

**WEEKLY BULLETIN
PUBLIC HEALTH AND WELFARE
#####, GHQ, SCAP
14th to 20th October 1945**

1. Preventive Medicine.

a. Sanitary Engineering.

- (1) Inspection of Tokyo water treatment plants reveals plants in good ## ## ## few lack of ## for water treatment.
- (2) Preparation of directive to sixth and Eighth Armies on standards few maintenance of civilian water supplies.

b. Venereal Disease Control.

- (1) Drafting directive to Japanese government for strengthening venereal control measures.
- (2) Conference with Tokyo officials and others regarding specifics ## to be ## to ## ##, treatment, ## and reporting of infectious cases gonorrhea, syphilis, ##.

c. Nutrition.

- (1) Major Garlette, nutritionist, reported for duty.

d. Laboratories.

- (5) Plan (##) prepared few ## of Japanese Public Health diagnosis and biological production facilities to show current and future potentials.
- (6) Completed survey of ## Institute for tuberculosis.

a. General Administration.

- (2) Completed details for ## of communicable diseases reporting system in Japan. Venereal diseases to be reported for first time in history of Nation.
- (3) Drafts of directives to Japanese government, Sixth Army, Eighth Army, XXIV Corps and ## Fifth Fleet ## and transmitted to higher ##. Material deals with details of port quarantine and control of ## and Japanese ##.

1. ##

a. The following ## were issued the Adjustment Counsel.

- (3) Memorandum to the ## General, Eighth Army with ## listing nine (9) hospitals in Tokyo and four (4) hospitals in Yokohama designated to give medical and hospital treatment to Japanese civilians introduced to transfer all such patients to designated hospitals as case as the patients condition ##.
- (4) Memorandum to the ## general, Sixth Army and the ## general, Eighth Army designating the Seibo International (catholic) Hospital and the ## (former Yokohama ##) Hospital for the Tokyo and Yokohama## ## as the institutions to which all foreign ## will be referred who ## hospitalization or medical care. ## final arrangements for the ## of the ## Hospital, the Seibo International Hospital will be ## by foreign ## of both ##.

4. Veterinary Affairs

a. General.

- (1) Communicable Animal Disease first 6 month of 1945. (All prefectures).

5. Dental affairs.

report

1. Nursing Affairs

a. General; report from Japanese

- (1) Training Schools for nurses - 907 Midwives, 69 public health, 4## Clinical.
Red Cross Hospitals - (Training School) for nurses 90, midwives 3.
Total. General Hospitals and sanitarium - 3609

b. Report from Japanese

- (6) Report on tuberculosis - #####
- (7) Report of training schools and location in Japan along with ## of students and list of nurse training schools and location in Tokyo, Red Cross training schools etc.
- (8) Report on number of graduate nurses and midwives in Japan.
- (9) Curriculum - Public health Nurse program, Midwives and Clinical nurse program was received.

c. Personnel

Classification		Graduates	Students	Training Schools
Clinical	Graduate Nurse	93,270	19,001	401
Public Health	Graduate	13,071	7,745	106
Midwives	Graduate	60,000	3,695	68
TOTAL		166,341	31,351	575
Red Cross Hospitals (Training Schools)			8,376	30
			39,727	605

1. Welfare

a. General.

(1) Status of Red Cross liaison.

- a. A representative of the American Red Cross has arrived in Tokyo for the process of surveying possible fields of red Cross activity in civilian relief and welfare. Discussions with this section have ## around the problems of relief in Korea, the ## of foreign nationals in Japan, who reorganization of the Japanese Red Cross. There has been ## explanation of the possible ## of trained Red Cross social work ## in ## ## welfare problem. No official personal has been submitted to this headquarters.
- b. International Red Cross, currently distributing surplus POW supplies to foreign nationals, has discussed with the Public Welfare staff the probable translation of this program. It is estimated that current supplies will be exhausted in November. The possibility of receiving surplus clothing supplies from Red Cross sources in Manila is being investigated. It is contemplated that if such supplies are received the IRC program would be continued beyond the date of the ## of POW materials.
- c. Representatives of the American Red Cross and this section have conferred with the Japanese Red Cross regarding plans for future activities and reorganization of that agency. The annual IRC meeting will be held in Tokyo on 29 October for the purposes of receiving representative ## on this topic. It is proposed that the charter be amended to diverse the agency from Army-Navy domination. No ## plans have been discussed to enlarge the program beyond its ## ## ##.

(2) Status of Korean care and repatriation.

- b. Korean repatriation through the Shimonoseki area has been in progress since 26 August 1945. It is estimated that approximately 100,000 have been departed at Fusan by the ## of Japanese repatriation shipping. Port areas are ## and conditions reported to be unsatisfactory. The Japanese Government has designated the Ministry of Health and Social Affairs (Welfare) to be the responsible agency for establishing reception centers at specific ports of ## where adequate shelter, medical attention and food will be provided to both Japanese and non-Japanese repatriates, and to coordinate the repatriation responsibilities of the wartime Ministry.
- c. This section has in preparation a ## to the Japanese government requiring the Ministry of Health and Social Affairs (Welfare) to ## the additional responsibility of providing to all Korean ## repatriation adequate food, clothing, shelter and medical care. Reports indicate ## negligence of Korean. The proposed directive ## that administrative responsibility for carrying out its provisions would be assessed by the Ministry through ## social affairs personnel.

(3) Status of Foreign nationals in Japan.

foreign nationals are applying to the occupying forces and to the International red Cross for emergency relief, housing and other service. Partial responsibility has been accused by IRC (see above) but such care by that agency is not planned on a continuing basis. Discussions have taken place during the week looking to a long range settlement of the public responsibility by the responsible government or by an international agency. ## policy decision has yet been ##.

(4) Control of Japanese Public Welfare activities.

No new reports have been received from the Japanese Government during the past week. No specific controls measures have been taken.

a. Personnel.

- (7) Officers assigned to the Public Welfare sub-section are
Lt. ##
Captain ##

- (2) Reported for duty but not yet assigned;
Lt. ##

1. Legal Affairs

h. General.

(1) V.D. control;

In conference with representatives of the Sanitation Department of Tokyo Municipality it was learned that the ## ## re, weekly physical examination for disease will prescribe ## ## technique and that ##/ will be ## in the provision. ## same conference it was learned that the Sanitation Department of Tokyo ## had taken ever in 1942 the ##/ of the Sanitation section of the National Health Ministry. Under this authority the Tokyo sanitary office will get the ## into ##/ about 23 October and has introduced all ## Governors to ## and have ## ## ## ordinances throughout Japan.

(2) Korean repatriation;

A ## to the Japanese Government has been forwarded to ##/ the Government to ## adequate clothing, shelter, rail transport to the ports and not less than 2000 salary per day of ## for all ##/ ## ## return to their homes.

This ##/ will ##/ and specify ## ## (##) Subjects, Repatriation Centers in Japan for Processing repatriates. The ## ## the ## and maintaining of center ## at in ports, for Japanese returning and for Koreans and Chinese departing, ## and ##/ to be under supervision of the Army Commanders.

b. Personnel.

Officer assigned to legal sub-section;
Lt. Col. ##

1. Supply

a. General.

- (1) In accordance with recent directive on above subject the following status report is submitted for the period 2400, 13 Oct. to 2400, 20 Oct;
During above period the medical Supply sub-section performed the ## routine administrative duties and visited several Japanese medical supply manufacturing establishments in the Tokyo area. Definite action was taken in the following instances;

2. Additional requirements for typhus control supplies submitted to CO. AF##?PAC.
3. Directive issued to Japanese Government on the subject of ## Control.
4. ##, XXIV Corps. advised of policies of this headquarters concerning control of narcotics.
5. Shipment of small supply of vaccine ## for Korea.
6. Requirements of bi##? for civilian relief submitted to CO, Af##?PAC.
7. Occurrence of ## and Scientific Section for survey of ## ##.
8. ## submitted to G-4, concerning establishment of an "emergency reserve" of medical supplies in U.S. for civilian relief.

c. Personnel assigned;

a. Supply Status.

(1) Military stocks for civilian relief:

- c. These consist mainly of a shipment destined for civilian relief in the Philippines and subsequently diverted to Japan. These supplies are in storage at Yokohama under control of the 8th army. Recent instructions to 6th and 8th armies from GHQ SCAP have diverted that no ## for civilian relief to make without approval of that headquarters. Supplies originally "##" for civilian relief are to be stored and ## for ##. ## items will be issued for army use to prevent ## and replaced from army stocks

d. Civilian stocks

Available information indicates a considerable shortage based on pre-war standards. Replace of Japanese Army and Navy stocks, now in process, should alleviate some of the shortages.

d. Manufacturing establishments

A listed survey has been made of several plants in the Tokyo area. Practically no stocks of finished products are on hand and only a small ## are being produced at present. One large manufacturing plant

reports sufficient ## material on hand and ##/ to start operating within the next month. It is doubtful whether large ## production may be ## for at least six month.

e. Narcotics

Preliminary survey of a few supply courses indicates a surplus of raw and ##-processed opium, based upon medical requirements. All ## stocks of opium have been “##” and manufacture prohibited ## further instructions from GHQ SCAP.

i. Miscellaneous

The following institutions in the Tokyo area were visited by personnel of this sub-section, during the week; Hygienic Laboratory of the Ministry of Welfare Japanese Army Medical Depot (Bureau of medical supplies).

Seibo International Catholic Hospital.

Takeda Drug Manufacturing Plant.

Hosi Drug Manufacturing Co.

1. Miscellaneous;

a. The following directives concerning Public Health and Welfare were issued to the Imperial Japanese Government by the Supreme Commander for the Allied Powers during the period;

(3) Supply of ## -

AG 440 (12 Oct. 45) PH.

(2) ## of DDT by Japanese

AG 4## (8 Oct. 45) PH

(1) Control of Narcotics Products and Records in Japan

AG ## (12 Oct. 45) PH.

b. ## information to the Surgeons of the Sixth and Eighth Armies;

(1) Communicable Diseases Reporting in Japan, 19 October 1945.

CRAWFORD F. SAMS,
Colonel, Medical Corps.

Public Health and Welfare Section

SUMMARY REPORT PUBLIC HEALTH AND WELFARE
CONDITION IN JAPAN

The following is a summary report of conditions as found to exist in Japan after approximately one month of occupational experience. The report is derived from two sources: reports of Japanese governmental officials, and observations made by members of this section. The observations were limited to the Tokyo-Yokohama area.

The administration of public health and welfare activities in Japan is vested largely in the Ministry of Public Health and Social Affairs (Welfare) – (the translation of the Japanese word “koseisho” may mean either welfare of social affairs). Ramifications are found in the Ministry of Home Affairs and in the Ministry of Agriculture and Forestry. All branches of the Japanese Government are at present quite fluid. For the current organization of the Ministry of Public Health and Social Affairs see Annex 1.

The report is divided as follows:

Section I	Preventive Medicine
Section II	Hospitals
Section III	Veterinary Affairs
Section IV	Dental Affairs
Section V	Nursing Affairs
Section VI	Welfare
Section VII	Legal
Section VIII	Supply

SECTION I
Preventive Medicine

1.

a. The following diseases are reported under Japanese law:

Epidemic Meningitis (Cerebro-spinal)	Plague
Cholera	Scarlet Fever
Diphtheria	Smallpox
Dysentery (Includes Ekiri)	Typhoid Fever
Paratyphoid Fever	(Includes louse-borne and Tsutsugamusi)

b. Preliminary investigations reveal a serious problem regarding venereal diseases. While the “on paper” control program looks good – field practice, at best, brings only a small percentage of the known infected group under control. Cases are found among the licensed prostitute group but actual check reveals very few arrive at isolation centers. Steps have been instituted through the VD Control Officer of this section to institute more effective control, including detection, treatment and isolation, of civilians by the official Japanese health agencies concerned. A complete outline of the procedures in process of development will be incorporated in the succeeding monthly report.

c. Epidemic louse-borne typhus has been reported in Hokkaido and in Northern Honshu quite recently. Typhus Commission personnel at GHQ, AFPAC (Manila) have been ordered forward and will proceed in accordance with plan of action approved by the Surgeon, AFPAC (Manila) and the Chief Public Health Officer, this Division, prior to our arrival in Japan. Estimates for equipment and supplies have been completed and appropriate steps taken to procure same.

d. The return of Japanese Military and Civilian repatriates to Japan will create a special marine and perhaps aerial quarantine situation. Japanese quarantine facilities at the ten (10) or more ports designated as “Ports of entry” for these groups are grossly inadequate to meet recognized minimum needs. Action has been initiated for the Army Liaison Quarantine Officer, attached to the Chief Surgeon’s Office, AFPAC (ADV), to represent the Chief Public Health Officer and the Chief Surgeon as technical advisor in dealing with U.S. Military Commands and Japanese

Officials. The Japanese government will have full responsibility quarantinable diseases into Japan. Quarantine plans contemplate the use of DDT for the delousing of all repatriates in view of the gross inadequacy of indigenous facilities. Lt. Colonel Knies, Army Liaison Quarantine Officer, will act as Technical Advisor pending the arrival of the U.S. Public Health service trained quarantine officer requested through the office of the Surgeon General, War Department.

e. Filth-borne disease (typhoid, paratyphoid and dysenteries) are normally of high incidence. Except for summary report previously referred to, no data are available as to the true situation as of 30 September.

2. Sanitary Engineering, including Control of Insect Vectors.

The Sanitary Engineer has been able to content and establish cooperative working relationship with opposite in most U.S. Military Commands in the Tokyo – Yokohama area.

a. The public water supply in Tokyo prefecture is ample. Treatment routine is deficient for potable water according to U.S. standards. “Token” chlorination is now in effect by the Japanese. Adequate chlorination will be instituted immediately upon receipt of chlorine supply requisitioned through Military channels or as soon as raw materials can be found for manufacture of chlorine in Japanese plants. The possibility of Japanese military stocks of chlorine being available are being investigated.

b. Sewage systems, in the main, are largely intact but inadequate to handle peak loads at certain hours in selected buildings and areas where military billets are located. Adjustments are in process to correct this condition where possible.

c. Insect vectors have not presented a problem to date, except in connection with the typhus situation referred to in a preceding section.

2. Nutrition Problems and Food Supply.

a. Sufficient time and data have not been available to make an appraisal of the food and nutrition situation. Preliminary contacts indicates certain Japanese groups continue experiments on food substitutes. A more logical approach at this would appear to be an all-out effort to increase food production throughout the Japanese Home islands.

3. ABSTRACTS FROM JAPANESE REPORTS

The following data have been abstracted from a report prepared by the Bureau of Sanitation, Japanese Ministry of Health and Welfare in compliance with a directive by the Supreme Commander for the Allied Powers.

a. General Problems.

- (1) Shortage of foodstuffs, medical supplies, sanitary supplies, health personnel and over-work have caused breakdown in health organization. Special reference made to nutrition problems in children. Clinical evidence of Malnutrition reported on increase with increasing used of “artificial nourishment” for infants.
- (2) Communicable disease – diphtheria and filth-borne diseases reported as increasing. Death rate from tuberculosis around 225 per 100,000 population with general increase throughout area.
- (3) Inadequate medical care due to shortage of physicians, drugs and supplies and inadequate hospital facilities.
- (4) Sanitation services have deteriorated as result of labor shortage, lack of materials and bombings.

b. Public Health and Medical Care Measures.

General over-all plan basically as outlined in TB Med 160 with increasing attention being given to “physical strength” measures.

- (1) The Japan Medical Corporation organized to reconstruct medical facilities.
- (2) Medical and related professional groups (exclusive of Military) in 1944 were:

Physician	49,234	Nurses	94,861
Dentists	19,784	Midwives	36,329
Pharmacists	26,054	Special Nurses	11,678
- (3) Cultivation and collection of Medical plants encouraged because of shortages. Controlling institute established to control production and distribution. Prices regulated officially. All medical and sanitary supplies under institute control.

(4) Preventive Measure include –

Tuberculosis control – increasing rates observed among “youth” are groups. A total of 192 “Sanatoriums” with 30,000 beds reported. Special care through Healthy Nation Training Stations for “male youth of tuberculosis delicate constitution”. Considerable stress is placed on use of BCG. (Data observed do not reveal any encouraging results).

Infectious diseases – Cholera, dysentery, typhoid and paratyphoid fevers, smallpox, “eruptive” typhus, scarlet fever, diphtheria and epidemic cerebro-spinal meningitis are classed as “legal epidemics” and are the only diseases that are reportable by law. “Compulsory smallpox vaccinations are carried on twice a year”. Quarantine stations were functioning at important ports.

Control of venereal disease emphasized in prostitute group. Reporting not required by law. Control of positive cases known to have been very lax.

“Water-works” established as follows:

Cities, etc. over 10,000 population	228
Cities, etc under 10,000 population	<u>462</u>
TOTAL	690

Sewage systems:	Cities	48
	Towns	4
	Villages	<u>1</u>
	TOTAL	53

(5) Various Social Insurance programs include:

Health Insurance Law	Crew Insurance Law
Labor Injury Insurance Law	Welfare Annuity Law
Nations Health Insurance Law	

(6) “Sanitary” Administration organizations are classed as follows:

- Administrative organizations
- Investigation and deliberation organizations
- Outside organizations

Functions of Sanitation Bureau includes:

- Medical treatment, medicines and drugs
- Sanitary materials
- Food and drink Sanitation and environmental problems
- Medical inspection and epidemic prevention
- Laborer’s sanitation

National Health Bureau functions includes:

- General sanitary life of the nation
- Control of physical strength
- Physical training
- Protection and direction of Mothers and Babies
- Social enterprises and direction of the nations life

The Insurance Bureau handles:

- Health Insurance, Nations Health Insurance and Laborer
- Injury Insurance, Crew Insurance, Welfare Annuities Insurance,
- Employees Funds, Retiring Allowance and other Social Insurances

A special bureau in Ministry of Health and Welfare handles special services for soldiers who are discharged on medical grounds. National nurseries are maintained for children of decreased veterans.

Examination and research organizations are listed as the Research Institute of the Ministry of Welfare. The Hygienic Laboratories and Epidemic Research Institute.

c.

(1) Communicable Diseases Reported:

81 cases of typhus in Hokkaido prefecture from July 1-10

6 cases of typhus in Shizuoka prefecture during July

1 case of typhus in Gunma prefecture during July

Steam disinfestation is only means available for delousing.

(2) Smallpox reported in Hokkaido and North Honshu prefectures during July.

(3) Numerous widespread outbreaks of dysentery reported during July and August.

4. Summary, Conclusions and Recommendations.

a. Disintegration of public health service and organization in Japan was rather rapid after the breakdown of the reporting system in 1942. Also the legal limitation on the number of reportable diseases as for instance, venereal disease, malaria, and other communicable diseases are not reported, places a distinct handicap on the communicable disease control program.

Due consideration must be given the reporting of certain additional communicable diseases, particularly venereal diseases and those diseases likely to be transmitted to the Occupation Forces. It has not been possible up to the present time to get a clear picture of the exact procedure for handling cases and case reports at all levels.

b. The venereal disease control plan requires extensive overhauling and something more than the "on paper" plan that has been more or less inoperative for the past three years at least, if the health of the Occupation Forces is to be effectively safeguarded. Reporting of cases must be made compulsory, more modern treatment plan inaugurated and rigid control of infectious cases instituted. Some progress has been made toward these objectives.

c. The presence of typhus fever (epidemic louse-borne) in Hokkaido, northern Honshu and Korea will require immediate control action. The overall situation is further aggravated by the action of the Japanese government in releasing Korean and other workers in Foci areas (Hokkaido) and leaving these workers to get home the best way they can. The probability of this group spreading typhus to previously free areas is likely.

d. The immediate reestablishment of effective aerial and marine quarantine service by the Japanese government is mandatory because of the problem anticipated as a result of Japanese repatriates returning from Pacific, Asiatic mainland and other areas.

e. The apparent desire of the Japanese officials to cooperate in every possible way has been quite contrary to what was expected. The presence of a number of former Rockefeller Foundation trained medical officers among the official health group has made official contacts and understanding much easier.

SECTION II

Administration of Hospitals

1. The Japanese Government on 15 September 1945, reported 2,567 hospitals and sanitariums having 101,508 patients with a total bed capacity of 155,654; physicians 37,391; nurses 93,270. These statistics do not include the number of hospitals, number of patients and hospital bed capacity in Nagasaki prefecture. No data has been submitted for Yamaguchi, Saga and Kumamoto prefectures. The report shows 983 hospitals totally destroyed and 50 hospitals partially destroyed by war disaster in 42 prefectures having a total bed capacity of 51,397

2. According to reports received from the Imperial Japanese Army approximately 78,000 sick and wound veterans were being treated in 268 and 9 hospitals in Japan and Korea respectively on 15 August 1945. Of these 8 hospitals were destroyed by war disaster in whole or in part most of which have subsequently been moved to inns, schools, or other civil buildings. In addition to those hospitals and 4 clearing hospitals which are now being gradually demobilized. The exact number and addresses of those now actually in operation is not known.

3. The Ministry of the Japanese Navy reported ### hospitals a total capacity of 14,000 beds. The report stated 3 hospitals having a total capacity of 700 beds were 70 to 80 per-cent destroyed by fire.

4. On 15 September 1945 the Japanese Government reported 15,700 physicians, 29 dentists, 1500 pharmacists and 15,000 nurses had been demobilized from the Army. At the same time the navy had demobilized 3,279 physicians, 253 dentists, 213 pharmacists and 500 nurses.

5. Inspections have been made of 14 hospitals and sanitoria in the Tokyo and Yokohama area. Those inspected included a typical general hospital, psychopathic hospital, tuberculosis sanatoria, leprosaria, naval hospital, venereal disease hospital, maternity hospital and a Red Cross Hospital. Some of these were found to be

partially destroyed but this fact has apparently not prevented provision of adequate hospital care as none of those visited were utilized more than 50 per-cent of total capacities. Total hospital personnel and equipment was more than adequate. According to the directors of the institutions visited, medical supplies were inadequate. Lack of food and fuel was found to be common to all.

SECTION III Veterinary Affairs

1. Veterinary affairs in Japan are administered by two Ministries:

- . The Ministry of Agriculture and Forestry.
- . The Ministry of Public Health and Welfare (Social Service).

Both Ministries are hampered by a shortage of personnel and a disruption of activities due to the war when many of their functions were discontinued or became so inefficient as to of no value. This was particularly apparent in all reporting functions so that little statistical data is available for the past three years.

2. The Ministry of Agriculture and Forestry reports the following data for 1945:

Number of Veterinary Surgeons	21,878
Number of Horses	1,191,130
Number of Cattle	2,403,264
Number of Swine	309,678
Number of Sheep	180,685
Number of Goats	251,973
Number of Rabbits	3,226,532
Number of Poultry	22,491,701
Number of Ducks	387,172

Communicable disease first 6 months 1945.

Blackleg	3 Outbreaks	4 cases
Anthrax	8 Outbreaks	8 cases
Texas Fever	1 Outbreak	8 cases
Swine Cholera	8 Outbreaks	486 cases
Swine Plague	8 Outbreaks	297 cases
Swine Erisipelas	3 Outbreaks	25 cases
Bovine Infectious Abortion	16 Outbreaks	390 cases
White Diarrhea Chickens	20 Outbreaks	12,832 cases

Tuberculosis eradication in dairy cattle showed 3.143% affected in 1942, date of last report.

The 1944 laboratory statistics indicate Veterinary Biologicals were manufactured for all types of animals.

3. The Ministry of Public Health and Welfare reports as follows:

Number of slaughter houses	712
Number of cattle slaughtered	382,340
Number of calves slaughtered	35,817
Number of sheep slaughtered	5,317
Number of goats slaughtered	12,035
Number of swine slaughtered	603,180
Number of horses slaughtered	36,415

Number of cattle condemned.

Ante Mortem	51
Post Mortem	
Total carcass	147
Partial carcass	4,702
Viscera only	73,667

Number of Swine condemned.

Ante Mortem	127
-------------	-----

Post Mortem	
Total carcass	249
Partial carcass	3,274
Viscera only	203,673
Number of Horses condemned.	
Ante Mortem	42
Post Mortem	
Total carcass	52
Partial carcass	2,550
Viscera only	4,720

Similar figures were submitted for calves, sheep and goats.

Dairy Inspection

Total Milk consumed	
Pasteurized	2,840,904 Litters
Raw	242,889,354 Litters

4. Conclusions.

- a. Statistics are being brought up to date as the disrupted Veterinary Service is reestablished in the various prefectures.
- b. The animal slaughter at the present time is about 10 percent of normal due to the fact that Animals are not available.
- c. Dairy production is almost at a stand still except in Hokkaido.
- d. Sanitation at all establishments visited was sub-standard.
- e. Veterinary inspectors appear to be efficient and interested in their jobs but their methods leave much to be desired.

SECTION IV Dental Affairs

1. Dental Administration

- a. Industrial Dental Hygiene is under the Sanitary Bureau of the Ministry of Public Health and Social Affairs. This service was impaired during the war but elaborate plans are made for its rejuvenation.
- b. Dental licensure comes under this same Bureau but examinations are held only for foreigners and self-educated applicants. Graduates of recognized schools are permitted to practice without examination.
- c. Dental Health insurance participates in the Health Insurance benefit controlled by the Insurance Bureau.
- d. School Dental Hygiene is under the jurisdiction of Department of Education. Dental Colleges are also under the same Department.
- e. The Department of Army and Navy until two years ago received dental care by attaching civilian dentists to organizations. From then until surrender, service was rendered by a Dental Corps of 292 plus attached civilians.

2. Supplies and Equipment

- a. Manufacture of supplies and equipment is at 50 % required capacity with normal capacity anticipated within a year.
- b. Supplies are rationed and the price controlled through the Dental Materials Control Co. whose President is appointed of Ministry of Public Health and Social Affairs.

Sales for Oct 1942 – March 43	3,627,319.34 Yen
Sales for Oct 1944 – March 45	1,854,927.15 Yen
- c. A small stock of excess Japanese army and navy supplies are available and under control of Home Ministry.

3. Dental Education

- a. There are six dental colleges for men and two for women in Japan with a total of 4,500 students.
- b. The faculties and physical facilities are adequate but methods and techniques are obsolete and sub-standard.

- c. One college for women completely destroyed and one college for men 50% damaged.
- d. One college (governmental) is a combined Medico-Dental School both degrees being attainable in six years.
- e. The students are uninformed and salute the instructors giving a militaristic air to the college.
- f. The text books are obsolete many of which are translations from German.

4. Practitioners:

- a. No. Dentists in Japan 17,542
- b. No. displaced 7,000
- c. No. in Military service as soldiers 2,732
- d. No. in Military service in profession 292
- e. Estimated no. that can be immediately rehabilitated 2,100
- f. Most dentists practice in own homes instead of office buildings.
- g. There are many traveling dentists giving service to rural areas whose population has been increased by

evacuees.

5. Dental Health

- a. All prior existing sponsored Dental Health programs have broken down during the war years.
- b. Nine five percent of school-age children are dental cripples. Mal-nutrition plus lack of care and preventive measure has resulted in national ravage of oral health.
- c. "Protruding upper antereos" (mal occlusion) is a racial characteristic caused by constructed nasal opening resulting in mouth breathing. Sleeping habits also contribute to this abnormality.

6. General Remarks

- a. Analysis of the water supply shows a negligible amount of fluorine which is perhaps a contributing factor in the high incidence of cavities.
- b. Intervention of the government is evident in all phases of dentistry – i.e., the schools, the Societies and Associations.

SECTION V
Nursing Affairs

1. In Japan, all nurses fall into the following classifications:

- a. Clinical or bedside nurses.
- b. Public health nurses.
- c. Tuberculosis nurses (a new classification since 1941).
- d. Military nurses.
- e. Midwives
- f. Others.

g. Sub-classifications of public health nurses are:

- (0) Those working in health centers.
- (0) Those working in official agencies.
- (0) School nurses.
- (0) Industrial nurses.
- (0) Health Insurance nurses.
- (0) Others,

2. Their standards of education, registration and organization vary considerably. Graduate of St. Lukes' College of Nursing and the Red Cross Hospitals more approximate U.S. standards of nursing than any of the others. Before the war, there was a trend toward standardization, but there are evidences that this failed during the war years, and gradually standards were lowered. Students were admitted to schools of nursing at an age younger than 18 years, courses were shortened to 1 1/2 to 2 years, and a depletion of adequate trained personnel occurred with the absorption of approximately 34,000 nurses by the Army and Navy.

3. Schools of nursing and midwifery are classified as follows:

- a. Red Cross Hospitals offering a 2 year war emergency program for clinical or bedside nurses. Red Cross Hospital offering a 2 year program for midwives.
- b. Other private and government hospitals, including St. Lukes' College (now being used by U.S. Army) offering a 1 to 2 year program for clinical nurses.
- c. Other private and government hospitals offering an 8 to 10 months program for midwives.

- d. Private and government public health nursing training schools of the following classifications:
 - (0) 1st class – for high school graduates and offering a 2 year program.
 - (0) For graduate nurses, offering a 6 to 8 months program.
 - (0) For midwives, offering an 8 to 10 months program.
- e. Government owned training school for graduate nurses, offering a 6 months program in tuberculosis nursing.

4. The clinical nursing program in Japan has suffered the most severely. The requirements for entrance are low and the training appears to be very inadequate; thereby graduating girls who are very young and immature in their judgment. There are 401 training schools for clinical nurses in Japan Today with 19,911 students enrolled.

5. Qualifications for entrance vary according to Prefecture. Average age required is 18 to 25 years, (Japanese count 16 to 23) most schools require oral, written and physical examination along with a letter of recommendation from school. Applicants may be graduates higher elementary or high school.

6. Courses range from 1 year to 3 years, depending on school, prefecture and training received before entering hospital. Training schools 401 – students 19,911 – graduate nurses 90,000.

7. Tuition ranges from nothing to three yen. Schedules have been received, stating hours and courses received. If the school is not an accredited school, prefectural examination must be taken.

SECTION VI

Welfare

1. Before the war Japan's public welfare activities were administered by a large number of public and private agencies, controlled to a limited degree and supported by the Government. During the war an additional group of agencies, boards, bureaus and divisions were established for various welfare purpose but these organizations were not integrated by any level of government nor were their functions correlated. The result is a hodgepodge of agencies, etc., without central direction or organization.

2. The Health and Welfare Ministry is woefully lacking in factual data, statistics and knowledge of operations conducted at the lower levels of government, i.e., the Ministry does not receive information relative to the number of persons receiving relief nor the amount of money spent, except upon a fiscal year basis. No liaison or field supervision is maintained by the Ministry. Lines of responsibility and authority are not clearly drawn. No supervision or even liaison is maintained with as important an agency as the Japanese Red Cross.

3. ##### Insurance program was strengthened by the adoption of the Workers Annuity Insurance Act of 1941 and its 1942 amendments. It incorporated into the custom of giving separation allowances to employees terminating their employment with industrial, commercial and transport companies, and provided sickness, old age and survivors insurance benefits. It does not provide unemployment insurance and apparently was adopted to counteract the wartime inflationary trend and to provide a long-term outlet for government war bonds. Under the act contributions totaled eleven percent of the payroll. An examination of the fund statistics indicated that as of 31 August 1945 the Reserve Fund totaled 848,164,000 Yen while total benefits paid in 1944 equalled 835,765 Yen, less than one-tenth of one percent of the reserve.

It is planned to develop a through study of the entire Social Insurance system in order to properly evaluate it in terms of present needs.

4. A great deal of time has been devoted to sifting through the maize of diversified Japanese Governmental agencies, bureaus and Ministries each of which is responsible for a part of the Korean Repatriation program. A directive to the Japanese Government on this subject has been prepared by this headquarters.

5. The Veterans Bureau of the Health and Welfare Ministry has been directed to prepare a detailed report on its organization, functions, payments, etc. Problems relative to the operation of veteran's Army and Navy hospitals have been referred to the Hospital Administration Sub-Section, this headquarters.

SECTION VII

Legal

Venereal Disease Control

1. Present legislation in Japan indicates that the control is entirely inadequate. The Law for Prevention of Infectious Disease does not cover the Venereal Diseases nor does it unconditionally prescribing the periodic examination of individuals refer to licensed prostitutes only and decree that examinations shall be conducted in accordance with prefectural ordinances.

As a result of conferences with Tokyo Metropolitan and Health Ministry officials the following results have been secured.

a. A new ordinance for Tokyo City, effective about 23 October, will make weekly physical examinations mandatory, including microscopic tests.

b. The new ordinance will cover not only licensed prostitutes but geisya, who has been among the worst offenders.

c. All Ken Governors have been instructed to enact precisely the same ordinance for their respective Prefectures.

2. It is anticipated that these measures will be backed by a memorandum from this headquarters to the Japanese Government prescribing that all persons whose occupations constitute serious hazard or source of venereal infection be brought under the ordinances prescribing periodical physician examinations.

3. Reports from Japanese agencies and spot checking by personnel of this headquarters will test the effectiveness of enforcement.

SECTION VIII

Supply

1. Surveys of the status of medical and sanitary supplies in Japan have been accomplished, mainly, by contact with representatives of the Ministry of Health and Welfare and study of reports submitted by the Japanese covering stocks of medical supplies and capacity of manufacturing facilities.

2. An intelligent estimate of Japanese requirements cannot be made from the incomplete data submitted by the Ministry of Health and Welfare. The short ### as of supplies reported are grossly in excess of any possible ### the medical care and treatment of the civilian population. It appears ### as though the Japanese are endeavoring to accumulate a stock pile which may subsequently be utilized for export purposes.

3. The Japanese estimate that 50% of medical supply manufacturing facilities have been destroyed or converted to other use. The remaining 50% can manufacture only 20% of pre-war production due to shortage of critical materials. An estimate of production capacity was submitted but the figures were based on a proposed program rather than what might be produced with existing facilities and resources. The proposed program undoubtedly is in excess of domestic requirements and contemplates extensive imports.

4. From a review of all available data and observations during visits to hospitals, clinics and sanatoriums the following assumptions may be made:

a. Stocks of drugs, surgical dressings, and surgical instruments and supplies are extremely low.

b. Hospital equipment such as x-ray and sterilizers is inadequate and the limited amount on hand is in need of considerable repair and maintenance.

c. Dental supplies are barely sufficient to provide emergency treatment and numerous substitutes are being used. Normal Japanese standards of dental care cannot be maintained with existing facilities.

d. The occurrences of any unusual epidemic of disease will necessitate supplementations of present stocks as a protection to the Health of occupation forces and to prevent acute suffering and distress among the civilian population.

**GENERAL HEAD QUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
Public Health and Welfare Section**

**WEEKLY BULLETIN
21st to 27th October 1945**

1. Preventive Medicine

- b. Directives governing Japanese traffic were published as follows
 - (3) Establishment of Port quarantine control of all Japanese returning to homeland from any area.
 - (4) Establishment of control of all traffic from Hokkaido to other home islands and Korean returning to Korea.
- b. The Army Quarantine Liaison Officer completed survey of designated ports of entry is the home islands areas south of Tokyo.
- c. Communicable diseases report (##) received from Japanese government. Special condition proved and forwarded to ##, AFPAC (##), Sixth Army, Eight Army, ## and ## ## ##, ## ##.

4. Tokyo Health Department officials ## to ## ## in following ## for control of venereal disease. 以下解読不能

5. Administration of Hospitals

a. The Japanese government reported medical personnel and hospital facilities in ## ## ## (Prefectural) to have ## physicians; ##### doctor follows; 976 dentists; 1149 nurses; ## government hospitals; 97 ## hospitals; 114 private hospitals; 48 tuberculosis sanatoria; 1230 tuberculosis sanatoria ##; 9 ##; ## ##.

b. The Japanese government reported the number of physicians, dentists, pharmacists and nurses in Japan for the period of 1936 to 1945 ##. the report showed 59,786 physicians in 1936 had declined to 39,269 in 1945. According to the Ministry of Health and Social Affairs there are an additional 20,000 physicians who are being demobilized from the Army and Navy. For the period covered in the report dentists were ## in number from 21,067 in 1936 to ##438 in 1945 with an estimated additional 3,600 to be demobilized. There was an increase of approximately 1,000 pharmacists during the period with a total of 27,873 for 1945. Total number of nurses showed a decrease from 113,987 in 1936 to 96#### In 1945. An estimate of the number of pharmacists and nurses in the armed services was not stated.

c. On 15 October 1945, the Ministry of Health and Social Affairs were requested to obtain hospital strength report from each prefecture at weekly intervals ## 12 October 1945. Prefectures were ## by the Ministry to submit reports by telegraph. For the period ending 12 October 1945, reports received from 21 prefectures ## a total of 963 hospitals; 66## hospital beds; 39,245 occupied beds; ## outpatients. For the period ending 19 October reports provided from 13 prefectures show a total of 924 hospitals; 99,338 hospital beds; 21,386 occupied beds; 66,728 outpatients. These did not show a significant change in the total number of occupied hospital beds and outpatients treated.

WEEKLY BULLETIN

28th October to 3 November 1945

1. Welfare

a. General

(1) Care of foreign nationals.

- (e) An investigation was conducted of inadequate ration supplied foreign nationals who require hospitalization and special diets.
- (f) An inquiry was also instituted regarding use of excess Army supplies for emergency relief in Hokkaido for certain nationals in a newly established hospital.
- (g) Reports from 6th Army revealed that certain // nationals were receiving extra ration privileges from Tokyo Police. At a conference with Economics and Scientific section it was divided to ## the ## Ministry to ## this extra ration privilege to all nationals reporting them.

(6) Korean repatriates.

- (g) The 6th Army reported uncontrolled movement of Korean nationals to ports for Korea. Newspaper publicity was instituted to old Japanese is ## were effective control of ## and ## migration which ## facilities for Korean at port cities.

