest causes of infant deaths was listed as congenital debility. The deaths from tuberculosis in this age group were very low.

The question arises whether among that group diagnosed as "congenital debility" there may not be hidden many cases of unrecognized tuberculosis in infancy. Several factors may be the reason--such as errors in diagnosis due to lack of knowledge, failure to report accurately, difficulty of diagnosis.

In childhood tuberculosis, the diagnosis should be based upon four factors: first, history of contact with an open case; second, a positive tuberculin reaction; third, the age of the child; fourth, the presence of enlarged hilar nodes in the x-ray study. The diagnosis, however, is established by demonstration of the tubercle bacillus in the sputum, in aspirated material from the bronchi, or in gastric washings.

Primary lesions may produce no symptoms or may be general. It must be emphasized that tuberculosis may be present in other parts of the body than in the lung field and that the presence or absence of activity cannot be decided from the extent of the lesion; therefore, a very careful and complete physical examination is imperative. It is again a matter of education of all individuals concerned with the problem of tuberculosis.

Sanitation

On 14 May a three months course for Sanitary Engineers officially opened at the Institute of Public Health in Tokyo, with 25 students enrolled.

Many of the Prefectures are not represented due to the fact that personnel with engineering degrees were not available from Prefectural Public Health agencies.

It is desirable that by the time the next class starts, Prefectures will have qualified students available so full representation can be attained.

SECTION VII MEDICAL SERVICES DIVISION

Hospital Strength Report

Civilian Hospital Strength Report for the week ending 30 April shows a total of 3,502 hospitals with bed capacity of 210,321, of which 99,049 were occupied. During this period, 308,720 out-patient treatments were rendered.

Nutrition Branch

The results of the February 1948 (Revised) Nutrition Survey Consumption Studies are inclosed with this Bulletin.

SECTION VIII SOCIAL SECURITY DIVISION

General

Pending completion of the current revision of statistical and reporting requirements under the several social insurance programs, it has been found that existing procedures for reports from the field would go a long way in providing the information desired if they were commonly observed and complied with. The extent and frequency of failure to report and the number of undue delays in reporting very regionally and from program to program. They appear to be largest in National Health Insurance (Kokumin Kenko Hoken) and second largest in society-managed Health Insurance (Kenko Hoken-Kumiai Kansho).

For the information of Military Government Teams existing reporting requirements under the social insurance schemes for workers in private industry and the self-employed will be listed in successive issues of this Bulletin. Those applying to National Health Insurance are listed below. Regular compliance therewith is a responsibility of the Insurance Section (Hoken Ka) of the Welfare Bureau (Minsei Bu) in all the prefectures.

Reports required under the National Health Insurance program from each National Health Insurance Association are of two kinds, monthly and annual. It is the job of the prefectural Insurance Section to consolidate the reports from the associations into one and forward it to the Ministry of Welfare. Reportable data are as follows:

A. Monthly Report

1. Insurer (National Health Insurance Association of — ..., Agricultural Association of — ..., other)
2. Number of “members” of the associations (heads of households only)
3. Number of “insured person” (dependents of the insured heads of households). Note: Items (2) and (3) are reportable as of the end of the current month and at the end of the preceding month with the intervening increase or decrease.
4. Benefits provided during the month (number of cases, number of days, and cost thereof)
 - a. Medical care (broken down by hospitalized, ambulatory and dental)
 - b. Cash sickness benefit
 - c. Maternity benefit
 - d. Nursing allowance
 - e. Funeral benefit
 - f. Total
5. Income (annual budget, actual income during current month, and cumulative income during current year up to and including current month) broken down according to:
 - a. Income from members’ contributions (premium)
 - b. Members’ share of the cost of medical care received for which the association is reimbursed by the member (for himself or his dependents)
 - c. National subsidy
 - d. Prefectural subsidy
 - e. City, town and village subsidy
 - f. Transfers from association funds or reserves
 - g. Other incomes
 - h. Total
6. Expenditure (annual budget, actual expenditure during current month, and cumulative expenditure during current year up to and including current month) broken down according to:
 - a. Administrative expenditures
 - b. Medical care expenditures
 - c. Maternity expenditures
 - d. Nursing expenditures
 - e. Funeral expenditures
 - f. Expenditures for health facilities
 - g. Other expenditures
 - h. Total -Note: Item (4), (5) and (6) call for explanatory remarks to accompany data presented wherever such seem indicated.
7. Balance (income minus expenditures)
8. Loan operations
 - a. Transfer from reserve fund
 - b. Transfer from previous month’s balance
9. Consolidated balance at the end of the month.
10. Total income, expenditure and balance of association
11. Unpaid balance owed to doctors for medical care received by the association (totalled by month in which services were received) Note: Monthly reports are due at the prefectural Insurance

Section on the last day of the succeeding month and should reach the Welfare Ministry ten days later.

B. Annual and Budget Report

Information required in the annual report which also serves as current budget report is substantially the same as that reportable monthly. Additional items required annually are as follows:

1. Date of authorization of the association and date on which it started operations; number of people eligible to membership and rate of application; number of public health nurses at the beginning of the current fiscal year.
2. Income data are restricted to totals, broken down as above A, 5, (Plus an additional item: advances received on next fiscal year's income), but per-capitation of each figure is required on the basis of the number of "members" reported. Also a comparison is required between the current fiscal year for which the report is made and the fiscal year for which accounts have been settled.
3. The same is true of expenditure data, see above A, 6.
4. So-called basic data for the budget are required including the following:
 - a. Number of "members" and "insured".
 - b. Duration of medical care benefit.
 - c. Ratios of medical care cost borne by the member and his dependents for each type of benefit and for all types combined.
 - d. Reserve at the beginning of the fiscal year and at the end of the last completed fiscal year. Note: These data likewise are required for the fiscal year under review and the fiscal year for which accounts have been settled. For example: The annual and budget report for the current fiscal year 1948-49 is due at the prefectural Insurance Section on 20 June. It must carry comparative data for the completed fiscal year of 1946-47. The compilation of all annual and budget data should reach the Ministry of Welfare on 30 June. (This concludes current reporting requirements under the National Health Insurance Program. Other programs will be discussed in subsequent issues of the Public Health and Welfare Weekly Bulletin).

Unemployment

The government subsidized programs of Unemployment Allowance were succeeded on 1 May by the Unemployment Insurance Laws based on employer-employee contributions. Basically, persons eligible for benefits under Unemployment Insurance are those who became unemployed after 1 May after having been engaged in covered employment for at least six months prior to that date. Unemployment Insurance has been provided for seamen through revision of the Seamen's Insurance Law administered by the Welfare Ministry and for industrial workers in general through a separate law administered by the Ministry of Labor.

SECTION IX MEMORAMDA TO THE JAPANESE GOVERNMENT

None.

CRAWFORD F. SAMS
Brigadier General, Medical Corps
Chief

5 Incls:

1. The Constitution of the Japanese Junior Red Cross Corps.
2. Instructions for Preparing International and Domestic School Correspondence Albums of the Japanese Junior Red Cross.
3. Procedure for Establishing and Operating Volunteer Service projects in local communities.
4. Nutrition Surveys - February 1948
5. Report of cases and deaths from communicable and venereal diseases in Japan - 15 May 1948.

SECTION I
GENERAL

Ministerial Instructions

The following is a list of instructions issued by the various Bureaus of the Ministry of Welfare to the prefectural governments for the period 10-15 May:

- May 10, 1948 From: Director, Children Bureau To: All Prefectural Governors
(Ji-Hatsu, No.254)
Subject: Forwarding of Sub-regulation for Detailed Regulation for Enforcement of Child Welfare Law.
- May 10, 1948 From: Director, Relief Bureau, RRB. To: Governors of Hokkaido and six
(Repatriation Relief Board, prefectures in Tohoku District
Hatsu-Butsu No.501)
Subject: Special Distribution of powder bean paste to Repatriates from Saghalien who have no Relatives.
- May 10, 1948 From: Director, Medical Bureau To: All Prefectural Governors
(I-Hatsu, No.184)
Subject: Distribution of Medicine for Relief in Disaster.
- May 10, 1948 From: Director, Prevention Bureau To: All Prefectural Governors
(Yo-Hatsu, No.569)
Subject: State Subsidy for expenses for extension and Improvement of Waterworks and Sewerage for 1948
- 49.
- May 10, 1948 From: Director, Prevention Bureau To: All Prefectural Governors
(Yo-Hatsu, No.570)
Subject: Request for Cooperation for Invitation of Students for the 9th Term of Doin Gakuen.
- May 10, 1948 From: Director, Prevention Bureau To: All Prefectural Governors
(Yo-Hatsu, No.580)
Subject: Communicable Disease Prevention Officials to be Assigned for Emergency Prevention of Communicable Diseases.
- May 10, 1948 From: Director, Insurance Bureau To: Chief, Insurance Section, each prefecture
(Ho-Hatsu, No.688) each branch office of Social Insurance
Subject: Distribution of Disbursement Budget of Pension Account, Welfare Insurance Special Accounts for 1948 - 49.
- May 10, 1948 From: Director, Insurance Bureau To: All Prefectural Governors
(Ho-Hatsu, No.695)
Subject: Notification of Disbursement Program of General Accounts under Jurisdiction of Welfare Ministry for 1948 - 49.
- May 10, 1948 From: Directors, Relief and Social Bureaus To: All Prefectural Governors
(Repatriation Relief Board,
Hatsu-Shi, No.498)
Subject: Relief of Repatriates According to Re-opening of Repatriation from U.S.S.R. Area.
- May 10, 1948 From: Directors, Social Bureau To: Governor of Kanagawa Prefecture
(Sha-Hatsu, No.721)
Subject: Alteration of Donation of Social Work Association Kanagawa Prefecture, Foundation Juridical Person.
- May 10, 1948 From: Directors, Social Bureau To: All Prefectural Governors
(Sha-Otsu-Hatsu, No.73)
Subject: Free Distribution of Food to Needy Foreigners Living in Japan.
- May 10, 1948 From: Directors, Social Bureau To: All Prefectural Governors

(Sha-Otsu-Hatsu, No.75)

Subject: Survey of Protection Situation under Daily Life Security Law.

May 10, 1948 From: Directors, Social Bureau To: All Prefectural Governors

(Sha-Otsu-Hatsu, No.76)

Subject: State Subsidy for Expenses necessary for Equipments of the Institution for Accommodation of Repatriates and Needy Persons, and of Protection Institution under Daily Life Security Law for 1948 - 49.

May 10, 1948 From: Directors, Social Bureau To: All Prefectural Governors

(Sha-Otsu-Hatsu, No.77)

Subject: Application of Living Assistance under Daily Life Security Law to Patients Accommodated in national hospitals and Sanatoria.

May 10, 1948 From: Directors, Social Bureau To: All Prefectural Governors

(Sha-Otsu-Hatsu, No.78)

Subject: Allocation of Cement to be used for Building of the Social Work Institution for the 1st Quarter, 1948 - 49.

May 11, 1948 From: Directors, Social Bureau To: Governor of Fukushima Prefecture

(Sha-Hatsu, No.723)

Subject: Alteration of the Creation Program of the Protection Institution under Daily Life Security Law.

May 11, 1948 From: Directors, Social Bureau To: Governor of Kagoshima Prefecture

(Sha-Hatsu, No.724)

Subject: Alteration of the Creation Program of the Protection Institution under Daily Life Security Law.

May 11, 1948 From: Directors, Social Bureau To: Governor of Tokushima Prefecture

(Sha-Hatsu, No.731)

Subject: Permission for the Protection Institution under the Provision of Article 7 of Daily Life Security Law.

May 11, 1948 From: Directors, Social Bureau To: Governor of Saitama Prefecture

(Sha-Hatsu, No.733)

Subject: Theft of Relief Commodities from LARA.

May 11, 1948 From: Director, Social Bureau To: Governors of Hokkaido and

(Sha-Hatsu, No.734)

other Four Prefectures.

Subject: Allocation of the India Rubber Hose for the Second Quarter.

May 11, 1948 From: Director, Relief Bureau, RRB.

(Repatriation Relief Board

Hatsu-Gyo, No.504)

To: Governors of Aomori, Tokyo, Aichi,

Osaka, Okayama, Kagawa and Kyoto

Prefectures.

Subject: Relief for Repatriates at Principal Stations.

May 11, 1948 From: Director, Relief Bureau, RRB. To: All Prefectural Governors

(Repatriation Relief Board,

Hatsu-Gyo, No.507)

Subject: Amendment of Form of the Certificate of Repatriate and Dealing with its re-insurance.

May 11, 1948 From: Director, Relief Bureau, RRB. To: Governors of Six Prefectures

(Repatriation Relief Board,

Hatsu-Shi, No.509)

in Tohoku District

Subject: Measures for School Education of Children in Accordance with Increase of Repatriates who have been Repatriated from Saghalien and have no Relatives.

May 11, 1948 From: Director, Relief Bureau, RRB. To: Governors of Yamaguchi Prefecture

(Hatsu-Shi, No.512)

Subject: Strengthening of Operation of Business for Loaning of Rehabilitation Funds.

May 11, 1948 From: Director, Relief Bureau, RRB. To: All Prefectural Governors
(Ji-Hatsu, No.255)
Subject: State Subsidy for the Expenses for making out Maternal and Child Handbook for 1948-49.

May 11, 1948 From: Director, Medical Bureau To: All Prefectural Governors
(I-Hatsu, No.192)
Subject: Determination of Distribution Quantity of Insect Control (30 times Emulsion of Pyrethrum).

May 11, 1948 From: Director, Demobilization Bureau To: Chief Service Section, each Prefecture
(Ichi-Fuku, No.2055)
Subject: Coordination of Business Concerning Postal Deposit.

May 11, 1948 From: Director, Insurance Bureau To: All Prefectural Governors
(Ho-Hatsu, No.698)
Subject: Alteration of Commission of Members on the Side of Persons in charge of Medical Treatment among Members of the Social Insurance Relations Committee.

May 11, 1948 From: Chief, Branch Office of To: Chief, Insurance Section, each Prefecture
(Ho-Hatsu, No.700) Social Insurance
Subject: Distribution of Estimated Disbursement Animal Expenditure of Health Account, Welfare Insurance Special Accounts for 1948 - 49.

May 12, 1948 From: Director, Social Bureau To: Governor of Hokkaido Prefecture
(Sha-Hatsu, No.736)
Subject: Reserving of Disaster Relief Fund.

May 12, 1948 From: Director, Social Bureau To: Governor of Okayama Prefecture
(Sha-Hatsu, No.737)
Subject: Consultation Concerning Permission of a Protection Institution under Daily Life Security Law.

May 12, 1948 From: Director, Relief Board Bureau, RRB. To: Governor of Tokyo Metropolis
(Repatriation Relief Board
Hatsu-Gyo, No.518)
Subject: Forwarding a List of Koreans whose Repatriation has been Approved by GHQ, SCAP.

May 12, 1948 From: Director, Relief Board Bureau, RRB To: Governor of Kyoto Prefecture
(Repatriation Relief Board,
Hatsu-Gyo, No.521)
Subject: Forwarding a list of Koreans whose Repatriation has been Approved by GHQ, SCAP.

May 13, 1948 From: Director, Prevention Bureau To: All Prefectural Governors
(Yo-Hatsu, No.596)
Subject: Administration of Inoculation for Tuberculosis for 1948 - 49.

May 13, 1948 From: Director, Children's Bureau To: All Prefectural Governors
(Ji-Hatsu, No.261)
Subject: Allocation of Special Washing Chemical for Child Welfare Agencies.

May 13, 1948 From: Director, Children's Bureau To: All Prefectural Governors
(Ji-Hatsu, No.262)
Subject: Distribution of Clothing for Child Welfare Agencies.

May 13, 1948 From: Director, Children's Bureau To: Governor of Yamaguchi Prefecture
(Ji-Hatsu, No.265)
Subject: Child Welfare Official of your Prefecture Consulted by an Official Letter, Ji No.66.

May 13, 1948 From: Director, Children's Bureau To: Governor of Nara Prefecture
(Ji-Hatsu, No.266)

Subject: Approval for Establishment of the Child Welfare Station.

- May 14, 1948 From: Director, Children's Bureau To: Governors of Kyoto, Tokyo, Kanagawa, Osaka, Hyogo, and Toyama Prefectures.
(Ji-Hatsu, No.268)
Subject: Distribution of Alpha Powder for Infants.
- May 14, 1948 From: Chief, Accounts Section To: All Directors
(Kai-Hatsu, No.355)
Subject: Custody of National Property.
- May 14, 1948 From: Director, Relief Bureau, RRB. To: All Prefectural Governors
(Repatriation Relief Board,
Hatsu-Shi, No.529)
Subject: Railroad freight charge, etc. of exhibits for the Rehabilitation Industry Exhibition for Repatriates, etc.
- May 14, 1948 From: Director, Relief Bureau, RRB To: Governors of Hokkaido, and other
(Repatriation Relief Board, 37 Prefectures concerned
Hatsu-Shi, No.530)
Subject: Forwarding of List of Koreans whose Repatriation has been approved by GHQ, SCAP.
- May 14, 1948 From: Director, Insurance Bureau To: Chief, Insurance Section, each Prefecture
(Ho-Hatsu, No.735)
Subject: Disbursement Program of Annual Expenditure, Seamen's Insurance, Special Accounts for 1948 - 49.
- May 15, 1948 From: Director, Insurance Bureau To: Governors of all Prefectures
(Ho-Hatsu, No.746)
Subject: Commission of Adult of Business of the Health Insurance Association.
- May 15, 1948 From: Director, Children's Bureau To: Chief, Civil Welfare Division or Education
(Ji-Hatsu, No.270) and Civil Welfare Division, each Prefecture
Subject: Standards of base amounts of State Subsidy for Expenses necessary for Enforcement, etc. of Child Welfare Law for 1948 - 49.
- May 15, 1948 From: Director, Children's Bureau To: All Prefectural Governors
(Ji-Hatsu, No.274)
Subject: Forwarding of a List of Figures about the Nation-wide Simultaneous Investigation of Orphans.
- May 15, 1948 From: Director, Relief Bureau, RRB. To: Governors of Kyoto and other
(Repatriation Relief Board, 22 Prefectures Concerned
Hatsu-Gyo, No.539)
Subject: Forwarding of a List of Koreans whose Repatriation has been Approved by GHQ, SCAP.
- May 15, 1948 From: Director, Medical Bureau To: All Prefectural Governors
(I-Hatsu, No.190)
Subject: Request of Forwarding of Reference Date for Amendment of Pharmacopoeia Japonica.
- May 15, 1948 From: Director, Social Bureau To: Governor, of Oita Prefecture
(Sha-Hatsu, No.740)
Subject: Alteration of the Plan for Equipments of the Institution for Accommodation of Repatriates and Needy Persons for 1947-48.
- May 15, 1948 From: Director, Social Bureau To: Governor of Fukuoka Prefecture
(Sha-Hatsu, No.741)
Subject: Distribution of Relief Commodities from LARA.

SECTION II
WELFARE DIVISION

Community Chest - Japanese Red Cross Campaign

Because of the difficulties encountered in selecting the most suitable and effective campaign dates this Fall, without a confliction or overlapping of the Community Chest and Red Cross Fund Campaigns, it has been agreed that a "joint" campaign will be held in 1948 with the month of October tentatively set as the campaign month.

The terms of the agreement covering the Community Chest - Red Cross Campaign (1948) are currently being drawn up and will be published in a subsequent issue of the Public Health and Welfare Weekly Bulletin.

Policy for Social Works Projects Entering Japan

Entrance into Japan of certain social works projects designed to demonstrate recognized theories of modern social service practices has been approved in a new plan announced by General Headquarters, Supreme Commander for the Allied Powers.

The plan is in accord with economic rehabilitation developments currently being experienced in Japan and all projects which are established as a result of this plan must be social service in nature. Supervised by qualified welfare personnel and operated under democratic principles, these projects will be of special benefit to Japanese welfare workers who appear ready to receive and accept democratic concepts of welfare administration. Ample opportunity will be afforded Japanese welfare workers to be integrated into these project staffs so that they can learn by doing and by being associated with well-trained specialists.

The new plan will allow recognized welfare organizations and individuals outside Japan to submit complete plans of their projects to SCAP for review in order that their suitability and necessity to the Occupation may be determined. This plan must assure SCAP that the project and its personnel will not be dependent upon the Occupation, the Japanese Government or the Japanese economy for logistic support as it relates to food, clothing and shelter, and that all of these needs will be shipped to Japan from outside sources on space available revenue basis.

SCAP must be further assured that no projects will engage in general relief services which require importing relief supplies for general relief distribution.

When approval of the project is given by SCAP, welfare workers will be permitted to enter Japan for the purpose of completing details incident to the opening of the project. These welfare workers will be required to provide their own transportation to Japan and they will reside in Japanese operated commercial hotels.

After completing their survey, these workers will be required to return to the U.S. so that they may orient their people in the United States of what is needed to successfully carry on the contemplated project in Japan.

Mennonite - Community Service Center

Permission has been granted the Mennonite Central Committee, Akron, Pa., to establish a Community Service Center in Japan. The exact location will depend upon further survey after arrival of the Mennonite welfare group in Japan. At present two possible locations are being considered, Tokyo and Osaka.

The Community Service Center will be established on the principal of personal and community relationships.

The Mennonites will furnish the necessary personnel and resources to establish sewing rooms, shoe repair shops, kindergarten and study room facilities for children, boy's and girl's group activities, craft activities, etc.

In all of these activities the Mennonite is prepared to furnish equipment and materials not available within the Japanese economy together with a wooden barracks to house their project and personnel.

Public Assistance - Correction in March Figures

The Ministry of Welfare has submitted the following corrections for Hyogo Prefecture. Totals in the public assistance report in Public Health and Welfare Weekly Bulletin #71, dated 3-9 May, are effected.

Persons in institutions (Hyogo)	7,541
Persons in institutions (National total)	138,195
National total of all persons assisted	2,215,226

The Ministry of Welfare has reported that as of 27 May they have not received April statistical reports from the following prefectures: Miyagi, Ibaraki, Osaka, Nara, Wakayama, Shimane and Nagasaki.

International Conference on Social Work

The International Conference on Social Work was held in Atlantic City and New York City from 16 to 28 April. (See Weekly Bulletin #66 for period 29 March - 4 April.) Plans for a 1940 conference were cancelled because of the war in Europe and no conference was held in 1944. The fourth Conference held this year was, therefore, the first meeting held since 1936 and represented the 20th anniversary of the founding of the Conference. Representatives of Japan attended the three conferences previously held. Prior to the 1936 conference the Japan Social Work Association was designated to represent Japan, and did so at the third conference held in London.

A member of the Welfare Division, Public Health and Welfare Section, SCAP, attended the 1948 conference as an observer for SCAP, to secure information to be made available to Japanese officials responsible for administering public and private welfare programs in Japan.

The National Conference of Social Work (U.S.) held their annual meeting in Atlantic City, from 17 - 23 April. The International Conference held several joint meetings with the National Conference.

A series of round table meetings were held to permit discussion of problems common to the various countries represented. Round table discussions were held on the following subjects:

- Maternal and personal aid and rehabilitation.
- The respective roles of mass and individual measures.
- Housing programs.
- The respective roles of Governmental and voluntary agencies.
- Services for relocated individuals and families.
- Special programs for rural and undeveloped areas.

Nations represented at the conference included: Argentina, Australia, Austria, Belgium, Brazil, Canada, Chile, China, Czechoslovakia, Denmark, Ecuador, Egypt, Finland, France, Great Britain, Greece, Haiti, Hungary, India, Iran, Italy, Japan, Mexico, Netherlands, Norway, Palestine, Peru, Philippines, Poland, Sweden, Switzerland, Turkey, Union of South Africa, United States, Venezuela, Yugoslavia.

The final meeting of the Conference was held at the Headquarters of the United Nations, Lake Success, New York, in cooperation with the Social Activities Division, Department of Social Affairs, United Nations Secretariat. Sessions were held under the chairmanship of Sir Rafael Cilento of Australia, Director of Social Activities Division.

In addition to the meetings in Atlantic City the International Conference held sessions in New York on 24 and 25 April. A new constitution for International Conference was adopted. The following subjects were presented and discussed:

- International Social Welfare Activities and the place of the International Conference of Social Work.
- Training and Exchange of Personnel

Various committees had been established to consider specific subjects, and reports were submitted on the following matters; Intergovernmental Welfare Programs; International Voluntary Agency Programs; Role of Social Work in Meeting Post-war needs; Training and Exchange of Personnel.

The International Conference elected new officers for the next four-year period. Mr. George E. Haynes, General Secretary, National Council of Social Service London, England, became the new president, succeeding Dr. Rene Sand, Professor of Social Medicine, University of Brussels, Brussels, Belgium. The next meeting of the Conference will be held in 1952, the place to be determined later by the Conference Executive Committee.

SECTION III
VETERINARY AFFAIRS DIVISION

Animal Disease Report

The following outbreak of diseases was reported by the Ministry of Agriculture and Forestry for the period 22-28 May:

Prefecture	Disease	No. of Cases
Chiba	Swine erysipelas	27
Iwate	" "	11
Iwate	Swine plague	18
Kanagawa	" "	1
Kanagawa	Swine erysipelas	2
Saitama	Swine cholera	4

Note: - Control measures have been instituted. Serum and vaccines were administered.

SECTION IV
NURSING AFFAIRS DIVISION

Midwifery Lectures

The fifth and sixth in the series of midwifery lectures were given in Nagoya and Osaka. These are 10 day courses sponsored by the Ministry of Welfare and the Midwifery Section of the National Nurses Association. There were 219 present at Osaka and 159 at Nagoya.

Personnel

Miss Ann Miller, a newly arrived Public Health Nurse, is scheduled for subsequent assignment to the Tohoku Military Government Region and Miss Jeanette Pitcherella is scheduled for subsequent assignment to the Chugoku Military Government Region.

SECTION V
SUPPLY DIVISION

Distribution

Dusters and sprayers for insect and rodent control were shipped to 13 prefectures under Ministry of Welfare supervision in the period 16 - 22 May. A total of 1,690 were distributed as follows:

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsack Sprayer</u>	<u>Semiautomatic Sprayer</u>	<u>Hand Sprayer</u>
Aomori	0	0	108	0
Miyazaki	240	0	0	0
Niigata	80	0	0	0
Tokyo	200	0	0	0
Chiba	0	0	12	0
Yamanashi	0	0	0	50
Aichi	240	0	0	0

Kagawa	0	120	0	0
Ehime	0	0	40	0
Fukuoka	0	0	0	200
Total	760	270	260	400

In the period 16 - 22 May, a total of 652 drums of pyrethrum emulsion, each drum containing 50 gallons, were shipped to 13 prefectures. The shipments were directed by the Ministry of Welfare. The emulsion is to be diluted 30 times, making the equivalent of 978,000 gallons of finished insecticide distributed in this period.

DISTRIBUTION PYRETHRUM EMULSION 30X, 16 - 22 MAY

<u>Prefecture</u>	<u>Quantity 50 gallon drums</u>
Akita	40
Tochigi	45
Tokyo	190

Total	2,149,270	996,070	2,053,365	3,898,420

Although supplies of sulfathiazole and penicillin have not yet reached a level where control over distribution is no longer necessary, there is no shortage of these two medicines. It is doubtful whether hospitals, doctors, and other users are fully aware that they may purchase these in increasing quantities, or whether proper allocation is made of available supplies at the prefectural level. There are ample stocks available at the manufacturers to allow for a vastly increased distribution over that which reports indicate is being made.

Production

A total of 5,171 pieces of the various types of DDT dusting and spraying equipment for mosquito and fly control programs was produced during the period 16 - 22 May.

A total of 127,240 lbs. of 10% DDT dust, 15,848 gallons of 5% DDT residual effect spray and 13,500 vials of typhus vaccine were distributed during the period 16 - 22 May. At the same time, a total of 44,200 lbs. of 10% DDT dust, 9,800 gallons of 5% DDT residual effect spray, and 6,700 vials of typhus vaccine were received from the manufacturing plants. Total stocks on hand in wholesale houses of the Ministry of Welfare as of 22 May include

3,432,748 lbs. of 10% DDT dust, 317,827 gallons of 5% DDT residual effect spray and 122,979 vials of typhus vaccine.

Distribution of DDT products and typhus vaccine during April totaled 861,925 lbs. of 10% DDT dust, 126,719 gallons of 5% DDT residual effect spray, and 2,394 vials of typhus vaccine. A detailed breakdown by prefectures and governmental departments is as follows:

DISTRIBUTION OF DDT PRODUCTS AND TYPHUS VACCINE - APRIL 1948

Production quota of triple typhoid vaccine for the contemplated 1948 immunization program has been completed. Plans include inoculations for 67,158,25# persons, using 95,144 liters of vaccine.

Production of wire screening materials, copper and brass base, 16 mesh per square inch, to implement scheduled mosquito and fly control programs in 1948, has been initiated. Ministry of Welfare has received an allocation of 70 tons of the screening material to be used in equipping public sanitary facilities, slaughter houses and dairies, national and private hospitals, health centers, welfare institutions, etc. Further announcements will be made shortly in future issues of this bulletin furnishing detailed breakdown of the allocation.

SECTION VI NARCOTIC CONTROL DIVISION

Loss of narcotics through theft or burglary has become a distinct hazard to drying up the source of narcotics in illegal traffic. Practically all reported losses could have been prevented with proper precautionary measures.

The hospitals were burglarized resulting in the loss of comparatively large quantities of narcotics. While the Ministry of Welfare is endeavoring to have all hospitals procure combination-lock heavy steel safes for the proper storage of narcotics, some hospitals complain they are unable to take such action. The Ministry of Welfare has been advised to inform narcotic agents in all prefectures to require any hospital that has been burglarized to procure an adequate safe before they are permitted to restock narcotics.

Information relative to the above-mentioned two hospitals indicates the night watchmen were not alert. In addition it appears that keys to the storage places for narcotics were not properly safeguarded to prevent impressions being made or possibly to prevent the burglar from using the keys left in a desk-drawer of the pharmacy. Investigation is being made to determine if administrative action should be taken against the staffs of the hospitals.

That information received, regarding illegal possession or dealing in narcotics, must receive prompt action was illustrated in two recent cases. In one the narcotic agents waited three days during which time the trafficker, advised by his father in a neighboring prefecture, destroyed the narcotics. In the other case, on the same day on which the information was received, the agents made the investigation, seized seven grams of morphine, arrested one defendant, and caused the arrest of a person in another prefecture who had illegally obtained the narcotics at the time of surrender in 1945.

SECTION VII PREVENTIVE MEDICINE DIVISION

Venereal Disease Control

Attention is invited to Disease Prevention Bureau, Ministry of Welfare Directive No.622 (Yohatsu No.622) issued 18 May 1948.

Paragraph 1 of this directive relieves the prefectures of the obligation and responsibility of conducting weekly or routine, periodic examination of prostitutes by revising paragraph 2 of Disease Prevention Bureau, Ministry of Health and Welfare (Old Title) Directive No.15 (Bohatsu No.15) dated 22 November 1945, "The Regulation for Medical Examination of Those Whose Occupation Involves Liability of Spreading Venereal Disease" to read: "The said medical examinations shall be made whenever a prefectural governor deems it necessary".

This means that the weekly examinations of prostitutes can now be discontinued. The personnel and facilities engaged in this work can now be redirected to the care of the general public. The prostitutes will no longer be given special consideration as a group, but will be treated like any other member of the community. They may use the services of the Health Centers as individual patients.

With reference to health certificates of prostitutes, paragraph 2 of Yohatsu No.622 states "..... health certificates, cards, badges or any other form of identification showing that a person is supposedly free from venereal disease shall not be issued by individuals or associations nor shall they be carried by any individual."

Japanese B. Encephalitis

Japanese B Encephalitis is a seasonal disease, cases occurring in Japan from July to September. Caused by a virus, it is considered to be transmitted by mosquitoes. Areas where Culex pipiens pallens. C. tritaeniorhynchus,

Aedes togoi and A. albopictus are found to breed should receive special attention in control operations. Measures taken to control the above mosquitoes could readily be made a part of the general anti-malaria activities.

If all physicians as well as Health Officers are alert in recognizing early suspected cases, placing them under mosquito nets, and reporting to the proper authorities for immediate insect control action in the vicinity, the spread of the disease should be greatly reduced. In this connection it is well to keep in mind the cardinal symptoms of high fever, headache, nausea, and "dazed" consciousness, followed by neurological symptoms.

During the 1924 epidemic of Japanese B Encephalitis the disease was prevalent in the Chugoku and Shikoku regions, the area of Toyama, Nagano and Niigata prefectures and in Aomori and Akita prefectures. It reached its highest incidence in the prefectures of Kagawa, Okayama and Hyogo.

Epidemics occurred in 1935 with highest incidence in Tokyo and Kanagawa, and a smaller one in 1937 centering in Okayama.

Due to an observed tendency toward recurrence in cycles, and epidemic had been anticipated during the past two years. The incidence of suspected cases in 1946 was about 176 cases with 79 deaths, and in 1947 was 252 suspected cases with 131 deaths. Most of these cases occurred in Okayama Prefecture, where a study on vaccination has been carried on for the past two years.

The efficacy of general vaccination has not yet been sufficiently established for such measures to be taken, nor is vaccine available for general use. Anti-body response is slow to develop; vaccination of contacts is therefore of no immediate value. Control measures will of necessity need to be of an environmental nature.

Insect and Rodent Control

The cleaning of sewers, ditches and drains constitutes the most important phase of insect control - and is the most inexpensive one.

Drainage systems that carry storm water from the streets and waste water from houses become silted and clogged leaving pools of stagnant water that breed great numbers of mosquitoes. The organic matter contained in this type of water affords food for mosquito larvae, among which may be found the most common known transmitter of Japanese B Encephalitis.

As these drains are totally or partially covered, satisfactory inspection and cleaning cannot be made unless the drains are uncovered completely and the mud and debris removed throughout the entire system. Usually one thorough cleaning will last through the mosquito breeding season.

SECTION VIII MEDICAL SERVICES DIVISION

Civilian Hospital Strength Report for the week ending 7 May shows a total of 3,501 hospitals with bed capacity of 210,344, of which 118,728 were occupied. During this period, 330,030 out-patient treatments were rendered.

SECTION IX SOCIAL SECURITY DIVISION

National Health Insurance

In accordance with the program of transferring matters of substantive rights now contained in cabinet orders to statutes as adopted by the Diet, a draft of a revised National Health Insurance Law was cleared without objection by Public Health and Welfare and received Cabinet approval for introduction in the Diet in the course of the present session. Aside from incorporating into law substantive and important procedural provisions heretofore contained in the Enforcement Ordinance, the revisions aim at a consolidation of this all-important program which covered at its height upward of 40,000,000 insured in more than 10,000 associations. Though suffering severe set-backs in the past year or two, it is still reported to cover over 30,000,000 people in about 7,000 active associations.

While restating the essentially voluntary character of the membership by making it optional with the residents of each city, town, or village to decide by majority vote whether or not they wish to have National Health Insurance in their locality, the revisions, if passed by the Diet, will strengthen the foundation of the system in two ways. Firstly, they add a third to the present two types of insurer (National Health Insurance associations and other corporate bodies, such as agricultural cooperatives, administering National Health Insurance), to wit, local public bodies in the sense of the Local Autonomy Law, that is cities, towns, and villages. In the revised law these local public bodies may elect through their assemblies to operate National Health Insurance as a city, town or village function. Secondly, no matter whether National Health Insurance will be operated by the local public body or by either of the two existing semi-private types of agency, coverage is to include - with minor exceptions - all local residents not protected by other forms of social insurance.

An interesting innovation will be the National Health Insurance Operations Advisory Council, a citizens' advisory body to be created in those cities, towns, and villages administering National Health Insurance on a municipal basis and designed to keep in close touch on the one hand, with the insured and their problems, on the other hand, with the mayor and city, town, or village assembly. A report of its activities and recommendations is to be published annually. The major provisions concerning contributions by, and services to, the insured and arrangements for their provision remain in substance as they are, leaving the insurer of whatever type free to decide the method of financing (it being understood that sufficient funds must be collected from the insured to offer at least medical and, as a rule, also maternity and funeral services), determine the scope of benefits to be provided, and conclude agreements with the purveyors of medical and allied services. The provision of the law giving the prefectural governor the power "in case of necessity" to order the establishment of a National Health Insurance association, will be eliminated.

Reports from the field indicate the interest expressed by several Military Government Teams in obtaining translations of the several social insurance laws. In keeping with this request, an effort will be made to procure enough copies of a new translation of the National Health Insurance Law in its revised form, if and when it is passed by the Diet, for distribution to all Regional and Prefectural Military Government Teams.

SECTION I
GENERAL

Special Training Courses for Model Health Center Personnel

In order to expedite the Health Center training program, arrangements have been made to hold short intensive training courses for key personnel of each of the 12 basic services of a Health Center. These courses will be conducted through the coordinated efforts of Public Health and Welfare Section, SCAP, the Ministry of Welfare, the Institute of Public Health and the Sugunami Model Health Center in Tokyo for each specific group. The first course will be for the benefit of Public Health Nurses and will be conducted from 21 to 30 June. Persons attending this course will be (1) the Chief Nurse of the Prefectural Health Department of each prefecture and (2) the Chief Nurse of the Model Health Center in each prefecture.

It is very important that all of the above personnel attend this course. Military Government Public Health Officers are urged to maintain close liaison with the prefectural Health Officers in order to make certain that these persons will be in attendance. It is also of the utmost importance to see that the personnel selected are the best available and that they will continue to serve in the job for which they are being trained.

The importance of this training cannot be over emphasized as these are the people who are going to be responsible for the proper functioning of particular service in the Model Health Center. They will also be responsible for the training and supervision of similar personnel and services in each Health Center throughout the prefecture.

Notification to the prefectural governors concerning the above mentioned course was dispatched by the Ministry of Welfare on 1 June.

Similar courses for the key personnel of each of the other (11) basic services of the Health Center will be held as soon as Model Health Centers have secured personnel who are capable of receiving the training and who are reasonably certain to continue to serve in the job for which trained. Military Government Health Officers will be notified through this Bulletin concerning these courses.

Training of Public Health Personnel

Seven different refresher training courses for public health personnel are currently being conducted simultaneously at the Institute of Public Health in Tokyo. These courses are for different types of personnel and the duration of each course varies from two to four months. Consequently all courses do not begin and end at the same time. The next classes for the following five courses will begin on the following dates:

<u>Name of Course</u>	<u>No. Students</u>	<u>Date of Next Class</u>
Third P.H. Pharmacists Refresher Course	50	1 July - 31 August
Third P.H. Veterinarians Refresher Course	50	1 July - 31 August
Fifth P.H. Medical Officers Refresher Course	50	12 July - 2 October
Fifth P.H. Sanitarians Refresher Course	50	12 July - 2 October
Fifth P.H. Nurse Refresher Course	50	2 August - 31 November

Information relative to these courses has already been dispatched to the prefectures by the Institute of Public Health. It is important that Military Government Health Officers exercise surveillance to insure that one qualified representative from every prefecture attends each course. Each prefecture must make financial provisions for their representatives according to the instructions issued by the IPH. The amount of funds needed for food is currently 3,200 yen for each month of the course. Transportation expenses and incidental expenses are also to be borne by the prefectures.

Model Health Centers

Recent staff visits made for the purpose of observing and advising on the Health Centers, particularly the Model Health Centers, have proven most encouraging. However, progress on development of Model Health Centers varies considerably. It appears that some prefectures will not have completed the Model Health Center by 1 July, while others will have completed the facilities but not the staff, and others will have completed both. Military Government Health Officers should encourage this project to the utmost. Its importance cannot be overemphasized because the sooner this project is completed the sooner it will be possible to complete the

reorganization of all Health Centers within each prefecture. Health Centers are the basic units of the public health administrative organization and for this reason their reorganization must not be delayed.

Generally speaking the building selected and plans being executed for development of Model Health Centers will result in more adequate facilities than those of the Model Health Center in Tokyo. This is encouraging. However, Military Government Health Officers should be careful to see that prefectures do not invest so heavily in the Model Health Center that nothing will be available for the other Health Centers. The entire program must be considered in the light of adequate facilities for all Health Centers.

Ministerial Instructions

The following is a list of instructions issued by the various Bureaus of the Ministry of Welfare to the prefectural governments for the period 17 - 22 May:

May 17, 1948 From: Director, Public Health Bureau To: All Prefectural Governors
(Ko-Ho-Hatsu No.547)
Subject: Establishment of Model Health Center.

May 17, 1948 From: Director, Social Bureau To: Governor of Tokyo Metropolis
(Sha-Hatsu No.744)
Subject: Directions for permission of establishment of the Karitasu Society, Inc.

May 17, 1948 From: Director, Civil Affairs Bureau, Attorney To: All Prefectural Governors
(Attorney General's Office General's Office; Director, Children Bureau
Civil Affairs A No.1310)
(Ji-Hatsu No.275)
Subject: Description of the birth report to Maternal and Child's Handbook.

May 17, 1948 From: Director, Children Bureau To: Governor of Tokyo Metropolis
(To-Ji No.19)
Subject: A written application for permission of establishment of Japan Child Association, Foundation Juridical Person.

May 17, 1948 From: Director, Children Bureau To: All Prefectural Governors
(Ji-Hatsu, No.277)
Subject: The current repertoire of acrobatic feats or performance to be presented by circus companies.

May 18, 1948 From: Director, Children Bureau To: Director, Civil Welfare Bureau,
(Ji-Hatsu, No.281) Tokyo Metropolis
Subject: Allocation of European paper for the second quarter, 1948 - 49.

May 18, 1948 From: Director, Children Bureau To: Governor of Chiba Pref.
(Ji-Hatsu, No.285)
Subject: Appointment of the principal of a home for juvenile training and education.

May 18, 1948 From: Director, Public Health Bureau To: All Prefectural Governors
(Ko-Ho-Hatsu, No.550)
Subject: Survey of condition of hospital rationing program.

May 19, 1948 From: Director, Relief Bureau, To: Governor of Toyama Pref.
(Repatriation Relief Board Repatriation Relief Bureau
Hatsu-Gyo No.559)
Subject: Parcels to be carried by Koreans to be repatriated.

May 19, 1948 From: Director, Children Bureau To: All Prefectural Governors
(Ji-Hatsu, No.287)
Subject: Distribution of sweets or candies for the nation-wide child welfare week.

May 19, 1948 From: Director, Children Bureau To: Governor of Niigata Pref.
(Ji-Hatsu, No.293)
Subject: Approval for establishment of child welfare station.

May 19, 1948 From: Director, Prevention Bureau To: All Prefectural Governors
(Yo-Hatsu, No.633)
Subject: Survey and research of patients of infectious diarrhea.

May 19, 1948 From: Director, Insurance Bureau; To: All Prefectural Governors; Chief
(Ho-Hatsu, No.773) Chief, Accounts Section of each branch office of social insurance
Subject: Notification of disbursement program of annual expenditure, business account, Welfare Insurance Special Accounts for 1948 - 49.

May 20, 1948 From: Director, Insurance Bureau To: All Prefectural Governors
(Ho-Hatsu, No.778)
Subject: Handling of a written bill of medical fee of Health Insurance.

May 20, 1948 From: Director, Children Bureau To: All Prefectural Governors
(Ji-Otsu-Hatsu, No.21)
Subject: Presentation of reference data concerning foster parents.

May 20, 1948 From: Director, Public Health Bureau To: All Prefectural Governors
(Ko-Ho-Hatsu, No.565)
Subject: Designation of hospital rationing.

May 20, 1948 From: Director, Social Bureau To: Tokyo and other 5 Prefectures
(Hotsu-Sha, No.51)
Subject: Distribution of budget of national subsidy for protection expenses under Daily Life Security Law for 1948 - 49.

May 20, 1948 From: Director, Social Bureau To: Tokyo and other 8 Prefectures
(Hatsu-Sha, No.754)
Subject: Alteration of special allocation of LARA relief materials and clothings.

May 18, 1948 From: Director, Prevention Bureau To: All Prefectural Governors
(Yo-Hatsu, No.622)
Subject: Physical examination and a health certificate of persons being engaged in entertainment.

May 18, 1948 From: Director, Social Bureau To: Governor of Tokyo Metropolis
(Sha-Hatsu, No.745)
Subject: Allocation of electric wire for construction of a social work institution.

May 18, 1948 From: Director, Social Bureau To: Governor of Shimane Pref.
(Sha-Hatsu, No.747)
Subject: Survey of condition of public assistance Daily Life Security Law.

May 18, 1948 From: Director, Social Bureau To: Governor of Fukuoka Pref.
(Sha-Hatsu, No.748)
Subject: Inquiry concerning the standard payment of public assistance to families of in-patients in national hospitals.

May 18, 1948 From: Director, Social Bureau To: Governor of Kumamoto Pref.
(Sha-Hatsu, No.749)
Subject: Limit of compensation for actual costs under Disaster Relief Law.

May 18, 1948 From: Director, Social Bureau To: Ibaraki and other three prefectures
(Sha-Hatsu, No.750)
Subject: Sending of contributed money for a flood disaster.

May 19, 1948 From: Headquarters of Ministry of Welfare To: All Bureau and Division

(Kai-Hatsu, No.463) Workers' Mutual Aid Association Directors Chief
Subject: Amendment of unit price per one point for social insurance medical fee.

May 19, 1948 From: Headquarters of Ministry of Welfare To: All Bureau and Division
(Kai-Hatsu, No.465) Workers' Mutual Aid Association Directors Chief
Subject: Handling of benefits from Mutual Aid Association.

May 19, 1948 From: Director, Medical Bureau To: Chief, Health Division of each prefecture
(I-Hatsu, No.195)
Subject: Amending the weekly report of in-patients to monthly report.

May 19, 1948 From: Director, Medical Bureau To: Governors of Yamaguchi and
(I-Hatsu, No.202) other 9 prefectures
Subject: Control of smuggling of narcotics.

May 20, 1948 From: Director, Social Bureau To: All Prefectural Governors
(Hatsu-Sha, No.755)
Subject: Allocation of important chemical products for the first quarter.

May 20, 1948 From: Director, Social Bureau To: All Prefectural Governors
(Sha-Otsu-Hatsu, No.80)
Subject: Preliminary arrangement of community chest affairs.

May 21, 1948 From: Director, Social Bureau To: Governor of Niigata Pref.
(Sha-Hatsu, No.758)
Subject: Appointment of full time service guidance personnel for social work.

May 21, 1948 From: Director, Social Bureau To: Governor of Saitama Pref.
(Sha-Hatsu, No.759)
Subject: Appointment of full time service guidance personnel for social work.

May 21, 1948 From: Director, Social Bureau To: Governor of Tottori Pref.
(Sha-Hatsu, No.760)
Subject: Appointment of full time service guidance personnel for social work.

May 21, 1948 From: Director, Social Bureau To: Governor of Iwate Pref.
(Sha-Hatsu, No.761)
Subject: Appointment of full time service guidance personnel for social work.

May 21, 1948 From: Director, Social Bureau To: Governor of Gifu Pref.
(Sha-Hatsu, No.762)
Subject: Alteration of establishment program of the protection institution under Daily Life Security Law.

May 21, 1948 From: Director, Medical Bureau To: All Prefectural Governors
(I-Hatsu, No.198)
Subject: Price of DDT Solution.

May 21, 1948 From: Director, Medical Bureau To: Governors of Hokkaido and
(I-Hatsu, No.201) other 34 prefectures
Subject: Special distribution of medicine.

May 21, 1948 From: Director, Medical Bureau To: Governors of Okayama and
(I-Hatsu, No.205) other 6 prefectures
Subject: Inspection by H.I.H. Prince Takamatsu.

May 21, 1948 From: Headquarters of Ministry of Welfare To: All Bureau and Division
(Kai-Hatsu, No.477) Workers' Mutual Aid Association Directors Chief
Subject: A statement of revenue and expenditure and a report.

SECTION IV
VETERINARY AFFAIRS

Animal Diseases

The following outbreak of animal diseases occurred as reported by the Ministry of Agriculture and Forestry for period 29 May to 4 June:

Prefecture	Disease	No. of Cases
Hokkaido	Hog Cholera	2
Shizuoka	Swine Erysipelas	4
Fukushima	Hog Cholera	36
Gumma	Swine Erysipelas	1
Saitama	Swine Erysipelas	1
Chiba	Swine Erysipelas	4
Gifu	Hog Cholera	8
Yamanashi	Swine Erysipelas	1
Tokyo	Hog Cholera	5
Shimane	Black Leg	1
Kagoshima	Swine Erysipelas	1

Note: Serums and vaccines have been sent to the areas involved as a means of controlling the epidemic.

The Veterinary Division of Keio University was inspected and found to be inadequate to successfully train students in the field of veterinary medicine. Recommendations for the temporary closing of this school until satisfactory facilities are made available has been presented to the Council on Veterinary Affairs for action.

SECTION V
SUPPLY DIVISION

Production

A total of 5,031 pieces of the various types of DDT dusting and spraying equipment for mosquito and fly control programs was produced during the period 23 - 29 May.

A total of 241,000 lbs. of 10% DDT dust, 53,750 gallons of 5% DDT residual effect spray and 6,430 vials of typhus vaccine were distributed during the period 23 - 29 May. At the same time, a total of 3,200 lbs. of 10% DDT dust, and 41,450 gallons of 5% DDT residual effect spray were received from the manufacturing plants. Total stocks on hand in wholesale houses of the Ministry of Welfare as of 29 May include 3,174,948 lbs. of 10% DDT dust, 280,177 gallons of 5% DDT residual effect spray, and 122,979 vials of typhus vaccine.

A special allocation of Type III cement, excess to Occupation Forces needs, total 5,000 tons, in addition to the regular quarterly allocations for April, May, June, has been received by Ministry of Welfare and allocated to the various categories, as listed bellow:

<u>Category</u>	<u>Allocation</u>
Public Bath Houses	1,000 tons
Health Centers	550 tons
General Hospitals and Clinics	1,500 tons
Tokyo First National Hospital (Model hospital for Medical Center plan)	45 tons
Social Relief Facilities	530 tons
Child Welfare Institutions	530 tons
Quarantine Stations	65 tons
Acute Infectious Disease Hospitals	250 tons
National Health Insurance Ass'n Clinics	530 tons
Total	5,000 tons

Further detailed breakdown of allocations within the various categories will be included shortly in a future issue of this Bulletin. The allocation tickets are being issued by the Ministry of Welfare at the present time.

Present plans of the Ministry of Welfare call for the distribution during June of 45 tons of wire screening materials to implement scheduled mosquito and fly control programs. The balance of 25 tons of the total allocation of 70 tons will be distributed during July. Ministry of Welfare is issuing the allocation tickets at the present time. Detailed breakdown of the allocation plan will be included in a future issue of this Bulletin.

Distribution

Dusters and sprayers for insect and rodent control were shipped to 16 prefectures under Ministry of Welfare supervision in the period 23 - 29 May. A total of 2,782 were distributed as follows:

Prefecture	DDT Duster	Knapsack Sprayer	Semi-automatic Sprayer	Hand Sprayer
Iwate	0	0	0	150
Yamagata	48	0	0	0
Tokyo	180	109	0	100
Tochigi	312	0	0	0
Saitama	216	6	0	0
Chiba	0	35	0	0
Gumma	0	56	0	0
Kanagawa	0	180	0	0
Nagano	0	6	0	0
Yamanashi	0	50	50	0
Osaka	0	110	0	0
Okayama	0	0	80	150
Tottori	0	102	0	0
Yamaguchi	0	100	0	0
Nagasaki	200	0	100	150
Fukuoka	192	0	0	100
Total	1,148	754	230	650

The Ministry of Welfare directed that 926 drums, 50 gallons each, of pyrethrum emulsion be shipped to 15 prefectures in the period 24 - 31 May. This is equivalent to 1,389,000 gallons of finished insecticide. Shipments are as specified below:

DISTRIBUTION OF PYRETHRUM EMULSION, 30X, 24-31 MAY

Prefecture	Quantity 50-gal Drums
Gumma	64
Saitama	60
Chiba	26
Tokyo	95
Kanagawa	45
Toyama	60
Aichi	45
Shiga	26
Osaka	280
Hyogo	34
Tottori	31
Yamaguchi	48
Ehime	50
Fukuoka	30
Miyazaki	32

SECTION VI
NARCOTIC CONTROL DIVISION

Narcotic Violations

A Japanese female physician, an addict, who illegally obtained narcotic order forms and forged the names of nine other physicians thereon, was sentenced in the Tokyo Court to two years penal servitude.

Narcotic Agent Training School

Narcotic agents attending the Narcotic Agents Training School to be held in Tokyo from 15 to 22 June will receive instruction from SCAP's Narcotic Control Officers and from officials of the Narcotic Section, Ministry of Welfare, and Criminal Affairs Bureau, Attorney General's Office. The agents will also receive practical instruction in arrest from the Tokyo Police Department, and will visit Tokyo Courts and narcotic installations in Tokyo.

SECTION VII WELFARE DIVISION

Community Chest - Japanese Red Cross Campaign

Several conferences have been held regarding the advisability of the Community Chest and the Japanese Red Cross conducting the "joint campaign" this Fall, reference Public Health and Welfare Weekly Bulletin No.74 (for the period 24 - 30 May).

A conference was held on 1 June to reach an agreement between the officials of the Japanese Red Cross and the Community Chest in conducting a "joint campaign" and it was agreed that for the fiscal year 1948-49 the two organizations would conduct such a campaign, in harmony and cooperation, with the intrinsic characteristics of the organizations mutually respected. It was further agreed that the Japanese Red Cross reserves the right of conducting a separate campaign after this year.