(7) Welfare Administration.

- (a) Preliminary reports of the reorganization of the Bureau of Social Affairs, Welfare Ministry have been received
- (h) Detailed reports of the number and amounts of ## paid to military and civil service personnel have been received and are being studied.
- (i) A survey of current program and plans for special week education has been instituted with the assistance of the New Japan Social Work Interim Committee.

8. Administration of Hospitals

- a. Tables showing tuberculosis sanatoria and preventories, specialized hospitals, and hospitals is destroyed by air raids in Japan were furnished the Surgeons of Sixth and Eighth Armies, Chief Surgeon, GHQ, AFPAC, Advance ## and the Statistics and Reports Section.
- b. Copies of incomplete weekly civilian hospital strength reports for periods ending 12 October, 19 October were furnished the Surgeons of Sixth and Eighth Armies, Statistics and reports Section, Chief Surgeon, GHQ, AFPAC, Advance ##, and G-4. To date reports have been submitted by 36, 32 and 29 prefectures for the periods ending 12, 19 and 26 October respectively.

1. Medical Supplies

a. During the past week several reports have been received covering stocks of medical supplies, including narcotics, which have been located by occupational forces. It is now apparent that considerable stocks of medical supplies, pertaining to the Japanese armed forces are stored throughout the Home Islands. Since the Ministry of Health and Social Affairs had no jurisdiction over the armed forces it is I## To secure any information from that source as to the location or extent of stocks pertaining to the Japanese Army and Navy. The Home Ministry has been charged with the distribution of these stocks to civilian sources but so far has not taken any positive action in that connection. A conference has been scheduled for 5 November with representatives of the Home Ministry and Ministry of Health and Social Affairs at which time the Japanese officials will be ## as to their plan of distribution and a definite procedure formulated to carry out the project.

- (1) Reports of shortage of certain items of medical supplies have been received from the Tokyo-to and Kanagawa and Hiroshima prefectures. In these cases it was definitely determined that the Japanese did not have sufficient stocks to provide the required medical service and limited amounts have been ## to ## use for the purpose for which released.
- (2) The status of the stocks of civilian relief supplies which were originally destined for the Philippines, but subsequently diverted to Japan, has been definitely determined. These supplies will be stored under jurisdiction of ## at Yokohama and ## for as "civilian relief supplies", ## constituting a small emergency reserve, which may be issued only an authority of SCAP.
- (3) ## XXIV corps submitted requisitions covering a six month requirement of ## basis medical units. A total of 360 units were requested, to be phased for delivery a the rate of twenty each ten days. These

supplies should be sufficient to cover routine requirements for approximately six million people. Sufficient smallpox vaccine also was requested to vaccinate 350,000 ## ##.

- (4) Contact has been made with the Chief of the Industrial Division Education and Scientific Section SCAP concerning production of medical, dental and veterinary supplies. Limited surveys of manufacturing ## in the Tokyo - Yokohama area have been made, jointly, by personnel from Public Health and Welfare and Economic and Scientific Section. As far as may be determined at present very little manufacturing is now being done and there is no evidence of an overall plan of production or for ## of damaged installations. A conference of all interested Japanese agencies will be arranged in the near future and representatives of the Medical Supply Sub-Section will attend.
- (5) Inventories of narcotic stocks were published by the Japanese Government during the week. Sufficient information is now available to permit insurance of instructions concerning disposition of “## stocks” and concurrent directives are being issued to the Japanese government and the ## Sixth and Eighth Armies on the subject.

4. Nursing Affairs.

a. Reports received from Japanese

- (9) English translation of the Constitution and By-laws of the Japanese Public Health nurses Association (April 1945).
- (10) Curriculum St. Lukes' College of Nursing (1945).
- (11) Report on number of members of Japanese Public Health Nurses' Association (6,921 members).

1. Veterinary Affairs.

a. As with other communicable disease reporting, communicable disease control., and general health ## the Japanese government was directed to reestablish their laws on these subjects. After a trial period it became evident that the laws were either inadequate or their operation unsatisfactory so it was ## necessary to inaugurate new measure in an attempt to correct these deficiencies. Accordingly a memorandum to the Imperial Japanese Government AG 723 (30 Oct. 45) ## was published by the direction of the Supreme Commander.

b. A report of Animal Diseases for the period 1 January to 31 October 1945 was received from the Japanese Ministry of Agriculture and Forestry (see Annex 1).

1. Mental Affairs: No report.

1. Legal Affairs: No report.

1. Preventive Medicine:

a. General considerations.

- (1) Arrangements with Institute of Public Health Staff for visiting Schistosomiasis staff to study areas where Japanese have made special studies.
- (2) Conference with newly appointed Port Quarantine Officer of Japanese Government regarding measures to be enforced on Japanese Government responsibility at ports of entry and ports of ## for foreign nationals.
- (3) Details regarding distribution of DDT and equipment clarified with USA typhus Commission Staff.

b. Sanitary Engineering

- (1) Directive to Sixth and Eighth Armies on “Civilian Water Supply” completed.
- (2) Continued investigations of public water supplies with Eighth Army Engineers.

c. Venereal Disease Control

- (1) Continued efforts toward getting more effective diagnosis, treatment and control of infected persons in Tokyo - Yokohama area.
- (2) Special study initiated toward the development of laboratory evaluation service for checking examination results of laboratories in Tokyo area. Legal program to be considered as “proving ground” for more extensive national service.

(1) Effective directed toward procurement of materials for Japanese agencies for more effective treatment of infectious venereal disease section.

a. Laboratories

(1) Investigations made of indigenous facilities and personnel available for inauguration of evaluation service referred to is venereal disease section.

1. Miscellaneous:

a. The following instructions or information was furnished as indicated free this section;

- (1) Letter ## Eighth Army re Medical Supply required for civil relief.
- (2) Letter to Sixth and Eighth Armies in regard to quarantine control of repatriates.
- (3) Letter to Eighth Army Welfare Officer, Military government Section concerning distribution of unused POW supplies
- (4) Radio to ## Sixth and Eighth Armies in regard to Japanese narcotic stocks.
- (5) Letter to Military Government Officer, Sixth and Eighth Armies concerning ## of SCAP representatives.
- (1) Report of specialized hospitals in Japan to Surgeon Sixth and Eighth Armies.

b. The following directives to the Japanese government originated in this section.

- (1) Dojinkai (Dojin Medical Society), AG ## (31 Oct. 45) PH.
- (2) Information on Animal Disease Control, AG 928 (30 Oct. 45) PH.

**GENERAL HEAD QUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
Public Health and Welfare Section**

**WEEKLY BULLETIN
4 November to 10 November 1945**

1. Welfare

a. General

(1) Care of foreign nationals.

Field investigation into the Osaka - Kobe and continued contacts with the representative foreign nationals during the week emphasized that (1) since Japanese surrender foreign nationals in Japan have received adequate food and clothing supplies and (2) assures heretofore taken temporary and the development of a continuing policy is necessary. Supply sources have been (1) extra rations issued by the Japanese to foreign nationals distributed by International Red Cross. Distribution of supplies by IRC will be discontinued on 15 November but an order is in preparation which will require the Japanese ration system to make adequate provisions for foreign nationals.

(2) Korean Care and Repatriation

A field trip to the Shimonoseki and Fukuoka districts revealed some serious deficiencies in the feeding, housing, medical care and supply, quarantine, sanitation and general control of Korean and other repatriates. The Fukuoka situation was comparatively good in that some quarters, medical care and controls had been established for handling the repatriates through the port. A verbal report was given the 6th Army Surgeon and Chief Military Government officer who initiated corrective action immediately. Likewise C-1 and c-3, this Headquarters, were informed and steps taken to establish movement controls by means of reception centers by repatriates.

(3) Welfare Administration.

- (a) Preliminary reports have been received on the Japanese Special Insurance system. The submission of other details has been ordered.
- (b) Discussions with the Relief Bureau of the Welfare Ministry have been undertaken concerning the improvement of statistical and records systems in Japanese Welfare Administration.
- (c) The administration of veterans affairs is being studied with a view to eliminating militaristic influence and discrimination in favor of ex-service personnel welfare benefits.

(4) Distribution of Japanese Army-Navy supplies.

The Public Welfare sub-section has accepted responsibility for supervising the distribution of food and clothing supplies now held by the Home Ministry from former Army-Navy reserves.

(5) Personnel.

Captain James W. Harris, 0-129305, assigned to duty with Welfare Sub-section.

2. Preventive Medicine

a. General.

- (1) The VD control officer and the nutrition officer visited 6th Army Hq. I Corps Hq. and a number of Japanese health authorities in Kyoto and Osaka. The Chief of the Sub-section is visiting the XIV and IX Corps areas in company with the Executive Officer, USA Typhus Commission.

b. Sanitary Engineering

- (1) Liaison was maintained with Strategic Bombing Survey group in connection with their survey of sanitation conditions.
- (2) Conferences were held with representatives of the Ministry of Health and Welfare on water supplies and waste disposal.

c. Venereal Disease Control

- (1) Discussions were continued with representatives of the Ministry of Health and Welfare concerning the implementation of the Memorandum of 16 October 1945, subject; "Control of Venereal Disease".
- (2) Discussions were continued with the Tokyo-To and Kanagawa Ken health officers in an effort to accelerate the establishment of model diagnostics, treatment, laboratory and hospitalization facilities and services in these two areas.
- (3) Authority has been obtained for the release of limited quantities of drugs to Tokyo-to and Kanagawa Ken health departments for use among Japanese civilian who request a potential hazard to the health of the occupational forces. Certain restrictions and minimum professional standards to be observed in connection with the use of these supplies have been presented to the respective prefectural health officers.

d. Nutrition.

- (1) Study of the Japanese food and nutrition situation was continued. Observations were made of one rationing distribution area in Tokyo and an appropriate estimate of the daily per capita calorie and protein intake during the month of October was made.
- (2) Efforts were made to run down reports in the Japanese press of deaths from "starvation" in Tokyo, Kyoto and Osaka. No ## evidence of an unusual number of such occurrence was discovered.
- (3) The 8th Army liaison medical officer and the laboratory officer worked out with the Tokyo Metropolitan Health Office plans for the organization of a board of Japanese medical examiners to investigate deaths of persons not under medical care in whom suspicion exists of starvation or communicable disease. If the plan is successful the Ministry of Health and Welfare will extend it to the entire country.

e. Port Quarantine

- (1) An officer of the U. S. Public Health Service with experience in port quarantine activities in Japan reported for duty with the Sub-section on 3 November.
- (2) The repatriation (incoming) center for the Tokyo - Yokohama region located at Kurihama on Kurihama Bay (near Uraga) is fully equipped and operating capacity 15,000. There is a laboratory staff, ## disinfestation, hospital, etc. An additional 5,000 persons will be accommodated at a group of ## ## 2 miles away. Approximately 10,000 incoming Japanese were processed last month and 200-300 Koreans are being housed while awaiting transportation.
- (3) Sensaki (##) and Hakata continue to be the main ports of de- and repatriation. Conditions at ## are unsatisfactory, according to reports, as there are no barracks.
- (4) Hakata is operating satisfactory under Army supervision but much DDT is needed for the entire Osaka-Shimonoseki area where Korean are congregated to protect USA forces. The main quarantine hazard at present is eruptive typhus (## typhus).
- (5) Beside the above-mentioned ports the only other mentioned by operations as having received repatriates is Kajiki (Kagoshima) - about 2,000 persons. Third was not under Army supervision.
- (6) One shipment of 6,000-9,000 Koreans was said to have been made from Hakodate but more are not contemplated.
- (7) As of 8 November 1945, 272,505 persons have been evacuated, the great majority through Hakata and Sensaki. An ## but probably large number of financially well-to-do persons have sailed in unrecognized craft from Shimonoseki area.

f. Laboratories

The laboratory officer conferred with the Director of the Government Institute of Infectious Diseases to stimulate the organization of a program for improved VD diagnosis. The program will include standardization of technique, a training program for laboratory personnel and the setting up of a model diagnostic unit in the Tokyo area where check diagnosis will be simultaneously accomplished by laboratory units of the U.S. Army.

3. Administration of Hospitals

- a. Report submitted by the Relief Board for Veterans, Ministry of Health and Social Affairs listing 52 hospitals and sanatoria with 32,685 beds under its jurisdiction.
- b. Copies of the following reports were furnished Surgeon, Sixth Army, Surgeon, Eighth Army, Surgeon, GHQ, AFPAC advanced ## and ## and Reports Section.
 - (1) Weekly Japanese civilian hospital strength report for period ending 29 October 1945.
 - (2) Tuberculosis sanatoria by prefecture, province and town, the capacity and number of patients - September 1945.
 - (3) ## of specialized hospitals by prefecture - Sept. 1945
 - (4) Listing of medical personnel by prefecture - Sept. 1945.
 - (5) Report on leprosy by prefecture - Sept. 1945.
- c. Weekly hospital strength reports of 23 prefectures having 1,088 hospitals who submitted 12 October, 19 October, 26 October and 2 November shows the average number of hospital patients to have decreased from 1413 to 1311. The average number of out-patients treated was approximately the same for each period.

4. Supply

a. Since civilian medical supplies are developed and new production will not get under way for same time, the importance of fast action on distribution of returned military supplies and the magnitude of the job was impressed on Japanese government and business officials concerned.

b. Overall plan for distributing returned supplies processed by Japanese was approved by the Economics and Scientific Section, SCAP with ## of this Section. The plan for redistribution of medical supplies, which is now in effect, was discussed in detail with the Japanese and found to be in accordance with the approved plan.

c. Available information of location of Japanese Army stocks of medical supplies was passed on to the Sixth and Eighth Armies.

d. Follow up of status of all CAD Typhus control supplies was sent.

e. Inspection of manufacturing plants and Japanese Army medical ## was continued. A visit to one manufacturing plant (Hoshi Drug Co.) it was discovered that they were continuing to make narcotics on a ## ## in violation of a SCAP Directive. A photographer and a representative of the Japanese government were in the visiting group so that complete record of the case was made. Report was given to ## Marshal.

5. Veterinary Affairs: No report.

6. Dental Affairs.

a. During the first quarter of 1945 the Japanese government paid out 188,799.76 for the dental treatment of 40,860 insured patients.

b. Charters of the following organizations were received;

- (1) Japan Dental Instrument Control Association.
- (2) Japan Dental Materials Control Association.
- (3) Japan Dental Association.

c. The following reports were received;

- (1) Estimated need of raw dental materials for quarter ending 31 December 1945.
- (2) Report of amount of dental materials consumed 1942, '43, '44.
- (3) Estimated production of dental materials for year ending 1 September 1946.
- (4) Consumption rate of dental gold for 1918, '29, '37, '41, '42, '43, '44.

7. Nursing Affairs

a. Reports from Japanese.

- (1) Report on Prefectural Heads of Nurses Association, list of name, address and number of nurses in prefectures who belong to the Association.
- (2) Keio University Hospital - Curriculum for Nurses and Midwives.
- (3) Report of Graduate Public Health Nurses and Midwives by prefectures.

8. Legal: No report.

9. Miscellaneous

a. The following letters of technical information were dispatched to ## of the major ## during the period;

- (1) Weekly Japanese civilian hospital bed status report for period ending 19 October 1945.
- (2) List of tuberculosis sanatoria in Japan as of September 1945.
- (3) List of specialized hospitals in Japan as of September 1945.
- (4) List of medical personnel in Japan as of September 1945.
- (5) List of leprosaria in Japan as of September 1945.
- (6) Weekly communicable diseases report, Japan. (human).
- (7) Weekly communicable diseases report, Japan. (animal).

- b. The following directive concerning public health and welfare was issued by the Supreme Commander to the Japanese Government 4 November 1945: Subject: Termination of responsibility for distribution of relief supplies.

Crawford F. Sams,
Colonel, Medical Corps.
Chief, Public Health and Welfare Section.

**GENERAL HEAD QUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
Public Health and Welfare Section**

**WEEKLY BULLETIN
11 November to 17 November 1945**

1. Welfare.

a. General:

(1) Care of foreign nationals.

Recovered POW supplies which have been distributed by the International Red Cross were practically exhausted by 15 November 1945, on which date the IRC was relieved of distribution responsibilities by this Headquarters. An order has been prepared and submitted for staff concurrence, requiring the Imperial Japanese Government through its rationing system to make adequate provisions for foreign nationals. An authorization for non-Japanese nationals employed by military installations to make purchases at Commissary stores and Army Post Exchanges was issued by this Headquarters.

(2) Korean Care and Repatriation.

The situation in the congested repatriation areas of Shimonoseki, Sensaki and Hakata was materially improved following issuance of an order by this headquarters to the Imperial Japanese Government restricting Korean movements into the areas. It is believed that allocation of increased shipping space, establishment of liaison by 6th Army Headquarters in above mentioned areas, and corrective action by V Amphibious Corps will materially alleviate the feeding, housing, medical care and supply, quarantine, sanitation and general control conditions provided Koreans and other repatriates. XXIV Corps has suggested the assignment of Corps liaison officers at Korean embarkation ports and Reception Centers. This suggestion is being considered by the General Staff sections concerned.

(3) Welfare Administration

- (a) A study is being made of reports submitted by the Ministry of Health and Social Affairs relating to the social insurance system.
- (b) Preliminary conferences have been held with officials of the Veterans Bureau regarding a reorganization of the bureau to eliminate militaristic influences and discrimination favorable to ex-servicemen and their departments in welfare benefits and services.
- (c) Discussions held with officials of the Ministry of Health and Social Affairs indicate a complete reorganization of the Ministry is taking place. A functional chart and activities report regarding welfare matters has been submitted by the Ministry.

(4) Distribution of Japanese Army-Navy Supplies.

Preliminary conference was held with officials of the Home Ministry concerning allocation of Japanese Army-Navy supplies for relief purposes. A movements to the Imperial Japanese Government on this subject has been prepared requiring the submission of a plan for allocation storage and distribution and detailed reports as to stocks on hand, member of recipients given free supplies and related subjects. This memorandum has been submitted for General Staff conference.

(5) Personnel.

- (a) Lt. Louis. ## ## ####, 211104##, relieved from duty with Welfare Sub-section.
- (b) Captain James ## Harris, 0-129805, relieved from duty with Welfare Sub-section.

2. Preventive Medicine.

a. Field trio to Hokkaido:

(1) During the period 12 to 15 November inclusive a field trip to Hokkaido was made by the Chief of the Preventive Medicine Sub-section. Details regarding typhus control at Yubari and other areas, and delousing of civilians crossing Tsugaru Straits to Honshu were worked out with the IX Corps and 77th Division staffs. Medical supply needs were calculated and steps initiated to procure some.

(2) A conference held with prefectural health officials of Hokkaido revealed no serious communicable disease problem, except typhus, according to Japanese reports. Medical supplies, particularly certain biological, are not adequate to meet apparent needs.

(3) Venereal diseases are problem at Aomori and Hakodate. Some help is needed there in appraising the situation and setting up controls. The situation in Otaru and Sapporo is not state.

b. Japanese and Korean translations of the directions for "Use of DDT in delousing" were received from Lt. Roth. The Korean translation has been forwarded to USAPIK. Japanese translations are being forwarded to Sixth and Eighth Armies.

c. A conference held with Japanese ministry of Health and Social Affairs on venereal disease regulations reveals further evidence of prostitution. Any measure that tend to reduce private and official income from the centuries-old prostitution racket that is being ## to the fullest by the Japanese, may be accepted to ## passive support, if not actual opposition, from all Japanese officials except a small group in the Ministry of Health and Social Affairs.

d. Laboratory service activities included:

(1) A conference at 42nd General Hospital with Dr. Tamiya, Director of Govt. Institute for Infectious Diseases, his associate, Dr. Kawakita, and with Major Canatsey, Bacteriologist of the hospital. A progress was drawn up for a standard procedure for laboratory diagnosis of venereal disease by civilian laboratories. A training course was also outlined.

(2) The production laboratories of the Kitasato Institute were inspected and their condition and deficiencies were noted for the record.

e. Venereal disease control service included:

(1) In conjunction with the 8th Army Surgeon's office detailed plans for the use of anti-venereal drugs were presented to the Tokyo and Kanagawa Prefectural Health Officer.

(2) A schedule for the pilot demonstration project of examination and treatment was worked the Tokyo health authorities. The program will be instituted at the Yoshiwara V.D. Hospital on 20 November 1945.

(3) Representatives of the Ministry of Health and Welfare presented for consideration and discussion a draft of "Venereal Disease Prevention Regulation" which is ## to extend existing law and regulations to meet the provisions of the Memorandum of 15 October to the Japanese Government.

f. Nutrition service activities included:

(1) A report on the food rationing system as observed in one district of Tokyo (Meguro Ku) was completed and an estimation of the daily per capita calories and protein contents of the list as issued on the official ration during the month of October was calculated. These observations revealed a complicated and cumbersome food distribution system. The estimates daily per capita intake was 1272 calories and 31.56 grams of protein.

(2) Conferences were held with the M. and S. Section and the Welfare Sub-section regarding food allowances for foreign nationals in Japan. It was held that occidentals require 33 more calories than Orientals. This figure is based on comparison of body surface areas, body weights and ## metabolic rates. With this basis formula a directive is being prepared by the Welfare Sub-section to cover the numerous contingencies involved.

(3) This Sub-section was consulted by the ## Section in preparation of a radio to the War Department stating the food position of Japan and requesting importation of ##. The Public Health and Welfare Section prepared a check sheet to the P & S Section recommending a daily of 1800 calories per person per day be given Japanese civilians. The P & S Section prepared a radiogram containing this recommendation.

(4) A conference with the director of the Municipal Hygiene Laboratory, Tokyo revealed that small scale studies of the actual food intakes of a group of white collar workers and a low income laboring group had been made. The average daily per capita food intake of the white collar group during October 1945 was 1754 calories and 44.1 grams of protein. In March 1945 the same group received 1989 calories and 68 grams of protein. The average daily per capita food intake of the laboring group was 1580 calories and 41 grams of protein in September 1944. This same group is to be restudied in November 1945.

g. Sanitary Engineering service included:

(1) Inspection was made of the ?? intake of the Tokyo Water Supply System, and Murayama and Tanegushi Reservoirs. During normal operation, water for the Sakai and Yodobashi Filter Plants furnishing about 50% of the total supply is taken from the reservoirs. At times of high ##### in the river, the reservoirs are by passed and water to the Yodobashi plant is delivered directly from the river via the Tamagawa Canal. To relive the land at such times on the Yodobashi Filters, it is believed desirable to utilize the reservoirs under all conditions. This was discussed

with the Chief Engineer of the Tokyo Water Supply Bureau. Definite recommendations to this effect were withheld pending receipt of complete report on operation of Tokyo Water System.

(2) Conference on the separation of U.S. Army water purification units in the field was held with Eighth Army water supply engineers and operators. Following conclusions were reached, and will be reported to Engineer Board, CCR, by Major Hayes Black, CZ, Chief Equipment Division;

- (a) Engineer equipment for water supply proved satisfactory. (The diatomite filter had not been used by any man present).
- (b) Engineer supply for water purification unit, was lacking in several instances.
- (c) Technically trained personnel proved of great value to Engineers in training operators in the field, and checking operation of water points.

(3) Conferences were held and inspection made on waste disposal with Chief, Health Maintenance Section, Ministry of Health, and Chief of Tokyo Bureau of Sewerage

- (a) Little damage was done by bombing to the sewerage systems of Japan, and all treatment plants are operating normally.
- (b) Difficulties of night soil collections due to shortage of transportation are being overcome by assignment of Japanese Army trucks to cities.

3. Administration of Hospitals.

a. Memorandum AG 334 (23 Nov 45) PH dated 13, November 1945 directing the Japanese government to transfer authority of all hospitals, sanatoria, nursing homes and other hospital facilities of the Relief Board for Veterans, Ministry of Health and Social Affairs to that agency of the Ministry of Health and Social Affairs responsible for the hospitalization of civilians.

b. Incomplete Japanese civilian hospital strength reports for periods ending 12, 19, 26, October and 2, 9, November were furnished the Surgeons Sixth and Eighth Armies, chief Surgeon GHQ, AFPAC, Statistical and Reports Section, and G-4.

4. Supply:

a. The Chief of the Medical Supply Sub-section accompanied the Chief of the public Health and Welfare Section on a trip to Korea during the period 8-15 November 1945:

(1) Contacts were made with supply personnel at Hq. XXIV Corps and Hq. Military government. Visits were made to ASCOH-24 and the city of Korean, on the parallel.

(2) Production and distribution of medical, dental and veterinary supplies and equipment in U.S. occupied Korea is a responsibility of Medical Supply Section of the Bureau of Public Health, Military Government. Four (4) officials are assigned to the section at present.

(3) Distribution of medical supplies is being effected through the Chosen Medical Company which is operated under direct supervision of the Bureau of Public Health. This company operates mainly as a dental stock control point and allocates products of manufactures to the various providers. Limited warehouse space is available and some supplies are moved from manufactures plants to the company warehouse are shipped direct from manufacturing plants to wholesalers in the province. The Chosen Medical Company operated as a monopoly under the Japanese regime and exercised control over production and distribution of drugs and chemicals in Korea. It is planned to liquidate the company as soon as a plan for direct distribution by manufactures is developed and planned in operation.

(4) Twenty (20) drug manufacturing plants are now in operation. Production in these plants varies from 30% to 60% of normal. The shortage of coal will result in most of plants being closed within 30 days unless replacement of present stock pile is made. Every effort is being made to keep the plants in operation as there is an urgent need of medical supplies.

(5) About fifteen (15) drugs of captured Japanese medical supplies have been located. These supplies are being inventoried by military commanders and turned over to Military Government personnel for distribution to

civilians. Distribution will be accomplished by utilizing the facilities of the Chosen Medical Company and wholesalers in the various provinces.

b. It was learned that the main Jap Army medical supplies depot, in Tokyo, had not yet been turned over to Home Ministry in compliance with occupation instruction #2. This was called to the attention of Eighth Army. To insure prompt distribution of these supplies by the Japanese when they are given custody, the plant of the Tokyo prefectural office, which will handle them, were discussed and tentatively approved. The importance of prompt action was stressed to the prefectural officials.

c. An urgent need for supplies for control of typhus exists in Japan and Korea. A telecom conference was held with Manila to arrange for expediting shipment of certain items, to learn the status of all requisites for typhus supplies, and to ## all concerned with the necessity for prompt action.

d. Inspection tours of Narcotic manufacturing plants in Tokyo and Osaka areas have been completed. Equipment and stocks were photographed.

e. Visits to Japanese Army Medical Depots revealed that Japanese Military narcotics stock are under the custody of United States Forces.

f. In conference with officials of the Ministry of Welfare. The Narcotic Control Officer of the Headquarters emphasized that narcotic stocks must be securely stored, that the supply of narcotics in manufacture's and wholesaler's hands must be conserved as a black-log of supply, and that information regarding steps to be taken in compliance with directives from this headquarters regarding narcotics must be disseminated to dealers in narcotics. The Japanese officials apparently understood the importance of the above points as presented and mare satisfactory results along these lines are anticipated.

5. Veterinary Affairs:

a. Personnel.

The following Veterinary Corps Officers, assigned GHQ, AFPAC, (adv.) have reported for duty

Major W. H. Dietarich, V. C. 0-380321

Major Enswell M. Madison, V. C. 0-24371

Major Edwin J. Sunderville, V. C. 0-23335

b. General.

(1) The officer in charge of Veterinary Affairs made a field trip to Sendai, Miyagi Prefecture for the purposes of conditioning a survey of Japanese Veterinary Affairs.

(2) The following places were visited

Headquarters XIV Corps

“ 11th Airborne Division

“ Miyagi Prefecture

Miyagi Veterinary College

Sendai Municipal Slaughterhouse

Dairy establishments in the city and country.

(3) Conclusions - The governmental organization in this Prefecture is staffed with sufficient trained personnel to conduct an efficient Veterinary services. However, sanitation is being neglected and equipment is in poor repair and antiquated. Pasteurization of milk, eradication of tuberculosis, inspection of meat in slaughter houses and laboratory control measures appear to be effective.

c. Reports from the Japanese.

(1) Weekly reports of communicable animal disease. This report shows swine plague and white diarrhea of chicks in Iwate Prefecture and the latter disease in Chiba Prefecture. Previously reported Anthrax areas are free from this disease which indicates control measure are effective.

(2) Breeds of domestic animals in Japan.

(3) Reorganization of livestock Bureau, Ministry of Agriculture and Forestry.

6. Dental Affairs:

a. This Headquarters approved the method of rationing distributing dental gold as presented by Dr. ## of Ministry of Public Health and Social Affairs. The release of 2020 Kg of gold for dental purposes was recommended for approval.

b. There were a total 5,752 displaced dentists at the time of ## of ##, 2,191 of which have been rehabilitated to date. 131 dentists have office location but no equipment while 261 have equipment but no office locations.

7. Nursing Affairs

a. Reports from Japanese

- (1) Report on examination questions given to Public Health Nurses in Tokyo, 12 November 1945. There were 88 nurses who took the written examination and 10 took the practical examination.
- (2) Report of Public Health Nurses Association (after April 25, 1945) includes prefectures name of key persons and address of Prefectural Office.

b. Report received from Capt. Luska regarding Korean Nursing Affairs.

- (1) Chart attached (enclosure No.1) showing location of schools, number of students bed capacity, etc.
- (2) Lt. ## ## has been assigned to XXIV Corps Headquarters to Capt. Luska for supervision of Institutional Nursing.
- (3) 1st Lt. Myers and ##llempin, A.M.C., are on detached service to Department of Education and are working under guidance of Nursing Affairs Section, XXIV Corps Headquarters.
- (4) A Public Health course of 6 weeks duration was started 12 November 1945. Twenty-one graduate nurses were interviewed as candidate for this course.
- (5) "Consultation with Comdr. Grafts and Korean Officials of Seoul University regarding the establishment in the University of a Department of Public Health Nursing" (conclusion not given).

c. Personnel.

The civilian nurses have already been requested from the War Department to assist Captain Luska, XXIV Corps Headquarters is the teaching program. Qualification have been checked and approved.

8. Legal

- a. A conference was held with Kuge, Chief, Section for Medical Affairs, Health Ministry, at which he presented proposed amendments to article of incorporation of the Medical, Dental Pharmaceutical and Nurses Associations, relinquishing Government control of them. Proposed changes were filed and Mr. Kuge requested to write a formal application through Chief Legal Officer.
- b. Studies of the Civil Service system with references to the Health Ministry were continued conferences were held with representatives of the government section and members of the Legislative Bureau of the Cabinet. Conferences are to continue. The Cabinet announced drastic reduction in Government personnel and reorganization of the Civil service establishing a class of technicians for technical positions. Details are not yet available.
- c. The Chief of the Legal Sub-section of this headquarters interviewed two physicians in private practice regarding the sentiment of medical practitioners in general for reorganization of Japan Medical Practitioners association.
- d. A National School Professor was interviewed regarding the reorganization of the professional associations the need for a reorganization of the Ministry of Health and Welfare, and the training of Public Health men.
- e. A complaint regarding the sales of beverages containing wood alcohol was referred to the Counter Intelligence Corps for a directive enforcing the existing Japanese Law. Recommended increased punishment and reported publicity.

**GENERAL HEAD QUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
Public Health and Welfare Section**

WEEKLY BULLETIN

**For Period
18 November to 24 November
1945**

1. Welfare

a. General.

(1) Care of foreign nationals.

- (a) At the request of Economic and Scientific Section, this Headquarters, responsibility for the preparation of an order requiring the Imperial Japanese government through its rationing system to make adequate provisions for foreign nationals was assumed by the Price and Rationing subsection. It is expected that necessary staff concurrence will be obtained shortly and the order referred to above issued within a week.

(2) Korean Care and Repatriation.

- (a) Commencing 24 November 1945, controlled rail movements of Korean repatriates from Northern Honshu and Hokkaido were resumed. During the previous ten day period the situation in congested repatriation areas was materially improved by the rail movement embargo. Sixth Army Headquarters reported receipt of DDT powder to be used in delousing repatriates. Informal reports from Sixth Army Military Government Liaison Officers indicate improvement of conditions at reception centers operated by Japanese Government for repatriates. Suggestion of XXIV Corps to assign liaison officers at Korean embarkation ports and reception centers was unfavorably considered due to lack of communication facilities.

(3) Welfare Administration.

- (a) A conference was held with officials of the Ministry of Health and Social Affairs (Welfare) in regard to reorganization of the Ministry with particular reference to the Veterans' Bureau of the Ministry. A preliminary report of suggested changes was presented by the Ministry for consideration. Further conferences on this subject are to be held in conjunction with the Government Section, this Headquarters.
- (b) A memorandum to the Imperial Japanese Government is being prepared which will require its agencies concerned to submit a detailed plan with supporting programs for meeting the relief and welfare needs in Japan during the first the quarters of 1946.

(4) Distribution of Japanese Army-Navy Supplies.

- (a) A memorandum to the Imperial Japanese Government has been issued by this Headquarters requiring the submission of a plan for allocation, storage and distribution and detailed reports as to stocks on hand, number of recipients given free supplies and related subjects concerning the distribution of Japanese Army-Navy supplies held for relief purposes. Said supplies will be held for distribution during the period February to April, 1946, and upon order of this Headquarters.

2. Preventive Medicine.

- a. The preventive medicine program was discussed in detail by staff members with Lt. Col. Cook of the Austrian Military Group. A copy of the weekly Morbidity report from the Japanese Government will be sent to the Director of Health, AHP, each week.
- b. A detailed outline of delousing technique was prepared and forwarded to Sixth and Eighth Armies.
- c. Estimates of DDT powder and equipment requirements were re-checked with Supply Sub-section and ## as to area needs worked out.
- d. (1) A memorandum regarding deficiencies of the Japanese public health service was prepared for the Chief of Section.
(2) A cable was prepared for forwarding to WARCOS requesting USPHS Medical and Statistics Officers for an appraisal of Japanese organization preparatory to the formulation of a reorganization program.
- e. Arrangements were worked out for Typhus Commission Officer, Captain Blonton, to proceed to South Honshu and Kyushu for instructing port quarantine officials in delousing techniques.
- f. Japanese translations of direction for "Delousing by Use of DDT" were distributed to Sixth and Eighth Armies.

g. Laboratory activities included the following:

- (1) The laboratory facilities of the Yoshiwara hospital were inspected in company with Prof. Tamiya, Director of the Govt. Inst. For Inf. Dis., and Dr. Yosano of the Tokyo Metropolitan Health Department. Procedures were set in motion for instituting the control laboratory for the venereal disease control program under the control of the civilian authorities. Consultations were held with Colonel Kuhns and Lt. Colonel Gordon on a check laboratory for the above to be set up in U.S. Army units. At present the 28th General Medical Laboratory is planned as the best available, but further steps will admit the outcome of Colonel Kuhns' consultation with General Rico.
- (2) The Tokyo Metropolitan Health Department was visited again and definite steps worked out for the medical examiner system to probe the accuracy of deaths reported among outcasts and a means for checking the diagnosis to determine actual cause of death. This procedure is to be in operation by 24 November.
- (3) Continued investigations have been made into the work of Japanese investigators in Japanese B Encephalitis and a study is being organized with a view to a report with recommendations for action in regard to protection of occupation troops in the coming summer.

h. Venereal Disease control activities included:

- (1) The Health Division of the Tokyo Metropolitan officer initiated this week a VD examination-treatment program at the Yoshiwara VD Hospital which is to serve as a model for the Tokyo area. Fifty individuals were given an examination including a serological test for syphilis (positives to be confirmed next week), cervical and ## smears for gonococci prepared according to a technique suggestion by this Section, and an inspection of the skin and ## ## for infectious lesions. Checks were made to ascertain that treatment given to cases of venereal disease was adequate. All infectious cases were hospitalized.

i. Sanitary Engineering Activities included:

(1) Water Supply

- (a) A conference was held with Capt. Tarbott USNR (USPHS) on conditions in Kyoto, Osaka, and Kobe. Water systems are operating in the three cities and the supply is adequate. Low pressures and damage to distribution system make delivery by water ##### necessary in some areas. A check is being made on quality by regular sampling and laboratory analysis by Japanese. Water is non-potable according to Army standards.
- (b) An inspection was made of the Kanamachi Filter Plant of the Tokyo Supply. This plant takes water from the Edogawa, serves the northeast section of the city, and produces about 22% of the total supply. Facilities are provided for coagulation, sedimentation, filtration, chlorination, and laboratory control. Operation of the plant is unsatisfactory. Laboratory reports of analysis show non-potable water, according to Japanese standards being produced much of the time. Conditions found were reported to Lt. Colonel, Hinman, CE, Water Consultant, ASCOM-C. The Eighth Army Military Government Section in Tokyo was contacted and the problem explained. They will see that corrective action is taken.
- (c) A conference was held with Lt. Tabott, SnC, XXIV Corps. Water supplies in three cities in Korea are now potable according Army standard, and the quantity is adequate at the present time. It is planned to expand some supplies in accordance with Japanese prepared plans to furnish additional quantities where needed. Chlorine and alum have been imported from the U.S. Chemical plants will be in operation soon, but there is a shortage of salt for chlorine manufacture.