The outline of the "joint campaign" (for the Fall of 1948 only), as agreed upon, is given below:

"1. Principle.

(1) In principle, the Community Chest and the Japanese Red Cross fund raising should be conducted separately. However, for the year 1948 only, a joint fund raising will be undertaken in consideration of the pressing time element in preparations, adequate timing of the campaign date, etc. (It is understood that from the year 1949 onwards this agreement will not be binding.)

(2) In undertaking the campaign, which is to be conducted under a special circumstance, each will understand and respect the special characteristics of the other.

(3) In the advertisement of the campaign, the idea underlying the Community Chest and spirit of the Red Cross will be propagated side by side, in mutual respect of each other on the part of the Community Chest Committee and the Japanese Red Cross Society.

(4) The general public will be appealed to, to understand the purposes of the campaign, and to willingly contribute to the Community Chest and to the Japanese Red Cross.

2. The campaign for this year will be called:

Joint Fund Drive for the Community Chest and the Red Cross Operation.

3. The campaign date will be from 1 October 1948 to 31 October 1948 (one Month).

4. Organization.

Local Community Chest Committees as well as the Chapters of the Japanese Red Cross Society will establish separate fund raising secretariats, and these secretariats will closely cooperate with each other through the form of a joint fund raising committee or a liaison conference, etc., depending on local circumstances.

5. Deciding the goal.

Amount to be raised for the Community Chest and for the Japanese Red Cross Society will respectively be carefully assessed, and to these will be added the expense necessary for the campaign management. The total of these three will be considered as the goal of the campaign. The total and the amount to be raised for each party will be indicated to the people.

As an example, if the amount to be raised is: for the Community Chest 7,000,000 yen, for Red Cross 3,000,000 yen and for management 1,000,000 yen, the total 11,000,000 yen will be the goal.

6. Campaign Method.

(1) Publicizing the goal.

When a goal is decided the basis of calculation of the goal will be clearly indicated and publicized so that the people will trust in the cause and support the campaign.

(2) While the Community Chest and the Red Cross will closely cooperate with each other, the special characteristics of each will be mutually respected as it relates to the conduct of their normal routine business and activities.

7. Publicity and collection.

For publicity purposes the name Community Chest and Red Cross as well as the purposes of both will appear on the same poster in so far as possible, while separate publicity is not forbidden covering routine activities.

(1) The token of contribution will be a red feather.

(2) Red Cross buttons will be given to those persons whose contributions to the Red Cross amount to its membership fee. (See paragraph 9 below).

(3) On the collection boxes already prepared by the Community Chest, the emblem of Red Cross will be added by the side of the mark for Community Chest. When Red Cross boxes are used, they will also carry Community Chest marks.

(4) Immunity certificates and the receipt will be in the name of both parties.

8. Method of distribution of the fund raised.

In the first place, the management expense will be subtracted from the total amount collected. The remainder will be divided for the Community Chest and the Red Cross through the fund raising secretariats according to the ratio of the respective goals.

In the example shown above, let us assume a total of 12,000,000 yen was raised. Subtracting management expense, the remainder will be:

$$12,000,000 \text{ yen} - 1,000,000 \text{ yen} = 11,000,000 \text{ yen}$$

Pro rata division of this amount will be respectively:

$$\text{C.C. } 11,000,000 \text{ yen} \times 7/10 = 7,700,000 \text{ yen}$$

$$\text{R.C. } 11,000,000 \text{ yen} \times 3/10 = 3,300,000 \text{ yen}$$

The same pro rata division will apply in all cases, when the amount collected goes over the goal or when it falls short of the goal.

9. Treatment of the donors for membership in the Red Cross.

All the donors will be considered as having understood both the idea underlying the Community Chest and the spirit of the Red Cross and have made donations in sympathy of and to support these objectives. Accordingly all donors will become supporting members of the Japanese Red Cross Society.

The persons donating an amount which is equal to or is over the regular and the special Red Cross membership fees after the pro rata division is computed will be considered as such members.

Using the same ratio as in the above stated example, that is 3/10 for Red Cross, we get the following two equations:

$$100 \text{ yen} \times 3/10 = 30 \text{ yen}$$

$$1,670 \text{ yen} \times 3/10 = 501 \text{ yen}$$

The persons donating 100 yen will be regular Red Cross members; and persons donating 1,670 yen will be special Red Cross members.

10. Collection fee (Commission) or returning of the fund to the Locality where such a fund was collected is strictly forbidden. The allocation of the fund for the participating members of the present campaign, namely the beneficiaries, in the cities, towns and villages does not fall under this rule.

11. Expenses.

(1) The campaign expenses in the center (for the joint efforts) will be borne by the two parties at the ratio of the total goals for the entire country for the Community Chest and the Red Cross respectively.

(2) Local Expenses.

a. In the same manner as in the above stated example the management expense amounting to 1,000,000 yen will be borne by the two parties as follows:

$$\text{C.C. } 1,000,000 \text{ yen} \times 7/10 = 700,000 \text{ yen}$$

$$\text{R.C. } 1,000,000 \text{ yen} \times 3/10 = 300,000 \text{ yen}$$

b. While the expenses will be borne pro rata by the two parties as shown above for the Joint Expenses, independent expenditure for undertakings carried out separately, each will pay his own.

12. The details of the present agreement will be worked out by the fund raising secretariats through the Joint Committee or the Liaison Conference, etc.”

Japanese Red Cross (Volunteer Services)

The instructional informational material for the Volunteer Services Program, as previously announced, has been compiled in the form of “Volunteer Service Information Letters” which, in bound form, will constitute the Volunteer Service Handbook.

English translations of the instructional and informational Volunteer Service material have been inclosed, when available, in Public Health and Welfare Weekly Bulletin. Volunteer Services Information Letters, No. I, II and III (English Translations) were inclosed in Public Health and Welfare Weekly Bulletins, No.70 (for period 26 April - 2 May) and No.73 (for period 17 - 23 May), respectively.

Volunteer Services Letters, No. IV, V, VI, and VII, as listed below, are inclosed in this Weekly Bulletin and they complete the current series of letters:

Letter No. IV, dated 13 May 1948, subject: “Selection of Volunteer Chairmen and Members of Volunteer Service Committees” (Inclosure #1).

Letter No. V, dated 17 May 1948, subject: “System of Record Keeping and Reporting” (Inclosure #2).

Letter No. VI, dated 17 May 1948, subject: "System of Awards" (Inclosure #3).

Letter No. VII, dated 17 May 1948, subject: "The Use of Special Volunteer Service Advisory Committees in all Communities". (Inclosure #4).

Laws Regulating Domestic Relations

Questions have arisen concerning present laws in Japan controlling family relations. Legal provisions concerning marriage, adoption, duty to support relatives, divorce, are set forth in the Japan Civil Code. Many of these laws were changed by the Diet by Law No.222 promulgated 22 December 1947.

Present laws in Japan concerning adoption, support and related subjects can be found in the Official Gazette, English Edition, No.520 for Monday, 22 December 1947.

Child Welfare

Allowable Remuneration to Children's Agencies for Care of Children - including Administrative Costs:

The Ministry of Welfare, Children's Bureau, issued Amended Instruction #22, (JI-HATSU-OTSU #22) dated 26 May concerning the above subject.

The maximum per day limits for Kyogo-in are as follows:

Administrative expense	- 34 yen
Care of Children	- 24 yen
Total	58 yen

Maximum limits per day for Homes for Dependent, Neglected, Abused or Feeble-minded Children are:

Administrative expense	- 28 yen
Care of Children	- 24 yen
Total	52 yen

Administrative costs for these institutions have been based on the minimum standards of personnel, etc., which will be required of them.

SECTION VIII SOCIAL SECURITY DIVISION

General

One of the much discussed problems in the operation of social insurance has been the amount of time necessary to pay a medical care claim. The doctors who provide medical care for the insured frequently complain that the delay in the payment of their claims to the insurance systems causes them not only embarrassment in paying their own operating costs but also accounts for considerable financial loss because of changes in the monetary valuations. This delay in the past has been due to the lengthy procedure in the processing of a claim, which was usually submitted through the Medical Association to the prefectural insurance office or the insurance society or association and then back to the Medical Association, which paid the doctor. In some instances this procedure has delayed the payments for as much four to six months.

Under proposed legislation, each medical care claim should be paid within a period of 10 to 20 days. The new provisions will permit the doctor to submit his claim directly to the Insurance Section in the prefectural office for immediate payment with the understanding that the claim will be reviewed by a competent authority, including medical representation, and subject to readjustment of found unjust or not correct.

National Health Insurance

In connection with the description of current reporting requirements begun in Public Health and Welfare Weekly Bulletin #73, for period 17-23 May, there are given below the data reportable by each National Health

Insurance association in connection with its application for national government subsidies. Although this application falls outside the operational reporting, it contains, a number of important checks on the proper functioning of the respective association. Also it is important that this application, which serves as the basis for the allocation of national government subsidies, be filed promptly by all associations and forwarded speedily by the prefectural Insurance Section. Deadlines set for the receipt of said applications vary in the several prefectures. However, all of them were due at the Insurance Bureau, Ministry of Welfare, not later than 31 May. Latest reports from the Insurance Bureau indicate that several prefectures have failed to meet this deadline.

Data required:

1. Date of establishment of the National Health Insurance association requesting the subsidy.
2. Average number of insured, January through December 1947.
3. Share of the total cost of medical services to be borne by the insured requiring such services.
4. Ratio of cases treated to the number of insured.
5. Administrative expenditure as estimated for the current fiscal year. This figure must be broken down into personnel cost (salaries of full and part-time officials of the association), traveling expenses, and other expenditures (supplies, repairs, budget of the association's assembly, and miscellaneous).
6. Estimated cost of nursing personnel's salaries (number and salaries of licensed Public Health Nurses and such other nurses and midwives employed as have not yet been licensed as Public Health Nurses) and the estimated cost of their travel.
7. Estimated cost of maintaining health facilities and preventive services.
8. Estimated cost of (educational) publicity.
9. Estimated revenue from membership contributions during the current fiscal year, total and per member.
10. Estimated cost during the current fiscal year of services and benefits, total and per insured.
11. Number of hospitals (if any) under direct management of the association.

Having received all applications, the prefectural Insurance Section shall prepare the following summary table, giving under each paragraph the number of associations, the number of insured, and the amount of money.

1. Number of applications received.
2. Administrative expenditure: Aside from the total figure, a breakdown is required showing administrative cost in relation to the share of medical care cost borne by the association and according to the ratio of cases treated to the number of insured.
3. Health nurses: In addition to their total number and cost, a breakdown is required according to Public Health Nurses and other nurses not qualifying as such, and according to their salaries. "Standard" annual salary is 29,200 yen.
4. Association doctors: In addition to their total numbers and salaries, separate figures are required for each of the following three categories of doctors.
 - a. Those receiving from the association an annual fixed salary in addition to their medical fee. The amount of their salary is to be shown; "standard" is 24,000 yen per year. (Up to 8,000 yen may be received for each doctor in this category from national subsidies).
 - b. Doctors working on a straight salary basis in hospitals and clinics directly managed by National Health Insurance associations. These are not subsidized.

- c. Doctors concurrently in charge of more than one association. (In respect to such doctors subsidies may be received but the combined subsidy must not exceed 8,000 yen.)

5. Finally, a summary tabulation is required, separate from the statement containing the above four points, to show the number of associations, classed according to the contribution they levy on their insured (in classes ranging from 50 yen or less to 300 yen and over per capita) and the ratio of cases treated to the number of insured (in classes ranging from 25% and less to 80% and over). The number of partially suspended associations must likewise be shown. These are associations which had suspended, by 1 May, all operations except services offered by their health nurses.

SECTION IX
MEMORANDA TO JAPANESE GOVERNMENT

None.

CRAWFORD F. SAMS
Brigadier General, Medical Corps
Chief

6 Inclosures:

1. Selection of Volunteer Chairmen and Members of Volunteer Service Committees. (Letter No. IV)
2. System of Record Keeping and Reporting. (Letter No. V)
3. System of Awards. (Letter No. VI)
4. The Use of Special Volunteer Service Advisory Committees in all Communities. (Letter No. VII)
5. Subsidy for Insects and Rodents Control to Each Prefecture.
6. Report of Cases and Deaths from Communicable and Venereal Diseases in Japan, week ended 29 May 1948.

VOLUNTEER SERVICE INFORMATION LETTER NO. IV

13 May

TO: All Chapters

FROM: Mr. Tadatsugu Shimadzu, President, Japanese Red Cross

SUBJECT: SELECTION OF VOLUNTEER CHAIRMAN and MEMBERS OF VOLUNTEER SERVICE COMMITTEE.

Persons having a great deal of control over the success or failure of the Volunteer Service program will be the Volunteer Service Chairmen and committee members selected to serve at each level of administration - National, Chapter, Branch and Sub-Branch and Sub-Cho. Consequently the selection of this group is of prime importance.

In general there are three qualities which these leaders should have: first, administrative ability; second a capacity for leadership; and third, the ability to plan and direct training courses. The chairman at every level should have these abilities to a stronger degree than the committee members.

Equally important as the above listed abilities and capacities, which can be measured in a rather specific manner, are the qualities which the success of any enterprise involving human relationships depends. Leaders of any group or people must have and practice a true respect for all individuals, regardless of their social, political or economic status. A general love of people must be manifested by leaders if the proper influence is to be exerted.

The leaders of the Volunteer Service program, particularly, must have the ability to express appreciation for the service rendered by the workers and convey to them that their service is both important and necessary. The leaders must also be capable of encouraging workers and of stimulating their interest. A leader's job is that of keeping an entire program running smoothly and in order to do this, the leader must show a constant awareness of all problems and must have a clear understanding of the total operation.

Perhaps one of the most necessary of these intangible qualities desirable in a leader is that ability enabling the individual to get along with others and avoid, at all times, any attitude which might convey to the group that they are working for the leader, as an individual. It is always the leader's responsibility to build an "esprit de corps" among the workers and develop their loyalty to the organization and its objectives.

A good leader must know the members of the group and understand them. In the development of any effective program there must be a mutual respect existing between the individual in charge and the workers - this kind of relationship can exist only when there is a complete understanding on the part of everyone.

The relationship between the leaders and the volunteers must be one of sharing together the opportunity of serving where there is a need. Need is the only thing which justifies any Volunteer Service project and if we are constantly aware of this fact, nothing should arise to hinder the development and growth of a strong Volunteer Service program in the Japanese Red Cross. In fact, because the need is so great and there is so much to be done, the Japanese Red Cross has a great opportunity to organize its resources, to strengthen and expand its services to meet ever increasing needs.

The success of the Volunteer Service program will depend entirely upon the proper selection of Volunteer Service Chairmen - select carefully and wisely - with these leaders well chosen we cannot fail.

VOLUNTEER SERVICE INFORMATION LETTER NO. V

17 May 1948

TO: All Chapters

FROM: Mr. Tadatsugu Shimadzu, President, Japanese Red Cross

SUBJECT: SYSTEM OF RECORD KEEPING AND REPORTING.

I. PURPOSE OF RECORDS and REPORTS

It is important in the development of any organization to establish a method to measure its progress and growth. This factor makes it necessary to maintain a system of records and reports.

Statistical data obtained from records and reports serves to guide and direct these persons responsible for the organization in its growth and provides valuable material for publicity purposes. It is also important to keep staff members, both paid and volunteer, informed of their achievements and regular statistical reports are invaluable for this purpose, particularly in a Volunteer Service program.

Records will be kept primarily for two purposes: first, to inform Red Cross officials of the progress of the Volunteer Service program, and second, to provide an accurate account of time given by Volunteer workers in order to make awards and give proper recognition for the services rendered.

II. METHOD OF KEEPING RECORDS

The unit leaders will have the responsibility of keeping the records of individual worker's time. This will be done by using an individual record card for each Volunteer worker. Attached is a sample. This card will be referred to as "Individual Record of Volunteer Service - Volunteer Service Form No.1, April, 1948". These cards will be supplied by National Headquarters to each Chapter in sufficient amount to provide chapters with sample supplies to be used at the Chapter or Training Course. It will be the responsibility of each chapter to provide additional forms for the Branch, Sub-Branch, and Sub-Cho Volunteer Service Chairmen for training courses which will be given for their respective committees. Every Chapter Headquarters must keep an adequate supply of Volunteer Service Form No.1. When a project is organized in a local community the Red Cross Representative will request the Sub-Branch or Sub-Cho Committee Chairman to secure the necessary number of record forms from the Chapter Headquarters for the specific project. The request should be made through the Sub-Branch Head in those areas. The Sub-Cho Chairmen would make the request directly to the Branch Head and in the Cities, Branch and Branch Headquarters, a supply should be kept on hand.

SECTION I
GENERAL

Local Training of Health Center Personnel

Reference is made to Public Health and Welfare Weekly Bulletin #75 relative to the training of Health Center personnel. The urgent need for training of personnel already on duty in Health Centers, as well as those newly appointed is recognized. While every effort should be made to provide early in-service training at the local level, this training must be done in a thorough and proper manner if the desired results are to be obtained. Lectures alone are not sufficient, they must be supplemented by demonstrations and practical application.

For this reason it is advisable to place special emphasis upon completion of the Model Health Center's facilities as soon as possible. The model must be fully staffed with personnel who are, themselves, capable of receiving training and acting as instructors for the training of personnel of all other Health Centers. When the personnel of the Model Health Centers are familiar with their jobs then they should be utilized to teach the personnel of other health centers by the practical and accepted methods of (1) explanation, (2) demonstration and (3) application.

Little will be gained by holding formal lecture courses for Health Center personnel in general, until the lectures can be supplemented by demonstration and application, under supervision, in the Model Health Center or other properly functioning Health Centers.

Technical Bulletin

The following Public Health and Welfare Technical Bulletin is enclosed with this Weekly Bulletin:
Title: Supplementary School Lunch Program Short Title: TB-PH-WEL-12

SECTION II
PREVENTIVE MEDICINE DIVISION

VD Control

Venereal disease is still the most prevalent infectious disease among adults. In order to insure the success of the nation-wide control program, close liaison should be maintained with Japanese prefectural VD control personnel.

As an aid in determining future plans, it is essential that the Military Government Health Officer know; (1) what the prefectural VD Control program is (present and future) and (2) what personnel and facilities (Public clinics, health centers, hospitals, and laboratories) exist for carrying out the program.

SECTION III
MEDICAL SERVICES DIVISION

Civilian Hospital Strength Report for the week ending 21 May shows a total of 3,448 hospitals with bed capacity of 210,482, of which 103,940 were occupied. During this period, 318,254 out-patient treatments were rendered.

SECTION IV
VETERINARY AFFAIRS

Animal Diseases

The following outbreak of animal disease were reported by the Ministry of Agriculture and Forestry for period 5 - 11 June.

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Aomori	Swine erysipelas	2
Nagano	" "	1
Chiba	" "	1
Tokyo	Anthrax	1

Note: The Anthrax case occurred in a dairy furnishing milk to the Metropolitan area of Tokyo. Veterinarians in the Tokyo-to Public Health Bureau instituted quarantine measures immediately and withdrew the milk supply temporarily until the incubation period is over.

A representative of the Public Health and Welfare Section made a survey of Veterinary activities in Shizuoka Prefecture. The survey disclosed that meat inspection was good; milk inspection was considered fair with deficiencies noted in dairy farm inspection due to poor transportation facilities; sea-food inspection was quite poor, but an overall program to improve the inspection service is now under way.

A small number of goats recently assigned to the Nagaizumi village were inspected and found to be in a much improved condition compared to the condition at the time of arrival in Yokohama. These goats were part of a gift of "The Heifers for Relief Committee".

SECTION V SUPPLY DIVISION

General

The Ministry of Welfare has issued supplemental instructions to all prefectural governors on the subject of "Management of Hospital Food Rationing", Public Health Bureau, Ministry of Welfare Instruction No.616 (Ko-Ho-Hatsu), dated 9 June. These instructions point out that the original directive of 12 February, Vice-Minister of Welfare Directive No.12 (Hatsu-Ken), contemplated that each hospital be properly organized to insure correct procurement and fair distribution of allocated food materials, but that the directive authorizes in no way the organization of unions or associations of semi-official or of any other nature in order to delegate responsibility for hospital rationing which properly belongs to the Government, at both national and local levels.

Hospital officials must understand that the handling of hospital rationing is their responsibility and that this responsibility cannot be delegated. Certain hospitals have complained that transportation is not available for moving rations from the rationing point to the hospital. In these cases there is no objection to the employment of transportation facilities on a contract basis, as distinguished from the organization of a union or association.

Distribution

A total of 3,680 pieces of dusting and spraying equipment were distributed to 17 prefectures during the period 30 May - 5 June, under the direction of the Ministry of Welfare as follows:

Prefecture	DDT Duster	Knapsack Sprayer	Semiautomatic Sprayer	Hand Sprayer
Iwate	552	0	0	0
Miyagi	100	0	0	0
Fukushima	0	20	0	0
Gumma	0	10	0	0
Saitama	0	10	0	0
Tochigi	0	0	0	50
Tokyo	200	80	0	120
Chiba	504	0	0	0
Nagano	50	0	0	0
Yamanashi	100	0	0	0
Aichi	480	0	0	0
Kyoto	0	150	0	0
Wakayama	0	0	0	150
Ehime	48	42	140	0
Kagawa	0	120	0	0
Miyazaki	504	0	0	0
Fukuoka	200	0	0	50
Total	2,738	432	140	370

The Ministry of Welfare directed that 1,015 drums, 50 gallons each, of pyrethrum emulsion be shipped to 13 prefectures in the period 31 May - 6 June. This is equivalent to 1,522,500 gallons of finished insecticide. Shipments are as specified below:

DISTRIBUTION OF PYRETHRUM EMULSION, 30X, 31 May - 6 June 1948

<u>Prefectures</u>	<u>Quantity of 50-gal Drums</u>
Yamagata	21
Fukushima	64
Gumma	30
Tokyo	292
Shizuoka	106
Aichi	40
Mie	65
Shiga	26
Osaka	60
Hyogo	97
Shimane	20
Hiroshima	136
Fukuoka	<u>58</u>
Total	1,015

The following medicines are being removed from distribution control by Ministry of Welfare Ordinance No.27, published 1 June. Supply of these medicines is considered to be adequate to meet ordinary needs and distribution control is no longer necessary.

Sulfapyridin	Sulfamethylthiazol
Sulfapyridin tablet	Sulfamethylthiazol tablet
Sulfapyridin injection	Dextrose injection
Sulfamin	

Ordinance No.27 will designate that the following items are to be included as controlled medicines, effective the same date;

Hexylresorcinol tablets	Amylresorcinol tablets
Hexylresorcinol pills	Amylresorcinol pills
Hexylresorcinol capsules	Amylresorcinol capsules

SECTION VI
NARCOTIC CONTROL DIVISION

The April report of narcotic control activities from the Ministry of Welfare contains the following information:

Total registrants	82,324
Arrests- Registered persons	23
Unregistered persons	77
Convictions	
Registered persons	5
Unregistered persons	41
Thefts of narcotics	29
Losses by fire	3

Penalties for registrants varied from 5,000 yen fine to eight months penal servitude. Penalties for non-registrants varied from 500 yen to two years penal servitude with 23 of the defendants being sentenced to penal servitude. Charges against 83 defendants, including 79 professional people eligible for registration, were dropped because of insufficient evidence. Eighty-two registrants were admonished and 10 minor violations were disposed of administratively.

The report also summarizes the activities of narcotic agents as follows:

Inspections of registrants	2,953
Investigations originated	657
Investigations concluded	574
Investigations not concluded	356

Information was obtained relative to 20 additional addicts including five who were arrested.

Investigation of the motor vessel, Eastern Saga, reported to have a contraband cargo of opium aboard was concluded with the cooperation of Occupation Force enforcement units and Japanese customs and narcotic officials. The vessel was thoroughly searched at three different ports and the crew was questioned relative to the report of contraband cargo. No opium was discovered. The coordinated investigation clearly showed the difficulty of any attempt to introduce narcotic contraband cargo into Japan.

SECTION VII WELFARE DIVISION

Kyusyu Welfare Training Course

The Ministry of Welfare has planned a seven day welfare conference to be held from 16 to 22 June, inclusive. Approximately 50 persons from the various prefectures in the Kyusyu Region will attend. The meetings will be held at the Komin Club, Kasugayama, Saga City, Saga Prefecture. The subjects to be discussed include: Outline of Social Work, Social Survey and Social Statistics, Methods of Social Work, Daily Life Security and Disaster Relief, Child Welfare and the Responsibilities of Welfare Commissioners (Minsei-ii).

Child Welfare

“Child Welfare” page 12, Public Health and Welfare Weekly Bulletin No.75 is amended to include the following:

Allowance Remuneration to Children’s Agencies for Care of Children including Administrative Costs:

The Ministry of Welfare, Children’s Bureau, issued Ji-Hatsu #257, dated 29 May, concerning the above subject.

The maximum limits per child, per day, for Kyogo-in are as follows:

Administrative expense	-	34 yen
Care of children	-	<u>24 yen</u>
Total		58 yen

Maximum limits for Homes for Dependent, abused or feeble-minded children per child, per day, are:

Administrative expense	-	28 yen
Care of children	-	<u>24 yen</u>
Total		52 yen

Administrative costs for these institutions have been based on the minimum standards of personnel, etc., which will be required of them.

Lying-in Agency

Payment is limited to cost of care, delivery costs, physicians’ costs, etc.

Foster home care - amount for one person per day under present Daily Life Security Law allowance.

Mother’s and Children’s Home - up to 1.35 yen per day per person for all persons in the institution.

Day Nursery (year round only) - up to 1.35 yen per day per child for all children. There is no provision for temporary or seasonal day nurseries. Homes for Physically Handicapped and Weak Children (permanent homes only) up to 8 yen per day per child for all children.

Temporary Shelter Care (Article 33 of the Daily Life Security Law)

Administrative cost - 10 yen per day per child
Care of children - 27 yen per day per child

Consigned Temporary Care where no temporary shelter is operated.

No administrative cost. Care of children - 24 yen per day per child. Administrative costs for the above agencies may be adjusted upon completion of the proposed minimum standards for children's institutions.

A committee is now working on a standard bookkeeping procedure for all institutions which will be provided for their use as soon as is possible.

Welfare Officers are encouraged to give surveillance to the uses to which administrative allowances are put in individual institutions and to report interesting observations through channels.

Monthly Public Assistance Figures - April

The Ministry of Welfare has submitted the following national totals for the month of April 1948. Figures for March 1948 and for April 1947 are given for purpose of comparison.

	April 1948	March 1948	April 1947
Persons - institutional	135,944	138,195	112,769
Persons - non-institutional	2,013,927	2,077,031	2,650,272
Totals	2,149,871	2,215,226	2,763,041
Assistance in cash*	366,200,622	408,285,028	197,781,859
Assistance in kind	59,685,650	56,131,208	36,642,044
Totals	425,886,272	464,416,236	234,423,903

*Before deductions for repayment by families

Public Assistance by Prefectures

Prefecture	Institutional	Non-Institutional	In Kind	Cash
Hokkaido	11,839	59,634	18,845,566	18,283,400
Aomori	1,547	30,703	143,082	5,942,147

Total	135,944	2,013,927	59,685,650	366,116,197

Correction - Children's Bureau Survey of Orphans

Weekly Bulletin #71, dated 3 - 9 May, page 9, shows a total of male orphans of 68,478. The correct total of male orphans is 68,487.

Physically Handicapped Program

The first of 12 institutions for the handicapped in Japan opened in Tokyo, 7 June. It is named the Ohara-Ryo and accommodates 79 trainees and 37 members of their families.

Most of the accommodated are amputees and they will be trained in such crafts as: radio repair, dress making, watch repair, printing, shoe repair, wood work, electrical hand work and machine work of various types.

Out of the 79 trainees, 56 young ex-service personnel and civilians, formerly connected with the army, are included in the training, while 23 are civilians with no former army-navy background.

The program is slanted towards the age group, 20 - 40 years, and it is not surprising to find that the majority of handicapped needing this training are ex-service personnel. However, those receiving this training are to be based upon the overall needs of both ex-servicemen and civilians alike.

The numbers of physically handicapped in Tokyo-to as reported by welfare officials are:

Ex-servicemen and civilians formerly in the Armed Forces - 2094
Civilians not connected with Armed Forces - 738

A large former army barracks located on the property of the Second National Hospital in Tokyo has been renovated and equipped for this training institution. It is newly painted and all equipment has been renovated. It is equipped with a central kitchen, dining room and bathing facilities.

The facilities of the Second National Hospital will be used for necessary medical examinations and treatments.

The present course of training will take approximately 8 months.

Junior Red Cross Leadership Training Centers

Reference: Public Health and Welfare Weekly Bulletins No.66 (for the period 29 March - 4 April) and No.72 (for period 10 - 16 May).

The following information, in brief outline, is a report on the progress of establishing "Leadership Training Centers" (Camps) this Summer as reported in a recent meeting of the Junior Red Cross Advisory Committee:

a. Approval of camp sites and dates:

- (1) Okayama Training Center at Tamano, Okayama Prefecture 25 - 31 July.
- (2) Gora Training Center, Kanagawa Prefecture, 15 - 21 August. Note: The students will arrive on Sunday previous to the Monday on which the actual work of the camp will begin and they will leave on Saturday after the close of the camp on Friday night.

b. Budgets for the two Centers:

- (1) Food - 150 yen per day per person. 55 students will attend 6 days. 12 faculty members will attend 8 days. Average of 3 guests allowed each day.
 - (a) Students (55 in each Center)
 $55 \times 6 \times 2 \times 150 \text{ yen} = 99,000 \text{ yen}$
 - (b) Faculty (12)
 $12 \times 8 \times 2 \times 150 \text{ yen} = 28,800 \text{ yen}$
 - (c) Guests (3 per day permitted to attend)
 $3 \times 6 \times 2 \times 150 \text{ yen} = 5,400 \text{ yen}$
Total Food Cost - 133,200 yen
- (2) Room - 50 yen per day, 6 days for students, 8 days for faculty, 2 Centers
 - (a) Students (55 in each Center)
 $6 \times 2 \times 55 \times 50 \text{ yen} = 33,000 \text{ yen}$
 - (b) Faculty (12)
 $8 \times 12 \times 2 \times 50 \text{ yen} = 9,600 \text{ yen}$
 - (c) Guests (3 per day permitted to attend)
 $3 \times 6 \times 2 \times 50 \text{ yen} = 1,800 \text{ yen}$
Total Room Cost - 44,400 yen
- (3) Miscellaneous (2 Centers)
 - (a) Mimeographing and paper for bulletins used in teaching - 6,000 yen
 - (b) Rent for boat used in Water Safety and other expenses necessary for teaching materials - 18,000 yen
 - (c) Mail and telegrams - 6,000 yen
 - (d) Shipping materials to Centers such as blankets, sheets, mosquito nets and transportation of food, 20,000 yen
Total Cost for Miscellaneous Items - 50,000 yen
- (4) Transportation (12 teachers)
 - (a) Gora Center (average estimate per person for transportation to Gora - 600 yen)
 - (b) Okayama Center (average estimate per person for transportation to Okayama - 4,250 yen) $12 \times 4,250 \text{ yen} = 51,000 \text{ yen}$
Total Cost for Transportation - 58,200 yen

- (5) Awards to Teachers (estimate of 1,000 yen each)
 $12 \times 2 \times 1,000 \text{ yen} = 24,000 \text{ yen}$
- (6) General Services
 - (a) General maintenance of buildings
 - (b) Cleaning of buildings before Center opens
 - (c) Errand help
 Total for General Service for two Centers - 20,000 yen

Summary:

Food	133,200 yen
Room	44,400
Miscellaneous	50,000
Transportation	121,884 (including transportation of students)
Awards	24,000
General Services	20,000
Total	393,484 yen

Note: It was agreed at an Advisory Committee Meeting that the cost of food and housing would determine the tuition per students. The total cost of housing and food is 177,600 yen and this divided among 110 students will make the tuition fee per student approximately 1,600 yen.

c. Courses to be studied at Center

- (1) Junior Red Cross Organization and Membership
 - (a) What is Red Cross? Brief History. Discussion of thoughts and quotations dealing with goodwill, charity, humanitarian feelings, and the Red Cross ideals.
 - (b) How to become a Junior Red Cross member. Purposes of Junior Red Cross. Significance of Junior Red Cross membership.
 - (c) How to organize a Junior Red Cross Corps in School according to democratic principles and good parliamentary procedure.
- (2) Junior Red Cross Community Activities
 This will include:
 - (a) The study of how to make survey of community needs.
 - (b) How to determine and evaluate good Junior Red Cross projects.
 - (c) How to integrate Junior Red Cross activities with regular classroom work.
- (3) Safety Services
 To include safety and accident prevention information applicable to Japanese life.
- (4) Home Nursing and Nutrition
 To include a combination of the two subjects which will give basic health knowledge that is practical and applicable.
- (5) School Correspondence Project
 Study of National and International plan for exchanging school correspondence albums with schools in Japan and in other countries.
- (6) Crafts
 Making of articles which may be used in welfare institutions from native raw materials which students bring with them.
- (7) English conversation
 To be arranged during free periods.

Note: One month previous to the date of center the faculty will meet together to develop the units of work to be taught in each of the above courses. The faculty will assist in preparing the daily schedule. Only four hours each day will be given to study and discussion. There will be planned free periods and recreation. Students will share in the planning of their recreation. In fact, students will operate the Center with adult leaders' guidance.

d. Faculty (tentative)

Consultant and Junior Red Cross Chief have plans that the following will be the faculty of the Center:

- (1) Mr. S. Honjo, Chief, Japanese Junior Red Cross
- (2) Major Jack Moreman, Assistant Exec. Officer, CI&E (Dean and Co-Dean of Center)
- (3) Mr. Kashiwagi, Supervisor, Schools of Kanagawa Prefecture (Junior Red Cross Activities)
- (4) Mr. Takata, Social Studies Teacher, Akasaka School (Junior Red Cross Activities)
- (5) Mr. Eiichi Komori, Chief, Safety Services (Safety and Accident Prevention)
- (6) Miss Hayashi, Chief, Nursing Services (Nursing and Nutrition)
- (7) Mrs. Kobayashi, Nutritionist, Joshi Dai (Nursing and Nutrition)
- (8) Miss Shiroyama, Junior Red Cross (School Correspondence, International Project)
- (9) Mrs. Goto, Teacher at Shoei School (School Correspondence, International Project)
- (10) Crafts teacher - to-date not appointed.

SECTION VIII SOCIAL SECURITY DIVISION

General

In further supplementation of earlier information on current statistical reporting requirements for National Health Insurance (see Public Health and Welfare Weekly Bulletins Nos. 73 and 75) the Insurance Bureau, Ministry of Welfare, has informed Public Health and Welfare Section of a new report to be compiled for the first time in every prefecture in June.

This is to be a monthly report to the prefectural Insurance Section by every Public Health Nurse employed by a National Health Insurance association. After consolidating these individual reports, the prefectural Insurance Section is to send the consolidated report to the Ministry of Welfare not later than one month after completion of the month reported on. Each prefecture must decide for itself when the individual reports shall be due at the prefectural office. The following information is required to be forwarded to the Ministry:

1. Number of associations reported on;
2. Number of Public Health Nurses reporting;
3. Number of insured per one Public Health Nurse;
4. Number of Public Health Nurses who failed to report;
5. Total hours and percent of total working time spent, out of each business day, on each of the following activities:
 - a. Home visits, total and broken down into visiting time, travel time, and preparation of records;
 - b. Consultation in the office, total and broken down into consultation proper, assistance to the doctor, preparation, and cleaning up;
 - c. Outside consultations (itinerant clinics), total and broken down into consultation proper, assistance to the doctor and travel time;
 - d. Group education, total and broken down into guidance and travel time;
 - e. Meetings and conferences, total and broken down into staff education, study and attendance, practical (on the spot) observation;
 - f. Other activities, total and broken down investigation and statistics, communications, health preservation business (e.g. filling out of applications for special food for nursing mothers etc.) association business, conferences, and official trips outside the village;
 - g. Grand Totals
6. The total number of business days spent on:
 - a. Home visits, total number of homes and of cases and broken down according to the following categories: maternity case, unweaned infant, pre-school child, student, adult, investigation, control of communicable disease, not home, death, other.
 - b. Visits on special diseases: tuberculosis, venereal disease, infectious disease, mental disease.
 - c. Communication visits, total number and broken down according to the following categories: school, private doctor or dispensary, Health Center, member of welfare committee, workshop and store, social work institution, other.

d. Grand Totals

Reference is made also to the application and report required from all National Health Insurance associations desiring a national subsidy for the establishment of a clinic or hospital under their direct management. A translation of that form as required by Insurance Bureau, Ministry of Welfare Instruction #284, (Ho-Hatsu No.284) of 1 March was given as enclosure No.1 to Public Health and Welfare Weekly Bulletin No.67. Since no definite deadline was attached to that report, several associations planning to establish clinics or hospitals and desiring national subsidies therefore may have fallen behind and should be encouraged to make application promptly if such subsidy is desired for the current fiscal year.

Finally, reference is made to national subsidies payable to National Health Insurance associations hit by natural disasters such as floods, etc. (See Public Health and Welfare Weekly Bulletin No.64) The reporting requirements contained in the application form to be filed by associations wishing to qualify for such subsidies will be listed in the next issue of Public Health and Welfare Weekly Bulletin and will complete all regular statistical and related reporting done currently under the National Health Insurance Program.

Health Insurances

Attention is invited to Ho-Hatsu No.548 and No.552 dispatched by the Insurance Bureau, Ministry of Welfare, to the prefectural governors and noted in Public Health and Welfare Weekly Bulletin No.71 for the period 3 - 9 May. They contained information regarding new procedures for obtaining more prompt payment of claims presented by insurance doctors for medical care given to patients insured under society-managed Health Insurance.

The Central Committee for the Guidance of Insurance Doctors concurred in the action taken by the Ministry of Welfare in this matter and urged that the Prefectural Committees for the Guidance of Insurance Doctors take an active part in bringing about cooperation on the part of all doctors.

SECTION IX
MEMORAMDA TO THE JAPANESE GOVERNMENT

None.

CRAWFORD F. SAMS
Brigadier General, Medical Corps
Chief

2 Incls:

1. Report of Cases and Deaths from Communicable and Venereal Diseases in Japan, week ended 5 June 1948.
2. Number of Cases and Rates of Communicable and Venereal Diseases in Japan for 5 week period ended 29 May 1948.

SECTION VII - Social Security
SECTION VIII - Memoranda to Japanese Government

SECTION I
GENERAL

Health Centers

Under the provision of the health center law (Law 101, 1947) and Cabinet Order #77 dated 2 April 1948 certain cities (those with populations of 150,000) are authorized to supervise the administration of health centers within the designated cities. Enclosure No.1 to this bulletin is an English translation of the Ministry of Welfare's memorandum of instructions (Hatsu-Ken #60, dated 21 June 1948) to the prefectural governors and mayors of cities, subject: the "Transference of Health Centers to Cities."

Enclosure No.2 is an English translation of the Ministry of Welfare's memorandum of instruction (Hatsu-Ken #59, dated 21 June 1948) to prefectural governors, subject: "Notification About the Transference of Health Administrative Matters." This memorandum instructs governors to delegate to the health centers certain administrative matters under the provisions of the Health Center Law.

Morioka Model Health Center

The first prefectural Model Health Center to be completed, patterned after the Sugunami Model Health Center in Tokyo, opened in Morioka, Iwate Prefecture on 16 June. The Chief, Public Health and Welfare Section, GHQ, SCAP, attended the opening ceremony and addressed the prefecture officials, prefecture medical association, dental association and midwives association, at a combined meeting at the Health Center auditorium at Morioka.

Information contained in Military Government Team Monthly Activities Report indicates work is progressing on Model Health Centers throughout Japan.

Ministerial Instructions

The following is a list of instructions issued by the various Bureaus of the Ministry of Welfare to the prefectural governments for the period 24 May - 5 June:

- | | | |
|---|--|---|
| May 24, 1948
(I-Hatsu, No.207) | From: Director, Medical Bureau | To: Director, Health Department
Every prefecture |
| | Subject: Disposition of institutions and Commodities owned by Japan Medical Treatment Cooperation. | |

June 5, 1948 From: Director, Children Bureau To: Governor, Hiroshima Pref.
(Ji-Hatsu, No.345)
Subject: Appointment of child welfare official

SECTION II
PREVENTIVE MEDICINE DIVISION

Venereal Disease Control

According to data compiled from the "Monthly Clinic Reports", it is noted that there are eight prefectures which do not perform darkfield examinations, and 15 prefectures which perform only an insignificantly small number of such examinations. This may be due to a lack of darkfield microscopes, or in some prefectures, to inefficient utilization or distribution of available darkfield condensers.

The production of darkfield condensers is small, but is continuing at an increased rate. Prefectures which need darkfield microscopes should submit their requisitions to the Pharmaceutical Section of the Medical Bureau of the Ministry of Welfare.

The diagnosis of a chancre should never be made on clinical grounds, nor should it be made by waiting for the serological test to become positive (which takes from 10 days to two or three months). The diagnosis of primary syphilis should be made by the darkfield microscope during the sero-negative stage when the patients chance of complete cure is the greatest.

SECTION III VETERINARY AFFAIRS DIVISION

Rabies Immunization Program for Dogs

Public Law No.29 - Infectious Diseases of Domestic Animals, requires all dogs in Japan to be immunized once a year. Authority for this requirement falls within Article 7, which states that a Prefectural Governor can conduct a preventive campaign against rabies when recognized.

The standard dosage is 5 cc of vaccine for each dog, regardless of size, but over four months in age, at least once a year. The vaccine is prepared in Tokyo Laboratories in which both dog and rabbit brain and spinal cords are utilized. The vaccine is not assayed.

Due to considerable belief that the potency of the present vaccine is insufficient for a years immunity, plans are under way to require the testing of all dogs every six months, and assays on the vaccine made by National Institute of Health. The minimum requirements will subsequently be reported in this bulletin. (Note: Occupation personnel owning dogs are required to follow the rabies immunization procedure as noted in AR 40-2090 Change 3, utilizing Habel mouse-tested rabies vaccine, approved by the United States Department of Agriculture. The vaccine is a standard medical supply item Nos.1607885-1607895.)

Veterinary Education

Preliminary work has begun, in cooperation with the Ministry of Education, in establishing an inspection system for Veterinary Schools throughout Japan.

Food Sanitation

In order to establish a regulation supporting the Food Sanitation Law No.233, as a guidance for Prefectural Governments, a regulation was approved and should reach each Prefecture during the week of 21 June.

Animal Diseases

The following outbreak of animal diseases was reported by the Ministry of Agriculture and Forestry for period 12-18 June.

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Nara	Swine Erysipelas	1
Chiba	Swine Erysipelas	2

SECTION IV SUPPLY DIVISION

Distribution

Dusters and sprayers for insect and rodent control were shipped to 12 prefectures under Ministry of Welfare supervision in the period 6-12 June. A total of 1,550 pieces of equipment were distributed as follows:

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsack Sprayer</u>	<u>Semi-automatic Sprayer</u>	<u>Hand Sprayer</u>
Tokyo	130	140	0	140
Niigata	40	0	0	0
Fukui	100	0	0	0
Fukuoka	200	30	0	60
Kagawa	200	0	0	0
Yamagata	0	100	70	100
Akita	0	30	20	0
Chiba	0	20	0	0
Nagano	0	0	10	0
Aichi	0	10	0	0
Gifu	50	0	0	0
Kumamoto	0	100	0	0
Totals	720	430	100	300

In May, small shipments of diphtheria toxoid totaling 168,800 cc were ordered by the Ministry of Welfare to seven prefectures. These shipments practically completed the requirements as set-up by prefectures. The total quantity supplied each prefecture was based on requirements submitted to the Ministry of Welfare by the prefectures. Distribution for the immunization program was started in late 1947. Original requirements submitted by prefecture Health Officers totaled 18,510,000 cc for all of Japan. These were revised recently by some prefectures (see Weekly Bulletin No.72, 10-16 May) reducing the total to 13,974,880 cc. Adequate stocks of toxoid are available to continue further immunization. Reports show that there were, on 5 June, 2,816,754 cc available for distribution which had successfully passed assay, and an additional 4,951,980 cc awaiting assay tests. Below is tabulated a resume of the distribution already made.

Distribution of Diphtheria Toxoid
(Unit:cc)

<u>Prefecture</u>	<u>Original Requirement</u>	<u>Revised Requirement</u>	<u>Distribution May</u>	<u>Total Distributed to 31 May</u>

Production

A total of 5,686 pieces of the various types of DDT dusting and spraying equipment for mosquito and fly control programs was produced during the period 30 May - 5 June. For the period 6 - 12 June, a total of 5,495 pieces of equipment were produced. Large inventory stocks on hand are sufficient to meet all requirements.

During the period 30 May - 5 June, 205,630 lbs. of 10% DDT dust, 47,665 gallons of 5% DDT residual effect spray, and 36,166 vials of typhus vaccine were distributed. At the same time, a total of 175,000 lbs. of 10% DDT dust, 40,750 gallons of 5% DDT spray, and 20,000 vials of typhus vaccine were received from the manufacturing plants. Total stocks on hand in wholesale houses of the Ministry of Welfare as of 5 June included 3,220,318 lbs. of 10% DDT dust, 284,918 gallons of 5% DDT spray, and 100,383 vials of typhus vaccine.

During the period 6 - 12 June, 136,370 lbs. of 10% DDT dust, 37,330 gallons of 5% DDT spray, and 19,390 vials of typhus vaccine were distributed. At the same time, a total of 76,225 lbs. of 10% DDT dust and 63,810 gallons of 5% DDT spray were received from the manufacturing plants. Stocks on hand in wholesale houses of the Ministry as of 12 June totaled 3,305,093 lbs. of 10% DDT dust, 336,076 gallons of 5% DDT spray, and 80,993 vials of typhus vaccine.

Distribution of DDT products and typhus vaccine during May totaled 556,652 lbs. of 10% DDT dust, 152,323 gallons of 5% DDT spray, and 29,640 vials of typhus vaccine. A detailed breakdown by prefectures and governmental departments is as follows:

<u>Prefecture of Department</u>	<u>10% DDT Dust</u>	<u>5% DDT Residual Effect Spray</u>	<u>Typhus Vaccine</u>

SECTION V NARCOTIC CONTROL DIVISION

The Narcotic Section, Ministry of Welfare, is summarizing the activities of 150 narcotic agents throughout Japan reported the following statistics for 16 months ending 30 April:

Number of Registrants Inspected		34,340
Number of Investigations Oriented		2,701
Number of Prosecutions: Registrants	249	
Non-registrants	725	
Total		974
Number of Convictions: Registrants	86	
Non-registrants	318	
Total		404

Of the registrants convicted, 24 received sentences totalling 22 years one month penal servitude, and 62 were fine a total of 145,196 yen.

Of the non-registrants convicted 130 received sentences totalling 175 years 10 months penal servitude and 55 received suspended sentences totalling 84 years six months. One hundred eighty-two non-registrants, including 49 of those sentenced to penal servitude, were fined a total of 465,000 yen.

The most important seizures were:

Crude opium	20,014.1 grams
Morphine	7,265.61 grams
Cocaine	8,683.30 grams

There was an average of 37 thefts per month during 1947. This number has been reduced to 29 per month through April 1948. Hospitals, which represented the largest group of registrants losing narcotics through thefts, are gradually reducing the number of thefts by procuring heavy steel safes in which to store narcotics.

SECTION VI WELFARE DIVISION

Community Chest

A national meeting of the Community Chest was held in Tokyo on 3-4 June. The meeting was also attended by Japanese Red Cross and Japanese Government Officials.

In addition to discussions on administrative and operational problems, an agreement between the Japanese Red Cross and the Community Chest to hold a "joint fund raising campaign" for the year 1948-49 (Month of October 1948) was explained; reference Public Health and Welfare Weekly Bulletin No.75 (for the period 31 May - 6 June 1948).

A representative from Public Health and Welfare Section, SCAP, attended one of the conference sessions and gave a resume covering observations during the last Community Chest Campaign (winter 1947-48). It was pointed out that "**** the interest as well as the participation of the Japanese Government, principally the Ministry of Welfare, in the Community Chest organization and particularly the first campaign, was understandable but the active participation of the Government in the Administrative, Managerial and Operational functions of the Community Chest is at an end - The Community Chest is a private welfare enterprise and must operate as such. This does not mean that the government is not to be sympathetic, helpful and cooperative, but the Community Chest must establish its own administrative channels (not through the Ministry of Welfare) and prefectures must have Community Chest Committees (not prefectural government agencies) to disseminate information, etc., regarding their program".

Japanese Red Cross Society

A conference of Prefectural Red Cross Chapter Managers with officials of the National Headquarters, Japanese Red Cross Society, was held in Tokyo on 16, 17 and 18 June.

The following main topics were the subjects covered at the conferences:

1. Agreement between the Central Committee, Community Chest and the Japanese Red Cross, regarding the "joint fund raising campaign" for 1948-49, to be held between 1 - 31 October.
2. Red Cross plan for the execution of their responsibilities in the "joint fund campaign".
3. Community plan for the execution of their responsibilities in the "joint fund campaign".
4. Review of Community Chest and Japanese Red Cross fund raising experiences during the past campaign (winter 1947-48).

Material Issued for Welfare Commissioner (Minsei-iin)

The Ministry of Welfare advised that printed material such as that listed below, has been published by different organizations and has been distributed throughout Japan. All of this material should be available for use in training programs for Minsei-iin and other welfare personnel.

1. "Ordinances and Notifications instructions concerning the Daily Life Security Law" (additional) published in March 1947, by Social Affairs Bureau, Ministry of Welfare.
2. "Guide to Protection" (Engo no Shirube). Published by Ministry of Welfare.
3. "Interpretation of the Daily Life Security Law" (Seikatsu Hogo Ho no Kaishaku). Published by the Japan Social Work Association.
4. "On the Spirit of Minsei-iin" (Minsei-iin Seishin ni Tsuite).
5. "Hundred questions and answers on the Daily Life Security Law" (Seikatsu Hogo Hyaku-Mon Hyaku-To). Published by the Japanese Social Work Association.
6. "Interpretation of the Child Welfare Law" (Jido Fukushi Ho). Published by the Japan Social Work Association.

7. "What is the Child Welfare Law" (Jido Fukushi Ho Towa). Published by Children's Bureau, Ministry of Welfare.

8. "Minsei-iin Note Book" (Minsei-iin Techo). Prepared by Ministry of Welfare.

9. "Social Work in Japan" (Nippon no Shakai Jigyo). Published by the Japan Social Work Association.

Publication Concerning Child Welfare

A book, "Child Welfare" (Jido Fukushi) edited by the Children's Bureau, Ministry of Welfare, has been just published by TOYO SHOKAN, a publishing company located in Tokyo. This publication is available either at book stores or the publishing house (400 yen per copy). The publication may also be secured by Japanese officials at some price reduction through the Children's Bureau, Ministry of Welfare. This book is available only in the Japanese language. It has not been translated into English. The book should be useful in carrying out in-service training programs, particularly intended for child welfare personnel. The following is the table of contents:

Guide for Children's Policy (by Y. Matsuzaki)
Maternal and Child Health (M. Seki)
Day Nurseries (S. Yoshimi)
Homes for Mothers and Children (Boshe-Ryo) (S. Yamataka)
War Orphans and Vagrant Children (Y. Tsujimura)
Education and Protection of Delinquent Children (M. Shimada)
Children's Institutions (M. Kono)
Child Welfare Center (Judo Sodan Sho) (M. Miyake)
Case Work (F. Asaka)
Child Welfare and Education (Y. Miki)
Protection of Juvenile Laborers (Y. Kirihara)
Criminal Policy and Child Welfare (S. Danto)

In-Service Social Work Training Program

The Social Affairs Bureau of the Ministry of Welfare has established a tentative schedule of "in-service training meetings" to be held throughout Japan in 1948. Each of these conferences will last for a period of seven days.

Prefecture Welfare Officials with over two years' experience in social work administration, and Minsei-iin or social workers recommended by prefecture governors are eligible to attend the meetings. Subjects included in the conference program will be: Outline of social work; Minsei-iin work; Protection of daily life and disaster relief; Child welfare work; Social research and Statistics.

<u>Month</u>	<u>Area</u>	<u>Place to be Held</u>
June	Kyushu	Saga
July	Shikoku	Kochi
August	Chugoku	Hiroshima
October	Tohoku	Miyagi
November	Chubu	Toyama
December	Kinki	Kyoto or Nara

No training conference has been scheduled to be held in September because of the National Minsei-iin Meeting to be held in Hokkaido during that month.

SECTION VII SOCIAL SECURITY DIVISION

General

A continued check on the operational and other statistical data on the social insurances available at the Insurance Bureau, Ministry of Welfare, has revealed that the requirements in force are widely disregarded in practice. Even under the programs for which data are regularly reported from the prefectures, i.e. Welfare Pension

Insurance and Seamen's Insurance and the government-managed part of Health Insurance, delays of 2-3 months are common. Reports on the national level are thus delayed despite prompt reports by some prefectures.

Other programs, i.e. society-managed Health Insurance and National Health Insurance, are reported incompletely, owing either to individual societies' and associations' failure to report to the prefectural offices, or failure of prefectures to sent in the information.

Operational and related reports required under the National Health Insurance program were described in preceding issues of the Public Health and Welfare Weekly Bulletin, (see Nos.67, 73, 75 and 76). The one remaining National Health Insurance report not yet described is the one to be submitted by National Health Insurance associations desiring subsidies on account of having been hit by floods and other natural disasters. However, such reports will not be submitted this year in as much as all appropriations for such subsidies have been eliminated from the current national budget. Hence a description of this report will be given at such time as appropriations for disaster subsidies to National Health Insurance associations may be restored.

Current reporting requirements under the other programs will be given in subsequent issues of the Public Health and Welfare Weekly Bulletin.

(Yo-Hatsu, No.749)
Subject: Opening of a short course for X-ray.

June 10, 1948 From: Director, Social Bureau To: Governor, Yamaguchi Prefecture
(Sha-Hatsu, No.856)
Subject: Alteration of establishment program of institution for accommodation of repatriates and needy persons.

June 10, 1948 From: Director, Social Bureau To: Governor, Nagasaki Prefecture
(Sha-Hatsu, No.858)
Subject: Alteration of establishment program of institution for accommodation of repatriates and needy persons.

June 10, 1948 From: Director, Social Bureau To: Governor, Gifu Prefecture
(Sha-Hatsu, No.857)
Subject: Alteration of a plan of equipments of protection institution under Daily Life Security Law.

June 10, 1948 From: Director, Social Bureau To: Governor, Saga Prefecture
(Sha-Hatsu, No.860)
Subject: Consultation for permission of protection institution under the provision of Article 7 of Daily Life Security Law.

June 10, 1948 From: Director, Social Bureau To: Governor, Shiga Prefecture
(Sha-Hatsu, No.861)
Subject: Application of Disaster Relief Law.

June 11, 1948 From: Director, Social Bureau To: Governor, Saga Prefecture
(Sha-Hatsu, No.866)
Subject: Extent, method and term of disaster relief.

June 11, 1948 From: Director, Social Bureau To: Governors, Kanagawa and other 4 prefs.
(Sha-Hatsu, No.867)
Subject: Measures for protection of waifs.

June 11, 1948 From: Director, Insurance Bureau To: All prefectural governors
(Ho-Hatsu, No.948)
Subject: Hastening payment of medical fee, national health insurance.

June 11, 1948 From: Director, Demobilization Bureau To: Chief, Service Section of
(Ichi-fuku, No.2185) every prefecture
Subject: Partial amendment of the 1st Demobilization No.1522.

June 11, 1948 From: Director, Relief Bureau To: Governors, Hokkaido and 6
(En-shi, No.28) prefectures in Tohoku District
Subject: Temporary loan of funds from Deposit Division for establishment expense of institution for accommodation of repatriates from Saghalien without a relative.

June 11, 1948 From: Director, Medical Bureau To: All prefectural governors
(I-Hatsu, No.233)
Subject: Application for license of pharmacist.

June 12, 1948 From: Director, Medical Bureau To: All prefectural governors
(I-Hatsu, No.234)
Subject: Allocation of designated medicine and that of quantity permitted for distribution of such medicine for the second quarter, 1948-49.

June 12, 1948 From: Director, Medical Bureau To: All prefectural governors
(I-Hatsu, No.235)
Subject: Determination of allocation quantity of sanitary material for the second quarter, 1948-49.

June 12, 1948 From: Director, Relief Bureau To: Governors, Hokkaido and 6
(En-shi, No.35) prefectures in Tohoku District
Subject: Subsidy for establishment expense of institution for accommodation of repatriates from Saghalien without a relative.

June 12, 1948 From: Chief, Accounts Section To: Directors, all bureaus and divisions
(Kai-Hatsu, No.550)
Subject: Budget for allowance for extra hours.

June 12, 1948 From: Chief, Accounts Section To: Directors, all bureaus and divisions
(Kai-Hatsu, No.551)
Subject: Handling business for attestation of cheque, etc.

June 12, 1948 From: Director, Social Bureau To: Governor, Shiga Prefecture
(Sha-Hatsu, No.875)
Subject: Partial amendment of organization of disaster relief teams.

June 12, 1948 From: Director, Social Bureau To: Governor, Gumma Prefecture
(Sha-Hatsu, No.876)
Subject: Limit of compensation for the actual cost under Disaster Relief Law.

June 12, 1948 From: Director, Social Bureau To: Governors, Tokyo and other 4 prefs.
(Sha-Hatsu, No.878)
Subject: National subsidy for expense for daily life security of needy German Nationals living in Japan for 1948-49.

SECTION II VETERINARY AFFAIRS DIVISION

An inspection was made of the rinderpest serum plant in Ako Town, Hyogo Prefecture. Work has progressed favorably and it is estimated that operation will commence approximately 1 August. A slaughter house, milk plant and central fish market in Kobe were inspected. The inspection disclosed that close supervision is being maintained over Prefectural veterinary affairs.

Animal Diseases

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Tokyo	Swine Erysipelas	1
Shizuoka	Swine Erysipelas	1
Chiba	Swine Erysipelas	2
Iwate	Swine Erysipelas	13
Nagano	Swine Erysipelas	1
Saitama	Swine Erysipelas	2
Iwate	Swine Plague	16
Kumamoto	Texas Fever	3
Iwate	Texas Fever	2
Oita	Blackleg	1
Shimane	Blackleg	1
Saitama	Equine Encephalitis	1

SECTION III NURSING AFFAIRS DIVISION

Public Health Center Course

A 10 day course for the training of nursing personnel for the health centers opened 21 June at the Institute of Public Health, Tokyo. Ninety-nine nurses representing each prefecture, were present. The lectures, demonstrations and return demonstrations by the students have been given and well received. Complete cooperation has been received in this course from all concerned.

Midwifery

The seventh and eighth in the series of 10-day midwifery lectures were given in Fukushima and Sapporo. There were 130 midwives enrolled in Fukushima and 215 in Sapporo.

Lady of Science

The "Lady of Science" motion picture was shown in the Diet, Saturday 26 June before the Nursing Law was discussed.

SECTION IV SUPPLY DIVISION

General

Adequate stocks of penicillin and sulfathiazole are available, and manufacturers are experiencing some difficulty in disposing of inventories.

The Ministry of Welfare allocates to prefectures on the basis of estimated production and allocations are adjusted in the event production exceeds estimations. All prefectures may obtain increased allotments of penicillin and sulfathiazole by application to the Ministry of Welfare.

It is apparent the hospitals and doctors are not aware of the increase in production of these two drugs. There is a possibility also that time use is being restricted to the more critical cases based on instructions issued when supply was critical. Every effort should be made to acquaint using agencies of available supplies of penicillin and sulfathiazole with this increased production and to encourage applications both on the part of consumers and prefectural officials for increased allocations.

Instances have been noted where prefectural health officials have advised Military Government Health Officers that the allocation of DDT products to the prefecture were exhausted and that additional supplies could not be secured without the approval of Military Government officials.

It is not necessary or desirable for Military Government Officers to endorse requests for additional DDT supply. Prefectures may obtain adequate stocks upon application to the Ministry of Welfare. Allocations to prefectures are for planning purposes only. Whenever there is a need for additional supplies, allocations will be increased provided the Ministry of Welfare is furnished appropriate justification therefor.

Any difficulties in DDT supply which cannot be adjusted locally should be reported by Military Government Officers, through channels, to Public Health and Welfare Section.

Production

The yen value of production of medical supplies (medicines, biologicals, dental instruments, dental materials, rubber sanitary goods, medical instruments and surgical dressings) for May totaled 1,940,886,154 yen. This total, the largest ever reported, is due to increased quantities of electric power and coal made available to the drug and pharmaceutical industry, as well as increased allocations of raw materials.

Controlled medicine production for May was an increase of approximately 232,000,000 yen over April production and was the largest amount to date produced during any one month. Biological production remained approximately the same as the previous month's production. Production will be expanded whenever necessary to meet increased requirements.

Dental instrument production during May increased over the previous month's production approximately 1,400,000 yen and represented the largest monthly production ever reported. Dental material production increased 800,000 yen over April reported production and was the second largest monthly production ever reported. Medical

instrument production during May increased approximately 2,000,000 yen over April production and was likewise the largest monthly production ever reported.

Production of rubber sanitary goods during May increased over April production in the amounts of approximately 10,000,000 pieces and 6,500,000 yen. May production of rubber sanitary goods also represents a new high.

Production of gauze, bandage cloth, and absorbent cotton from stocks of American raw cotton during May, was approximately doubled over that for April and was the largest monthly production ever reported for textile sanitary materials, since the initiation of the program. This increase is attributed to increased quantities of electric power made available to the mills as well as improved deliveries of the raw cotton against scheduled allocations.

May production of textile sanitary materials totaled 105,394,724 yen. Gauze production totaled 119,466 lbs.; bandage cloth, 123,873 lbs.; absorbent cotton, 447,585 lbs.

Production of miscellaneous drugs, pure mapharsen, bismuth subsalicylate, and sulfathiazole during May evidenced a very substantial increase over production of all previous months since the initiation of the program. Pure mapharsen production during May increased to 113.6 kgs. compared to 47.4 kgs. produced during April; bismuth subsalicylate, 646.9 liters for May, for April, 431.1 liters; sulfathiazole for May 6,486 kgs. for April, 2,806 kgs.

Production of penicillin during May reached a new high with 230,270 vials of 100,000 oxford units each or 23,027,000,000 oxford units. This increase is attributed to the ever expanding production activities of the various manufacturers using the submerged method of production. Techniques of production are being improved constantly so that larger percentages of the finished penicillin are passing the national assay standards.

Glass syringe production during May increased to a new high total of 403,639 pieces. This increase, likewise, is the largest monthly production ever reported.

Production of Laboratory animals during May continued to show increases over preceding months and the overall numbers of animals furnished to laboratories were the largest ever yet reported since the initiation of indigenous production of laboratory animals to supply the needs of medical laboratories, assay and diagnostic laboratories, both governmental, private and Occupation Forces.

Production of hexylresorcinol has been initiated and concerted efforts are being made to expand production capacities to manufacture increased amounts of the drug to meet requirements. May production represents the largest amount of crystalline hexylresorcinol manufactured to date.

A total of 4,935 pieces of the various types of DDT dusting and spraying equipment for mosquito and fly control programs was produced during the period 13-19 June.

During the period 13-19 June, 87,745 lbs. of 10% DDT dust, and 50,025 gallons of 5% DDT residual effect spray were distributed. At the same time, 10,508 lbs. of 10% DDT dust, 30,050 gallons of 5% DDT spray, and 4,000 vials of typhus vaccine were received from the manufacturing plants. Total stocks on hand in wholesale houses of the Ministry of Welfare as of 19 June included 3,229,856 lbs. of 10% DDT dust, 324,088 gallons of 5% DDT spray, and 84,993 vials of typhus vaccine.

Distribution

Dusters and sprayers for insect and rodent control were shipped to 16 prefectures under Ministry of Welfare supervision in the period 13-19 June. A total of 3,646 pieces of equipment were distributed as follows:

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsack Sprayer</u>	<u>Semi-automatic Sprayer</u>	<u>Hand Sprayer</u>
Aomori	0	0	20	0
Iwate	0	750	0	150

The Konishiroku Photo Industrial Co., one of the manufacturers of x-ray film, has designated two additional agencies who are authorized to sell its x-ray film to authorized consumers. These are in addition to agencies listed in previous issues of the Weekly Bulletin.

Additional Konishiroku X-ray Film Agencies

<u>Prefecture</u>	<u>Name</u>	<u>Address</u>
Kanagawa	Kato Shakai	No.2268, Nobi Yokosuka City
Nagano	Nakajima Iryo Denki Co., Ltd.	3 chome, Nakamachi, Matsumoto City

There are two manufacturers who are now producing microscopes with dark field apparatus. There are listed below.

Manufacturers of Dark Field Apparatus

<u>Name</u>	<u>Address</u>
Chiyoda Kogaku Kogyo Co., Ltd.	No.531 Mure Mitake-machi, Kitatamagun, Tokyo-To
Fuyo Kogaku Kogyo Co., Ltd.	No.2, 1-chome, Motomachi, Bunkyoku, Tokyo-To

Distribution of dark field apparatus is not controlled. However, since quantities manufactured are limited, the manufacturers are advised by the Ministry of Welfare to make deliveries to prefectures where there is a need. Prefectural governments have been queried for requirements by the Ministry of Welfare and few have indicated any need. It would be advisable for prefectural supply officials who have not already done so, to inform the Pharmaceutical Affairs Section of the Ministry of Welfare of their needs. They may also place orders direct with the manufacturers listed above.

From September 1946 through June 1947 a total of 127 dark field microscopes were distributed. Production was resumed at the end of 1947. Distribution of these started in April 1948. Below is a resume of distribution through May.

SECTION V
NARCOTIC CONTROL DIVISION

Narcotic Agent Training School

With the completion of the second Training School for Narcotic Agents, arrangements have been made to hold a third school in Tokyo in September or October.

Before that time 21 additional agents will be appointed bringing the total to 163 agents, and making 61 agents eligible to attend the third school under the present plans.

Eight pounds of raw opium, alleged to have been smuggled into Japan, were seized in a Tokyo raid and three foreign nationals were arrested. Investigation is continuing to determine the source of the opium and the modus operandi of the smugglers. Instruction given at the training school should result in better liaison and cooperation between narcotic agents, custom agents, and other officials assigned to prevent illegal entry of narcotics into Japan.

SECTION VI
WELFARE DIVISION

Licensed Agencies for Relief in Asia (LARA)

LARA shipments, numbers 76 and 77, of relief supplies for Japan, have arrived in Yokohama. These shipments contained the following supplies:

76th Shipment: Arrived aboard the S.S. Pioneer Boy on 15 June and contained 61.28 tons (food, 17.84 tons - seeds, 0.19 tons - clothing, including shoes, 43.25 tons).

77th Shipment: Arrived aboard the S.S. Mount Davis on 15 June and contained 39.90 tons (food, 28.37 tons - miscellaneous, 1.59 tons - clothing, including shoes, 9.94 tons).

The total LARA relief supply shipments to Japan new amounts to 4,726.32 tons, consisting of the following:

Food	3519.81 tons
Clothing, including shoes	1054.04

Medicines	59.34
Miscellaneous (including soap and seeds)	<u>93.13</u>
Total	4726.32 tons

Heifers for Relief Committee Shipments

This Committee, with headquarters at 30 North Marion Ave., Pasadena 4, California, is planning to ship 2,000 goats, to Japan for use in welfare, education and rehabilitation projects, reference Public Health and Welfare Weekly Bulletin No.68 (for period 12-18 April).

The first shipment of goats totalling 280 (12 bucks, 234 does and 34 kids) arrived in Yokohama on 13 May.

The second shipment of goats totalling 284 arrived in Yokohama on 22 June aboard the S.S. Flying Scud. The tentative allocation of these goats is as follows:

Ministry of Welfare (for welfare institutions)	157 goats
Ministry of Agriculture (for villages in Miyagi and Fukushima Prefectures)	77 goats
Ministry of Education (for one agricultural college prefectures of Hokkaido, Iwate, Chiba, Tokyo and Mie)	50 goats
Total	284 goats

NOTE: The goats in the first shipment were all allocated to the Ministry of Agriculture and Forestry and were distributed in the following villages:

Ibaraki-ken, Tsukuba-gun, Oda-mura
 Saitama-ken, Irum-gun, Kanagawa-mura
 Gumma-ken, Oura-gun, Tarara-mura
 Kanagawa-ken, Kami-gun, Kamihataro-mura
 Shizuoka-ken, Mishima (and neighborhood)

Training Meeting for Welfare Commissioners (Minsei-iin)

A series of nine meetings have been scheduled by the Ministry of Welfare to be held throughout Japan during the month of July. Each meeting will last for two days and is intended to provide information to Minsei-iin concerning their responsibilities.

The meetings will be held under joint sponsorship of the Minsei-iin Federation and the Children's Bureau and Social Affairs Bureau of the Ministry of Welfare. The programs of each of the meetings will include the following: Minsei-iin System and functions; administration of the Child Welfare Law; administration of the Minsei-iin Law (which is now being considered by the Diet) and "Problems Related to Daily Life". The meetings which have been scheduled are as follows:

<u>Prefecture held</u>	<u>Prefectures Included</u>	<u>Date</u>
Gumma	Gumma, Tokyo, Chiba, Saitama, Ibaraki, Tochigi	2-3 July
Kanagawa	Kanagawa, Yamanashi, Shizuoka, Aichi	2-3 July
Fukushima	Fukushima, Aomori, Iwate, Akita, Yamagata, Miyagi, Niigata	7-8 July
Saga	Saga, Fukuoka, Nagasaki, Oita	9-10 July
Kagoshima	Kagoshima, Kumamoto, Miyazaki	12-13 July
Tokushima	Tokushima, Ehime, Kochi, Kagawa	19-20 July
Hiroshima	Hiroshima, Okayama, Tottori, Shimane	23-24 July
Toyama	Toyama, Nagano, Gifu, Ishikawa	23-24 July
Wakayama	Wakayama, Osaka, Kyoto, Hyogo, Nara, Shiga, Mie	26-27 July

It is expected that a total of 612 persons will attend these nine meetings, with approximately 50-100 persons at each meeting. Persons to attend will be selected by the prefectural governor.

SECTION VII SOCIAL SECURITY DIVISION

General

Reference society-managed Health Insurance, reporting provisions now in existence require each Health Insurance society to submit the following data each month, each report bearing the name and industry of the society and the location of its main (head) office since enterprises consisting of more than one establishment report at present only to the prefecture in which the head office is located.

1. Number of insured, both compulsory and voluntary, total and broken down according to sex and wage classes (1-17), and their total taxable pay; also average taxable pay for all insured.

2. Insurance services and cash benefits given, broken down by type of benefit, number of cases, duration (in days), and amount, to wit;

- a. Medical care, i.e. general, dental, and other.
- b. Medical care cash benefits in lieu of medical treatment.
- c. Disability allowance (cash benefits in lieu of wages payable during disabling sickness).
- d. Burial or funeral cash benefit.
- e. Delivery grant.
- f. Confinement allowance (payable like disability allowance - but not cumulative with it - in lieu of wages).
- g. - k. Analogous to a. - e. but applicable to dependents of the insured.

3. Receipts; estimate for the whole fiscal year, actual intake for past month, and cumulative for the completed months of the year.

4. Expenditure, as above (3)

5. Borrowing, repayment, and source of loans.

These reports should be collected by the prefectural Insurance Section, which is required to supply additional data on the point value of medical care benefits and treatment statistics of Health Insurance sanatoria, rest (or convalescent) homes, and medical care received in government hospitals.

The reports from the Health Insurance societies are due to the prefectural insurance office by the end of the month following the month reported on. Ten days later they are due at the Ministry of Welfare.

It has proved impossible to date to obtain complete figures when reports dating back to December are still incomplete. The reason given by the Ministry of Welfare is the incomplete reporting by the following prefectures: Tochigi prefecture (in regard to Suzunoomiya Hospital statistics); Fukuoka prefecture (in regard to rest center and Koseiso Hospital statistics); Chiba, Kanagawa, Toyama, Kyoto, and Kagoshima prefectures (in regard to medical care statistics); Wakayama and Yamanashi (regarding sanatorium statistics); Gumma, Chiba, Fukui, Shizuoka, Osaka, and Oita prefectures and Tokyo-To (regarding statistics on medical care cash benefits paid in lieu of actual care).

The annual reports required for the society-managed part of the Health Insurance program will be summarized in subsequent issues of Public Health and Welfare Weekly Bulletin, as well as reports required under other parts of the social insurance program. For National Health Insurance reporting, see Public Health and Welfare Weekly Bulletins Nos. 67, 73, 75, and 76.

National Health Insurance

A recent field trip emphasized the need for the prompt establishment of an adequate informational, educational, and advisory program in each prefectural insurance office to assist the inactive associations, under National Health Insurance, in their attempt to reorganize.

At a conference of representatives of suspended associations in one prefecture, it was clearly evidenced that they desired to resume operations but needed assistance in the form of advice and informational material for distribution to the potential members. Many had problems which had never been brought to the attention of the prefectural officials.

As an initial step in reorganization, many of the associations have reestablished the visiting nurse service. The nurses, in addition to performing professional services, disseminate information as to the need and value of a community cooperative health insurance program.

SECTION VII - Welfare

SECTION VIII - Social Security

SECTION IX - Memoranda to Japanese Government

SECTION I GENERAL

Information has been received from Civil Information and Education Section, GHQ, SCAP, that all Education Officers of Military Government Teams in Japan, have now been furnished with information on the necessary procedures in processing requests of Japanese Nationals for approval of travel to the United States for the purpose of study in educational institutions. (This information is set forth in SCAP-FEC staff Memo No.21, cite AG 680.2 dated 2 June 1948.) Memos stating visa requirements for both students' visa (generally issued in the case of undergraduates) and temporary visitors' visas (issued in the case of graduate students) have also been furnished to the Education Officer.

Military Government Health Officers, Welfare Officers, Public Health Nurses, Sanitarians, and Veterinarians who receive inquiries from Japanese National applicants wishing to study in these respective fields, or who receive inquiries from American missions, church groups, various organizations or individuals expressing an interest in furnishing sponsorship of such study, are asked to coordinate inquiries with the Education Officer on the Team.

When it has been ascertained that a Japanese National applicant meets the visa requirements, he must present himself, with supporting documents in hand, to Mr. T. H. McGrail, Civil Information and Education Section, Tokyo, and to a representative of the American Consulate. These two individuals have set aside each Wednesday afternoon for this purpose, and are located in Room 605, Radio Tokyo Building, Tokyo.

If the interview is favorable, and papers are in order, the applicant will draw up his formal written request, addressed in a letter to the Supreme Commander for the Allied Powers, APO 500.

SECTION II PREVENTIVE MEDICINE DIVISION

Typhoid Immunization Program

With the passage, by the Diet, of a national Preventive Vaccination Law (effective 1 July 1948) prefectural officials now have legal authority for completing the typhoid immunization program. A brief summary of the law's important points are outlined at the end of this Section.

It is still early enough in the typhoid season to obtain benefits from typhoid immunization. Military Government Health Officers should ascertain that prefectural health officials take the necessary action to insure that a complete course of inoculations (three inoculations with TAB vaccine) are given to all eligible persons.

It will not be necessary at this time to administer booster inoculations to those who have completed a full course (consisting of three inoculations) since September 1947. However, all persons between the ages of three years and 60 years, who have not been inoculated since 1 September 1947, should be given the necessary inoculations immediately, unless there is a contraindication.

The Training of Public Health Personnel

Announcements have been made in this Bulletin concerning the training of public health personnel at the Institute of Public Health in Tokyo. Dr. Oliver R. McCoy, Field Staff Member of the International Health Division, Rockefeller Foundation, has arrived in Japan and will serve as Consultant to SCAP for the purpose of assisting the Institute of Public Health in training of public health personnel.

Dr. McCoy was sent to Japan by the Rockefeller Foundation for the express purpose of assisting the Institute of Public Health in the training of public health personnel. Dr. McCoy's headquarters will be in Public Health and Welfare Section. He will also have an office at the Institute of Public Health and will devote the major part of his time to assisting the Institute's Director and staff in planning and executing a comprehensive training program for personnel who staff the public health Organization throughout Japan.

The Rockefeller Foundation gave the Institute its present buildings and equipment 10 years ago for the specific purpose of teaching public health. The building was completed and officially opened in 1938. There was little teaching of public health in the early years of the Institute's existence, most of its efforts being directed toward research.

In 1943 the Ministry of Welfare moved into the Institute's building where it remained until after the end of the war.

Preventive Vaccination Law

The Preventive Vaccination Law was passed by the Diet 28 June, and went into effect 1 July 1948. In brief, the provisions of the law are as follows:

Responsibility for receiving the required inoculations is placed on the individual himself or, in the case of persons under 16 years of age, on the guardians of such individuals.

Administration of the vaccination schedule in the ward area of Tokyo Metropolis rests with the Chiefs of Health Centers upon order of the governor. In rural areas the head of the city, town, or village administers the schedule in accordance with instructions of the Chief of a Health Center (district); and, in the cities designated by Enforcement Ordinance for Health Center Law dated 2 April 1948, the schedule is administered by the heads of these cities upon order by the Governor.

Provision is made for emergency inoculation by order of the Prefecture Governor or of the Minister of Welfare, as necessary to prevent the spread of epidemics.

Vaccination against smallpox is required routinely of each person two to 12 months after birth, within six months before admission to an elementary school, and within six months before completion of an elementary school.

Inoculation against diphtheria is required routinely of each person six to 12 months after birth, within six months before admission to an elementary school, and within six months before completion of an elementary school.

Inoculation against typhoid and paratyphoid fever is required routinely of each person 36 to 48 months after birth and annually thereafter to the age of 60 years. Initial inoculation is required of each person between the ages of 36 months and 60 years.

Inoculation against pertussis (whooping cough) is required routinely of each person three to six months after birth, and again 12 to 18 months after the first inoculation. Any person between six and 24 months of age and not already inoculated is to be inoculated. The provisions regarding pertussis go into effect on cabinet order not later than 30 June 1949.

Vaccination against tuberculosis is required routinely of all negative reactors to tuberculin, within six months after birth and annually thereafter until 30 years of age, with a tuberculin test prior to each proposed vaccination. Initial vaccination is to be performed on all negatively reacting persons six months to 30 years of age. The provisions regarding tuberculosis vaccination go into effect on cabinet order not later than 30 June 1949.

Records are to be maintained of all vaccinations performed, and certificates of vaccination are to be issued those receiving vaccination.

For information regarding expenditures and penalties the Law itself should be consulted. Ministry regulations and instructions will be published later.

SECTION III VETERINARY AFFAIRS DIVISION

Equine Encephalitis

Between June and October 1947, there were 1106 cases of equine encephalitis reported with a mortality rate of 47.7%. During this outbreak, three Tokyo laboratories were successful in isolating the virus and developed six different strains. Vaccines have been developed from mouse brain and embryo tissues and are in production.

Since 1 June 1948, nine cases of equine encephalitis have been reported with two deaths. The widespread incidence of the disease in 1947 has resulted in a plan of the part of the Ministry of Agriculture and Forestry

officials to immunize approximately 50,000 horses in those areas where the disease occurred. To date vaccines have been issued to Miyazaki and Saitama Prefectures and the program is to start 5 July. The immunization of horses will take place only on a voluntary basis, and owners will be required to submit an application for the immunization of their horses.

An overall immunization program cannot be fulfilled due to the shortage of vaccine which necessitates only active programs in those Prefectures having reported the disease during 1947. The Prefectural Animal Disease Control Teams should be briefed by Military Government Health Officers in the early recognition of the disease and an immediate report to the Ministry of Agriculture and Forestry officials.

Animal Disease Report

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Saitama	Equine Encephalitis	1
Ishikawa	Swine Erysipelas	1
Oita	Blackleg	1
Shizuoka	Swine Erysipelas	2
Nagano	Swine Erysipelas	5
Saga	Swine Erysipelas	1
Gumma	Swine Erysipelas	1

SECTION IV NURSING AFFAIRS DIVISION

National refresher course for clinical nurse instructors, sponsored by the Ministry of Welfare, will be held for four months at Red Cross Hospital, Tokyo, beginning 2 August. Fifty instructors are expected. The proposed curriculum for this course is as follows:

Principles of Nursing Education	60 hours
Nursing Arts	160 hours
Medical Nursing	25 hours
Surgical Nursing	25 hours
Pediatric Nursing	20 hours
Communicable and T.B. Nursing	20 hours
School Administration	30 hours
Anatomy and Physiology	30 hours
Professional Relationships	10 hours
Histry of Nursinsg Outline	10 hours
Ward Administration and Teaching	25 hours
Integrating Public Health Attitudes	6 hours
Practice Teaching	50 hours
Discussion Classes for Practice Teaching	15 hours
Personal Interview	<u>26 hours</u>
Total	512 hours

SECTION V SUPPLY DIVISION

General

Upon receipt of information concerning the earthquake disaster in Fukui and Ishikawa Prefectures, supply agencies of the Ministry of Welfare authorized adjacent prefectures to release reserve stocks of medical and sanitary supplies and equipment for use in the stricken areas. Steps were also taken to ear-mark stocks of critical supplies in anticipation of specific demands. The first request for emergency supplies from the disaster area was received on the morning of 29 June.

The Ministry of Welfare officials have taken action to supply considerable quantities of emergency supplies. Shipments to Fukui and Ishikawa Prefectures have included typhoid and typhus vaccine, tetanus serum, sulfa drugs, penicillin, alcohol, cresol, Halazone tablets, bleaching powder, surgical dressings, splints, blood plasma, materials for treatment of burns, DDT and spraying and dusting equipment.

Supply representatives of the Ministry of Welfare were dispatched to Fukui on 30 July and will remain in the area as long as their services may be required. A supply representative also was dispatched to the Osaka area to coordinate shipments from the locality to Fukui and Ishikawa Prefectures.

Pharmaceutical Affairs Law

The Pharmaceutical Affairs Law was passed by the Diet 30 June and will become effective within 30 days from that date at the time of promulgation.

The Law provides that all drugs, devices and cosmetics meet the requirements and conform to standards set by the Minister of Welfare as recommended by a National Board of Pharmacy established under the Law and appointed from among leaders in the fields of medicine, pharmacy and education. The Law also provides that pharmacists will not be licensed unless they have been graduated from an accredited college or university and have passed a National Pharmacist Examination given by the National Board of Pharmacy.

The maximum penalty under the Law is three years penal servitude or 30,000 yen fine or both which applies particularly to the sale or other distribution of poison and powerful drugs, including sulfanilamide and its derivatives, penicillin and streptomycin, except pursuant to the prescription or under the direction of a licensed physician, dentist or veterinary surgeon.

False or misleading advertising in regard to any factor relating to the preparation, including the efficacy or efficiency of drugs, devices or cosmetics, is prohibited. Certain classes of drugs including barbiturates and narcotics must be plainly labeled with the name, quantity and percentage of such drugs contained therein together with the statement, "Warning-May be habit forming".

The Law will be administered by the Minister of Welfare and urban or prefectural governors through inspectors which will be appointed both on the national and prefectural level. Regulations to be issued by the Minister of Welfare to effectuate the provisions of the Law will be issued, amended or repealed only after public hearings are held in connection therewith.

Distribution

A total of 5,322 pieces of dusting and spraying equipment were distributed to 25 prefectures during 20-26 June, under the direction of the Ministry of Welfare, as follow:

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsack Sprayer</u>	<u>Semi-automatic Sprayer</u>	<u>Hand Sprayer</u>	<u>Power Duster</u>
Aomori	1,440	5	0	0	0
Iwate	0	241	15	0	3

Miyazaki	0	300	0	0	0
Nagasaki	200	0	0	200	0
Total	2,720	1,700	199	700	3

The Ministry of Welfare directed that 719 drums, 50 gallons each, of pyrethrum emulsion be shipped to 9 prefectures in the period 21-27 June. This is equivalent to 1,078,500 gallons of finished insecticide. Shipments are as specified below:

Distribution of Pyrethrum Emulsion, 30X, 21-27 June 1948

<u>Prefecture</u>	<u>Quantity 50-gal. Drums</u>
Hokkaido	147
Aomori	70
Ibaraki	44
Tokyo	151
Aichi	43
Osaka	35
Hyogo	119
Yamaguchi	25
Nagasaki	<u>85</u>
Total	719

Production

A total of 5,125 pieces of the various types of DDT dusting and spraying equipment for mosquito and fly control programs was produced during the period 20-26 June.

During the period 20-26 June 226,160 lbs. of 10% DDT Dust, 22,446 gallons of 5% DDT residual effect spray and 6,650 vials of typhus vaccine were distributed. At the same time 70,000 lbs. of 10% DDT dust, 27,850 gallons 5% DDT spray, and 770 vials of typhus vaccine were received from the manufacturing plants. Total stocks on hand in wholesale houses of the Ministry of Welfare as of 26 June included 2,712,868 lbs. of DDT dust, 280,842 gallons of 5% DDT spray and 79,113 vials of typhus vaccine.

The production of pyrethrum emulsion from 26 May to 10 June totaled 2,224 drums (50 gallon). A total of 5,441 drums have been made since production started 10 April.

SECTION VI
NARCOTIC CONTROL DIVISION

The Narcotic Control Law and the Marihuana Control Law were passed by the Diet 28 June with 10 July set as the effective date.

The Narcotic Control Law continues in effect as law, the strict provisions of SCAP directives and Ministerial Regulations under which narcotics have been brought under control during the past 33 months. The Law provides that persons who are addicted to narcotics so as to be a menace to the public welfare because of their addiction or who lose their self control as a result of narcotic addiction, shall be subject to penal servitude of not less than six months nor more than one year. If such persons possess narcotic illegally they are subject to the maximum penalty under the Law which is five years penal servitude or 50,000 yen fine or both.

Loss serious violations of the Law make a person subject to a penalty not exceeding one year penal servitude or a fine not exceeding 10,000 yen fine or both. The smallest penalty provided for by the Law is 5,000 yen fine for minor violations of the Law by registrants. The gradation of penalties was written in the Law to encourage the Courts to assess severe penalties for willful violators of the Law.

The Marihuana Control Law provides that marihuana can only be grown for fiber purposes, limits the area or such production, and continues in effect the strict control which have been operative as a result of SCAP directives. Quarterly reports rather than monthly reports are required from all persons registered under the Law to grow marihuana for fiber purposes. The maximum penalty provided by the Law is three years penal servitude or 30,000 yen fine or both.

SECTION VII
WELFARE DIVISION

Dobo Engo Kai (National Relief Association)

The National Headquarters Office (Tokyo) of Dobo Engo Kai have adopted a policy of allowing each Branch Officer (prefectural) to make their own decision regarding affiliation with the Community Chest.

Branch Offices of Dobo Engo Kai who are affiliated with the Community Chest will depend on the Community Chest for their main financial support and will not conduct membership (fund) campaigns. Branch Offices not affiliated with the Community Chest will conduct separate membership (fund) campaigns.

The following communication, National Relief Association Instruction #16 (Do Chi Shi No.16) dated 29 June 1948, subject: "Change of the Association's Policy with Regard to the Community Chest and Raising Members" has been forwarded by the Acting Chief Director, Dobo Engo Kai to the Chiefs of each Prefectural Branch:

"We request your acknowledgement of the change in our policy with regard to the above-stated matter, which was recently decided as the result of our consultations with the competent authorities.

"In brief, the main resources of the Branches should hereafter rely upon either the Community Chest or the Membership System. Our pathway must be one-fold, not two-fold.

"Needless to say, each Branch may choose either one of the two methods to cope with its local situation. Uniform steps to bind the Branches throughout our country are not necessary. Those Branches which have already started membership activities and are also members of the Community Chest are now directed to prefer one of the two to the other, in accordance with this new policy, without loss of time.

"Furthermore, our Headquarters should submit a final report to the General Headquarters of the SCAP by July 25, gathering and basing on reports of new plans decided by every Branch. Therefore, please send in your reply without delay not later than July 20."

Heifers for Relief Committee Shipments

Reference: Public Health and Welfare Weekly Bulletin No.78 (for the period 21-27 June 1948)

The total number of goats received in the second shipment was 271 rather than 284 and of this total 17 died. Therefore a revision in the allocation of goats reported previously (reference above) has been necessary and is given below:

*Ministry of Welfare (for welfare institutions)	128 goats
Ministry of Agriculture	77 goats
Ministry of Education	<u>49 goats</u>
Total	254 goats

*The Ministry of Welfare allocation (distribution completed) is as follows:

<u>Prefecture</u>	<u>Number of Goats</u>
Hokkaido	39
Aomori	13
Iwate	25
Akita	15
Miyagi	9
Yamagata	6

Fukushima	21
Total	128

Rehabilitation

The second general meeting of the National Rehabilitation Commission was held at the Tokyo Social Work School, 2 July 1948. The principle subjects presented for consideration of the conferences were: "Now jobs the Blind" and "Prosthetic Appliances".

The National Commission and its committees are now gathering information and are charged with the detailed development of programs for the medical care, training, guidance and placement of the physically handicapped, such plans to be devised as to preclude preferential treatment for ex-service or other groups.

A representative of Public Health and Welfare Section, in exploring needs for the group of physically handicapped, pointed out to the commission the many groups still requiring aid, in addition to the blind, deaf and dumb and amputees, are the paralytic, the arrested tubercular, the diabetic, the mentally deficient and the cardiac case.

A prefectural commission or committee will be organized shortly in each prefecture and thereafter in each city and gun as needed. Persons "of knowledge" in administration, medicine, welfare and education aided by representatives from management and labor, are to be included at each level of operation.

With inclusion of additional groups needing rehabilitation, it is estimated the present blind, deaf and dumb and amputee group numbering 600,000 will be more than doubled.

Public Assistance Statistical Reports - May

The Ministry of Welfare reports that the following prefectures' statistical reports for May had not reached the Ministry as of 28 June: Hokkaido, Miyagi, Ibaraki, Gumma, Toyama, Aichi, Tokushima and Kagoshima.

Social Work Training Course - Nagasaki

The Ministry of Welfare has been advised that a three day welfare training course is scheduled to be held in the city of Nagasaki, Nagasaki Prefecture, Kyusyu on 9, 10 and 11 August. The program will be under the auspices of the Nagasaki YMCA and the Prefectural Department of Welfare. Meetings will be held at the Nagasaki YMCA. The tentative program includes consideration of the following subjects: Theory of Social Work; Case Work; Group Work; Child Welfare; Social Work Education and the Theory of Community Chests.

Training Meetings for Minsei-iin

Public Health and Welfare Weekly Bulletin No.78 for the period 21-27 June, carried information regarding a series of nine Minsei-iin meetings to be held during the month of July. The Ministry of Welfare advises that it has been necessary to change the dates of four of these meetings. The revisions are:

Prefecture held	Prefectures Included	New Dates
Kanagawa	Kanagawa, Yamanashi, Shizuoka, Aichi	End of July
Fukushima	Fukushima, Aomori, Iwate, Akita, Yamagata, Miyagi, Niigata	27-28 July
Hiroshima	Hiroshima, Okayama, Tottori, Shimane	15-16 July
Toyama	Toyama, Nagano, Gifu, Ishikawa	22-23 July

New Welfare Commissioner (Minsei-iin) Law

The Japanese Diet on 30 June passed the new Minsei-iin Law which will provide a new legal basis for the appointment and work of the Minsei-iin. This Law replaces Imperial Ordinance No.426, issued in September 1946. The new Law will be promulgated, effective 1 August. Information concerning the Minsei-iin may be found in Public Health and Welfare Technical Bulletin (TB-PH-WEL 7), subject: Minsei-iin issued November 1947. A new Cabinet Order as well as a Ministerial Order to implement the new law will be issued by the Ministry of Welfare in the near future.

Ministry of Welfare Publication

The first issue of The Welfare Times (Kosei Jiho), a magazine issued by the Ministry of Welfare, was published on 15 May. The magazine contains several articles on social work subjects. It is published by the Ichiyasha Publishing House, Tokyo. The cost per copy is 35 yen. The following are the titles of some of the articles which appeared in the first issue:

- Public Health and Welfare Organization in Japan (Brig. Gen. C. F. Sams)
- New Civil Law and Social Work (S. Hozumi)
- Study of Modern Social Work
- Welfare Work (S. Suzuki, Editor, Japanese Edition, Readers Digest)
- Worries about Children - Management of Children's Institutions (K. Matsushima)
- To Japanese Children (S. Yoshimi)

This magazine is published in Japanese and has not been published in English. The second issue is now in the process of preparation.

Notices to Governors Concerning Repatriation Trains

Chiefs of Repatriation Centers at Maizuru and Sasebo are required to notify prefectural governors of the following facts:

1. Time of departure of train from Center.
2. Time expected to pass through each main station enroute.
3. Numbers debarking at main stations in each prefecture.

Since the proper reception and handling of repatriates in each prefecture is an important phase of the program, it is suggested that Military Government Teams determine that such notifications are being received and acted upon by the proper local governmental agencies.

Osaka School of Social Work

A School of Social Work will open in Osaka in October of this year. The school will operate as a branch of the Japan School of Social Work located in Tokyo. The school will be managed, however, by the Osaka Prefectural Government, the Ministry of Welfare and the Japan Social Work Association. The location of the school will be: Osaka Prefecture Social Welfare Hall, 2 Tajima Cho, Minami-ku, Osaka.

A one year graduate course will be offered which will be similar to the one year course of study now offered by the school of social work in Tokyo. In order to be admitted to the graduate course, the applicant must be a university graduate or been graduated from a technical college (Semmon Gakko). In some cases persons with at least three years experience in welfare work may be admitted to the school although they do not have the desired amount of formal education. A total of fifty students will be admitted to the one-year course, with limited dormitory facilities provided by the school.

The tuition for the course has been set at 1200 yen per year in addition to a 50 yen admission fee. A total of five scholarships will be available, the amount of which has not been announced. The scholarships will be sufficient, however, to cover tuition and some monthly allowance. It is expected that further scholarships will be provided by local public and private welfare agencies for students who are qualified to enter the school. Welfare Officers of Military Government Teams can be of assistance in the development of the new school of social work by discussing the school with prefectural welfare officials and by encouraging qualified person to apply for admission.

SECTION VII SOCIAL SECURITY DIVISION

Social Security

The report of the Social Security Mission has been accepted by SCAP, as a document of reference for study and analysis by interested SCAP Staff Sections and by the Japanese government to assist in providing a sound foundation of social security for the Japanese people. A copy of the report is to be given to the Japanese government.

The maintenance of comprehensive and adequate social security program in Japan based on democratic precepts and within the limits of the nation's resources was declared to be an approved Occupation objective.

Mutual Aid

In continuing the program of transferring all substantive provisions of Imperial Ordinances into law, the Diet has enacted the National Public Service Mutual Aid Association Law. The provisions of the 13 Imperial Ordinances providing for Mutual Aid Associations have been incorporated into one law providing uniformity of coverage for employees of the national government.

While the Imperial Ordinances provided for both on-duty and off-duty injury and illness benefits for some of the government employees, this Law provides benefits for off-duty causes only. The Minister of Finance has proposed a separate program for providing accident compensation for all government workers.

Under this Law, Mutual Aid Associations will be formed in the various branches of the government. The chief of the governmental agency within which an association is formed will be responsible for its administration with the assistance of a Managerial Committee.

Although there is some overlapping of this program and that under the Government Pension Law, which provides old age and invalidity pensions for officials only, and the Seamen's Insurance Law, which covers all seamen (government employees as well as others), the enactment of this Law and the proposing of a law for uniform coverage for accident compensation for all government employees denote steps toward unification and simplification of these two programs.

SECTION IX MEMORANDA TO JAPANESE GOVERNMENT

<u>PHMJG</u>	<u>Date</u>	<u>Subject</u>	<u>Surveillance</u>	<u>Distribution</u>
67	6/29/48	Distribution of Materials for the School Lunch Program.	No	MG, Hq 8th Army

NOTE: Directive to Ministry of Welfare advising provisions under which no objection is offered to a "Report on the Distribution Organ, etc., of Materials for the School Lunch".

SECTION I
PREVENTIVE MEDICINE DIVISION

Sanitation

Cement Allocations for Water Works and Sewage Systems, reference: AG 411.8 (7 Jul 48) PH, dated 7 July 1948, subject as above. Limited supplies of cement and other critical materials for the repair of water works and sewer systems are available for immediate distribution. Construction plans and estimates, together with recommendations and justification, are to be prepared quarterly by the Sanitation Bureau of the Prefectural Department of Health and submitted to the Prefecture Reconstruction Board for checking to determine that the design and proposed operations are properly planned along sound engineering principles. They are then forwarded to the Ministry of Welfare.

Priorities for public water supply projects should be established on the following basis:

1. Repairs and renovation (including distribution systems) of water works that will result in an immediate increase in the quality and quantity of the supply.
2. Completion of partially constructed projects that are considered urgently needed for domestic uses.
3. New installations including extensions to existing systems.

Priorities for sewer systems repair and construction projects should be established on the following basis:

1. Repair and renovation of existing systems - including construction of slabs to cover street drains.
2. Completion of partially constructed systems (including house connections to sanitary sewers).
3. New installations.

Venereal Disease Prevention Law

The Venereal Disease Prevention Law was passed by the Diet on 3 July, to be effective 1 September. Certain preparations will need to be made prior to that date to insure adequate diagnostic and treatment facilities for implementation of the law. In brief, the provisions of the law include the following:

Physicians are to submit a written report of diagnosed cases and the names and addresses of contracts to the local Health Center within 24 hours (article 6).

Physicians are to report to the local Health Center patients who fail to carry out instructions as to treatment and preventive measures, or who lapse treatment (article 7).

Persons entering matrimony are to have a health examination to determine freedom from Venereal Disease ("shall try, in advance, to exchange their health certificates prepared by a physician") (article 8).

Women who become pregnant are to have a health examination to determine freedom from Venereal Disease (article 9).

When necessary, contacts of patients not under treatment by a physician, habitual prostitutes and suspects may be required by government order to have a health examination, if there is reasonable evidence to suspect the presence of venereal disease. (Articles 10, 11, 12).

Patients may be required to report on treatment they are taking, and may be required to enter hospitals or clinics if necessary during the infectious period. (Articles 14, 15).

Examination and treatment facilities are to be established by prefectures and by cities, towns and villages as provided by Ministerial Ordinance (Article 16).

Costs of examination and treatment are to be collected from the individuals concerned, except that those unable to pay shall be given free examination and/or treatment. Net costs for administering this Law are borne jointly by local public bodies, prefectures, and the national treasury (Articles 17, 18, 19, 21).

Expenditures for “dissemination of the knowledge of the treatment and prevention of VD executed by the prefecture” are subsidized to not exceed on half, within the limit of the budget (national) for this purpose. (Article 20).

In case of compulsory examination of contacts, prostitutes, and suspects, the order for examination must be accompanied by a notification to the persons concerned that he (or she) has a right to appeal to a court prior to the examination for a withdrawal of the order. This appeal may be made if the individual concerned claims that he (or she) does not come within the provisions for compulsory examinations for which there must be reasonable evidence to suspect the individual to have venereal disease or to be a habitual prostitute. In case of appeal, the examination will not be performed before the court decision is made. (Article 25).

Penalties are provided for those who, knowing that they have venereal disease in an infectious stage, act so as to infect others. Penalties are also provided for those who assist or solicit or provide a place for prostitution in the presence of venereal disease in an infectious stage. (Articles 26, 27, 28).

All information obtained by physicians and health officials in the course of examination, treatment and reporting of cases, contacts and suspects is not to be revealed without proper reasons. Individuals are also prohibited from giving false information as to the identity of contacts, or from hindering public officials in the performance of their duties. (Articles 29, to 32).

SECTION II MEDICAL SERVICES DIVISION

Civilian Hospital Strength Report for the week ending 28 May shows a total of 3,451 hospitals with bed capacity of 210,562, of which 98,010 were occupied. During this period, 295,942 out-patient treatments were rendered.

SECTION III DENTAL AFFAIRS DIVISION

The Dentists Law was passed by the Diet, 4 July, and becomes effective 1 October. It sets forth the requirements for qualification for practice and provides for national examination, registration and licensing. Penal rules for violation of the provisions of this law are included.

The Dental Hygienist Law, passed by the Diet 4 July to be effective 1 October fixes qualification requirements and provides for the examination and licensing of dental hygienists.

SECTION IV VETERINARY AFFAIRS DIVISION

A representative of Public Health and Welfare Section inspected the sea-food processing establishments in Shimonoseki, Yamaguchi Prefecture and found that good sanitary measures are being taken in the handling of all sea-foods. Five establishments were inspected and each meets requirements for processing sea-food for export use. Changes in the handling of sea-food being unloaded from boats to the dock were suggested and will be carried out.

The Yamaguchi Veterinary and Livestock School located at Ogori was inspected. The status of this School is expected to be changed in the near future as it will be absorbed as a branch of the Yamaguchi National University. Future plans will be discussed with the Ministry of Education in order to have it placed on the accredited list.

Animal Disease Report

The following report was submitted by the Ministry of Agriculture and Forestry listing new outbreaks of animal diseases for period 3-9 July.

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Nagasaki	Texas Fever	1

Niigata	Swine erysipelas	1
Nagano	Swine erysipelas	2
Kagoshima	Swine erysipelas	1
Hokkaido	Swine erysipelas	1
Gumma	Swine erysipelas	41
Kyoto	Swine erysipelas	5
Tottori	Swine plague	1
Tottori	Blackleg	1

Note: Serums and vaccines were sent to Gumma Prefecture for use in controlling the outbreak of Swine erysipelas.

SECTION V NURSING AFFAIRS DIVISION

First National Hospital School of Nursing

Miss Yoshida has been appointed as Director of Nursing Service. Conferences have been held regarding the reorganization of chart room, setup for administration of medications and hypodermics and the moving of the nurses dining room to a better place.

The total number of nurses by classification is as follows:

Supervisors and Instructors	15
Older graduates	114
New graduates	62
Affiliates	4
Students (2nd Year)	<u>31</u>
Total	226

Tokyo Model Demonstration School of Nursing

Student government has been organized by the student body with ##### elected and an advisor appointed. The students have entered whole heartily into this and it will serve to help them understand the necessity of rules and cooperation in this new Japan.

The nursery is being enlarged and remodeled as 35 baskets are no longer sufficient to take care of the increased maternity cases.

Nursing Affairs Section, Ministry of Welfare

A Nursing Affairs Section in the Ministry of Welfare is being established and Mrs. Hora of Osaka has been appointed as Chief. This is a great achievement for the Japanese nurses.

Publications

Dr. C. Ohta has sent out notices regarding the expected date of release on several pamphlets, Child Care, Infant Care and two on Tuberculosis. Sent orders direct to Dr. C. Ohta for these publications. Name and address is in the Japan Nursing Journal.

SECTION VI SUPPLY DIVISION

General

Comments contained in Monthly Activities Reports of Military Government Teams are carefully reviewed with supply deficiencies being reported to Ministry of Welfare officials promptly for correction. These comments are of material assistance in Public Health and Welfare Section in accomplishing supply and fiscal programs. It is suggested that detailed information be included whenever possible in order to expedite action at the Ministry of Welfare level.

Production

A total of 4,427 pieces of the various types of DDT dusting and spraying equipment for mosquito and fly control programs was produced during the period 27 June - 3 July.

During the period 27 June - 3 July, 411,230 lbs. of 10% DDT dust, 39,090 gallons of 5% DDT residual effect spray, and 4,052 vials of typhus vaccine were distributed. At the same time, 68,000 lbs. of 10% DDT dust, 38,155 gallons of 5% DDT spray, and 1,600 vials of typhus vaccine were received from the manufacturing plants. Total stocks on hand in wholesale houses of the Ministry of Welfare as of 3 July include 2,369,638 lbs. of 10% DDT dust, 252,322 gallons of 5% DDT spray, and 76,661 vials of typhus vaccine.

Distribution

Dusters and sprayers for insect and rodent control were shipped to 25 prefectures under Ministry of Welfare supervision in the period 27 June - 3 July. A total of 3,308 pieces of equipment were distributed as follows:

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsack Sprayer</u>	<u>Semiautomatic Sprayer</u>	<u>Hand Sprayer</u>	<u>Power Duster</u>
Tokyo	150	67	0	50	0

Total	940	1,864	274	220	10

The Ministry of Welfare directed that 418 drums, 50 gallons each, of pyrethrum emulsion be shipped to 3 prefectures in the period 28 June - 4 July. This is equivalent to 627,000 gallons of finished insecticide. Shipments are as specified below

Distribution of Pyrethrum Emulsion, 30X, 28 June - 4 July 1948

<u>Prefecture</u>	<u>Quantity 50-gal. Drums</u>
Tokyo	343
Toyama	25

Hyogo	<u>50</u>
Total	418

A recent release of surplus vehicles was made by the British Forces to the Japanese Government. The Ministry of Welfare was allocated eight 3-ton trucks which are being distributed to eight local agencies throughout Japan to be used for garbage collection, and transportation of supplies and personnel. One truck will be allowed each of the following agencies:

Public Health Institute, Tokyo
 Social Affairs Section, Public Welfare Dept., Hokkaido Gov. Bureau
 Construction Section, Welfare Supply Bureau, Tokyo Metropolis
 Cleaning Section, Health Bureau, Yokohama City
 Health Section, Public Welfare Dept., Chiba City
 Children Section, Public Welfare Dept., Osaka City
 Health Section, Kochi City
 Public Health Section, Health Bureau, Tokyo Metropolis

Anti-rabies vaccine (canine) shipments were ordered by the Ministry of Welfare to 19 prefectures in May.

DISTRIBUTION OF ANTI-RABIES VACCINE, MAY 1948

<u>Prefecture</u>	<u>Unit: cc</u>
Hokkaido	16,000
Aomori	10,000
Iwate	500
Ibaraki	10,000
Gumma	5,800
Saitama	1,400
Chiba	12,000
Toyama	800

Total	1,812,375

Allocation of 25,500 bottles of imported santonin tablets, 1/2 grain, 100 tablets to a bottle, was made to all prefectures on the basis of population. Notification was sent to the prefectures under date of 9 June, Medical Affairs Bureau Institution (I-Hatsu) No.231. Santonin manufactured in Japan was allocated for the period July, August and September on notification dated 11 June Medical Affairs Bureau Instruction (I-Hatsu) No.234 to each prefecture. A total of 9,900,000 tablets was allocated as listed below.