(2) Waste Disposal

- (a) A conference was held with Capt. Tarbott, USNR, and Capt. Houser, SnC, Strategic bombing Survey, on conditions in Kyoto, Osaka, and Kobe. Sewage treatment plants are operating in the three cities. In Osaka several pumping stations were damaged, and sewage from these discharges in to canals. Repairs to the stations are delayed due to a shortage of material. Nightsoil collection systems are operating with difficulty due to a shortage of transportation. Neighborhood Associations are being held responsible for disposal, and it is being done without creating a nuisance.
- (b) Capt. Alston, CE, Utilities Officer, Eighth Army Military Government Section, reported waste disposal in the Tokyo area as satisfactory. Refuse, and the very small quantity of garbage being collected, is taken to dump areas and burned.
- (c) Lt. Tarbett, SnC, reported on Korea that night soil collections are being made regularly without creating a nuisance. He knew of no serious waste disposal problems in that area.
- (d) Capt. Trubnick, SnC, visited the office to discuss plans for the construction of sewage disposal facilities for Air Force installation at Tachikawa Airstrip.

(3) Sanitary Supply

- (a) Conference with the Economic and Scientific Section indicate a drop from the former estimate of chlorine production for the month of November, but minimum requirements for water treatment will be met. Arrangements have been made for the importation of salt from China.
- (b) The Tokyo Bureau of Water Supply has 15 days' supply of Chlorine on hand. Both chlorine and alum are available for the city at chemical plants.

j. Nutrition Service Activities

- (1) Conferences were held with representatives of the Economic & Scientific Section and Welfare Sub-section regarding dietary requirements for Foreign Nationals. The following standards were recommended:
 - (a) Occidental United Nations nationals, Occidental Neutral Nationals and Occidental Stateless persons to receive a balanced diet with 70 grams of protein and essential vitamin & minerals to provide 3000 calories per person per day for individuals over 12 years of age and 2000 calories for those under 12.
 - (b) Other occidental nationals to receive a dietary one third greater calorically than the official Japanese ration.
 - (c) ## Nations Orientals and Koreans to receive a restorative ration of 2400 calories for these over 12 and 1600 calories for those under 12 years of age.
 - (2) Investigated radio broadcast and newspaper reports on deaths from starvation in large cities. It was found that the data for the reports were obtained by Japanese newspaper reporters going to various district police headquarters and receiving a statement there as to the number of deaths from "starvation" in the particular areas. It was established that the diagnosis were made by a physician assigned to police headquarters on the basis of an inspection of the bodies and not on post mortem study as it is known in the United States.
 - (3) A conference was held by Major Moolton and Major Corlette with the Tokyo Metropolitan Health Office to check on previous arrangements made for carrying out autopsies on all dead bodies found in the Tokyo area in whom a nutritional or communicable disease cause of death was suspected. It was found the plan was not yet in effect due to administrative difficulties but assurances were given that it would be in operation on or before 24 November. Weekly reports will be submitted to this office.
 - (4) Prepared and submitted to the Chief of Section a proposed directive to the Japanese Government for the establishment of nutrition survey groups to gather factual information of the nutritional status and actual food consumption of Japanese civilian.
- k. The Port Quarantine Officer was in the field the entire week with a representative of the Ministry of Health and Social Affairs. A detailed report will be submitted upon his return to the office.
- l. The epidemiologist, Major Philip E.H. Bourland, reported for duty on 22 November.
- a. A memorandum to the Imperial Japanese Government, AG 632 (17 Nov. 45) PH subject: Imperial Japanese Army and Navy Hospitals be transferred to civilian agencies of the Japanese government and prohibits the limiting of use of those facilities to ex-army and navy personnel. This supplements directive AG 334 (13 Nov. 45) PH, subject Relief Board for Veterans, which transferred that to a civilian agency of the Japanese government.

4. Supply

- a. In response to a request for blanket authority to release Army stocks of supplies to civilian agencies for use in V.D. Control, advice was given that approval of this Headquarters would have to be obtained in each instance.
- b. Military commanders were advised the status of all supplies due in for typhus control.
- c. A warehouse of Japanese military medical supplies at Tachikawa Airstrip containing many microscopes was being turned back to the Japanese. Arrangements were made to take the microscopes to the 29th Medical Depot to insure safekeeping and careful inventory and so make it possible to supervise proper distribution.

d. Information from various sources is that approximately 50% of the medicine producing capacity of Japan was destroyed. The remaining 50% was working at only 20% capacity because of lack of supplies, materials, labor and fuel. An unofficial report (to Economics and Scientific Section) now shows that of 643 medicine factories, 470 (73%) are working at less than 50% capacity; 16 (2%) are working at over 50% capacity and 157 (25%) are not in operation at all.

e. Reports received indicate the Eighth Army is now rapidly concentrating Japanese military narcotic stocks at the 29th Medical Depot, Yokohama. In addition, over thirteen tons of narcotics, type not given, taken into custody by 97th Division in Nagano Prefecture. In the Sixth Army Area, the superintendent of Osaka Hygienic Laboratory has been ordered to concentrate crude and semi-processed narcotics for serious by the Sixth Army.

f. Instructions were issued for the Eighth Army to seize all narcotics, including approximately 230 pounds of finished morphine hydro-chloride, at Hoshi Medicine Manufacturing Company, Tokyo.

g. Some Japanese Military narcotics were released in Aomori Prefecture for agency emergency use at a civilian hospital.

5. Veterinary Affairs.

a. Personnel:

(1) The following Veterinary Corps Officers, assigned to GHQ, AFPAC, (Adv.) have reported for duty.

Captain G. O. Halpin	0-17158489
1st Lt. R. F. Finch	0-1765522
1st Lt. W. D. Carroll	0-1765792
1st Lt. A. T. Zancanella	0-929635
1st Lt. J.G. Woodcock	0-932386

b. General.

(1) Colonel Oness H. Dixon, Chief of Veterinary Affairs, departed for Kyoto on the 20th of November for the following purposes:

(a) Survey of Japanese Veterinary Affairs.

(b) Liaison with Sixth Army.

(c) Attendance at a conference of Japanese Prefectural Veterinary Officials from southern half of Japan.

c. Reports from the Japanese:

(1) Weekly report of communicable animal diseases (for week 16-22 Nov.):

This report shows anthrax in cattle in Hyogo, Tottori, and Wakayama prefectures; hog cholera and swine plague in Fukushima, the latter also in Iwate; one case of swine erysipelas in Saitama; and white diarrhea of chicks in Hyogo, Tottori, and Iwate prefectures.

(2) A list of Animal Quarantine Stations in Japan, covering inspection of livestock meat, bone and bone meal, hides, wool, and hair. There are twelve such stations.

(3) "Statistical Map of Animals Attacked by Infectious Diseases" during the year 1944 - This chart shows graphically the location and severity of the ten most important infectious diseases during 1944, as well as the locations of the twelve Animal Quarantine Stations.

6. Dental Affairs.

Negative Report.

7. Nursing Affairs.

a. Report from Chief, Nursing Affairs, Korea, re: Public Health Nursing Program of Training Center in Seoul..

(1) Methods used in organizing course and plans to be followed along with curriculum to be used for the six week course. Copy of curriculum and plans is attached hereto as an annex.

(2) Request from Chief, Nursing Affairs, Korea, asking for at least 8 Public Health Trained Nurses for the provinces of Korea, Chief, Public Health and Welfare Section, SCAP, brought back from Korea authorization for three civilian nurses. These have been requested for XXIV Corps Headquarters and will be requisitioned.

- (3) Report from Lt. Colonel Brewer on the nursing situation in Kofu City, Yamanashi Prefecture. Report included the number of nurses working in hospitals and consultation officers (137); the number of nurses in training at present time; registered midwives; number who passed examination. Also subjects studied by nurses and midwives. Lt. Colonel Brewer states that the Public Health Program in this Prefecture is entirely inadequate and he has recommended that a well trained Medical Officer (P.H.) be assigned to the Military Government Section to work out a health program.

8. Legal.

No report.

9. Miscellaneous

a. The following directives to the Imperial Japanese Government originated in this Section:

- (1) Violation of Directive Prohibiting Manufacture of Narcotics, AG 441.1 (12 Nov. 45) PH.
- (2) Relief Board for Veterans, AG 334 (13 Nov. 45) PH.
- (3) Imperial Japanese Army and Navy Hospitals, AG 632 (17 Nov. 45) PH.

b. The following information or instructions were furnished as indicated from this Section:

- (1) To commanding general, Sixth and Eighth Armies, and XXIV Corps requesting Public health and Welfare Military Government Personnel status reports.
- (2) To the Surgeon, Eighth Army regarding typhus control in Hokkaido.

Crawford F. Sams,
Colonel, Medical Corps.
Chief, Public Health and Welfare Section.

1 Inclosure: Annex to Nursing Affairs.

ANNEX

ORGANIZATION AND PLAN FOR PUBLIC HEALTH NURSING IN KOREA

1. Following is an account of how the 6-weeks' Public Health Nursing course was organized and the curriculum being used:

- a. Publicity through newspaper, radio and personal visits to leading hospitals.
- b. Interview of each applicant and qualifications recorded.
- c. Planning of curriculum, outline of courses, and number of details worked out after consultations with Section Chiefs and Korean Medical and Seoul University personnel.
- d. Organization of city maternal and infant Health Centers as practice center and field. Field program outlined, standing orders, bag contents, records and uniforms planned and new under procurement and organization.
- e. Consultations with Korean and Military Government, Presidents of Seoul University and Bureau of Education officers, particularly Medical Education officer in regard to establishment of this course. It is to be made a department in the University (Dep't of P.H.N).
- f. So far, 18 candidates have been interviewed and two will come from In-Chau.
- g. On 10 November 1945, each candidate shall have ##### and be measured for uniforms.
- h. Participants in instruction will be:
 - (1) Mrs. Whang, Instructor in P.H.N.
 - (2) Drs. (Korean) at Seoul Universities.
 - (3) Miss Kine, P.H.N. at City Clinic (will teach in the field).

The course will continue for 6 weeks. At its completion, 10 of these graduates will form the nucleus of the (Seoul) City Health Department. The two nurses from In-Chau will return there. The others will form a part of public health teams (Korean) to work in the other provinces. Its success will determine the continuance and possibly the lengthening of the program.

The following curriculum will be utilized:

	HOURS
P.H.N. Principles	25
Nutrition and Dietetics	10
Statistics	5
Maternal Hygiene	15
Infant Hygiene	20
Mental Hygiene	6
Tuberculosis	6
Venereal Diseases	6
Sanitation	10
School Nursing	10
Industrial Hygiene	10
Family Health Work	5
English	10
Communicable Diseases	10
Theory	148 hours
Practice	140 hours

2. Practical (P.H.N.) Program (140 hours):

- a. Orientation.
 - Tour of center: introduction to other workers.
- b. Conference on records, scope of work.
- c. Introduction to bag; bag technique practice
- d. Review of standing orders for P.H.N.
- e. Work in Center.
 - (1) Assist exam. Of ante-parum, post-partum mothers, babies.

- (2) Immunization of babies.
- (3) Milk station; Demonstration of making formula, etc.
- (4) Health talks to mothers regarding pregnancy, infant care.

f. Follow up Health Center patients into home.

- (1) Demonstration visit made initially by Miss. Kin.
Observation at Tuberculosis and V.D. Hospital clinics.

3. Bag Technique:

- a. If possible, carry some newspaper with the bag. It may not be available in the home.
- b. Always place bag on newspaper on a high surface so that children and curious onlookers may not readily get into it.
- c. Take out step, towel, handbrush, ask family for some water, scrub your hands well. Leave these materials on the newspaper.
- d. With clean hands, take out your apron, and put it on.
- e. Take out any other necessary materials and close the bag.
- f. Proceed with the visit.
- g. When visit is completed, wash and dry all equipment used and replace in the bag.
- h. Wash hands well with soap and remove apron.
- i. Replace into bag, the apron and all materials used.
- j. In case of communicable disease, do not put the apron back into the bag. Wrap it separately in paper and carry it outside of bag to Center where it must be boiled.

4. Regulations regarding P.H.N. uniforms

- a. Each nurse will be given material (10 yds), thread, and buttons for 2 uniforms and bandanas for hair, and white material (2 yds) for collar and cuffs.
- b. The uniform will be gray, washable material with white collar and cuffs, and turban made of same gray material.
- c. Uniforms will be made by tailor.
- d. Uniforms will be kept clean and neat at all times.
- e. On duty, while at work in health centers, clinics, or in making home visits, public health nurses will be in complete uniform at all times.
- f. White armbands will be worn on left sleeve with words in English and Korean "Public Health Nurse". (Or possibly to have this put upon each bag. Not yet decided).
- g. Uniforms will remain the property of the nurse as long as she is engaged in some phase of public health nursing in Korea.

5. Regulations Regarding Bag.

- a. The practice center (City Maternal and Infant Health Center) will have 15 public health nurses bags completely equipped with basic first-aid, teaching and demonstration materials.
- b. These bags will be kept clean and the equipment complete and in good condition at all times by the nurses using them.
- c. They must be taken to the nurses own homes except in emergency, but will be kept at the Center.
- d. Expendable materials will be replaced by the city Health Department for whom the students will work during their training period.

**GENERAL HEAD QUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
Public Health and Welfare Section**

WEEKLY BULLETIN

**For Period
25 November to 1 December
1945**

SECTION I WELFARE

Welfare administration

Conferences were held by this section with officials of the Ministry of Health and Social Affairs relative to the reorganization of the ministry as a whole and particularly with reference to the Veteran's Protective Board. It was explained that this headquarters desires to deemphasize the military aspects of the Veteran's Board to liberalize and integrate Board functions with those of a similar civilian category now conducted by the Ministry and to make Veteran's facilities available to all needy person in Japan.

Belief

A memorandum for the Imperial Japanese Government was issued directing certain stocks of foodstuffs and supplies be set aside for relief purposes. Source of the supplies is Japanese Army and Navy stocks turned over to Home Ministry control by the occupation forces. Stocks will be held for later distribution when orders from this headquarters. The Japanese government's plan for distribution of the supplies must include: complete inventories, free issuance to persons whose eligibility is determined on individual need based on family budgetary deficiency, distribution through normal ration channels, avoidance of mass feeding or distribution schemes and complete reports of persons aided and status of supply stocks throughout Japan.

In view of increasing numbers of unemployed in Japan for whom no relief law or social insurance scheme provides assistance, a staff study surveying the entire relief problem and making recommendation for care to be provided during the coming winter months is being circulated among interested staff sections.

Repatriation

Report on status of Korean, Chinese and Formosan repatriation issued by this headquarters on 25 November 1945 showed that 405,602 Koreans and 11,399 Chinese had been repatriated, by the date. There remain approximately 638,098 Korean, 29,202 Chinese and 30,000 Formosans to be repatriated.

Foreign Nationals

Responsibility for preparing a satisfactory program for the care of Foreign Nationals in Japan has been assumed by the Economic and Scientific Section, this headquarters.

SECTION II PREVENTIVE MEDICINE

General

It is planned to send members of the U.S. Typhus Commission to South Honshu (going directly to 32nd Division Hq.) and Kyushu for training prefectural health department and port quarantine staffs in delousing technique by use of hand and power guns, and to clarify points as to purposes for which DDT powder and equipment were being made available.

Members of the Ministry of Health have been instructed regarding Japanese responsibility in more rigid enforcement of smallpox and typhus control measure at all levels.

A Directive has been issued to the Imperial Japanese Government regarding spraying by use of Insecticide, spray DDT, of Hakodate-Aomori ferries and all railway care assigned for transportation of Allied personnel.

The Epidemiologist, Major Philip Bourland, reported for duty during the preceding week.

Sanitary Engineering

Water Supplies The reconditioning and operation or supervision of Korean public water supplies by Army personnel was discussed with Sanitary Engineer, XXIV Corps. This procedure is to be followed in all cities having acceptable sources of supply and suitable facilities for treatment in those areas where occupation forces are located.

The utilities engineer, Tokyo Military Government Section, reported that progress was being made on improving operation of Kanamachi Filter Plant where unsatisfactory conditions were previously found. Some of these improvements that were noted were, that cleaning of overloaded sedimentation tanks has started; the chlorine dosage has been increased to the maximum prewar Japanese standard of 0.4 ppm; and that trucks are being furnished from Japanese sources for stocking 30 days of alum, soda ash and chlorine.

Insect and Rodent Control

From conferences held with officers in charge of control work in Tokyo area it was learned that insecticidal work is continuing in building as they are taken over for military personnel occupancy and that all buildings

occupied by military personnel are being rat-proofed; trapping is being carried on in building that have been completed.

Nutrition

An inspection was made of Ueno railroad station and the Ueno Vagrant House located in the basement of the Asakusa Honganji Temple at 1400 on 26 November 1945. The station was rather dirty and malodorous but no sick or starving people were found lying in the corridors or alcoves. Navy travelers waiting for trains were sitting on the sidewalks and ground outside the station. A cursory inspection of these people revealed them to be in satisfactory nutritional condition.

The vagrant house was a place of indescribable filth and destitution. Crowded into five rooms in the basement of the temple were some 450 derelicts dressed in rags, many lying about on the floors obviously ill and all presenting a pitiful picture. No sanitary facilities were in evidence and the floors were covered with human excrete. Nine dead bodies were discovered in this pest hole. There were said to have accumulated over the preceding weeks. Arrangements were made to have these bodies removed immediately and for them to be autopsied. A subsequent verified report found inanition to be the primary cause of death in eight of these nine cadavers.

On 28 November at the direction of the nutrition consultant, Public Health and Welfare Section, SCAP, the Tokyo Metropolitan Health Department sent a nutrition survey group of 13 workers to the Ueno Vagrant House. This group made physical examinations of the inmates and estimated the daily per capita food consumption. Detailed reports of the findings will be submitted shortly.

Discussions have continued with the Ministry of Health regarding personnel and methods to be employed in making nutritional surveys of the civilian population. It was stated that the survey in Tokyo can begin by 15 December 1945.

Venereal diseases Control

On 27 November the Ministry of Health and Welfare submitted the first report required by the Memorandum to the Imperial Japanese Government dated 16 October 1945, subject; "Control of Venereal Diseases". Highlights of report were:

1. A special regulation for the Venereal Disease Prevention Law (Regulation No.45 of the Ministry of Health and Social Affairs) issued on November 1945 provides for:
 - a. The reporting of all cases of syphilis, gonorrhea, chancroid and lymphogranuloma venereum by name, address and sex.
 - b. Compulsory treatment and hospitalization of persons in the infectious stage of venereal disease "whose occupation naturally involves liability of spreading disease".
 - c. Health examination and the issuance of a certificate of examination to individuals "whose occupation naturally involves liability of spreading venereal disease".
2. The Nippon Iryodan (Japanese Medical Treatment Corporation) was ordered on 7 October 1945 to issue instructions to every prefectural branch to establish an institution for the treatment of venereal diseases.
3. A demonstration examination-treatment clinic using modern techniques and modern drugs was initiated in Yokohama under the supervision of Eighth Army medical officers. The demonstration project at the Yoshiwara Hospital in Tokyo was continued with the institution of mepharsen-bismuth therapy for the first time on 30 November.

Medical Examiner System

The operation of the newly instituted medical examiner system in metropolitan Tokyo was inspected and the results checked in conjunction with Eighth Army liaison officers. The principal areas of survey, the Ueno Park station and nearby Honganji temple, provided the largest number of cases of sick and dead, the sick having been largely transported to the Shiba Ku charity hospital (Saiseikai), the dead having been autopsied under the direction of Dr. Furuhashi, professor of forensic medicine of Tokyo Imperial University. Nearly all the deaths, totaling 11 since 24 November, were attributed to severe undernutrition.

Venereal Disease Laboratory Diagnosis Program

The previously projected program was completed under the auspices of Dr. Tamiya, Director of the Government Institute for Infectious Diseases with the assistance of Major Canatsey, bacteriologist of the 42nd General Hospital, and is now available for large scale application. The first collection of specimens is scheduled for 4 December 1945, check test to be performed at the 42nd General Hospital Laboratory. The first refresher course for laboratory technicians will be given 10 December 1945.

Survey of Japanese Studies on Japanese B Encephalitis

Further conferences were held with members of the Institute for Infectious Diseases and their experimental data analyzed in part. Information is also being assembled from official governmental and other sources in the effort to assess the importance of the disease to occupation forces during the ensuing summer months, and a report with recommendations is being prepared.

SECTION III ADMINISTRATION OF HOSPITALS

Memorandum for the Japanese Government

The Imperial Japanese Government was directed by a memorandum dated 19 November 1945 to transfer supervisory authority of all Japanese Army and Navy hospitals, sanatoria and other hospital facilities of the former Imperial Japanese Army and Navy, when received by the Home Ministry from Occupational Force Commanders, to that agency of the Ministry of Health and Social Affairs responsible for the hospitalization of civilians. Restriction of treatment to veterans and their families is prohibited.

Memorandum to Occupation Force Commanders

The Commanding Generals, Sixth and Eighth Armies, and Commander, Fifth Fleet, in a letter dated 20 November, subject: "Imperial Japanese Army and Navy Hospitals", were instructed that all hospital facilities of the Imperial Japanese Army and Navy, in excess of United States Army and Navy occupational force needs as established by the occupational force commanders, be turned over to the Home Ministry of the Japanese Government as soon as practicable.

Reports

Weekly Japanese civilian hospital strength report received from 19 prefectures shows a decrease in the total number of hospital patients and outpatients treated.

SECTION IV NURSING AFFAIRS

Reports from Japanese

1. Curriculum of nursing course from Japanese Central Red Cross Hospital.
2. Chart showing diet and calories for period of 10 days for patients and nurses at a tuberculosis sanatorium (Hoseiyen Sanatorium).
3. Proposed meeting of Public Health Nurses Association to be held 4 December 1945. Delegates have been notified and returns of those expected received. The program has been discussed and planned. Legal aid and interpretation assistance has been requested for meeting. Meeting will be held in Nippon Ishikai Building, Surugadai, Kandaku, Tokyo.

SECTION V VETERINARY AFFAIRS

General

The officer in charge of Veterinary Affairs made a field trip to Kyoto, Osaka, Kobe and Nara for liaison with the Sixth Army, survey of Japanese veterinary affairs and to attend a conference of prefecture veterinarians from the southern half of Japan.

The officer in charge of Veterinary Affairs made a field trip to Fukushima for liaison with the Eighth Army to survey Japanese veterinary conditions and to attend a conference with the veterinarians of the prefecture of the northern half of Japan.

As a result of these two field trips it was observed that the two conferences brought together representatives from every prefecture. All phases of animal disease control, meat and milk inspection, livestock production and directives from the Supreme Commander of the Allied Powers were discussed. Many problems were solved especially with reference to the responsibilities of prefecture officials. These meetings are evidence of the fact that the Ministry of Health and Welfare is making a concerted effort to comply with pertinent SCAP directives in these instances. The governmental organization in all prefectures visited is staffed with sufficient trained personnel to conduct an efficient veterinary service. However, sanitation is being neglected and equipment is in poor repair and antiquated in design. Inspection of meat in slaughter houses and eradication of bovine tuberculosis is generally practiced. Some pasteurization of milk exists but much raw milk is being consumed. Laboratory control of dairy products is not being generally practiced.

Reports from the Japanese

Ministry of Agriculture and Forestry reported:

1. Communicable animal disease for week 23-29 November. (This report shows one case of anthrax in Gunma Prefecture and one of blackleg in Tottori Prefecture.)
2. Steps taken to comply with SCAP Directive AG 728, 30 October 1945.
3. Results of bovine tuberculosis eradication of 1942, 1943 and 1944.
4. Animal disease for the years 1942, 1943 and the months from January to September 1945.
5. Preparation and distribution of veterinary sera, vaccine and biologicals, April 1943 to March 1944; April 1944 to March 1945; April 1945 to October 1945.

Ministry of Health and Welfare reported:

1. Steps taken to comply with SCAP Directive AG 728, 30 October 1945.
2. Monthly meat inspection report for July, August and September 1945.

Korean Report

The Surgeon's Office XXIV Corps submitted the following report on Korean Veterinary Affairs:

1. General. Japan veterinarians held practically all key positions in the Korean Government prior to surrender. These have all been removed and as a result the effectiveness of the veterinary service is greatly reduced.
2. Organization. The Korean Government under the Japanese had a national veterinary service in the department of agriculture. On 7 November 1945, Ordinance No. 25, Headquarters USAFIK, Office of the Military Governor, transferred this service to the Bureau of Public Health and Welfare.
3. Structure. National Headquarters is in the Bureau of Public Health and Welfare; a Provincial Headquarters is located in each province and each province is subdivided into districts; total 132.
4. Personnel. There are about 1,000 veterinarians in Korean of which 458 are assigned to districts.
5. Education. There is one Veterinary College located at Souwon which is not functioning because the Japanese teaching staff was removed and has not been replaced. Two instructors remain out of a former staff of seven.
6. Animal strength 1943. (Census to nearest 1000)

Dairy cattle	2,000
Work oxen	1,062,000
Swine	636,000
Sheep	48,000
Horses	35,000
Pigs	225,000
Chickens	2,983,000

7. Animal disease control. Prevailing animal disease are glanders, rabies, anthrax, tuberculosis and rhinderpest. In 1943 the tuberculosis test was applied to all dairy cattle in Kyung KI Go. And 24.9 percent showed positive reactions. The method of disposal of positive reactors is unsatisfactory. Owners are required to remove them from the herd for one year.

8. Meat and Dairy Inspection. District veterinarians are responsible for ante and post mortem inspection of animals presented for slaughter and the sanitation of slaughter houses. Nothing definite is known about dairy inspection but it apparently did not go beyond periodic testing of cattle for tuberculosis.

SECTION VI DENTAL AFFAIRS

No report.

SECTION VII SUPPLY

Approval has been received to request for establishment of a reserve of biologics, to be maintained in U.S. stocks in Japan, to supplement local stocks, if necessary to protect the health of occupational troops. Recommendation for the establishment of an emergency reserve of other types of medical supplies, to be set up in U.S. depots for use on call from this headquarters, has been returned by the War Department with request for information whether the reserve could be provided from excess supplies in Pacific areas. A study on the subject is now being made by AFPAC.

Commanding Generals, Sixth and Eighth Armies and XXIV Corps, have been advised of the status of typhus control supplies requisitioned by S.G.O., and this headquarters. It was pointed out that supplies requisitioned covered only civilian requirements for delousing at ports and other typhus control measures among civilians.

Recommendations were submitted reference additional accounting procedures to be followed by all agencies handling medical supplies released from U.S. military stocks.

Reports from the Seibo International Catholic Hospital stated that an ample supply of medicines had been received. Difficulty is still being experienced in connection with fuel and heating equipment.

The Eighth Army was authorized to utilize captured Japanese equipment in the rehabilitation of the Yokohama General Hospital which will be used for hospitalization of foreign nationals.

A report from the Ministry of Welfare stated two new regulations have been issued strengthening narcotic control as directed by this headquarters. A civilian narcotic investigation was requested to study Japanese production, manufacture, import and export narcotic records.

SECTION VIII LEGAL

Consideration is being given to the abrogation of the licensed prostitute legislation. While the present laws on the subject appear adequate there is, in actuality, much to be desired in how it is practiced.

In an effort to ascertain the functionings of the civil service system in Japan conferences were attended in the Government Section with members of the cabinet.

A directive is now under consideration to the Japanese Government concerning poison alcohol which is being sold to the public. The directive now under consideration is pending decision as to whether it should be published alone or as part of a series of offenses the establishment of which is contemplated.

Crawford F. Sams,
Colonel, Medical Corps,
Chief, Public Health and Welfare Section.

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
PUBLIC HEALTH AND WELFARE SECTION**

WEEKLY BULLETIN

**For Period
2 December to 8 December
1945**

SECTION I WELFARE

Welfare Administration

A report was received from the Ministry of Health and Social Affairs (Koseisho) outlining in detail all subsidy payment made by it to various private health and welfare organizations and associations. Study is continuing with reference to reorganization of the Ministry.

Miscellaneous

1. Korean and Chinese Repatriation.

Field reports received in the section indicate definite improvement in facilities and care provided Korean and Chinese repatriates at Japanese government operated Reception Centers. Numbers being repatriated from Japan continue at a high rate although the number of Japanese returned from Korea has slackened.

2. Care of Foreign Nationals.

Communication to Sixth and Eighth Armies directed that action be taken to prevent Japanese discrimination in favor of German and other enemy nationals and to seize German hoarded supplies. It is the intent to use these for relief use should it become necessary.

Relief

The first reports of location, amount and kind of supplies to be set aside by Japanese Home Ministry for relief purposes was received.

SECTION II PREVENTIVE MEDICINE

General

Two typhus cases in military personnel investigated. Eighth Army Liaison Office contacted and arrangements made for checks on control action taken by Japanese authorities and regarding action required to clean up unsanitary conditions in Tokyo railway stations.

The inmates of Asakusu Honganji Temple, presently used as a refuge for indigents, were deloused in a cooperative project supervised by USA Typhus Commission personnel. Civilian dusters were furnished by Tokyo Municipal Health Department. The project was utilized for training this group in dusting techniques. Arrangements were made with the laboratory officer to collect data on laboratory situation in Japan.

Sanitary Engineering

1. Water Supplies

Kyoto and Osaka systems were reported to be operating normally by Major Black, CE, Engineer Intelligence, OCE. Osaka water treatment plant was said to be the best he has seen in Japan. Lack of sanitary engineering personnel in Sixth Army area was noted; inspection and supervision of water and sewage systems were reported by him to be inadequate.

Clarification of the responsibility of the Army for water supplies in refugee camp established by the Japanese was given to the Sixth Army. Japanese are responsible for water supplies in camps established by them; the Army is responsible for supervision of such supplies, and will act in operations capacity only if required to prevent outbreak or spread of disease.

Conference was held with Lt. Col. Hinman, CE, Water Supplies Consultant, ASCOM-C, on proceed use of Sakai-Wadabori water supply in Tokyo for direct consumption by military personnel. Suggestions had been made by OCE, and transmitted for comments, that the central district of the city fed from this source is to valved off from the other interconnecting sources of supply and chlorine dosage will be increased for this district. Proposal was not considered favorably for the following principle reasons:

a. With 19 sources of supply interconnected at many different points in the distribution system, it is a very difficult task to make certain that one supply is completely isolated from all others, and even more difficult to assure that the valves remain closed.

b. According to U.S. practice, a closed gate valve is not considered satisfactory protection between a potable and non-potable supply; danger of contamination is especially great where pressure of the non-potable supply may frequently exceed that of the potable supply as would be case here.

c. Many cross-connection exist between the city supply and private well supplies. A complete report on the Tokyo system with recommendations for its improvement is being prepared by Lt. Col. Hinman.

Chlorine production is continuing to increase, but salt stocks are running low at some chemical plants. Total production for November (first 25 days) was 152 metric tons with 69.7 metric tons allocated for water

treatment. (Prewar normal monthly demand for water was 42 tons.) Estimated total production for December is 225 metric tons.

2. Environmental Sanitation:

Five railroad stations in the central part of Tokyo were inspected for general sanitation. Conditions in general were poor; some improvement was noted at Ueno. Eighth Army Military Government Detachment in Tokyo and the Surgeon's Office, Eighth Army, were contacted. Program for general housecleaning and regular maintenance of all stations in the Tokyo-Yokohama area will be developed.

3. Nutrition.

Analysis was made and report submitted on the date obtained from the nutrition survey conducted at the Ueno Vagrant House in the basement of the Asakusa Honganji Temple on the 28th and 29th of November 1945.

The survey showed a per capita food intake of 1,197 and 1,506 calories on the two days of the study. The average daily protein intake was 32.8 grams. Eighth-six percent of the inmates showed an average weight loss of 13 pounds below standard weights for age, sex, and height. Thirteen subjects, or 10.4 percent of those examined showed edema.

Material for a press release was submitted through Captain Mitchell to General K.R. Dyke, Chief. C.I. and E. Section, on the nutritional outlook for the Japanese people during the winter. The purposes of this report was to allay fear and point out the much better relative position of Japan than the countries of western Europe, notably Germany. Cooperation, careful husbanding of her food supplies, and relentless efforts to effect adequate distribution of food were cited as the requisites to alleviate the present situation. It was pointed out that the many recent reports in the Japanese press on widespread starvation were considerably exaggerated and related only to vagrant indigent groups which did not reflect conditions existing in the population at large.

There conferences were held with representatives of the Ministry of Health and Social Affairs and the Tokyo Metropolitan Health Bureau relative to plans and methods to be employed in the forthcoming nutrition survey of Tokyo. Excellent progress has been made. Final plans will be submitted to this office on 11 December and assurances were given that if approved the survey could be begun immediately.

4. Venereal Disease.

Dr. C. M. Carpenter, Scientific Consultant to The Surgeon General and head of the Chancroid Commission, visited the Section. Observations were made by him in company with the venereal disease consultant, this section, on diagnostic and treatment practice in both Army and Japanese civilian hospitals. Skin tests for chancroid and lymphogranuloma venereum on a group of 57 joro showed 21 positive reactions to Ducrey antigen and 2 to Frei antigen.

Investigations were made with the legal advisor of business practice in connection with joro and geisha enterprises.

5. Laboratory.

Japanese B encephalitis. The survey of published and unpublished material concerning Japanese B encephalitis studied in the laboratories of the Institute for Infectious Diseases in Tokyo was continued intensively. The assembled data will provide a basis for further studies by American investigators, particularly in relation to the epidemiological problems affecting our own personnel in Japan.

SECTION III ADMINISTRATION OF HOSPITALS

During the period covered by this report Japanese civilian hospital strength reports received from 21 prefectures showed a total increase of 11,201 out-patients treated while the number of hospital patients was decreased by 589. Complete weekly Japanese civilian hospital strength reports for periods indicated are shown in the following table.

Period	Number of		Number of Patients		
	Hospital	Capacity	Inpatients	Outpatients	Total
12 Oct.	2,504	126,140	77,464	222,054	303,469
19 Oct.	2,540	122,532	74,897	242,522	312,461
26 Oct.	2,598	131,747	77,091	217,500	320,579
2 Nov.	2,595	133,448	75,959	237,839	317,744

It is to be noted that while hospitalization statistics do not reflect the presence of any specific disease, it does indicate: a) the general overall disease rate of a nation, b) the adequacy of physicians as reflected in the demand for medical care and c) the adequacy of available hospital beds as shown by this demand.

SECTION IV NURSING AFFAIRS

Reports from Japanese

1. Copy of questions given in practical examination to 19 midwives in Tokyo, To, 26 November 1945 was received from the Japanese, the examination being in two parts giving 5 point: for questions on the model and 5 points for examination of pregnant mother ## patient. The questions pertaining to the model were as follows:

“Five minutes to make internal examination to determine: condition of the baby, stage of delivery, position of baby, length of the cord, length of the baby, length of the baby's head.”

Among other questioned an important one is to name the instruments on the table.

2. Applicants names, ages, prefectures and schools attended received.

3. Public Health Nurses Association. A list of the delegates names and prefectures were given with program. On December 4th an all-day meeting was held in Tokyo, To by the Public Health Nurses. Discussion of dues magazine, constitution and by-laws was held and a letter was composed and sent to the Ministry of Health asking permission to carry on the association without the interference of non-nursing personal.

4. A report from Nakano-ku Sanatorium for Tuberculosis. Copy of training school curriculum, regulations and routine of nurses and salary paid to nurses.

5. Report of names, address, ages and schools of nurses taking Public Health Nurses examination in Tokyo, To.

SECTION V VETERINARY AFFAIRS

General

The following inspections were conducted during the month:

1. The Tokyo Milk and Milk Products Control Company (formerly Morning Milk Company).

This establishment is housed in an excellent brick and tile building with separate rooms for the various ##. Ventilation, drainage and refrigeration are satisfactory. Seven hundred gallons of milk, received from 13 farms, is pasteurized and bottled daily. Equipment is modern in design but badly in need of repair. Steam and chlorine are used for sterilization. The sanitation of the institution was fair. Butterfat, bacteriological, activity, specific gravity and temperature tests, daily farm inspection, tuberculosis and bovine contagious abortion eradication, are control measures in effect. Measured by United States standards, Grade C milk is being supplied by this plant. Under Japanese standards it is Grade A, or ordinary milk.

2. The Kitasato Institute of Infectious Diseases; Dr. Katsuya Kasai, Director of Veterinary Affairs.

This is a private institution which conducted a large private business in sera, vaccine, biologicals, drugs and chemicals, both human and animal, in prewar days. Affairs at the present time are practically at a standstill and the plant presents a dilapidated appearance. A research staff has rendered excellent service in the past. Plans call for rehabilitation of the establishment and reestablishment of business as soon as funds can be obtained.

Personnel

The following Veterinary Corps officers assigned to General Headquarters, American Forces in the Pacific (Advance), Military Government Section, have been transferred as follows:

1. To Korea.

Major William H. Dieterich VC, 0380321

Major Russell M. Madison VC, 024371

Captain George O. Halpin, VC, 17155249

1st Lieutenant Walter D. Carroll VC, 01765792

1st Lieutenant August T. ## VC, 0929635

2. To Eighth Army Headquarters.

Major Edwin G. Sunderville, VC, 023335

SECTION VI DENTAL AFFAIRS

Dental equipment units are in production at the rate of 20 per month. The conversion of an additional factory is expected soon so that within three months the rate should be raised to 70 units per month. It is estimated that it will take 4-5 years to reequip the profession.

The recommendation on that gold, platinum and silver be released for dental purposes is still being delayed by the Reparations Commission. This causes an undue hardship for both patient and practitioner.

SECTION VII MEDICAL SUPPLY

A brief survey covering manufacture of X-ray film indicates that three plants are now producing film. The plants were damaged only slightly but production is low due to lack of fuel and chemicals.

An average of 30,000 dozen 10" x 12" film was produced monthly from 1940 to 1944 of which from 50 to 70 percent were used by the military forces. Present production is 5,000 dozen monthly.

A request has been submitted for an estimate of the amount of materials required to increase production to 15,000 dozen of film monthly and efforts will be made to provide the necessary raw materials and fuel. Close supervision is being exercised over distribution procedures to insure that production is utilized properly.