Listed below also are allocations for the months of July, August and September for sulfathiazole tablets and penicillin. Reference is made to paragraphs in Weekly Bulletin No.78, 21-27 June, describing difficulties in distribution of these two items. It is desired that prefectural officials make full allocation of these two items from allowable inventories to all authorized to purchase these supplies.

ALLOCATIONS FOR JULY, AUGUST AND SEPTEMBER

<u>Prefecture</u>	<u>Imported Santonin Tab.</u> (unit: bottle, 100 tablets)	<u>Santonin</u> (unit: tablet)	<u>Sulfathiazole Tablets</u> (unit: tablet)	<u>Penicillin</u> (unit: vial 100,000 O.U.)

SECTION VII
NARCOTIC CONTROL DIVISION

Narcotic Control Activities Report - May

The May report of narcotic control activities from the Ministry of Welfare contains the following information:

Total registrants	83,463
Arrests - Registered persons	37
Unregistered persons	90
Convictions - Registered persons	8
Unregistered persons	39
Thefts of narcotics (including three hospitals)	27
Losses by fire	6

Penalties for registrants varied from 250 yen fine to eight months penal servitude. Penalties for non-registrants varied from 500 yen fine to two years penal servitude with 17 of the defendants being sentenced to penal servitude. Charges against 29 defendants were dropped because of insufficient evidence. Sixty-four registrants were admonished and six minor violations were disposed of administratively.

The report also summarizes the activities of narcotic agents as follows:

Inspections of registrants	3,224
Investigations originated	317
Investigations concluded	330
Investigations not concluded	297

Admonition of Registrants

At the training school held in June, narcotic agents were advised to examine their records to determine the principal causes for admonition of registrants in each prefecture. It was emphasized the number of admonitions may be materially reduced by talking to as many groups of meetings of registrants as possible, calling to their attention these principal causes, and warning them that prosecution of any registrants, who has been so advised, will follow on the next occasion of an inspection if there is evidence that corrective action has not been taken.

SECTION VIII
WELFARE DIVISION

Juvenile (Court) Law

The Diet on 5 July passed a new Juvenile Law to be effective on 1 January 1949, which replaces the former Court Law (Law No.42 of 1922).

An important provision of the new Law is the granting to the Family (Domestic Relations) Court of jurisdiction over juveniles rather than to a separate Juvenile Court. By placing jurisdiction over juveniles in the Family Court, it is hoped that court facilities can be provided for children in all parts of Japan and not merely in those areas where a separate Juvenile Court has been established in the past.

Under the new Law as well as the previous Law, jurisdiction of the court is much more limited than in Juvenile Courts in the United States. It is expected that needed governmental child welfare services in Japan will be provided by the Child Welfare Sections of Prefectural Departments of Welfare and by Child Welfare Centers. Through such a division of function it is hoped that necessary services can be provided with a minimum of duplication and overlapping of activities of the court and the child welfare program. The court's jurisdiction is limited to delinquent children who are actually charged with the violation of a criminal statute (Item 1 of Article 3) except for certain children who are delinquent or in danger of becoming delinquent (Item 2 of Article 3).

The court is not granted jurisdiction of children under the age of 14 other than those charged with the violation of a criminal law, unless transferred to the court by the governor or head of a Child Welfare Station.

The new Juvenile Law will increase the responsibilities of the Child Welfare Stations authorized by the Child Welfare Law. Articles 3, 18 and 24 are the most important in this regard. Article 3 sets forth the jurisdiction of the court over juveniles; Article 18 authorizes transfer of cases to the child welfare authorities and Article 24 controls the disposition of children. These three articles are quoted below:

“Article 3: The Family Court shall have the jurisdiction over the following Juveniles:

- (1) Any juvenile who has committed a crime or any juvenile under 14 years of age whose acts or behavior has violated any criminal law or regulation.
- (2) Any juvenile of whom there is apprehension that he may commit a crime, in view of his character or surrounding circumstances, because of the existence of the following reasons:
 - (a) He habitually refuses to submit himself to the reasonable control of his guardian.
 - (b) He repeatedly deserts his home without good reason.
 - (c) He associates with persons of a known criminal or immoral nature, or frequents any place the existence of which is in violation of law.
 - (d) He habitually acts so as to injure or endanger his own morals or those of others.

The Family Court may put a juvenile under fourteen years of age to trial who comes under Item 2 of the preceding paragraph, only when the prefectural governor or the Head of the Child Welfare Station transfers him to the Court”.

“Article 18”:

The Family Court shall, when it deems it proper, upon investigation, to take measures in accordance with the provisions of the Child Welfare Law (Law No.164 of 1947), render a ruling to transfer the case to the competent prefectural governor or the head of Child Welfare Station. However, this shall not apply to the cases which have been transferred from prefectural governors or heads of Child Welfare Stations.”

“Article 24”:

The Family Court shall, by means of a ruling, effect any of the following protective dispositions for a case in which the Court has conducted a trial, except the cases stated in the preceding Article:

- (1) To be placed under the supervision of the Juvenile Protection Committee (Shonen Hogo-iin Kai).
- (2) To be committed to a Home for Juvenile Training and Education (Kyogoin) or Protection Institution (Yogo-shisetsu).
- (3) To be committed to a reformatory (Shonen-iin).

In the case of the protective dispositions mentioned in Items 1 and 3 of the preceding paragraph, a Juvenile Protective Committee (Shonen Hogo-iin Kai) may be caused to take steps concerning the adjustment of the family affairs and other environments of the juveniles”.

Pamphlets Inclosed with this Issue

Inclosed with this issue of the Weekly Bulletin are: (1) a pamphlet titled “Standards of Child Health, Education and Social Welfare”, a publication of the U.S. Children’s Bureau, and (2) a pamphlet titled “What is the Child Welfare Law”, issued by the Japanese Children’s Bureau, for use of Military Government Welfare Officers.

The U.S. Children’s Bureau pamphlet was secured in a quantity only sufficient to make available one copy to each Child Welfare Board. It is therefore suggested that Welfare Officers copy any pertinent data contained in the pamphlet previous to its presentation. It is recommended that each Board establish and maintain a library of similar material for reference use.

The aforementioned Japanese pamphlet was issued in limited numbers to prefecture welfare departments, but the Children’s Bureau reports that more copies are now available and may be secured through regular Japanese channels.

Public Assistance Statistics - May

The Ministry of Welfare has submitted the following statistics for May: Figures for April 1948 and for May 1947 are for purposes of comparison:

	<u>May 1948</u>	<u>April 1948</u>	<u>May 1947</u>

School Lunch Program

A report submitted by the School Lunch Coordinating Committee, which includes representatives from the Ministries of Welfare, Education, Agriculture and Forestry and Transportation, resulted in the issuance of PHMJG (#67), offering no objection to the Committee's report, subject to the following exceptions:

1. The use of the Kodans in the distribution of School Lunch supplies is not to be constructed as permitting profits to the benefit of any private individual group or corporation.

2. Prices for foodstuffs, indigenous and imported, for the School Lunch Program must represent the lowest possible figure, consistent with good government and before being officially established for the School Lunch Program, must be approved by the Supreme Commander for the Allied Powers.

3. Sufficient technical supervisory staff must be provided by the Ministry of Education at national, prefectural, and local levels of responsibility to adequately supervise the School Lunch Program to the end that distribution, storage and utilization shall be under control of the government at all times, and that the greatest possible food value is obtained from School Lunch supplies, imported and/or indigenous.

4. In the face of the current critical food supply status that now obtains in Japan, every encouragement is to be given to increase of yield of present school farms' facilities to increase indigenous contribution to the School Lunch Program, consistent with progressive educational techniques and schedules, and in harmony with the Land Reform Program. Attention should be given to the development of school gardens for the School Lunch Program within burned out areas of the urban centers of Japan.

The above points, reference paragraphs 1 through 4, will serve as an outline of items to be included in the observation of the School Lunch Program by Welfare Officers in cooperation with Education Officers. Deviations from points contained in 1 through 4 should be reported through technical channels. Encouragement in the development of supervisory personnel should be given as well as the development of school gardens wherever practicable in the interest of maximum production for the School Lunch Program.

Dobo Engo Kai (National Relief Association) and Saisei Kai (Medical Relief Association).

Reference: Public Health and Welfare Weekly Bulletin No.79 (for the period 28 June - 4 July).

An informational communication to all prefectural governors regarding the relationship of Dobo Engo Kai and Saisei Kai to the Community Chest has been issued, Social Affairs Bureau, Ministry of Welfare, Amended Instructions, (Sha-Otsu-Hatsu No.105, dated 8 July), the content of which is given below for the information of Military Government personnel concerned:

“Subject: Community Chest and the Membership Campaign of Saisei Kai and the National Relief Association.

“It has been decided, as a result of several conferences between the parties concerned, that fund raising by the Saisei Kai (Medical Relief Association), Imperial Gift Foundation, and by the Dobo Engo Kai (National Relief Association). Foundational Juridical Person, should choose either one of the two methods, namely, to join the Community Chest or to conduct a separate membership campaign. We understand that separate instructions to this effect are being sent to the prefectural branches of the two organizations from their respective headquarters.

“The view is held by some that these two organizations should join the Community Chest. However, under different local prefectural circumstances, independent and separate fund raising through membership campaign or other means might be necessary. Such campaigns, however, should avoid conflicting with the nation-wide campaign of the Community Chest and/or the Japanese Red Cross, and any organizations which undertake separate fund or membership campaigns should not be members of the Community Chest. Action described above has been taken in view of some confusion caused by some branches of these organizations being a member in the Community Chest last year and have since or are now conducting or planning to conduct membership and/or fund campaigns of their own, while expecting to also benefit from the Community Chest campaign this Fall.

“This information is being forwarded to you to acquaint you with such possible errors and to assist you in your understanding and relationship with the Community Chest and other fund raising organizations.”

Institutions for the Blind

The Diet passed, on 4 July, a bill for the Protection of the Blind. This legislation now transfers the operation of the two existing quasi-governmental institutions, located at Shiobara and Tokyo, from private administration to that of governmental administration.

SECTION IX SOCIAL SECURITY DIVISION

General

In further continuation of the outline of current reporting requirements (see Public Health and Welfare Weekly Bulletin Nos. 67, 73, 75-78), annual reports prescribed for the society-managed part of Health Insurance are summarized below:

1. A complete and itemized statement of income and expenditure showing the original estimate, the actual figures, and an explanation of the difference. Benefit costs must be broken down according to classes of benefit paid.
2. A complete and itemized statement of the society's assets as of the end of the fiscal year.

(Both statements are due at the prefectural Insurance Section not later than 31 July).

3. Data for the Calculation of the Subsidy from the National Treasury. This report must contain annual cost of benefits broken down according to classes of benefits offered in the past year and expected to be offered in the coming year. (The estimated subsidy must be calculated on the basis thereon.) The long-term cost, including depreciation, must be pro-rated. Also a statement is required showing the number of insured at the end of each month of the past fiscal year.

(This report is due to be submitted to the Ministry of Welfare via the prefectural Insurance Office not later than 18 April).

Unfortunately, extreme laxity seems to prevail in regard to the first two reports. Sometimes they are submitted with considerable delay, sometimes not at all. Energetic measures to obtain prompt reporting have been requested.

National Health Insurance

The Amendments to the National Health Insurance Law outlined in Public Health and Welfare Weekly Bulletin No.74 for 24 - 30 May were passed by the Diet and became effective on 1 July. Ordinances designed to

implement and smooth enforcement of the law as amended are now being cleared by SCAP. Translations of the law as revised are being prepared.

The Social Insurance Medical Fee Payment Fund Law

This Law was passed by the Diet on 3 July to be effective 1 August. The primary purpose of the Law is to provide a system for prompt and appropriate payment of the medical care claims submitted by the purveyors of medical care and allied services under the Health Insurance Law, National Health Insurance Law, Seamen's Insurance Law, and the Mutual Aid Associations Law.

The principal provisions are:

1. The insurer which participates will have on deposit in the Fund an amount sufficient to meet its monthly medical care claims.
2. The Fund will receive all claims for medical care given to the insured under the aforementioned laws by those doctors appointed or designated by agreement as insurance doctors and shall make prompt and appropriate payment of the claims calculated in accordance with the medical care fee schedule determined by the Minister of Welfare.
3. The Fund will provide for the adult and review of all claims subsequent to the initial payment.
4. The Fund will compile fiscal and statistical reports concerning medical care claims and the cost of medical under the social insurance programs.
5. The central office will be in Tokyo, composed of eight directors and four or more inspectors, and will determine policies and supervision for the efficient operation of the Fund.
6. There will be a branch office in each prefecture with secretaries and inspectors for handling the operation of the Fund at the prefectural level.
7. When necessary, sub-branch offices may be established where it is considered essential for efficient and convenient operation.
8. The branch and sub-branch offices will handle the payment, audit, and review of the medical care claims in their respective areas.
9. The Law provides for representation of the purveyors of medical care and allied services at each level of operation and in the review of medical care claims.
10. The Law does not compel participation in this program on the part of the insurers. All are expected to join in view of the demands of the medical profession for prompt payment of its medical care claims.

Health Insurance Law

The amendments to the Health Insurance Law passed the Diet on 3 July to be effective 1 August. The amendments as proposed by the Insurance Bureau, Ministry of Welfare, were passed without alternations.

While the amendments provide some additions and changes, they were mainly for transferring provisions affecting individuals' rights and privileges from Cabinet Order into Law.

The principal provisions affected by the amendments were as follows:

1. The purpose of the Law in providing protection and the eligibility of dependents has been more fully explained and clarified in Article 1.
2. The ceiling on wages for computing benefits and premium was increased from 5100 yen to 8100 yen per month, thus making this law uniform with the other social insurance laws.

3. The premium rate continues to be shared equally by employee and employer; however, the maximum amount an employee can be assessed has been reduced from 3% to 2.5% for society-managed and 2.2% for governmental-managed, while the employer may increase his share if he so desires.

4. The penalties for delinquency of employers in making premium payments to the insurer has been increased and the procedure for collecting strengthened.

5. The government subsidy for the cost of administration has been permitted to remain an undesignated amount except that it is to be within the limits of the national budget. In the discussion regarding this subject it was the consensus of opinion that the amount should be approximately 10% of benefit costs.

6. The policy stated in the Cabinet Order for coordination with the Mutual Aid Associations and the National Health Insurance Associations was clarified and made a part of the basic law.

7. The classification of those covered as well as those exempted was transferred from Cabinet Order to statute.

8. The legal basis for the establishment of the Social Insurance Medical Fee Calculating Committee on the national level to advise the Ministry of Welfare in determining an adequate and uniform rate for the payment of medical care was transferred from ordinance to basic law.

9. The Social Insurance Medical Care Advisory Council was established on the national and prefectural levels to give advice and guidance to doctors participating in the various programs.

10. The participation by the purveyors of medical care has been placed on a voluntary basis.

11. The funeral allowance was increased to a minimum of 2000 yen or an amount equal to one month's pay in accordance with the standard monthly remuneration classification.

12. The maternity (delivery) allowance was increased to a minimum of 1000 yen or an amount equal to one-half of the standard monthly remuneration of the insured.

13. The confinement allowance was changed to provide 60% of the standard daily remuneration for a maximum of 42 days preceding and 42 days after giving birth to a child when the insured worker is unable to work. If she does not have any dependents, the amount is reduced.

14. The nursing allowance is increased to 100 yen per month for a period of six months following childbirth.

15. The provisions relating to dependents' benefits are transferred from Cabinet Order to basic Law.

Welfare Pension Insurance Law

The Welfare Pension Insurance Law was revised by a bill of amendments enacted by the Diet on 3 July to be effective 1 August. Virtually all provisions of the applicable Cabinet Order were transferred to the basic Law and a number of changes were made with respect to benefits and contribution rates.

Premium and benefits at present are computed on only such wages as are not in excess of 600 yen, and family allowances and several other allowances are excluded in the definition of taxable wages. Under the amendments the ceiling on wages for computing benefits and premiums are raised to 8100 yen, and only allowances paid irregularly and less frequently than every three months are excluded from the computations. For the time being old age benefits, however, will be computed only on wages not in excess of 300 yen. (Old age pensions are not payable until 1956). The resulting changes in premium rates are as follows:

	<u>Present</u>	Proposed	
		<u>"Temporary"</u>	<u>"Normal"</u>
Miners	12.582%	3.5%	12.3%
Other men	9.395%	3.0%	9.4%
Women	6.796%	3.0%	5.5%

At present, an average is taken of the wages of all employees paid by the day, hour, output, or on contract, doing the same work for a given employer, in order to arrive at the "standard remuneration" for any one of such workers. It is provided to recognize the actual earnings of the individual worker in those cases.

Invalidity and survivors' pensions arising from occupational injury or illness and payable to persons who became entitled prior to enactment of the Worker's Accident Compensation Insurance Law are increased by five times the present amount. This additional amount will be paid entirely from contributions and will not be subsidized by the usual 10% of government funds.

Retirement allowances are now paid immediately upon leaving employment when a worker has been insured for six months or more. Under the amendments this allowance will be paid only to workers of age 50 or more who have been insured at least five years, provided that the allowance will be paid regardless of age to a worker (or his heir) who has been insured for six months when retirement is due to death or, in the case of a woman, to marriage or confinement. However, the allowance will not be paid during such time as the insured person may be eligible for unemployment insurance benefits or sickness and injury allowance.

Survivors' pensions now are payable only if the insured worker has been in covered employment for a period of 20 years. Pensions will now be granted to the surviving spouse and children of workers in covered employment for six-months. The spouse's pension will be payable only when the widow is age 50, the widower is age 55, the widow has custody of surviving children, or the spouse is disabled.

At present a surviving spouse does not have to prove he or she was supported by the insured worker at the time of his death. A surviving widower, in order to qualify for benefits, must be age 60 or disabled. The amendment provides that a surviving spouse, as well as other survivors, must prove support by the deceased worker, but no age requirement will exist for either widows or widowers.

Marriage terminates benefits for only the surviving spouse under the present law. It is now provided that marriage of any survivor will terminate his benefits.

If a survivor of preferred status appears after benefits have been awarded a survivor of lesser priority, he cannot receive benefits until the current payee becomes disqualified. This has been changed to permit the survivor of senior rank to take over the payments immediately.

Delinquent employers now are assessed 4 yen per 100 yen for each day of delinquency in reporting and are charged 3 yen for the sending of the delinquency notice. The 4 yen is changed to 5 yen and the 3 yen to 10 yen.

The employer is not obliged to notify a worker of the specific amount deducted from his wages for contributions. The amendment imposes this requirement.

Seamen's Insurance Law

The Seamen's Insurance Law was revised in almost exactly the same manner as the Welfare Pension Insurance Law and the Health Insurance Law through legislation passed by the Diet on 3 July to be effective 1 September. Here, too, the contents of the pertinent Cabinet Order were transferred to the basic Law.

The definition of taxable wages is amended to consist of the basic wage plus all allowances except those paid irregularly and less frequently than every three months. This conforms to the revision of the corresponding provision in the Welfare Pension Insurance Law. For the time being, old age benefits (the first of which will not be payable for several years) will be computed only on wages not in excess of 500 yen, whereas other benefits and contributions will be computed on all wages not in excess of 8,000 yen. The changes in premium rates resulting from this and other factors noted below are as follows:

	<u>Present</u>	<u>Temporary</u>	<u>Normal</u>
A. Includes medical care, Unemployment insurance old-age pension, invalidity retirement, survivors, and funeral benefits.			
Seamen	7.9%	4.0%	8.1%
Ship owners	11.3%	7.5%	11.5%
Total	19.2%	11.5%	19.6%

B. Excludes unemployment insurance.

Seamen	6.8%	2.9%	7.0%
Ship owners	10.2%	6.4%	10.4%
Total	17.0%	9.3%	17.4%

C. Voluntary includes only old-age pension, retirement and funeral benefits.

Seamen	12.2%	10.0%	10.0%
--------	-------	-------	-------

Invalidly and survivors' pensions arising from occupational injury or illness and payable to persons who became entitled prior to enactment of the 1947 amendments (comparable to the Workmen's Accident Compensation Insurance Law) are increased by five times the present amount. Government funds bear the total expense of occupational invalidity and survivors' benefits (one-fifth of other types of benefits), and the total cost of the increased pensions.

Medical and funeral benefits have been limited to the insured sea an himself, but the amendments provide that one-half of medical expenses, and funeral benefits equal to one month's average standard remuneration, will be paid on behalf of the seamen's dependents.

Survivors' pensions now are payable only if the insured worker had been in covered employment for a period of 15 years. Pensions will now be provided for the surviving spouse and children of workers who have been in covered employment for six months. The spouse's pension will be payable only when, at the time of the seamen's death, the widow is age 50, the widower is age 55, the widow has custody of surviving children, or the spouse is disabled.

A recipient of an invalidity pension now receives nothing additional to provide for a dependent spouse or child, but the amendments provide that, for the more seriously disabled pensioners, 200 yen additional will be paid each month for the spouse and for each child.

Retirement allowances are now paid immediately upon leaving employment when a seamen has been insured for six months or more. Under the amendments this allowance will be paid only to workers of age 50 or more who have been insured at least three years; provided that the allowance will be paid regardless of age to a worker (or his heir) who has been insured for six months when retirement is due to death or, in the case of a woman, to marriage or confinement. However, the allowance will not be paid during such time as the insured person may be eligible for unemployment insurance benefits or sickness and injury allowance.

Unemployment Insurance benefit rates were revised to conform to the changed schedule for land workers.

At present a surviving spouse does not have to prove he or she was supported by the insured seamen at the time of his death. A surviving widower, in order to qualify for benefits, must be age 60 or disabled. The amendment provides that a surviving spouse, as well as other survivors, must prove support by the deceased worker, but no age requirement will exist for either widows or widowers.

Marriage terminates benefits for only the surviving spouse under the present law and adoption has this effect for only children. It is now provided that marriage or adoption of any survivor will terminate his benefits.

If a survivor of preferred status appears after benefits have been awarded a survivor of lesser priority he cannot receive benefits until the current payee becomes disqualified. This has been changed to permit the survivor of senior rank to take over the payment immediately.

Delinquent employers now are assessed 4 yen per 100 yen for each day of delinquency in reporting and are charged 3 yen for the sending of the delinquency notice. The 4 yen will be changed to 5 yen and the 3 yen to 10 yen.

The procedure for selecting insurance doctors will be revised to conform to the procedure under Health Insurance.

Government Pension System

The "Pension Law" (Law No.48 of 1923), applicable to government employees classed as having "career status", was revised by Diet action of 4 July, the amendments being effective as of 1 July. The primary purpose of the legislation was to transfer, without change, to the basic Law substantive provisions of the program now contained in Cabinet Order and Ministerial Ordinances. In addition, a few modifications were introduced.

Provision is made to recognize the National Public Service Law (Law No.120 of 1947) as controlling in the event of any conflict between the provisions of that law and the Pension Law.

Articles not in conformance with the revised Civil and Criminal Codes and the new police reorganization law were revised accordingly.

Law No.77 of 1947 amended the Pension Law to continue pension rights for government employees whose positions are within the scope of the Local Autonomy Law, but only if the employee continues in the same position. The current amendment extends this provision to employees of the newly created Health Centers in view of the urgency of such employees' consenting to being transferred to this new program.

Law No.36 of 1946, was passed as companion legislation to the Pension Law. It provided for a scale of benefits under the Pension Law to maintain the level existing prior to the increased salary schedule of 1946. On 5 July the Diet enacted legislation, "Provisional Regulations regarding Special Cases of the Government Pension Law", superseding Law No.36 of 1946 and providing as follows:

1. Effective 1 July, benefits for employees becoming eligible on or after that date will be computed upon the basis of actual wages.
2. Effective 1 October, pensions in payment status prior to 1 July thereafter be computed on the new 3700 yen salary schedule.

It is noted in connection with this legislation that no action has been taken with respect to pensions being paid by reason of military service. SCAPIN No.338, 24 November 1945 provides that such pensions may be paid only as "compensation for physical disability, limiting the recipient's ability to work, at rates which are no higher than the lowest of those for comparable physical disability arising from non-military causes". With the increase of invalidity pensions under the Pension Law and the Welfare Pension Insurance Law, it may be that some increase may be effected for invalidity pensions based on military service. This would involve revision of Cabinet Order No.68 of 1 February 1946 (a "Potsdam Declaration Order") and the matter is now being considered by the Pension Bureau.

SECTION X MEMORANDA TO JAPANESE GOVERNMENT

None.

CROWFORD F. SAMS
Brigadier General, Medical Corps
Chief

3 Incles:

1. Translation of a Pamphlet issued by the Children's Bureau entitled "What is Child Welfare Law".

Subject: Appointment of child welfare official.

June 19, 1948 From: Director, Children Bureau To: Governor, Saitama Prefecture
(Ji-hatsu No.388)
Subject: Appointment of child welfare official.

Accounts Section

20-26 June

June 21, 1948 From: Chief, Accounts Section To: Directors, All Bureaus and Divisions
(Kai-hatsu No.572)
Subject: Allowance for over-time work.

June 23, 1948 From: Chief, Accounts Section To: Directors, All Bureaus and Divisions
(Kai-hatsu No.582)
Subject: Presentation of reports for 1947-48 on national property.

Medical Affairs Bureau

June 21, 1948 From: Director, Medical Bureau To: All Prefectural Governors
(I-hatsu No.238)
Subject: Alkyl- (Hexyl- and Amyl-,etc.) resorcinol prepares.

June 21, 1948 From: Director, Medical Bureau To: All Prefectural Governors
(I-hatsu No.249)
Subject: Survey of conditions of precious metal allocated for dental use.

June 22, 1948 From: Director, Medical Bureau To: All Prefectural Governors
(I-hatsu No.241)
Subject: Examination of Pyrethrum emulsion for communicable disease prevention.

June 22, 1948 From: Director, Medical Bureau To: All Prefectural Governors
(I-hatsu No.247)
Subject: Price of Quinine derivative released from confiscated stock.

June 22, 1948 From: Director, Medical Bureau To: All Prefectural Governors
(I-hatsu No.254)
Subject: Advertisement of Sunzelly.

June 24, 1948 From: Director, Medical Bureau To: All Prefectural Governors
(I-hatsu No.260)
Subject: Distribution of sulfathiazol.

June 25, 1948 From: Director, Medical Bureau To: All Prefectural Governors
(I-hatsu No.253)
Subject: Distribution of medicine for school hygiene.

June 25, 1948 From: Director, Medical Bureau To: All Prefectural Governors
(I-hatsu No.256)
Subject: Term of validity for purchase ration-book.

June 25, 1948 From: Director, Medical Bureau To: All Prefectural Governors
(except (Osaka Prefecture)
(I-hatsu No.257)
Subject: Discovery of false medicine.

June 25, 1948 From: Director, Medical Bureau To: All Prefectural Governors
(I-hatsu No.258)
Subject: Distribution of lactose.

June 25, 1948 From: Director, Medical Bureau To: All Prefectural Governors
(I-hatsu No.259)
Subject: Production of medicine for the second quarter in 1948-49.

Disease Prevention Bureau

June 24, 1948 From: Director, Prevention Bureau To: Governor, Okayama Prefecture
(Yo-hatsu No.827)
Subject: Progress report of special research on Japanese Encephalitis.

June 26, 1948 From: Director, Prevention Bureau To: All Prefectural Governors
(Yo-hatsu No.853)
Subject: Preventive inoculation against typhoid fever to repatriates.

Public Health Bureau

June 21, 1948 From: Director, Public Health Bureau To: All Prefectural Governors
(Ko-ho-hatsu No.651)
Subject: Nation-wide simultaneous control of raw leather.

June 22, 1948 From: Director, Public Health Bureau To: Chief, Health Division, every
prefecture
(Ko-ho-hatsu No.653)
Subject: Field-guidance for health statistics.

June 25, 1948 From: Director, Public Health Bureau To: Chief, Health Division, every
prefecture
(Ko-ho-hatsu No.666)
Subject: Change of name of training institute for nutritionists.

June 26, 1948 From: Director, Public Health Bureau To: Chief, Health Division every
prefecture
(Ko-ho-hatsu No.674)
Subject: Classified disposition of “on duty” sickness or injury and “private” sickness or injury
with
administration of physical examination of Japanese workers employed by the occupation
forces.

Social Affairs Bureau

June 21, 1948 From: Director, Social Bureau To: Governor, Nagasaki Prefecture
(Sha-hatsu No.912)

Subject: Decision of the minimum living expenses under Daily Life Security Law.

- June 21, 1948 From: Director, Social Bureau To: Governor, Yamagata Prefecture
(Sha-hatsu No.914)
Subject: Change of a plan of equipments for protection institution under Daily Life Security Law.
- June 21, 1948 From: Director, Social Bureau To: Governor, Wakayama Prefecture
(Sha-hatsu No.916)
Subject: Excessive disbursement of the base amount of vocational aid under Daily Life Security Law.
- June 21, 1948 From: Director, Social Bureau To: Governor, Hyogo Prefecture,
(Hyo-sha No.220)
Subject: Excessive disbursement of the base amount of vocational aid under Daily Life Security Law.
- June 22, 1948 From: Director, Social Bureau To: Governors, Hokkaido and three
(Sha-hatsu No.923) other prefs.
Subject: Allocation of leather belt for the fourth quarter.
- June 22, 1948 From: Director, Social Bureau To: Governors, Akita and Aomori Prefectures
(Sha-hatsu No.924)
Subject: Special Distribution of LARA commodities.
- June 22, 1948 From: Director, Social Bureau To: Governor, Fukushima Prefecture
(Sha-hatsu No.925)
Subject: Measures for manufactured goods of cloth, material for sewing at vocational agencies.
- June 22, 1948 From: Director, Social Bureau To: Governor, Yamagata Prefecture
(Sha-hatsu No.928)
Subject: Accurate account of national subsidy for disaster relief expenses for 1947-48.
- June 22, 1948 From: Director, Social Bureau To: Governor, Aichi Prefecture
(Sha-hatsu No.929)
Subject: Succession of approval for protection institution under Daily Life Security Law.

(Sha-hatsu No.934)
Subject: Transfer, removal and use of a telephone owned by the former Kyajo-kai Kyoto Branch.
- June 24, 1948 From: Director, Social Bureau To: Governor, Yamagata Prefecture
(Sha-hatsu No.935)
Subject: Recommendation for reward of honor under Honor Endowment Regulations.
- June 24, 1948 From: Director, Social Bureau To: Governors, Hokkaido and six other
prefs.
(Sha-hatsu No.936)
Subject: Distribution of LARA commodity, (goats).

June 24, 1948 From: Director, Social Bureau To: Governor, Shizuoka Prefecture
(Sha-hatsu No.942)
Subject: Discontinuance of protection institution under Daily Life Security Law.

June 24, 1948 From: Director, Social Bureau To: Governor, Ishikawa Prefecture
(Sha-hatsu No.943)
Subject: Application for sanction of extend, method and term of relief under Disaster Relief Law.

June 24, 1948 From: Director, Social Bureau To: Governor, Saitama Prefecture
(Sha-hatsu No.944)
Subject: Conference on approval for protection institution under Daily Life Security Law.

June 24, 1948 From: Director, Social Bureau To: Governor, Tochigi Prefecture
(Sha-hatsu No.945)
Subject: The former Imperial Villa, Shiobara.

June 24, 1948 From: Director, Social Bureau To: Governor, Akita Prefecture
(Sha-hatsu No.946)
Subject: Conference on approval for protection institution under the provision of Article 7 of Daily Life Security Law.

June 24, 1948 From: Director, Social Bureau To: Governor, Yamagata Prefecture
(Sha-hatsu No.947)
Subject: Simultaneous investigation of living conditions of the protected.

June 24, 1948 From: Director, Social Bureau To: Governor, Hyogo Prefecture
(Sha-hatsu No.948)
Subject: Excessive disbursement of the base amount of living aid under Daily Life Security Law.

June 25, 1948 From: Director, Social Bureau To: Governor, Wakayama Prefecture
(Sha-hatsu No.951)
Subject: Extent of expense to be disbursed for living aid under Daily Life Security Law.

June 25, 1948 From: Director, Social Bureau To: Governor, Niigata Prefecture
(Sha-hatsu No.950)
Subject: Conference on approval for continuation of protection institution under Daily Life Security Law.

June 25, 1948 From: Director, Social Bureau To: Governor, Ibaraki Prefecture
(Sha-hatsu No.952)
Subject: Disbursement for projects other than originally instructed from among the emergency relief expense at the time of damage by wind and flood in Kanto and Tohoku districts.

June 25, 1948 From: Director, Social Bureau To: Governor, Ishikawa Prefecture
(Sha-hatsu No.953)
Subject: Application for sanction for limits of compensation for actual expense under Disaster Relief Law.

June 25, 1948 From: Director, Social Bureau To: Governor, Kochi Prefecture
(Sha-hatsu No.954)
Subject: Limits of compensation for actual expense under Disaster Relief Law.

June 25, 1948 From: Director, Social Bureau To: Governor, Yamagata Prefecture
(Sha-hatsu No.955)
Subject: Alteration of a plan for equipments of institution for accommodation of repatriates and needy persons.

June 25, 1948 From: Director, Social Bureau To: Governor, Kyoto Prefecture

(Sha-hatsu No.958)

Subject: Appointment of chief of institution for accommodation of physically handicapped persons.

June 26, 1948 From: Director, Social Bureau To: Governor, Saga Prefecture
(Sha-hatsu No.962)

Subject: Measures to be taken in accordance with the dissolution of Kyojo-kai.

June 26, 1948 From: Director, Social Bureau To: Governor, Osaka Prefecture
(Sha-hatsu No.965)

Subject: Additional distribution of LARA commodities.

June 26, 1948 From: Director, Social Bureau To: Governor, Saitama Prefecture
(Sha-hatsu No.966)

Subject: Alteration of allocation of LARA commodities.

June 26, 1948 From: Director, Social Bureau To: Governors, Tokyo and seven prefectures
(Sha-hatsu No.968)

Subject: Distribution of LARA commodity, (material piece-goods).

June 26, 1948 From: Director, Social Bureau To: Governor, Kanagawa Prefecture
(Sha-hatsu No.972)

Subject: Presentation of an investigation list concerning commodities kept by the former
Yokosuka
Local Demobilization Station.

June 21, 1948 From: Director, Social Bureau To: All Prefectural Governors
(Sha-otsu-hatsu No.92)

Subject: Abolishment of application of living aid under Daily Life Security Law to patients who have been accommodated in national sanatoria.

(Sha-otsu-hatsu No.94)

Subject: Activity of Japan Red Cross Society under Disaster Relief Law.

June 24, 1948 From: Director, Social Bureau To: All Prefectural Governors
(Sha-otsu-hatsu No.95)

Subject: Special distribution of LARA commodities.

June 24, 1948 From: Director, Social Bureau To: All Prefectural Governors
(Sha-otsu-hatsu No.96)

Subject: Administration of community chest movement for 1948-49.

June 24, 1948 From: Director, Social Bureau To: All Prefectural Governors
(Sha-otsu-hatsu No.97)

Subject: Establishment of Local Committee for Care of Physically Handicapped.

Children's Bureau

June 10, 1948 From: Director, Children's Bureau To: Governors, Hokkaido and three
(Ji-hatsu No.363) other prefs.

Subject: Approval of establishment of child welfare station.

June 12, 1948 From: Director, Children's Bureau To: Governors, Shizuoka and 17
(Ji-hatsu No.369) other prefs.

Subject: Additional distribution of staple-food to children, such as orphans and waifs, etc., who have been accommodated in protection institution.

June 17, 1948 From: Director, Children's Bureau To: Governors, Tokyo and six other prefs.
(Ji-hatsu No.380)

Subject: Soap, chocolate and chewing gum released by U.S. Army.

June 21, 1948 From: Director, Children's Bureau To: All Prefectural Governors
(Ji-hatsu No.369)

Subject: Allocation of building material, (cement for emergency program), for child welfare agencies for the first quarter, 1948-49.

June 21, 1948 From: Director, Children's Bureau To: Governor, Osaka Prefecture
(Ji-hatsu No.392)

Subject: Approval for establishment of training institute for personnel, (nursing teachers).

June 17, 1948 From: Director, Children's Bureau To: Governors, Miyazaki and Chiba
(Ji-hatsu No.393) Prefs.

Subject: Allocation of transformers for the first quarter, 1948-49.

June 17, 1948 From: Director, Children's Bureau To: Governors, Osaka and three other
(Ji-hatsu No.393) prefs.

Subject: Allocation of standard electro-motors for the first quarter, 1948-49.

June 17, 1948 From: Director, Children's Bureau To: Governors, Tokyo and Chiba
(Ji-hatsu No.393) Prefectures

Subject: Allocation of regenerated steel-pipe for the first quarter, 1948-49.

June 22, 1948 From: Director, Children's Bureau To: Governor, Chiba Prefecture
(Ji-hatsu No.396)

Subject: Application for designation of training institute for nursing teachers.

June 23, 1948 From: Director, Children's Bureau To: All Prefectural Governors
(Ji-hatsu No.400)

Subject: Material and Child Handbook.

June 26, 1948 From: Director, Children's Bureau To: All Prefectural Governors
(Ji-hatsu No.403)

Subject: Report of actual results concerning timber, (veneer for general use), among building materials for child welfare agencies.

Insurance Bureau

June 25, 1948 From: Director, Insurance Bureau To: All Prefectural Governors;
(Ho-hatsu No.1035) all Social Insurance Branch
Office Chiefs; Director of National
Health Insurance Sanatorium Chiba.

Subject: Grants for the death in accordance with enactment of the law concerning administration
of
new pay for Government personnel.

Repatriation Relief Agency

June 21, 1948 From: Director, Demobilization Bureau To: All Prefectural Governors
(Ichi-fuku No.2203)

Subject: Preliminary notification of an amount to be borne by Service Section for June, 1948-49.

June 23, 1948 From: Director, Demobilization Bureau To: Chiefs, Service Sections, all
(Ichi-fuku No.2206) prefectures

Subject: Establishment of "repatriation news and missing persons' hour" in broadcasting program.

June 23, 1948 From: Director, Demobilization Bureau To: Chiefs, Service Sections, all
(Ichi-fuku No.2209) prefectures

Subject: Partial amendment of the Ichi-fuku No.2057.

June 23, 1948 From: Director, Relief Bureau To: Governor, Hiroshima Prefecture
(En-shi No.65)
Subject: Request for shipment.

June 23, 1948 From: Director, Relief Bureau To: Governor, Shizuoka Prefecture
(Engo No.66)
Subject: Reference of permanent domicile for Chinese nationals.

June 24, 1948 From: Director, Relief Bureau To: Governor, Gumma Prefecture
(Engo No.69)
Subject: Forwarding of a list of Koreans whose return has been permitted by GHQ, SCAP.

June 26, 1948 From: Director, Relief Bureau To: All Prefectural Governors
(Engo No.84)
Subject: Forwarding of a list of Koreans whose return has been permitted by GHQ, SCAP.

SECTION II PREVENTIVE MEDICINE DIVISION

Typhoid Fever

An epidemic of typhoid fever has occurred in Hongo Mura, Nagano Prefecture. At the time of this report there are 65 confirmed cases and approximately 160 suspects under surveillance. Control measures are being enforced and the source of the epidemic is being investigated. Investigations thus far indicate that few, if any, confirmed cases were immunized within the past year. The fact that this epidemic has occurred emphasizes the immediate need for completion of the nation-wide immunization program, since similar epidemics may occur in any area where the population is unimmunized.

It must be emphasized, however, that immunization is not a substitute for sanitation nor is sanitation alone sufficient to completely control typhoid in Japan today. Both procedures must be carried out simultaneously in order to reduce typhoid fever to a minimum. The new Preventive Vaccination Law which became effective 1 July requires immunization against typhoid and paratyphoid fevers. Military Government Health Officers should ascertain that all eligible personnel are immunized in accordance with provisions of this law. In this connection reference is made to Section II, Weekly Bulletin #79.

Venereal Disease Control

It has been reported that some clinics are having difficulty with vomiting of patients, as a reaction to mapharsol. This vomiting occurs only once, a few minutes after the injection, and is associated with the "ether odor" of the arsphenamines. It is probably caused by the nauseating effect of this odor, which is due to the actual passage of the drug through the capillaries of the nasal mucosa. This odor may be entirely obviated by the simple expedient of having the patient hold his nose tightly between finger and thumb during the injection, breathing meanwhile through his mouth. Additional measures to be observed as a means of reducing the incidence of reactions to mapharsol are:

1. Omitting the meal prior to treatment.
2. Sufficient aeration of the solution after dissolving mapharsol to decrease toxicity.
3. Rapid injection of mapharsol using a large intravenous needle (gauge 19-20). The total elapsed time, from the insertion of the needle until the syringe has been emptied and the needle removed from the vein, should be no longer than thirty seconds.

SECTION III MEDICAL SERVICE DIVISION

Medical Service Law

The Medical Service Law passed by the Diet on 4 July, to become operative from 1 October 1948, was designed to provide operating and administrative standards for hospitals, clinics and midwifery homes, in order to insure a high standard of medical care for the patient and at the same time to provide conditions favorable to the medical profession.

This law provides for definitions of clinics, hospitals and midwifery homes and regulates licensure of such institutions. Clinics will have the capacity for not more than 19 patients and will not be permitted to hold patients for more than 48 hours except in emergency. Hospitals will have specified equipments and accommodation for 20 patients or more, providing proper facilities for the scientific and ethical care of the sick and injured. No hospital may be termed a general hospital unless it possesses equipment and capacity for 100 patients or more and has the medical staff for operating internal medicine, surgery, gynecology, ophthalmology and otorhinology departments. Midwifery homes are limited to nine beds for women in pregnancy and childbirth and may not use the title of hospital. Three years will be allowed for the reconversion of clinics, hospitals and midwifery homes presently in existence.

Medical Care inspectors will be placed in state, urban and local governments to ascertain that violations of the provisions of the law are reported to competent officials for correction.

The principle of grants-in-aid by the national government to urban or local prefectural governments for the establishment (not operation) of necessary public medical facilities is established.

The regulation of public medical institutions is strengthened by the formation of councils on arrangement and management appointed by the prime minister upon recommendation of the Minister of Welfare.

Fees for medical care in public medical institutions may be fixed by a Council on Medical Fees under the jurisdiction of the Minister of Welfare.

An additional notable feature of the new law provides for the use of public medical facilities by duly licensed physicians of the community who are in need of such facilities in carrying out the paper treatment of patients.

Army Medical Library Representative

Mr. Joseph A. Groesbeck, Chief of the Acquisition Division of the Army Medical Library has arrived in the theatre for a stay of approximately 60 days.

Mr. Groesbeck's mission will be to arrange for the distribution of certain duplicate medical texts and Journals to civilian Japanese medical libraries and to arrange for the acquisition of Japanese materials through exchange with these libraries and through such purchases as may be feasible.

Mr. Groesbeck will visit the major medical libraries in Japan and will endeavor to assist Japanese medical libraries and Military Government Health Officers in their medical literature problems.

SECTION IV VETERINARY AFFAIRS DIVISION

Outbreak of Equine Encephalomyelitis

An outbreak of Equine Encephalomyelitis was reported in Saitama and Miyazaki Prefectures. The Animal Hygiene Section of the Ministry of Agriculture and Forestry has distributed vaccines to Chiba, Saitama, Gumma, Akita, Miyazaki, Gifu, Niigata, Toyama, Ishikawa, Miyagi, Saga, Tottori, Okayama, Kochi, Kagawa and Fukuoka for use in immunizing the horses in the areas that were involved during the 1947 outbreak. Military Government Health Officers should caution the Prefectural Animal Disease Control Teams to report immediately, all cases which are suspected of being Equine Encephalomyelitis.

Brucellosis Tests

An area test to determine the percentage of cattle affected with Brucellosis (Bovine Infectious Abortion) is now under way in Ishikawa, Shizuoka and Tokyo Prefectures. Tests in other prefectures will be made as soon as schedules have been approved. No reactors to the test will be removed. However, as soon as all tests are complied, steps will be taken to consider this disease important to the cattle industry depending on the percentage of reactors found.

New Veterinary Affairs Section

A Veterinary Affairs Section will be activated on 26 July in the Sanitary Bureau, Ministry of Welfare. This Section will operate with Dr. Asamura as the Chief, and will be responsible for meat, milk, sea-food and rabies control. Formerly this new Section was a Division in the Food Sanitation Section. However, it was decided to divide the Section into two parts, namely Inspection of Foods of Animal Origin and Inspection of Foods of other than animal origin.

Animal Diseases Report

The following outbreak of animal diseases was reported by the Ministry of Agriculture and Forestry for the period of 10-16 July:

<u>Prefecture</u>	<u>Diseases</u>	<u>No. of Cases</u>
Aomori	Swine Erysipelas	9
Niigata	Swine Erysipelas	2
Iwate	Swine Erysipelas	6
Iwate	Swine Plague	4
Toyama	Swine Erysipelas	2
Nagano	Swine Erysipelas	1
Nagano	Texas Fever	1
Saitama	Equine Encephalitis	2

SECTION V NURSING AFFAIRS DIVISION

Publications

A Japanese translation of "Tuberculosis Nursing for the Public Health Nurse" by Violet Hodgson is now on sale 35.00 yen. Send orders direct to:

Mr. Katsu Suzuki
Far Eastern Literary Agency Pub. Co.
Branch Bldg. Finance Ministry
2-1 Chome Uchisaiwai-cho, Chiyoda-ku, Tokyo

A pamphlet on tuberculosis edited by New York Nursing Educational Bureau is available in Japanese, published by:

Dr. Chizuo Ohta
Medical Friend Co.
40 Momozono-cho, Nakano-ku, Tokyo
20.00 yen

National Nurses Association

Active membership now totals 49,844 nurses. The Association is carrying on a very fine educational program through Japan.

Refresher Course

The new four-month refresher course for clinical nurses will open 2 August in Central Red Cross Hospital, Tokyo.

SECTION VI SUPPLY DIVISION

Production

A total of 6,603 pieces of the various types of DDT dusting and spraying equipment for mosquito and fly control programs was produced during the period 4-10 July.

During the period 4-10 July, 421,740 lbs. of 10% DDT dust, 18,525 gallons of 5% DDT residual effect spray, and 7,168 vials of typhus vaccine were distributed. At the same time, 20,000 lbs. of 10% DDT dust, 55,000 gallons of 5% DDT spray, and 2,261 vials of typhus vaccine were received. Total stocks on hand in wholesale houses of the Ministry of Welfare as of 10 July include 2,218,726 lbs. of 10% DDT dust, 236,847 gallons of 5% DDT spray, and 71,754 vials of typhus vaccine.

Reference: Weekly Bulletin No.75, period 30 May - 5 June, Section V, paragraphs 3 and 4, under "Production". The special allocation of 5,000 tons of cement, in addition to the regular quarterly allocations for April, May, June 1948, received by the Ministry of Welfare, was outlined according to the breakdown of allocations to the various general categories. Further detailed breakdown within these categories according to district and prefectural distribution is included (See inclosure #1). In addition, a breakdown of distribution by district and prefecture is furnished according to the type of cement made available (see inclosure #2).

Distribution

One hundred eleven drums (50 gallons each) of pyrethrum emulsion, the equivalent of 166,500 gallons finished insecticide, were shipped to four prefectures during the period 5-11 July. The distribution was as follows:

Distribution of Pyrethrum Emulsion, 30x, 5-11 July 1948

<u>Prefecture</u>	<u>Quantity 50-gal. Drums</u>
Hokkaido	50
Tokyo	36
Okayama	5
Kochi	20
Total	111

Reference is made to the paragraphs under Distribution in Weekly Bulletin No.78 (21-27 June) relating to dark field microscopes. A total of 64 dark field microscopes are listed for allocation during July, August and September. The following table is a breakdown of subject allocation:

Allocation of Microscopes with Dark Field Apparatus: July, August, September, 1948

<u>Prefecture</u>	<u>Requirement</u>	<u>July</u>	<u>August</u>	<u>September</u>	<u>Total</u>
Niigata	16	6		6	12
Osaka	71	11	2	6	19
Saitama	1	1			1
Kochi	2	2			2
Kanagawa	12	4			4

Total	2,258	1,997	444	1,633	13

SECTION VII NARCOTIC CONTROL DIVISION

Transportation of Narcotics

Acting upon the request of registered local wholesalers in Akita, Iwate, Yamagata and Aomori for an improved method for transporting narcotics, officials of the Narcotic Section, Ministry of Welfare, Ministry of Transportation, and registered central wholesalers in Tokyo have made arrangements to ship narcotics to these prefectures periodically in an express car attached to a passenger train.

Heretofore each of the 19 local wholesalers in the four prefectures have sent representatives to carry the narcotics personally from the central wholesalers in Tokyo.

Under the present plan a representative of local wholesalers in each prefecture will bring the necessary order forms to Tokyo where the orders will be filled and the goods packed for shipment. Cost of transportation and packing is to be paid by local wholesalers.

The express car will go to Aomori, and transportation officials with police power will ride in the car which is opened only at prefectural capitals. Narcotic officials state such express cars are available to prefectural capitals on all lines throughout Japan. The plan, if found to be safe and effective, will gradually be extended to all narcotic wholesalers in Japan.

SECTION VIII WELFARE DIVISION

Cooperative for American Remittance to Europe, Inc., (CARE)

Reference Public Health and Welfare Weekly Bulletin No.72 (for the period 10-16 May).

CARE, Inc., a non-profit organization, composed of 26 leading American welfare agencies, was authorized by SCAP to extend their operations into Japan under a license issued on 21 August 1947. Until now CARE operations have been confined to Europe and in the past two years they have delivered approximately 5,000,000 food and clothing packages in 17 European countries.

CARE operations in Japan will begin on 19 July 1948. A special food package (gross weight 29 lbs.) known as an "oriental pack" has been designed for delivery in Japan and will contain approximately 23 lbs. of food (net weight), contents of which is outlined in above reference.

CARE operations in Japan are briefly:

a. Persons desirous of having CARE food packages (oriental pack) delivered to relatives, friends or designated groups (institutions, etc.) in Japan must send their remittance (\$10.00 for each package) to CARE, Inc., by U. S. Postal Money Order or Bank Draft. Person residing in Japan are to forward their remittance to: CARE, Inc., 200 Terminal Building, Honolulu, T. H.

Note: CARE request that the name and the address of the beneficiary be clearly written in Romaji (English) and also where possible in Kanji (Japanese characters).

b. The CARE office in Honolulu, T. H., will record all remittances and airmail the name and address of beneficiary (addressee) to the CARE distributing warehouse located in Yokohama, (address: 63, 4-chome, Bentendari, Nakaku, Yokohama, Japan). Remittances received by the CARE office in New York, N. Y. (address: 50 Board Street, New York 4, New York) will be processed in the same way as remittances received in Honolulu. The CARE distributing office in Yokohama will be responsible for all the necessary mechanics in effecting deliveries of CARE packages in Japan.

c. The receipt and acceptance of each ten dollar remittance by CARE, Inc., obligates them to effect delivery of a food package, oriental pack, to the addressee in Japan as named by the remitter, with a signed receipt from the addressee being transmitted to the original donor as evidence of the requested delivery being made. Whenever a food package is undeliverable, the donor will be notified and his remittance returned.

Note: CARE packages entering Japan are admitted tax and duty free and the recipients (addressee) are not subject to any reduction in their regular authorized official food ration.

In-Service Training Program, Chubu District

Another in a series of welfare in-service training programs being sponsored by the Ministry of Welfare is scheduled to be held in Toyama Prefecture from 3 August - 9 August. It is expected that approximately 50 persons will attend from the following prefectures in the Chubu District: Toyama, Ishikawa, Nagano, Aichi, Gifu and Niigata. The meetings will be held at Unazuki Kan, Unazuki Onsen, Uchiyama-mura, Toyama Prefecture.

The program of the conference is similar to that of other weekly conferences, subjects to be covered include an outline of social work: Assistance for Livelihood, Disaster Relief, Child Welfare Work, Social Investigation and Statistics and Methods of Social Work.

Consumers Livelihood Cooperative Association Law

The Diet at a recent session passed a Consumers Cooperative Law for which the Ministry of Welfare has been assigned administrative responsibility. Effective date of the law will be determined by Cabinet Order. On National level, Welfare Section, Social Affairs Bureau, Ministry of Welfare, has administrative responsibilities for determining that the law is being carried out properly. It is anticipated that certain of these responsibilities will be carried out in the prefectures by the prefectural department of welfare. Further information on this law will be contained in a subsequent Public Health and Welfare Weekly Bulletin.

Kansai Social Work Education Committee

The Kansai Social Work Education Committee's regular monthly meeting was held in Kyoto, 13 July, and attended by approximately 40 persons representing welfare and education organizations in Kobe, Osaka, Kyoto and Nagoya. Representatives of Public Health and Welfare Section, as well as Military Government Officers from Hyogo, Osaka and Kyoto attended. Reports were submitted concerning the development of plans in various colleges and universities in that area which included social work courses in their curricula.

The committee has also recommended that information concerning social work be provided in educational training programs for such groups as policemen, teachers and doctors. Plans for the new Osaka School of Social Work which is to open in September were also reviewed by the Committee. The Committee will hold their next meeting in Kobe in September.

SECTION IV SOCIAL SECURITY DIVISION

General

SCAP has issued the following press release with reference to the Report of the Social Security Mission:

"As stated in a recent press release, General Douglas MacArthur, Supreme Commander for the Allied Powers, has accepted the Report of the Social Security Mission and has given it to the Japanese government as a document of reference and guidance in formulating and effectuating plans for reformation of the present structure to provide a sound foundation of social security for the Japanese people. He has indicated that the maintenance of a comprehensive and adequate social security program in Japan, based on democratic precepts and within the limits of the nation's resources, is an approved Occupation objective.

"The Social Security Mission was composed of individuals from the United States with considerable experience and knowledge of both public health and social insurance administration and included members of the medical profession. They were invited by the Supreme Commander for the Allied Powers to visit Japan as the result of a request by the Japanese government for advice and guidance with regard to social security. In the course of their studies, the members of the Mission conferred with representatives of number of private groups in Japan as well as officials in the Japanese government. The Japanese Social Insurance Investigating Committee was particularly helpful."

"The Report describes the existing social security and public health programs, their development, analyzes their character and administration, and submits recommendations for attaining effective operation within the present limited resources and inflationary conditions and for building a structure of sound and adequate programs in keeping with the responsibilities of a democratic government to promote conditions which will secure and advance the social welfare and security and public health of its people.

"The Mission Report suggests a program in keeping with present day Japan and her immediate prospects. It proposes establishing a foundation upon which the nation can build as it improves economically and resources become available. Stress is given to strengthening the present programs as to financing, adequacy of protection, administration through coordination and integration, improvement of quality of medical and administrative services, continuous, adjustment to inflationary conditions, democratization of administration, and participation by the medical profession and communities on a voluntary basis. The specific recommendations are summarized as follows:

“1. The establishment of a representative advisory council to advise the Diet and responsible administrative agencies on planning, policy and legislation.

“2. The integration of all the present obligatory social insurances into one basic system to provide uniform protection relative to the major risks of old age, invalidity, health, unemployment, and survivorship, with consideration to be given to extension of such protection to workers of firms employing less than five people.

“3. The strengthening of health insurance for other wage earners by providing community health plans at the choice of the citizens, to be partially supported by grants-aid if minimum standards are maintained.

“4. The development of public health functions through a consistent pattern of national, prefectural, and local administration including the development of a nationwide hospital plan with recognition of the hospital’s public service character and the furnishing of a portion of their capital costs and operating expenses through grants-in-aid.”

“5. The concentration of primary responsibility for social security within the national government should be placed to the Ministry of Welfare instead of the present division of responsibility among several ministries.

“6. The administration of the integrated social security program should be decentralized to the prefectural and local government level.

“7. The establishment of an independent appeal structure of quasi-judicial nature to provide a fair hearing to all interested parties subject to final appeal to the regular courts.

“8. The revamping of the fiscal structure of the social insurances to supplant the ““full reserve”“ concept now followed with reference to taxation and investment policies by a “limited reserve” or “pay-as-you-go” basis and with the understanding that funds raised for the purpose of social security not be diverted to ends foreign thereto.

“In turning this Report over to the Japanese government, it was pointed out that the recommendations with regard to administrative structure represent one possible approach and that other organizational patterns as well as the one suggested have been successfully applied in other countries.

“The specific procedures and programs for implementation of social security in Japan should be determined in the light of conditions in Japan and the needs of her people and with firm resolve to meet the obligations prescribed by Article 25 of the Constitution.”

Mr. Harold K. Knoy has been assigned as Chief of the Health Insurance Branch of this Division.

In further continuation of the outline of current reporting requirements (see Public Health and Welfare Weekly Bulletins Nos. 67, 73, 75-78, and 80), those prescribed for the government-managed part of Health Insurance are summarized below:

1. Monthly Reports are due at the prefectural Insurance Section at the end of the month following that reported on. Within ten days they are to be consolidated for the prefecture as a whole and forwarded to the Ministry of Welfare.

There are, at present, the separate monthly reports, one called “Monthly Report on Conditions of Operation”, the other “Payment of Medical Expenses”.

The “Monthly Report on Conditions of Operations” includes the following data:

a. Number of insured, monthly increase and decrease by class of coverage (compulsory or voluntary) and by wage classes.

b. Number of establishments, monthly increase and decrease by class of coverage (compulsory or voluntary).

c. Insurance benefits paid, broken down in the same way as for society-managed Health Insurance. (See Public Health and Welfare Weekly Bulletin No.78, pp. 13, 14.)

d. Statistics concerning the load of insurance patients and treatment given them in government hospitals, Health Insurance Sanatoria, and Health Insurance Rest and Convalescence Centers.

The monthly report on "Payment of Medical Expenses" shows the number of insured treated by insurance doctors, by other insurance doctors, and in hospitals and to amounts claimed and paid respectively for such treatment. Primary insured and dependents are treated separately.

2. A "Yearly Report on the Number of Establishments and the Number of Insured Broken Down by Industry" was instituted only recently. It was to be rendered for the first time with respect to the fiscal year 1947 and was due on 30 April.

As the title implies, the report consolidates for the whole prefecture the number of establishments and the number of insured (broken down by sex) in each of the major industries covered. It lists also those insured who have voluntarily their insurance after leaving covered employment.

SECTION X
MEMORANDA TO JAPANESE GOVERNMENT

None.

CRAWFORD F. SAMS
Brigadier General, Medical Corps
Chief

3 Inclosures:

1. Special Allocation of Cement, 1st quarter Japanese FY 1948, with breakdown of allocations to the various general categories.
2. Special Allocation of Cement, 1st quarter Japanese FY 1948, according to type of cement.
3. Report of Cases and Deaths from Communicable and Venereal Diseases in Japan, week ended 10 July 1948.

SECTION VII - Social Security
SECTION VIII - Memoranda to Japanese Government

SECTION I
PREVENTIVE MEDICINE DIVISION

Venereal Disease Control

Control of distribution of penicillin and sulfathiazole has been removed since the production of these two drugs is now greater than the present demand. Prefectural health department officials and private physicians should be informed that these drugs may now be used more liberally in the treatment of venereal disease. Since penicillin is now packaged in ampoules containing 100,000 units, instead of 30,000 units, the average dose in the treatment of gonorrhoea should be 50,000 units repeated every two or three hours until a total of 200,000 units is given. This schedule may be repeated once or even twice if necessary. No authentic penicillin resistant strains of gonococcus have yet been detected. In cases where symptoms persist the possibility of complications or of a non-specific urethritis must be considered.

Preventive Vaccination Law

An English translation of the Preventive Vaccination Law, which was effective 1 July, is reproduced in its entirety as Inclosure 1 to this Bulletin for the guidance of Military Government Health Officers. This is the official translation as accepted by SCAP and is the document of reference in the interpretation of the law. If any questions should arise regarding the interpretation of the provisions of this law, they should be referred to Public Health and Welfare Section for clarification.

Institute of Public Health

The following tabular summary is published to indicate the extent to which the various prefectures and cities have sent personnel to attend the seven types of refresher courses being conducted periodically at the Institute of Public Health in Tokyo. As a whole the record is good, but there are some prefectures which are failing to take advantage of the opportunity offered. It is intended that each prefecture send one student to each of the courses, care being taken to select well qualified individuals who can help teach others when they return home. Military Government Health Officers are requested to promote the careful selection and attendance of public health personnel for these courses.

The scheduled dates for the opening of succeeding courses are as follows:

Public Health Nursing	7 August
Public Health Nutritionists	30 August
Public Health Pharmacists	6 September
Public Health Veterinarians	6 September
Medical Health Officers	2 October
Sanitarians	2 October

SECTION II MEDICAL SERVICES DIVISION

Visit of American Medical Association Representatives

Five representatives of the American Medical Association will arrive in Japan during the first part of August.

Dr. Roscoe L. Sensenich, South Bend, Indiana, President of the American Medical Association, Dr. Edward McCormick, Toledo, Ohio, Dr. Ernest Irons, Chicago, Illinois, Dr. Elmer Henderson, Louisville, Kentucky

and Dr. John Fitzgibbon, Portland, Oregon, members of the Board of Trustees, will represent the American Medical Association as consultants to SCAP.

During their stay in Japan they will be primarily interested in studying the social security system and the Japanese system of medical service.

Visits will be made to selected areas and Military Government Teams Health Officers will be notified in advance in order that problems of local interest may be presented to the group.

The Medical Service Law

The Medical Service Law was passed by the Diet on 4 July to become effective 1 October.

The Law provides definitions of clinics, hospitals and midwifery homes and regulates their licensure. Clinics may have a maximum capacity of 19 beds and will not be permitted to hold patients for more than 48 hours except in emergencies. Hospitals will have 20 beds or more and the law specifies services, standards and equipments for general hospitals (100 beds). Midwifery homes may not accommodate more than nine women in pregnancy and childbirth and will not be termed hospitals.

Medical Care Inspectors are provided for in the Law and will be placed in state, urban and local governments.

The principle of grants-in-aid by the National Government to urban or local prefectural governments for the establishment (not operation) of necessary public medical facilities is established and the Minister of Welfare will be advised by a Council on arrangement, appointed by the Prime Minister, in matters pertaining to needs for such grants.

Public medical facilities are made available to duly licensed local practitioners where the need exists and with approval of the Minister of Welfare. Fees of public medical facilities may be fixed by a Council on Medical Fees within the Ministry of Welfare. The Minister of Welfare is advised on public medical institutions by a Council on Management appointed by the Prime Minister on recommendation of the Minister of Welfare.

Nutrition Branch

The May Nutrition Survey results on the food consumed in grams and calories are given in the attached table. (Inclosure #2).

Throughout the urban and rural areas, a distinction has been made between the farmers and non-farmers. Areas covered in the table are: Tokyo, the Eleven Large Cities (Yokohama, Nagoya, Kyoto, Osaka, Kobe, Kure, Fukuoka, Sapporo, Sendai, Kanazawa and Matsuyama), Other Cities (population of 30,000 and over), Forty-six (rural) Prefectures, Tokyo Railways, Akita Copper Mine and Four Coal Mines (Hokkaido-Bibai Coal Mine, Fukushima-Joban Coal Mine, and Fukuoka-Miyawa and Katsuta Coal Mines).

SECTION III VETERINARY AFFAIRS DIVISION

Equine Encephalitis

An outbreak of Equine Encephalitis totaling 34 cases has been reported in the following prefectures: Saitama, Gumma, Chiba, Tokyo, Yamagata, Gifu, Toyama and Miyazaki. Animal disease control teams are now immunizing horses in the areas where the disease prevailed in 1947. The shortage of available vaccine is due to insufficient laboratory facilities, however, production is continuing and more vaccine will be made available shortly, although not in sufficient amounts to meet the demand. Immediate reports should be made to the Animal Hygiene Section, Ministry of Agriculture and Forestry upon diagnosing new cases in those Prefectures now having negative reports.

Food Shortage

Ministry Government Health Officers are requested to bring the attention of the Food Sanitation inspectors to poor sanitary storage conditions of those commodities being turned over to the Japanese for distribution and

rationing. In many cases, insects native to Japan are being found, particularly in the sugar, which is due to carelessness on the part of the Japanese in storing the staples under sanitary conditions.

Animal Diseases

Following is the report of animal diseases for the period 17-23 July, as submitted by the Ministry of Agriculture and Forestry.

<u>Prefecture</u>	<u>Diseases</u>	<u>No. of Cases</u>
Iwate	Swine erysipelas	3
Kagoshima	Swine plague	7
Chiba	Swine plague	3
	Anthrax	1
Saitama	Equine encephalomyelitis	10
Chiba	"	2
Toyama	"	2
Tokyo	"	2
Yamagata	"	1
Gumma	"	7
Yamanashi	"	2
Gifu	"	1

SECTION IV SUPPLY DIVISION

Production

A total of 4,690 pieces of the various types of DDT dusting and spraying equipment for mosquito and fly control programs was produced during the period 11-17 July.

During the period 11-17 July, 46,035 lbs. of 10% DDT dust and 47,768 gallons of 5% DDT residual effect spray were distributed. At the same time, 180,000 lbs. of 10% DDT dust, 32,200 gallons of 5% DDT spray, and 10,000 vials of typhus vaccine were received. Total stocks on hand in wholesale houses of the Ministry of Welfare as of 17 July include 2,284,691 lbs. of 10% DDT dust, 210,609 gallons of 5% DDT spray, and 81,754 vials of typhus vaccine.

Distribution

The Ministry of Welfare directed that 134 drums, 50 gallons each, of pyrethrum emulsion be shipped to four prefectures in the period 12-18 July. This is equivalent to 201,000 gallons of finished insecticide. Shipments are as specified below.

Distribution of Pyrethrum Emulsion, 30×, 12-18 July

<u>Prefecture</u>	<u>Quantity, 50-gal. Drums</u>
Fukui	23
Nagano	57
Hiroshima	29
Fukuoka	25
Total	134

A total of 6,356 pieces of dusting and spraying equipment were distributed to 11 prefectures during the period 11-17 July, as follows:

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsack Sprayer</u>	<u>Semiautomatic Sprayer</u>	<u>Hand Sprayer</u>
Hokkaido	100	50		
Saitama	200			
Chiba		206		50
Tokyo	280	270		2,050

Osaka	500			
Shimane			80	
Tokushima	150			
Kagawa				150
Fukuoka		300	50	600
Saga		120		
Nagasaki	300	400		500
Total	1,530	1,346	130	3,350

The Ministry of Welfare announced in the Official Gazette of 23 July, the removal from distribution control of penicillin and sulfathiazole. During the past few months the production of these items has improved to the extent that it makes further control of these drugs unnecessary.

SECTION V NARCOTIC CONTROL DIVISION

Fukui Earthquake

Reports from the Narcotic Section, Ministry of Welfare, show that less than 20% of the medical narcotics made available immediately following the earthquake in Fukui were required during the first five days.

Addicts

Addicts, changed with narcotic violations, who had shown no withdrawal symptoms during their confinement, immediately evidenced such symptoms when a close watch was maintained over possible sources of supply. Corrective action has been taken to prevent narcotics being smuggled to such inmates in the future.

Annual Statistical Information

The Narcotic Section, Ministry of Welfare, is preparing statistical information on a monthly basis which will be used to prepare annual reports at the end of each year. Such statistics relate to violations, arrests, convictions (average length of sentence or amount of fine), suspended sentences, suspension of license, addicts and their classification, and recidivists. Prefectural officials who are preparing similar information are better informed relative to the effectiveness of narcotic enforcement in their respective prefectures.

Suspension of Registrants

The attention of officials of the Narcotic Section, Ministry of Welfare, was referred to the necessity of narcotic agents conferring with local procurators before decision is made to suspend a registrant's license rather than prosecute him in Japanese Courts. In all cases in which a registrant's license is suspended, the Minister of Welfare must be notified immediately of all facts in the case.

Narcotic Section

Effective 15 July the Narcotic Section, Ministry of Welfare, was placed in the newly established Pharmaceutical and Supply Bureau rather than in the Medical Affairs Bureau.

SECTION VI WELFARE DIVISION

Heifers for Relief Committee Shipments

The "Heifers for Relief Committee (30 North Marion Ave., Pasadena (4), California) are shipping approximately 2,000 goats to Japan before October.

Three shipments of goats have arrived (280 goats in the first shipment, 254 goats in the second shipment and 225 in the third shipment). Information covering the allocation and distribution of the first and second shipments was carried in previous Public Health and Welfare Weekly Bulletins.

The allocation of the 225 goats in the third shipment is as follows:

*Ministry of Welfare (for welfare institutions)	94 goats
Ministry of Agriculture	41 goats
Ministry of Education	90 goats
Total	<u>225 goats</u>

*Ministry of Welfare allocation (distribution now being effected) is as follows:

Prefecture	Institution	No. of Goats
Niigata	Seien Seiyosha	5
	Seien Hoikuen	5
Toyama	Kenritsu Jutoku Gakuen	3
	Sekijiyi Bysin	4
	Nireharayo	3
	Tomari-cho Boshiryo	3
Ishikawa	Ono Jinzenin	5
	Keiseijiku	3
	Baikokai	3
	Kano Jisshu Gaku	4
Aichi	Takashi Sagyojo	5
	Aichi Gakuen	5
	Handaryo	5
Gifu	Futabaryo	5
	Kagamigahara-Kunrenjo	5
	Gifu Gakuin	3
Mie	Suzuka-Koseiryo	5
	Kameyama Shakaikan	3
	Sensai Gakusha	3
	Asagami-Jusanjo	3
Nara	Tenri-Yotokuin	5
	Tenri-Yorozusodansho	5
	Aizenryo	4
	Total	<u>94</u>

Community Chest - Japanese Red Cross Campaign

Reference, Public Health and Welfare Weekly Bulletin, No.75 (for the period 31 May - 6 June).

The Ministry of Welfare, Community Chest and Japanese Red Cross have reported, within the past week, that there appears to be some misunderstanding on the part of some Military Government personnel regarding the "joint campaign agreement" between the Japanese Red Cross and the Community Chest.

The Japanese Red Cross and the Community Chest have agreed to conduct a "joint campaign" for the fiscal year (1948-49) during October 1948 and every encouragement to assist in making this cooperative fund raising effort a success is requested. For details covering the agreement see the information contained in referenced Weekly Bulletin.

Japanese Red Cross Society

The American Red Cross has made 400,000 yen available to the Japanese Red Cross, as a donation, to assist in the development of the Japanese Junior Red Cross Program. Of the donation, 300,000 yen will be expended on the Junior Red Cross Leadership Training Center to be held at Okayama (25-31 July) and Gora (15-21 August).

The American Red Cross has also delivered a donation of 2,030 reams of bible paper, 60 reams of vellum and 900 bundles of binder boards for use in publishing a Japanese Red Cross Home Nursing Textbook and other pamphlets on nursing. The publishing of these texts and pamphlets will be under the supervision of the Public Health and Welfare Division, SCAP.

An extensive Water Safety Program is being conducted during the months of July and August with the assistance of an American Red Cross First Aid and Water Safety Consultant in Kagoshima, Kumamoto, Fukuoka, Okayama, Akita, Niigata and Kanagawa Prefectural Chapter Areas.

Maternal and Child Health Program

Inclosed with this Weekly Bulletin are two copies of the approval Maternal and Child Health Program of the Children's Bureau, Ministry of Welfare. It is requested that one copy be made available to the Team Health Officer and one to the Team Welfare Officer for information purposes. It is probable that the Children's Section within the Prefectural Health Department will have copies in Japanese. This material may be used for purposes of publicity.

SECTION VII SOCIAL SECURITY DIVISION

General

The Report of the Social Security Mission is being translated into Japanese by the Japanese Government and copies of the translation will be given to the various Ministries, the Diet and interested private groups. The newspapers have given rather extensive coverage to the release of the Report.

SECTION VIII MEMORANDA TO THE JAPANESE GOVERNMENT

None.

CRAWFORD F. SAMS
Brigadier General, Medical Corps
Chief

Inclosures:

1. Preventive Vaccination Law.
2. Results of Nutrition Surveys, Japan - May 1948.
3. Maternal and Child Health Program
4. Digest and Report of Vital Statistics in Japan, May 1948.
5. Report of Cases and Deaths from Communicable and Venereal Diseases in Japan, week ended 17 July 1948.

SECTION IV - Supply
SECTION V - Narcotic Control
SECTION VI - Welfare
SECTION VII - Social Security
SECTION VIII - Memoranda to Japanese Government

SECTION I
PREVENTIVE MEDICINE DIVISION

Venereal Disease Control

A copy of the English translation of the new Venereal Disease Prevention Law is included with this Bulletin (Inclosure 1) for the guidance of Military Government Health Officers. The Venereal Disease Prevention Law No.48, 1927, and Welfare Ministry Ordinance No. 45, 1945, and all Disease Prevention Bureau Instructions pertaining to them will be rescinded when the new VD Prevention Law becomes effective on 1 September. The Ministry Ordinance and Cabinet Ordinance referred to in the new Law are now being drawn up and will be disseminated as soon as possible. The attached copy of the new Law is the official copy as approved by SCAP. If any questions arise as to the interpretation of the law, they should be referred to the Public Health and Welfare Section, SCAP, through channels for clarification.

SECTION II
VETERINARY AFFAIRS DIVISION

Animal Disease Control School

Two lectures on Animal Diseases and their relationship to public health and Bovine Brucellosis was given at the Kodaira Laboratory where representatives from each prefecture are in attendance for a period of one month. This school is being sponsored by the Animal Hygiene Section, Ministry of Agriculture and Forestry.

Equine Encephalomyelitis

The Ministry of Agriculture and Forestry reported a sharp increase in the current outbreak of equine encephalomyelitis in the Kanto district. A total of 169 additional cases were reported from seven prefectures with Tochigi accounting for 69 of the total. A temporary delay in the production of encephalomyelitis vaccine has occurred, but will be available approximately 4 August. Heavy rains followed by hot weather is held accountable due to the increased amounts of mosquitoes in the district.

Animal Diseases

The following report of animal disease outbreaks for period 24-30 July was submitted by the Animal Hygiene Section, Ministry of Agriculture and Forestry.

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Fukushima	Swine cholera	29
Nagano	Swine erysipelas	5
Chiba	Swine erysipelas	3
	Swine plague	15

Nagano	"	3

SECTION III
NURSING AFFAIRS DIVISION

On Wednesday 28 July, 61 students were graduated from the four month Refresher Course in Public Health Nursing at the Institute of Public Health.

SECTION IV

SUPPLY DIVISION

General

As noted in Public Health and Welfare Weekly Bulletin No.81, for period 5-11 July, the information supplied by Military Government Teams in the Monthly Military Government Activities Reports on supply activities is carefully screened by Supply Division and appropriate action taken to correct irregularities. Therefore, it is desirable that full details be supplied in order to facilitate investigation and correction of these irregularities. Such information as file numbers and dates of communications, quantities and names of items involved, and any other information which is pertinent will be helpful to complete this action.

Production

A breakdown of the plan of allocation of liquid chlorine for chlorination of water and water treatment plants, by prefectures, for the period July, August and September 1948 is included as Inclosure 2a. Allocation tickets were mailed on 24 July by the Ministry of Welfare direct to the cities and towns concerned. At the same time, Ministry of Welfare notified each prefectural office of the breakdown of allocations to the cities and towns within the given prefecture.

While it is realized that the total quantity allocated for this period, July - September, is the largest overall quarterly allocation of liquid chlorine ever received, further efforts will be made at the national level, if necessary, to increase this supply and subsequent announcements will be made. Prefectural health officials should assist water treatment plants to obtain liquid chlorine in accordance with the allocations made.

A breakdown of the plan of allocation of bleaching powder for water purification treatment and water treatment plants, by prefectures, for the period July, August and September is included as Inclosure 2b. Allocation tickets were mailed on 27 July by the Ministry of Welfare direct to the cities and towns concerned. At the same time, Ministry of Welfare notified each prefectural office of the breakdown of allocations to the cities and towns within the given prefecture. The total quantity allocated for this period, July - September, is the largest overall quarterly allocation ever received and should be adequate to meet all requirements.

In addition to the breakdown furnished in Inclosure 2b, allocations of 20,000 kgs. of bleaching powder for use in slaughter houses, meat inspection plants and 17,690 kgs. of bleaching powder to those prefectures (Ishikawa, Toyama, Fukui, in the Hokuriku District) devastated by the recent disastrous earthquake, are being planned. Prefectural health officials should assist in expediting deliveries of the material in accordance with the allocations made.

A breakdown of fuel allocation, (standard coal and lignite), by prefectures, for use in those hospitals attached to Universities, Medical Colleges, and other educational institutions under the jurisdiction of the Ministry of Education, is included in Inclosure 2c. The standard coal allocations cover the period July, August and September, while the lignite allocations listed cover only the month of July. Ministry of Education officials have mailed allocation tickets directly to the hospitals concerned.

Distribution of DDT products and typhus vaccine during June totaled 862,995 lbs. of 10% DDT dust, 169,741 gallons of 5% DDT residual effect spray, and 56,751 vials of typhus vaccine. A detailed breakdown by prefectures and governmental departments of the June distribution is included in Inclosure 2d.

Studies were made of the requirements for 10% DDT dust residual effect spray for use in the national hospitals and national sanatoria under the jurisdiction of the Ministry of Welfare. Allocations were based on 3.5 lbs. of 10% DDT dust and 0.6 gallons of 5% spray per hospital bed per year. Shipments of the DDT products were made direct to the hospitals during April, May and June, to meet the yearly requirement of each hospital.

<u>Month</u>	<u>10% DDT Dust</u>		<u>5% DDT Residual Effect Spray</u>	
	<u>Nat'l. Hospital</u>	<u>Nat'l Sanatorium</u>	<u>Nat'l. Hospital</u>	<u>Nat'l Sanatorium</u>
April	122,685 lbs.	169,101 lbs.	20,380 gals.	27,100 gals.
May	30,485 lbs.	33,767 lbs.	6,578 gals.	7,455 gals.
June	5,590 lbs.	2,795 lbs.	720 gals.	350 gals.
Total	158,760 lbs.	205,663 lbs.	27,678 gals.	34,905 gals.

Grand Total of Distribution of DDT Products to Nat'l. Hospitals and Nat'l. Sanatoria

<u>Month</u>	<u>10% DDT Dust</u>	<u>5% DDT Residual Effect Spray</u>
April	291,786	47,480
May	64,252	14,033
June	8,385	1,070
Total	364,423	62,583

Detailed breakdown indicating quantities of dust and spray received by each institution, according to dates of shipments, is furnished in Inclosure 2e.

A breakdown of solid fuel allocation (standard coal and lignite) by district and prefectures, for use in national hospitals and sanatoria, for July, August and September is furnished in Inclosure 2f. (Unit: metric tons). Allocation tickets were mailed direct to the institutions while notification by the Ministry of Welfare of the detailed prefectural allocation breakdown is mailed to each prefectural health office.

A similar breakdown is furnished in Inclosure 2g of solid fuel allocation (standard coal and lignite) by districts and prefectures, for use in Public and Private Hospitals and Sanatoria, for July, August and September. (Unit: metric ton). Allocation tickets are mailed direct to the institutions while the Ministry of Welfare notifies by mail each prefectural health office of its detailed prefectural allocation breakdown.

A similar breakdown is furnished in Inclosure 2h of solid fuel allocation (standard and substandard coal and lignite) by districts and prefectures, for use in Public Bathhouses, for July, August and September (Unit: metric ton). The same procedure applies on mailing direct to consumer the allocation tickets at the same time mailing to prefectural health offices the detailed prefectural allocation breakdown.

Allocations of cement received by the Ministry of Welfare for July, August and September included the following three categories in the specified amounts:

<u>Category</u>	<u>Amount of Allocation</u>
Welfare Institutions	3,000 tons
Government Demand	5 tons
Waterworks Repairs	<u>1,500</u> tons
Total	4,505 tons

Breakdown of the allocations, according to general categories, is included Inclosure 2i. Further detailed prefectural breakdown of the category "Water-works Repairs" is included in Inclosure 2j.

A total of 5,505 pieces of the various types of DDT dusting and spraying equipment for mosquito and fly control programs was produced during the period produced during the period 18-24 July.

During the period 18-24 July, 120,010 lbs. of 10% DDT dust, 4,855 gallons of 5% DDT residual effect spray, and 24,630 vials of typhus vaccine were distributed. At the same time, 69,800 lbs. of 10% DDT dust, 121,250 gallons of 5% DDT spray, and 3,111 vials of typhus vaccine were received. Total stocks on hand in wholesale houses of the Ministry of Welfare as of 24 July include 2,214,481 lbs. of 10% DDT dust, 415,365 gallons of 5% DDT spray, and 60,235 vials of typhus vaccine.

Distribution

Dusters and sprayers for insect and rodent control were shipped to 23 prefectures under Ministry of Welfare supervision in the period 18-24 July. A total of 6,822 pieces of equipment were distributed as follows:

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsack Sprayer</u>	<u>Semiautomatic Sprayer</u>	<u>Hand Sprayer</u>	<u>Power Duster</u>
Ehime	0	100	0	0	0
Hokkaido	100	0	20	500	0

Total	2,308	1,750	800	1,963	1

The "Second distribution" of U.S. Army surplus cotton sanitary materials released to the Japanese Government has been completed. Sales have been made through normal ration channels, special ration tickets having been issued by prefectural governors. Following is a list of items and quantities covered by this "Second distribution", a total of 22 items is involved.

<u>Stock No.</u>	<u>Description</u>	<u>Unit</u>	<u>Quantity</u>
2004000	Bandage Gauze Roller, 2 in. by 6 yds.	Doz.	21,768
2005000	Bandage Gauze Roller, 3 in. by 10 yds.	Doz.	6,586
2006000	Bandage Gauze Roller, 4 in. by 10 yds.	Doz.	30,024
2008000	Bandage Muslin, 3 in. by 5 yds.	Doz.	720
2011000	Bandage Suspensary	Doz.	480
2015000	Cotton Battin Non-absorbent, 1 lb.	Roll	364
2013000	Cotton Absorbent Compresed, 1 oz.	Pkg.	81,270
2016500	Crinoline Surgical, 36 in. by 100 yds.	Roll	2,592
2021000	Gauze Plain, 36 in. by 5 yds.	Roll	7,836
2024000	Gauze Plain, Sterilized, 36 in. by 1 yd.	Each	32,628
2025400	Mask, Face, Surgical, Improved, 120	Pkg.	360
2039000	Stockinet, 3 in. by 25 yds.	Roll	708
2040000	Stockinet, 6 in. by 25 yds.	Roll	432
2003185	Bandage, Gauze, Compressed, 3 in. by 6 yds.	Each	927,988
2042000	Wadding Sheet, 5 in. by 6 yds.	Roll	137,796
2012000	Bandage, Muslin, Traiangular, 12	Pkg.	75

9200200	Bandage, Gauze, Compressed, White 4 in. by 4 in.	Each	5
9200300	Bandage, Gauze, Compressed, Brown 4 in. by 4 in.	Each	10,000
9200500	Bandage, Gauze, Compressed, Brown 2 in. by 2 in, 4	Pkg.	16,150
9203000	Bandage, Plaster of Paris, 6 in. by 5 yds. 12	Pkg.	2,800
9205000	Dressing, First Aid, Large	Each	3,300
9206000	Dressing, First Aid, Small	Each	14,700

Following is a breakdown of distribution by prefecture, for five of these items:

<u>Prefecture</u>	Bandage Gauze Roller (unit: doz.)	Cotton Absorbent Compressed (unit: 1 oz pkg)	Gauze Plain Ster. (unit: pc)	Wadding Sheet (unit: roll)	Bandage Gauze Comp. (unit: pc)
Hokkaido	1,271	3,440	1,378	5,850	39,168
Aomori	388	1,020	428	1,770	12,096
Iwate	425	1,210	510	2,124	14,688

SECTION V
NARCOTIC CONTROL DIVISION

Narcotic Section Conferences

The Narcotic Section, Ministry of Welfare, is conducting conferences in Aomori, Niigata, Kyoto and Oita for all the Prefectures in Japan. The Narcotic Control Law, Marihuana Control Law, and regulations issued pursuant thereto will be discussed with narcotic agents and other prefectural officials.

Addicts

A female addict arrested in Tokyo in September 1947 and subsequently sentenced to two months hard labor was arrested again in July on a narcotic charge. Posing as a Nisei, the addict was using extortion to obtain narcotics from at least four physicians all whom are being investigated. This case accentuates the necessity for the provision in the Narcotic Control Law which makes it mandatory that such an addict receive not less than six months penal servitude.

SECTION VI
WELFARE DIVISION

International League of Red Cross Societies

The XVII International Red Cross Conference is to be held in Stockholm, Sweden, 17 August -2 September.

A representative from Public Health and Welfare Section will attend the conference as SCAP Observer accompanied by three officials of the Japanese Red Cross Society in the capacity of Technical Advisors.

This Conference is the first International meeting of the League of Red Cross Societies since the meeting held in London, England, in 1938.

National Relief Association (Dobo Engo Kai)

References: Public Health and Welfare Weekly Bulletins No.79 (for period 28 June - 4 July) and No.80 (for period 5 - 11 July).

Dobo Engo Kai, National Headquarters (Tokyo) took administrative action whereby their Branch Offices (prefectural) were to determine, individually, on or before 20 July, if they were to be participating members of the Community Chest.

Thirty-eight Branch Offices have decided to be participating members of the Community Chest (fund raising during October 1948 for fiscal year 1948-49) and eight Branch Offices have decided to conduct fund raising activities (membership campaign) independent of the Community Chest. The Branch Offices (prefectural) that will be independent of the Community Chest (fiscal year 1948-49) are: Iwate, Akita, Yamagata, Fukushima, Gumma, Saga, Nagasaki and Kagoshima.

Training Programs for Day Nursery Personnel

The Child Care Section, Children's Bureau, Ministry of Welfare, has established a program of short courses for day nursery and child welfare institutional personnel. Information received by the Ministry of Welfare indicates that definite programs have been planned in the following seven prefectures: Okayama, Tottori, Gumma, Mie, Yamaguchi, Kanagawa and Osaka.

The number of days and hours included in each of the programs varies by prefecture. Most of the training courses begin in July and August and will be completed by December. Detailed information concerning the training programs for particular prefectures may be secured from the Child Welfare Section of the prefectural Department of Welfare.

Subjects to be covered in this training program are child care, nutrition, children's diseases, case work, group work. Lecturers who will conduct the in-service training program are for the most part personnel in the various prefectures.

Miss Helen Keller to Visit Japan

Information has been received that Miss Helen Keller is expected to arrive in Japan on 29 August in the BCOF Area of Iwakuni Air Field. From Iwakuni, Miss Keller will proceed to Tokyo as a guest of SCAP and after a series of meetings in the Tokyo Metropolitan Area, will enter on a tour that will cover the major cities of Japan. The tentative schedule, as prepared by the Helen Keller Fund Committee (Japanese), subject to Miss Keller's approval, is given below:

September	1-7	Tokyo
	8	Leave Tokyo
	9	Arrive Sendai
	10-11	Sendai program
	12	Leave Sendai
	15	Arrive Sapporo
	17-18	Sapporo program
	19	Leave Sapporo
	23	Arrive Kanazawa
	24	Kanazawa program
	25	Leave Kanazawa
	26	Arrive Nagoya
	27-28	Nagoya program
	29	Leave Nagoya, arrive Osaka
30-4 Oct	Osaka program (Includes Kobe)	
October	6-8	Nara
	9	Kyoto program
	10	Leave Osaka
	11-12	Arrive Hiroshima
	13	Leave Hiroshima
14	Arrive Fukuoka	

15-16	Fukuoka program
17-18	Nagasaki program
19-20	Unzen

Military Government Teams will be notified of any deviation from this schedule. While not as yet included in this schedule, it is hoped that Miss Keller may make a stop at Sakata, Yamagata Prefecture, on 21 September.

The Awarding of Medals to Wounded Solders and Bereaved Families

Information received from the field through Command and Technical Channels has indicated that the Japanese Government has permitted the continuance of the awarding of wounded soldiers and bereaved families' medals during the early part of 1948.

While this has not been considered by the Japanese as a decoration ("Kun-Sha") -nevertheless it appears to be a violation of the spirit, if not the letter of the Potsdam Declaration and subsequent statements of policy. The Ministry of Welfare has been requested to halt the further awarding of these medals.

On 26 July a Ministerial dispatch was sent to all prefectures ordering immediate suspension of the awarding of these medals. It is suggested that Military Government Welfare Officers advise SCAP, through channels of any further violations. Any utilization of these awards by organized groups or individuals in the solicitation of funds for public and/or private organizations, agencies and operations should also be reported. Public display of these badges medals is to be discouraged.

Public Assistance

The Ministry of Welfare is expected shortly to announce a new table of standard allowances for public assistance. The new table will represent an increase of approximately 200% and will probably rescind Social Affairs Bureau Instruction (Sha-hatsus) #7 and #57. This information is furnished in confidence at this time in order that Military Government Welfare Officers may be so guided in their administrative views.

Complete information will be given in subsequent Public Health and Welfare Weekly Bulletin as the official information concerning the increased allowances becomes available.

SECTION VII SOCIAL SECURITY DIVISION

Health Insurance

The Insurance Bureau, Ministry of Welfare, has sent to all prefectural governors information on the amended Health Insurance Law effective 1 August, in Insurance Bureau Instructions (Hohatsu) No.1, dated 12 July. The information made particular reference to:

1. The paying of bonuses and how they are to be classified as part of the standard remuneration.
2. The employees of government or local public bodies, not covered by a mutual aid society shall be insured under Health Insurance with attention called to the fact that a group of employers of the local public bodies may form a Health Insurance Society.
3. The limit placed on the premium rate in a society-managed organization.
4. The nurses' allowance and the necessary revisions of premium rates by some Health Insurance societies.

Attention is called to Hohatsu No.5, dated 13 July, subject: "The Health Facilities of the Health Insurance Law for Fiscal Year 1948". Information contained in this Hohatsu pertains particularly to the operation of the directly managed Health Insurance medical facilities, as to special emphasis on tuberculosis, the minimum fee rates and what physical culture programs should be encouraged.

Reference Hohatsu No.8, dated 13 July, subject: "Regard to the Establishment of the Social Insurance Medical Care Advisory Council". The Law provides for establishing such a council in each prefecture with the membership composed of representation of the insurer, insured, medical and dental profession and public interest.

Appointments are made by the governor based on the recommendations of the organizations concerned. This council shall function largely on its own initiative as advisors to both the local public body and the purveyors of medical care.

Mutual Aid

No objection was offered to a Cabinet Order establishing Appeal Boards to function for the Mutual Aid Associations. This is a major step towards incorporating appeal and fair hearing proceedings into the administration of social insurance for government employees.

SECTION VIII MEMORANDA TO THE JAPANESE GOVERNMENT

None.

CRAWFORD F. SAMS
Brigadier General, Medical Corps
Chief

3 Incls:

1. Venereal Disease Prevention Law

 Emergency Measures for Salary and Allowance concerned with Government Officials
 with Enforcement of Labor Standards Act, (Law No.167, 1947).

July 8, 1948 (Ho-hatsu No.1124) official
From: Director, Insurance Bureau
To: Chief, Insurance sections of prefectures, Chiefs branch of social insurance, Director, Health Insurance National Sanatorium, Chiba
Subject: Payment of family allowance.

July 9, 1948 (Ho-hatsu No.1130)
From: Director, Insurance Bureau
To: Chief, Insurance sections of prefectures, Chiefs branch offices of social insurance.
Subject: Notification of disbursement program of Unemployment Insurance Account Budget, Sea-men Insurance Special Accounts for 1948-49.

July 9, 1948 (Ho-hatsu No.1131)
From: Director, Insurance Bureau
To: Chief, Insurance sections of prefectures, Chiefs branch offices of social insurance.
Subject: Notification of disbursement program of budget of Ordinary Insurance Account Sea-men Insurance, Special Accounts for the second quarter, 1948-49.

July 10, 1948 (Ho-hatsu No.1082)
From: Director, Insurance Bureau
To: All Prefectural governors
Subject: Conference of chiefs of Insurance Sections and chiefs of social insurance branch offices.

July 5, 1948 (Repatriation Relief Agency En-butsum No.110)
From: Director Relief Bureau
To: All Prefectural governors
Subject: Special allocation of mosquito-net for relief of rehabilitated repatriates.

July 7, 1948 (Repatriation Relief Agency En-butsum No.120)
From: Director Relief Bureau
To: Governor, Tokyo Metropolis
Subject: Allocation of iron-plate for repairing institutions for accommodation of repatriates.

July 8, 1948 (Repatriation Relief Agency En-shi No.127)
From: Director Relief Bureau
To: All Prefectural governors
Subject: Compensation for loss of agents which are dealing business fund loan.

July 8, 1948 (Repatriation Relief Agency Engo- No.128)
From: Director Relief Bureau
To: All Prefectural governors
Subject: Forwarding of a list of Koreans whose return have been permitted by SCAP.

July 8, 1948 (Repatriation Relief Agency Engo No.130)
From: Director Relief Bureau
To: Governor, Saga Prefecture
Subject: Repatriation of persons from Province of Formosa.

July 10, 1948 (Repatriation Relief Agency Engo No.133)
From: Director Relief Bureau
To: All Prefectural governors
Subject: Relief to be given repatriates at railway station.

July 12, 1948 (Kai-hatsu No.635)
From: Chief, Accounts Section
To: Governor, Yamanashi Prefecture
Subject: Transfer of national property.

July 13, 1948 (Kai-hatsu No.636)
From: Chief, Accounts Section
To: Every official in charge of disbursement
Subject: Measures for estimation of Overtime allowance.

July 14, 1948 (Kai-hatsu No.638)
From: Chief, Accounts Section
To: Director of every bureau or division
Subject: Date for drafting legislation concerning official residence.

July 12, 1948 (I-hatsu No.263)	From: Director, Medical Affairs Bureau	To: Chief, Health Div. Every Prefecture
	Subject: Internship for graduation of medical educational Institution concerning medical care and public health.	
July 12, 1948 (I-hatsu No.280)	From: Director, Medical Affairs Bureau	To: Governors, all Prefecture (except Aomori, Niigata Kyoto & Oita).
	Subject: Conference for business concerning Narcotic Control Law and Tima Control Law.	
July 12, 1948 (I-hatsu No.286)	From: Director, Medical Affairs Bureau	To: All Prefectural Governors
	Subject: Distribution of imported medicine.	
July 13, 1948 (I-hatsu No.297)	From: Director, Medical Affairs Bureau	To: All Prefectural Governors
	Subject: Additional allocation of imported penicillin.	
July 14, 1948 (I-hatsu No.299)	From: Director, Medical Affairs Bureau	To: All Prefectural Governors
	Subject: Revised allocation of alkyl-resorcinol.	
July 14, 1948 (I-hatsu No.300)	From: Director, Medical Affairs Bureau	To: All Prefectural Governors
	Subject: Distribution of released quinine-derivative.	
July 14, 1948 (I-hatsu No.301)	From: Director, Medical Affairs Bureau	To: All Prefectural Governors
	Subject: Course for permission of manufacturing sulfanilamide preparation.	
July 12, 1948 (Yo-hatsu No.932)	From: Director, Disease Prevention Bureau	To: Governor, Saitama Prefecture
	Subject: Directions for change of local inspector of biological preparations.	
July 12, 1948 (Yo-hatsu No.938)	From: Director, Disease Prevention Bureau	To: All Prefectural Governors
	Subject: Enlargement and repair work of Water works and drainage for 1949-50.	
July 14, 1948 (Ri-sha No.126)	From: Minister of Welfare	To: Governor, Yamanashi Prefecture
	Subject: Subsidy for expense of prevention of endemics.	
July 12, 1948 (Ko-ho-hatsu No.738)	From: Director, Public Health Bureau	To: All Prefectural Governors
	Subject: Preservation of sanitation of transportation car for sea foodstuffs.	
July 14, 1948 (Ko-ho-hatsu No.742)	From: Director, Public Health Bureau	To: All Prefectural Governors
	Subject: Payment of travel expense for survey commissioners from among for national nutrition survey expenditure.	
July 14, 1948 (Ko-ho-hatsu No.746)	From: Director, Public Health Bureau	To: All Prefectural Governors
	Subject: Forwarding vital statistic survey cards.	
July 15, 1948 (Hi-hatsu No.2)	From: Director, Public Health Bureau	To: All Prefectural Governors
	Subject: Supplemental report of national nutrition survey.	

July 17, 1948 From: Director, Public Health Bureau To: All Prefectural Governors
(Hi-hatsu No.3)
Subject: Change of the hospital ration monthly report form.

July 17, 1948 From: Director, Public Health Bureau To: All Prefectural Governors
(Hi-hatsu No.4)
Subject: Special distribution of food available for medical care.

July 17, 1948 From: Director, Public Health Bureau To: All Prefectural Governors
(Hi-hatsu No.5)
Subject: Special distribution of imported canned food for hospital ration.

July 17, 1948 From: Vice Minister of Welfare To: All Prefectural Governors
(Hatsu-ei No.1)
Subject: The second distribution of expenditure necessary for nutrition survey for 1948-49.

(En-shi No.156) prefectures in Tohoku District.
Subject: Acceptance with establishment of institutions for accomodation of repatriates from Saghalien without relatives.

SECTION II PREVENTIVE MEDICINE DIVISION

Japanese B. Encephalitis

Japanese B. Encephalitis began to occur in Tokyo on or about 20 July. Up to 31 July only 10 clinical cases had been reported all of which were isolated in Komagomi hospital. Since 1 August cases have been increasing daily and on 7 August there were 80 admissions. As of 9 August approximately 400 cases and 52 deaths had been reported in Tokyo alone. A small number of cases have been reported from neighboring prefectures; principally Kanagawa, Saitama and Ibaraki.

Section II, Public Health and Welfare Weekly Bulletin No.83 calls attention to the equine encephalitis outbreak which has been confined largely to the Kanto Region. Research has proved without reasonable doubt that the virus causing equine encephalitis and Japanese B. Encephalitis in human is the same. The vector of the disease is known to be mosquitoes, however, it is by no means certain that this is the only vector. Consequently insect control should be intensified and directed against all household insect pests with particular attention to flies and mosquitoes.

This disease has been present in Japan since at least 1924 and while some cases occur annually there has been a tendency for major epidemics to occur periodically at intervals of 10-14 years. The first such epidemic occurred in 1924, the second in 1935 and evidence points to the fact that we are now in the midst of a third major epidemic.

Case finding, case reporting, insect control and environmental sanitation should be intensified. Once an outbreak has occurred the maximum benefits from insect control cannot be obtained. However, since insect control is our principal weapon intensified control measures will do much to mitigate the epidemic. It is to be expected that this disease will spread to other areas of Japan, especially to those areas in which equine encephalitis is occurring. Military Government Health Officers are urged to exercise surveillance over the Japanese Health authorities in

order to ascertain that maximum efforts are made for effective mosquito control and other measures designed to curb the epidemic.

Sanitation

The following telegraphic order was sent by the Ministry of Welfare to the Prefectures on 4 August: "Ministerial Order No.43 regarding insect control program for 1948 will be put into full effect at once. Sanitary Teams will start operations in all areas as outlined. In addition, additional insect control will be initiated in areas where there is present or a threat of equine or human encephalitis so as to eliminate all household insects and the breeding places of these insects. Revision will be made in the base subsidy to be paid by the Welfare Ministry of meet this emergency."

Encephalitis control consists chiefly of control of all insects that live in and around homes and should not be confined to mosquitoes. Control should consist of the following:

1. Residual effect spraying of homes where a case of encephalitis occurs, and the houses adjacent for not less than 50 meters. Five percent DDT in oil solution should be used and sprayed in closets, behind and underneath furniture, pictures, in attics and under the houses. All out-houses and pens for livestock such as chickens, rabbits, horses, etc., should also be sprayed thoroughly.

2. Areas within 1 kilometer of the home should be cleaned up and larvae control of flies and mosquitoes should be thoroughly effected for a distance of not less than 1 kilometer. Pyrethrum emulsion or 10% DDT dust should be used for this control.

3. Routine work by sanitary teams should be stepped up to catch up with the lag in insect control due to the late start most of the prefectures have had.

The limiting of the Ministry's subsidy to 25 yen per day has been lifted so as to permit the prevailing wage scale to be paid. Fifty percent of what ever the local labor costs will be met by the Ministry of Welfare.

Venereal Disease Control

The Disease Prevention Section of the Ministry of Welfare is conducting a series of regional conferences at Tokyo, Fukushima, Nagano, Kobe, Hiroshima and Fukuoka to discuss the new Venereal Disease Prevention Law with prefectural health authorities.

Military Government Health Officers should see that steps are taken by prefectural health authorities to provide adequate laboratory facilities, personnel and supplies to carry out the routine pre-marital and pre-natal serological tests as provided in Articles 8 and 9 of the new Venereal Disease Prevention Law which becomes effective 1 September.

SECTION III VETERINARY AFFAIRS DIVISION

Equine Encephalomyelitis

A slight decline in reported cases during period 31 July - 6 August as compared to the period 24 July - 30 July was reported by the Ministry of Agriculture and Forestry.

Animal Diseases

The following outbreak of diseases were reported for period 31 July - 6 August by the Animal Hygiene Section, B.A.I., Ministry of Agriculture and Forestry.

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>

Food Sanitation Regulations

Regulations supporting the Food Sanitation Law were issued to all prefectures as Ministerial Ordinance No.23 on 21 July during a conference of prefectural Public Health Department Chiefs in Tokyo.

SECTION IV NURSING AFFAIRS DIVISION

Refresher Courses

On Monday, 2 August, the four months refresher course for instructions in basic schools of nursing opened at the Red Cross Central Hospital in Tokyo. Fifty-three students from schools throughout Japan are enrolled in this course.

Saturday, 7 August, the fifth four months refresher course for public health nurses opened at the Institute of Public Health, Tokyo in which 51 students are enrolled.

SECTION V SUPPLY DIVISION

General

With the return to the United States of Lt. Col. B. N. Riordan for assignment to the Surgeon General's Office in Washington, D.C., effective 27 July, personnel changes in the Supply Division, Public Health & Welfare Section were made as listed below:

Mr. Charles V. Band, Chief, Supply Division

Mr. Eugene E. Coppola, Chief, Stock Control & Distribution Branch, Supply Division

Production

The following tables indicate production of medical, dental, and sanitary supplies and equipment during the period January - June 1948, by months, production averages attained during the 1st Quarter, 2nd Quarter, 1st Half, 1948, and monthly production averages for 1946 and 1947.

A total of 5,680 pieces of the various types of DDT dusting and spraying equipment for mosquito and fly control programs was produced during the period 25 - 31 July.

An outbreak of equine encephalitis was reported recently at the horserace tracks at Fuchu and Chiba. Releases of 5% DDT residual effect spray were made immediately upon receipt of the report. The spray was used in the barn, stables, and the general area of the tracks. Plans are now being formulated for further releases of DDT products for general distribution throughout all the prefectures of Japan to be used in the barns, stables and horserace tracks to prevent further spread or further outbreaks of equine encephalitis. Pharmaceutical Affairs Section Ministry of Welfare, and Animal Hygiene Section, Ministry of Agriculture and Forestry, are coordinating their efforts on this project.

Distribution

A total of 7,780 pieces of dusting and spraying equipment was distributed to 25 prefectures, as follows:

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsack Sprayer</u>	<u>Semiautomatic Sprayer</u>	<u>Hand Sprayer</u>	<u>Power Duster</u>

SECTION V
NARCOTIC CONTROL DIVISION

Narcotic Control Activities Report - June

The June report of narcotic control activities from the Ministry of Welfare contains the following information:

Total Registrants	84,180
Arrests - Registered persons	24
Unregistered persons	70
Convictions - Registered persons	6
Unregistered persons	114
Thefts of narcotics	33
Losses by fire	7

Penalties for registrants varied from 1,000 yen fine to two years penal servitude. Penalties for non-registrants varied from 200 yen fine to two years penal servitude with 33 of the defendants being sentenced to penal servitude. Charges against 20 defendants were dropped because of insufficient evidence. Forty-five registrants were admonished and two minor violations were disposed of administratively.

The report also summarizes the activities of narcotic agents as follows:

Inspections of registrants	1,593
Investigations originated	297
Investigations concluded	69
Investigations not concluded	271

Power of Arrest

Under Diet Law Number 112, only those persons appointed by the Minister of Welfare to work exclusively on narcotics are authorized to have power of arrest for narcotic violations. According to a roster of such narcotic agents prepared by the Narcotic Section, Ministry of Welfare, one chief of a prefectural Sanitary Bureau has been delegated such power. Stops are being taken to divest this person of the power of arrest.

Registration

The request of a foreign national physician for permission to write narcotic prescriptions without being licensed as a physician and registered under the Narcotic Law was denied by the Ministry of Welfare. All such persons must be properly licensed and registered before engaging in any narcotic activity.

Narcotic Laws and Regulations

Copies of the Narcotic Control Law and the Taima (Marihuana) Control Law, both effective as of 10 July, and regulations issued pursuant thereto, promulgated 22 July, are attached for information of Military Government Health Officers.

SECTION VI
WELFARE DIVISION

Welfare Commissioner Law (Minsei-iin)

The new Minsei-iin Law passed by the recent Diet, became effective on 29 July.

A copy of the translation of this law is being sent out with this Bulletin for information of Military Government Welfare Officers. The Cabinet Order which is necessary to implement certain provisions of the Law has also been approved and issued. Provisions of the Minsei-iin Law which require further action by Cabinet Order are: Article 8 (par 5); Article 9 (par 5); Article 19 (par 3); Article 21 (par 5); Article 21 (par 6); Article 25 (par 1); Article 25 (par 2); Article 33.

The Ministry of Welfare issued Social Affairs Bureau Instruction (Hatsu-sha) No.85, on 29 July, to prefectural governors. This regulation calls attention to the new Minsei-iin Law and sets forth certain matters which are necessary for its implementation. Due to the fact that there was such criticism in the Diet, of members of the Diet, as well as members of prefectural and local assemblies serving as Minsei-iin, the prefectural governors are advised that members of the Diet or Assembly should not serve as Minsei-iin. The Ministry of Welfare anticipates there will be some objections to this provision. Such a regulation seems advisable, however, since it is difficult for a person to serve as Minsei-iin and not benefit thereby when it comes time to be elected to a legislative body. The decision to adopt such a regulation was made by the Ministry of Welfare upon the suggestion of the members of the Diet.