Personnel of the medical supply sub-section visited the Yokohama Naval Base and the Tachikawa Air Strip during the week in connection with the removal of Japanese medical supplies from those installations. The Home Ministry has made arrangements for transfer of the supplies to local prefectural warehouses and work is now in progress at both locations.

Conference was held with representatives of the Ministry of Health and Social Affairs and Medicine Control Company reference distribution of military stocks and newly manufactured supplies. A visit was made to the Medicine Control Company on the same subject.

Narcotics

A translation of Japanese narcotic laws and regulation including penal regulations was furnished this section along with an official estimate of Japan's yearly narcotic requirements for legitimate medical purposes.

The planned import of opium into Japan in the year 1944 was more than sixty-two tons whereas the actual import was only 9 tons according to figure furnished.

Personnel

Major Alfred R. Cannon, MAC, was assigned during the week and Major Charles L. Locker joined for temporary duty.

SECTION VIII LEGAL

No report.

SECTION IX MISCELLANEOUS

The following directives to the Imperial Japanese Government originated in this section and have been published since first issue of the Weekly Bulletin:

- a. Disposition of Heroin in Japan. AG 441.1 (2 Nov. 45) PH

Forbids the possession or traffic in heroin. Directs the Japanese Government to confiscate all heroin, deliver it to occupation forces and report such actions taken.

- b. Use of Japanese Red Cross Hospital by Allied Force. AG632 (21 Nov.45) PH

A statement of policy that Red Cross Hospitals cannot per se be considered exempt from use by occupation forces and specifically rejects the petition to deny the Osaka Red Cross Hospital from such use.

- c. Prevention and Control of Typhus Fever in Japan. AG710 (21 Nov. 45) PH.

Designates the Japanese Government's public health agencies as responsible for control and prevention of typhus fever in Japan under the supervision of the occupation forces. That U.S. military forces will furnish typhus control supplies that are necessary.

- d. Reserve Supplies Held for Relief Distribution. AG400 (26 Nov. 45) PH.

Rescinds directive of the same subject dated 22 November 1945 and directs that Japanese Government will submit an inventory of relief stocks available and submit a plan for approval of their distribution.

- e. Distribution and Use of Medical, Dental and Veterinary Supplies. Issued by the Occupation Forces to Civilian Agencies. AG440 (27 Nov. 45) PH.

In the event it ever becomes necessary to issue supplies from occupation force stocks, the Japanese Government will be responsible for their distribution under the supervision of the Chief Health Officer of the area.

f. Prevention and Control of Typhus Fever in Japan. AG710 (29 Nov. 45) PH.

Supplemental instructions to memorandum of the same subject dated 21 November 1945 and directs the spraying with DDT of railroad cars and other public conveyances assigned for the use of occupational forces.

g. Violation of Directive Prohibiting Manufacture of Narcotics. AG441.1 (7 Dec. 45) PH.

An incidence of violation of narcotics directive of 12 October 1945 was discovered. This memorandum directs the Japanese Government to report the facts concerning the violation and the action taken.

Crawford F. Sams,
Colonel, Medical Corps,
Chief, Public Health and Welfare Section.

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
PUBLIC HEALTH AND WELFARE SECTION**

**WEEKLY BULLETIN
For period**

**9 December to 15 December
1945**

SECTION I WELFARE

Welfare Administration

During the week a report was received from SCAP Finance Section listing subsidy payments made under the 1945 budget by the Ministry of Health and Social Affairs. The payments constitute a sizable portion of the total amounts expended by government in Japan for relief and welfare services. They are distributed to private welfare or medical associations and agencies and cover a wide variety of activities. A study of the report is now being conducted by the Welfare Subsection with a view to determining future policy and control over the agencies concerned. It is generally conceded that the wide-spread use of the subsidy system in Japanese welfare administration contains elements at variance with SCAP control requirements.

Relief

An additional directive to the Japanese Government on the subject of relief was issued during the week. This directive requires the submission, to SCAP by 31 December, of a plan for providing relief to unemployed and other dependent persons during the period January-June 1946. The policy inherent in the release of this memorandum is basic to Japanese welfare administration and represents a definite clarification of future occupation and Japanese responsibility in the field. It is clear that the relief of destitution must be undertaken directly by the Japanese Government and that SCAP will hold it responsible for the prevention of wide-spread hunger and disease.

Added significance is given this plan by the fact that newer in Japanese history has government accepted responsibility for providing minimum food and care for its dependent citizens. Current legislation permits low payments to the aged, mothers and several other special categories of persons, but makes no provision for unemployment relief or the general care of persons who are involuntarily dependent. It is the intention of SCAP to require such general care at whatever level is necessary for the protection of occupation troops and to implement basic occupation aims.

Coincident with the release of the directive requiring the institution of a general relief program there was received from Japanese Government an inventory and distribution plan for the use of Japanese Army-Navy supplies held for relief purposes. This plan was submitted in compliance with a memorandum to the Government, AG 400 (26 Nov. 45) PH, requiring the free distribution of reserve stocks to needy persons. It is intended that the distribution of these supplies will become part of and implement the over-all relief plan discussed above. Details of the food distribution program are being forwarded to lower echelon forces with instructions for checking and supervising the program. The plan requires the distribution of reserve food supplies through ration channels after investigation of individual need by a local Public Welfare Agency. Withdrawal authorizations will be given free to persons whose need is established.

Care of Foreign Nationals

At a conference this week, attended by representatives of G-1, G-3, G-4, Natural Resource, Economic and Scientific and Public Health and Welfare Sections, agreement was reached on methods to be employed in the feeding and care of foreign nationals in Japan. A directive to the Japanese Government is being prepared on this subject. Details of the plan will be announced as soon as it is approved by the Supreme Commander.

Korean and Chinese Repatriation

Field reports submitted by the officers of this section plus detailed plans and reports prepared by Japanese Government officials indicate that the Reception Centers established to care for and process repatriates are in satisfactory operation. A report issued by this headquarters shows that 492,455 Koreans and ### Chinese had been repatriated as of 9 December 1945. No Formosans have been repatriated because of lack of shipping.

SECTION II PREVENTIVE MEDICINE

General

Japanese Ministry of Transportation officials were given detailed instructions regarding disinfection of railway cars assigned for use by Allied military personnel and procurement of disinfection supplies and equipment from U.S. military commands concerned. These officials were also furnished with the names and addresses of the U.S. Unit (Corps or Division) Surgeons located nearest the respective regional railway offices who are to be contacted by the regional car managers responsible for the carrying out the above disinfection program.

Plans were worked out with the Medical Supply Sub-section for distribution of delousing material in accordance with recommendations by Port Quarantine Officer, Typhus Commission and Sixth and Eighth Armies M/G personnel.

The Port Quarantine Officer returned on 12 December from an extensive field trip which was concerned with quarantine and communicable disease control problems at repatriation ports which included inspection of facilities present and procedure employed at the respective ports.

Sanitary Engineering

1. Water supplies.

Reports on the water supplies of the cities of Fukuoka Ken, Kyushu, indicate that in general ## systems are operating in nearly normal manner. In bombed areas water mains have been repaired, but leakage from service connections is high. Water leakage in these areas is estimated at 50 % of the water supplied. It is estimated that it will taken until May 1946 to repair services. Chlorine dosage is about 0.3 ppm. Several cities have been using bleaching powder because of the shortage of liquid chlorine. At Tobata-shi the supply is barely sufficient to meet present demands because of damage to pumps. The supply is also considered inadequate by the Japanese at Omuta-shi. Mine water for industrial supply is interconnected with other sources at Omuta-shi and is said to be used mainly for cooling and miscellaneous uses.

The sanitary engineer with the Military Government Company at ##### standards. Army water supply men are supervising increase in the chlorine dosage. Liquid chlorine is available from sources.

The water supply consultant, ASCOM-C, reported progress in improving chlorination of supplies in Tokyo-Yokohama area. Arrangements have been made for repair of chlorinators and manufacture of new machines at the two local plants. Experimental work using higher chlorine dosage is being carried out at the Kawai Plant of the Yokohama System serving Atsugi Airfield.

Most recent reports from the Japanese gives an estimated total production of liquid chlorine for December of 150 metric tons, of which 85 tons will be allocated for water treatment. (Normal pre-war demand was 42 tons monthly for water.) Production is decreasing because of the shortage of salt. Some plants are also short of coal and chlorine cylinders. The present status of salt production and importation will be investigated by the Economic and Scientific Section.

2. Water Disposal.

Reports from Fukuoka and Fukushima indicate sewerage systems and nightsoil collection systems are operating normally in both areas.

3. Insect and Rodent Control

A report from GHQ medical inspector states that there is a continuation of work by the 68th Malaria Control Unit in rat-proofing of buildings in Tokyo occupied by military personnel and that trapping is done as indicated.

A conference was held with the Entomologist of the Institute of Infectious Diseases and an inspection was made of the laboratory. Species and habits of mosquitoes of medical importance in Japan were discussed and results of recent surveys were examined.

Laboratory Activities

Spot check of medical laboratories in the Tokyo area was made as a part of the survey of facilities available for the preventive medicine program. The Komagome Contagious Disease Hospital was visited and its laboratory equipment examined. The laboratory of Yoshiwara Hospital was revisited in connection with the venereal disease control program. Further surveys were made of the production potential of the Government Institute for Infectious Diseases and of the Kitasato Institute in connection with biologicals of key importance.

Nutrition Service Activities

The directives to the Japanese Government ordering nutrition surveys of the civilian population was issued by this headquarters on 11 December. Numerous conferences have been held with representatives of the Ministry of Health and Social Affairs and the Tokyo Metropolitan Office on plans for the initial survey to be made in Tokyo under the supervision of this headquarters. Methods to be employed have been established. The survey is being conducted on a 1% sample of the population of each the 35 Kens n Tokyo. About 33,000 people will be examined. These samples are to be carefully selected so as to be representative of the population at large on the basis of sex, age, economic status and occupation. In the survey, 65 doctors, 140 nutritionists and 200 clerical workers are being employed. The survey was begun on 15 December and will be completed on 24 December.

In a conference called by the Economic and Scientific Section and attended by representatives of G-1, G-3, G-4, Natural Resources and Public Health and Welfare Sections for the purpose of establishing ration scales #### foreign nationals in Japan, the following proposal was made by this section and was approved by the conference:

1. Occidental foreign nationals will have made available to them a daily ration furnishing not less than 70 grams of protein and 2400 calories per person.
2. Oriental foreign nationals will have made available to them a daily ration furnishing not less than 50 grams of protein and 1800 calories per person.

Venereal Disease Control

The venereal disease control officer, this headquarters, continued observations of Japanese venereal disease control and treatment activities in company with Dr. Charles M. Carpenter, Venereal Disease Consultant to The Surgeon General. Visits were made to several civilian clinics in the vicinity of Tokyo, Yokohama and Sendai.

The examination-treatment program in Tokyo was expanded to include four additional areas curing the week with one each in Omori and Koiwa and two in Shinagawa.

SECTION III ADMINISTRATION OF HOSPITALS

Reports from Japanese

1. During the period covered by this report Japanese civilian hospital strength reports received from 33 prefectures showed a decrease of 430 hospital patients, while the number of out-patients treated was decreased by 694. Complete weekly Japanese civilian hospital strength reports for periods indicated are shown in the following table.

Periods	No. of Hospitals	Capacity	Number of Patients		Total
			In-patients	Out-patient	
12 Oct.	2,504	126,140	77,464	222,054	303,469
19 Oct.	2,540	122,532	74,897	243,522	312,461
26 Oct.	2,598	131,747	77,091	217,500	320,579
2 Nov.	2,595	133,448	75,959	237,839	317,744
9 Nov.	2,598	136,845	75,756	238,281	311,037

2. The ratio of physicians to the total population in Japan for the period 1933 to 1944 was 1:1621, while the estimated ratio for the period 1945 to 1952 was 1:1818.

3. The Ministry of Health and Social Affairs issued a memorandum to prefectural governors directing the re-establishment of physicians, dentists and pharmacists in air-raided areas.

4. Reports were made on the organization and personnel of the newly established Bureau for National Hospital Affairs, Ministry of Health and Social Affairs, which is responsible for the administration and operation of former Japanese Army, Navy and Veteran's Hospitals.

SECTION IV NURSING AFFAIRS

Korea

A report from Korea (XXIV Corps) stated that a survey of nursing schools is being conducted, the following questionnaire is being used:

1. Hospital Information
 - a. Size of hospital
 - (1) Average number of patients.....
 - (2) Number of beds
 - b. Type of Hospital
 - c. Controlled by (Group)
2. School of Nursing
 - a. Director of Nurses:
 - (1) Qualification (education and experience)
 - b. Size of School:
 - (1) Number of students ... 1st year ..., 2nd year..., and 3rd year (if a 3-year course)
 - c. Number of semester ...
 - (1) Schedule of semester
 - d. Obligation to school after graduation
 - e. Tuition fee ...
 - f. Provincial exam given ... and consists of proof ...
 - g. Educational qualification of prospective students:
 - (1) Primary or Secondary School required
 - (2) Minimum scholastic standard required
 - (3) Acceptance of a students ?? ?? whom

- h. Physical exam consists of
- i. Age upon admission ... to ...
- j. Marital status
- k. Teaching material in class room
- l. Time on duty daily ..., does this include class room work?
 - (1) Time off during week ...
 - (2) Vacation time yearly ...
- m. Uniform:
 - (1) Type worn ...
 - (2) Furnished by whom ...
- n. Instructors
 - (1) Nurses (include qualification and subjects taught) ...
- o. Grading system ...
- p. Head nurse employed:
 - (1) Number (4) Salary
 - (2) Qualifications (5) Hours of work daily
 - (3) Duties (6) Vacation yearly
 - (with or without pay)
- q. Health program consists of (including immunization) ...
- r. Nurses aides:
 - (1) number employed ... (2) Duties
- s. Midwifery:
 - (1) Included as part of course ...
 - (2) Allowed to practice after graduation
- t. Nurses quarters:
 - (1) Number of nurses assigned to a room ...
 - (2) Lavatory facilities ...
 - (3) Laundry facilities ...
 - (4) Dining room facilities ...
 - (5) Recreation facilities ...
- u. Needs of the nursing school:

Standard Curriculum for ## Schools:

- a. Course ## of each subject taught. To include laboratory work.
- b. A copy of curriculum, including total number of hours and semester.
- c. Copy of rotation schedule of a student nurses to wards for experience in different departments.
- d. Answer questions on attached forms.
- e. Enclose sample copy of student records: application, health and ##.

The Public Health Nurses six-week refresher course is progressing nicely and the Korean nurses are doing a good job.

was given a correspondent from the Japanese Ladies Journal regarding ## of Tokyo and Japan, the interview to be published next month.

Supply

was made of Nursing Journals and text books for use of Japanese nurses. If they are obtained they will be circulated through the nursing section of the Ministry of Health.

SECTION V
VETERINARY AFFAIRS

General

Personnel of Veterinary Affair Sub-section held a conference with the Fisheries Division of the Natural Resources Section and visited the Tokyo wholesale fish market. Fish inspection there is under the supervision of the Police Department. All fish in the market were found to be in an edible condition. Sanitation was comparatively good except in the cold storage plant and in a nearby fish-cake factory.

Reports from Japanese

1. Report of an outbreak of swine plague in Iwate Prefecture. Ten cases were reported of which 2 died, 5 were destroyed and 3 recovered.
2. Animal Disease Report for September 1945. There has been no marked change in the communicable disease incidence.
3. Milk Inspection Report for September 1945. This report shows dairy farm inspections in 30 prefectures and laboratory examination of milk in 24.
4. Laboratory Report on Hog Cholera Vaccine Experiments. This report covers the experiments on the preparation of formalized hog cholera vaccine from the ## of acutely affected hogs.
5. Report of Stallions and Government Horse Farms for 1945. This report shows 1,864 stallions located on 21 government house farms and 4,141 # # ## of private owners.
6. Report of Purchase and Distribution of Dairy Cows by the Government. This report shows 6,000 cows have been purchased and distributed in 730 villages.

SECTION VI DENTAL AFFAIRS

Verbal consent was given by Mr. Maxwell of the Reparation Mission for the release of 90-days gold supply based on 100 grams per dentist per year.

During the month of November 295 dentists were re-established in practice.

SECTION VII SUPPLY

The War Department approved an emergency reserve of medical supplies for civilian relief. This reserve will be supplied from excesses of AFMIDPAC and AFWBSEAC supplies, only items not available in the theater will be maintained in the some of Interior depots.

Steps were taken to expedite the distribution of Japanese military and naval medical supplies turned back to the Japanese by Occupation Forces at Tachigawa and Yokosuka. Visits were made to both of these points and conferences were held with prefectural officers and control companies to hasten the distribution of these medical supplies into civilian channels.

A list of critical materials required to increase production of X-ray film ## from the X-ray film control company and is being transmitted to the Economic and Scientific Section with a request that efforts be made to release the desired items. The ## company is submitting a request for increase in allocation to the ## of commerce and industry.

A ## was received from the Sixth Army which shows that ## pounds of Japanese military narcotic stocks were taken into custody in that area as of the week ending 24 November 1945. Previous reports had shown comparatively small narcotic stocks taken into custody.

The target date for taking into custody all heroin, crude narcotics and semi-processed narcotics in Japan was 15 December 1945. Reports from the Sixth and Eighth Armies on the progress made with the seizures will be published in this bulletin when received.

A memorandum was issued to the Japanese Government ordering them to submit a report on pertinent facts concerning the violation of the memorandum ## ## ##. The Japanese Government was directed to nominate, for approval by the headquarters, eighth pharmaceutical wholesale houses in Japan to receive custody of certain Japanese military narcotic stocks now in the custody of the Sixth and Eighth Armies.

SECTION VIII LEGAL

The Japanese laws and ordinances concerning manufacture and sale of drugs and biologicals was received and a translation of it was arranged through ATIS.

A study was begun of the obligation of occupying forces respecting food and shelter for enemy nationals, restricted in travel and areas of residence, but not formally interned.

Two additional conferences were held with Japanese physicians relative to the elimination of government control of professional associations. One conference was with regard to the reorganization of the Health Ministry and its plan for elimination of certain personnel.

Crawford F. Sams,
Colonel, Medical Corps,

Chief, Public Health and Welfare Section.

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
PUBLIC HEALTH AND WELFARE SECTION**

WEEKLY BULLETIN

**For Period
16 December to 22 December
1945**

SECTION I WELFARE

Welfare Administration

Based upon the policy of this section to approve the continuation of government subsidized private agencies, pending complete investigation of their functions and operation, this section concurred with SCAP Finance Section authorization to Ministry of Finance to release an Imperial Household grant for the Association for the Relief of War Sufferers.

Relief

A reply was prepared to the Japanese Government's distribution plan for the use of Japanese Army-Navy supplies held for the relief purposes. This reply was in the form of a memorandum accepting the plan with the following exception giving SCAP greater control over the use of these supplies:

- (1) Clarify the use of supplies for emergencies under SCAP control.
- (2) Retain authority for the Supreme Commander to approve the use of special distribution facilities as opposed to the use of normal ration channels, and
- (3) Require SCAP approval for the actual inauguration of the plan in specific prefectures.

Additionally a communication to the Armies is in preparation directing that:

- (1) A check be made of the Japanese inventory of relief supplies,
- (2) An estimate of the number of unemployed and other dependent persons in each prefecture be prepared,
- (3) A program of inspecting and supervising the Japanese distribution plan be established,
- (4) Reports be submitted on operations, and
- (5) A plan be prepared for assuming direct administrative control of these supplies should the Japanese fail to carry out their plan.

Repatriation

The first 2,000 Formosans were repatriated from the Atsugi area during the past week. As shipping becomes available it is expected that more Formosans and Chinese will be moved. A copy of report prepared by the Korean representatives attached to the Sixth Army was received. The report covered general conditions in Nagoya and Osaka but made no specific recommendations regarding the 400,000 Koreans in these areas.

Miscellaneous

A report was received from the New Japan Social Work Interim Committee which was recently organized in Tokyo for the purpose of encouraging and revitalizing social work activities in Japan. The committee consists of a representative group of individuals engaged in public and private social work. The two immediate goals of the organization are to establish refresher #####-service training courses for social workers and to call a national conference of social workers and from it develop a permanent social workers association to replace the present interim committee.

SECTION II PREVENTIVE MEDICINE

General

The Institute of Tuberculosis Research at Kiyose was visited and fairly complete data were procured regarding past and current work of the organization. All data are being consolidated in a summary report.

Arrangements were completed by medical supply, the Economic and Scientific Section, and the Sanitary Engineer of this sub-section for a sample run to be made by a local manufacturer to determine if "China Clay" is a satisfactory diluent for DDT powder and if available grinding machinery and diluent will be utilized only when 10% DDT insecticide or larvicide powder is not available from military sources.

Latest census figures were obtained, showing population by District and prefecture; on the basis of these figures. Crude rates (per 1,000 per annum) have been derived for the reportable communicable diseases. Charts showing communicable disease rates in Japan since January 1941 are in process of preparation.

Sanitary Engineering

1. Water Supplies.

Health Maintenance Section, Ministry of Health and Social Affairs reported very high chlorine dosages being required in public water supplies by military commands in some cities, particularly in Nagasaki. Previous reports from Nagasaki to the Office of the Chief Engineer and from Fukushima to this office indicate that high

chlorine dosages and residuals used for field water supplies in Pacific islands are now being applied to city water supplies. The office of the Chief Engineer and the Chief Surgeon's Office were informed of the above Japanese report, and subject of reducing Army chlorine requirements where approved city supplies are used for direct consumption by troops was discussed. This is particularly desirable because of the very limited supply of chlorine and it is believed feasible where adequate treatment and protection of the water is provided.

Utilities Engineer, Tokyo Military Government Detachment, reported work of reconditioning Kanamachi Filter Plant as progressing. He will inspect both the Kanamachi and Yodobashi Plants next week.

Demonstration of water supply equipment and conference of officers and men of all branches interested in field water supplies from Sixth and Eighth Armies was attended at 1519th Engineer Water Supply Company, Headquarters. Demonstration was given of operation of water purification unit, diatomite, 50 gallons per month, now being supplies to replace portable unit, 15 gallons and mobile unit, 75 gallons. This diatomite filter will produce a water free bacterial contamination and with complete removal of amobic cystex and cercariae of schistosomes. Demonstration was followed by conference on use of field equipment and special problems of water supply in this area..

2. Waste Disposal

Inspection was made of the Mikawajima Sewage Treatment Plant, Tokyo, with representative of Health Maintenance Section. Ministry of Health and Social Affairs, and Mr. Harada, Tokyo Sewage Engineer. The plant provided primary and secondary treatment, but much equipment was in poor state of repair, and general maintenance was unsatisfactory. City sewage department will take action to restore both this plant and Shiba-ura. Conditions were reported to Utilization Engineer, Tokyo Military Government Detachment.

3. Environmental Sanitation.

Sanitary Engineer, Yokohama Military Government Detachment, reported railroad stations in the city were all receiving regular cleaning. They are inspected twice weekly with the station masters. Inspection reveals little improvement in the Tokyo area except at Ueno. Situation has been discussed with the Tokyo Military Government Detachment.

Nutrition Service Activities

During the period 15-24 December a nutrition survey has been conducted in Tokyo according to the following plans and schedule:

1. The purpose of the survey was to gather factual information on the physical status and the actual food consumption of a statistically significant sample of a civilian population of Tokyo.

2. The Tokyo Metropolitan Office Health Division has been the agency responsible under supervision of this Headquarters for the study and has worked through the District or Ku offices. Using 1 November 1945 census figures it was decided to examine physically a 1.0 % sample of the population of each Ku or district and to take complete three day dietary histories on representative families of each Ku in numbers sufficient to give data on a 0.5 % sample of the whole. The composition of the sample to be examined in each Ku was selected, using census data on the basis of age, sex, occupation and economic status. After selection on the basis of these factors the sample was taken at random in each Ku.

3. Personnel for the survey consisted of doctors of medicine specially selected for the work, graduates of schools of nutrition, and the necessary nurses and clerical help. The doctors, nurses and assistants were organized into teams and assigned to work in various Kus at public places such as health centers, schools or hospitals. It was estimated that one team could examine 70 subjects a day and thus the number of teams and the duration of their work was determined. The nutritionists worked independently, each worker being responsible for recording the complete dietary intake over a 3-day period of each member of 10 families assigned to her.

4. Physical signs were selected for examination in the survey with the purpose of being as objective as possible and thus subject to standardization. Forms for the examination were prepared, printed and distributed each team. The signs selected for the study consisted of: age, sex, height, weight, pulse rate, presence or absence of edema, cheilosis, glossitis, hyperkeratosis, anemia, tendon reflexes, chronic diarrhea and marked menstrual disturbances.

Forms suitable for recording the complete food intake of each member of a family for a 3-day period were devised, printed and distributed to each nutritionist. She in turn visited the house, explained what was wanted in detail to the housewife and left the forms to be filled out. At the end of three days the nutritionist visited the #####, checked all items listed or suspected of being omitted and computed the per capita calorie and protein intake of each member of the families studied.

5. Numerous meetings of the personnel for the study were held prior to the start of the survey to the end that all would be thoroughly acquainted with the purpose and objectives of the study and the methods to be employed. Grant effect was made to standardize and coordinate the work of the various teams. The nutrition consultant, SCAP, met with the 65 doctors who are to conduct the physical examinations **one one** day and defined

as clearly as possible the criteria to be used in assessing physical signs. On another day he met with the 140 nutritionists and outlined their work stressing the importance that the total quantity of all food from all sources be obtained from all subjects of the sample during the test period.

6. In the following table are recorded the various Kus or districts of Tokyo, the size of the sample from each Ku on whom physical examinations were done and the number of families in each Ku from whom dietary information was taken.

Name of Ku	Examination	No. of Families	Name of Ku	Examination	No. of Families
Kojimachi	210	26	Asakusa	300	37
Kanda	320	40	Honjo	150	19
Nihonbashi	270	34	Fukagawa	170	21
Kyobashi	650	81	Shinagawa	1,100	137
Shiba	800	100	Meguro	1,400	175
Azabu	360	45	Ebara	650	81
Akasaka	100	13	Omori	1,900	238
Yotsuya	150	19	Kamata	630	79
Ushigome	240	30	Setagaya	3,300	413
Koishikawa	520	65	Shibuya	1,000	125
Hongo	600	75	Yodobashi	600	75
Shitaya	720	90	Nakano	1,400	175
Itabashi	2,600	312	Adachi	2,000	250
Toshima	1,100	138	Mukojima	780	97
Takinogawa	450	56	Joto	130	16
Arakawa	1,000	125	Katsushika	2,000	250
Oji	1,200	150	Edogawa	1,700	213
Suginami	2,500	312			
			Total	33,000	4,125

During the course of the above survey the nutritionist of this section visited each of the Kus of Tokyo and observed the physical examinations and the nutritionists at work in the field. In general the survey has gone surprisingly well. All participants seemed well acquainted with their tasks and all performed them in the prescribe manner. The survey will be completed 24 December and the finding will be submitted to this Headquarters not later than 7 January 1946.

Laboratory Activities

The survey of Japanese studies on Japanese B encephalitis was completed and a report was submitted. Further data were assembled on production capacity of various laboratories manufacturing biologicals, particularly in connection with control of diphtheria, typhoid and smallpox.

SECTION III ADMINISTRATION OF HOSPITALS

Hospital strength reports from 32 prefectures for the period ending 14 December showed 56,572 patients in 2,011 hospitals with 120,739 beds, as compared with 49,174 patients in 1,831 hospitals with 92,723 beds, for the previous week. This increase is due to the fact that former Japanese Army and Navy Hospitals have been transferred to the Ministry of Health and Social Affairs.

Hospitalization in Japan for the periods indicated is shown in the following table.

Period	No. of Hospitals	Capacities	No. of Patients		Total
			Inpatient	Outpatient	
12 Oct.	2,504	126,140	77,464	22,064	303,469
19 Oct.	2,540	122,532	74,879	242,582	312,461
26 Oct.	2,598	131,747	77,091	217,500	290,579
2 Nov.	2,595	133,448	75,959	237,839	317,744
9 Nov.	2,598	139,845	75,756	235,281	311,037
16 Nov.	2,614	138,577	74,728	228,086	302,783

The Matsuzawa Psychopathic Hospital, Tokyo, was designed as the institution to which all psychopathic foreign nationals in Japan will be referred who require hospitalization or medical care.

Eighth Army submitted a report showing Japanese hospitals required for the Occupational Forces, name and location of former Japanese Army and Navy hospitals and a list of Japanese civilian hospitals, giving their location, capacity and number of patients, in the Eighth Army Area.

SECTION IV NNURSING AFFAIRS

Reports from Japanese

1. Copy of letter sent to the Ministry of Health regarding Public Health Nurses Association. An informal meeting of members of the nursing association was held 4 December 1945 and this letter was sent by the nurses following the meeting requesting they be allowed to have a nursing organization of their own.

2. A revised copy of the proposed Constitution and By-Laws of the Public Health Nurses Association was received.

3. A report was made of a trip to five prefectures in connection with a refresher course for Public Health Nurses. The following is the schedule, aim and program:

A Brief Report of the Refresher Courses for Public Health Nurses in 1945

I. The Aim of the Course:

To cultivate Nursing Spirit higher and emphasize their instructive knowledge.

II. The courses are promoted by "P.H.W. Association" and "The Ministry of Health and Social Affairs" and "The National Insurance Association" supported it.

III. P.H.W. who attended the courses:

- (1) The supervisors of Health Centers.
- (2) The instructors of P.H.N. Training Schools.
- (3) The instructors of the Insurance Nurses.

IV. The places where the courses were opened and the numbers of attended nurse:

During the war

- (1) Iwate, Prefecture. Gathered 46 Nurses from 10 Prefectures.
- (2) Shiga, Prefecture. Gathered 37 Nurses from 10 Prefectures.

After the war

- (3) Oita, Prefecture. Gathered 23 Nurses from 7 Prefectures.
- (4) Shimane, Prefecture. Gathered 56 Nurses from 9 Prefectures.
- (5) Chiba, Prefecture. Gathered 68 Nurses from 10 Prefectures.

V. The Schedule of the courses:

- (1) Give 2 questions as follows and have conference according to their answers.
 1. Give some information about a village and let them make up the P.H.N. Plan.
 2. Give some information about 2 different types of the family (one is artificial feeding case and the other is TB family) and let them make out how to instruct these cases
- (2) Conference about the refresher courses for the staff nurses in each Prefecture.
- (3) Conference of each group such as Health Centers, Training Schools and Insurance Nurses.
- (4) Free Talking Conference.

SECTION V VETERINARY AFFAIRS

General

During a field trip to Mito, Ibaraki Prefecture, the following places were visited:

XII Corps Artillery Headquarters, APO 471.
81st Military Government Hdqs., Hdqs Co A, APO471.
Headquarters Ibaraki Prefecture.
Mito City slaughter house.
Ishida dairy farm.

It was observed that the governmental organization in this prefecture is staffed with sufficient trained personnel to conduct an efficient veterinary service. The immediate problem is to recover from wartime laxity and to more effectively enforce existing laws and regulations of meat and dairy inspection. A concerned effort is being made in this regard.

There are 140 veterinarians, 5 milk plants and 21 slaughter houses in Ibaraki Prefecture. Dairy farm inspection, tuberculin testing of cattle, pasteurization of milk, laboratory control of dairy products and inspection of meat in slaughter houses is generally practiced. Animal disease control measures appear to be effective.

Reports from Japanese

The Ministry of Agriculture and Forestry, submitted a communicable animal disease report for the week 9 - 15 December. This report shown one case of anthrax in Hyogo Prefecture and 51 cases of swine cholera in Osaka Prefecture.

SECTION VI DENTAL HEALTH

Production of dental materials in some factories is being impeded due to lack of packing supplies such as bottles, corks and labels. Fuel too, continue to be a critical item.

Complaints have been received regarding the unequal distribution of supplies to practitioners and teaching institution. Investigation will be made and report rendered at a later date.

SECTION VII SUPPLY

The Japanese Bureau of Medical Supplies (Yoga depot) was released to the Home Ministry during the week. The medicine Control Company, has prepared a list of critical materials with should be given priority for removal from the depot and a representative of the medical supply sub-section has been detailed to exercise general supervision over the transfer stocks to commercial channels, for distribution.

Several conferences were held with officials of the Central Medicine Control Company and the Ministry of Health and Social Affairs concerning distribution of medical supplies. A concerned effort is being made by the Japanese to expedite distribution.

The methods employed in establishing a reserve of medical supplies for emergency use were carefully checked. It was found that 20 % of all items turned over to the Home Ministry are being released immediately. The remainder has been frozen awaiting complete reports from all prefectures at which time 30 % of the total would be placed in reserve and the rest distributed. While this procedure presents some advantages from an overall stock control standpoint the extreme shortage of medicines does not justify freezing large blocks of stock until all prefectures have reported. Instructions were given to place 30 % of each inventory in reserve and distribute the remainder immediately, based upon known requirements. Any mal-distribution which may occur will be adjusted later when new requirements are established.

The few factories making X-ray film sustained only minor bomb damage. Present production is about one-third of minimum requirements. Much X-ray paper is made which may be substituted for film for gross work. Film production is limited by competing demands for photographic film and by the shortage of fuel and raw materials particularly organic solvents. In coordination with Economic and Scientific Section, arrangements are being made to have more materials allotted to increase production of X-ray film.

Prior to the war 80 % of manufacturing of small medical instruments, (forceps, specula, etc.) was done in Tokyo. One rebuilt and one undamaged factory are operating now in this area, each employing less than fifty people. One is producing to the limit of his equipment and tools, the other could triple production if fuel and raw materials particularly brass, were available.

An inspection trip to the Tokyo Hygienic Laboratory revealed that the semi-processed narcotics were not as yet removed by the Eighth Army. The materials are being consolidated and will be removed to the 29th Medical Depot at Yokohama by the Eighth Army by 29 December 1945.

A conference was held with the narcotic control officials in the Japanese Government and the directors of the leading pharmaceutical houses in Japan at which time the inadequacy of present Japanese narcotic laws and regulation was discussed.

SECTION VIII

LEGAL

No report.

Crawford F. Sams,
Colonel, Medical Corps,
Chief, Public Health and Welfare Section.

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
PUBLIC HEALTH AND WELFARE SECTION**

WEEKLY BULLETIN

**For Period
23 December to 29 December
1945**

SECTION I WELFARE

Relief

Approval of a Japanese plan for distributing food and clothing supplies to needy persons was issued during the week. Foods amounting to about 20 million tons and more than 3 million items of clothing and bedding are to be released free to persons whom eligibility is certified by prefectural welfare agencies. Investigations of individual need by the social welfare staffs of prefectural offices or by other local representatives of the public agency will be the basis for ##### withdrawal authorizations permitting regular ration outlets to release the relief supplies.

Food supplies consist of dry biscuits and various canned meats and fish. These supplies were returned from Allied custody to the Home Ministry after seizure from the Japanese Army and Navy. Investigation of need and distribution procedure will be in the hands of the Japanese welfare agency but a ##### check will be maintained by the Allied forces. Army commanders will be asked to make recommendations concerning the inauguration of the distribution plan in each prefecture and will keep SCAP informed of its operations and of the adequacy of supplies and administrative organization. Monthly reports prepared by SCAP will be delivered by the Japanese at prefectural and local levels to local Army commands for passage through channels to GHQ. A detailed explanation of the responsibility of Army commanders is being prepared for release by SCAP.

SECTION II PREVENTIVE MEDICINE

General

Conferences were held by members of the Medical Supply Sub-section and of the USA Typhus Commission relative to requirements and availability of DDT. General policies on allocation and distribution of available and anticipated stocks were formulated.

Arrangements were made with representatives of the Dai Nippon Chemical Industries, Ltd., to produce a sample lot of DDT dusting powder using China Clay as a diluent and this lot has been submitted for inspection and testing.

A conference was held with Mr. Sampson of the Natural Resources Section regarding the presence of ##### compound, in Japan ##### the possibility of mining this compound for use as a DDT diluent. A later conference was held with Lt. Col. #####, Chief of the Mining Section, Korean Military Government, and Lt. Col. Wheeler of the Typhus Commission. Samples of high-grade Korean pyrophyllite were submitted and the feasibility of mining this product was discussed. Dai Nippon Chemical Industries was requested to produce a test lot of dusting powder, using this pyrophyllite as a diluent.

A conference was held with the Chief Surgeon, AFPAC Adv., on the subject of Japanese B encephalitis. Reports submitted by Col. Kuhns of the 19th General Laboratory, and by Major Moolten of this sub-section, were discussed and with concurrence of the Chief Surgeon, a message was prepared for dispatch requesting that the U.S. Neurotrophic Virus Commission be invited to study this situation further.

Conferences were held with representatives of the Acute Infectious Disease Section of the Ministry of Health relative to communicable disease reporting, and to the control of smallpox.

Laboratory Activities

Various reports on production of biologicals were assembled from the Ministry of Health and Social Affairs and the Government Institute for Infectious Diseases. Conferences were held with officials of both agencies in further efforts to reduce production bottlenecks.

Conferences were held with officials of the Ministry of Education to obtain data on public health education in the curriculum of medical schools

Additional data on deaths and autopsy findings in vagrants in Tokyo were obtained and analyzed

SECTION III ADMINISTRATION OF HOSPITALS

Reports received from 26 prefectures showed an increase in the number of hospitals and a corresponding increase in the number of hospital patients as a result of the recent transfer of former Japanese Army, Navy and Veterans hospital facilities to the Ministry of Health and Social Affairs. Complete weekly Japanese hospital strength reports are shown in the following table.