Welfare Officers - Military Government

The following list of Welfare Officers in Military Government Teams and Regions has been provided by Military Government Section, Hqs, Eighth Army:

Tokyo	Mrs. Edna K. Callow Miss Jeanne G. Fullar
Kanagawa	Mr. Robert W. Stemple Mrs. Cora Jeanne Baker
Shizuoka	Miss Irene Randolph
Kinki (I Corps)	Mr. Roland Artigues
Fukui	Lt. John A Devine

Licensed Agencies for Relief in Asia (LARA)

Overseas shipments of LARA relief supplies, Nos. 78 through 86, arrived in Yokohama for distribution to the Japanese, through official Japanese Governmental Welfare channels, under the supervision of the Supreme Commander for the Allied Powers. These shipments totaled 1,741.44 tons and included the following relief supplies.

Food	1,661.49
Clothing (including shoes)	77.53
Miscellaneous	2.42
Medicines (atabrine tablets)	<u>weight unknown</u>
Total	1,741.44 tons

Recapitulation of LARA shipments from 1 September 1946 to and including 15 July is furnished herewith for general information:

<u>Dates</u>	<u>Shipments</u>	<u>Pounds</u>	<u>Value</u>
1 Sept 46 - 31 Aug 47	Nos. 1-22 Incl	5,905,628 lbs	\$1,568,965.49
1 Sept 47 - 1 Feb 48	Nos. 23-48 Incl	1,821,233 lbs	796,392.17
3 Feb 48 - 26 Jun 48	Nos. 49-79 Incl	5,743,971 lbs	1,321,597.70
1 July 48 - 15 July 48	Nos. 80-83 Incl	<u>153,695 lbs</u>	<u>139,682.20</u>
		13,624,527 lbs	\$3,826,638.56

Agencies involved in these relief shipments, in the United States, Honolulu, Brazil, and Argentina are given, indicating scope of interest and the agencies participating in the program:

<u>Agency</u>	<u>Pound lbs</u>	<u>Value \$</u>
American Friends Service Committee	2,502,000	769,974.68
Argentina	73,216	64,640.00
Brethern Service Committee	83,210	15,552.00
Frazil	396,480	37,007.10
Canadian Council of Churches	16,437	16,437.00
Church World Service	7,888,049	2,155,023.40
Honolulu	664,929	244,708.52
Luthran Service Committee	169,045	59,145.20
Mennonite Service Committee	59,900	2,700.00
War Relief Services (N.C.W.C.)	<u>1,771,261</u>	<u>461,450.66</u>
	13,624,527	3,826,638.56

Work Shops

The Ministry of Welfare will shortly inaugurate a survey of work shops which are under its general supervision. Purpose of the survey will be to learn more of the general make-up of these so-called protective institutions and to determine their material needs with the idea of facilitating procurement of required materials and aiding them in distribution of finished products.

While the Supreme Commander for the Allied Powers has never requested specific surveillance over these institutions, Public Health and Welfare Section has been interested in occasional reports concerning workshops contained in Annex B-2 Monthly Military Government Team Reports. These reports indicate that considerably more attention needs to be given to the entire program. At present there are at least three general types of "workshops". They are:

1. Vocational Training Institutes, under the supervision of the Ministry of Labor. These shops provide vocational training to normal individuals for a period not usually exceeding six months. These persons are placed in employment through Public Employment Security Officer, upon completion of training.

2. Cooperative Work Shops, under the supervision of the Ministry of Labor. These shops are cooperative efforts, and, as a rule, are manned by those having a full capacity for work.

3. Work shops, under the Ministry of Welfare. These shops may be publicly owned and operated, or may be run by a corporation or individual. Generally they provide work for the aged, infirm, physically handicapped, those receiving public assistance, and others of similar circumstances. These persons are generally considered to be of the lowest standard of employee available. Work days and work hours are generally suited to the needs of the individual.

Among this latter group, institutions employing at least 30 persons of whom 50% or more are recipients of public assistance may be classed, upon application, as "protective institutions" under the Daily Life Security Law and its regulations, and are eligible for 1.35 yen per day per public assistance recipient for administrative costs. Shops which qualify as social work agencies under Article 10 of the Social Work Law of 1938 may be exempted from taxation.

Present Policy of Public Health and Welfare Section is that any work shop receiving a grant for administrative costs shall be nonprofit in nature. As a general principle we have requested that such work shops shall not operate in such manner that employment is taken from regular labor in the community except as may be done through competition based on fair labor practices and standards.

It is anticipated that under the revision of the Social Work Law of 1938 which is now contemplated by the Ministry of Welfare, revisions will be made which will require certain standards of operation in these institutions.

National Public Assistance Report - June

The Ministry of Welfare has submitted the following figures for the month of June. Figures for May 1948 and for June 1947 are shown for purpose of comparison:

	<u>June 1948</u>	<u>May 1948</u>	<u>June 1947</u>
Persons - Institutional	140,591	136,898	131,628
Persons - Non-Institutional	<u>1,841,429</u>	<u>1,911,666</u>	<u>2,615,884</u>
Total	1,982,020	2,048,564	2,747,512
Assistance - cash*	397,062,940	397,359,593	213,783,766
Assistance - Kind	<u>30,308,832</u>	<u>35,361,528</u>	<u>20,470,507</u>
Totals	Yen 427,371,772	412,721,121	234,254,273

Japanese Red Cross - Nursing

Reeducation and Instructor's Course is being held at Japanese Red Cross Headquarters, 2-21 August.

Fifty candidates from each Red Cross School of Nursing are in attendance. The course of study consists of:

1. Medical lectures	20 hours
2. Surgical lectures	10 hours
3. Communicable disease lectures	5 hours
4. Ward administration lectures	3 hours
5. First Aid lectures	4 hours
6. Practice work & demonstration of nursing procedures	36 hours
7. Practice teaching by students	30 hours
8. Student conference	12 hours

This course is a sequel to the course offered to the candidates from Red Cross Schools of Nursing in January at which time they were given instructions and practice teaching in principles, practices of nursing arts, history of nursing, personal hygiene and nursing ethics.

The purpose of these courses is to prepare nursing instructors for the various Red Cross Schools of Nursing.

Volunteer Service Groups

On 2 August Musashino Branch of the Japanese Red Cross called a meeting of the Sakae City Women's Group to organize Japanese Red Cross Volunteer Service Groups.

Present were the city mayor, principal of Girl's High School, Chief of Police Department and the Station master. Those who attended from the Japanese Red Cross Headquarters were ARC Consultant on Volunteer Service and Chief of Volunteer Service Section. The Chairman and vice-chairman of the Japanese Red Cross Volunteer Service Women's Group were elected from among those who attended the meeting.

For their first project, the women's group is considering a day nursery project to care for the children of the employed parents and those busy in their fields as the greater area of Sakae is rural. The volunteers who will work on this project will take home nursing courses and will lay emphasis on child care.

Japanese Junior Red Cross Leadership Center

From 25 through 31 July, Japanese Junior Red Cross Leadership Center was conducted at Tamano, Okayama Prefecture. Another Center is scheduled to operate from 15-21 August at Gohra, Kanagawa Prefecture. The Tamano Training Center accommodated 55 children, approximately one boy and one girl from each of 23 Chapters in southern Japan. The students themselves operated the Center with minimum adult guidance. Courses of study offered included Junior Red Cross organization and community activities, home nursing and nutrition, water safety and accident prevention, English conversation and a variety of handcraft. Twelve Japanese school supervisors, nutritionists, teachers, craftsmen, nurses and safety service experts were selected as faculty members to teach these subjects.

American Red Cross Consultant for the Japanese Junior Red Cross served as liaison officer for Public Health and Welfare, Major O.S. Moreman, Jr. and Mr. Donal Typer, CI&E, assisted with camp programming. Mr. S. Honjo, Chief, Junior Red Cross Section, Japanese Red Cross, acted as dean of the training center.

Other American faculty members included Mrs. R. M. Hamill, Principal, Yoyogi Elementary Tokyo American School; Mr. Clark K. Poppell, Asst. Director, First Aid and Water Safety, ARC, and Miss Margaret James, Administrative Security, ARC.

Board of Directors Meeting

A meeting of the Board of Directors, Japanese Red Cross Society, was held on 30 July. Announcement of the resignation of Prince Takamatsu as Honorary President was made to the Board.

SECTION VII SOCIAL SECURITY DIVISION

General

During a recent field trip, representatives of Public Health and Welfare, Section visited the Kagawa and Ehime Prefectures on the Island of Shikoku. Interviews were held with prefectural officials and representatives of employers, employees and medical associations.

In both prefectures the Insurance Section officials seemed better informed on the social insurance programs and their administration than has been observed in previous visits to other prefectures. They have also been carrying on an active informational service throughout their prefectures, particularly since the first of the year, covering amendments to the various laws governing the social insurance programs, appeals procedures, and the scope of benefits and welfare facilities available to members. Prefectural Information Sections have recently been formed in these prefectures and although to date the Insurance Sections have operated independently, they expect to make use of this agency in the future.

The Insurance Section at Ehime had developed and printed some interesting posters, for display in places of employment and public places, giving information on appeals procedures and welfare establishments. Ministry of Welfare Officials have since indicated that they will secure from all prefectures sample posters which have been locally produced and thus provide for an exchange of such ideas.

At all meetings the major interest of those present appeared to be in National Health Insurance - in how to revitalize inactive associations, increase benefits to members, adjust medical fees to rates more nearly comparable to those for other patients, and expedite prompt payment of medical fees.

The Insurance officials in both prefectures have worked with representatives of the Employment Security Sections in the prefectural governments to effectuate the unemployment insurance provisions of the Seamen's Insurance Law. Liaison has been established with the Maritime Offices in this connection also, but no Mariners' Employment Security Offices have been established by the Ministry of Transportation as yet.

National Health Insurance

No objection was offered to a proposed cabinet designed to make effective the provisions recently incorporated in the National Health Insurance Law relative to advisory councils to be set up for each local association. The membership will be drawn from three groups: insured members of the association, licensed doctors of medicine and dentistry, and the public interest. The number of members will be determined by local ordinance. The function of these local councils will be similar to that of the National Advisory Councils already existing for the Health Insurance, Welfare Pensions Insurance, and Seamen's Insurance programs. It should be noted that these advisory councils are to be distinguished from the "Social Insurance Medical Care Advisory Council," referred to in Public Health and Welfare Weekly Bulletin No.82.

Medical Fee Calculating Committee

The Social Insurance Medical Fee Calculating Committee held a meeting 22 July, in regard to recommending a revision in the rate of fee point for medical care under Health and Seamen's Insurance. The rates recommended by the Committee to the Minister of Welfare were as follows: for the month of August and September Area A - (the six big cities and their suburban areas) 10 yen per points, Area B - (other areas) 9 yen per point. As of 1 October the rate in each area will be increased 1 yen per point. The Minister of Welfare has accepted the above recommendations and is sending a notice to each prefecture for establishing the above rates effective as of 1 August.

For National Health Insurance, a separate committee is to be established in the near future under provisions of the revised Law, to advise on standard rates for this program, as the Minister of Welfare does not establish the rates under the revised National Health Insurance Laws. However, the present Medical Fee Calculating Committee did discuss the rates for National Health Insurance and have advised that rates comparable to the other programs be adhered to, at least for the month of August and September, as follows: Area A, 10 yen per points; Area B, 9 yen per point; Area C (rural) 8 yen per point. The Insurance Bureau, Ministry of Welfare states that notifications have been sent to all prefectures advising them as to the Committee's advice.

SECTION VIII MEMORANDA TO THE JAPANESE GOVERNMENT

None.

CRAWFORD F. SAMS
Brigadier General, Medical Corps
Chief

Inclosures:

1. a. The Narcotic Control Law
b. The Enforcement Regulation of the Narcotic Control Law
c. The Taima Control Law
d. The Enforcement Regulation of the Taima Control Law
2. Welfare Commissioner (Minsei-iiin) Law (Information for Public Welfare Officers only)
3. Report of cases and deaths from communicable and venereal diseases in Japan, for the week ending 31 July 1948.

SECTION I
GENERAL

Ministerial Instructions

The below-listed instructions were issued by the various Bureau of the Ministry of Welfare to prefectural governments, during the period indicated.

		12 July - 17 July		
16 July, 1948 (Ji-Hatsu No.451)	From: Director, Children Bureau		To: All Prefectural Governors	
	Subject: Forwarding of list of figure-work on the nation-wide simultaneous investigation of orphans.			
		19 July - 24 July		
19 July, 1948 (Kai-hatsu No.648)	From: Chief of Account Section		To: Head of each department or bureau	
	Subject: Investigation into business expense.			
20 July, 1948 (Kai-hatsu No.650)	From: Chief of Account Section		To: Head of each department or bureau	
	Subject: Application of Law No.171 of 1947.			
July 20, 1948 (Kai-hatsu No.653)	From: Chief of Account Section		To: Head of each department or bureau	
	Subject: Concerning the contract price for goods of which sum is not controlled.			
July 20, 1948 (Kai-hatsu No.655)	From: Chief of Account Section		To: Governor, Aomori Prefecture	
	Subject: Field examination of accounts by the Board of Audit.			
July 21, 1948 (Kai-hatsu No.657)	From: Chief of Account Section		To: Governors, Shiga & Nara Prefectures	
	Subject: Field examination of accounts by the Board of Audit.			
July 24, 1948 (Kai-hatsu No.665)	From: Chief of Account Section		To: Governor of Yamaguchi Prefecture	
	Subject: Reply concerning the contract price for goods of which the sum is not controlled.			
July 19, 1948 (Yo-hatsu No.954)	From: Director, Disease Prevention Bureau		To: Governor of Each Prefecture	
	Subject: Amendment to enforcement regulations relative to Health Center Law and others.			
July 19, 1948 (Yo-hatsu No.957)	From: Director, Disease Prevention Bureau		To: Governor of Each Prefecture	
	Subject: Amendment to regulations concerning the division of the Ministry of Welfare.			
July 20, 1948 (Yo-hatsu No.960)	From: Director, Disease Prevention Bureau		To: Governor of Each Prefecture	
	Subject: Information on the monthly reports on the business of health centers.			
July 21, 1948 (Yo-hatsu No.969)	From: Director, Disease Prevention Bureau		To: Governor of Each Prefecture	
	Subject: Investigations into B.C.G. inoculation.			
July 22, 1948 (Yo-hatsu No.978)	From: Director, Disease Prevention Bureau		To: Governor of Each Prefecture	
	Subject: Contract with the insured concerning medical treatment according to Health Seamen's and National Health Insurance.			

July 19, 1948 From: Director, Pharmaceutical & Supply Bureau To: Governor of Each Prefecture
(Yaku-hatsu No.2)
Subject: Decision on allocation of designated supplies (medical drugs) permitted to be distributed.

July 22, 1948 From: Director, Pharmaceutical & Supply Bureau To: Governor of Each Prefecture
(Yaku-hatsu No.7)
Subject: Amendment to regulations governing the distribution of medical supplies.

July 22, 1948 From: Director, Pharmaceutical & Supply Bureau To: Governor of Each Prefecture
(Yaku-hatsu No.8)
Subject: Disposal of medical supplies owned by dissolved organizations.

July 22, 1948 From: Director, Pharmaceutical & Supply Bureau To: Governor of Each Prefecture
(Yaku-hatsu No.17)
Subject: Control over bad medical supplies.

July 19, 1948 From: Director, Social Affairs Bureau To: Governor Niigata Pref. & 1 other prefecture
(Sha-hatsu No.1100)
Subject: Allocation of LARA relief goods.

July 20, 1948 From: Director, Social Affairs Bureau To: Governor of Hokkaido & 10 other Prefectures
(Sha-hatsu No.1103)
Subject: Allocation of bleaching powder to work shops.

July 20, 1948 From: Director, Social Affairs Bureau To: Governor Gumma Prefecture
(Sha-hatsu No.1104)
Subject: Granting of standard sum of livelihood aid allowance under the Daily Life Security Law.

July 20, 1948 From: Director, Social Affairs Bureau To: Governor Ishikawa Prefectures
(Sha-hatsu No.1105)
Subject: Application for the acknowledgment of the limit of the actual cost to be compensated for under the Disaster Relief Law.

July 21, 1948 From: Director, Social Affairs Bureau To: Governor Kochi Prefectures
(Sha-hatsu No.1109)
Subject: Report on commendation according to Regulation on Commendation.

July 24, 1948 From: Director, Social Affairs Bureau To: Governor, Osaka & Nagano Prefecture
(Sha-hatsu No.1125)
Subject: Allocation of materials for toilet articles to give for vocational training.

July 19, 1948 From: Director, Social Affairs Bureau To: Governor of Each Prefecture
(Sha-otsu-hatsu No.109)
Subject: Information and dissemination of the purpose of the Welfare Committeemen's Law.

July 21, 1948 From: Director, Childrens Bureau To: Governor of Each Prefecture
(Ji-hatsu No.459)
Subject: Authorization of facilities for children's welfare which have relations to more than two prefectures.

July 21, 1948 From: Director, Childrens Bureau To: Governor of Tokyo and Osaka Pref.
(Ji-hatsu No.462)
Subject: Allocation of LARA relief goods.

July 22, 1948 From: Director, **Childrens** Bureau To: Governor of Tochigi and 4 other Pref.
(Ji-hatsu No.470)
Subject: Allocation of bicycle for the last quarter of 1947.

July 22, 1948 From: Director, **Childrens** Bureau To: Governor, Kagawa Prefecture
(Ji-hatsu No.477)
Subject: Conference on the employment of children's welfare officers.

July 23, 1948 From: Director, **Childrens** Bureau To: Governor of Each Prefecture
(Ji-hatsu No.471)
Subject: Advice for immediate installation of full-time staffs for local children's welfare agencies, children's welfare officers and personnel of child welfare station (Including homes for temporary protection).

July 20, 1948 From: Director, **Childrens** Bureau To: Governor of Each Prefecture
(Ji-otsu-hatsu No.34)
Subject: Request for investigations concerning the enforcement of the Children's Welfare Law.

July 23, 1948 From: Director, **Childrens** Bureau To: Governor of Each Prefecture
(Ji-otsu-hatsu No.35)
Subject: Investigation into the present condition of Child Welfare Station.

July 20, 1948 From: Director, Insurance Bureau To: Chief of Insurance Section, each Pref.
(Ho-hatsu No.12) Head of Branch, Social Insurance Office. Head of Chiba Sanatorium
Subject: Payment of salaries for July.

July 21, 1948 From: Director, Insurance Bureau To: Governor of Each Prefecture
(Ho-hatsu No.13)
Subject: Amendment to the enforcement regulations governing the Seamen's Insurance Law.

July 21, 1948 From: Director, Insurance Bureau To: Chief of Insurance Section, each Pref.
(Ho-hatsu No.14) Head of Branch, Social Insurance Office. Head of Chiba Sanatorium
Subject: Estimated expenditure on health special account in the Welfare Insurance for 1948.

July 21, 1948 From: Director, Insurance Bureau To: Governor of Each Prefecture
(Ho-hatsu No.15)
Subject: Standard for the grants for the medical fees by Seamen's Insurance.

July 22, 1948 From: Director, Relief Bureau To: Governor, Fukuoka and 21 other Pref.
(Engo No.169)
Subject: Name-list of Koreans who have been permitted by SCAP to return home.

July 23, 1948 From: Director of Demobilization Board To: Governor of Each Prefecture
(Ichi-fuku No.2269)
Subject: Informal notification of the sum of money to be borne by the Service Section.

SECTION II PREVENTIVE MEDICINE DIVISION

Japanese B Encephalitis

Reference Section II, Weekly Bulletin #84. The current encephalitis epidemic which originated in Tokyo about 20 July has spread to other prefectures, principally those in the Kanto District. Saitama bordering Tokyo on the north and Kanagawa on the south, have reported the largest number of cases to date. Other prefectures of the Kanto District reporting cases are Fukushima, Ibaraki, Tochigi, Gumma, Nagano, Yamanashi and Chiba. In addition to the above Shizuoka, Aichi and Gifu have also reported a considerable number of cases. Only a few cases have been reported from other prefectures.

Proof that this epidemic is Japanese B Encephalitis is supported by laboratory findings. Complement fixation reactions performed on paired specimens of blood, secured at intervals of several days, have shown a negative reaction in the first specimen and a positive reaction in the second specimen. A virus has also been isolated from several of the earlier cases. The complete identification of this virus was still pending at the time this report was prepared, however, its behavior up to this time is consistent of that of known Japanese B Encephalitis strains. The following is a tabulation by prefectures of encephalitis cases reported to this Headquarters since 25 July. This report includes cases reported up to 0900 hours 16 August.

Prefectures not listed have not reported any cases:

<u>Prefecture</u>	<u>Cases</u>
Aomori	4
Iwate	1
Miyagi	7
Akita	7
Yamagata	1
Fukushima	25
Ibaraki	45
Tochigi	37
Gumma	43
Saitama	125

Tottori	1
Shimane	1
Kochi	2
Fukuoka	3
Kumamoto	2
Oita	1
Miyazaki	<u>1</u>
Total	1,948

Sanitation

SCAPIN 920, AG 725.11 (4 May 46) PH, dtd 4 May 46, subject: Appointment of Insect and Rodent Control Officers, directing that a full time Insect and Rodent Control official be appointed in each Prefecture, has not been complied with in many prefectures. In most prefectures the infectious diseases control official is doubling in both infectious disease control and insect and rodent control positions, with the result that very little attention is given to the planning and proper operation of insect and rodent control programs. This work is a full time job and of the utmost importance in the control of communicable diseases.

There have been five classes of sanitarians and one class of sanitary engineers graduated from the Institute of Public Health. These students have been thoroughly trained in environmental sanitation which includes all types and methods of insect and rodent control and it is of utmost importance to see that they are properly used for this work in the prefectures.

Venereal Disease Control

Reference is made to the English translation of the new Venereal Disease Prevention Law which was included as Inclosure 1 in Weekly Bulletin No.83 for period 26 July - 1 August 1948.

Article 13, which was omitted in above mentioned copy, is as follows: "When physicians conduct the health examination as provided in Article 10 or 11, they shall make medical examination of VD by the method prescribed by Ministerial Ordinance."

SECTION III VETERINARY AFFAIRS DIVISION

Equine Encephalomyelitis

During the period 6-13 August, a total of 315 new cases were reported which makes this period the most active and quite possibly, may represent the peak of the outbreak. The new cases, while present in nearly all prefectures reporting the disease, showed a higher number in the northern prefectures of Akita, Iwate, Fukushima, Miyagi and Tochigi. The totals to date are 650 positive cases, 54 suspect cases (awaiting confirmation), 100 deaths and 21 sacrifices. The above figures represents a mortality rate of 17.18% which is considerably lower than the 47.7% recorded in 1947.

Weekly Animal Disease Report

Following is the outbreak of new diseases as reported by Ministry of Agriculture and Forestry for period 6-13 August.

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Saitama	Equine encephalomyelitis	18
Gumma	"	16
Ibaraki	"	60
Tochigi	"	67
Gifu	"	3
Toyama	"	1
Nagano	"	7
Yamanashi	"	12
Niigata	"	9
Fukushima	"	68
Miyagi	"	20
Iwate	"	10
Akita	"	2
Kochi	"	1
Kanagawa	"	1
Chiba	"	7
Tokyo	"	9
Chiba	Swine erysipelas	3
Aichi	"	1
Tokyo	"	1
Tokyo	Texas Fever	1
Nagano	Swine erysipelas	2
Hokkaido	Swine cholera	20
Ishikawa	Swine erysipelas	3
Tokyo	Anthrax	1
Ibaraki	Swine cholera	2
Chiba	Swine plague	1

SECTION IV SUPPLY DIVISION

Production

A total of 5,700 pieces of the various types of DDT dusting and spraying equipment for mosquito and fly control programs was produced during the period 1-7 August. Large stocks of this equipment are on hand to meet all requirements.

During the period 25-31 July, 129,300 lbs. of 10% DDT dust, 99,888 gallons of 5% DDT residual effect spray and 24,500 vials of typhus vaccine were distributed. At the same time, 23,600 lbs. of 10% DDT dust and 74,050 gallons of 5% DDT spray were received from the manufacturing plants. Total inventory stocks on hand in regional warehouses of the Ministry of Welfare as of 31 July include 2,064,781 lbs. of 10% DDT dust, 411,565 gallons of 5% DDT spray and 49,985 vials of typhus vaccine. During the period 1-7 August, 109,940 lbs. of 10% DDT dust, 33,370 gallons of 5% DDT residual effect spray, and 3,993 vials of typhus vaccine were distributed. At the same time, 64,950 gallons of 5% DDT spray were received from manufacturing plants. Total inventory stocks on hand in regional warehouses of the Ministry of Welfare as of 7 August include 1,924,941 lbs. of 10% DDT dust, 348,802 gallons of 5% DDT spray, and 51,792 vials of typhus vaccine.

With the recent outbreak of Japanese B Encephalitis and the intensification of insect control activities, it is emphasized again that Ministry of Welfare inventory stocks of all insect and rodent control supplies and equipment are adequate to meet all requirements. Prefectural health officials should requisition sufficient insect control supplies and equipment to cope adequately with local prefectural conditions.

Distribution

Dusters and sprayers for insect and rodent control were shipped to 32 prefectures under Ministry of Welfare supervision during the period 1-7 August. A total of 20,847 pieces of equipment, 13,067 more than during the previous period, was distributed. The distribution was increased to implement the current encephalitis control program.

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsac k Sprayer</u>	<u>Semiautomatic Sprayer</u>	<u>Hand Sprayer</u>	<u>Power Duster</u>
Hokkaido	720	1,402		600	
Aomori	816	800	1,602		
Iwate	508	504	130	300	2
Miyagi		200	708	80

Total	5,930	7,416	3,349	4,140	12

The Ministry of Welfare directed that 227 drums, 50 gallons each, of pyrethrum emulsion be shipped to three prefectures during the period 2-8 August. This is equivalent to 340,500 gallons of finished insecticide. Shipments are as specified below:

<u>Prefecture</u>	<u>Distribution of Pyrethrum Emulsion, 30×</u> <u>Quantity 50-Gal. Drums</u>
Shizuoka	50
Aichi	146
Yamaguchi	31
Total	227

SECTION V NARCOTIC CONTROL DIVISION

Addicts

The Narcotic Section, Ministry of Welfare, compiled statistical information by prefecture of the number of registrants found to be addicted to narcotics since 19 June 1946. The information reveals .35% of registrants inspected have been found to be narcotic addicts.

Some prefectures, including one large prefecture in which there is a concentration of registrants, report no registrants found to addicts. It is considered necessary to ferret out addict registrants, and in the course of field trips made by officials of the Narcotic Control Division, Public Health and Welfare Section, improved methods thorough investigation of suspected registrants' records are being given primary consideration.

Narcotic Evidence

Conferences with procurators and narcotic agents have revealed there is no established procedure for the custody of narcotic evidence during the trial of the defendant. In the future, narcotic agents will maintain custody until the trial is concluded, producing the evidence in Court when required. When the case is finally concluded, the narcotic agent will forward the narcotics to the Drug Disposal Committee as heretofore.

SECTION VI WELFARE DIVISION

Japanese Red Cross Services

The First General Meeting of the Bunkyo Volunteer Service Group, sponsored by the Tokyo Chapter, Japanese Red Cross, was held on 9 August at the Tokyo School for the Blind.

Discussion on types of services that might be given by volunteers indicated that two courses of instructions might be given.

- (a) Home nursing course to be conducted by a Japanese Red Cross instructor.
- (b) A course in Nutrition to be conducted by an instructor from the Japan Women's University.

It is planned to divide volunteer into four groups as follows:

1. School lunch group - to assist in preparing lunches for blind school children.
2. Group on the Care of Eyes - those who have taken home nursing course to assist the blind children in the care of their eyes.
3. Group to read books to children in hospitals, write letters and learn Braille.
4. Production Group - plans to remake ARC surplus ditty bags and bed bags into children's clothes, be distributed to Fukui Disaster victims.

Plans were made for the utilization of American Red Cross surplus ditty bags and bedside bags in the manufacture of children's clothes. A room will be assigned at Japanese Red Cross Headquarters for cutting and ripping. Efforts will be made to get girls interested in this project and instructions will be given in classroom at the girls' schools, utilizing this material.

Relief Team

At the request of the Governor of Fukui Prefecture, the Fukui Red Cross Chapter dispatched on 25 July one relief team composed of a doctor, one pharmacist, six nurses and one clerk to the Fukui flood area. In addition nine other teams - four from the Fukui Chapter and one each from Hyogo, Kyoto, Shimane, Tottori, and Aichi Chapter had been active in relief work among earthquake victims, were called in and participated in relief for flood victims in areas where they were currently working.

The Kanagawa Chapter participated with one rescue team for medical aid in the relief work at Kawasaki City which was badly hit during a thunder storm, by a tornado of limited scope which destroyed 38 dwellings and badly damaged 78 others. Six hundred sufferers were accounted for, among whom three deaths resulted, one missing, 13 seriously and 88 slightly injured. The Kanagawa Chapter donated a box containing some household remedies to each affected family who had suffered a total loss of dwelling place. This donation was made through the Welfare Section of Kawasaki City.

Heifers for Relief Committee Shipments

The "Heifer for Relief Committee (30 North Marion Ave., Pasadena (4), California) made the fourth shipments of goats which consisted of 242 goats.

The allocated of the goats in the fourth shipment is as follows:

Ministry of Welfare (for welfare institutions)	123
Ministry of Education	80
Ministry of Agriculture and Forestry	<u>39</u>
Total	242

Chugoku Region, In-service Training Institute

A Social Work Training Institute is to be held in Hiroshima Prefecture from 17 to 23 August at Dai-Sho-In, Itsukushimi Cho, Saiki Gun. A total of 50 persons from the following prefectures are expected to attend.

Okayama, Yamaguchi, Tottori, Shimane, Hyogo and Hiroshima

The program of the conference which is scheduled to last seven days, is similar to that of previous conferences. Subjects to be covered include:

Outline of Social Work, Minsei-iin Work, Social Research and Statistics Financial Problems, Daily Life Security and Disaster Relief.

Reorganization of Social Affairs Bureau

Effective 12 August the number of sections within the Social Affairs Bureau was increased from four to five.

A new section was created because of the increasing importance of the rehabilitation programs of the Social Affairs Bureau. At the present time the five sections and their duties are as follows:

- (1) General Affairs Section (Shomu-ka)
 - (a) Overall planning for social welfare
 - (b) Investigations and statistics concerning welfare.
 - (c) Minsei-iin organization.
 - (d) Social Welfare training and education.
 - (e) Matters not assigned to other sections.
- (2) Protection Section (Hogo-ka)
 - (a) Administration of Daily Life Security Law.
 - (b) Administration of Disaster Relief Law.
 - (c) Other relief programs.

- (3) Rehabilitation Section (Kosei-ka)
- (a) Protection of persons physically or otherwise handicapped.
 - (b) Administration of National Blind Institution - Shiobara, Tochigi Prefecture and Ohara, Tokyo.
 - (c) Protection program for "street girls".
 - (d) Aid to needy foreign nationals.
- (4) Life Improvement Section (Seikatsu-ka)
- (a) Administration of Consumers Livelihood Cooperative Association Law.
 - (b) Operation of public pawnshops, bathhouses, barbershops, markets and dining halls.
 - (c) Recreation program.
 - (d) Development of consultation services.
- (5) Supply Section (Busshi-ka)
- (a) Workshops (Jusan-jo)
 - (b) Goods and materials required for relief and assistance:

This above changes the outline set forth in Section I of TB-PH-ADM 3, issued in February 1948, subject: Administration of Health, Welfare, and Social Insurance in Japan.

Public Assistance

A. Increase in Public Assistance Allowances

The following information is condensed from Social Affairs Bureau Instruction (Sha-Hatsu) #94 dated 15 August, and covers a part of the information contained in that order as well as additional material. Information concerning phases of public assistance program will be contained in subsequent Weekly Bulletins. A Technical Bulletin on the Daily Life Security Law will be released in the near future. The tables of allowances are as follows:

Table I. City, Town or Village Heads are Authorized to Give Assistance Based on the Following Table.

District	Family Make-up						Each additional person
	1	2	3	4	5	6	
The region divided into wards in Tokyo Metropolis, 5 cities and the region of similar circumstances	455	1,100	1,710	1,860	2,600	3,040	425
Other cities and the region similar circumstances	425	955	1,565	1,715	2,370	2,795	385
Town and Village	395	875	1,415	1,575	2,145	2,540	360

Table II. Heads of cities, towns or villages may give assistance to individual cases up to the amounts in the following table with case by case approval by the prefectural governor.

The region divided into wards in Tokyo Metropolis, 5 cities and the region of similar circumstances	570	1,375	2,140	2,325	3,250	3,800	530
Other cities and the region similar circumstances	530	1,195	1,955	2,145	2,965	3,490	485
Town and Village	490	1,095	1,770	1,970	2,680	3,180	450

Heads of cities, towns or villages may give assistance to individual cases up to the amounts in the following table with case by case approval by the prefectural governor and the Ministry of Welfare.

Table III.

The region divided into wards in Tokyo Metropolis, 5 cities and the region of similar circumstances	720	1,735	2,700	2,930	4,100	4,795	670
	(24.00)	(57.85)	(90.00)	(97.65)	(136.65)	(159.85)	(22.35)
Other cities and the region similar circumstances	670	1,505	2,465	2,705	3,740	4,405	610
	(22.35)	(50.15)	(82.15)	(90.15)	(124.65)	(146.85)	(20.35)
Town and Village	620	1,380	2,230	2,485	3,380	4,010	570
	(20.85)	(46.00)	(74.35)	(82.85)	(112.65)	(133.65)	(19.00)

The figures in the above three tables have been based on a 30 day month and may be adjusted for longer or shorter months or for partial months. Indoor protection shall be based on the amount for one person in the above tables and is subject to the same method for increase as is outdoor assistance.

TABLE III above is the “limit necessary for a minimum living” from which income will be deducted. It will be noted that cities, towns and villages have considerably higher standard which may be authorized locally and that the prefectural governor may now authorize increases in individual public assistance grants of approximately 25%. Heads of cities, towns and villages are still authorized to request the prefectural governor to increase the status of individual cities, towns and villages on a blanket basis. For example, a town bordering on a city may have just as high living costs as the city. If the head of the town applies through the prefecture governor to the Ministry of Welfare, the status of the town may be increased to that of the city in order that the same allowance standard prevails for both.

B. Example of Application of Tables in Individual Cases

Reference to Table III above shows that a family of five in Osaka has a “Limit necessary for a minimum living” of 4,100 yen per 30 day month:

Representative Families of Five Persons	Monthly Family Income *	Public Assistance Grant	Approval Process
A	600 Yen	3,500 Yen	Individual Approval by Governor & Ministry
B	1,000 Yen	3,100 Yen	Approval by Governor
C	2,000 Yen	2,100 Yen	Local Approval only

*As determined by Minsei-iin committee

Family “A” public assistance grant is over 2,600 yen and also over 3,250 yen and therefore requires approval by the governor and by the Ministry of Welfare.

Family “B” public assistance grant is over 2,600 yen yet under 3,250 yen therefore requires approval by the governor.

In examples A and B above, the 2,600 yen locally approved grant would be made immediately upon local eligibility acceptance. Increases authorized by the governor and the Ministry of Welfare presumably would be retroactive to the effective local eligibility date.

The above tables of allowance and method of application has been proposed by the Ministries of Welfare and Finance and approved by SCAP. The Ministry of Welfare has been charged with certain responsibilities which it will attempt to carry out.

They are:

1. Continued and accelerated training programs for local officials and Minsei-iin.
2. An addition to the prefecture reporting process to include the number of requests and approved requests for individual case increases from cities, towns and villages.
3. Analysis for such reports by prefectures to closely watch local operations and reviews of the operations in those cities, towns and villages welfare programs when requests appear to be abnormal in number.
4. Analysis of prefecture reports in a like manner by the Ministry of Welfare.

5. Because Table I represents figures which will approximate the total national budget for public assistance purposes, it is extremely important that family income be properly reported and deducted. Prefectures will be urged to give publicity to the programs for individuals in need of public assistance and to the responsibilities of the individual who accepts such public assistance. The Ministry of Welfare Officials do not believe that Minsei-iin and local officials are as yet competent enough to evaluate other resources in kind which might be deducted from the budget in addition to cash income. They also believe that the volunteer status of the Minsei-iin and their admittedly heavy responsibilities in addition to the public assistance program precludes the possibility of making additional demands on their time and effort by requesting use of a family budget system and a full evaluation of needs and resources. The Ministry officials are, however, studying all types of family budgeting and methods of determining eligibility in order to prepare a more adequate program for the future.

Military Government Welfare Officers can assist the Prefectural Welfare Department in preparing to meet these responsibilities.

SECTION VII SOCIAL SECURITY DIVISION

Statistical Reporting

Inspection of the statistical and reporting activities carried on in the prefectural Insurance Section, the Insurance Branch Offices and the Gun Offices of several northern prefectures has yielded the following findings: Monthly Reports required under the three compulsory programs (Health Insurance, Seamen's Insurance and Welfare Pension Insurance) are compiled and forwarded to the Ministry of Welfare with reasonable promptness and apparent accuracy. However, three qualifications must be made to this statement.

Firstly, reports from individual Health Insurance Societies (the society-managed part of Health Insurance) are frequently late or not available.

Secondly, taxable wages reported under all three programs show such low averages as to suggest the possibility that employers either by themselves or in collusion with their employees fail to report the full taxable wages, presumably in order to lighten the burden of their contribution (premium) payable under the law. Such practice is definitely illegal and should be checked.

Thirdly, there is reason to believe that several enterprises subject to coverage under one or more of the three programs have neglected to apply for coverage and to pay contributions. Actually, this was found to be the case in regard to shipowners whose coverage was broadened in November 1947 so as to include the crews of fishing vessels of 30 tons and over, and of other vessels of five tons and over. Since last December the crews of vessels of this description are covered in addition, by Seamen's Unemployment Insurance. The enforcement of both extensions of coverage was found to be incomplete as appeared from a comparison of older and more recent reports. In regard to the other two programs, comparison of the number of establishments covered thereunder with the number of establishments covered under Unemployment Insurance for landworkers and under Workmen's Accident Compensation Insurance provides some check on the completeness of coverage. Such checks should be encouraged and their findings followed up by the officials of the prefectural Insurance Section.

In contrast to this comparatively adequate state of reporting under the three compulsory schemes, statistics and reports required under the National Health Insurance program were found to be sadly neglected in all places visited. Both on the prefectural and on the gun level, only a portion of reports had been received and some allegedly active associations have not been heard from in many months. This state of affairs deserves a thorough check with a view to improving conditions radically.

Note: Summaries of current reporting requirements under Seamen's Insurance and Welfare Pension Insurance will be published in subsequent issues of this Bulletin.

SECTION VIII MEMORANDA TO THE JAPANESE GOVERNMENT

None.

CRAWFORD F. SAMS
Brigadier General, Medical Corps
Chief

2 Incls:

1. Digest and report of cases and deaths from communicable and venereal diseases in Japan for week ending 7 August 1948.
2. Monthly report of cases and rates of communicable and venereal diseases for period ending 31 July 1948.

ADDENDA TO WEEKLY BULLETIN NO.85

Special training Course for Model Health Center Personnel

Reference Section I Weekly Bulletin #75. Special One-Week Training Courses for the Chief Nutritionist and the Chief Sanitarian of the Model Health Center in each prefecture are scheduled at the Institute of Public Health in Tokyo during the period 27 September through 2 October. Detailed instructions will be given concerning their duties and functions in the work of the Health Center. It is very important that every prefecture have qualified personnel in these positions and that they send them to Tokyo for the one-week course of special training.

Information received indicates that most Model Health Centers already have such personnel on duty. Those who do not yet have such qualified personnel in the Model Health Centers should secure such personnel early enough to enable them to attend these special training courses. Military Government Health Officers are urged to ascertain that prefectural health authorities take the action as outlined above. The necessary notification concerning these special courses has been forwarded to each prefecture by the Ministry of Welfare. Additional special courses for other categories of public health personnel in Model Health Centers will be scheduled later this year.

Sanitation

“Dissolution of Sanitary Associations and other Similar Organizations”:

Numerous reports have been received relative to the illegal activities of sanitary associations and other similar organizations. These reports have indicated that subject organizations are not voluntary, as alleged, and that they have, in fact, adopted the pattern of organization and operation of the old Tonarigumi and in many cases are being operated or directly influenced by the same officials who formerly directed the activities of the Tonarigumi and other similar organizations in violation of Cabinet Order No.15, 1947. Subject Cabinet Order required dissolution of all organizations similar to the Chonakai, Burakukai or Federations thereof and Tonarigumi and the assumption of their functions by proper Sections of the offices of a municipality, Ward, Town, Village and the Government.

About one year ago, the Ministry of Welfare requested permission to utilize sanitary associations (Eisei Kumiai) and public health associations to assist the public health departments in stimulating interest in public health problems. Informal permission for the existence of such organizations was granted in June 1947 upon the conditions that such associations would be strictly voluntary in membership and that they would adhere to the provisions and abide by the prohibitions of Cabinet Order No.15, 1947, by restricting their activities to educational and advisory matters.

A one year trial period has proved that these associations did not live up to the original agreement. In fact, these organizations have adopted the pattern of organization and operation of the old Tonarigumi. As a result of this situation the entire matter has been reconsidered and a policy directive has been issued by this Headquarters. Subject directive, PHMJG 69, together with letter of General Application has been forwarded through Command Channels. In brief this Memorandum provides that the provisions of Cabinet Order No.15, 1947, will be enforced with respect to all so-called sanitary associations or public health associations. For the information of Military Government Teams, a copy of subject memorandum is inclosed with this Bulletin (Inclosure #1).

Japanese B Encephalitis

Reference Section II Weekly Bulletin #85. The current Japanese B Encephalitis epidemic which originated in Tokyo on or about 20 July reached its Peak in Tokyo on 13 August and has since been subsiding rapidly. Although cases continue to occur and will probably continue to occur for some time yet, it can be stated with certainty that the epidemic is definitely on the decline in Tokyo. The epidemiological picture in Tokyo has been the same as in previous epidemics.

Cases continue to be reported from the prefectures listed in last week's Bulletin and in addition a few cases have been reported from a number of other prefectures especially in the southern part of Japan. Although complete information is not available, it appears likely that some of these sporadic cases may not be Japanese B Encephalitis at all but rather may represent misdiagnoses as a result of an acute consciousness of the existence of Japanese B Encephalitis in Japan. The following is a tabulation, by prefecture, of Encephalitis cases reported to this Headquarters up to 0900 hours 23 August 1948.

Iwate	1	Aichi	133
Miyagi	13	Mie	11
Akita	6	Shiga	11
Yamagata	6	Kyoto	3
Fukushima	8	Osaka	6
Ibaraki	155	Hyogo	9
Tochigi	76	Nara	1
Gumma	88	Tottori	1
Saitama	219	Shimane	1
Chiba	108	Hiroshima	1
Tokyo	1664	Kochi	2
Kanagawa	397	Fukuoka	3
Toyama	11	Kumamoto	4
Yamanashi	40	Oita	2
Nagano	32	Miyazaki	2
Gifu	40	Kagoshima	3
Shizuoka	155	Total	3244

Venereal Disease Control

Examination of the graph of venereal disease case rates for all Japan reveals that there has been a sharp downward trend from a peak in April 1948 of 425 per 100,000 per annum for gonorrhoea, 375 for syphilis and 75 for chancroid to the low July rate of 256 for gonorrhoea, 245 syphilis and 32 for chancroid.

Although there may be several factors involved it is believed that a lot-down in venereal disease control activities, public education in particular, is largely responsible for this decline in the venereal disease rates.

It is suggested that Military Government Health Officers study the prefectural venereal disease rates and impress upon the health authorities the necessity for increased activity in venereal disease control.

SECTION II MEDICAL SERVICES DIVISION

Mr. Joseph Greesbeck, of the Army Medical Library, has completed arrangements for the shipment of American medical texts and journals to Japan. These texts will arrive during the next few months in increasing quantities and will aid in the fulfillment of an urgent demand for medical literature and textbooks in the schools of Japan. The Japanese Medical Library Association has undertaken the problem of distributing these volumes to its membership libraries throughout Japan.

SECTION III VETERINARY AFFAIRS DIVISION

Equine Encephalomyelitis

The report for 20 August disclosed cases of equine encephalomyelitis to have been confirmed in a total of 31 prefectures. The total overall report now lists 1138 positive cases, 100 suspect cases, 219 deaths and 30 deaths by sacrificing. This represents a mortality rate of 20.1 per cent.

The Japanese Government has placed a quarantine on the movement of horses, in which inter-island movement is forbidden, and horses in prefectures having reported the disease are restricted to intra-prefectural traffic. Collections of horses for exhibit and resale purposes are forbidden during the period of quarantine. Any prefecture having reported the outbreak of equine encephalomyelitis cannot lift or change the quarantine without permission of the Animal Hygiene Section, Ministry of Agriculture and Forestry.

Weekly Animal Disease Report

The following animal diseases were reported for the period 14 August to 20 August, as submitted by the Animal Hygiene Section, Ministry of Agriculture and Forestry.

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>

Tochigi	"	80
Fukushima	"	131

Note: Equine encephalomyelitis vaccine is being produced in three laboratories in Tokyo at the maximum rate of 120,000 cc monthly. Low production is the reason for some prefectures not having received any vaccine as allocation is being made on the basis of prefectural requests.

SECTION IV SUPPLY DIVISION

Production

A total of 5,800 pieces of the various types of DDT dusting and spraying equipment for mosquito and fly control programs was produced during the period 8-14 August. Large stocks of this equipment are on hand to meet all requirements.

During the period 8-14 August, 686,380 lbs. of 10% DDT dust, and 179,255 gallons of 5% DDT residual effect spray were distributed. At the same time, 149,950 gallons of 5% DDT spray were received from the manufacturing plants. Total inventory stocks on hand in regional warehouses of the Ministry of Welfare as of 14

August include 1,295,221 lbs. of 10% DDT dust, 423,287 gallons 5% DDT spray, and 49,331 vials of typhus vaccine.

Distribution

During the period 8-14 August a total of 8,483 pieces of dusting and spraying equipment for insect and rodent control was distributed to 24 prefectures, as follows:

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsack Sprayer</u>	<u>Semiautomatic Sprayer</u>	<u>Hand Sprayer</u>
Hokkaido		300	650	200
Aomori		804		
Iwate	480	300		200
Miyagi		200		72
Akita				200
Yamagata	72		150	
Fukushima		24		
Tochigi		200		200
Gumma		5		
Saitama				230
Chiba	168	32		150
Tokyo		242	2	650
Nagano		24		300
Shizuoka			300	
Osaka	150			
Shimane			50	
Yamaguchi	600			
Tokushima				200
Kagawa				450
Ehime	48			
Fukuoka		100		100
Oita			50	
Miyazaki	150			
Kanagawa				
	1,668	2,661	1,202	2,952

During the period 9 - 15 August 157 drums, 50 gallons of each, of pyrethrum emulsion were shipped to six prefectures. This is equivalent to 235,500 gallons of finished insecticide. Shipments are as specified below:

Distribution of Pyrethrum Emulsion, 30×, 9-15 August 1948

<u>Prefecture</u>	<u>Quantity 50-gal Drum</u>
Hokkaido	57
Tochigi	15
Chiba	18
Ishikawa	45
Osaka	15
Shiga	7
Total	157

The distribution as noted above completes the distribution of pyrethrum emulsion according to the 1948 allocation plan listed in Weekly Bulletin No.72, for period 9-15 May.

The Ministry of Welfare reports that during July 6,437,335 tablets of santonin were distributed to the various prefectures, as follows:

Distribution of Santonin: July 1948

<u>Prefecture</u>	<u>Quantity</u>
Hokkaido	86,100
Aomori	38,900
Iwate	247,600
Miyagi	58,470
Akita	198,800
Yamagata	201,440
Fukushima	198,665
Ibaraki	132,310
Tochigi	59,890
Gumma	67,830
Saitama	85,420
Chiba	166,850
Tokyo	374,720
Kanagawa	72,500
Niigata	422,880
Yamanashi	18,380
Nagano	272,700
Shizuoka	756,030
Toyama	190,350
Ishikawa	74,690

Tokushima	85,900
Kagawa	30,200
Ehime	187,860
Kochi	112,120
Fukuoka	85,475
Saga	61,440
Nagasaki	47,980
Kumamoto	78,480
Oita	63,510
Miyazaki	77,760
Kagoshima	<u>75,100</u>
Total	6,437,335

SECTION V
NARCOTIC CONTROL DIVISION

Violations

Four arrests for illegal cultivation of the opium poppy were reported. The number of plants being cultivated varied from 27 to 300. One of the defendants was in possession of one gram of opium obtained from the plant. The Attorney General's Office has advised the local procurators concerned that severe penalties should be demanded since the prohibition against cultivation of the opium poppy has been in effect three years.

A physician, not registered as a narcotic practitioner, arrested for illegal possession of 66 grams codeine phosphate, 45 grams cocaine hydrochloride and 5 grams morphine hydrochloride was fined 5,000 yen in an Appeal Court on the doctor's plea he did not know the above preparations to be narcotics. Evidence was introduced proving he had been dispensing the preparations. A block has been established in Ministry of Welfare files to prevent this physician registering in the future.

Exempt Narcotics

A drug manufacturing company requested permission to merchandise a preparation, containing a small amount of narcotics, as a non-narcotic. The preparation was manufactured in large quantities prior to the establishment of the strict narcotic control system. The company was informed there is no possibility of any exception being made to the Narcotic Control Law which requires registered dealers in exempt narcotics obtain the name, address, and use from the consumer at the time of sale.

Only 15 500 gram bottles are being sold per month in Japan. The company was advised not to attempt to overstock registrants with an unsalable preparation. In the event the company decides to destroy the preparation, such destruction will be consummated through instructions from the Ministry of Welfare who will direct a narcotic agent to witness any such destruction. Recovery of the small amount of narcotics contained in the preparation is not considered feasible by the Drug Disposal Committee.

SECTION VI
WELFARE DIVISION

Red Cross Disaster Relief Activities

As might be expected, the spectacular disaster, always fully covered by appropriate new agencies, is given wide publicity and persons and agencies participating in disaster relief work attendant thereto are recognized for the services rendered. However, many local disasters occur frequently throughout Japan and it is interesting to know the work that the Japanese Red Cross has been doing in conjunction with these more localized disturbances.

The following tabulated report indicates the scope and content of the work that the Japanese Red Cross has been engaged in, in various localities throughout Japan, as reported in the month of July to National Headquarters:

Type	Location	Date	Victims	Building Damaged	Relief Measures
Fire	Aomori Pref.	June 8	98 recipients of relief		10,000 yen & 170 parcels cotton distributed
"	Aomori City		163 "		5,000 yen, clothing, blankets distributed
Explosion		June 18	62 dead		1 medical relief unit sent
	Katsuta Coal Mine		8 injured		
Fire	Hokkaido	May 11	1 dead	317	1 medical relief unit sent
			3 injured		
Fire	Hokkaido	May 24	1 dead	31	1 medical relief unit sent
Fire	Hokkaido	May 16	3 dead	163	129 Home Medicine Packages distributed
			23 wounded		
Flood	Nagasaki Pref.	July 5	7,085	1,460	64 Home Medicine Packages distributed;
			3 dead		Epidemic Prevention Unit
			1 missing		
			1 injured		

Wounded Soldier's Badge and Bereaved Family Badge

Reference Weekly Bulletin No.83 for the period 26 July - 1 August, "The Awarding of Medals to Wounded Soldiers and Bereaved Families". Final decision has been made by the Supreme Commander for the Allied Powers as to the status of wounded soldiers and bereaved families' badges, and as these badges have never ranked, according to the Japanese system, with medals and decorations, they may still be presented according to this decision.

The following information has been given to the Ministry of Welfare and is repeated for the information that it contains:

“SCAP has decided that the appropriate Japanese Government authorities, exceptionally, will be permitted to present to qualified persons the Soldier’s Wound Badge (Gunjin Shoi Kisho) and the Bereaved Family Badge (Gunjin Isoku Kisho). SCAP does not however mean to encourage the conferment of these badges.

“These Badges or medals are not to be publicly displayed or worn in connection with public and/or private welfare fund drives, or for the purpose of street solicitation or street begging. The Japanese authorities will take appropriate measures to prevent and suppress the wearing or display of these badges for such purposes.”

National Conference, September and October

The following meetings are scheduled for the near future.

1. Monday, 6 September, at 1300 at Japanese Red Cross, National Conference of all Chairmen of Prefectural Community Chest Committees. Subject: Campaign Methods.

2. 1, 2 and 3 October at Sapporo City, Hokkaido, National Welfare Commissioners and Child Welfare Workers’ Conference.

3. 11 and 12 October, Central Social Welfare Hall, Tokyo, the National Social Workers’ Assembly.

Heifers for Relief Committees Shipments

	Grand Total	120

Disaster Relief Operations

In anticipation of future needs, several prefectures have developed disaster relief “dry runs” to test the efficiency of the work and speed with which responsible elements coordinate their activities. A good example of such a test operation was held during May in Niigata Prefecture.

Following is the account of the simulated disaster prepared by the Niigata Military Government Team and is published for information of other MG Teams contemplating this type of disaster relief test:

“Disaster Exercise - Niigata City

29 May 1948

I. Plan for Exercise

The Niigata Prefecture Disaster Plan was given a test operation on 29 May to ascertain how effective the organization for disaster relief would be under actual disaster circumstances.

Prior to the test the Prefectural Disaster Plan had been approved by Military Government, necessary revisions had been made where discrepancies were found in the original plans and copies of the approved plan had been sent to the Ministry of Welfare.

The team welfare officer had suggested to the prefecture disaster planning board in April that a test exercise be held at an early date to see how well they could operate under simulated disaster condition. The following is an outline of the exercise that was held under the plan developed by the Japanese Prefectural Officials.

I. Report of Disaster: Alerting Phase

a. Disaster occurs at 1310 hours 29 May when a fire broke out at a house near the Daiwa Department Store in Niigata City. Police report fire to welfare chief and at same time fire department notified and Japanese Red Cross alerted.

b. Because of strong winds the fire threatened to spread throughout the business section of the city involving four complete blocks.

c. Police (Public Safety) Fire Department, Communication Section and General Affairs Section started action immediately.

II. Initial Activities of Disaster Operating Team

a. Coordination of reports to General Affairs Section was done by liaison party from scene of disaster.

b. Military Government notified by liaison party.

c. General Affairs Section made responsible for recording all reports from disaster - to handle all charges and expenses involved in operation.

d. Public Safety

Niigata City Police Station. Police Training and District Police Station turned out 100 police to preserve peace, assist in relief to victims and to maintain order and traffic control including spectators. Reports on damage and situation were made by police party to the city police station.

e. Fire Department

Niigata Fire Brigade and two assistants (three in all) were turned out immediately.

f. Communications

Telephones were controlled and held open for official use only. Public notified of this in advance. Priority given on all communication to reports from disaster area.

Second Phase

Situation Report - at 1410 hours

Fire spreads rapidly
100 dwellings completely destroyed
500 persons homeless in the section
40 dwellings partially destroyed
200 persons homeless
70 families (350 persons) taken to emergency shelter
8 persons injured
5 seriously burned
5 persons ill
Total of 18 persons needing medical treatment

Actions of Disaster Team

1. Welfare Section establishes relief service - refugee centers set up and put in operation - assisted by the technical and cooperation section. Public Primary School opened for homeless persons.

2. Health Section supervisor emergency medical treatment and care for victims. Japanese Red Cross set up first aid station in nearby temple and evacuated injured from disaster scene to aid station and hospitals.

Health Section arranges for disinfection, DDT and inoculation of homeless to prevent disease.

3. Transportation Section arranges for necessary vehicles to take homeless to emergency shelters.

4. Additional fire brigade (district) turned out - total of 5 brigadier fighting spread of fire - peak of operations.

Third Phase

1. Situation report as of 1500 hours fire under control

Total damage 4 city blocks destroyed
1000 persons (200 families) ... homeless
400 persons (80 families) homes partially destroyed
30 persons injured
10 persons seriously burned
10 persons sick

a. Food, clothing and supplies made available to victims through the Welfare Section.

- b. Destroyed area being cleared and rebuilt under direction of the Cooperation Section.

Summary

This disaster exercise revealed that the Japanese can plan and carry out an operation in a satisfactory manner. Certain lessons were learned in this exercise that are valuable in future planning and may serve to eliminate many costly mistakes when actual disaster occurs.

For example, it was found out that alerting of each service and section had to be well planned and carried out. In this operation the Japanese Red Cross Chairman was not notified at once and consequently his team did not get into action until about the second phase of the exercise.

Public Assistance

Welfare Officers may wish to base informational programs on the following suggested lists of responsibilities in the public assistance program in connection with the recently announced increase in the allowances tables.

Agency responsibilities

1. To accept applications for public assistance or for services and to act on the applications with a minimum of delay.
2. To inform the applicant of his eligibility or non-eligibility.
3. To provide a system for appeals to higher authority in the event of dissatisfaction with a decision rendered by an agency employee or an agency official.
4. To provide family or individual counseling services for person who desire such services.
5. To provide knowledge concerning all parallel programs and services and a referral system.
6. To provide assistance adequate to maintain health and family unity on a basis compatible with decency standards of the area served.
7. To protect the individual recipient by recognizing the confidentiality of information provided by the recipient.
8. It should be recognized that policies and rules are built around the majority of cases - the average situation. It is unwise to lose sight of the goals of the program by preoccupation with the unusual case or the minority situation. In those few cases, policies should be used as far as they apply, supplemented by good judgment and common sense.
9. When need has been established, the applicant for public assistance should continue to receive his grant in an unchanged amount until his needs change or ineligibility has been established. Withholding a grant until presumptive ineligibility has been cleared is not good agency policy and often creates undue hardship for the recipient.
10. To conduct its business in such a way that its expenditures are properly accounted for and that it has recorded proof of eligibility for each person receiving public assistance from the agency.

Responsibility of the Recipient

1. While the recipient chooses whether he wants the agency's service, if he receives it he is obligated to also accept the legal limitations surrounding it, within which both the recipient and agency must function. However, the agency must exercise care that operation procedures expedite agency function rather than introduce unnecessary or arbitrary complications.

2. The recipient must realize that the public agency concerned must have a record of the recipient's status which reflects the true condition of his family's situation at all times if the agency is to justify the expenditure of public funds for the support of the recipient.

3. The recipient should recognize that it is his duty to do everything in his power, within the limits of his physical and mental ability, to relieve the public of responsibility for his support, even for short period of employment.

4. The recipient should be aware of the penalties for fraudulently receiving public funds for his support.

5. The able-bodied employable members of the family should be registered at employment offices. Those claiming illness should have a statement concerning condition from a physician. Nothing in the above two points is meant to imply that mothers with growing children or that those who are needed in the home for other reasons should be forced into employment.

6. The applicant must realize that there is only one basic requirement for public assistance and that that basis is need. There are no provisions in the Daily Life Security Law for payments to special groups of persons who suffered losses as a result of war or for any other reason. Public assistance funds, in the last analysis, are provided through tax payments by one's friends and neighbors. It is the desire of the nation through the wise use of these funds and with the pattern as set up by the Daily Life Security Law, to provide for its more unfortunate citizens the minimum amount of assistance which will provide a healthful, decent living for those persons.

SECTION VII SOCIAL SECURITY DIVISION

General

With reference to earlier issues of this Bulletin, the summary of current reports required under the several social insurance programs is continued below.

Under the Welfare Pension Insurance Program, the Prefectural Insurance Sections have to submit to the Ministry of Welfare the following reports:

1. Monthly Report

This report, which is due at the Ministry 40 days after the completion of the month reported on, contains:

- a. The number of insured by sex and establishments covered.
- b. The number of insured grouped according to sex and wage classes.
- c. The number of benefits currently paid, broken down by class of benefit, number of cases and amounts.
- d. Contributions collected and total benefit expenditures.

2. Annual Report

This report is a summary statement of the number of insured and establishments covered, classed by major industry.

(A summary of statistical report requirements under Seamen's Insurance will follow in the subsequent issue of this Bulletin.)

Health Insurance

Incomplete reports have indicated a wide variation among localities as to the number of employers who are delinquent in submitting premium payments under Health Insurance, government-managed. The amended Law has strengthened the procedures for requiring the prompt payment of premiums. This is important in order to perfect the prompt payment of benefits and medical care claims.

(Yoku-hatsu No.16) | From: Director, Pharmaceutical and Supply Bureau | To: Governors, all prefectures |
| | Subject: The second additional allocation of sanitary material sold by U.S. Army. | |
| July 28, 1948
(Yoku-hatsu No.66) | From: Director, Pharmaceutical Supply Bureau | To: Chiefs, Health Divisions, all and prefectures |
| | Subject: Inquiry on investigation into officials at local governments in change of distribution of medicine and other sanitary material. | |

July 29, 1948 (Yoku-hatsu No.46)	From: Director, Pharmaceutical and Supply Bureau	To: Governors, all prefectures and Supply Bureau
	Subject: Survey of estimated quantity of DDT preparations and subsidiary chemicals to be used for 1949-50.	
July 30, 1948 (Yoku-hatsu No.67)	From: Director, Pharmaceutical and Supply Bureau	To: Governors, all prefectures
	Subject: State of arrival of yellow petrolatum.	
July 30, 1948 (Yoku-hatsu No.74)	From: Director, Pharmaceutical and Supply Bureau	To: Governors, all prefectures
	Subject: Allocation of designated precious metals and gold bullion for dental use by district.	
July 31, 1948 (Yoku-hatsu No.51)	From: Director, Pharmaceutical and Supply Bureau	To: Governors, all prefectures
	Subject: Narcotic Control Law and Hemp Control Law.	
July 26, 1948 (Sha-hatsu No.1132)	From: Director, Social Affairs Bureau	To: Governors, Fukushima and 6 other prefectures
	Subject: Distribution of LARA relief commodities.	
July 27, 1948 (Hatsu-sha No.86)	From: Director, Social Affairs Bureau	To: Governors, Kyoto and 4 other prefectures
	Subject: Operation of the welfare commissioner system in five big cities.	
July 27, 1948 (Sha-hatsu No.1139)	From: Director, Social Affairs Bureau	To: Governors, Aomori and 11 other prefectures
	Subject: Survey of living conditions of the protected.	
July 27, 1948 (Sha-hatsu No.1140)	From: Director, Social Affairs Bureau	To: Governors, Toyama and Okayama prefectures
	Subject: Survey of state of protection under Daily Life Security Law.	
July 29, 1948 (Sha-hatsu No.1141)	From: Director, Social Affairs Bureau	To: Governors, Hiroshima and 5 other prefectures
	Subject: Announcement on a short course for social workers in Chugoku District.	
July 30, 1948 (Sha-hatsu No.1145)	From: Director, Social Affairs Bureau	To: Governors, Yamaguchi Prefectures
	Subject: Temporary payment of living aid under Daily Life Security Law.	
July 30, 1948 (Sha-hatsu No.1146)	From: Director, Social Affairs Bureau	To: Governors, Ishikawa and Fukui Prefectures
	Subject: Survey of state of protection of the protected.	
July 30, 1948 (Sha-hatsu No.1149)	From: Director, Social Affairs Bureau	To: Governor, Tottori Prefectures
	Subject: Consultation on approval of protection institutions under the provisions of Article 7 of the Daily Life Security Law.	
July 30, 1948 (Sha-hatsu No.1150)	From: Director, Social Affairs Bureau	To: Governor, Shimane Prefectures
	Subject: Payment in excess of the standard of living aid.	
July 30, 1948 (Sha-hatsu No.1151)	From: Director, Social Affairs Bureau	To: Governor, Niigata Prefectures
	Subject: Collection of money and commodities to be contributed for earthquake disaster in Hokuriku.	

July 30, 1948 From: Director, Social Affairs Bureau To: Governor, Yamaguchi Prefectures
(Sha-hatsu No.1152)
Subject: Collection of money and commodities to be contributed for earthquake disaster in Hokuriku

27 July, 1948 From: Director, Social Affairs Bureau To: All prefectural governors
(Sha-otsu-hatsu No.111)
Subject: Change in procedure of application for building material for social work institutions.

27 July, 1948 From: Director, Social Affairs Bureau To: All prefectural governors
(Sha-otsu-hatsu No.112)
Subject: Establishment and management of work providing shops.

29 July, 1948 From: Director, Social Affairs Bureau To: All prefectural governors
(Sha-otsu-hatsu No.113)
Subject: Announcement on a business meeting concerning development of work providing program.

July 29, 1948 From: Director, Social Affairs Bureau To: All prefectural governors
(Sha-otsu-hatsu No.117)
Subject: The first allocation of raw piece goods for tailoring at work proving agencies for the fiscal year 1948-49.

July 26, 1948 From: Director, Children's Bureau To: All prefectural governors
(Ji-hatsu No.484)
Subject: Application for designation of nursery school teacher training institutions.

July 26, 1948 From: Director, Children's Bureau To: Governors, Fukushima and
(Ji-hatsu No.485) 3 other prefectures
Subject: Allocation of rubber products for the third quarter, 1947-48.

July 26, 1948 From: Director, Children's Bureau To: Governors, Saitama and
(Ji-hatsu No.486) 17 other prefectures
Subject: Allocation of rubber products for the fourth quarter, 1947-48.

July 26, 1948 From: Director, Children's Bureau To: All Prefectural governors
(Ji-hatsu No.487)
Subject: Dealing with expense to be disbursed for measures under the provision of Article 27, par 1, item 3 of the Child Welfare Law.

July 26, 1948 From: Director, Children's Bureau To: Governors, Aomori and 24 other
(Ji-hatsu No.488) prefectures
Subject: Presentation of reference data on foster-parents.

July 26, 1948 From: Director, Children's Bureau To: Governor, Iwate Prefecture
(Ji-hatsu No.489)
Subject: National subsidy for expense on institutions of mothers' homes and day-nurseries for the fiscal year 1948-49.

July 30, 1948 From: Director, Children's Bureau To: Governor, Mie Prefecture
(Ji-hatsu No.494)
Subject: Consultation on appointment of child welfare officials.

July 30, 1948 From: Director, Children's Bureau To: Governor, Shiga Prefecture
(Ji-hatsu No.495)
Subject: Consultation on appointment of child welfare officials.

July 30, 1948 From: Director, Children's Bureau To: All Prefectural governors
(Ji-hatsu No.497)
Subject: Reference books for nursery school teacher training institutions and for examination for license of nursery school teachers.

July 30, 1948 From: Director, Children's Bureau To: Governor, Ehime Prefecture
(Ji-hatsu No.502)
Subject: Missing allocation certificate for paper to be used for making out maternal and child handbooks.

July 31, 1948 From: Director, Children's Bureau To: Governors, Osaka and 2 other prefectures
(Ji-hatsu No.504)
Subject: Designation of nursery school teacher training institutions.

July 26, 1948 From: Director, Insurance Bureau To: All prefectural governors; chiefs all branch offices of social insurance
(Ho-hatsu No.6)

(En-go No.228) Divisions, Kyoto Prefecture
Subject: Re-delivery of the list of Korean nationals whose return have been approved by SCAP.

SECTION II
PREVENTIVE MEDICINE DIVISION

Sanitary Associations

Reference Section I, Weekly Bulletin No.86 and Inclosure No.1 (PHMJG 69) to that Bulletin. The Disease Prevention Bureau, Ministry of Welfare has issued instructions (Kosei-sho Yo-hatsu No.52, dated 20 August) to all prefectural governors concerning the "dissolution of sanitary associations and other similar organizations". A copy of subject Yo-hatsu is attached to this Bulletin, Inclosure No.1, for information of Military Government Health Officers.

The Ministry of Welfare (Disease Prevention Bureau) has informed this headquarters that the money and property belonging to sanitary associations will be disposed of as follows:

1. All moneys belonging to these associations will be donated to health education councils or similar committees, if such exist.
2. All vaccines, DDT or other sanitation supplies and equipment will be turned over to the prefectural governments.

Military Government Teams are requested to exercise close surveillance over the disposition of said moneys, supplies and equipment, in order to ascertain that proper disposition is made.

Japanese B Encephalitis

Reference Section II, Weekly Bulletins No.84 and 85 and Section I, Weekly Bulletin No.86. Suspect Japanese B. Encephalitis cases have now been reported from every prefecture in Japan. The epidemic continues to subside in the Tokyo-Yokohama area and in the neighboring prefectures of the Kanto and Tokai-Hokuriku regions. However, the number of cases being reported from these prefectures continues to exceed those reported from all other prefectures in Japan. In Tokyo, the current number of cases reported is less than 15% of the peak incidence.

Laboratory serologic studies on a sizeable number of the cases reported from the Tokyo are reveals a very high percentage of confirmations. This not only indicates that we are dealing with true Japanese B Encephalitis, but is also shows a high degree of diagnostic skill and accuracy of reporting on the part of the public health authorities. This high type of public health work is commendable and it represents the type of work which is necessary in order to satisfactorily control communicable diseases.

For the information of all concerned, the following is a tabulation, by prefecture, of all reports of suspect Japanese B Encephalitis received at this headquarters up to 0900 hours, 30 August. It should be noted, however, that these data are based upon reports received from all sources, and are not to be confused with the official reports received through regular statistical reporting channels and published in the communicable disease reports of this Bulletin.

<u>Prefecture</u>	<u>No. of Cases</u>	<u>No. of Deaths</u>

Improvement in Sanitation

The disease rates for dysentery are at present the best indication for general improvement in sanitation, particularly if considered over the period of the so-called intestinal disease season, the months of July, August and September.

Certain prefectures have shown outstanding improvement in this regard. The case rates for dysentery for the month of July 1948, when compared with those of July 1947 show that all of Japan had 52% as much dysentery this year (July) as was present last year (July). Nineteen prefectures showed a greater proportionate decrease of dysentery than did the nation as a whole. Of these, Yamanashi heads the list with only 10% as high a rate this July as last. The next nine are, in order, Kochi 16%, Saitama 19%, Chiba 20%, Tokushima 21%, Kagawa 22%, Ishikawa 23%, Kagoshima 28%, Toyama 29%, Yamagata 30%.

The use of typhoid fever incidence as an indicator of general sanitation is not so dependable. A good coverage with anti-typhoid inoculations may cause reduction in typhoid fever without comparable improvement in general sanitation, and the tendency of typhoid to occur in outbreaks would show greater fluctuation for its incidence than for dysentery. In spite of extensive inoculation programs, the typhoid case rates July 1948 were still 73% of those for July 1947 for all of Japan. Most improvement, when comparing prefecture case rates for July 1948 with July 1947, was shown by Yamanashi with 14% as high a rate as the previous year, followed by Miyazaki with 16%, Kumamoto 19%, Yamagata 20%, Wakayama 21%, Shimane 36%, Kagawa 37%, Ishikawa 41% and Tokushima 41%.

When the reports for the month of August have been received and analyzed, a review of comparative improvement by prefectures will be made and published in this Bulletin.

Venereal Disease Control

Attention is invited to two errors appeared in the English translation of the new Venereal Disease Prevention Law which included as Inclosure 1 in Weekly Bulletin Number 83 for period 26 July - 1 August 1948.

In Art. 16, par 3, the words “under Art. 11” should be changed to read as follows: “under the preceding two paragraphs.

In Art. 28, par 2, the word “two” should be deleted.

SECTION III VETERINARY AFFAIRS

Equine Encephalomyelitis

During the period 21-27 August, a total of 605 new cases of equine encephalomyelitis was reported. This represents the highest number of cases reported in any one week. The prefectures having first reported the outbreak are, according to the latest report, showing a definite reduction in number of cases reported and in some instances a negative report was issued for this period. The total cases to date including the above-mentioned cases now stands at 1801 of which 149 cases are still regarded as suspects. A total of 480 horses have died and 42 have been sacrificed. The mortality rate including suspects and sacrificed animals is 28.9 percent.

Inspection Trips

An inspection trip to Osaka Prefecture was made by a representative of Public Health and Welfare Section. The storage facilities for food intended for distribution to Japanese and establishments manufacturing food or handling food and beverages were inspected. The overall sanitation of food appeared to be closely supervised by Prefectural inspectors, but it was noted that the inspections were not being carried out in detail and only a surface check was made. The collection of samples from material being utilized in the products were not complete enough of guarantee all products employed were safe for consumption.

Animal Diseases

The following new diseases were reported during the period 21-27 August, submitted by the Animal Hygiene Section, Ministry of Agriculture and Forestry.

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Gumma	Equine encephalomyelitis	6

Tochigi	Swine Cholera	1
Chiba	Filariasis (Goat)	1

SECTION IV
NARCOTIC CONTROL DIVISION

Training School

The Narcotic Section, Ministry of Welfare, has announced the third training school for narcotic agents will be held in Tokyo from 26 October to 2 November, inclusive. Forty-two agents are scheduled to attend the school. Nineteen other agents, if appointed prior to the date of school, will also attend. Prefectural authorities are being requested to expedite nominations for agents to the Minister of Welfare in order that appointments can be consummated.

Narcotic Agents

Information received shows that prefectural authorities have selected narcotic agents to attend the two-month pharmaceutical training course held from time to time in Tokyo. In some instances there are only two agents in a prefecture. Removal of an agent in such a prefecture for a two-month period means that narcotic enforcement work in the prefecture is practically at a standstill during the period, particularly if the other agent is incapacitated through illness as has happened in the past.

SECTION V
SUPPLY DIVISION

Production

A total of 5,680 pieces of the various types of DDT dusting and spraying equipment for mosquito and fly control programs was produced during the period 15-21 August.

During the period 15-21 August, 172,465 lbs. of 10% DDT dust and 127,390 gallons of 5% DDT residual effect spray were distributed. At the same time, 20,000 lbs. of 10% DDT dust and 46,150 gallons of 5% DDT spray were received from the manufacturing plants. Total inventory stocks on hand in regional warehouses of the Ministry of Welfare as of 21 August include 1,179,756 lbs. of 10% DDT dust, 304,347 gallons of 5% DDT spray, and 47,940 vials of typhus vaccine.

Distribution

Dusters and sprayers for insect and rodent control were shipped to 22 prefectures under Ministry of Welfare supervision in the period 15-21 August. A total of 8,709 pieces of equipment were distributed as follows:

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsack Sprayer</u>	<u>Semiautomatic Sprayer</u>	<u>Hand Sprayer</u>
Hokkaido		504	300	300
Aomori		618	30	200

SECTION VI NURSING AFFAIRS DIVISION

The pamphlet "Child Care and Development Family Health Series" by New York Nursing Education Bureau, has been translated into Japanese and can be obtained from:

Dr. Chizuo Ohta, Medical Friend Co., 40 Momozono-cho, Nakano-ku, Tokyo, 25 yen.

SECTION VII WELFARE DIVISION

Public Assistance Allowances

The Ministry of Welfare has announced that upon reconsideration of its tables of allowances the following changes in Social Affairs Bureau Instruction (Sha-hatsu) No.94, issued 15 August will be made by a new order.

1. In the table allowable by the head of city, town or village the four person totals are as follows:
 - a. Large cities 2,120 yen
 - b. Medium cities 1,940 yen
 - c. Towns, villages 1,760 yen

2. In the table allowable by the prefecture (four persons):
 - a. Large cities 2,655 yen
 - b. Medium cities 2,425 yen
 - c. Towns, villages 2,200 yen

3. In the table allowable by the Ministry (four persons):
 - a. Large cities 3,350 yen (111.65 per day)
 - b. Medium cities 3,060 yen (102. per day)
 - c. Towns, villages 2,775 yen (92.50 per day)

4. Two other less important changes will be made in other sections of the order.

Welfare Officers are requested to correct Public Health and Welfare Weekly Bulletin No.85, dated 9-15 August, accordingly.

Assistance in Addition to Public Assistance Allowances

Assistance in addition to the regular allowances tables may be given for the following purposes:

1. School lunches
2. Expenses for children under one year of age fed chiefly on prepared infant's foods.
3. School supplies (a new feature)

In earlier plans, funds for school supplies were allowed for within the regular allowance table. This portion of the regular budget was removed, and, now considerably augmented, may be given in addition to the regular allowance.

Resources in Public Assistance Families

Paragraph 5, page 12, Weekly Bulletin No.85 dated 9-15 August, indicates that generally only cash resources are to be deducted from the "limit necessary for a minimum living". Nothing in that paragraph is meant to imply that Welfare Officers should not encourage the deduction of other resources in kind of which are free to the recipient. Such encouragement should be tempered by the fact that Welfare Commissioners (Minsei-iin) are not all well trained, do not all have good educational background, and are fundamentally volunteers who find it necessary to carry out on a job of their own in addition to their work as Minsei-iin.

Indoor Assistance

"Cost of care" for persons in institutions is based on the following plan (this does not include "administrative cost"):

1. Reference, Tables of Allowance as published in Weekly Bulletin #85, dated 9-15 August. For institutions for the aged the local officials may authorize only the local table allowance for one person and if additional funds are required, the head of city, town and village requests an increase through the prefecture and through the Ministry of Welfare.

2. Institutions under the Child Welfare Law are authorized the immediate use of the maximum allowance in Table III, however, each institution should be dealt with individually and the allowance should be based on need within the maximum allowance.

SECTION VIII SOCIAL SECURITY DIVISION

General

Preceding issues of the Public Health and Welfare Bulletin contained summaries of the statistical reports required under National Health Insurance, (both the government-managed and the society-managed parts) and Welfare Pension Insurance. (See Nos.67, 73, 75-78, 80, 81, 85 and 86).

The only social insurance program administered by the Prefectural Insurance Bureau (and in Tokyo by the Ministry of Welfare) is Seamen's Insurance. It represents a consolidated social insurance program for seamen incorporating the features of government-managed Health Insurance, Welfare Pension Insurance, and since last year, also Unemployment Insurance.

There is only one report required under this program. It is a monthly report to be submitted by the Prefectural Insurance Section not later than one month following the end of the month on which report is being submitted.

All reportable data must cover in separate columns, on the one hand, health and pension insurance for seamen and, on other hand, unemployment insurance for seamen. The reason for this lies in slight differences in the coverage between the two schemes.

Table I lists the number of insured and of shipowners covered at the end of the month and any changes from the preceding month.

Table II lists the number of insured by wage class.

Table III lists the types and amounts of benefits paid according to the number of cases and days of benefit.

Table IV shows the amount of insurance contributions due, the amount collected and the amount outstanding.

Spot checks in the field have revealed that seamen's unemployment insurance, operative since November 1947, as yet has not been extended to all shipowners liable to be covered thereunder. Whenever large discrepancies occur between the coverage figures reported for unemployment insurance on the one hand and the remaining schemes for seamen on the other, they are indicative of such incomplete coverage. Under this as under the other compulsory insurance schemes, there is also reason to believe that in several prefectures the wages reported for social insurance tax purposes, fall short of taxable wages actually paid.

Medical Fee Payment Fund

Information obtained by recent visits to some prefectures revealed there are currently several misinterpretations regarding the purpose and administration of the Social Insurance Medical Fee Payment Fund. For a description of this Law and its purpose, your attention is called to Public Health and Welfare Weekly Bulletin No.80 for the period 5-11 July.

The first erroneous interpretation is that the Fund will be handled entirely at the national level by the main office in Tokyo. Actually, the main office in Tokyo will be responsible for the general overall policies, uniformity of procedure and inspection of operation. But there will be branch offices in each prefecture to handle all of the Fund's business for the prefecture. If found necessary, sub-branches may even be established in the prefecture for convenience and efficiency of operation.

A second misinterpretation is that the deposit from the insurer will be used to pay claims indiscriminately. Actually the deposit from an insurer will be used only to pay claims submitted against its account.

Another erroneous interpretation is that National Health Insurance Associations are not included in the scheme. The Law provides that National Health Insurance Associations may participate if they so desire.

The Insurance Bureau, Ministry of Welfare, states the information they have sent to the Prefectural Insurance Office, should not have caused the above-mentioned misinterpretations.

Title: Child Welfare
Short Title: TB-PH-WEL 11 (Supplement)

Title: Juvenile Delinquents and Child Welfare
Short Title: TB-PH-WEL 16

SECTION II
PREVENTIVE MEDICINE DIVISION

Japanese B Encephalitis

The epidemic in Tokyo is declining rapidly. The number of cases being reported currently is very small when compared with the number reported at the highest of the epidemic. Cases continue to be reported from most all prefectures in Japan.

For the information of all concerned the following is a tabulation, by prefecture, of all reports of suspect Japanese B Encephalitis received at this headquarters up to 0900 hours, 6 September. It should be noted, however, that these data are based upon reports received from all sources. They do not necessarily agree with previous reports and are not to be confused with the official reports received through regular statistical reporting channels and published in the communicable disease reports of this Bulletin.

<u>Prefecture</u>	<u>New Cases during Week</u>	<u>Total Cases</u>	<u>Total Deaths</u>

Venereal Disease Control

Recent inspections have revealed that many VD clinics are still using methylene blue to stain smears for the detection of gonococci. One reason for this is the reluctance of doctors to adopt the Gram method of staining since they have become accustomed to the simpler methylene blue method. However, this latter methods will often result in inaccurate diagnosis since it cannot be used to differentiate between the Gram-negative and the Gram-positive diplococci. The shortage of acetone used as a decolorizer in the Gram method has been used as an argument against this technique. It should be pointed out that alcohol is just as good and can be substituted for acetone and used in the same manner. Military Government Health Officers should urge all VD clinics to use the Gram method of staining. Any shortage of materials should be brought to the attention of the Pharmaceutical Affairs Section of the Prefectural Health Department.

Health Education Committees

Reference Section I, Weekly Bulletin Number 86 and Memorandum to the Japanese Government, PHMJG No.69, dated 16 August subject: Dissolution of Sanitary Associations and Other Similar Associations. Following the dissolution of Sanitary Associations and other similar organizations, it is expected that attempts will be made to organize all manner of substitute organizations. Close surveillance must be exercised if a repetition of the unfortunate experiences with the former organizations are to be avoided.

Reports received at this headquarters indicate that various types of organizations are being proposed. Health Education Councils and Committees similar to that operating in Yamanashi Prefecture have been proposed. There is no objection to such health education councils or committees provided they confine their activities to health education and the making of recommendations to official governmental health organizations concerning public health problems. Such health education councils and committees can be of inestimable value to the public health program if their activities are properly directed. However, if neglected or ignored, such committees are apt to assume the pattern of organization and operation of the old sanitary association.

Health education is one of the most important functions of a Health Department. Every Health Department should have a health education (or information) unit staffed with an adequate number of competent personnel. It is suggested that Military Government Health Officers investigate the organization of the Health Departments in their respective prefectures and take the necessary steps to organize a Health Education unit, if such does not already exist. One of the functions of the unit should be to cooperate with the activities of lay health education councils or committees.

In view of past experience in Japan where the so-called sanitary associations have assumed governmental functions on a wide scale, it is suggested that all new organizations be very carefully scrutinized to determine whether or not they resemble in any way the former sanitary associations and if such is the case a report should be made to SCAP in accordance with existing instructions. One of the best ways to insure that health education committees function only as educational and/or advisory bodies is for the Health Department to offer the proper

guidance. This guidance can and should be given but it can be given only if the Health Department and the Health Centers have suitable and properly functioning health education units.

Refresher Courses at the Institute of Public Health

The fourth in the series of 2-month refresher courses for Public Health Veterinarians and for Public Health Pharmacists will open Monday, 4 October 1948 at the Institute of Public Health in Tokyo.

Three-month refresher courses for Public Health Medical Officers and for Public Health Sanitarians will begin Monday, 11 October 1948. Official notices concerning these courses have been sent to the prefectural Governors by the Ministry of Welfare.

It is expected that each prefecture will send one student to each of these courses for training. Military Government Health Officers are urged to see that this is done and that well qualified candidates are selected. Successful implementation of the Health Center program depends, to a large extent, upon having properly trained personnel to carry out the various public health functions.

Port Quarantine

A report was received of the diagnosis of a case of typhus fever in a repatriate at Hokkaido on 4 September. Subject repatriate had arrived in Hakodate from Karafuto on 27 August aboard the repatriation ship Soya Maru. An undetermined number of repatriates from the same ship had already departed Hakodate for other points in Japan, prior to the diagnosis of the illness. All prefectures involved have been notified and instructed to keep under surveillance the repatriates from the Soya Maru.

SECTION III VETERINARY AFFAIRS DIVISION

Equine Encephalomyelitis

During the period 28 August - 3 September, a total of 325 new cases of equine encephalomyelitis was reported. This is approximately one half of the number of cases reported for the preceding week. The largest number of new cases were reported from Iwate, Tochigi, Fukushima, and Saga and Aomori Prefectures. Sporadic cases were reported in those prefectures showing a previous decline in the past two weeks. Of the total 325 new cases, 58 were classified as suspects and have not been confirmed.

Animal Diseases

The following new diseases were reported during the period 28 August -3 September, submitted by the Animal Hygiene Section, Ministry of Agriculture and Forestry.

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Hokkaido	Swine Erysipelas	2

SECTION IV NURSING AFFAIRS DIVISION

The pamphlet "Syphilis" by New York Nursing Education Bureau has been translated into Japanese, and is available for 30 yen from:

Dr. Chizuo Ohta
Medical Friend Co.
40 Momozono-cho, Nakano-ku, Tokyo

SECTION V SUPPLY DIVISION

General

It has come to the attention of Supply Division that hospitals and doctors have experienced difficulty in purchasing penicillin. As announced in previous issues of the Weekly Bulletin, penicillin and sulfathiazole have been removed from distribution control. This was possible because production of these drugs is more than sufficient to meet minimum needs. All available publicity should be given by prefectural health officials and commercial establishments to the fact that penicillin and sulfathiazole are now distributed through normal commercial channels, not controlled by government agencies. Efforts are being made to obtain lists of authorized dealers in these drugs. These lists will be published in this Weekly Bulletin.

Inclosed with this issue of the Weekly Bulletin is the Enforcement Regulation, Pharmaceutical Affairs Law, Law No.197, 1948. This regulation became effective 15 August by publication as Minister of Welfare Ordinance No.37. A copy of the Law was included as Addenda to Weekly Bulletin No.85 (9-15 August). With the publication of this Enforcement Regulation the new Pharmaceutical Affairs Law becomes fully operative.

Production

A total of 5,850 pieces of the various types of DDT dusting and spraying equipment for mosquito and fly control programs was produced during the period 22-28 August.

During the period 22-28 August, 59,480 lbs. of 10% DDT dust and 104,215 gallons of 5% DDT residual effect spray were distributed. At the same time, 66,120 lbs. of 10% DDT dust and 145,050 gallons of 5% DDT spray were received from the manufacturing plants. Total inventory of stocks on hand in regional warehouses of the Ministry of Welfare as of 28 August includes 1,236,164 lbs. of 10% DDT dust, 335,278 gallons of 5% DDT spray and 45,790 vials of typhus vaccine.

Distribution of DDT products and typhus vaccine during July totaled 462,705 lbs. of 10% DDT dust, 189,186 gallons of 5% DDT residual effect spray, and 39,295 vials of typhus vaccine. During the month, 67,800 lbs. of 10% DDT dust and 313,800 gallons of 5% DDT spray were received from the manufacturers. A breakdown of distribution to prefectures and government agencies follows:

<u>Prefecture or Department</u>	<u>10% DDT Dust</u> lbs.	<u>5% DDT Residual Effect Spray</u> gals.	<u>Typhus Vaccine</u> vials
Hokkaido		30,000	19,310

SECTION VI
NARCOTIC CONTROL DIVISION

Thefts

Thefts of narcotics for the month of July totaled 34. Seven of the victims were hospitals and the remainder clinics. In all cases except one, the perpetrators of the thefts, probably addicts in most instances, are reported as not apprehended.

In at least one case a hospital failed to store the metal box containing narcotics in the safe as usual and during the night the narcotics were stolen. It is emphasized, hospital narcotics must be kept in a safe at all times.

One hundred fifty-nine grams of morphine powder, enough to sustain six addicts for one year, in addition to 45 other narcotic items were introduced into illicit traffic by the above thefts.

Prosecutions

Two cases in which prominent physicians have willfully violated the Narcotic Law were thoroughly investigated. In one case the physician had unreported narcotics which he was supplying to addicts. In the other case the physician illegally disposed of a quantity of narcotics which resulted in the arrest and conviction of three other defendants.

Procurators, enforcing the Law impartially, are proceeding against the above mentioned physicians one of whom is a university professor, the other has been a governmental official for 15 years.

SECTION VII WELFARE DIVISION

Licensed Agencies for Relief in Asia (LARA)

Overseas shipments of LARA relief supplies, Nos.87 through 91 received during period 9-24 August inclusive, arrived in Yokohama for distribution to the Japanese, through official Japanese Government Welfare channels, under the supervision of the Supreme Commander for the Allied Powers. These shipments totaled 274.80 tons and included the following relief supplies:

Food	20.74
Clothing (including shoes)	43.44
Miscellaneous	3.00
Cotton-raw	207.62 (999 bales)
	274.80 tons

Community Chest Fund Campaign

The Japanese Central Community Chest Committee has prepared a "Community Chest Kit" consisting of the following:

- a. Sample card of the Community Chest "Red Feather".
- b. Report of Community Chest activities (in Japanese) 1947-1948.
- c. Community Chest Pamphlet prepared particularly for primary and secondary school teachers.
- d. Solicitation pamphlet prepared for Joint Campaign Fund Chairman and solicitors.
- e. Stickers to be fixed to door posts indicating participation in the Community Chest Drive.
- f. Community Chest solicitor's button (large) and campaign chairman Red Cross Buttons.
- g. One each wood and metal solicitor's collection box with sticker to be attached to the face thereof.

This material is being forwarded under separate cover to Welfare Officers for information and will be supplied to local Joint Fund Drive Committees at cost, upon placing order with the Central Community Chest Campaign Committee in Tokyo. It is suggested that Welfare Officers familiarize themselves with utilization made by the Joint Committees of material prepared centrally and furnished to Prefectural Joint Fund Committees.

SECTION VIII SOCIAL SECURITY DIVISION

Medical Fee Payment Fund

Reference Public Health and Welfare Weekly Bulletin No.80 for the period from 5 to 11 July which gives a description and the purpose of the Social Insurance Medical Fee Payment Fund Law. Public Health and Welfare Section, GHQ, SCAP had no objection to a proposed Cabinet Order, submitted by the Ministry of Welfare, which provides the regulations and procedures for registering with the Judicial Affairs Bureau, the above Medical Fee Payment Fund. The Cabinet Order was in accordance with Article 6 of the Law.

The main office of the Medical Fee Payment Fund will be located in Tokyo, with branch offices in each prefecture and sub-branch offices where considered necessary for convenient and efficient operation. Each of the above offices will register with the Judicial Affairs Bureau in their respective localities with the registration including the names and addresses of the directors, secretaries and inspectors. In addition, each office will register, in their own locality, all other existing offices of the Fund.

Appeals Procedures

The Cabinet, on 31 August, revised Cabinet Order No.240 of 11 November 1947 relative to appeals procedures under the social insurance laws. Those revisions were made in the light of amendment enacted in the last session of the Diet with reference to the basic laws governing the social insurance. (See Public Health and Welfare Weekly Bulletin Nos. 74, 79 and 80.) The revised Cabinet Order will supplant both Cabinet Order 240 of 1947 and Ministerial Ordinance 29 of 1947. Ministerial notifications are now being drafted to inform the prefectural governors of this action.

National Health Insurance

No objection was raised to a Ministerial Ordinance by the Ministry of Welfare amending the existing Regulations Governing National Treasury Subsidies to National Health Insurance.

The Regulations as amended implement Article 47, paragraph 1, of the National Health Insurance Law which authorizes subsidization by the national government. Specifically, they provide for annual subsidies within the limits of the budget, to insurers and federations thereof to help them bear the cost of

1. Administration;
2. Health facilities;
3. Establishment of facilities for medical and maternity care;
4. Other National Health Insurance operations.

These categories follow the usage of the past years. As heretofore, certain reports are required in connection with the application. These include a statement of the insurer's accounts for the past year and an estimate of income and expenditure during the year for which the insurer requests a subsidy.

The extent of subsidization will be determined in the Ministry of Welfare and will depend upon the funds made available by the Diet. However, as a rule, no subsidies for the cost of administration will be granted to an insurer failing to bear at least half the cost of medical care for the insured or failing to raise by way of insurance contributions at least 70% of the cost of benefits thus provided.

These minimum requirements constitute a new departure. Heretofore, any National Health Insurance Association could qualify for subsidies as long as it had not suspended operations. Thus, an association could obtain a subsidy even though it under took to bear less than 50% of the medical treatment cost, leaving the greater share of the expense to be borne by the insured patient himself. Moreover, to the extent that the association did provide the necessary care or pay the cost thereof, it could rely excessively on sources other than members' insurance contribution, e.g., national, prefectural and local subsidies. In the future, such insurers will be disqualified from obtaining national subsidies for administration, although they may conceivably obtain national subsidies under one of the other counts enumerated above.

	Subject: Treatment of persons who had been called for military service in a land other than Japan proper and were demobilized after settling down in the home land.	

SECTION II PREVENTIVE MEDICINE DIVISION

Inoculation Procedures

The Ministry of Welfare has established procedures for immunizations now required by Law 68, 1948. These procedures have received Public Health and Welfare approval and will be published by the Ministry of Welfare.

In all cases, only vaccines which have passed official test under Ministry of Welfare Ordinance No.32, 1947, may be used. Storage of smallpox vaccine is to be under minus 10°C, and of other vaccines between 2°C and 5°C. Validity of smallpox vaccine is for two months; diphtheria toxoid, two years; typhoid vaccine, 12 months; typhus vaccine, 18 months; and cholera vaccine, 12 months. Each cutaneous or sub-cutaneous inoculation is to be performed with a sterile needle and syringe.

For smallpox vaccination the multiple puncture method is described and a single inoculation site 3 to 5 mm in diameter permitted for primary vaccination by this method. For the "cross cut" method by scalpel, two sites are recommended for primary and four sites for secondary or additional vaccinations.

Disinfection of the skin in preparation for smallpox vaccination is to be with acetone, ether, or alcohol. If alcohol is used, excess is avoided by "squeezed alcohol cotton" and to "wait perfect drying before vaccination". Cleansing with soap and water may be substituted for other methods of skin disinfection.

For all intra-cutaneous or sub-cutaneous inoculations, skin dis-infections by tincture of iodine or alcohol is recommended.

Results of smallpox vaccinations are to be recorded as “vaccinia”, “vaccinoid”, “Immune reaction” or “negative”. All who are “negative” at time of inspection, which is on the second or third day following primary vaccinations and on the sixth to eighth day following other vaccinations, are to be “once more immediately vaccinated”.

The amounts of vaccine to be used for immunization are as follows:

Smallpox	“It is suggested that approximately 0.1cc will be the quantity for 10 persons.”		
Diphtheria	Initial Immunization:	1st	- 0.5cc
		2nd & 3rd	- 1.0cc
		At intervals of 4 to 6 weeks.	
	Reimmunization:	1.0cc	
		Before entering elementary school and before completing elementary school.	
Typhoid	Initial Immunization:	1st	- 0.5cc
		2nd & 3rd	- 1.0cc
		At intervals of 5 to 10 days.	
	Reimmunization:	1.0cc	
	(annually)	Amounts for pre-school children 5/10 of above dose; for elementary school children 7/10 of above dose.	
Typhus	Initial Immunization:	1st & 2nd	- 1.0cc
		At intervals of 7 to 10 days.	
Cholera	Initial Immunization:	1st	- 0.5cc
		2nd	- 1.0cc
		At intervals of 5 to 7 days.	
		Amounts for pre-school children 5/10 of above dose; for elementary school children 7/10 of above dose.	

SECTION III MEDICAL SERVICES DIVISION

The opening of the short refresher course of hospital administration at the Tokyo First National Hospital is scheduled for 13 September.

The course will be of one week duration and each session will be composed of a group 35 directors of national hospitals and sanatoriums throughout Japan, receiving lectures and demonstrations in proper hospital procedure and management.

Upon completion of the refresher courses for present directors of national institutions, the long course (date to be announced) designed to give intensive training in hospital management to qualified applicants, will be inaugurated.

This training in hospital administration will be the first formal schooling in this field offered in Japan, and gratifying results are expected.

SECTION IV VETERINARY AFFAIRS DIVISION

Equine Encephalomyelitis

During the period 4-10 September, a total of 401 new cases of equine encephalomyelitis was reported. This is an increase of approximately 23% over the number of cases reported for the preceding week. The majority of new cases were reported from Iwate (136), Akita (10), Aomori (195), Tochigi (15), and Ibaraki (19).

Weekly Animal Disease Report

The following new cases of animal disease during period 4 - 10 September were submitted by the Animal Hygiene Section, Ministry of Agriculture and Forestry:

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Aomori	Swine Erysipelas	12
Tochigi	"	1
"	Swine Cholera	4
"	Swine Plague	1
Nagano	Filaria (Goat)	1
"	Swine Erysipelas	4
"	Swine Plague	2

In addition, a total of 50,000 kg of zinc oxide, 542 kg of Rivanol, 30,000 kg of aspirin and 4,494 kg of aminopyrine are scheduled for distribution to prefectures during the same period.

SECTION VII
NARCOTIC CONTROL DIVISION

The July report of narcotic control activities from the Ministry of Welfare contained the following information:

Total registrants	84,340
Arrest - Registered persons	24
Unregistered persons	62
Convictions - Registered persons	15
Unregistered persons	38
Thefts of narcotics (including seven hospitals)	34
Losses by fire (Fukui earthquake)	40

Penalties for registrants varied from 2,000 yen fine to one year six months penal servitude plus 5,000 yen fine with nine defendants sentenced to penal servitude including four suspended sentences. Penalties for non-registrants varied from 1,500 yen fine to one year six months penal servitude plus 5,000 yen fine with 24 of the defendants sentenced to penal servitude including eight suspended sentences. Charged against 33 non-registrants were dropped because of insufficient evidence. Twenty-seven registrants were admonished and two minor violations were disposed of administratively.

The report also summarized the activities of narcotic agents as follows:

Inspections of registrants	1,545
Investigations originated	250
Investigations concluded	189
Investigations not concluded	327

Four persons were arrested for illegal cultivation of marihuana and one defendant was fined 100 yen for illegal possession of marihuana seed.

A former narcotic agent and a clerk in a prefectural narcotic division have been arrested for malfeasance in office. Other persons involved in the transactions are being thoroughly investigated before the defendants are brought to trial.

SECTION VIII
WELFARE DIVISION

General

Miss Florence Brugger has been assigned to Welfare Division as Social Work Training Consultant, effective 30 August, vice Mr. Donald V. Wilson.

Joint Fund Drive (Japanese Red Cross and Community Chest)

Reference Weekly Bulletin #75 dated 31 May 1948, subject: "Community Chest - Japanese Red Cross Campaign".

The figures used as an example to illustrate Joint Fund composition and post-drive distribution (30% Japanese Red Cross, 70% Community Chest) are only in illustration and are not to be used as a concrete, hard and fast rule. After approval by the Joint Funds Committee, the goal might be 20-80, 40-60, 50-50, etc. The prefecture-to-prefecture goal will vary in accord with Japanese Red Cross and other private agency programs and services.

Note: This Joint Fund Agreement is for 1948 only.

Information Libraries for Japanese on Social Work

Public Welfare Officers are requested to bring to the attention of the Japanese social workers and Welfare Officers with whom they work that there is available in the CI&E Information Libraries for Japanese some good material on social work. It is expected that this material can be amplified if there is sufficient request and use made of that now available. These information libraries are located in the following places and further information regarding social work literature in them can be obtained through the American Librarian in charge:

SCAP CI&E Information Center, APO 301, Kyoto, Honshu
CI&E Library, GHQ, SCAP, APO 710, c/o Aichi MG Team, Nagoya, Honshu
CI&E Library, GHQ, SCAP, APO 929, c/o Fukuoka MG Team, Fukuoka, Kyushu
CI&E Library, GHQ, SCAP, APO 547, c/o Niigata MG Team, Niigata, Honshu
CI&E Library, GHQ, SCAP, APO 468, c/o Hokkaido MG District, Sapporo, Hokkaido
CI&E Library, GHQ, SCAP, APO 309, c/o Miyagi MG Team, Sendai, Honshu
CI&E Library, GHQ, SCAP, APO 301, c/o Ishikawa MG Team, Kanazawa, Honshu
CI&E Library, GHQ, SCAP, APO 1007, c/o Shizuoka MG Team, Shizuoka, Honshu
CI&E Library, GHQ, SCAP, APO 929 c/o Nagasaki MG Team, Nagasaki, Kyushu
CI&E Library, GHQ, SCAP, APO 317, c/o Hyogo MG Team, Kobe, Honshu
CI&E Library, GHQ, SCAP, APO 1050, c/o Shikoku MG Region, Takamatsu, Shikoku
CI&E Library, GHQ, SCAP, APO 343, c/o Yokohama, Honshu
CI&E Library, GHQ, SCAP, APO 929, c/o Kumamoto, Kyushu
CI&E Library, GHQ, SCAP, APO 468, c/o Hakodate, Hokkaido

The additional libraries will be opened soon and the field will be notified.

Osaka School of Social Work

On 4 October, the Osaka School of Social Work is accepting 50 students for three months in-service training. This three-months course which will be repeated is intended for people working in the field of social work in the Osaka Area.

On 18 October the one-year course entitled "Research" will open for 50 students, university or college graduates, or those who have had three years' experience in social work. Those coming without university or college degrees will be expected to take an entrance examination. To-date there have been approximately 130 inquiries regarding the one-year course of which about 10% were women. This is a low percentage compared to the number of women in the Minsei-iin Organization which is said to be about 20%.

The tuition for the year's course has been set at 1,200 yen but no statement could be made regarding the cost of board and room since the building for this has not been finally obtained. However, it is anticipated that the building will be ready by the time the course opens and living costs will be kept at a minimum. Students from other parts of Japan will be welcome for the one-year course. The grand opening is planned for 25 October.

SECTION IX SOCIAL SECURITY DIVISION

General

The Report of the Social Security Mission has been translated into Japanese by the Ministry of Welfare and copies will be available for purchase by the general public for a nominal fee. It is expected that the forthcoming Diet will give major consideration to social security legislation.

Representative of the Social Security Division, Public Health and Welfare Section, will participate in the current series of regional conferences of Welfare Officers.

(En Shi No.368) Prefectures in Tohoku District
Subject: Regular reports on public works for the fiscal year 1948-49.

SECTION II
PREVENTIVE MEDICINE DIVISION

Japanese B Encephalitis

The incidence of Japanese B Encephalitis is rapidly declining in most prefectures. Only 15 prefectures reported more than 10 cases each during the past week. A total of 327 cases were reported for all Japan during the seven day period September 11-17 inclusive. The total number of cases and deaths reported for all Japan to date is 6,907 cases and 966 deaths.

SECTION III
VETERINARY AFFAIRS DIVISION

Equine Encephalomyelitis

The initial outbreak of equine encephalomyelitis occurred in Hokkaido in the vicinity of Sapporo during period 13-20 September. Additional cases are still being reported from those prefectures in which the outbreak occurred during the month of August. The total number of cases for this period is reported to be 255 bringing the total to date: 2,308 positive, 626 suspects, 914 dead and 75 sacrificed. The mortality rate including suspects and sacrifices is 33.7%.

Veterinary Education

The Keio Veterinary College was inspected with a representative of the Ministry of Education. The only students present are those who will be graduated during the spring of 1949. Registration of new students is being delayed pending final decision as to allowing this College to accept new students on the basis of the poor facilities available.

Field Trip

A field trip to Shikoku Island was made in which Animal Disease Control measures were investigated in Ehime, Kochi, Kagawa and Tokushima Prefectures. Emphasis was placed on the control of equine encephalomyelitis and it was determined that the immunization of horses in Ehime, Kochi and Kagawa did offer protection to other horses in the areas of outbreak. However, Tokushima Prefecture did not receive any vaccine and a total of 32 cases were reported in horses.

Animal Diseases

The following animal diseases were reported by the Animal Hygiene Section, Ministry of Agriculture and Forestry for period 11-17 September.

<u>Prefecture</u>	<u>Disease</u>	<u>Number of Cases</u>
Ibaraki	Swine Cholera	7

SECTION IV
NURSING AFFAIRS DIVISION

Instructions from Employment Security Bureau

On 14 June instructions from Employment Security Bureau, (Shoku Hatsu #665) taken from Official Gazette Employment Security, were sent to the Prefectural Governors regarding the Employment Exchange of Nurses and Application for permission for Private Employment Exchange and Labor Supply Project of Nurses.

The inclosed letter from the Employment Security Bureau, dated 9 September (Incl. #1) is a complete translation of the letter sent to the Prefectures clarifying the policy with regard to nurse exchanges. It is requested this letter be interpreted for the Japanese nurses as it affects thousands of nurses.

Midwife's Meeting

A meeting for Midwives was held in Maebashi City, Gumma Prefecture on 14 and 15 September. The National program and the goals for the coming year were discussed and plans made for the fulfillment of this program. There were 550 present and an intense interest was shown throughout the meeting.

Personnel

The following Public Health Nurses have arrived for duty with Military Government Teams. Misses Lundeen, Harris, Wagner, Casto for Japan and for Okinawa Miss Ochiai.

SECTION V
SUPPLY DIVISION

Production

A total of 6,419 pieces of the various types of DDT dusting and spraying equipment for mosquito and fly control programs was produced during the period 5-11 September. Large inventory stocks are on hand to meet all requirements.

During the period 5-11 September, 173,650 lbs. of 10% DDT dust, 51,270 gallons of 5% DDT spray, and 2,370 vials of typhus vaccine were distributed. At the same time, 544,500 lbs. of 10% DDT dust, and 70,900 gallons of 5% DDT spray were received. Total inventory of stocks on hand in regional warehouses of the Ministry of Welfare as of 11 September includes 1,112,836 lbs. of 10% DDT dust, 337,454 gallons of 5% DDT spray, and 51,046 vials of typhus vaccine.

Distribution of DDT products and typhus vaccine during August totaled 1,060,235 lbs. of 10% DDT dust, 477,380 gallons of 5% DDT residual effect spray, and 6,400 vials of typhus vaccine. During the month, 121,120 lbs. of 10% DDT dust, and 430,950 gallons of 5% DDT spray were received form the manufacturers. A breakdown of distribution to prefectures and government agencies follows:

<u>Prefecture or Department</u>	<u>10% DDT Dust</u>	<u>5% DDT Residual Effect Spray</u>	<u>Typhus Vaccine</u>

SECTION VI

NARCOTIC CONTROL DIVISION

Stocks of Tropococaine

Tropococaine, a lumbar anesthetic, is not being used by physicians although there are sufficient quantities available in the stocks of compounders and producers. It has been determined that many wholesalers have tropococaine in only 25-gram bottles although the usual demand is for ampoules containing 0.05 grams each.