Period	Number of		Number of Patients		Total
	Hospitals	Capacity	In-patients	Out-patients	

12 Oct.	2,504	126,140	77,464	222,588	303,469
19 Oct.	2,540	122,532	74,279	242,588	312,461
26 Oct.	2,598	131,747	77,091	217,500	320,579
2 Nov.	2,595	133,448	75,959	237,839	317,744
9 Nov.	2,598	136,845	75,756	235,281	311,037
16 Nov.	2,614	138,557	74,728	229,086	302,783
23 Nov.	2,634	139,409	3,369	202,780	275,649
30 Nov.	2,630	142,926	73,469	231,269	304,749

The number of calories provided patients in 17 Tokyo hospitals according to a report submitted by the Ministry of Health and Social Affairs is shown in the following table:

<u>Type of Hospital</u>	<u>Number Surveyed</u>	<u>Average Calories per Patient</u>
General	10	1,647
Psychopathic	4	1,567
Tuberculosis	3	1,987

SECTION IV NURSING AFFAIRS

Reports from Japanese

A copy of standard curriculum for Public Health Nurses, Refresher Course and Midwifery Course as put out by Health Bureau Ministry as of May 6, 1945.

Report received on distribution of St. Luke's graduate public health nurses and a map showing where they are working and the type of work in which they are engaged.

Two conferences were held regarding the translation of Public Health books for use by students. It has been decided that a Public Health practical manual will be completed first and published. About half of this has been written in Japanese. The text book will be started in the near future. The critical item now is paper which will have to be secured for publishing of these books.

Korea

The Public Health program is moving along rapidly. The one 6-week refresher course has been successful and the second one will begin 31 December. A certificate is being given to the graduate nurses successfully completing the course.

An institute is being planned, the attendance to be one day each week, for head nurses who will assume the position of nurse instructors in schools of nursing.

Weekly staff meetings have been inaugurated for military and civilian personnel, to discuss nursing problem and plans.

The first meeting of directors of hospitals and directors of nurses was held to discuss the method of approach to the raising of nursing standards in hospitals. A committee was formed which will meet regularly.

A short course in operating room technique and procedure is being planned for operating room supervisors.

SECTION V VETERINARY AFFAIRS

General

The officer in charge of veterinary affairs made a field trip to Hokkaido and Aomori prefectures for the purpose of conducting a survey of Japanese veterinary affairs and establishing liaison with Eighth Army and Military Government officials.

All phase of animal disease control, meat and milk inspection, livestock production and directives from the Supreme Commander for the Allied Powers were discussed. The governmental organization in Hokkaido prefecture is staffed with sufficient trained personnel to conduct veterinary service. The staff in Aomori prefecture is weak and ineffective. In both prefectures sanitation is being neglected and equipment is in poor repair and antiquated in design.

Inspection of meat is slaughter house, eradication of bovine tuberculosis, and dairy farm inspection are practices in a fairly efficient manner.

Some pasteurization of milk exists, but its efficiency is hampered by faulty control devices. Much raw milk is being consumed. The use of the sediment test on milk was observed, for the first time in Japan, in Hokkaido prefecture. Laboratory control of dairy products is not being generally practiced.

The quality of livestock in Hokkaido prefecture is the best observed in Japan.

Reports from Japanese

1. Ministry of Public Health and Welfare, Veterinary Hygiene Section:

November Milk Inspection report

Total milk plants		2,859
Volume of milk products	6,188,098	
Results of laboratory examination:		
Total examinations		5,606
Over bacterial standard (2,000,000 per cc)		747
Under bacterial standard (3%)		870
Milk retailer data:		
Total milk retailers	1,419	
Unsatisfactory equipment	128	
Without cold storage	239	
Pounds of milk products produced:		
Whole milk powder	58,126	
Skim milk powder	566,213	
Sweetened condensed milk	88,477	
Butter	6,371,870	
Cheese	600,576	

October Meat Inspection Report

	<u>Slaughtered</u>	<u>Totally Condemned</u>	<u>Partially Viscera Condemned</u>	<u>Condemned</u>
Cattle	5,030	9	191	858
Calves	894	4	9	41
Sheep & Goats	24			
Swine	1,203	1	20	235
Horse	6,343	10	447	491

2. Ministry of Agriculture and Forestry, Animal Disease Section:

	<u>1945 Estimated Livestock Population</u>		
Dairy cattle	256,000	Sheep	181,000
Other cattle	2,720,000	Goats	252,000
Horses	1,854,000	Chickens	17,204,000
Swine	250,000	Rabbits	3,000,000

Livestock forage supplies are believed adequate for 1946. Supplies of concentrate feeds are now insufficient and will remain so in 1946 unless imported. An ample supply of concentrate foods and of protein supplements for dairy cows would contribute markedly to the program for increased milk production.

The immediate report of animal disease outbreak includes two cases of blackleg in Ehime prefecture, the date of the initial case being 21 December 1945.

The monthly animal disease report for November 1945 shows no marked change in incidence of disease when compared with previous monthly reports.

SECTION VI
DENTAL AFFAIRS

No report.

SECTION VII
MEDICAL SUPPLY

A directive was issued to the Japanese Government concerning the distribution of Japanese Army and Navy medical supplies turned over to the Home Ministry by occupation forces. The directive pointed out the acute

need for medical supplies among the civilian population and required that adequate personnel, transportation, packing material and other necessary facilities be provided in order to expedite distribution. Representatives of the Home Ministry and the Ministry of Health and Social Affairs called at this office after publication of the directive and advised that further efforts would be made to increase the rate of distribution.

The Commanding General, AFWESPAC, submitted a radio report on shipments of typhus control supplies. One hundred and twenty thousand pounds of DDT are being loaded on the ship Myers Lissner which was scheduled to sail from Base M 26 December for Sasebo. Most of the remaining quantity of DDT requisitioned on AFWESPAC has been extracted to the zone of interior. Fifty thousand pounds are available for air shipment from the United States and air priority has been furnished from ASCOM-C. Korea received 80,000 pounds of DDT and another shipment of at least 200,000 pounds was reported enroute. Several shipments of hand dusters scheduled for air lift have not been received.

An emergency requisition was received from Korea for 6,000 vials of diphtheria antitoxin to be used for treatment of civilians. Twenty-five hundred vials were shipped by air from Eighth Army stocks and the remainder extracted to AFWESPAC.

A recent report on penicillin production indicates that manufacture is only in the experimental stage. The three plants in operation produced 168,000 oxford units in November and 152,000 in December.

The Ministry of Health and Social Affairs reported an increased allotment of materials for manufacture of X-ray film which should be sufficient to triple present production.

Information was received that crude and semi-process narcotics and Japanese military narcotics stocks in the Sixth Army area being concentrated in Osaka in the Japanese mint.

The headquarters notified the Medical Supply Officer, Surgeon's Office, Sixth Army Headquarters, Kyoto, that 3,866.4 kgs of raw opium, belonging to the Koeki Eidan, are stored in a warehouse near Kobe. The narcotics will be seized and stored at the mint in Osaka under the custody of the United States forces.

The Eighth Army seized crude and semi-processed narcotics at former narcotic manufacturing plants in the Tokyo area. Some finished stocks were removed through error and will be returned to the owners for distribution.

A visit to the Tokyo-To Medicine Distribution Company confirmed the fact that responsible privately owned institutions should be designed to take custody of narcotic stocks rather than organizations whose functions are chiefly distribution through paper work.

SECTION VIII LEGAL

No report.

SECTION IX DIRECTIVES TO JAPANESE GOVERNMENT

The following memoranda, issued to the Imperial Japanese Government, originated in this section:

1. Reserve Supplies Held for Relief Distribution, AG 400 (21 Dec 45) PH.

This approves a plan submitted by the Japanese for holding certain reserves for relief distribution with exceptions as noted.

2. Nutrition Surveys of Civilian Population, AG 430.2 (11 Dec 45) PH.

This directs the Japanese to conduct nutritional surveys of the population of Japan.

3. Control of Traffic in Poisonous Beverage, AG 435 (8 Dec 45) PH.

This directs the Japanese to amend existing laws for violations of traffic in poisonous beverages so that fines and imprisonment of adequate amounts may be given.

4. Relief of Nationals of Countries with which the United Nations have been at war, AG 091.4 (19 Dec 45) PH.

Directs that the Japanese Government care for those resident enemy nationals who are not self-supporting.

Crawford F. Sams,
Colonel, Medical Corps,
Chief, Public Health and Welfare Section.

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
PUBLIC HEALTH AND WELFARE SECTION**

WEEKLY BULLETIN

**For Period
30 December 1945
To
5 January 1946**

SECTION I WELFARE

Welfare Administration

Pursuant to a memorandum issued by this Headquarters last month, AG 044 (8 Dec. 45) Subject: "Relief and Welfare Plans", the Imperial Japanese Government submitted a plan during the week. The plan purposes the attachment of a new law which would integrate welfare and relief activities now conducted as separate categories of assistance under the Relief Law for the Poor and Disabled (Law #49, 1929), Law for the Protection of Mothers and Poor Children (Law #19, 1937), War Casualties and Damage Protection Law (Law #71, 1942) and related measures.

Similarly the plan proposes a new non-governmental agency or association to assume the relief activities of such present organizations as the Association of Relief for War Refugees, Association of Relief for the Nationals Abroad, and Association of Relief for Veterans.

The Japanese Government has often organized quasi-public agencies or associations, subsidized from governmental funds, as an expedient in implementing relief and welfare administration. Japanese officials explain this action as a necessary to circumvent governmental restrictions on personnel, use of funds and other limitations.

This Section has been studying the subsidy program of the Ministry of Health and Social Affairs because a large percentage of relief expenditures are represented by subsidies to these quasi-governmental associations. One of the principles of proper public welfare administration requires an integrated program, responsibility for administration of which lies with the public agency. As further detailed plans are submitted by the Ministry, it is proposed to analyze them in conjunction with the Government Section of this Headquarters.

Relief

The Ministry of Health and Social Affairs estimates the following number of persons in need of relief in Japan.

<u>Category of Need</u>	<u>Number</u>
Unemployable	760,000
Unemployed	4,340,000
Needy Repatriates	860,000
Others	<u>2,040,000</u>
Total	8,000,000

During the week a communication was sent Occupation Forces Commanders requesting a check be made of the Japanese inventory of Army-Navy stocks held for relief purposes and they supervise the local Japanese relief distribution. Additionally they were requested to submit a plan for assuming direct relief distribution responsibility should the Japanese system break down.

SECTION II PREVENTIVE MEDICINE

General

Arrangements have been completed for a meeting of the Prefectural Health Officers (twelve prefectures in the Tokyo region) at the Institute of Public Health on 7 January, for discussion of typhus, venereal disease and other communicable disease problems. Meetings arranged on January 15, 24 and 28 at Yamagata, Kyoto and Fukuoka, respectively for similar discussions.

Data on organization and functions of the Bureau for Control Infectious Diseases (Japanese Ministry of Health) obtained in conference with the Bureau Chief. Data will be incorporated in a summary report of a study covering all Ministry of Health services.

Venereal Disease Control

From 18 to 29 December 1945, the venereal disease control officer of this Headquarters, made a survey of venereal disease control activities among the Japanese in Hokkaido and Aomori prefectures. Venereal disease rates among the Occupational Forces in these areas have been generally lower than the average for the Eighth Army. There was very little evidence of effective efforts at control found in the Japanese communities visited. Venereal disease prevalence among groups of women surveyed by acceptable methods have shown almost universal infection. The reporting of venereal disease to the Ministry of Health and Welfare is in process of establishment.

The demonstration examination-treatment program in Tokyo has been fully instituted with the completion of a course of training in laboratory methods under the auspices of the Government Institute for Infectious Diseases.

Sixteen of the 46 prefectures were reporting venereal disease cases to the Ministry of Health and Welfare as of the week ending 22 December 1945.

Sanitary Engineering Activities

1. Water Supplies. Direct supervision of public water supplies in the Tokyo-Kawasaki-Yokohama area by Army personnel has been recommended by the water supply consultant, ASCOM-C. Proposed organization would supervise operation and maintenance of water supplies, treatment plants, distribution systems and laboratories. The quality of water would be improved to meet Army standards. Inspections for cross-connection and collection of samples would be made by military personnel. Checks on laboratory analyses would be made regularly by Army laboratories. The plan is comprehensive and would result in the distribution of a safe potable water according to U.S. standards. Principle difficulty would be in obtaining suitably trained, experienced personnel from military sources.

It is reported from Hokkaido that all public water supplies are considered unsafe for direct consumption of occupational forces except at Muroran where engineers are treating the water at the source. Supply at Otaru is being rationed, but the situation is not considered unusual.

2. Waste Disposal. Certain supplies for repair of the sewage treatment plant equipment were reported as unobtainable at the present time, by Mr. Harada, Tokyo Sewage Engineer, and Mr. Kawabata, Health Maintenance Section, Ministry of Health and Social Affairs. The problem was referred to the local Military Government Sections who are aiding in the procurement of supplies which are deemed essential for the maintenance of plants.

Progress is now being made in restoring Tokyo sewage treatment plants to their prewar condition. Reports from other cities are due next week.

Quarantine Activities

The week ending Saturday, 5 January 1946, showed 62,622 persons passing through quarantine, i.e., 4,327 from S. Korea, 5,780 from Philippine Islands, 20,220 from Pacific Ocean area, 4,258 Ryukyans, 25,655 from China, 582 from Formosa and 1,800 from Hong Kong.

One case of smallpox was diagnosed at Horio Barracks (near Sasebo) in a Korean repatriate. No case of quarantine disease was recorded as having passed through quarantine.

Nutrition Service Activities

During the period 27 December to 4 January, the nutrition consultant made a field trip to Nagoya, Osaka, Kure, Hiroshima, Fukuoka and Nagasaki. The purpose of this trip was to visit the cities and surrounding rural areas in Japan that are under consideration as sites for the performance of nutrition surveys. At each of these cities the Military Government authorities were contacted and attempts were made to meet with the Japanese prefectural and city public health personnel. The purposes of the methods to be employed in the surveys were discussed with all groups contacted.

In no case did any of the Military Government authorities report on important nutrition problems in their areas. All were very receptive to the plans for the nutrition surveys. From observations made on this trip, it is believed that Nagoya, Osaka, Kure and Fukuoka and rural areas adjacent to those cities are the proper sites for the forthcoming nutrition surveys.

Laboratory Activities

A summarizing report was prepared on the production of biologicals in Japanese laboratories with recommendations for facilitating increase in production levels of certain crucial items. Conferences were held on the problem of supervision of drugs and pharmaceuticals and on measures needed to ensure their conformity with the minimum standards of purity and effectiveness.

SECTION III ADMINISTRATION OF HOSPITALS

Former Japanese Army, Navy and Veterans Hospitals are now included the Ministry of Health and Social Affairs weekly civilian hospital strength report. Since 30 November, for 37 prefectures reporting the establishment of new hospitals, reconstruction of those damaged by air-raids and other

1 ページ抜け

Serums

Anti-equine infectious abortion	300,000 cc		

SECTION VI DENTAL AFFAIRS

No report.

SECTION VII SUPPLY

A directive was prepared for transmittal to the Imperial Japanese Government concerning the need for increasing production of medical supplies. Particular attention was directed to the fact that production quotes for biological products were not being met.

A list of medical books and periodicals required by the Japanese for educational purposes was forwarded to C. I. and E. Section with a request that steps be taken to secure these publications for distribution by the Ministry of Health and Social Affairs, under the supervision of this Section.

Representatives of Public Health and Welfare Section attended a conference held by E. and S. S. on the subject of "Japanese Imports". The import program as now set up provides for 3,000 metric tons of raw materials for manufacture of material supplies during 1945.

Upon recommendation of the Typhus Commission, a request was submitted for mixing of test supplies of DDT with Japanese stocks of talc and pyrophyllite. Certain stocks of talc and pyrophyllite which have been located in Japan are to be ##### for possible use in mixing DDT, provided test samples prove satisfactory.

A conference was held with representatives of Ministry of Health and Social Affairs and the Tokyo Medicine Control and Prefectural offices. The Japanese officials were informed that increased emphasis must be placed on the distribution of supplies seized from the Japanese Armed Forces and turned over to the Home Ministry for civilian use. It was pointed out that several operating procedures now being employed in connection with transfer of supplies from the Yoga Depot could be improved. ##### were given that supplies would not be removed from the depot until covered storage space was available in Tokyo. Efforts will be made to inventory items at Yoga and then make ##### ##### to using agencies.

Authorization was granted for transfer of Japanese military narcotic stocks from the Fifth Fleet to the ##### Medical Depot. Eighth Army, Yokohama, for custody and further disposition as determined by this Headquarters.

An inspection trip was made to the 29th Medical Depot where approximately thirty carloads of Japanese military narcotics and seized civilian stocks of crude and semi-processed narcotics are being concentrated. A complete inventory of these narcotics will be undertaken at an early date.

SECTION VII LEGAL

A discussion was held with representatives of the Ministry of Finance at which time terms of a memorandum regarding the control of poisonous beverages were discussed and interpreted.

Conferences were held with section chiefs of the Minister's Office and Bureau for Physique, Health Ministry, on organization functions and personnel of their sections.

Translations were procured of a regulation regarding ceiling prices on certain drugs.

SECTION IX DIRECTIVES TO JAPANESE GOVERNMENT

The following memoranda to the Imperial Japanese Government originated in this Section:

1. Japanese Military and Naval Medical Supplies Received by Home Ministry from Occupation Forces, AG 440 (20 Dec. 45) PH. This memorandum again calls attention to the central Japanese government, their lethargy in distributing army and navy medical supplies. It directs prefectural officials take vigorous action in distributing these supplies to physicians and hospitals.

2. Custody and Distribution of Japanese Military Medical Narcotic Stocks, AG 441.1 (4 Dec. 45) PH.
Directs the Japanese Government to designate

1 ページ抜け

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
PUBLIC HEALTH AND WELFARE SECTION**

WEEKLY BULLETIN

**For Period
6 January to 12 January
1946**

SECTION I WELFARE

General

A memorandum for the Imperial Japanese Government, AG 091 (8 Jan 45) PH, was issued during the week, which called the Government's attention to serious health, economic and welfare problems which will be created if continued population movements to urban centers are permitted. The memorandum defined urban centers as cities of 100,000 or more population. Further it directed the Japanese Government to submit a plan to this Headquarters as soon as practicable indicating measures to be taken to restrict or prohibit unnecessary population movement from rural to urban centers. Japanese evacuees who are considered essential in reestablishing the minimum authorized civilian economy of Japan will be permitted to return to those localities where their services are required.

Welfare Administration

Study of the Japanese relief and welfare plan contained in C.L.O. Memorandum No. 1484(1.1) continued. A reply to the plan was prepared and circulated among interested SCAP staff sections. Details of the accepted plan will be announced following approval of the reply by the Supreme Commander.

SECTION II PREVENTIVE MEDICINE

General

Members of the Preventive Medicine Sub-Section attended a conference of prefectural health officers held at the Ministry of Health on 7 and 8 January 1946. Talks were made to the conference on the subjects of typhus fever and control thereof, venereal disease control and reporting and control of communicable diseases in general.

A direct request was made to the American Medical Association for material relative to standards of medical education in the United States and standards of licensure in the several states.

A request was made to the Surgeon General, U.S. Army, to procure authorization for the translation into Japanese of the textbook "Public Health Administration in the United States", By Wilson G. Smillie, for use and reference by Japanese health officials.

The current status of birth and death reporting and certain other vital statistics was discussed with a representative of the Japanese Census Bureau. It was pointed out that certain change in the current system will be necessitated in order to meet the requirements of the occupation forces.

An exhibit of typhus control supplies and equipment was requested and received from the U.S.A. Typhus Commission. This has been installed and placed an exhibition in this Sub-Section.

The Epidemiologist returned from a field trip to Kyoto, Osaka, Kobe and Nagoya. The incidence of smallpox was investigated, both in civilians and in U.S. Military Forces, and their possible inter-relationship studied, as was civilian smallpox control measures presently employed in the Kobe epidemic.

Sanitary Engineering

Water Supplies. Conferences were held with engineers of the Ministry of Health and Social Affairs, the Tokyo Bureau of Water Supply, and the Water Supply Officer of ASCOM-C, regarding the proposed increase in chlorine dosages in civilian water supplies. ASCOM-C has placed demand requisitions on the Japanese Government for new chlorinators and increased production of chlorine for chlorination of public supplies to meet U.S. Army standards in larger cities having concentrations of occupational forces. The Economic and Scientific Section reported that salt was not available in sufficient quantities at the present time to warrant any increase in chlorine production. The sanitary engineer, 79th Military Government Company, reported water supplies in Saitama Prefecture to be about 80% restored to pre-war condition. The quantity supplied is considered adequate and the quality is thought to meet Japanese pre-war standards. There is a shortage of chlorine as the present time.

Insect Control. The Dai Nippon Chemical Industries submitted a laboratory sample of 10% powder, with native talc used as a diluent. Arrangements have been made to obtain one tone of talc rock for a full scale trial run in the near future, diluting DDT concentrate (100%) for use of as 10% DDT powder insecticide.

Laboratory Activities

A talk on the Clinical Diagnosis of Typhus Fever was given 7 January 1946 at the Institute for Public Health, Tokyo, before a group health officials engaged in the current civilian program for control of communicable disease. The subject matter of the talk will be repeated in Japanese by certain health officials before other meetings to be held elsewhere in Japan during the succeeding weeks. Conferences were held with members of the Government Institute for Infectious Diseases and of the Kitasato Institute to discuss means of increasing the

production of smallpox vaccine. Plans for increasing production of other production of other urgently needed biologicals were carried further forward.

Venereal Disease Control

The emergency venereal disease control measures, required of the Japanese by SCAP Memorandum of 16 October, was explained in detail to the meeting of prefectural health officers on 8 January. Minimum standards for examination, diagnosis and treatment were outlined.

Nutrition Service Activities

A conference was held with Lt. Col. F. B. Moore, census expert assigned to C-2, regarding statistical sampling methods to be employed in nutrition surveys. Col. Moore approved the methods used in the Tokyo survey but recommended that a statistical sampling expert be required for this Headquarters to help in the sampling work when the surveys are extended to include Nagoya, Osaka, Kure, and Fukuoka. On 7 January a radiogram was prepared for dispatch to the CAD, War Department, requesting that such an expert be sent to this Headquarters.

Conferences with representatives of the Ministry of Health and Social Affairs reveal that the data on the Tokyo Nutrition Survey will be furnished this Headquarters not later than 20 January 1946. All details regarding the nutrition surveys to be carried out in Nagoya, Osaka, Kure, Fukuoka and surrounding rural areas, have now been worked out with the Ministry and their formal plan for this work is to be submitted for approval 12 January 1946.

Final plans were submitted and approved for the Tokyo Metropolitan Office, Health Bureau, to carry out a nutrition survey in the municipal hospitals of Tokyo. The survey will be made in 20 general hospitals, 5 psychiatric hospitals, and 5 tuberculosis hospitals. The survey will begin 25 January and will be completed 9 February. The data will be submitted to this Headquarters on 14 February 1946.

Port Quarantine

During the week one case of smallpox was reported in a Korean at Sensaki Repatriation Center. This individual had been living in Sensaki prior to applying for repatriation. Bad weather is making embarkation difficult at this port, DDT was reported as having been received at Sasebo and other centers have also received supplies shipped to them. No significant changes in repatriation figures were noted.

SECTION III ADMINISTRATION OF HOSPITALS

Reports received from 27 prefectures showed an increase in the number of hospitals and a corresponding increase in the number of hospital patients as a result of the recent transfer of former Japanese army, navy and veteran hospital facilities to the Ministry of Health and Social Affairs. A complete weekly Japanese hospital strength report with the percentage of occupied beds is shown in the following table:

Period	Number of		Number of Patient		Percentage
	Hospitals	Capacity	In-patient	Out-patients	Occupied beds
12 Oct.	2,504	126,140	77,464	222,054	60.5
19 Oct.	2,540	122,532	77,849	242,588	60.0
26 Oct.	2,598	131,747	77,091	217,500	58.8
2 Nov.	2,595	133,448	75,959	237,839	56.3
9 Nov.	2,598	136,845	75,756	235,281	54.3
16 Nov.	2,614	138,577	74,728	228,068	54.0
23 Nov.	2,634	139,409	73,369	202,780	52.6
30 Nov.	2,630	142,926	73,634	243,307	51.5
7 Dec.	2,812	153,079	76,634	246,931	50.0
14 Dec.	2,915	178,816	81,747	246,931	46.2
21 Dec.	2,951	197,619	85,698	239,347	43.3

SECTION IV NURSING AFFAIRS

Material to be used as a guide for the nursing program has been requested from the Surgeon General.

In Korea a letter was sent to all Military Government teams informing them of the availability of Korean Public Health Nurses for assignment to provincial or city health departments. A request was also made for the names of applicants for the new Public Health Nursing class which opened 7 January 1946, instead of on 31 December 1945. This letter outlined the subjects given, the quote of nurses allowed to attend, the monetary allowance per month while studying and the uniforms provided.

A brief notation was received regarding the strikes held by nurses at Seoul University and the Red Cross Hospital. The proposed strike at Seoul Medical College Hospital was averted and the situation seems to be abated at the present time.

The policies for the Nursing Affairs Section (present and future) includes program for Public Health Nurses, clinical nurses and midwives. The following are some of the high spots in the program:

- a. Establishment of licensure and registration of all nurses and midwives. Licensure by examination set up by the Board of Nurse Licensure.
- b. Establishment of Korean Nurses Association.
- c. Development of a practice area for public health nursing students.
- d. The inclusion of Public Health Nursing theory in the basic nursing curriculum for all schools of nursing.
- e. Supervision of practice of midwifery by Provincial Health Departments.

SECTION V VETERINARY AFFAIRS

General

A survey of horse racing in Japan has revealed the fact that this sport is under the guidance of the Japanese Racing Association which is controlled by the Ministry of Agriculture and Forestry. The Association maintains 11 tracks located as follows;

Fuchu (Tokyo suburb)	Fukushima
Osaka	Yokohama
Wakayama	Kyoto
Kokura	Sapporo
Miyazaki	Hakodate
Niigata	

It also maintains three horse and jockey training farms located Morioka, Shizunai (Hokkaido), and Setagaya (Tokyo suburb). Horse-racing was terminated in 1943 by order of the Ministry of Agriculture and Forestry and none of the tracks have functioned since that time. Pari-mutual betting is allowed but bookmakers are not authorized.

Reports from Japanese

1. Ministry of Agriculture and Forestry Animal Disease Reports.

Equine Infectious Anemia. This report shows 1,848 cases in 1944 with 1,688 destroyed, 168 deaths and 12 recoveries. In 1945 (January to September) there were 631 cases with 588 destroyed, 38 deaths and 5 recoveries.

Equine Infectious Abortion. This report shows a total of 331 cases occurred during the 1944-1945 breeding season in Hokkaido, Aomori and Iwate Prefectures.

2. Ministry of Health and Welfare Dairy Reports

Japanese Dairy Regulation, 1933 Code. These regulations are applicable to fluid milk traders and manufacturers of processed milk products. Specific instructions are given concerning health of employees, diseases of dairy cattle, undesirable types of milk, specific gravity, butterfat content, pasteurization, bacterial content, cooling and bottling of milk, cleanliness and sterilization of equipment, types of containers, marking to be placed there on and the fines to be imposed for violation.

Prefectural governors are charged with the responsibility of enforcing these regulations, the details concerning equipment, construction and management of dairy plants and the employment of a competent sanitary expert to act as dairy inspector.

3. Miscellaneous

Report received regarding Japanese Horseshoeing Association, its rules and regulations.

SECTION VI DENTAL AFFAIRS

No report.

SECTION VII MEDICAL SUPPLY

Continued progress is reported on the problem of moving returned Japanese military medical supplies into civilian distribution channels. A field trip to Osaka and Kyoto prefectures indicated that little distribution to consumers had been made to date. However, considerable progress has been made toward getting the supplies from depots and collecting points to civilian warehouse, and distributions to dispensers are planned for the current month.

The results obtained through a trip to Hokkaido prefecture were largely the same. One additional factor was observed in that area in that it was found that doctors were not aware of the availability of supplies. Arrangements were made to see that publicity was given to the existence of medical supplies, and when the visiting officer left, distribution was being made to all sections of the prefecture.

This week good results of efforts made to clear medical supplies from the Yoga Depot. On 10 January, a distribution of nearly 300,000 yen was made to doctors and hospitals in the Tokyo area. Two hospitals were visited and both had received allotments of supplies. A short documentary film was made of this distribution as well as considerable footage covering the movement of the supplies out of the Yoga Depot.

A report was received from the Central Medicine Control Company covering the December distribution of controlled medicine from factories to prefectural distributing organizations. This report indicated that the value of these medicines in December was nearly 5,000,000 yen as compared 8,000,000 yen in November.

Field trips had indicated at all points, one particularly difficulty hampering medical supply distribution, and that is lack of transport facilities. A meeting was called and representatives of the Home, Health and Transportation Ministries were present. Arrangements were made for these people to coordinate their activities to see that sufficient transport is made available for the movement of medical supplies. The Health Ministry will be the liaison agency and a report was requested as to the results of the meeting.

A report of the approximate tonnage of crude and semi-processed narcotic stocks in custody of United States Forces in Korean has been requested. An inventory of Japanese military narcotics held at the 29th Medical Depot, Yokohama, was begun 11 January 1946. This inventory will show be separate entries, the kind of drug or preparation and each kind of size of package.

An inspection trip was made to the Hoshi Medicine Company where a considerable quantity of opium slag and other semi-processed narcotics, unsuitable for storage, was found. These narcotics will be destroyed on the premises by Eighth Army.

SECTION VIII LEGAL

No report.

SECTION IV DIRECTIVES TO JAPANESE GOVERNMENT

During the week a memorandum was issued to the Imperial Japanese Government from Public Health and Welfare Section, subject: "Control of Population Movements", AG 091 (8 Jan. 45) PH. This directive is attached and is discussed in Section I - WELFARE.

Crawford F. Sams,
Colonel, Medical Corps,
Chief, Public Health and Welfare Section.

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
PUBLIC HEALTH AND WELFARE SECTION**

WEEKLY BULLETIN

**For Period
13 January to 19 January
1946**

SECTION I WELFARE

General

Relief requirements in southern Japan are increasing because price controls on certain foodstuffs are ineffectual and black market activities are rampant, thus people with limited or small fixed income are unable to obtain sufficient amounts for their needs. The increase in requests for medical relief is attributed to the fact that people are using their funds for food purchases and therefore must apply for free medical assistance whenever such services are required.

Unemployment has increased because the people refuse to accept work for wages which are considered too low under present circumstances. In addition, many demobilized service men and repatriates have deferred seeking employment and prefer to engage in black marketing activities to gain huge profits.

Many Koreans and Chinese have indicated a desire to remain in Japan, particularly since it became known that they would be permitted to take only limited amounts of money with them on departure.

Prefectures in which Reception Centers for repatriates are located report a rapid depletion of relief supplies caused by the need for meeting requirements of destitute repatriates. (NOTE: The Japanese Government was ordered in AG 370.05 (7 Jan. 46) GC, subject, "Inequitable Distribution of Supplies to Reception Centers", to take immediate action to insure that the requirements of reception centers for food and clothing will be levied proportionately on all prefectures.)

The general food situation in southern Japan is fair and serious shortages are not anticipated before April or May when present stocks become depleted. Reconstruction of housing is progressing very slowly due to lack of materials and transportation. The most pressing needs are for clothing and fuel, both of which are critical items in short supply throughout the country.

Foreign Nationals

During the week a communication was sent occupation force commanders authorizing the distribution of certain POW supplies, stocks seized from enemy nationals and American Red Cross clothing supplies, to needy foreign nationals (excluding enemy nationals). The relief supplies are to be distributed through responsible agencies, societies or committee representing the foreign national groups resident throughout Japan. Reports are required and supervision directed, over actual operation for the program, so that the Supreme Commander will be kept fully informed on all aspects of the program.

Korean Welfare Activities

A report received from Korea indicates that fifteen million yen has been distributed for the care of refugees and that additional sums will soon be made available for distribution through the Provincial Governments to meet all legitimate welfare needs, including food, clothing, emergency medical care and construction of refugee housing.

An unemployment relief program is to be established to meet the needs of the resident population. This program includes aid to public and private institutions, such as homes for the aged and orphanages. However, the report states the ultimate success of the welfare program must rest on a well trained group of paid special service personnel.

SECTION II PREVENTIVE MEDICINE

General

The Division was visited by Dr. Wood of UNRRA, who was seeking various epidemiologic information with special reference to conditions presently existing in Korea.

An extended conference on repatriation was attended by the Division Chief and the Port Quarantine Officer. Of particular interest to this Division were matters relative to observance of the International Quarantine Covenant and to proper clearance of quarantinable diseases, at both ends of shuttle routes bearing repatriates to or from Japan.

A conference was held with responsible representatives of the Ministry of Health relative to the production potential of certain biologicals, with particular reference to smallpox and typhoid vaccines, diphtheria toxoid and diphtheria antitoxin. These individuals were to expedite the production of vaccines, and to report, next week, on the progress made.

Due to the increasing prevalence of smallpox among Japanese civilians, the Japanese Government has been directed to carry out a wide-spread program of vaccination of civilians. Particular emphasis is to be placed on those in contact with, or employed by, occupation forces. The increased production of smallpox vaccine has also been required in order to carry out this program and also to reinstate the pre-war compulsory vaccination program throughout Japan.

Sanitary Engineering

Water Supplies. The Ministry of Health and Social Affairs submitted a report of estimated damage, and of the reduction of the quantity of water supplied to 32 cities, due to bombing. These figures vary from those for Chiba, where 95% of the houses served were reportedly destroyed and the public supply was reduced to zero; to Moji where 31% of the houses served were destroyed and there was no reduction in the quantity of water supplied. In Tokyo, 63% of the houses served were destroyed, 67% of the services were broken, and the water supplied was reduced to 6%. Data is being collected on the present status of all city water systems.

A proposed increase in chlorine dosage in water supplies of Tokyo, Kawasaki, Yokohama, and Yokosuka, was discussed with the Water Supply Consultant, ASCOM-C, as was a plan of organization for direct operational supervision by Army personnel. He was advised that the Economic and Scientific Section estimates that there will be no increase in the production of chlorine for water treatment within the next few months, due to the critical shortage of salt, and that the total production of chlorine for the country must not be used in this limited area. It was brought to his attention that the present policy does not include direct operational supervision of civilian water supplies by Army personnel.

Concurrence was given to the recommendation of the Economic and Scientific Section that chlorine be placed on the list of Controlled Critical Items for better control of production and distribution.

Japanese reports of water analysis of the Tokyo supply for the month of December were received. Samples were taken from raw water, finished water at the treatment plants, and from 63 taps in the city. The treated water showed low total bacterial plate counts in all cases, and B. Coli tests were all negative. Small amounts of residual chlorine were reported from two taps for the first time.

An investigation was made of Japanese electrical equipment, for prospecting for ores and aquifers, with Corps of Engineers and Natural Resource personnel. The Japanese equipment showed the same deficiencies as American equipment of similar type, which caused it to be disapproved as impracticable for use in locating ground water supplies, by the U.S. Army at the start of the war.

Engine Supply has approved the request of the XXIV Corps for four chlorinators of Japanese manufacture for use in the Seoul water supply system.

Insect and Rodent Control. Units trained in insect and rodent control work are now located in the Finance Building for operations in the Tokyo area under the general direction of the GHQ Medical Inspector .

Venereal Disease Control

The number of prefecture reporting on venereal disease morbidity increased to 31 for the week ending 22 December 1945. Included in the report were 319 cases of syphilis, 416 gonorrhea, and 49 chancroid.

Port Quarantine Service

The total persons repatriates was 53,775, an increase of 23,360 over the previous week, half of which to and from China. Of repatriates to and from Japan, outgoing passengers were double the number of incoming passengers. No quarantinable diseases were reported from the station.

Nutrition Activities

Nutrition Survey of Tokyo: Results of the survey carried out by civilian nutritionist in December 1945, were reported. An analysis of the data was made showing the present food-consumption compared with the 1936 average. Data on "black market" food consumption was provided.

Nutrition Survey of Japan: On 19 January 1946 a meeting of prefectural officials was held in Tokyo for the purposes of organizing a nation-wide survey along the same lines recently completed in Tokyo. The survey is to be conducted under governmental auspices in accordance with instructions of the Headquarters.

Laboratory Activities

Venereal Disease Control. On 16 January 1946 the results of the comparative survey on serological methods for diagnosis of syphilis were reported and discussed in a conference at the Tokyo Imperial University. It was attended by representatives of the medical faculty of Tokyo Imperial University.

Keio University, and of the 42nd General Hospital which assisted in the survey. The methods employed by the Japanese technicians proved very satisfactory under the conditions of the survey, and will probably be adequate for the needs of the venereal disease control program of the Japanese Government. The methods of the U.S. Army were considered simpler, and more sensitive, and the Japanese physicians present indicated their intention to supplant their present methods with the latter as soon as conditions permit.

Production of Biologicals. On 17 January 1946 a conference was held with officials of the Japanese Ministry of Health and Social Affairs, and the problem of supply and distribution of urgently needed biologicals was discussed in detail and needed action recommend.

SECTION III ADMINISTRATION OF HOSPITALS

Weekly Japanese civilian hospital strength reports from 36 prefectures shows a continued decline in the percentage of beds occupied, while the actual number of both "In" and "Out" patients remains relatively constant.

SECTION IV NURSING AFFAIRS

Reports from Japanese

A request was received from the Japanese Red Cross to have permission to reprint three nursing text-book for use in the Red Cross Hospital Training School. Books were sent to the Civil information and Education Section to request the publisher's permission to reprint the books.

An article appeared in the Nippon Times, on January 15, 1946, concerning complaints of nurses in Japanese hospitals. A meeting was held in the Central Red Cross Hospital and at this Headquarters which was attended by doctors, nurses and members of the Labor Union. A Labor representative of this Headquarters was asked to advise the group as to their "rights" to organize.

A report was received from the Red Cross Hospital regarding the number of training schools and students at the present time.

A copy of the Regulations of Public Health Nurses, issued in May 1945, was received this week. Article XX concerns the organization of Public Health Nurses and is the only one translated into English.

SECTION V VETERINARY AFFAIRS

General

Representatives from the Veterinary Affairs Sub-Section made the following field trips for the purpose of surveying Japanese conditions:

Kanagawa Prefecture. As a result of this survey it was found that animal disease control, meat inspection in slaughter houses, and dairy farm inspection is being practiced in a fairly efficient manner, but pasteurization of milk laboratory control of daily products is being neglected. Sanitation is comparatively good, but equipment is in poor repair and antiquated in design.

Tokyo: Soji Small Animal Hospital. This was found to be an extremely modern establishment, designed and equipped to render excellent service.

Reports from Japanese

Ministry of Agriculture and Forestry.

1. Law concerning the Prevention of Infectious Diseases of Domestic Animals.
 - a. Provisions are made for isolation, quarantine, disinfection, disposal of diseased carcasses, dipping, immunization, reporting, reimbursements, and fines to be imposed violation.
 - b. Prefectural Governors are charged with the responsibility of enforcing these regulations through the medium of local and commissioners for the prevention of infectious diseases of domestic animals.
2. Law pertaining to Disposal of Horses with Infectious Animals.

Prefectural Governors are granted authority to order the slaughter of horses infected with this disease, reimburse owners, and impose fine for violation.
3. Law relating to Cattle Tuberculosis Control.

Specific instructions are included concerning all phases of tuberculosis eradication except frequently of application.
4. Imperial Ordinance relating to Bearer of Expenses for Infectious Animal Disease Control.

The National Treasury, prefectures, municipalities had owners, are charged with a proportionate amount of the expense.
5. Animal Quarantine Regulations.

Location of quarantine stations, duties of inspectors, and instructions concerning the disposal of diseased animals are included.

Korean Report

The Chief of the Veterinary Department, Bureau of Public Health, Headquarters Military Government in Korea, submitted the following reports on Korean Veterinary Affairs:

a. General. A conference of Korean and American veterinarians, and the submission of a report to the Korean Commission of America, relative to the need of personnel and equipment for the rehabilitation and improvement of Korean veterinary service.

The discovery of stocks of captured veterinary supplies located at Susek (near Seoul) and on the Island of Saishu.

An inspection of Suwon Agricultural College where it is planned to expand the three year veterinary course into four years.

b. Personnel. The assignment of veterinary affairs, by Headquarters XXIV Corps, to Provincial Departments of Public Health and Welfare as follows:

Major W.R. Dieterich	-	National Bureau of Public Health & Welfare
Major W.C. Carr	-	Kyoggido
Major R.M. Madison	-	Kyogang Namdo
Capt. J.R. Moeler	-	Kangwando
1st Lt. D.L. Baker	-	Kyogang Pukto
1st Lt. W.D. Carroll	-	Chunghong Namdo
1st Lt. W.A. McCrory	-	Cholla Namdo
1st Lt. J.G. Woodcock	-	Chunghong Oukto
1st Lt. A.T. Zancanella	-	Cholla Pukto

The employment of four veterinarians, three interpreters, one translator and five clerks, by the veterinary department, Bureau of Public Health and Welfare.

c. Animal Disease Control. The translation of Japanese Regulations and Ordinances relating to livestock disease with a view to future revisions, if necessary, and the instructing of Korean veterinarians to abide by these including the rendition of reports.

The dissemination of information concerning rhinderpest over the radio and through newspapers covering provinces bordering the 38th parallel; the continuation of an immunization program and the continued absence of this disease in the American occupied zone.

The discovery of one case of glanders in Kyonggido and the enforcement of routine sanitary control measure which include the application of the Mallein ?? to equines in adjacent areas.

The assistance being rendered, by veterinary affairs, to laboratories at Pusan and taigu, in the production of human smallpox vaccine and various veterinary biologicals.

SECTION VI DENATAL AFFAIRS

A warehouse of the Osaka Dental Materials Control Corporation was burned 14 January 1945. The stocks destroyed amounted to a three-month supply. The reason for this accumulation of undistributed stock was insufficient transportation facilities.

A total of 115 dentists of reestablished in practice during the month of December.

SECTION VII SUPPLY

Officer of the 8th Cavalry Regiment, and the XI Corps., requested that narcotic control officers from this Headquarters assist in the destruction of approximately 100,000 ounces of opium residue and 5,600 liters of solution which contained from one to two percent of morphine, and was unsuitable for storage. A documentary film was made of the destruction on 14 January 1946.

Inspection trips were made to the 29th Medical Depot, Yokohama, in which Japanese military narcotics and confiscated civilian crude narcotics, are stored. During the inventory of these stocks, all damaged and adulterated narcotics, heroin, and narcotics unsuitable for storage, are being withdrawn for destruction. Non-narcotic items are being segregated and will be turned over to the Home Ministry.

A summary report, of medical narcotic stocks in Japan, was prepared. This report shows an adequate reserve level of narcotics for legitimate medical needs.

A conference, on the subject of mixing DDT in Japan, was held with representatives from the Eighth Army, Natural Resources Section of SCAP, USA Typhus Commission, and certain technical Japanese. The representative from Natural Resources pointed out that 50 tons of talcum rock was already mined and could be made available for grinding and mixing, and additional deposits were available for mining. It was estimated that approximately 200 tons per month could be mined in the very near future. Officers of the Eighth Army were instructed that the supervision of this operation would have to be made by the Eighth Army. It was felt that the mixing of the 50 tons already mined should be accomplished as an experiment, prior to entering into the operation on a large scale. Officers of the Eighth Army have already advised that a plan of operation is being submitted to the Chief of Staff, Eighth Army, requesting approval.

Mr. Shiohara, and a representative of the Central Medicine Control Company, were requested to submit minimum requirements of principal raw materials required for the manufacture of medicines. A complete list will be presented in the near future. After correction the list will be referred to the Economic and Scientific Section, requesting necessary action to provide Japanese manufacture of medical and sanitary supplies with sufficient quantities of raw materials to insure adequate production.

The Supply Division, in conjunction with the Preventive Medicine Division, and with the concurrence of the USA Typhus Commission, prepared estimates of Quartermaster and Engineer supplies required for insect and rodent control among the civilian population. This estimate covers items listed in the War Department Circular No. 163, 1945, for the period ending 30 June 1946.

Arrangements were made to obtain 60,000 doses of smallpox vaccine from the Institute of Infectious Diseases. This material was delivered to the 29th Medical Depot for transmitted to Otura, Hokkaido, for use on the civilian population of the city of Yubari.

Delivery was arranged for 400 doses of smallpox vaccine to Kyoto for use on the Japanese civilian employees of the 364th Station Hospital in that city.

The Supply Division investigated the medical supply situation at the Tokyo Public Health Center at the request of the Chief Surgeon's Office. This institution is responsible for conducting physical examination on Japanese civilian employees of the U.S. military installations in this area. A meeting was arranged with Dr. Ichikawa, of the Ministry of Health, and arrangements were made to supply this Center with a 90-day stock.

Assistance was given the Seibo and the Matsuzazwa Hospitals in obtaining coal and coke.

SECTION VIII LEGAL

No report.

SECTION IX DIRECTIVES TO JAPANESE GOVERNMENT

Directives to the Imperial Japanese Government, originating in this Section and issued during the week:
Smallpox Vaccination of Japanese Civilian employed in Occupational Forces Messes, attached hereto.

CRAWFORD F. SAMS
Colonel, Medical Corps,
Chief, Public Health and Welfare Section

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
PUBLIC HEALTH AND WELFARE SECTION**

WEEKLY BULLETIN

**For Period
20 January to 26 January
1946**

SECTION I WELFARE

General

A conference was held with Japanese authorities regarding a memorandum, AG 091 (8 Jan. 46) PH, which had directed the submission of a plan to control population movements from rural area to cities of over 100,000 population. The discussion centered around a proposed Imperial Ordinance to control such movements. Details of the proposal will be reported at a later date when the formal program is submitted to this Headquarters for approval.

Welfare Admission

A discussions were held during the week with Ministry officials regarding the new relief association proposed by the Welfare Ministry. Their preliminary proposal is to substitute a new non-government relief agency to administer welfare benefits, under the welfare and Relief Plan, which are now administered by the Association of Relief for War Refugees, the Association for Relief of Veterans, and other submitted agencies.

Social Insurance

Japanese Social Insurance officials informally proposed a plan to extend social insurance benefits to ex-servicemen whose pensions and other payments will be discontinued on 1 February 1946. A preliminary study of the proposal indicates that the Japanese Government is proposing a substitute scheme for providing special treatment for ex-servicemen in lieu of benefits ordered discontinued by SCAP directive.

Foreign Nationals

A radio message was dispatched to the Joint Chiefs of Staff for clarification of policy regarding continuation of care being provided United Nations Nationals and neutrals who do not desire repatriation. All present policies and directives on this subject assume that foreign nationals desire repatriation, when such is not the actual case. Many Koreans and Chinese, in particular, are refusing repatriation because they can take only limited funds (1000 yen) with them on departure from Japan. In addition, many of them came to Japan voluntarily, prior to or during hostilities, and have established homes and business in this country.

Private Agencies

A meeting was held with the Kanto Christian Social Work Association. A discussion ensued regarding present welfare and relief problems in Japan and the place and contribution of the private welfare agencies in relation to these problems.

SECTION II PREVENTIVE MEDICINE

General

A conference was held with representatives of the Surgeon's Office, Eighth Army, relative to communicable disease control among civilians and the expediting of civilian communicable disease reporting through Army and Military Government channels.

Problems arising from the sudden departure of the Chief Military Government Medical Officer, Eighth Army, were also discussed.

A report was inaugurated showing communicable disease cases and rates (per 100,000 per annum) by prefectures over a four week (respective five week) period.

Maps showing geographical distribution of the reportable communicable disease in Japan for the year 1945 are in process of preparation.

Sanitary Engineering

1. Water Supplies. The water supply officer, ASCOM-C, reported that increased chlorine dosage in Yokohama have resulted in residuals meeting U.S. Army standards at taps in many parts of the city.

The sanitary engineer, 77th MG Company, Gunma Ken, reported that supplies of Maebashi, Numata, and Ota, and possibly two others, were being operated and chlorinated under general supervision of Army engineer personnel for consumption of occupational forces. Leakage in the Maebashi system is extremely high due to air raid damage.

Sanitary surveys in the northern half of Honshu (old Eighth Army area), completed by Japanese officials in November, have been received and are being consolidated. Many cities reported inadequate supply, but few reported the inadequacy as due to war damage. About 30 percent of the cities reported shortage or lack of chlorine, 26 percent reported no analyses made of the quality of water supplied, and several others stated, "occasionally", "infrequently", or "yearly".

2. Waste Disposal. Reports contained in the sanitary surveys indicated a strong consciousness, on the part of most Japanese public health officers and some mayors, of the danger and hazard to health in the use of human excreta as fertilizer. Several cities have constructed large sanitary collection tanks for the storage of nightsoil for three months before it is used farmers. Shortage of labor has caused a number of cities to hold families and neighborhood associations responsible for the collection and disposal of their excreta. It is indicated that this method is not entirely satisfactory.

3. Rodent Control. Several cities reported prevalence of rats and mice as an economic problem, with practically no control measures being taken.

Laboratory Activities

Production of Biologicals. In a conference with officials of the Japanese Ministry of Health, the agenda of the conference of the proceeding week was reviewed. The following action by these officials was reported: stock-oils in former military establishments, previously designated for civilian use, will be made available under a revised plan whereby key agencies producing biologicals will receive priority to satisfy their shortages. Calves for use in manufacture of smallpox vaccine, and horses for the production of antitoxin, were secured in some number under the spur of decisions reached at the previous conference. These officials had arranged to supply funds from Japanese sources as needed, and had secured from civilian sources certain urgently needed utilities and supplies, and had delivered them to the laboratories concerned.

Standardization of Biologicals. In the course of the above conference, discussion brought to light the need for a program of standardization of biologicals employed in control of communicable disease. Experience has shown the unreliability of certain products on sale in open market. Legal responsibility for periodic assay of such products extends to diphtheria antitoxin alone. The matter was presented as one for immediate action, and assurance was received that an effective program would be established as soon as possible to cover the needs of all biologicals.

Standardization of Penicillin. A conference was held with officials of the Ministry of Health on standards to be employed in the manufacture of penicillin. They agreed to classify penicillin as a biological, not a drug. Accordingly, the assay and standardization of penicillin will be governed by existing and projected laws and regulations concerned with biologicals in general. It transpired that prices fixed by the Japanese Government for the sale of penicillin in Japan, are 100 to 500 times the price of the American product at the current rate of exchange. The desirability of curtailing production of penicillin until a uniform product of adequate potency was available, was made clear to these officials. They agreed to submit a revised program.

Conferences were held with representatives of a large pharmaceutical manufacturing company regarding the establishment of mass production of penicillin in Japan. A request was sent to the War Department for the services of technical experts to assist in this project.

Production of Typhus Vaccine. A conference was held with the U.S. Typhus Commission on a program of assisting Japanese laboratories in establishing methods for producing typhus vaccine on a large scale, to be employed in the later months of 1946 and subsequently.

Nutrition Activities

Additional data was supplied by the Japanese nutritionists concerned in the survey program. Evidence was brought to light that black market purchases of rationed items were occurring to a dangerous degree, threatening the stability of the entire program organized by the Japanese Government to avert mass starvation in later months.

A tabulation of the results is appended.

Port Quarantine Service

Repatriation of outgoing nationals increased 8,346 over the previous week, while incoming Japanese decreased by 1,156. A total of 75,919 persons passed through quarantine. No quarantinable disease was diagnosed.

On January 16, at Kakata, a case of smallpox was found on the Tokuju Maru from Pusan. All hands had been vaccinated but the passengers were merely held in quarantine at the former Tuberculosis Sanatorium at Imazu.

Venereal Disease Control

A memorandum to the Imperial Japanese Government was delivered requiring the abolition of licensed prostitution and the outlawing of contracts binding women to prostitution, was delivered to the Japanese Government. A copy of the memorandum is appended

SECTION III ADMINISTRATION OF HOSPITALS

The trend of the percentage of beds occupied in Japanese civilian hospitals continues downward. Latest reports from all prefectures show only 39 percent of available beds being occupied. This conforms to the seasonal trend of previous years.

Due to several recent deliveries of war surpluses, supplies are now being received in the smaller out-lying hospitals.

SECTION IV NURSING AFFAIRS

Reports from Japanese

A copy of the Public Health Nurse's Regulations (Ministry of Health and Social Affairs) Ordinance No. 21, 31 May 1945, Imperial Ordinance No. 331, 30 May 1945.

Article 7 - The Public Health Nurses Examination will be conducted under the jurisdiction of the Prefectural Governor.

Article 19 - The Public Health Nurses must carry out the instruction of the Chief of the Public Health Bureau.

Article 20 - The Public Health Nurse must follow the instruction of the Prefectural Governor exercising jurisdiction and will join the organization of Public Health Nurses which he authorizes.

Article 24 - These regulations will be enforced beginning with June 1, 1945.

There are 28 articles, some are sound, others are unsound, while others are carried out only on paper.

Red Cross First Aid Manuals returned to Red Cross for reprinting. Clearance was given by C.I. & E. The books do not come under the directive of 17 January 1946.

A list of suggested questions for clinical and public health nurses, both written and practical. Possibility of being used for Prefectural examinations.

Copy of curriculum now being used by St. Luke's (Japanese) Hospital for clinical and public health nurses.

List of reference books that are being used at present time in training program at St. Luke's Hospital.

Personnel

A civilian nurse has been approved as assistant in the Nursing Affairs Section.

SECTION V VETERINARY AFFAIRS

General

Representatives of the Veterinary Affairs Sub-Section inspected the Imperial Household stables in Tokyo and the Shimofusa Imperial Horse Farm, Chiba Prefecture. Breeds and type of animals, character and quality of feeds and facilities for veterinary service were observed.

Reports from Japanese

The Ministry of Agriculture and Forestry, Animal Disease Section, submitted an animal disease report for the month of December 1945. According to this report, the incidence of animal diseases remained low in that month. The Hokkaido prefectural veterinarian submitted a 1945 annual report of animal disease in Hokkaido Prefecture. This report does not indicate any marked change in animal disease incidence.

The Ministry of Agriculture and Forestry, Dairy and Meat Products Section, has provided a list of milk condensaries, milk driers, and butter factories, their names and locations.

Law No. 53, 1926, and additional regulations set forth in the Ministry of Agriculture and Forestry Ordinance No. 6, 1927, concerning the licensing of veterinarians, have been received. These regulations contain information relative to qualifications of applicants, fees, professional ethics, discontinuance of licenses, and fines for violation.

SECTION VI DENTAL AFFAIRS

In the past, large quantities of dental supplies have been held up in Dental Material Control Company warehouse awaiting transportation. The Japanese Government has issued instructions that the distribution of medical and dental supplies be expedited and that such supplies be specially marked for prefectural transportation.

SECTION VII SUPPLY

A memorandum was dispatched 24 January 1946 to the Imperial Japanese Government directing the enactment of legislation for the registering, licensing, and classification of all narcotic dealers. The memorandum to the Japanese Government is appended.

The Ministry of Public Health and Social Affairs submitted a report showing quantities of heroin from three prefectures seized and turned over to United States Forces. The Eighth Army submitted similar reports from nine prefectures.

During an inspection trip to the Tokyo-To Medicine Control Company, six and one-half pounds of damaged cocaine hydrochloride was burned. The officials reported approximately 4,000 containers of heroin have both confiscated in Tokyo-To, but the weight has not been tabulated. The Eighth Army will take custody of this heroin and its destruction.

The Japanese Government submitted a list of eight wholesale pharmaceutical companies, plus three alternates, for the custody and distribution of Japanese military medical narcotics. When approved by this Headquarters, it is estimated that the list as submitted will provide approximately 40,000 cubic feet of safe storage space for these narcotic drugs.

A meeting was held with Mr. Sugiyama, Supervisor of Medicine Manufacturing, Health Ministry, to again stress the importance of immediate large scale production of smallpox vaccine. He was told that a sufficient quantity to vaccinate 15,000,000 was the absolute minimum, and that 30,000,000 was desired in the next four to six months. Subsequent reports indicate that excellent action has been taken to accomplish the goal. This matter will be constantly followed and periodic reports obtained. In the event that difficulty in obtaining raw materials is encountered, Ministry officials were requested to contact this office.

A radio was prepared to CG, Eighth Army, directing shipment of 300,000 packages of smallpox vaccine to CG, XXIV Corps., Korea, to cover civilian requirements for a three month period. This action was taken at the request of CG, XXIV Corps and because of the epidemic proportions which smallpox has reached in Korea which, together with the repatriation program, has created an urgent need for large quantities of smallpox vaccine.

A conference was held with representatives of the Yamanouchi Pharmaceutical Company to discuss penicillin production. These representatives desire to produce penicillin on a large scale and visualize no difficulty except a lack of technical personnel to supervise manufacture.

It was discovered that the Banyu Medicine Manufacturing Company was marketing penicillin at 35 yen per ampoule. The ampoule was labelled as containing 500units. As a consequence of this evident misuse of the available limited Japanese supply, it was considered advisable to institute controls to eliminate such practices, and to prevent future similar instances. Representatives of the Health Ministry were called to this Headquarters and were told to initiate a plan covering production, quantity, and distribution of penicillin. This office has since been informed that the Institute of Infectious Diseases has been made the controlling agency for penicillin, and that the Banyu Company has been instructed to discontinue the preparation of the 500 unit package.

The Surgeon, 98th Division, reported a shortage of DDT for typhus control in the Osaka area. Investigation revealed that 10,000 pounds of DDT had been requisitioned and that shipment had been made by the Eighth Army and was obviously enroute. This shipment could not be located immediately. Arrangements were made by Eighth Army, upon request of this office, to ship 10,000 pounds by special car and was due to arrive in Osaka 25 January 1946.

The Central Medicine Control, Ltd., furnished this section the following figures:

Distribution of controlled medicine in December 1945 -----	8,582,320 yen
Purchase of controlled medicines from manufactures in December 1945 -----	4,984,985 yen

The Hoshi Medicine Company will be granted permission to resume operations on 1 February 1946. This company was suspended 26 November 1945 for violation of SCAP directive which prohibited the manufacture of narcotics.

A visit was made to the Kitasato Institute for the purpose of determining production capacity and existing shortages of raw materials. Representatives of the Health Ministry were present during the visit in order that they could be appraised of existing shortage of raw materials.

The shortage of stomach of pigs and horses is the principal limiting factor in the production of diphtheria antitoxin and diphtheria toxoid. A branch laboratory located in Iwakawa, Kagoshima Prefecture, will begin the production of smallpox vaccine early in February. Representatives of the Health Ministry indicated that they would render assistance in obtaining raw materials mentioned above and report action to this office. Investigation revealed that Health Ministry officials had already alleviated shortages previously pointed out.

SECTION VIII

LEGAL

The Japanese Health Ministry reports that the new ordinance, with more severe penalties for traffic in beverages containing methyl alcohol, should be in the hands of the provincial authorities by the first of February.

SECTION IX
DIRECTIVES TO JAPANESE GOVERNMENT

The following Memoranda to the Imperial Japanese Government were initiated in this Section during the week:

1. AG 726.7 (21 Jan. 46) PH, "Abolition of Licensed Prostitution in Japan".
2. AG 441.1 (22 Jan. 46) PH, "Establishment of an Effective System for Narcotic Control in Japan".

CRAWFORD F. SAMS
Colonel, Medical Corps,
Chief, Public Health and Welfare Section

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
PUBLIC HEALTH AND WELFARE SECTION**

WEEKLY BULLETIN

**For Period
27 January to 2 February
1946**

SECTION I WELFARE

General

During the week the Imperial Japanese Government in CLO memorandum No. 450 (1.1), dated 30 January 1946, submitted the formal draft of the proposed Imperial Ordinance limiting population movements from rural areas to urban centers (cities of 100,000 or more population). A study of the proposal is continuing and details of the control measures to be inaugurated will be announced following approval by the Supreme Commander.

Relief

The Eighth Army Headquarters announced that subordinate units were ordered, during the week, to check the Japanese Government's inventory of Army-Navy food and clothing stocks and to submit estimates of needy persons in each prefecture. Upon receipt of such information in this Headquarters, the Japanese Government will be authorized to distribute these items to destitute persons.

SECTION II PREVENTIVE MEDICINE

General

Colonel Wilson C. Williams, M.C., Chief of the Preventive Medicine Division, departed this station on 1 February 1946.

A brief summary of the reportable diseases for the year 1945 was prepared in chart form, showing total reported cases and rates per 100,000 per annum by prefecture.

A system of master cards was set up by which cumulative communicable disease data are available for ready reference, cross-indexed by disease and prefectures.

On the basis of age distribution figures, obtained from the Ministry of Health, a comprehensive plan for diphtheria immunization was formulated and a memorandum for the Imperial Japanese Government prepared and forwarded for dispatch, directing that detailed plans be submitted for the carrying out of this program.

Following receipt of replies from the major commands concerned, (AFWES-PAC, CINCPOA and USAFIK), a reply to the Central Liaison Office was prepared and forwarded for dispatch; disapproving the request for additional birth and death registration among Japanese nationals under U.S. control.

Sanitary Engineering

Water Supplies. A conference was held with the G-4 Section regarding chlorination of public water supplies in cities having concentrations of occupational troops, as a result of requisition for hypochlorinators from GHQ Medical Inspector. The Chief Engineers' Office disapproved the requisition, on the advice of ASCOM-C engineers, since the Tokyo water supply will be chlorinated to meet U.S. Army standard in the near future. The Chief Surgeon's Office recommended chlorinating water supplies to U.S. Army standards, in all cities having concentrations of occupational forces; for more adequate protection of the health of troops. It was agreed that such action is desirable if sufficient chlorine can be obtained. G-4 is requesting, of the Chief Surgeon, a list of cities considered as having concentrations of occupational forces, or for a basis for making such a decision. The Chief Engineer will be requested to make surveys of cities selected, and estimates of equipment and supplies necessary for proper treatment of those water supplies for direct consumption by occupational forces. The Economic and Scientific Section reported G-4 that some increase in chlorine allocation for water treatment could probably be made if the Chief Surgeon considers it necessary for the protection of the health of troops. Consideration is also being given to the importation of chlorine from the States for this purpose.

Water Disposal. A study is being made of Japanese program for the sanitary treatment of nightsoil. Methods are all based upon the destruction of pathogenic bacteria and parasites by storage. Experiments have shown that properly designed sanitary privates, and city nightsoil storage vaults, providing three months storage, have given excellent results. Considerable experimental work was done before the war on the development of plants for the treatment of human excreta from smaller cities, or districts of larger cities not having water borne sewage systems. The excreta was to be collected in the usual manner and treated at a central plant providing controlled sludge digestion. The dried sludge was to be used as fertilizer. Basic principles involved are sound, and there would seem to be a place for this type of treatment in this country.

Laboratory Service

Production of Biologicals. A third conference was held with members of the Japanese Ministry of Health and Social Affairs, on the matter of facilitating production of smallpox vaccine, triple typhoid vaccine, and diphtheria antitoxin and toxoid. The Medical Supply Division assisted in the program of obtaining sufficient calves for the production of smallpox vaccine, enlisting the aid of the Natural Resource Section, SCAP, and the Japanese

Ministry of Forestry and Agriculture. Sufficient numbers of calves were ultimately assured for the quotas previously established for smallpox vaccine. Distribution bottle-necks were surveyed in discussion and measures initiated to facilitate the supply of the vaccine in areas of greatest immediate need.

Standardization of Penicillin. A committee for the standardization of penicillin is being organized by the Health Ministry, to determine the standards of potency and quality of all penicillin being produced in Japan. The action of this committee will be referred to this section for review.

Medical Examiner System in Tokyo. The medical examiner system, established in Tokyo in December 1945, was re-examined and certain improvements were instituted. When fully perfected the program will be utilized as a model for a nation-wide system of the same general type, whereby the accurate diagnosis and reporting of death will be assured insofar as the public health program is concerned.

Nutrition Service

Nutrition Survey of Tokyo Hospitals. On 28 January 1946, a survey was begun of 20 general hospitals, 5 psychiatric hospitals and 5 tuberculosis hospitals. The same general procedure is being followed as in the nutrition survey recently completed in 35 ku of Tokyo.

Nutrition Survey of Other Area. The nutrition survey of Nagoya, Osaka, Kure and Fukuoka modeled on the Tokyo survey of December 1945, was formally commenced by two large groups of nutritionists, one for the western portion of Japan, the other for the eastern portion. Comparable segments of the rural population adjacent to these cities, and to Tokyo, will be similarly surveyed. The results will be compiled with those of the previous survey in Tokyo and will furnish the basis for a continued program of nutrition survey to be undertaken in the same five areas every three months therefore for as long a period as needed.

On 29 January 1946, at a meeting held in Keio University Hospital, Tokyo, Colonel Sams addressed the group which will survey eastern Japan. A similar assembly met in Kyoto on 1 February 1946 at which time Colonel Sams' address was read in transcript.

Post Quarantine Service

The number of outgoing repatriates for the week ending January 27, was 47,898; incoming numbered 23,540. The total for this week exceeded that of last week by 4,481. The predominant shipments were: Japanese from China, 30,655; Koreans, 21,550. No cases of quarantinable disease were known to have occurred during the week.

Venereal Disease Control Service

Plans were drawn for a demonstration of venereal disease contact tracing in Tokyo, using personnel of the First Cavalry Division, the office of the Provost Marshall of Tokyo, and the Tokyo Health Department.

A conference was held with a representative of the Ministry of Health on the subject of "health certification", and the admission of venereal patients to communicable disease hospitals. The Ministry will order the discontinuance of the practice of issuing health certificates to persons examined for communicable disease.

Analysis of the first 8 weeks of operation of the venereal disease examination-treatment demonstration at Yoshiwara Hospital in Tokyo, revealed that 118 cases of gonorrhea were diagnosed during that period, in 88 of approximately 180 individuals subjected to weekly examination. Sixty-three individuals developed gonorrhea once, 21 twice, 3 three times, 1 four times.

SECTION III ADMINISTRATION OF HOSPITALS

The percentage of occupied beds continues downward although the number of both in-patients and out-patients remain well within the average. The inconvenient location of some of the National Hospitals accounts for the reluctance of patients to enter them for treatment.

SECTION IV NURSING AFFAIRS

Reports from Japanese

The Public Health Ministry has assigned Dr. Yukikazu Kuramochi as assistant to Dr. Miki in the Bureau of Health. Dr. Kuramochi is to work with Miss Kaneko on the Public Health program and establish a unified curriculum for the training schools. He has submitted the curriculum listed below. This curriculum was established after a meeting which was held in Tokyo on January 19th, at which time a number of the physicians had 14 directors of nurses were present. The great need for text books was again expressed.

THE STANDARD CURRICULUM FOR PUBLIC HEALTH NURSES' TRAINING SCHOOL

SUBJECTS (Class Work) hours	3 yrs	2 yrs	Midwives	Remarks
	A	B	C	
	hours	hours	hours

SUPPLEMENTARY:

Class work 5 hrs per day and 25days for a month

Practical work 8 hrs per day and 25days for a month

SECTION V
VETERINARY AFFAIRS

General

A representative from the Veterinary Affairs Division conducted a survey of Tachikawa Japanese Army Veterinary Supply Depot, now occupied U.S. Armed Forces. It was found that practically all medical and veterinary supplies have been removed by the Japanese Ministry of Home Affairs, except horseshoes, horseshoe nails and the machinery necessary for their fabrication.

Reports from Japanese

Animal Disease report. The Ministry of Agriculture and Forestry, Animal Disease Section, reported one case of anthrax, bovine, in Chiba Prefecture, which was diagnosed on 26 January 1946. Control measures used are immunization and quarantine.

Examination for Veterinary License. The Ministry of Agriculture and Forestry has submitted information concerning the examination of non-graduate veterinarians desiring a veterinary license. Qualifications of applicant, veterinary subjects to be included in the examination, fees and procedures are outlined in this information.

Korean Report

The Chief of the Veterinary Department, Bureau of Public Health, Headquarters Military Government in Korea, submitted the following report on Korean Veterinary Affairs:

GENERAL: A conference of Provincial veterinarians for the purpose of clarifying their relationship with Military Government.

ANIMAL DISEASE CONTROL:

1. The completion of the Rhinderpest immunization program along the 38th parallel.
2. The production of 100 cc's of mallein.
3. An outbreak of Fowl Pest in three districts and the use of vaccine as a control measure.

SECTION VI DENTAL AFFAIRS

No report.

SECTION VII SUPPLY

Production

Continuous efforts are being made to accelerate the production of vaccines. The Health Ministry has been requested to make every effort to increase prices of vaccine in order that a profit can be made by manufactures. Manufactures are making patent medicines in order to provide sufficient funds to carry on production of vaccines. Increase in prices will permit these manufactures to stop production of patent medicine, and this effort can be diverted to the manufacture of vaccines.

Conferences on the production of smallpox vaccine continue to indicate that obtaining a sufficient number of cows is the hardest problem to solve. The Health Ministry requested the help of this office in solving this problem. Accordingly, a conference was called on 2 February in an effort to iron out all difficulties. Representatives of the Health Ministry, Agriculture Ministry and the Natural Resources Section, SCAP, were present. The over-all problem was outlined, stressing the fact that production of at least thirty million individual doses in the next four or five months, was absolutely essential.

The Health Ministry presented a new plan for production outlining the manufacturers and the number of cows necessary during specified periods. Representatives of the Natural Resources Section stated that there were approximately two million draft cows in Japan, and that the total number required for production of smallpox vaccine (1936) was very small and this number could be obtained without too much difficulty. It was pointed out that this requirement would have to be met and the representatives of the Agricultural Ministry stated that the required number would be obtained. Weekly reports beginning next Tuesday, February 5th, will be made by the Agricultural Ministry and the Natural Resources Section, SCAP, on the actual number obtained against the program as outlined by the Health Ministry.

Distribution

Field trips were made to Fukushima, Yamagata, Niigata, Saitama and Gunma Prefectures to investigate medical supply operations. Conditions, as pertains to the distribution of medical supplies, were unsatisfactory. Corrective action was indicated to the prefectural officials and to the Welfare Ministry. It is apparent that the

Ministry must take more positive action to see that the local agencies perform their responsibilities. Supervision and advice from this Section will be given to see that this is done.

A preliminary investigation has been made on the distribution of smallpox vaccine. This is the first year that it has been necessary to control the distribution of this item. Stocks are being distributed with due regard for the incidence of the disease.

Reports were received this week indicating that the December distribution of newly manufactured medical supplies were generally higher, than for previous months, since the occupation. Controlled medicines especially increasing from 1,000,000 yen to over 8,000,000 yen.

Distribution of returned military medical supplies continued. A report indicated that the Japanese have inventoried 110,000,000 yen through December, and the Welfare Ministry has authorized distribution of 20,000,000 yen. This Section is pushing the program to make certain that Ministry balances stock between prefectures as soon as possible and distributes additional quantities on an equitable basis.

Narcotics

Japanese officials of the Drug and Pharmacy Section, Ministry of Health reported on 28 January 1946, that they expect to have legislation setting up a system of narcotic control ready in approximately one month. About 100 people in the national and prefectural governments will work on narcotics control exclusively, according to the present plans of the Health Ministry.

The narcotic storage facilities of the Takeda Wholesale Drug Co. and the Sankyo Drug Co. were inspected in order to determine their suitability for the custody and distribution of seized Japanese military medical narcotics.

The Sankyo Drug Co. reported that a quantity of finished narcotics, seized in error by the Eighth Army, had been returned with nine items missing, among them a 25 gram bottle of morphine hydrochloride and a 25 program bottle of cocaine hydrochloride. This matter has been referred to the Headquarters, Eighth Army, for investigation and report.

A report on the crude and semiprocessed narcotics, now in the custody of the United States Forces, as reported to this Headquarters, was forward to the War Department on 28 January 1946.

CRAWFORD F. SAMS
Colonel, Medical Corps,
Chief, Public Health and Welfare Section

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
PUBLIC HEALTH AND WELFARE SECTION**

WEEKLY BULLETIN

**For Period
3 February to 9 February
1946**

SECTION I WELFARE

General

A study was completed during the week of the Japanese Government to control population movements from rural areas to urban centers (cities of 100,000 or more population) as contained in CLO memorandum No.450 (1.1) dated 30 January 1945. A reply to the memorandum was prepared and circulated among interested SCAP staff sections. After approval of the program by the Supreme Commander details of the plan will be announced.

Relief

In compliance with an informal request of this Section a preliminary status report was received from the Home Ministry regarding former Japanese Army and Navy stocks as of 31 December 1945. Although the report covers stocks other than those being held as reserve relief supplies, the information is of interest since the Japanese Government has been directed to place funds received from the sale of such goods in a central account to be used for welfare and relief purposes. The report stated that 111,457 metric tons of rice, wheat, barley and other cereals, had been received by the Home Ministry who had turned over 83,725 tons to the Foodstuff Control Corporation, and that 22,750 tons had been distributed to consumers.

Social Insurance

The Finance Division of the Economic and Scientific Section, this Headquarters received a formal request from the Imperial Japanese Government during the week to blanket an estimated 2,880,000 ex-servicemen under the provisions of the social insurance system. The Japanese Government had been directed by this Headquarters to discontinue pensions and other benefits to Japanese Army and Navy personnel by 1 February 1946. The gist of the Japanese proposal is that these ex-servicemen and their dependents are now without resources or employment, that the subscriptions paid by ex-servicemen to the Pension Fund (amounting to approximately 1% of their salary) should be considered as insurance premiums, and that annuities and benefits to be paid ex-servicemen should be on an equal basis with other insured persons (despite the fact that the latter have been contributing more than 5% of their salaries to the insurance system).

A thorough study of the proposal is being made by this Section as well as by the Government Section and the Economic and Scientific Section of this Headquarters.

Foreign Nationals

Eighth Army Headquarters announced during the week that it had implemented the authorization of this Headquarters to distribute supplies to needy foreign nationals (other than enemy nationals) in Japan. An International Relief Committee has been organized to undertake actual distribution of the materials, to maintain proper records and to submit necessary reports.

A conference was held with American Red Cross officials regarding distribution of approximately 27,000 Red Cross clothing items shipped to Japan from the Philippines for use of foreign nationals. Details of the above mentioned program were discussed and complete agreement reached on all operating procedures. The Red Cross clothing will be made available for needy foreign nationals through the International Relief Committee under Eighth Army supervision.

A conference was held during the week to establish a policy regarding the continued care of foreign nationals in Japan who do not desire repatriation. This policy will be announced following approval by the Supreme Commander.

SECTION II PREVENTIVE MEDICINE

General

Under a reorganization of the Public Health and Welfare Section, effective 4 February, Port Quarantine, Laboratory and Nutrition activities were separated administratively from the Preventive Medicine Division, and grouped under a Consultants' Division.

Preparation of the Summary Report of Communicable Diseases for the four week period ending 26 January 1946 was started.

Conferences were attended, together with the Laboratory Consultant and officials of the Ministry of Health, relative to the transportation, distribution and utilization of smallpox vaccine, which was made available by the encouragingly high production at Kumamoto laboratory.

Population figures and information relative to diphtheria were furnished to the Laboratory Consultant and officials of the Ministry of Health to assist them in planning for the production of diphtheria toxoid for the projected immunization program.

Discussions were held with Col. Sams, Lt. Col. Wheeler, USATC, Maj. Kirkwood, I Corps. Surgeon's Office, and Dr. Shibayama, Typhus Control Officer of the Ministry of Health, relative to the present epidemic of

typhus fever in Osaka and Nagoya. The discussions covered particularly such points as the obvious ##### in reporting, and alleged lack of cooperation, by the prefectural health officials in Osaka and the intensification of control measures both by civilian and U.S. Army authorities.

Sanitary Engineering

Water Supplies. Chlorine requirements for water treatment for 135 cities were submitted by the Bureau of Sanitation, Ministry of Health and Social Affairs. The tabulation showed an average water consumption for each city, present chlorine dosage, chlorine requirements at present rates of dosage, and estimated chlorine requirements for dosage of 2.0 parts per million. Present rates of dosage vary from 0.1 ppm to 1.0 ppm in 127 cities, from 1.1 ppm to 1.5 ppm in 7 cities, and 4.0 ppm in 1 city (Taira).

Insect Control. Conferences have been held with the Bureau of Sanitation officials, Ministry of Health and Social Affairs, regarding mosquito control. The little control work that has been done in the past has been entirely under prefectural health departments. Ministry officials could give little information as to control methods used, or supplies and equipment available. A definite program for mosquito survey and control work in endemic areas of mosquito borne diseases is to be submitted 20 February. As previously requested, an order has been issued by the Home Ministry for the refilling of water holes that were constructed for fighting fires during air raids.

Food Sanitation. Unsatisfactory sanitary conditions in food stalls on the streets of Tokyo, and other cities, has been brought to the attention of Japanese health officials. Laws against black marketing as well as food sanitation laws are said to be violated in many of these street stalls. Tokyo police have issued warnings to these merchants.

General. The first of a series of meeting was held this week with leading Japanese sanitary officials of this area for discussion of sanitary engineering in Japan. The need for qualified sanitary engineers in the Ministry, prefectural and city health departments, was discussed at some length. In the discussion of sanitary engineering education, it became evident that university courses should be improved and expanded. Considerable interest was shown in the proposed program for education of the general public in sanitation.

Laboratory Service

Production of Biologicals. At a fourth conference with officials of the Japanese Ministry of Health and Social Affairs, several issues concerned with the production of biologicals were raised and significant decisions were reached. Among them were the following:

a. Stockpiles of military medical supplies in former military laboratories have been inventoried and such supplies as are suitable for use in manufacture of biologics will be quickly distributed on a revised plan and reported to this Headquarters.

b. Smallpox vaccine will be produced in the largest possible amounts and distributed at once to all key areas. Arrangements were made to obtain surpluses of smallpox vaccine from Kumamoto where large amounts are being produced under the direction of the 93rd Headquarters and Headquarters Detachment Military Government Group (Lt. j.g. Volk, MC, USNR) for distribution in the over-all program. At the same time this Headquarters arranged assistance from the Health Ministry for the Kumamoto Laboratory in the form of additional equipment and supplies.

c. In compliance with the recent directive to the Imperial Japanese Government, a program for immunization of all susceptible individuals will be submitted and plans made for the production of the required amounts of diphtheria toxoid.

d. Biologicals required for processing of repatriations will be produced by a similarly accelerated program.

Standardization of Penicillin. A working program was submitted by the Director of the Government Institute for Infectious Diseases in compliance with decisions of previous conferences. With the assistance of Capt. Charles Armstrong, MC, 27th General Hospital, methods of assay and standardization will be explored at once in order to permit maximum production of penicillin by Japanese laboratories. The Ministry agreed to curtail the commercial sale of such penicillin as is now produced until its quality is established and its safety for use assured.

Standardization of Biologicals. As an extension of the principle already applied to penicillin, a program of standardization of all biologics is being developed by responsible officials of the Ministry and will be submitted to this Headquarters for approval.

Nutrition Service

Personnel. On 6 February 1946, Col. Paul E. Howe, SnG, reported for duty as Nutrition Consultant in the Consultant Division, vice, Maj. S.E. Moolten, Laboratory Consultant, who temporarily acted in that capacity since the departure of Maj. Corlette for the United States.

Nutrition Surveys. On 7 February, the Ministry of Health reported on the progress of nutrition surveys in Osaka, Nagoya, Kure and Fukuoka. The surveys began on 5 February at all places and include both urban and rural areas. They will continue for three weeks. The results are expected to be ready by the middle of March.

Plan for Nutrition Survey. A headquarters to supervise nutritional surveys, has been set up in the Welfare Ministry of the Imperial Japanese Government with branches in the Public Health Sections of the Prefectures of the cities to be surveyed. Survey groups will be organized to conduct the surveys, consisting of 8 members - 2 physicians, 2 nutritionists and 4 assistants. A team is expected to observe the nutritional status of 60 persons and obtain data on food consumption of 6 families per day. The representative samples of the population observed will be as follows: cities of 1,000,000 or over, 1%; 500,000 to 1,000,000, 1.5%; 100,000 to 500,000, 2%. Individuals to be surveyed will be directed to assemble at a designated place within the area to be surveyed. A local conference will be held in each city by a representative of the Japanese Welfare Ministry to explain the survey to officials of the local government and to selected individuals of the prefecture.

Venereal Disease Control

The Ministry of Health and Welfare presented a proposed directive to the Prefectural Governors "suspending" the practice of issuing health certificates to individuals examined for venereal disease. Concurrence of this office was given.

Arrangements were completed for the establishment of venereal disease contact-tracing in Tokyo. The Staff Surgeon, the Office of the Provost Marshall, Tokyo, and the Chief of the Medical Section, 32nd Military Government Company.

SECTION III ADMINISTRATION OF HOSPITALS

Reports received this week from Japanese civilian hospitals, of the percentage of occupied beds, indicate the first reversal of the downward trend during the period of occupation. There are now 2,947 hospitals with 201,537 beds, 83,553 of which are occupied.

SECTION IV NURSING AFFAIRS

Reports from Japanese

A conference was held regarding the reprinting of Japanese books for use in the nurses training schools in Japan. There are several late books written by outstanding doctors which might be helpful to the student nurses. A list of books and their authors was taken by Miss Kaneko to the Ministry of Health, requesting that they give consideration to the reprinting of those books. All of the books are Japanese and were written by Japanese.

Three appointments have been made for the 5th Medical Museum and Arts Detachment to take pictures of nurses' activities during the coming week at the Red Cross Hospital, the Imperial Gift Hospital, and St. Lukes International Hospital.

Medical books for the GHQ Nurses' Library were received this week from the 29th Medical Depot, Yokohama.

SECTION V VETERINARY AFFAIRS

Representatives from the Veterinary Affairs Division conducted the following surveys:

a. The Shimotakaido Dairy Farm. This was found to be a model institution owned and operated by the Mitsui Real Estate Company for the purpose of supplying the members of that family with wholesale milk. With the addition of a small amount of equipment this establishment could be classified as a "certified dairy"

b. The Japanese Army Veterinary School. It was found that this school had acquired a leading position in the field of veterinary education and research. Its purposes were: education of newly commissioned veterinary officers; education of non-commissioned veterinary officers; manufacture of biologicals and medicines; research and compilation of records. The school was composed of the following departments: headquarters, education, research, preventive medicine (biological and medicine manufacture) and veterinary hospital.

Reports from Japanese

Animal Disease Report. The Ministry of Agriculture and Forestry, Animal Disease Section, reported that no new outbreaks of animal disease occurred during the week of 2 to 9 February 1946.

Army Veterinary Service. The Ministry of Agriculture and Forestry has submitted the following information concerning the former Japanese Army Veterinary Service:

Classified as a Bureau the army organization allowed for veterinary representation at all levels. There were 5,024 veterinarians in the Japanese army with rank from second lieutenant to lieutenant general, inclusive.

The chief purposes of the veterinary service were animal disease control, veterinary supply and education of newly commissioned veterinary officers. Horse-shoeing was a very important responsibility. Food inspection was not a function of the veterinary burden.

Great emphasis was placed upon the welfare of horses because of the wide use of these animals for transportation purposes. The records of disease among army horses were destroyed by fire, but strangles and infectious anemia in Japan, and surra and glanders in China, were considered to have been the most important infectious diseases. All raids were responsible for a high casualty rate among China and Southern area horses. Malnutrition was also a problem of importance in those areas. Supply difficulties to forward areas resulted in an acute and, in many instances, a total lack of medicine, instruments and horse shoes. Thus, divisional and regimental veterinary service was not efficient.

SECTION VI DENTAL AFFAIRS

No report.

SECTION VII SUPPLY

Narcotics

As investigation has been made of a shortage in narcotics reported by the Sankyo Drug Company after the return of a quantity of finished narcotics erroneously seized by the Eight Army. It is now believed that the shortage was probably due to a lag in inventory, or to inaccuracy in counting the large quantity of packages. The Japanese plant officials, and Mr. Shiohara, President of the company, concur in this belief.

An inspection is being made of narcotic wholesale houses and their narcotic storage facilities in Kyushu.

There shipments of narcocon, comprising 490 cases, have been located at the post office in Osaka. All were consigned, apparently before the surrender, to Taikoku, Formosa, by the Takeda Medicine Industry Company, Ltd. I Corps Headquarters has been directed to pick up these narcotics and store them pending directions from this office as to their disposition.

Production

Estimate of smallpox vaccine production exceeded the proposed plan by approximately 1,700,000 individual doses, for the period 4 to 9 February 1946. This production was accomplished at the Government Institute for Infectious Diseases and the Osaka Imperial University. This does not include the production at Kumamoto Laboratory for which no figures were available. It is estimated that two to three million were manufactured by Kumamoto. The Ministry plan contemplated production of 900,000 individual doses during this period. Health Ministry officials report sufficient numbers of cows are being made available to meet production programs for smallpox vaccine.

Two requests have been received to operate a portion of the Yoga Medical Supply Depot as a medicine manufacturing plant. This installation has a well-equipped laboratory which has been included on the reparations list. Health Ministry officials express a desire to operate a Hygienic Research Laboratory at Yoga Depot. They desire to operate the entire depot and have discussed their plans with the Home Ministry. No definite decisions have been made. A conference is planned for 13 February 1946, to review plans of the Health Ministry and if considered advisable the Ministry will be assisted in carrying out proposed plans.

Health Ministry Officials furnished their office with a list of critically needed raw materials for manufacturing medicines. Expressed in terms of weight items appearing on their list will approximate 3,000 tons. After a thorough review, this list will be discussed with the Economic and Scientific Section with a view to importation.

Distribution

Distribution of smallpox vaccine for the week was made to the following:

	<u>Date</u>	<u>Doses</u>
	February	
Seibo Charity Hospital, Tokyo	7	500
Eight Army Surgeon	8	10,000

XI Corps Surgeon	8	1,000
42nd General Hospital	8	300
Eight Army Surgeon	9	20,000
I Corps Surgeon, Kyoto	9	200,000
IX Corps, Surgeon, Sapporo	9	125,000
XI Airborne Div. Surgeon, Sendai	9	125,000

Retail sale of Japanese Army medical supplies was held on 5, 6, and 7 February under the auspices of the Tokyo Prefectural Health Office in six large department stores strategically located throughout Tokyo, for the air raid victim. The stock involved was formerly Japanese Army supplies from the Yoga Medical Depot, which were sold for about one-tenth of the prevailing "black-market" prices on similar items. Possibilities are being explored for having similar sales in other cities, and preliminary plans are in process for one in Nagoya.

Habu Snake Antivenum (1600cc) was delivered to the 29th Medical Depot in Yokohama for shipment to the Medical Supply Officer at the Okinawa Base Command.

A plan for the distribution of penicillin was submitted by the welfare Ministry. The procedure involved is to be followed only until there is sufficient supply to effect general distribution. The plan will embrace the inauguration of a central committee who will be responsible for authorization of penicillin manufacturers and distribution to hospitals, upon request to the penicillin committee. Hospitals will make clinical reports to the committee on each case treated with penicillin.

A monthly report pertaining to production and distribution of penicillin will be submitted to this Division not later than the 15th day of the calendar month. All information will be in terms of Oxford units, and the amount in the release column will be supported by a list of consumers and quantities to each.

The Preventive Medicine Division is developing a plan covering standards and other technical data on penicillin up to the point where a manufacturer may be authorized to produce on a commercial scale.

SECTION VIII LEGAL

No report.

SECTION IX DIRECTIVE TO THE JAPANESE

A directive to the Imperial Japanese Government, subject "Diphtheria Control", AG 720 (4 Feb. 46) PH (SCAPIN-698) instructed the Japanese to produce diphtheria toxoid and to immunize all persons from nine month to ten year of age.

CRAWFORD F. SAMS
Colonel, Medical Corps,
Chief, Public Health and Welfare Section

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
PUBLIC HEALTH AND WELFARE SECTION**

WEEKLY BULLETIN

**For Period
10 February to 16 February
1946**

SECTION I WELFARE

General

Major R.E. Riordan, M.I., reported for duty with the Public Health and Welfare Section and was assigned as Acting Chief of the Welfare Division.

Welfare Administration

An agreement was reached, by interested SCAP staff sections, on the reply to the Japanese Government's welfare and relief plan. It is expected that the reply will be issued within a few days. An occupational force directive was prepared which related to surveillance procedures and details of the background material for the Japanese welfare and relief plan, and will be sent to Military Government completes and group. Following the issuance of the Memorandum to the Imperial Japanese Government, the surveillance material will be distributed.

Relief

A conference was held with Eighth Army Government officers relative to authorizing the distribution of clothing stocks now held by the Japanese Government as reserve relief supplies. Details of the release authorization plan will be announced following approval by the Supreme Commander.

Social Insurance

An informal report was received from the Social Insurance Bureau of the Ministry of Health and Social Affairs, relative to the number of individuals covered, the amount of contributions received, benefits paid, and fund status under each of the five social insurance laws. A study of the report is being made and an analysis of the information obtained will be releases in the near future.

Repatriation

A conference was held with officials of the Health and Welfare Ministry relative to the reduction in the number of Koreans who are being repatriated. The conference developed the following reasons as stated by the Japanese Government.

1. That the Korean Association was deliberately slowing down Korean Repatriation by urging the Koreans to stay in Japan until the strikes were over. Their leaders also promised additional food and clothing if they remind.
2. That lawlessness was rampant and was confined mostly to Korean groups who refused to obey the Japanese Laws and considered themselves entitled to preferential treatment in this regard.
3. That the police were afraid to interfere with the Koreans and enforce the laws because they felt it would be unfavorably received by GHQ.
4. That a ship sailed on 30 January 1946 with July 475 passengers on it when its capacity was 1,570.

SECTION II PREVENTIVE MEDICINE

Communicable Disease

Typhus Fever. The incidence of louse-borne fever has increased generally throughout Japan as indicated from reports received from Military Government units over the country. Although this increase is general, two epidemic areas have developed in southern Honshu at Nagoya and Osaka. The incidence in Osaka was beginning to rise rapidly last week, and, from the latest data presently available, had reached 300 cases since the beginning of the year.

Members of this Section and the United States Typhus Commission left this Headquarters to advise and assist Military Government Units in these two areas concerning control measures. Anti-typhus supplies have been furnished by the United State Army. (See Section VII "Supply")

Inadequate case-reporting by Japanese physicians has been observed and reported by Military Government units. Responsible officials have been warned by them. Direct observation by members of this Headquarters of the actual dusting procedures for delousing has shown that the Japanese dusting teams perform this function in a slipshod and unsatisfactory manner. Typhus patients have been found in the hospitals with live lice after having been dusted with DDT by these teams.

In many cases it has been necessary for the United States Typhus Commission and members of Military Government units to repeat classes of instruction in the technique of dusting and eliminate these individuals who cannot, or will not, perform the task satisfactory. In general, the Japanese women are more adapt than the men.

Smallpox. Smallpox continues to show seasonal increase all over Japan, although from available reports there is no definite epidemic focus. The production of vaccine has exceeded expectations and distribution to local health officials and to military units, for use on Japanese civilians, is progressing satisfactory.

Nutrition

The nutrition survey in Osaka, Nagoya, Kure and Fukuoka areas are expected to be completed during the coming week.

The drastic action by the Japanese Government, in changing currency and limiting the amount available to any one individual, is expected to make more food available to the general public as well as to sharply curtail black market activities in these commodities. If this occurs, the result should be reflected in the current and subsequent nutrition survey.

Quarantine

Incoming repatriation showed an increase of 18,055 persons passing through quarantine (total for the week ending 10 February was 61,839), while outgoing persons showed a decrease of 3,728 (total for the week ending 10 February was 20,099).

One case of smallpox occurred in a member of the crew of a SACAJAP ship.

Arrangements were made for the preparation of a new repatriation center on Hokkaido with the Hakodate Quarantine Station as a nucleus.

SECTION III ADMINISTRATION OF HOSPITALS

For the second consecutive week the ratio of beds occupied, to the total capacity, has increased.

The total number of in-patients and out-patients reached a now peak. The rise in the number of patients can be expected to continue for the next two or three months.

SECTION V NURSING SECTION

Reports from Japanese

Pictures were taken by the 5th Medical Museum and Arts Detachment, of nurses' activities in three Japanese hospitals, namely, the Imperial Gift Charity Hospital, St. Lukes International Hospital and Central Red Cross Hospital.

These pictures are for use in the Medical Department of this Section.

Notice was received of a meeting of the Japanese Public Health Nurses' Association to be held February 20 at the Ministry of Health. This meeting is to be for the General Councillors and at this time they will discuss the following: (1) Changes of Regulations; (2) Change of Organization. After this meeting they will give their answer to the nurses as to whether they may continue their Association under the old constitution and by-law.

General

The Asahi Newspaper Press is planning to erect an Institute for Physical Culture in Kyushu. This institute is to be established at Tsuyasaki-Cho, on 500,000 acres of land over which the Asahi Shimbun has custody. Part of the program is to be the training of Public Health Nurses. Plans have been submitted to GHQ for approval. The Nursing Affairs Division has been asked to make suggestions for planning the building as well as the program. An inspection trip to Kyushu will be made in March

The Public Health Nurses of seven prefectures of Kyushu are planning to hold a meeting in April, at which time this Headquarters will be represented.

Upon request, an article on nursing affairs was written for the Japanese Red Cross monthly magazine.

Korea

A manual entitled "Proposed Procedures for Maintaining Aseptic Technique in Korean Hospitals", is being written by Lt. Gillespie ANC.

Isolation technique is to be observed at the 29th General Hospital by Korean nurses, after which a short course will be given in the Infectious Disease Hospital, the doctors having promised to cooperate.

SECTION V VETERINARY AFFAIRS

General

The officer in charge of the Veterinary Affairs Division departed on a field trip to Kyushu and southern Honshu for the purpose of conducting a survey of Japanese veterinary affairs and establishing liaison with the Eighth Army and Military Government officials.

A representative from the Veterinary Affairs Division visited the Tokyo Veterinary College, a private institution with 300 students. The length of the school's course is three years. The entrance requirements allow middle school graduates to matriculate. The faculty is composed of 20 full time and 20 part time instructors. Compared with American veterinary colleges, the instructional equipment and facilities are inadequate, and the quality of the instruction sub-standard.

Reports from Japanese

The Veterinary Hygiene Section, Sanitary Bureau, Ministry of Health and Welfare, has submitted the following meat inspection report for November 1945. Thirty-nine prefectures are included in the report:

	<u>Cattle</u>	<u>Calves</u>	<u>Sheep</u>	<u>Swine</u>	<u>Horses</u>
Number slaughtered	3,855	563	15	1,075	6,311
Ante Mortem					
Totally condemned	0	0	0	0	0
Post Mortem					
Totally condemned	5	1	0	0	0
Partially condemned	159	5	0	12	309
Viscera condemned	599	43	0	177	815
Dressed Weight	1,411,555	45,291	503	92,321	2,118,383

Reports by the Ministry of Agriculture and Forestry of new outbreaks of animal disease during the week were one case of equine anthrax in Kagoshima, 3 February 1946 and one case of bovine anthrax in Hokkaido, 5 February 1946.

Equine Encephalitis in Japan. The Ministry of Agriculture and Forestry of the Animal Disease Section has submitted a paper relative to present-day knowledge of equine encephalitis. In the 1935 epizootic 892 cases of this disease were officially reported. The causative agent has been proved to be a virus. Some investigators claim it to be the same virus that caused the 1935 epidemic of human encephalitis. The relationship of this virus to the virus causing equine encephalomyelitis of United States horses has not been proven or disproven.

Animal Shoer Association of Japan. The Chairman of the Animal Shoer Association of Japan, Ministry of Agriculture and Forestry, has submitted the Imperial Ordinance authorizing the association, the constitution of the association, and the Ministry of Agriculture and Forestry ordinance relative to licensing of animal shoers. The membership of this organization is composed of those who, by profession, trim and shoe the hooves of horses and cattle, exclusive of veterinarians. The Association functions for the mutual benefit of all members by assisting in procurement of materials, establishing adequate and uniform pay rates, examining and licensing of newcomers to the profession, and distributing new information through lecture and study club.

Production Procedure for Fowl Pest Vaccine. The Ministry of Agriculture and Forestry has submitted the method of production of fowl pest vaccine. This method is the same as described in European literature. The vaccine has a limited use in fowl pest outbreaks, but is not considered successful enough for general use as an immunizing agent.

Korean Report

The Chief of the Veterinary Department, Bureau of Public Health, Headquarters, Military Government in Korea, submitted a report on Korean veterinary affairs. This included reports by Military Government veterinarians from four provinces. Their present activity concerns the following: plans for animal disease control; estimates of supply needs; numbers of veterinarians, livestock, dairies and slaughter houses; establishment of meat and dairy inspection service; and the budget for the veterinary affairs program.

SECTION VI DENTAL AFFAIRS

Of 5,920 dentists who were bombed out, or otherwise displaced during the war, 45 percent have been restored to practice. Housing and equipment are required for the remaining 3,257 dentists.

SECTION VII SUPPLY

Production

The Production of biologicals is favorable. Reports from the Japanese Government indicate that production of smallpox vaccine is exceeding the planned program. Raw materials are being obtained and the entire program is progressing satisfactory.

A plan for operation of the Yoga Medical Depot was submitted by the Health Ministry for consideration by this office. The Yoga Medical Depot was formerly a Japanese army medical supply depot. The Health Ministry plans to utilize this depot as a hygienic laboratory for the purpose of testing and elevating standards of medicine and for testing surgical instruments. The laboratory will also serve as a research laboratory for scholars, an information bureau for manufactures, an experienced manufacturing laboratory, and will conduct examinations of processed foods and liquors as well as surprise cultivation of medical plants. The plan contemplates utilization of all laboratory facilities, manufacturing facilities and three of their warehouses. No hygienic laboratory is functioning on a national scale in Japan. The need for overall governmental supervision of medicines, foods and liquors, to elevate standards, is apparent. The plan is being studied further and will be coordinated with other interested staff sections.

Progress in production of medical supplies is still slow, but the trend indicates an increase may be expected.

Distribution

Distribution of smallpox vaccine was made as follows: 125,000 doses to the Surgeon of 11th Airborne Division; 30,000 doses to the Surgeon of the Eighth Army, 70,000 doses to the Surgeon of the Medical Department of the 358th Infantry at Urawa; 3,000 doses are to be shipped from Kumamoto to selected prefectural health offices in southern Japan.

A request was received through radio from the Commanding General of ASCOM 24, for 150,000 units of diphtheria toxoid alum precipitated for use in the immunization of school children in Korea. The Preventive Medicine Division concurs in the amount requested. A radio was dispatched to the Commanding General of the Eighth Army covering necessary requirements.

Typhus supplies for Nagoya were procured by forwarding 10,000 pounds of DDT by train and 500 vials of typhus vaccine by courier. These supplies were urgently requested through telephonic communication by the United States of America Typhus Commission on 11 February 1946.

Typhus supplies were procured in order to complete mass dusting program in the Kobe-Osaka area. Arrangements were made for immediate shipment of 250,000 pounds of DDT, 4,000 hand dusters, and 12 power dusters which are required to carry out the program.

A follow-up was done on the distribution of medical supplies in Saitama Prefecture and a continued lack of proper distribution was encountered. The corrective action necessary was made known to Mr. Kamiya, Chief of Pharmaceutical Affairs of the Welfare Ministry, who accompanied the investigator on the trip to this prefecture.

Narcotics

Inspection was begun last week in Kyushu of narcotic wholesale houses and their narcotic storage facilities. This work is continuing.

An inspection of the 39th Medical Depot revealed that the inventory there is approximately three-quarters completed. All heroin found is being withdrawn and will be destroyed at the completion of the inventory.

In response to a request from H.J. Anslinger, the Commissioner of Narcotics, that the Japanese Government be required to furnish narcotic import and export information for the period 1940 to 1945 inclusive as agreed under the narcotic conventions of 1925 and 1931, a signed report was obtained and forwarded to the War Department for transmission to the Bureau of Narcotics. Commissioner Anslinger will furnish the information to the Permanent Central Opium Board, Washington, D.C.

SECTION VIII

LEGAL

No report.

SECTION IX

DIRECTIVES TO THE JAPANESE

There were no directives issued to the Japanese Government originating in this Section during the week.

CRAWFORD F. SAMS
Colonel, Medical Corps
Chief, Public Health and Welfare Section.

Incl: Weekly Communicable Disease Report.

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
PUBLIC HEALTH AND WELFARE SECTION**

WEEKLY BULLETIN

**For Period
17 February to 23 February
1946**

SECTION I WELFARE

General

An orientation of the functions and divisions of the Public Health and Welfare Section was given for the Special Labor Mission attached to the Economic and Scientific Section by Colonel Crawford F. Sams and members of the Welfare Division. The Mission will work closely with the Welfare Division on matters of Social Insurance.

Relief

Upon assurance of the Ministry of Welfare that winter clothing was necessary at this time for relief of the needy, this Division arranged for the release of the reserve supply of Japanese Army and Navy stocks held throughout Japan. It was determined by this division that the need was apparent for the distribution at this time rather than at a later period.

The Vice-Minister of the Ministry of Welfare submitted a Vocational Guidance Plan whereby a large group of those made needy as a result of war, such as war sufferers, returning repatriates and demobilized soldiers and sailors, would be given specialized training in various trades and occupations with placement at the termination of training in positions which would lead to their rehabilitation into the civilian economy. It has been recognized by the Ministry that many of the above persons have lost their work habits due to the war and a change in economy and must be retrained for civilian jobs. A general concurrence in the plan was agreed upon but certain details were corrected. However, permission was given to start setting up the machinery in operation for the plan in which the Labor Mission would assist us in making studied changes from time to time.

The social insurance plans of the Ministry of Welfare were given to the Labor Mission of the Economic and Scientific Section with comments by this Section. The Mission intends to make a through study of these plans with an emphasis on unemployment insurance. They will give this division the benefit of their experience and knowledge of this subject. It is anticipated that plans can be devised for more accurate statistical data and procedure for gathering it can be set in operation.

Foreign Nationals

A report was received from Yokohama area in which the White Russians were being discriminated against in the matter of rations because no directive specifically designates them as stateless people. As Yokohama has quite a large White Russian population, the matter was informally discussed with a representative of Central Liaison Office who agreed that they were stateless persons and correction would be made.

Repatriation

The Japanese allegations state that the Korea Association was slowing down repatriation at the present time. The position of this Headquarters was explained in that the Japanese Government, not the Korean Association, was responsible for Korean repatriation. It was suggested that the repatriation registration be accelerated to ease the problem.

SECTION II PREVENTIVE MEDICINE

General

Members of Preventive Medicine Division remained in the field during the entire week, the epidemiologist and the sanitary engineer being concerned with the Osaka typhus epidemic and measures for the control thereof. Mass dusting of the population of Osaka was completed on 19 February by which time, according to police figures, a total of 1,825,511 persons had been dusted. Succeeding days were taken up with the making of spot checks and surveys to determine the completeness and efficacy of the dusting program, and with conferences with the civilian authorities relative to continuation of the focal control program and related subjects.

The sanitary engineer visited the water and sewage plants in Osaka. Conferences were held with water and sewage authorities in Osaka and Kobe and recommendations were made for the improvement of service and water quality and for the reduction of excessive losses in the distribution system.

Visits were made at the 31st Military Government Company at Kobe and the Surgeon's Office, Kobe Base. Principal subjects of discussion were typhus and smallpox control, and certain phases of the anticipated insect control problem. Information was obtained and appropriate recommendations were made.

As the request of Maj. Gen. Mullens, Commanding General of the 25th Infantry Division, a meeting was held at his office which was also attended by the Acting Assistant Division Commander, the Chief of Staff and the Division Surgeon as well as the epidemiologist and the sanitary engineer of this Division. The General was informed of the present status of typhus fever in the area occupied by his command and of details of the control

program. He also requested information relative to water supply, insect control, and other matters of a civilian public health nature having possible effect upon the health of his troops.

On the return trip to Tokyo a conference was held with Major Weissman of the I Corps Surgeon's Office, relative to the same general subjects mentioned above and including also medical and sanitary personnel problems of the several Military Government organizations under the Corps' jurisdiction.

Venereal Disease Control

The Venereal disease control officer spent the period 12 to 23 February in making a survey of venereal disease control activities of the Japanese in Kyushu and southern Honshu. Serious deficiencies were found in organization, personnel, facilities, and drugs in all prefectures visited.

The contact-tracing demonstration described in the activities report of 2 February was instituted on 12 February and is operating very successfully.

The Ministry of Health and Welfare has ordered the discontinuance of the practice of issuing "health certificates" to individuals examined for communicable disease.

SECTION III ADMINISTRATION OF HOSPITALS

In the forty-four prefectures reported there were 191,459 beds in Japanese civilian hospitals of which 83,484 were occupied.

The total out-patients for these prefecture amounted to 291,639.

SECTION IV NURSING AFFAIRS

Reports from Japanese

The General Council of Japanese Public Health Nurses Association met on 20 February at the Ministry of Health. The main topics were discussed, (1) Changes of regulations, (2) Changes of organization. An answer is expected soon regarding the question of whether or not the nurses may have their own organization.

The editor of the Japanese magazine entitled "New Life" requested several women officers to form a round-table discussion group with some outstanding Japanese and discuss topics regarding "New Life of Post-War Women". This is to be written up and published in the April issue of the magazine. A meeting was cleared through the Civil Intelligence and Education Press Section and health, women's status, homelife, art, movies and co-education were discussed.

A conference was held with Capt. Donovan of the Women's Education section in regards to Education Committee due here from the United States and the part nursing education will have in the program. The nursing school curriculums were discussed and copies given for study.

Dr. Helen Kim, outstanding women educator of Korea, called at the Nursing Affairs Division for a conference on Korean affairs before leaving to attend a National Y.W.C.A. convention in Atlantic City, N.J. on 2 March 1946.

A report from XXIV Corps states that they have six Army and two civilian nurses at the present time. All will be eligible for discharge by June and none are interested in civilian jobs in Korea.

SECTION V VETERINARY AFFAIRS

General

The survey of Japanese veterinary affairs in southern Honshu and Kyushu, by a representative of the Veterinary Affairs Division continued throughout the week

Reports from Japanese

Animal Disease Reports. The Ministry of Agriculture and Forestry, Animal Disease Section, reported that no new outbreaks of animal disease occurred during the week 9 to 16 February 1946. The monthly animal disease report for January 1946 is as follows:

<u>Disease</u>	<u>No. of Cases</u>
Anthrax (bovine)	3
Anthrax (equine)	1

Infectious abortion of cattle	92
Texas fever	9
Swine erysipelas	1
Scabies	3
Infectious anemia of horses	1
Strangles	80
White diarrhea of chickens	10,700

The Laboratory Branch, Animal Disease Section, submitted a paper entitled "Epizootic Equine Encephalitis in Japan". The history, etiology, symptoms and pathology of the disease were described. The last serious outbreak of this disease occurred in 1935. Officially recorded were 892 cases with an average mortality rate of 45.9%.

Meat and Dairy Inspection reports. The Veterinary Hygiene Section, Sanitary Bureau, Ministry of Health and Welfare, submitted the following meat and Dairy Inspection reports:

DECEMBER 1945 MEAT INSPECTION REPORT

Thirty-nine Prefectures Included

	<u>Cattle</u>	<u>Calves</u>	<u>Sheep</u>	<u>Swine</u>	<u>Horses</u>
Number of slaughtered	11,461	542	64	1,935	4,567
<u>Inspection Results</u>					
Ante mortem totally condemned	0	0	0	0	1
Post mortem					
Totally condemned	8	3	0	0	1
Partially condemned	284	9	0	12	358
Viscera condemned	1,601	46	0	371	474
Dressed weight (Kg.)	3,917,037	45,855	1,934	164,551	1,466,344

NOVEMBER 1945 MILK INSPECTION REPORT

Twenty Prefectures Included

Number of bottling plants 1,746

Volume of bottled milk (Liters)

Raw	37,700
Pasteurized	8,540,546
Sterilized	2,658,155

Results of Laboratory Examinations

Number of milk samples examined	958
Bacterial count over 2 million per cc	33
Butterfat percentage less than 3	135

Milk Products Production (Kilogram)

Modified powdered milk (65% milk)	185,743
Modified powdered milk (50% milk)	8,442
Sweetened condensed milk	138,329
Butter	1,765,962
Cheese	1,231,947

SECTION VI DENTAL AFFAIRS

The sale of 76 controlled dental items increased from 260,000 yen to approximately 420,000 yen during the past month.

SECTION VII SUPPLY

Production figures obtained from the Ministry of Health and Welfare for the month of December 1945 indicate over the month of November 1945 in all classes of medical supplies except sanitary materials. It is

expected that production figures for the month of January 1946 will indicate still further increase. Production figures for X-ray film showed a marked increase. Approximately 4,500 dozen 10" x 12" films were produced during the month of November 1945; 12,000 for December 1945; 17,000 for January 1946, and it is expected that production will total 30,000 for the month of February 1946.

Production of smallpox vaccine continues to exceed planned program of the Health Ministry. Procurement of necessary calves by the Agriculture Ministry and excellent cooperation by the Agriculture Ministry in this program has contributed greatly towards accomplishing desired production.

The Health Ministry has been informed of the quantities of vaccine necessary for the repatriation program. It was pointed out that the quantities of cholera vaccine listed below should be produced and made available on the dates indicated:

<u>Quantities</u>	<u>Date</u>
500,000 cc	15 March 1946
1,100,000 cc	1 April 1946
1,600,000 cc	1 May 1946
500,000 cc	1 June 1946

They promised to have available quantities specified for 15 March and 1 April, but requested that they be permitted to wait until 1 March 1946 before making definite statements with regard to other quantities specified. The overall program for production of all biologicals is to be submitted on 1 March 1946 by officials of the Health Ministry.

Necessary quantities of typhus vaccine for vaccinating repatriates was also stated. Health Ministry requested permission to withhold comment on production of typhus vaccine until 1 March 1946. Due to lack of experience in manufacturing typhus vaccine in Japan some quantities necessary for the vaccination of repatriates may have to be furnished by the Army. Tentative arrangements have been made by the Health Ministry to begin production at Chiba Medical College, Government Institute for Infectious Diseases and former Army laboratory at Niigata. They contemplate production of 50,000 cc in March 1946 and 150,000 cc in April, with further increased production beyond April.

A joint conference was arranged with a representative of Imports and Exports Division, of the Economic and Scientific Section, to discuss importation of raw materials for production of medical supplies. Representatives of the Health Ministry, Central Medicine Control Company, Board of Trade and Crude Drug Control Company were present to give views of the Japanese Government. Health Ministry officials had been informed that importation of critically needed raw materials for manufacture of medicine might become necessary and were requested to bring a listing of raw materials required and to specify medicines to be produced by utilization of these raw materials. It was further requested that the list include quantities of raw materials and quantities of medicines to be produced.

This list was presented by the Health Ministry and indicated desired information. A similar list was presented by the Central Medicine Control Company. The latter list was prepared to present the manufacturers viewpoint. It was emphasized that the final list would have to be prepared by the Health Ministry. The Health Ministry was requested to hold a conference with all other interested agencies, determine a final list and submit request through the Central Liaison Office as a formal request on this Headquarters. The matter of stocks of medicine packed and held for export was briefly discussed. A listing of this stock had been furnished this Section and after review by the Health Ministry it had had been reduced from 30,000,000 yen to 24,000,000 yen. During the meeting it developed that the list reviewed by this Section was not a complete inventory. It was, therefore, requested that a complete list be prepared and that it be thoroughly analyzed by the Welfare Ministry as to quantities and items needed in Japan before being officially presented to this Headquarters.

Health Ministry officials were requested to submit their estimate of the minimum quantity of coal needed for production of medicine through June 1946. The total quantity was approximately 50,000 tons. A check with the Economic and Scientific Section revealed that 24,000 tons had been allocated for this period by the Japanese Government for medicine manufacturing. This quantity is not considered adequate and arrangements are being made to hold a conference with representatives of the Coal Control Association, Japanese Government, and the representatives of the Economic and Scientific Section to emphasize the need for accelerated production of medical supplies and to request that sufficient coal be allocated to meet the desired production program.

According to reports received from USAFIK, large deposits of prophyllite rock, diluent for DDT Insecticide powder, have been located. Reports further state that mixing machinery and milling equipment are available and that up to eight tons per day can be mixed. Reports indicate that production can be started within 45 days after receipt of instructions from this Headquarters. Instructions were forwarded to the effect that production of 10 % DDT Insecticide powder in Korea should be started as soon as possible. It was indicated that sufficient quantities should be produced to provide for all needs in Korea. Deposits reported indicated an almost unlimited

supply of prophyllite. Since mixing machinery and milling equipment is available, it is contemplated developing production to a point where additional quantities over and above quantities needed for Korea may be made available for shipment to Japan.

Mr. Joseph Bransky, Federal Bureau of Narcotics, Washington, D.C. reported to this Section on 22 February 1946 as requested by this Headquarters on 7 December 1945, for the purpose of examining records and compiling reports on the production, manufacture, importation, exportation consumption of narcotics in Japan.

Lt. Comdr. Speer returned on 22 February 1946 from a fifteen day inspection tour of southern Honshu, Kyushu and Shikoku. Drug wholesale firms recommended by the Japanese Government as suitable storage and distribution agencies for Japanese Military narcotic stocks were inspected in Osaka, Okayama, Fukuoka and Takamatsu. Medicine Control Companies, hospitals, doctors and pharmacists were visited in the I Corp Area. All heroin has been collected by prefectural officials but in several instances has not been taken into custody by the tactical units. Other narcotics were available through normal distribution channels in sufficient quantity in the areas visited.

As scheduled on 23 February, 60,000 doses of smallpox vaccine from the Eighth Army Surgeon were delivered for use in Kanagawa. Arrangements were made to furnish 1,000,000 doses to XI Corps.

SECTION VIII LEGAL

Conferences were held with representatives of the Ministry of Health and Welfare relative to items of 1946-47 Budget, with special reference to communicable disease control among repatriates from China, Manchuria and Korea and the unit cost of medical supplies for control of communicable disease.

Conferences with representatives of distillers and the Ministry were held regarding the publication of policy on tolerated maximum of methanol in beverages.

Conferred with Dr. Katsumata, Health Ministry regarding the Organization of the Repatriates Relief Board and Bureau thereunder.

SECTION IX DIRECTIVES TO THE JAPANESE

The following Memorandum was issued to the Japanese Government during the week: "Distribution of Winter Clothing Held for Relief Purposes" AG400 (21 Feb 46) PH, (SCAPIN 760).

CRAWFORD F. SAMS
Colonel, Medical Corps,
Chief, Public Health and Welfare Section.

Incls:

Incl#1 - Communicable Disease Report for Week ending 9 February 1946.

Incl#2 - Memorandum to Imperial Japanese Government.

Incl#3 - Venereal Disease Report for Week ending 2 February 1946.

Incl#2

GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS

APO 500
21 February 1946

AG 400 (21 Feb 46) PH
(SCAPIN - 760)

MEMORANDUM TO: IMPERIAL JAPANESE GOVERNMENT

THROUGH: Central Liaison Office

SUBJECT: Distribution of Winter Clothing Held for Relief Purposes.

1. Reference AG 400 (21 Dec 45) PH, Memorandum for Imperial Japanese Government, subject: "Reserve Supplies Held for Relief Distribution".

2. It is desired to implement the distribution of all winter clothing and blankets at this time pursuant to provisions of plan approved in reference above.

FOR THE SUPREME COMMANDER:

B.M. FITCH,
Brigadier General, AGD,
Adjutant General.

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
PUBLIC HEALTH AND WELFARE SECTION**

WEEKLY BULLETIN

**For Period
24 February to 2 March
1946**

SECTION I WELFARE

General

There was evidence during the week that the Japanese Government is actively engaged in preparing plans to solve the unemployment and other social and economic problems facing the nation. These plans contain definite appreciation and understanding of the conditions at present but the program is not specific in detail as to the solution of the problems. This Division was represented at a meeting of the Labor Mission and the Economic and Scientific Section when the plans of the Central Committee of Unemployment were presented. A representative stated that industry as well as the people themselves were constantly facing the threat of possible starvation and shortage of essential raw materials. The Labor Mission urged the Japanese to consider the materials that were available and that imports would depend, to a degree, upon the proper use made of indigenous materials and supplies.

Welfare

The directive on Public Assistance, by which the Relief and Welfare Plans of the Japanese Government were accepted, was issued as of 27 February 1946. The Japanese plans were approved, but an exception requires the establishment of a single National Governmental Agency to administer relief, thus preventing the shifting of operational and financial responsibility to semi-governmental and private organizations. It also calls for monthly reports on the amount extended for relief and the number of families and individuals granted assistance.

A conference with Public Welfare officials, headed by the Chief of Social Affairs Bureau, was held during the week. Explanation and instructions were given the Japanese officials with reference to the directive on Public Assistance. Complete agreement was reached on all matters under discussion.

Foreign Nationals

An inquiry was received from a German national regarding the procedure of procuring enough money from blocked accounts to defray medical and nursing expenses. He was informed that under the Emergency Financial Measure, Imperial Ordinance No. 83 (1946), funds could be procured for these expenses by drawing restricted checks against their frozen accounts.

Repatriation

The status of repatriation from Japan indicated that of a total of 1,497,031 persons to be evacuated, 829,757 have been repatriated to date, leaving a total of 667,274 yet to be evacuated. Of this number 564,791 are Koreans.

The status of repatriation of Japanese Nationals as of 24 February indicates the following:

Total to be repatriated to Japan	6,390,857
Total evacuated as of 24 February	1,465,980
Total remaining	4,924,877

SECTION II PREVENTIVE MEDICINE

General

Lt. Col. James H. Gordon, MC, Venereal Disease Control Officer and Acting Chief of the Preventive Medicine Division, departed this station 1 March 1946.

General supervision of the typhus control program for Tokyo-To has been taken over by this Division, supported by technical advice from the United States of America Typhus Commission. All possible assistance is being given to the local Military Government Company in the formulation and carrying out of a typhus control program for this area.

Conferences have been held with representatives of the Metropolitan Police and Health Department at which details of the above program have been worked out and definite responsibilities assigned.

Conference have been held with the Chief of the Public Health and Welfare Section, representatives of the Chief Surgeon's Office, AFPAC, and members of the Neurotropic Virus Commission, regarding formulation of an over-all program for insect control (mosquitoes and flies particularly) and certain agreements reached on the division of authority and responsibility relative to the areas to be controlled.

During the early part of the week Sanitary Engineer was dispatched to Aomori in northern Honshu, to assist in the control of an outbreak of typhus fever in that area.

Nutrition service

Partial results of the survey of 30 hospitals in Tokyo were reported by the Metropolitan Office, Health Bureau, Tokyo. The types of hospitals surveyed were 20 general hospitals, 5 tuberculosis hospitals, and 5 psychiatric hospitals.

Nutrition surveys of the following additional area, desired by the Imperial Japanese Government, were approved: Shikoku, Sanin, Hokuriku, Tohoku and Hokkaido. In addition, a survey will be made of coal miners in Fukushima and Hokkaido, and copper miners in Akita.

Port Quarantine

The week ending 24 February, 16,808 repatriates arrived in Japan while 51,455 left Japan, the figures ##### identical with those of the week ending 16 February.

Four cases of smallpox, and one cases of typhus, were detected in outgoing quarantine ports at Hakata, Senzaki, Ugina and Uruga. At incoming quarantine ports one ship from Fuzan was quarantined at Senzaki because of typhus and another at Hakata because of smallpox.

SECTION III ADMINISTRATION OF HOSPITALS

Tachikawa National Hospital and Konodai Government Hospital for Insane were visited as part of the program to check on the effectiveness of directives emanating from this Division as it applies to former Japanese Army and Navy hospitals.

In the 34 prefectures reporting for the week ending 22 February there were 2,035 hospitals with 134,312 beds, 62,731 of which were occupied. During this period there were 240,439 out-patients.

SECTION IV NURSING AFFAIRS

Reports from Japanese

Explanation of Public Health Nurse course, A-I, A-II, B and C was given in more detail. The course is to be in effect April 1946.

PUBLIC HEALTH NURSES COURSE for 1946

<u>Type of School</u>	<u>Length of training (hrs)</u>		<u>Total</u>	<u>Qualification for admission</u>	
	<u>Class work</u> Months	<u>Practice work</u> Months			
A-I	16		14	3 yrs 30 mos	Graduate of high school.
A-II	10		10	2 yrs 20 mos	Same as above.
B	6		5	1 yr 11 mos	Clinical nurse's license.
C	8		8	1 1/2 yrs 16	Midwife license. Same as above.

A type school

1. This is the highest training courses for Public Health Nurses as a college standard.
2. The entrance requirement is graduation from a girl high school or the equivalent.
3. The duration of the course is 3 years which is divided in 2 parts such as 16 month for class work and 14 months for practice work.

Subsequent to this is the A (II) course as follows:

1. The duration of the course is 2years which divided 2 parts such as 10 months each of class work and practice work.
2. The qualification is the same as for the first course.

B type School

1. This is a short course for Public Health Nurse which is offered for a nurse who had obtained a clinical nurse's license.
2. The duration of this course is 1 year which is divided in 2 parts such as 6month for class work and 5 months for practice work.

C type School

1. This course is for a woman who has a midwife's license.
2. The duration of this course is 1 year and a half which is divided in 2 parts such as 8 months for class work and another 8 month for practice work.

SECTION V VETERINARY AFFAIRS

General

The Chief of the Veterinary Affairs Division returned from a survey of Japanese veterinary conditions in Kyushu and southern Honshu. Liaison was established with prefectural officials and occupation forces.

Practically all cattle in the areas visited are draft cattle of native breeds. The number of dairy cattle is small and industry minor. All daily herds have been found free from tuberculosis.

Beef slaughter consists almost entirely of native cattle not needed for work purposes. Ante and post mortem examination at the time of slaughter is practiced in a satisfactory manner. Careless handling of meat after slaughter results in much needless contamination. Sanitation in slaughter houses, butcher shops and cold storage is sub standard.

The horses are a mixture of Norma thoroughbred, Porcheron and native stock with thoroughbred characteristics predominating. Many animals are not in good condition due to a shortage of roughage. Rice hay is about the only kind available at the present time.

No animal disease epidemics exist in the areas visited. Prevailing animal diseases are swine cholera, contagious abortion of cattle and white diarrhea of poultry. Control measures appear to be effective.

Prefectural officials are aware of their responsibilities but at the same time have a defeatist attitude which makes it necessary to apply constant pressure in order to obtain pre-war efficiency levels.

Reports from Japanese

The Ministry of Agriculture and Forestry, Animal Disease Section, reported that no new outbreaks of animal disease occurred during the week 16 to 23 February.

The following annual animal disease report has been compiled from the monthly animal disease reports submitted by the Ministry of Agriculture and Forestry, Animal Disease Section:

<u>Disease</u>	<u>Cases</u>	<u>Disease</u>	<u>Cases</u>
Blackleg	34	Swine erysipelas	31
Infectious abortion of cattle	542	Fowl pest	933
Texas fever	169	White diarrhea of chickens	30,638
Anthrax, equine	4	Infectious anemia of horses, Hokkaido	793
Anthrax, bovine	35	Equine infectious abortion, Hokkaido, Aomori & Iwate	
Rabies, bovine	8	1944-45 breeding season	331
Scabies, equine	8	Osteomalacia of horses, Hokkaido	9,286
Swine Cholera	574		
Swine Plague			

Korean Report

The Chief of the Veterinary Department, Bureau of Public Health, Headquarters Military Government in Korea, reported a total 30,006 cases of fowl pest during January 1946 in Kyong Sang Pukto. 14,160 chickens were immunized with fowl pest vaccine in conjunction with the control program.

SECTION VI DENTAL AFFAIRS

Conference of the Ministry of Education and the Ministry of Health officials continue regarding dental education, examination and licensure.

SECTION VII SUPPLY

Narcotics

A visit to the 29th Medical Depot, Yokohama, revealed that the inventory of seized Japanese military narcotic stocks will be completed in about two weeks.

A conference was held with Mr. Emiya, Dr. Yasumi and Mr. Saito of the Pharmaceutical Bureau of the Ministry of Health and Social Affairs regarding impending narcotic legislation, particularly concerning exempt narcotic preparation. It was decided that the powdered cough medicine containing codeine, generally used in Japan, could not be treated as an exempt preparation since the amount of codeine contained therein is excessive. A report submitted by Dr. Yasumi, regarding narcotic production and consumption in Japan, was discussed in detail, since the report equalizes consumption with production from 1930 to 1945, whereas only at intervals were reports actually called for from doctors and pharmacists.

Production

A report of production of medical supplies for the month of January 1946 furnished by representatives of the Health and Welfare Ministry indicated a definite increase over production from November and December 1945. An increasing in production of biologicals, essential medicine, dental materials and X-ray film is particularly noteworthy. Although production is still not satisfactory a favorable trend is indicated.

A report furnished by Natural Resources Section, SCAP, and the Agriculture Ministry indicating action taken to obtain calves for smallpox vaccine production for the last week of February and projected numbers to be obtained through June 1946, indicates that sufficient calves will be made available to meet the planned program of the Health and Welfare Ministry. The cooperation of the Natural Resources Section, SCAP, and the Agriculture Ministry, to obtain calves, has contributed greatly to this program.

A conference with Health and Welfare Ministry representatives brought out the fact that considerable quantities of raw materials, needed by manufacturers, are physically located in former Army and Navy Supply Depots throughout Japan. It was emphasized that these raw materials should be placed in the hands of manufacturers of biologicals and essential medicines at the earliest possible date. A distribution plan will be completed by 5 March by the Ministry officials and representatives of the Health Ministry will visit each prefecture between 10 and 15 March for the purpose of directing and supervising distribution. Due to the present shortage of raw materials required for manufacture of medical supplies; this proposed distribution, if properly handled, should make a definite contribution to accelerating production.

Distribution

A memorandum was forwarded to the Japanese Government regarding the production of medical supplies necessary for the medical processing of Japanese repatriates in China. Arrangements were made with the Welfare Ministry to make the required supplies available for this program.

A field trip to Kyoto, Osaka, Kure, Hiroshima, Fukuoka, Sasebo, Nagasaki, Matsuyama, Takamatsu and Okyana was made regarding distribution of medical supplies. It is apparent that expeditious action is not being taken by prefectural officials in distributing medical supplies. The system is so complicated and involves so many agencies that constant supervision is necessary. More supervision will have to be exercised by Military Government personnel in the field. The Supply Division will continue to make field trips for the purpose of orienting Military Government personnel and coordinating the various agencies involved. There is also room for improvement at the Ministry level which will be called to the attention of responsible officials.

SECTION VIII LEGAL

No report.

SECTION IX DIRECTIVES TO THE JAPANESE

The following directives to the Imperial Government originated in this Section during the week:
Control of Population Movements, AG 091.4 (2 Mar. 46)PH, (SCAPIN 651-A)
Medical Supplies for Repatriation Program, AG 443 (3 Mar. 46)PH, (SCAPIN 791)

CRAWFORD F. SAMS
Colonel, Medical Corp.,
Chief, Public Health and Welfare Section

- 4 Incl.: As indicated in Section IX.
- 1 -2 Incl. As indicated in Section IX.
- 3 Incl. VD Report in Japan for week ending 9 Feb 46.
- 4 Incl. Communicable Disease in Japan for week ending 16 Feb 46.

GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS

APO 500
3 March 1946

AG 443 (3 March 46) PH
(SCAPIN - 791)

MEMORANDUM FOR: IMPERIAL JAPANESE GOVERNMENT
THROUGH: Central Liaison Office, Tokyo
SUBJECT: Medical Supplies for Repatriation Program

1. Memorandum, file AG 370.05 (29 Jan 46) GC, subject: "Projected Changes in Repatriation Procedures", dated 29 January 1946, indicates that the Japanese Government will furnish the vaccines necessary for medical processing at all repatriation ports in China and Japan. In addition to the vaccines, it will be necessary for the Japanese Government to furnish miscellaneous medical supplies incidental to inoculation of the repatriates.

2. Attached find requisitions MED-JAP-REP-1-46 through 10-46 and QM-JAP-REP-1-46 through 10-46. These requisitions cover supplies necessary for medical processing of repatriates at Chinese port. It should be noted that the destination is indicated on each requisition and that there is both a MED and a QM requisition for each port.

3. Informal contact with the Ministry of Health and Social Affairs indicates certain of the quantities called for on the attached requisitions are not available from Japanese sources. The following items will be shipped from United States Army Stocks.

Absorbent cotton	11735 pounds
Applicator wood	3334 boxes
Syringe, luer 10cc	6350 each
Typhus Vaccine 20 cc	25000 vials
Stove, 1 burner	133 each
DDT	465,000 pounds
Outfit delousing	24 each
Dusters Insecticide	500 each

4. Immediate action by the Imperial Japanese Government is necessary as follows:

a: Ship to Uraga Reception Center, Kurihama Station all quantities on the attached requisitions except those listed in paragraph 3, this communication.

b: Sort and pack supplies for shipment according to quantities and ports as indicated on the requisitions. This will include both supplies from Japanese sources and the items listed in paragraph 3, which will be shipped from United States Army stocks to Uraga. Where sufficient stock of an item is not available to fill all requisitions complete, the available stock should be prorated by requisition.

c: Advise this headquarters by port the weight and cubic measurement of the initial quantities made ready for shipment.

d: Advise this headquarters by port of subsequent quantities made ready for shipment by weight and cubic measurement.

e: Make shipment as directed by this headquarters. Shipping information will be given upon receipt of data requested in 4 c and d, above.

f: Maintain records by item and quantity of supplies received from United States Army stocks and disposition of same.

FOR THE SUPREME COMMANDER:

B.M. FITCH,
Brigadier General, AGD,
Adjutant General.

20 Incls:

As described in par 2 above,
(to addresses only)

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
PUBLIC HEALTH AND WELFARE SECTION**

WEEKLY BULLETIN

**For Period
3 March to 9 March
1946**

SECTION I WELFARE

General

The Headquarters issued a Memorandum for the Imperial Japanese Government, AG 091.4 (2 March 46) PH, (SCAPIN-651-A), subject: "Control of population Movements". In effect the directive authorized the Japanese Government to implement its plan for controlling population movements into cities of 100,000 or more population. The plan will prevent the movement of people into specified urban areas until 31 May 1946. During that time those persons whose services are required to reestablish the minimum economy of Japan, such as government officials, students and teachers, and repatriates, will be allowed to move back to urban centers. Permits will be issued those who are authorized to change residence only after an investigation has been made of the circumstances involved. Primary reasons for placing such restrictions on population movements is to prevent serious breakdowns in the food distribution, housing, welfare, employment, sanitation, and public utility service in urban centers.

A series of joint conferences was held by this Division, the United State Labor Mission, and Health and Welfare Ministry officials, to discuss in detail a proposed vocational guidance program. Basic policies to be incorporated in the Japanese plan include: 1) a single governmental agency to be responsible for vocational training; 2) local operational responsibility to be assumed by prefectural officials; 3) no preference or discrimination to be shown any individual or group in the training program with the exception that employable indigents will be given priority for training; and 4) sufficient funds to be allotted to carry out an adequate program. The formal Japanese proposal will be submitted this Headquarters by 20 March 1946.

Private Relief Agencies

An agreement was reached during the week by Welfare Ministry and Finance Ministry officials on a suggestion by the former to permit private relief agencies to make larger withdrawals from banks to meet their operating expenses. As a result of recent Japanese governmental orders limiting bank deposit withdrawals, private agency activities have been seriously curtailed. However, the agreement mentioned above will permit continued operation.

It was announced that distribution of food and clothing would be made to needy foreign nationals throughout Japan. The International Relief Committee, representing all but enemy foreign nationals, is commencing the operations in Yokohama, Kobe, Hakodate, Sendai, Fukuoka and Karuizawa. These are localities where most of the foreign nationals reside.

At attempt during the week by the Japanese Finance Ministry to advance 900,000 yen to a group of Nazi-Germans, to be used for welfare purposes, was prohibited. This Headquarters had directed the Japanese government to provide for needy enemy foreign nationals. In implementing the directive, the Japanese organized a committee of Nazi-Germans to distribute the sum of 150 yen per month to each of an estimated 2,000 Germans. A conference has been arranged with the Japanese officials to organize a committee of non-Nazi Germans to distribute relief made available to the Japanese.

Repatriation

A meeting was held with representatives of interested SCAP staff sections, Korean and Japanese officials in attendance to discuss the repatriation program. Finance limitations on yen which may be taken out of the country by repatriates was explained. Another topic discussed was the necessity for compliance with the registration procedure to be undertaken on 18 March 1946.

It was pointed out by SCAP representatives that all Koreans, Chinese, Formosans and Ryukyans must indicate whether or not they desire repatriation in order that this Headquarters may properly schedule shipping. Those who do not desire repatriation will forfeit the privilege and will remain in Japan in the same status as any neutral foreign national. Since Koreans are treated as liberated people, and not as United Nations nationals, they are subject to Japanese law. However, they may appeal for review of their sentences to this Headquarters after exhausting all remedies available to them under Japanese law. The meeting closed with a request for the cooperation of the Korean leaders and their constituents in implementing the repatriation program.

SECTION II PREVENTIVE MEDICINE

General

In view of the increasing incidence of typhus fever in the Kobe area, it was recommended, in conference with the U.S.A. Typhus Commission, that Lt. Gephardt of the Commission be dispatched to that area to give technical advice and assistance relative to control of the outbreak.

A conference was held with the medical and sanitary officers, 32nd Military Government Company, welfare and liaison officers of the Metropolitan Police Bureau, officials of the Metropolitan Health Bureau

(Infectious Disease Section), and members of the U.S.A. Typhus Commission. Detailed plans were outlined for the control of typhus fever in Tokyo-To and responsibilities of the several participating Japanese agencies thoroughly clarified.

A conference on preventive medicine was held at the office of Chief Surgeon, AFPAC, at which the Surgeon of AFMIDPAC, Eighth Army and XXIV Corps reported on preventive medicine activities in their respective commands and on anticipant problems.

A discussion was held with Lt. Col. Coulson, SMGO, 75th Military Government Company, Aomori. The Aomori typhus outbreak and other public health problems of a general nature were discussed.

Sanitary Engineering

The Sanitary engineer remained in the field at Aomori during the entire week in connection with typhus control activities.

Laboratory Service

Standardization of Biologicals. A program has been initiated for important biologics, and ordinances are being drafted by the Ministry of Health, for assaying and standardizing such biologics. The draft of the proposed ordinance dealing with diphtheria toxoid was submitted and discussed in conference and will be made effective shortly.

Reform of Medical Education. The second meeting of the Council of Medical Education was noteworthy for its serious consideration of the desirability of withholding further licensure of physicians until 1947, when all present matriculants will have complied with the requirement of a 4-year medical course followed by a 1-year internship in an approved hospital. Final decision will be made next week, at which time the approximate date will be set for the first nationwide qualifying examination to be held under the new program.

Medical Examiner System. Conferences were held with officials of the Tokyo Metropolitan Office and Japanese Military of Health to determine the revised plan for a nationwide medical examiner system. The desirability was stressed of obtaining the services of highly trained pathologists in order that the cause of death in all cases where uncertainty existed should be established as accurately as possible. The system will cover the needs, not only of so-called "road deaths" among vagrants in the streets, and in emergency shelters, but deaths also in private dwellings, in hospitals, and elsewhere. As a corollary to this program, advice was given on a possible civil service procedure for procuring such trained personnel and for establishing their civil service tenure and other rights, with especial emphasis on the importance of a competitive examination held in strict fairness. Provisionally it was decided to employ the staff of the professor of forensic medicine and pathology in the Imperial universities of Tokyo and other large cities pending the establishment of a satisfactory civil service system.

Nutrition Service

Tentative data have been obtained on weight of animal, vegetable and total protein and caloric intake, as well as the extent to which these nutrients were obtained from the ration, free market, home production, or gifts for rural areas of the following prefectures; Tokyo, Kanagawa, Gunma, Shizuoka and Shiga. In general, the quantities of nutrients consumed have been reasonably adequate. Information on nutritional status are not available.

Plans have been discussed with the Ministry of Health and Social Affairs for changes in the details of assembling data obtained in nutrition surveys to provide information on weight of individual food consumed and of deviations in body weight. It is necessary to re-examine the tabulations of the present surveys for such information.

Venereal Disease Control

A memorandum, supported by appropriate inclosures, was prepared for the Chief of Staff, summarizing venereal disease control activities of the Section since the beginning of the occupation of Japan.

Port Quarantine Service

Repatriation figures for the week showed the following

Outgoing - 21,291 Increase over previous week - 7,024

Incoming - 87,307 Increase over previous week - 27,391

Quarantine inspection disclosed cases of smallpox aboard two incoming ships, one from Shanghai and one from Fusan. There were handled routinely by isolating the passengers ashore, re-vaccinating the crew, cleaning the ship and then allowing it to proceed.

SECTION III ADMINISTRATION OF HOSPITALS

During this period 90,272 hospital beds, of the 201,625 available, were occupied. This is the fourth consecutive week in which a continued rise in the percentage of bed occupancy was noted.

SECTION V NURSING AFFAIRS

Reports from Japanese

1. A list of seven nutrition schools in Japan (six of which are located in Tokyo) was received stating the following information: Name, Address, Director, Duration of Training, and Qualifications for Admission.
2. Corrections on Standard Curriculum for Public Health Nurse's Training School was requested and received. Corrected curriculum now reads as follows:

2ページ抜け

by the local government. The Imperial Japanese Government Zootechnical Experiment Station, located in Chiba City, was found to be rendering valuable service to the livestock industry of Japan. Noteworthy experiments in progress are artificial insemination of cattle, sex determination of newly hatched chicks, the nutritional value of various animal feeds and the preservation of meat and dairy products.

With the exception of dairy inspection it was found that the Chiba Prefecture organization is functioning in a satisfactory manner.

Preliminary arrangements have been completed for a survey of Japanese veterinary affairs in Kumamoto, Kagoshima, Miyazaki and Oita Prefectures by a representative of this Division during the next two weeks.

Reports from Japanese

The Ministry of Agriculture and Forestry, Animal Disease Section, has reported an outbreak of blackleg in Shimane Prefecture. Only one case has occurred to date. Control measures are, immunization and quarantine.

SECTION VI DENTAL AFFAIRS

No report.

SECTION VII SUPPLY

Production

A copy of the plan for production of biologicals for a period of one year was furnished by representatives of the Welfare Ministry. A plan is being studied to determine if quantities specified are adequate. A meeting with Health Ministry officials revealed that they have been able to obtain approximately a 15 percent increase in allocation of coal for medicine manufacturing for the months of April, May and June. This increase is not considered adequate and arrangements have been made for a conference to be held on 13 March 1946, with representatives of the Economic and Scientific Section and the Coal Control Association, to emphasize the importance of accelerating production of essential medicine.

A Japanese manufacturing company, selected by the Manufacturing Branch, Industrial Division, ESS, has completed a sample DDT hand duster which is considered satisfactory by the U.S.A. Typhus Commission and ESS. At a recent conference on this matter, called by Manufacturing Branch of the Industrial Division of ESS, with representative of the U.S.A. Typhus Commission, the Welfare Ministry, Japanese manufacturer and this office present, it was decided that 5,000 should be manufactured as soon as possible. The Welfare Ministry was instructed to prepare an estimate of requirements for the next six weeks and to submit this estimate to the Commerce and Industry Ministry. It was suggested that 12,000 should be the production goal for a six-month period.

Distribution

Arrangements were largely completed the past week for furnishing supplies to be used in medical processing of repatriates from China. Japanese sources of supply were utilized to the fullest possible extent as was Japanese labor and transportation facilities. Certain items, such as DDT and typhus vaccine, were not available from local supplies and had to be supplied from U.S. Military Government stocks.

The Division coordinated the movement of the Japanese and Army stocks to Uraga Reception Center which was selected to sort and pack the supplies trans-shipment to the Chinese ports. Arrangements were made

with the responsible Japanese officials to obtain necessary rail and water transportation to complete delivery to the mainland.

Plans were made to make the Japanese fully responsible for the distribution of smallpox vaccine. It has been necessary for Occupation Forces to enter into this in the past in order to direct the movement of the vaccine to the danger areas. The plan now is for the Ministry of Health and Social Affairs to present to this Headquarters a distribution plan for approval, and after agreement for them to be responsible for packing and shipment to the prefectures. This procedure has been made effective and necessary schedules of shipments have been prepared which will be periodically checked by the Headquarters.

The Japanese were directed to investigate the supply of typhus and cholera vaccine for use in medical processing of repatriates at Japanese ports. It was indicated that sufficient cholera vaccine would be made available from Japanese sources to the several ports. As regards typhus vaccine, Japanese production is not sufficient and will not be at least through April and May. Limited amounts were furnished from Army Military Government stocks to take care of repatriates arriving in March. All efforts are being made to increase Japanese typhus vaccine production and additional reserve quantities have been requisitioned from the United States.

Narcotics

Japan. Study and tabulation of the narcotic records of Takeda Pharmaceutical Industries, Takato Plant, Tokyo, were completed. From 1930 through 1945 more than 26 tons of opium were processed by this plant. The average yield of narcocon from the opium was approximately 16 percent.

In cooperation with Japanese officials, black market dealing in narcotics on a small scale was uncovered. The sales were made by unauthorized persons at black market prices. Narcotic officials in the Japanese Government and in Tokyo-To were called in for a conference on the results of the investigation and were impressed with the necessity of following up all information received in enforcing narcotic laws and regulations.

Korea. A report of the narcotic activities in Korea was received for the month of January. The report indicates progress is being made in the tightening of controls on narcotics. In addition, a report on narcotic production, manufacture, consumption, import and export in Korea, from 1930 to 1945, was received.

SECTION VIII LEGAL

In company with representatives of the Economic and Scientific Section, Tokyo Provost Marshal, Eighth Army Provost Marshal General, 32nd Military Government Company, and others, conferred with 14 representatives of Korean Associations in Japan relative to the rights, obligations and status of Koreans.

The Tokyo Provost Marshal and the 32nd Military Government Company were furnished English translations of Directive and Japanese Ordinances on venereal disease control and abolition of licensed prostitution.

Drafted information of general application regarding control of methanol in beverages for issue to Eighth Army after approval. Parallel notice to the Imperial Japanese Government.

SECTION IX DIRECTIVES TO THE JAPANESE

Directives issued during the week to the Imperial Japanese Government, which originated in this Section, were as follows:

1. Medical Supplies for Repatriation Program - AG443 (7 Mar 46) PH, (SCAPIN 803)
2. Quarantine and Screening of Formosan Repatriates - AG720.4 (9Mar 46) PH, (SCAPIN 866)

MEMORANDUM FOR: IMPERIAL JAPANESE GOVERNMENT.
THROUGH: Central Liaison Office, Tokyo.
SUBJECT: Quarantine and Screening of Formosan Repatriates.

1. Reference is made to the following memorandums from the Supreme Commander for the Allied Powers:

a. File AG 720 (20 Oct 45) PH, (SCAPIN 167), dated 20 October 1945, subject: "Medical and Sanitary Procedures for Debarkation and Port Sanitation in Repatriation".

b. File AG 370.05 (17 Nov 45) GC, (SCAPIN 293), dated 17 November 1945, subject: "Reception Centers in Japan for Processing Repatriates".

2. There have been numerous recent cases of smallpox appearing aboard ships sailing to Formosa loaded with Formosan repatriates.

3. The Imperial Japanese Government upon receipt of this Memorandum will:

a. Process all Formosan repatriates through reception centers in the Kure-Ugina-Otake area.

b. Vaccinate for smallpox all Formosan repatriates immediately upon arrival at the Reception center.

c. Hold all Formosan repatriates in quarantine at the Kure Reception Center for a period of 14 days.

d. Hold Formosan repatriates who have completed the 14-day quarantine prescribed in paragraph 3b above until a capacity shipload is assembled.

e. When a capacity shipload of Formosan is assembled request a ship for their transport from SCAJAP through Civilian Merchant Marine Committee.

GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS

6 March 1946

AG 091.4 (6 March 46) PH
(SCAPIN 866)

MEMORANDUM:

SUBJECT: Information of General Application Pertaining to Directive Number (SCAPIN 775), file AG 091.4 (27 Feb 46) PH/GS/GA/GD, this Headquarters, 27 February 1946, subject: "Public Assistance".

1. With reference to Memorandum Number (SCAPIN 775), this Headquarters, to the Imperial Japanese Government, dated 27 February 1946, the following is published for the information of all concerned.

2. The purpose of the directive mentioned in paragraph 1, above, is to implement the Japanese Government' plan for providing food, clothing, housing, medical care, financial assistance and welfare services to unemployed and other needy persons in Japan. It requires the establishment of a single governmental agency to supervise local governmental operation of the relief program. It directs that the needs of all indigent persons be met adequately without discrimination or preferential treatment. Further it recognizes that the administration of relief is a national problem with variations in local needs requiring flexible administration at local levels.

3. The methods by which the Imperial Japanese Government intends to implement the directive are contained in an inclosure to the Japanese Welfare and Relief Plan ("Data Submitted", No.1) in C.L.O. Memorandum No. 1484 (1.1), dated 31 December 1945, copy attached.

4. Command instructions pertaining to the execution of surveillance required in connection with Memorandum mentioned in paragraph 1, above, have been dispatched through command channels. The following is a general statement regarding Occupation Force responsibility for surveillance of the directive.

a. Inspections made of local relief administration should include a review of record keeping procedures, type of investigations made, kind of personnel employed as relief administrators and welfare investigators, controls established over financial expenditures, methods of distribution of relief supplies and accuracy of statistical information compiled. Suggestions for improvements or changes should be included in reports rendered this Headquarters through channels.

b. Inspections of sample relief cases including visits to homes should be made to verify that no discrimination or preferential treatment is being provided individuals or groups of needy persons.

c. Japanese estimates of needy persons and the costs of assistance should be checked and evaluated by close observation and investigations in the local areas.

d. Copies of the Japanese reports required by the approved plan should be obtained from Prefectural authorities and forwarded this Headquarters through channels.

HAROLD FAIR,
Lt. Colonel, AGD,
Asst Adjutant General.

SUBJECT: Relief and Welfare Plans.

December 31, 1945

C.L.O. No. 1484 (1.1)

Receipt is acknowledged of the Memorandum AG 044 (8 Dec 45) GD, dated 8 December of the General Headquarters of the Supreme Commander for the Allied Powers on the above subject.

Pursuant to the above directive, the Japanese Government herewith submits the following plans of relief and welfare.

1. With a view to maintaining the minimum living standards of the people who need relief, irrespective of its cause, the people's living is to be firmly secured by enacting a new law, effecting an overall adjustment of the current laws and ordinance relating to relief such as Relief Law for the Poor and Disabled (Law No. 39, 1929), Law for the Protection of Mothers and Poor Children (Law No.19, 1937), Law for the Medical Care of the Poor and Disabled (Law NO. 36, 1941), War Casualties and Damages Protection Law (Law No. 71, 1942), Law for the Aids to Deceased Soldiers' Families (No.1, 1917) etc.

Furthermore preparations are speedily made to set up a new non-governmental body of relief in order to enlarge the governmental activities of relief under the new law, with the understanding that the establishment of such organization will abolish or amalgamate existing various associations of relief such as Association of Relief for War Refugees, Association of Relief for the Nationals Abroad, Association of Relief for Veterans etc.

2. Pending the embodiment and execution of the preceding plan, emergency measures of relief and welfare based on the Cabinet decision on 15 December 1945, as shown in enclosure No.1, will be put into effect in the following manners:

(1) Relief is to be given to needy persons because of unemployment, mental or physical incapacity, or other cause of dependency. Their number is now being investigated but the maximum number is now being investigated but the maximum number is estimated approximately at 8,000,000, as shown in Enclosure No.2 (The actual number will be available by the investigation to be completed at the end of January 1946.)

(2) Relief shall not exceed Yen 200 a month in the case of a standard household (consisting of five members). This amount will be increased or decreased according to the number of a household, (as shown in Enclosure No.3).

(3) Relief will be given in one or more of the following ways as will fit the actual conditions of each household (Enclosure No.4).

- a. Supplying the deficiency of food.
- b. Providing clothing and other necessities of life.
- c. Providing housing.
- d. Medical aid.
- e. Guidance and good offices in obtaining employment.
- f. Financial assistance.

Under the preceding Paragraph the relief will be made as far as possible in kind. Regarding foodstuff, other essential commodities and housing, it is impossible to provide for the whole nation in adequacy, as the present overall ability of this country to supply them is unfortunately extremely limited.

However, faithfully observing the principle to treat the whole nation in distress as fairly and equitably as possible, the Government proposes to adopt such special measures on behalf of the needy persons as shown in Enclosure No.5.

(4) On behalf of the repatriates from abroad (including the veterans repatriated) following special measures will be taken, in addition to the relief based upon the preceding paragraph, in view of the special situation confronting them:

Temporary relief measures at debarkation ports and during their travel to their home.

Providing of minimum household effects in order to enable them to settle down.

3. With a view to insuring the effectiveness of relief work, the following steps will be taken to meet the immediate needs of the situation in order to improve and enlarge relief institutions:

(a) To enlarge the central and local administrative machinery concerned with relief work, and to install an increased staff of officials charged exclusively with the duty of giving guidance in connection therewith.

(b) To form a Committee of experienced persons in each Prefecture, in order to ensure that relief work shall be properly carried into effect.

(c) To enlarge and consolidate the system of "Homen Iin" (Social Welfare Commissioner), in order to ensure their full activity and to promote positive activity on the part of the social welfare machinery.

4. With regard to the expenditure necessary for relief the sum of Yen 300,000,000 will be appropriated provisionally in accordance with the provisions of the aforementioned apart from the current expenditure and the expenditure arising from the provisions of Paragraph 2, (4) of the present plan. The estimate of general expenditure for relief will be submitted for the approval of the Supreme Commander for the Allied Powers.

Data Submitted

1. An Outline of Urgent Relief Measures for