Koto Pharmaceutical Company, Tokyo, has advised local wholesalers they may exchange their stocks of tropococaine for fresh stocks, in ampoules, on the following basis:

- 5 grams tropococaine for 100 ampoules (0.05 grams each)
- 25 grams tropococaine for 500 ampoules (0.05 grams each)

The rate for exchange will be 20 yen for each carton containing five ampoules. The exchange will be made in accordance with the Narcotic Control Law.

Addicts

An addict was arrested in Tokyo who had purchased narcotic from five physicians for approximately 44,000 yen. Not only had this addict used his own funds, but also was using the wages of his children to satisfy his addiction. He owed 24,000 yen at the time of his arrest. Narcotic agents are being instructed by the Ministry of Welfare to include all information of this nature in their reports to procurators since it clearly shows the addict to be a menace to the public welfare.

SECTION VII WELFARE DIVISION

The Third All Japan Minsei-iin Conference

An All Japan Conference of Welfare Commissioners and Child Welfare Workers (Minsei-iin and Jidoiin) is being held in Sapporo City, Hokkaido, 1, 2 and 3 October. This is the third meeting of its kind and its objective are:

1. To impress the workers the sense of their heavy responsibilities.
2. To cause a spiritual uplift and technical enlightenment.
3. To draw up practical plans to meet the present extraordinary situation.

This conference is being supported by the Ministries of Welfare, Education, Labor, and Finance and is approved by all the organizations of the Japan Social Work Association. The points for discussion will be:

1. System of Minsei-iin and its applications.
2. Welfare activities.

The topics for discussion will be grouped into three sections and these three sections divided into 16 committees so that there will be an opportunity for all attending to take part in the discussion of some group. It is hoped that the discussions will be based not on abstract theories but on actual conditions and experiences.

It is expected that over 2,000 people will attend - 1,000 from Honshu 1,000 from Hokkaido, 100 from the central office and representatives from Kyushu and Shikoku. Qualifications for attendance are that they be:

1. Minsei-iin and Jido-iin.
2. Persons be connected with Minsei and Jido activities.
3. Persons be recommended by Chairman of the Federation (Renmei).

Japanese Red Cross Society

At the request of the Health Bureau, Tokyo Metropolitan Office, the Headquarters and Chapter Medical Relief Teams assisted in the Tokyo Metropolitan Hospitals in the care of Japanese B Encephalitis patients in these hospitals.

The period of assistance was 25 days from 10 August to 3 September.

<u>Tokyo Metropolitan Hospitals to which Teams were dispatched</u>	<u>No. of Persons Dispatched</u>	<u>Chapters which Dispatched Teams</u>
Komagome Hospital	30	Tokyo (10 persons) Gumma (10) Niigata (5) Kanagawa (5)

Otsuka Hospital	5	Nagano (5)
Hiroo Hospital	<u>5</u>	Nagano (5)
Total	84 persons dispatched	

SECTION VIII
SOCIAL SECURITY DIVISION

General

Two Ministerial Notifications were released this week by the Insurance Bureau, Ministry of Welfare. Both discuss the recently revised Cabinet Order concerning appeals procedures for the social insurances. One was addressed to the prefectural governors and relates to National Health Insurance Appeals Boards. The other was sent to the prefectural referees and deals with appeals under Health Insurance, Welfare Pension Insurance and Seamen's Insurance.

Health Insurance

In a recent staff visit to several prefectures, it was revealed that there has been quite a fluctuation in the percent of employers delinquent in submitting contributions due under the Health Insurance Law, government -managed. In addition, there was quite a variation in the percentages of delinquents among prefectures. Various reasons were given by the prefecture officials as to why employers were delinquent in forwarding contributions deducted from wages, none of which were particularly valid reasons.

Also, the prefecture officials seemed to be rather confused in explaining as to what extent they were exercising the Law in requiring delinquent employers to submit contributions promptly. They were informed as to the requirements of the Law and their responsibility in enforcing the provisions of the Law. During the same conferences, the prefectural officials commented on the tardiness of the Government in forwarding appropriations to the prefectures for benefit payments under the Health Insurance Law. They were then acquainted with the fact that they could hardly expect appropriations to be prompt if they permitted employers to be delinquent in submitting contributions.

SECTION IX
MEMORANDA TO THE JAPANESE GOVERNMENT

None.

CRAWFORD F. SAMS
Brigadier General, Medical Corps
Chief

2 Incls:

1. Employment Exchange of Nurses and Application for Permission for Private Employment Exchange and Labor Supply Project of Nurses.
2. Report of Cases and Deaths form Communicable and Venereal Diseases in Japan - 11 September 1948.

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
Public Health and Welfare Section**

WEEKLY BULLETIN

**For Period
20 - 26 September
1948
Number 91**

SECTION I - Preventive Medicine
SECTION II - Veterinary Affairs
SECTION III - Nursing Affairs
SECTION IV - Supply
SECTION V - Narcotic Control
SECTION VI - Welfare
SECTION VII - Social Security
SECTION VIII - Memoranda to Japanese Government

SECTION I
PREVENTIVE MEDICINE DIVISION

Tuberculosis

The Ministry of Welfare has initiated a survey to determine the availability and use of beds for the care of tuberculosis patients. The survey will be made first in Tokyo and vicinity where the bed shortage is most acute and later will extend to all of Japan. It is expected that this survey will result in greater utilization of existing beds, reactivation of marginal beds, and creation of new ones wherever needed.

Japanese B. Encephalitis

The season's Japanese B. Encephalitis epidemic appears to be nearing an end, with only a few sporadic cases being currently reported. It is expected that these may continue for a few weeks longer. Latest available figures show 7142 suspect cases and 1000 deaths for all Japan. Final figures may be somewhat less as many cases originally reported as suspects will not have been confirmed.

Model Health Centers

Latest reports indicate that 27 prefectures now have Model Health Centers. Some prefectures are already establishing additional Health Centers patterned after the Model Health Centers.

Typhus Fever

The time is near at hand when epidemic (louse borne) typhus will again make its appearance. It is strongly urged that early preventive steps be taken to reduce the threat to a minimum. Most cases reported during 1947-48 typhus season occurred among people housed in institutions of one type or another and in the poorer areas with heavy louse infestation of the populace.

In order to carry out an effective control program, the following suggestions are made to Military Government Health Officers:

1. Review Public Health and Welfare Section Technical Bulletin #3 (TB-PH-PREV MED 3), dtd Feb 1947, subj: Rickettsial Diseases in Japan and Korea.
2. Consult with the Public Health Officer and impress on him the necessity for early initiation of control measures.
3. Make a cursory louse survey in the poorer sections of the cities, in orphanages, poor farms, jails, prisons, certain hospitals, vagrant camps, etc. If lice are found, institute immediate 10% DDT dusting procedures of persons in such locations. Repeat dustings should be done in 7-10 days followed by periodic louse surveys.
4. An extensive typhus immunization program should be initiated as soon as possible in the types of places mentioned above. The full course of immunization should be used or a "booster" shot given if a previous full immunization course has been administered during the past season. Information and education campaigns should begin early.

Public Health Train

The Public Health Train completed its tour of Hokkaido in the latter part of August. Approximately 50,000 persons viewed the exhibits. Negotiations for continuance of the train are in progress.

SECTION II
VETERINARY AFFAIRS DIVISION

Equine Encephalomyelitis

During the period 20-25 September a total of 34 new cases of equine encephalomyelitis was reported. This represents a steady decline in cases in comparison to the previous four weeks and indicates that the peak of the

epidemic has been reached. The total numbers to date for the epidemic now are 2317 positive cases, 651 suspect cases, 922 deaths and 76 sacrifices. The mortality rate is 33.6%.

Recombined Milk

Under the supervision of Public Health and Welfare Section, GHQ, SCAP, recombined milk is being produced at a rate of 1000 gallons a day. Milk cooled to a temperature of 20 degrees C. is showing daily laboratory test of 1.032 Specific Gravity, 3.0 percent butterfat and an average of 75,000 bacteria per cc. The milk is actually superior in quality to fresh cow's milk and comparative tests on two groups of babies disclosed that the babies being fed the recombined milk were responding better than those receiving cow's milks. It is hoped to stimulate the production of recombined milk in other areas in Japan as a direct means of supplementing the present supply of fresh milk which is very inadequate.

Animal Disease Report

The following animal diseases were reported for the period 18-24 September:

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Aomori	Equine Encephalomyelitis	24
Miyagi	"	2
Fukushima	"	2
Tochigi	"	2
Ehime	"	1
Saga	"	1
Miyazaki	"	2
Nagano	Swine Erysipelas	2
Kanagawa	"	1
"	Swine Plague	1
"	Swine Cholera	25

SECTION III NURSING AFFAIRS DIVISION

Nurses' Association

The Branch Association of Tokyo-to held its first two-day meeting in Tokyo 22-23 September, which three representatives from Public Health and Welfare Section attended.

A representative of Public Health and Welfare Section attended an Association meeting in Mito, Ibaraki Ken, on 22 September and addressed a group of about 125 midwives on "The Goals of the Maternity Program".

Publications

The pamphlet "Child Health Conference" by United States Department of Labor, Children's Bureau, has been translated into Japanese, and is available for 45 yen from:

Dr. Chizuo Ohta
Medical Friend Co.
40 Momozono-cho,
Nakano-ku, Tokyo.

SECTION IV SUPPLY DIVISION

Production

A total of 4,038 pieces of the various types of DDT dusting and spraying equipment for insect control program was produced during the period 12 - 18 September. Large inventory stocks are on hand to meet all requirements.

During the period 12 - 18 September, 108,293 lbs. of 10% DDT dust and 34,280 gallons of 5% DDT residual effect spray were distributed. At the same time, 158,430 lbs. of 10% DDT dust and 61,400 gallons of 5% DDT spray were received. Total inventory of stocks on hand in regional warehouses of the Ministry of Welfare as of 18 September includes 1,162,973 lbs. of 10% DDT dust, 347,674 gallons of 5% DDT spray, and 51,046 vials of typhus vaccine.

Distribution

During August 71,300 cc cholera vaccine, 198,000 cc typhus vaccine, 45,600 cc anti-rabies vaccine (canine) and 14 doses anti-rabies vaccine for human use were shipped to the various prefectures. Others vaccines were distributed as follows:

Prefecture	Diphtheria Antitoxin (Unit: cc)	Diphtheria Toxoid (Unit: cc)	Smallpox Vaccine (Unit: dose)	Triple Toxoid (Unit: cc)
Hokkaido	2,580		20,150	
Aomori	975

Kumamoto	1,950		1,130	
Kagoshima	270			
Quarantine Stations			4,000	112,500
Oita	445			
Total	47,547	199,360	48,490	1,257,250

In the period 12-18 September, a total of 5,366 pieces of spraying and dusting equipment for use in insect and rodent control programs was shipped to 23 prefectures under the supervision of the Ministry of Welfare.

The following are allocations of controlled medicines for months of October, November and December. These are a continuation of the tables published in Weekly Bulletin No.89 and 90 (6-12 September and 13-19 September). The next Weekly Bulletin will include the final table of controlled medicines that have been allocated for this period.

Prefecture	Sodium				Solution of Cresol with soap (kg)	Procaine Hydrochloride (kg)

SECTION V
NARCOTIC CONTROL DIVISION

Narcotic Inspections

It was noted during a field trip that Narcotic Agents are inspecting the records of practitioners and hospitals without making the necessary preliminary preparations. Narcotic Agents have been instructed to prepare an abstract of the registrant's purchases from prefectural records before each inspection. With this record of purchases the Narcotic Agent can easily determine whether the proper record has been kept of all narcotics dispensed or administered.

For those cases in which it is suspected the registrant is either an addict himself or is supplying narcotics illegally, it will be necessary to check on the persons shown in the records to determine if they were actually attended on the date shown and received the narcotics as stated in the record. Many cases of falsification of records have been proved in this way and the registrant has admitted using the narcotics to satisfy his own addiction.

Violations

Three cases of illegal cultivation of the opium poppy were reported. In one case the pods bore the marks of incisions having been made to obtain opium although the defendant stated he was cultivating the poppy only for the floral beauty of the plant. The evidence does not justify the defense, and procurators have been advised to prosecute all cases in which the prohibition against the cultivation of opium poppies is violated.

SECTION VI WELFARE DIVISION

Japanese Red Cross Activities

Printing of the Junior Red Cross handbook has been completed and copies sent out the Chapters. Distribution will be made the Chapters at orientation meetings of teachers and principals of the prefectures.

Distribution is to be on the basis of two handbooks for each primary, middle or high school. The number of schools is determined by the April survey of the Textbook Bureau of Monbu-sho.

Heifers for Relief Committee Shipments

The fifth and sixth shipment of goats from the "Heifers for Relief Committee" have arrived. Allocation is as follows:

Fifth Shipment: (240 goats.) Ministry of Welfare allocation (133 goats) were as follows:

<u>Prefecture</u>	<u>Institution</u>	<u>No. of Goats Allocated</u>

SECTION VII SOCIAL SECURITY DIVISION

General

During staff visits to a number of prefectures, it was learned that the Chief of the Prefectural Welfare Departments whose responsibilities include social insurance activities, has taken only a minor interest in such programs. Apparently this was due to feeling that such activities are national programs and not a direct responsibility of the prefectures. However, such functions are a part of the total welfare program and complete coordination should be maintained with public assistance and child welfare programs by correlation of policies, claims and fiscal aspects to ensure a unified rational approach and the minimizing of duplication.

Public Employees

The Allowance Bureau, Ministry of Finance, has issued a Ministerial Notification addressed to the various Ministries relative to the appointment of members of Appeals Boards under the National Public Service Mutual Aid Association Law and elaborating upon the procedures through which such Boards will function.

National Health Insurance

A difficulty existing in some localities visited, is how the National Health Insurance medical care program is to be coordinated with the public health program. The public health program is the responsibility of the District Health Office. That office may enlist the cooperation of the National Health Insurance Association in performing such functions for association members to be accomplished in accordance to its technical direction. The recently established local National Health Insurance Advisory Councils could render considerable assistance in coordinating their activities.

A new reason has been revealed as to why a number of localities have suspended the National Health Insurance program. In many places the programs were administered by the All-Japan Agriculture Association; therefore, when that organization was dissolved, it was assumed that the national health insurance activities were also forbidden. This was a misinterpretation and it is expected that many of the associations will be reorganized under the jurisdiction of the local government body.

PREVENTIVE MEDICINE DIVISION

Sanitation

The fifth class of sanitarians to complete the refresher training course at the Institute of Public Health was graduated on 2 October, and the members have returned to their respective prefectures. Members of the class were instructed to contact the local Military Government Health Officer and the Regional Sanitary Engineer and inform them concerning their activities and problems. Military Government Health Officials should ascertain that these graduates are gainfully employed in the local public health organizations in projects where their training and experience will be of the greatest benefit to the public health program.

The sixth class for sanitarians, is scheduled to begin 11 October. Although the new students have already received their instructions, additional students may be sent if special training of additional key personnel is desired at this time.

Public Health Information and Education

Reorganization of Health Center System

As a part of the Public Health Information and Education programs a series of press releases have been prepared concerning the reorganization of the Health Center System of Japan. In this series the purpose of the Health Center, its relation to the public, its functions and the activities being carried out by the various services of the Health Center are discussed. In the future, releases to the press will be made twice each month until all services of the Health Center have been covered. The material has been prepared in semi-journalistic style and may be used by the press as written or as a source for newspaper and radio releases, etc. Two press conferences were held during September. In addition, key men of the press held a joint conference with Ministry of Welfare Officials with a view to improving the relationship between the press and the Ministry of Welfare and thereby improving publicity of health programs in general.

For the information and guidance of Military Government Health Officers, material furnished to the press at the time of press conference mentioned above, are inclosed with this Bulletin (Incl.1 & 2).

In order to obtain the maximum favorable publicity for the Health Center Program and to insure uniformity of such publicity, it is suggested that Military Government Health Officers utilize this material as a basis for press and radio releases in each prefecture. This material may also be kept on file and reused on appropriate occasions as a basis for lectures, press and radio releases, etc.

Port Quarantine

Transfer of operation of Port and Terminal facilities to the Japanese, including quarantine activities, originally scheduled for 1 October, has been indefinitely postponed pending further study and revisions of operating plans submitted by the Japanese Government.

SECTION III
VETERINARY AFFAIRS DIVISION

Equine Encephalomyelitis

The incidence of equine encephalomyelitis shows only a few remote cases being reported for the last three days of the week ending 2 October in the Prefectures of Aomori, Iwate, Saga, Yamagata and Kagoshima, while Hokkaido still is reporting figures indicative of an extensive outbreak. The total figures on the over all epidemic are

as follows: 2,337 positive cases, 987 suspect cases, 969 deaths and 86 deaths by sacrificing. The mortality rate of 31.7% represents the combined figures as given.

Animal Diseases

<u>Prefecture</u>	<u>Diseases</u>	<u>No. of Cases</u>
Aichi	Swine Erysipelas	1
Kagoshima	"	2
Hokkaido	Equine Encephalomyelitis	160
Aomori	"	4
Iwate	"	10
Yamagata	"	12
Saga	"	1
Kagoshima	"	1

SECTION IV NURSING AFFAIRS DIVISION

The second edition of "Handbook on Tuberculosis for Public Health Nurses" by Violet H. Hodgson, in Japanese, is now available and can be ordered from:

Mr. Katsu Suzuki
Far Eastern Literary Agency Publishing Co.
Branch Bldg. Finance Ministry
2-1 Chome Uchisaiwai-cho, Chiyoda-ku, Tokyo

Midwifery Education

The ninth and final lecture in the series of regional midwifery lectures is being held in Kanto Region. These are 10 days courses sponsored by the Ministry of Welfare and the Midwifery Section of the National Association. There are 180 enrolled in the course with representatives from the six prefectures of Kanto Region. These courses were started in April and have been attended by representatives from all prefectures. Total number of midwives enrolled was 1,764 with each one receiving a certificate upon completion. Curriculum consisted of 51 hours of theory and nine of practice.

Personnel

Miss Catherine Beachem, newly arrived Public Health Nurse, is scheduled for assignment to the Aichi Military Government Team.

SECTION V SYPPPLY DIVISION

Production

A total of 3,720 pieces of the various types of DDT dusting and spraying equipment for insect control programs was produced during the period 19-25 September. Large inventory stocks are on hand to meet all requirements.

During the period 19-25 September, 8,800 lbs. of 10% DDT dust and 18,255 gallons of 5% DDT residual effect spray were distributed. At the same time, 80,000 lbs. of 10% DDT dust and 32,700 gallons of 5% DDT spray were received, leaving inventory stocks on hand in regional warehouses of the Ministry of Welfare of 1,234,173 lbs. of 10% DDT dust, 355,269 gallons of 5% DDT spray, and 51,046 vials of typhus vaccine.

During July, August and September, the production of DDT products did not keep pace with the unusually large distribution made during the same period. Until such time as the production has again become adequate to replenish reserve stocks, future prefectural requests for shipments of DDT products made to the Ministry of Welfare will be carefully screened by Public Health and Welfare Section. It is suggested that Military Government Team Officers maintain a systematic check on prefectural stocks of DDT products.

Distribution

During August, a total of 5,283,100 tablets of santonin was distributed to the various prefectures as listed below:

Distribution of Santonin; August 1948

<u>Prefecture</u>	<u>Quantity</u>
Hokkaido	120,950
Aomori	91,380
Iwate	20,100
Miyagi	116,060
Akita	52,940

Supplementary report of allocations of sodium bicarbonate and formalin change the amounts to be distributed as follows:

- Formalin from 18,977 kg to 58,977 kg.
- * Sodium bicarbonate from 170,400 to 250,582 kg.

Listed below are totals of additional items of controlled medicines allocated to the prefectures for distribution during the months of October, November and December:

<u>Item</u>	<u>Quantity</u> <u>(Unit Kg unless otherwise specified)</u>
Alcohol for disinfectant	22,500.00
Albumin tannate	4,497.60
Barbital	719.80
Bromdiethyl actyl urea	96.70
Bromdiethyl urea	2,929.00
Bromdiethyl urea tablets	6,894,000 tab
Caffeine with sodium benzoate acid	4,499.00
Calcium lactate	2,249.00
Caster oil, aromatic	11,900.00
Evipan natrium	34.88
Gentian, tincture of , mild	34,975.00
Japan wax, ointment of	4,499.50
Lanolin	1,297.50
Magnesium oxide	9,517.00
Maize, oil of	11,967.00
Mercurochrome	1,778.40
Nux vomica, extract of	299.90
Ointment, simple	20,696.00
Phenacetin	8,476.00
Phenacetin tablets	11,770,000 tab
Philorcarpine Hydrochloride	49.00
Sesame oil	1,990.00
Sugar nutrition	154,987.00
Zinc sulfate	1,500.00
Zinc Oil	17,907

SECTION VI
NARCOTIC CONTROL DIVISION

Addicts

The addict reported in Weekly Bulletin #90 was sentenced to two years penal servitude 22 September in a Tokyo Court.

Surveillance of an addict, who was not sentenced to confinement by the Court because of the plea of the defendant's family that he was not an addict, resulted in his re-arrest when it was determined the addict was dispatching members of his family to procure the narcotics for his addiction.

Thefts

During August there were only 20 narcotic thefts, including three hospitals, reported. This represents a reduction of 58% from the previous month. Improved security is being stressed to dry up this source of narcotics for illicit traffic.

SECTION VII
WELFARE DIVISION

The second National Conference of Social Workers

The Second National Conference of Social Workers since the war will be held on 11 and 12 October at the Central Social Work Hall, Tokyo, under the auspices of the Japan Social Work Association and supported by the Ministries of Welfare, Education, Labor, the Attorney General's Office, the National Relief Organization (Dobo Engo Kai) the Mother's and Children's Welfare Society (Boshi Aikku Kai) the Medical Relief Association (Saisei Kai), the All Japan Welfare Commissioners Federation (Minsei-iin), The Office of Imperial Household and the Japanese Red Cross Society.

The Conference will be attended by social workers from all over the country including those engaged in both public and private fields and the government officials connected with social work.

The main subjects for discussion will be the basic welfare laws, the development of child welfare work and promotion of programs of Social Insurance.

Japanese Red Cross Activities

Relief goods (clothing) from the Indian Red Cross Society are being received through SCAP by the Japanese Red Cross for disaster victims.

Disaster Relief Reports

Kanagawa Chapter, Japanese Red Cross, sent one relief team to Miyagino-mura where damages were caused by typhoon Ione. Three hundred fifty villages were given anti-epidemic shots and Japanese Red Cross Home Medicine Kits were distributed to the disaster victims.

Nursing Education

The Chief of the Nursing Education Section, Japanese Red Cross Headquarters, attended the re-education course sponsored by the National Nurses Association at Nagano Red Cross Hospital on 25 August - 14 September, and gave eight hours of lectures on the history of nursing. One thousand nine hundred thirty-eight lay people have been taught home nursing under the auspices of Japanese Red Cross Chapters up to 14 September.

Volunteer Service Section

Red Cross Volunteer Service Groups have been organized in five wards in Osaka, during 15 - 22 September and more groups are to be organized in Semboku-gun and Minami-Kawachi gun, Osaka. No mayors or other governmental officials were appointed as chairmen or vice-chairmen but these positions are held by men.

In Kobe there are at present nine city branches and 16 local branches which are headed by women.

Report of Junior Red Cross Section

Meetings were held by the Kanagawa Chapter to report on the Junior Red Cross Leadership Training Camp at Gora and an orientation meeting on Junior Red Cross was held at the Girls' Middle School of the Nippon Womens College, Tokyo. Shiga Chapter also held a meeting to lay a foundation for the development of a new Junior Red Cross organization in primary, middle and high schools in the prefecture.

Public Assistance Allowances

Reports from prefecture Military Government Welfare Officers indicate that uniform interpretation of Social Affairs Bureau Instructions (Sha Hatsu #94), concerning public assistance allowances are still lacking. The following interpretation has been coordinated with the Chief of Protection Section, Ministry of Welfare.

Table III, page II, Public Health and Welfare Weekly Bulletin #85, dated 9 - 15 August, is to be considered the maximum family needs as determined by accurate study of conditions throughout Japan. All income and resources are to be deducted from these amounts, excepting only that the needs of the family for school supplies, school lunches, and for artificial feeding for infants is added to Table III totals before such deductions are made. Family needs under no circumstances are to be considered as higher than Table III, noted above, plus school supplies, school lunches, and artificial nutrition.

Article VI of Sha Hatsu #94 describes the method by which a governor may authorize a standard lower than that described in Table III. Lower standards may be set only on an area basis (town or village, medium city or large city). If the governor, at the request of the head of city, town or village, determines that there is sufficient foundation to so lower the standard set by Table III, he may set a new standard and send a notification to the Ministry of Welfare. The Ministry of Welfare will not be called upon to authorize such decreases, but will make investigation of those which do not appear to conform to pattern.

It is further presumed and expected by the Ministry of Welfare that heads of cities, towns and villages will take advantage of requesting increases of the prefecture and of the Ministry for individual cases who show a public assistance need higher than that which may maybe approved by the heads of cities, towns or villages (Table I, Weekly Bulletin #85). It is recognized that the work and time involved is considerable, but at present there is no possibility of reducing the amount of work which is required. It is hoped that future plans will exhibit more confidence in the ability of local officials.

Further clarification as to family make-up indicates that persons to the third degree of relationship are responsible for the care of others within that relationship. This may be interpreted as meaning that where persons within that degree form a household, all income and resources available to the family are deductable from the total family needs. There have been instances in which three members of a family of seven have had income from employment, while public assistance was granted to the other four members who showed no income and were considered as a family of four. Technically, members to the third degree outside of the household are also responsible for their relatives although such responsibility is seldom demanded.

Allowance for school lunches should be reviewed on a common sense basis and should be similar from prefecture to prefecture and depending on local interest and procurement, similar village to village, town to town and city to city throughout Japan. Prohibitive costs should be considered as reasonable cause for investigation.

SECTION VIII SOCIAL SECURITY DIVISION

Advisory Councils

There was no objection to the proposed Cabinet Order, submitted by the Insurance Bureau Ministry of Welfare, for the establishment of the Social Insurance Medical Care Advisory Councils as prescribed by the Health Insurance Law.

The purpose of the councils is to advice appropriate government officials on the appointment, dismissal, guidance, and supervision of insurance doctors, dentists, and pharmacists.

Councils to be established are a central council associated with the Minister of Welfare and local councils associated with each prefectural government. Each council shall be composed of 24 members with equal representation of insurers, insured and employers (contributors), physicians and dentists, and the public interest.

Medical Fee Calculating Committees

There was no objection to the proposed Cabinet Order, submitted by the Insurance Bureau, Ministry of Welfare, for the establishment of two Social Insurance Medical Fee Calculation Committees, the first in accordance with the provisions of Article 43-7 of the Health Insurance Law and Article 28-5 of the Seamen's Insurance Law, and the second in accordance with Article 8-7 of the National Health Insurance Law. The above committees are to be established at the national level only.

The functions of these committees are to advise the Minister of Welfare on the determination of appropriate medical care fees for Health and Seamen's Insurance to prescribe a standard amount of medical care fee for National Health Insurance.

Medical Fee Payment Fund

Recent visits to some prefectures revealed that there continues to be some misunderstanding by prefectural officials and doctors as to the extent that the Medical Fee Payment Fund is applicable to National Health Insurance. (Reference Public Health and Welfare Weekly Bulletin No.80 as to purpose and provisions of the Fund).

While the Fund Law includes National Health Insurance Associations in its applicability, it is not obligatory for the associations to participate. It is a decision to be made by the individual association as to whether the fund will be used in the prompt payment of medical care claims.

Government Pension System

Cabinet Order to Increase Rates for Invalidity Pensions Based on Military Service

The Cabinet on 1 October took affirmative action on the recommendations of the Pension Bureau, Prime Minister's Office concerning increases in the rates for invalidity pensions based on military service, the revised rates to be effective as of 1 September. Much correspondence has been received by SCAP Sections from recipients of these pensions and from members of their families describing the hardships suffered because of the meager pensions and inflated prices. Prior to the action of the Cabinet, the Pension Bureau was informed through PHMJG-73 of 24 September that Public Health and Welfare Section had no objections to the proposed revisions as submitted for review.

Invalidity pensions for both civilian officials and military personnel are authorized by the Pension Law (Law No.48 of 1923). SCAPIN No.338 of 24 November 1945, subject: "Pensions and Benefits" as prepared by ESS/Finance Division, directs that pensions to military personnel were to be terminated by 1 February 1946, except that such benefits may be paid "by reason of military service" as only "compensation for physical disability, limiting the recipient's ability to work, at rates which are no higher than the lowest of these for comparable physical disability arising from non-military causes." This was interpreted to mean that invalidity pensions for military personnel and civilian employees attached to the Army or Navy should be reduced to the lowest rates upon which invalidity pensions are computed under any social insurance law. The lowest benefit rates at that time were those prescribed by the Welfare Pension Insurance Law.

Thereupon the Cabinet established Imperial Ordinance No.68 of 1 February 1946, in conformance with SCAPIN No.338 and Imperial Ordinance No.542 of 1945 (which relates to orders to be issued in consequence of the acceptance of the Potsdam Declaration); one of the effects of such ordinance being to reduce invalidity pensions based on military service to the amount of invalidity pensions paid under the Welfare Pension Insurance Law. This resulted in the invalidity pension of a soldier with the rank of private, whose injury was of a degree falling in "Category 1", being reduced to 560 yen per annum whereas a civilian official of comparable rank received 3,597 yen per annum for the same degree of injury.

The Diet in July 1948 enacted amendments to the Welfare Pension Insurance Law and to the law (Law No.36 of 15 October 1946) which supplements the Pension Law and fixes rates for computing benefits authorized by the Pension Law. These Amendments increased benefit rates so that the invalidity pension of the civilian official referred to above was raised from 3,597 yen to 20,314 yen per annum and the invalidity pension for the workers of comparable salary covered by the Welfare Pension Insurance Law was raised from 560 yen to 2,800 yen per annum. In addition, it was provided in both laws that 2,400 yen per annum would be paid such beneficiary on behalf of his wife and each dependent child.

The effect of the proposed Cabinet Order would be to increase invalidity pensions, based on military service, in amounts equal to similar pensions paid under the amended Welfare Pension Law, which continues to provide the lowest rates for invalidity pensions paid under any social insurance law. However, the proposed Cabinet Order limits to 7,200 yen per annum the amount payable upon behalf of the wife and children of a recipient of an invalidity pension. This is done because invalidity pensions paid under the National Public Service Mutual Aid Associations Law do not include the additional amount for the wife and children.

Although the basic invalidity pension of the Mutual Aid Associations is computed at a greater rate than that of the Welfare Pension Insurance Law, addition of the allowances for the wife and children to the invalidity pension based on military service would result in a larger total annual pension than that paid by the Mutual Aid Associations in the case of large families were it not for this limitation which precludes such allowances for dependents in excess of three. It is further provided that this limitation is "for the time being," since amendments are pending which would add to the Mutual Aid Associations' invalidity pensions the allowances for the wife and children. Upon enactment of such amendments, it is intended to remove the 7,200 yen limitation for a recipient of an invalidity pension based on military service.

The Diet in its last session included in the budget for the current fiscal year an appropriation to meet the cost of the increase proposed by this Cabinet Order. Such increase had been considered at the time revision of the other invalidity pensions was proposed, but formal drafting of this Cabinet Order was deferred pending final action by the Diet on the amendments proposed for the other pensions.

SECTION IX
MEMORANDA TO JAPANESE GOVERNMENT

SECTION I GENERAL

Ministerial Instructions

Included with this issue of the Weekly Bulletin for information of Military Government Public Health Officers and Public Welfare Officers are lists of instructions sent from the various Bureau of the Ministry of Welfare to prefectural governments for the period 6 - 11 and 13 - 18 September (see Incl. #1).

Health Center Organization and Personnel

A chart showing the organization and personnel of health centers is inclosed with this issue of the Weekly Bulletin for information of Military Government Public Health Officers and Public Welfare Officers. (Incl. #2). The organization follows the same general plan as was presented in March for the Model Health Center. Budgetary provisions have now been made for staff of 61, for each of the Model health centers, exclusive of sanitary team personnel which were provided for in the regular budget. The column headed "Non-professional employees" included second and third class officials as well as employees of other ranks.

Technical Bulletins

The following Public Health and Welfare Technical Bulletin is inclosed with this Weekly Bulletin:
Title: Daily Life Security Law (Seikatsu Hogo Ho)
Short Title: TB-PH-WEL 17

SECTION II PREVENTIVE MEDICINE DIVISION

Preventive Vaccination: Letter to Prefectural Governors

The Vice-Minister of Welfare is publishing a letter subject, "Administration of Preventive Vaccination Law", to Prefectural Governors requesting them to publicize the purpose of the Law and emphasize certain matters regarding the Law's administration.

Stress is placed on the importance of public health education in obtaining the cooperation of the people so that the obligatory nature of the vaccination program will be less in evidence. With good publicity, compliance may thus be obtained willingly without resorting to compulsion.

Reference is made to other related Laws, such as Epidemic Disease Prevention Law (Infectious Disease Law), the Tuberculosis Prevention Law, the Health Center Law, the Labor Standards Act, and the National Health and Hygiene Act.

Delegation of the Law's administration to Chiefs of Health Centers is suggested.

It is suggested that, for the convenience of working people, the physicians supervising health of employees may vaccinate at places of employment, giving a temporary certificate of vaccination which each individual will take to the authorities at the place of residence for recording. Careful planning with attention to administrative and technical details is advised. The certificate and the record of vaccinations should be made with care, but the "Preventive Vaccination Card" will not be issued for the time being.

The basis for expenses necessary for enforcement is stated as being still under negotiation. In regard to collections of actual costs, no others than described in Art.3 of the Cabinet Order are to be collected. A separate report is to be made as to the method for determining the actual costs. Only applicants for aid under the Living Protection Law (Daily Life Security) or those in similar state are to be considered unable to pay costs and to receive vaccination without charge.

Venereal Disease Prevention: Ministry Regulations

Ministry Regulations were published 24 September by the Ministry of Welfare regarding certain requirements of the Venereal Disease Prevention Law.

Some of the more important provisions follows: physicians are required to report the name, date of birth sex, occupation and address of patient, diagnosis, date of exposure, date of onset of symptoms, record of former treatment, and name, sex, address and occupation of contacts. Health officials empowered to perform health examinations must be physicians.

Prior approval by the Ministry of Welfare must be obtained for action under Article 12 of the Law (special measures by Governor) giving the locality and conditions of spreading venereal disease, the name and address of hospitals or clinics proposed for health examinations, the object of the examination, the means of examination and estimation and estimation of expense. A report of results of such special examinations is to be made to the Minister of Welfare promptly upon its conclusion.

Medical examinations for syphilis will include a darkfield examination, or more than two serological tests; for gonorrhea, a microscopic examination or culture; for lymphogranuloma venereum a Frei test.

Those unable to pay for examinations or treatment will submit, to the physician or hospital director who provided such care, a certification of such inability subject certificate will be obtained from the Chief of Health Center of their area of residence. This certificate will be the basis for payment by the prefectural government of the charges for such examination or treatment.

Applications will be made to the Ministry of Welfare for approval of establishing hospitals or clinics. This application will include reasons for establishment, name and site, means of management, outline of buildings and ground plan, list of equipment, number of staff and other personnel, proposed date of opening, and estimated annual expenses and incomes.

Substitute hospitals of clinics will be leased on an annual basis, subject to renewal, with applications for approval of the Minister of Welfare to include reasons for needing such a substitute hospital or clinic, name and personal history of director, name and location of the institution, number of staff and other personnel, outlines of building and equipment, capacity for out-patients and in-patients, monthly average of patients in the past, estimated expense, terms of lease and copy of proposed agreement.

A form for and identification card, to be carried by all health officials when carrying out examinations or investigations pertaining to venereal disease control is annexed to the regulations.

Venereal Disease Prevention: Cabinet Ordinance

The Cabinet has before it for consideration an ordinance which when passed will authorize subsidies of National Treasury funds to prefectural governments for certain Venereal Disease Preventive activities. Details will be published in a later issue of this Bulletin.

Maternal and Child Handbook

It is expected that a one reel film illustrating the "Maternal and Child Handbook" will shortly be produced under the guidance of the Maternal and Child Health Section, Children's Division, Ministry of Welfare. The scenario has already been approved. The purpose is to give the public a better understanding of the procedures indicated in the handbook.

Refresher Training Courses at the Institute of Public Health

During the period April 1947 to 30 September 1948, more than 1,000 students completed refresher training courses given at the Institute of Public Health in Tokyo. The number of graduates of the different courses is as follows:

Public Health (Medical) Officer	206
Public Health Nurses	268
Public Health Sanitarians	229
Public Health Veterinarians	136
Public Health Pharmacists	134
Public Health Nutritionists	38
Public Health Sanitary Engineers	34

These individuals, all of whom were engaged in public health work before taking these courses, came to the Institute from every prefecture and the larger cities of Japan. They were returned to their home prefectures to assume responsible positions in the local health organizations. It has been reported, however, that frequently local health organizations have not made good use of the personnel which they sent to the Institute for training. In some instances this is the result of having selected poorly qualified persons in the first place.

It is highly important that in the future well-qualified individuals, preferably younger persons showing evidence of leadership, be recommended to receive training at the Institute. Also, close surveillance should be exercised in order to ascertain that these people return and fill positions where their training will be used to the best advantage in furtherance of the public health program.

The next course scheduled at the Institute of Public Health will be for Public Health Nurses and will begin in December. Additional courses for other categories of personnel will be scheduled early in 1949. Announcement of the exact dates for the opening of courses will be made at a later date.

SECTION III MEDICAL SERVICES DIVISION

Military Government

Public Health Officers are urged to bring to the attention of the local Japanese medical societies the importance of medical ethics in the life of the physician and the benefit that ethical conduct on the part of the physician contributes to the welfare of the community. It is realized that individual physicians do not, in all cases, understand the ethical code which governs the medical profession, or, if understanding is present, do not accept their social responsibility.

Under this code, which stems from the oath of Hippocrates, elaborated by the laws of Hippocrates, physicians, "Should, as good citizens, and because their professional training specially qualifies them to render this service, bear their full part in enforcing the laws of the community and sustaining the institutions that advance the interests of humanity. They should cooperate especially with the proper authority in the administration of sanitary laws and regulations. They should be ready to counsel the public on subjects relating to sanitary police, public hygiene and legal medicine.

Quoting further, from the principles of medical ethics, as promulgated by the American Medical Association, in reference to medical societies, it is stated that "in order that the dignity and honor of the medical profession may be upheld, its standards exalted, its sphere of usefulness extended, and the advancement of medical science promoted, a physician should associate himself with medical societies and contribute his time, energy and means in order that these societies may represent the ideals of the profession."

The medical societies, therefore, become the recognized organs for the expression of the ideals of the profession, and the voice of the profession at large in the matter of ethics. This places upon medical societies a responsibility for the conduct of their members.

The local medical associations represent the physicians of Japan, and therefore must assume responsibility and establish within their organizations a strong and qualified grievance committee with disciplinary powers to be exercised against those physicians who transgress the ethical code.

It would be well to call to the attention of the physicians of Japan that it is not by scientific achievement alone that the medical profession of a country gains respect and dignity in the minds of medical men of other countries, unless such achievements are coupled with the ethical aspects of medicine.

There are many factors in Japan that lead to transgression of the ethical code, such as the highly developed sense of personal loyalty and duty, and unfavorable economic conditions. Japanese physicians, either through professional timidity or audacity, are apt to circumvent ethical principles when ethical ideals are not constantly stressed and brought to their attention. Therefore, it becomes necessary to elaborate the principles of medical ethics as understood and accepted by the physicians of the Occidental world.

The Japan Medical Association has established a Grievance Committee within its organization, and has already impartially considered the alleged unethical conduct of several physicians in the Tokyo area. The impartial judgment expressed by the Committee and accepted by the society has been gratifying.

It is desirable that impetus be given to the functioning of similar committees in each of the local societies, and orientation given to the understanding of medical ethics held by the profession.

SECTION IV VETERINARY AFFAIRS DIVISION

Equine Encephalomyelitis

No new cases of equine encephalomyelitis have been reported in Hokkaido since 30 September according to the weekly report of 2 - 8 October, submitted by the Animal Hygiene Section, Ministry of Agriculture and Forestry. During the period 27 - 30 September a total of 101 new cases, all classified as suspects, were reported from Hokkaido but no new cases have been reported for October. To date Hokkaido remains the only Prefecture reporting new cases and the possibility of additional cases will be largely those that have been discovered in remote areas. With the rapid decline of equine encephalomyelitis cases, the quarantine will be lifted, effective 12 October, and the inter-island traffic of horses will be resumed. Official notification to all Prefectures has been sent by the Ministry of Agriculture and Forestry to lift quarantine on that date.

Food Sanitation

Recently, cases of food poisoning have been reported to this office. It is suggested Military Government Public Health Officers contact the Prefectural Food Inspection Section and recommend greater activity in the procuring of food samples for laboratory analysis and to stimulate a more active sanitary inspection by Food Inspectors in establishments producing and handling food items. All food that has been allocated to each prefecture for rationing and distribution should be inspected at the time of its receipt and during the time it is held in storage awaiting distribution. The responsibility for this lies with the Prefectural Food Sanitation Section. Recent disclosures indicate a failure on the part of the Food Inspectors to make recommendations as to the correct manner of storage and to allow violations of good sanitary measures to exist in distribution points during rationing periods uncontrolled.

Animal Diseases

<u>Prefecture</u>	<u>Disease</u>	<u>Number of Cases</u>
Hokkaido	Equine Encephalomyelitis	101
Aichi	Swine Plague	1
Niigata	Swine Plague	1
	Swine Erysipelas	1
Miyazaki	Swine Erysipelas	1

Note: Submitted by Animal Hygiene Section, Ministry of Agriculture and Forestry on Weekly Report of 2-8 October.

SECTION V SUPPLY DIVISION

Production

A total of 3,290 pieces of the various types of DDT Dusting and spraying equipment for insect control program was produced during the period 26 September - 2 October. Adequate inventory stocks are on hand to meet all requirements.

During the period 26 September - 2 October, 52,105 lbs. of 10% DDT dust, 8,625 gallons of 5% DDT residual effect spray, and 2,000 vials of typhus vaccine were distributed. At the same time, 44 lbs. of 10% DDT dust, 62,065 gallons of 5% DDT spray, and 2,000 vials of typhus vaccine were received, leaving inventory stocks on hand in regional warehouses of the Ministry of Welfare of 1,200,912 lbs. of 10% DDT dust, 398,709 gallons of 5% DDT spray and 52,046 vials of typhus vaccine.

Distribution

The distribution of 2,975 pieces of dusting and spraying equipment which were shipped to 19 prefectures during the period 26 September - 2 October is listed below:

Prefecture	DDT Duster	Knapsack Sprayer	Semiautomatic Sprayer	Hand Sprayer	Engine Sprayer
Hokkaido		10			2
Iwate		20	30		
Yamagata				50	
Fukushima			20	20	
Ibaraki		200		20	
Tochigi				200	
Saitama		19			
Chiba				200	
Tokyo		8		250	5
Toyama		20			
Ishikawa		20			
Shizuoka		6	1		
Aichi		15			
Hyogo	720				
Shimane	320				
Hiroshima	200		24		
Fukuoka		300	20	250	
Kumamoto		10	5		
Miyazaki		10			
Total	1,240	638	100	990	7

SECTION VI NARCOTIC CONTROL DIVISION

Narcotic Control Activities Report - August

The August report of narcotic control activities from the Ministry of Welfare contained the following information:

Total registrants	85,166
Arrest - Registered persons	27
Unregistered persons	68
Convictions - Registered persons	8
Unregistered persons	19
Thefts of narcotics (including 3 hospitals)	20
Losses by fire (including 9 in Fukui Prefecture)	10

Penalties for registrants varied from 1,000 yen fine to six months penal servitude including one suspended sentence. Penalties for non-registrants varied from 2,000 yen fine to one year penal servitude including nine suspended sentences. Charges against two non-registrants were dropped because of insufficient evidence. Fourteen registrants were admonished and four minor violations were disposed of administratively.

For the first time since June 1946 two defendants charged with narcotic violations were found not guilty by the courts.

The report also summarized the activities of narcotic agents as follows:

Inspection of registrants	1,117
Investigations originated	153
Investigations concluded	128
Investigations not concluded	359

Four persons were arrested for illegal cultivation of marihuana.

Monthly Reports

Prefectural narcotic offices, charged with the responsibility of forwarding monthly reports to the Ministry of Welfare for consolidation, continue to prepare reports which are in error since the tabulations will not balance with the figures for the previous month. The Narcotic Section, Ministry of Welfare, has been requested to advise the Narcotic Control Division if any future reports are in error in order that appropriate action may be taken to assure correct reports being forwarded.

SECTION VII WELFARE DIVISION

National Relief Association (Dobo Engo Kai)

References: Public Health and Welfare Weekly Bulletin No.79 (for period 28 June - 4 July), No. 80 (for period 5 - 11 July) and No.83 (for period 26 July - 1 August).

Thirty-nine Branch Offices (prefectural) of Dobo Engo Kai are to be participating members of the Community Chest and will be entitled to allocation of Chest Funds raised during the current Community Chest - Japanese Red Cross Joint Fund Campaign for the fiscal year 1948 - 49. The Branch Offices (prefectural) not participating in the Community Chest and who will conduct their own independent membership campaigns are: Iwate, Akita, Fukushima, Gumma, Saga, Nagasaki and Kagoshima.

Japanese Red Cross Society

Disaster Relief and Preparedness:

a. Niigata City (Niigata Prefecture): On 23 August a fireworks exhibition was held near Bandai Bridge. The Red Cross Chapter, in anticipation of the large crowds that would assemble, established a Temporary Emergency Medical Aid and Relief Station and therefore were able to give immediate medical assistance to those persons injured when the bridge suddenly collapsed due to excess strain. Medical emergency treatment was given to 60 patients and 31 other persons more seriously injured were transported to Takegawa and Hasegawa Hospitals.

b. Nagahama City (Ehime Prefecture): One hundred eighty-five houses were totally destroyed and 15 houses were partially destroyed by fire, on 17 September, causing 786 persons to be homeless. No persons were killed and the injuries were minor. A Red Cross Relief Station was established within two hours and assistance was given to 125 people.

c. Saga Prefecture. Casualties in the prefecture, as of 19 September, resulting from a flash flood on 14 September included; 76 persons killed, 78 injured and 10 missing. The Saga Red Cross Chapter promptly dispatched six Medical Aid Teams into the affected areas and gave medical assistance as needed.

d. Nagasaki Prefecture. Casualties in the prefecture, as of 14 September, resulting from a flood on 12 September, included 74 persons killed, 39 injured and 51 missing. The Red Cross dispatched three Medical Aid and Relief Teams to the disaster area on 12 September and gave medical aid and assistance to the flood victims.

Volunteer Services:

a. Production: Great activity is noted in this very important program. One of the large production projects now underway in Tokyo, for example, is the remarking of 150,000 ditty bags (donated by the American Red Cross out of surplus) into children's garments.

Junior Red Cross:

a. Saitama Chapter: A Junior Red Cross meeting was held on 28 September and 160 persons, mostly outstanding students above the fifth grade of elementary schools, middle schools and teachers (representing 23 schools) attended. A full report on the Gora Youth Leadership Training Center was given by those delegates who attended camp this year.

b. The Junior Red Cross, National Headquarters, have representatives attending the Youth Organization Leadership Training Center, sponsored by the Ministry of Education and being held between 4 - 15 October. Other organizations being represented are the Ministry of Welfare, Y.M.C.A. and Boy Scouts.

Community Chest - Japanese Red Cross Joint Fund Campaign Goals (Prefectural and National)

The established Community Chest - Japanese Red Cross Joint Fund Campaign Goal (national) for 1948-49 is 1,178,950,000 yen, with 76% for Community Chest (898,717,800 yen) and 24% for Japanese Red Cross 280,232,200 yen).

The breakdown of the national goal on a prefectural basis giving the prefectural goals and the per centum agreed upon covering the allocation of all monies raised is given below:

Prefecture	Goal (1948-49)	Community Chest	Japanese Red Cross Society	%-CC	%-RC
Hokkaido	Yen 70,000,000	Yen 60,000,000	Yen 10,000,000	86%	14%
Aomori	11,000,000	6,600,000	4,400,000	60	40
*Iwate	17,000,000	12,050,000	4,950,000	71	29
Miyagi	16,000,000	11,000,000	5,000,000	69	31
Akita	10,000,000	5,560,000	4,440,000	56	44
Yamagata	25,000,000	20,000,000	5,000,000	80	20
Fukushima	20,000,000	15,000,000	5,000,000	75	25
*Ibaraki	15,000,000	10,500,000	4,500,000	70	30
Tochigi	21,000,000	17,664,800	3,335,200	84	16
*Gumma	12,000,000	6,999,000	5,001,000	58	42
*Saitama	16,000,000	10,000,000	6,000,000	63	37
Chiba	25,000,000	19,000,000	6,000,000	76	24
Tokyo	80,000,000	64,000,000	16,000,000	80	20
Kanagawa	70,000,000	58,333,000	11,667,000	63	17
Niigata	29,000,000	20,000,000	9,000,000	69	31
Toyama	13,000,000	10,000,000	3,000,000	62	38
Ishikawa	13,000,000	8,000,000	5,000,000	77	23
Fukui	13,000,000	9,500,000	3,500,000	73	27
Yamanashi	9,450,000	6,700,000	2,750,000	71	29
*Nagano	30,000,000	19,000,000	11,000,000	63	37
Gifu	20,000,000	15,000,000	5,000,000	75	25
Shizuoka	20,000,000	15,000,000	5,000,000	75	25
Aichi	66,000,000	54,000,000	12,000,000	82	18
Miye	16,000,000	10,666,000	5,334,000	63	37
Shiga	11,000,000	7,700,000	3,300,000	70	30
Kyoto	50,000,000	40,000,000	10,000,000	80	20
Osaka	85,000,000	65,450,000	19,550,000	77	23
Hyogo	60,000,000	48,000,000	12,000,000	80	20
Nara	12,000,000	9,000,000	3,000,000	75	25
Wakayama	9,500,000	6,750,000	2,750,000	71	29
Tottori	9,000,000	6,000,000	3,000,000	67	33
Shimane	10,000,000	8,000,000	2,000,000	80	20
Okayama	21,000,000	15,100,000	5,900,000	72	28
Hiroshima	30,000,000	22,500,000	7,500,000	75	25
Yamaguchi	26,000,000	20,000,000	6,000,000	77	23
Tokushima	15,000,000	10,435,000	4,565,000	70	30
Kagawa	14,000,000	10,500,000	3,500,000	75	25
Ehime	25,000,000	19,560,000	5,440,000	78	22
Kochi	13,000,000	8,700,000	4,300,000	67	33
Fukuoka	50,000,000	43,000,000	7,000,000	86	14
Saga	15,000,000	12,000,000	3,000,000	80	20
Nagasaki	20,000,000	14,500,000	5,500,000	73	27
Kumamoto	21,000,000	15,000,000	6,000,000	71	29
Oita	18,000,000	14,400,000	3,600,000	80	20
Miyazaki	10,000,000	6,670,000	3,330,000	67	33
Kagoshima	17,000,000	10,880,000	6,120,000	64	36
	1,178,950,000	898,717,800	280,232,200	76%	24%

*Did not conduct Community Chest Campaign for 1947-48.

Allocation of LARA Relief Supplies to Meet Disaster Needs

An allocation of clothing was approved by the LARA Central Committee on 28 September 1948 for disaster relief purposes in areas recently visited by typhoon and accompanying floods. The clothing allocation is given below:

<u>Prefecture</u>	<u>Amount</u>	
Iwate	180	bales of clothing
Miyagi	90	"
Chiba	40	"
Shizuoka	10	"
Kanagawa	10	"
Gumma	10	"
Ibaraki	10	"
Saga	40	"
Nagasaki	50	"
*Fukui	<u>590</u>	"
Total	1030	bales of clothing (Approx. 150 pieces per bale)

*Earthquake and subsequent floods.

Overseas Shipments of LARA Relief Supplies

LARA shipments, numbers 92 to 96, inclusive, for Japan, arrived in Yokohama between 20 August and 7 September. These shipments contained a total of 104.63 tons of relief supplies as given, by individual shipment, below:

- a. 92nd Shipment: Arrived aboard the S.S. Canada Mail on 30 August and contained 5 tons of clothing.
- b. 93rd Shipment: Arrived aboard the S.S. Britain Victory on 30 August and contained 40 tons of food.
- c. 94th Shipment: Arrived aboard the S.S. Julia Luckenbach on 3 September and contained 7.43 tons (clothing, including shoes).
- d. 95th Shipment: Arrived aboard the S.S. President Polk on 10 September and contained 19.77 tons (food - 15 tons, clothing - 4.1 tons, miscellaneous - .67 tons).
- e. 96th Shipment: Arrived aboard the S.S. American Transport on 7 September and contained 32.43 tons (food - 25 tons, clothing - 6.78 tons, miscellaneous - .65 tons).

The total LARA relief supply shipments to Japan now amount to 6,847.22 tons, consisting of the following:

Food	80.00 tons
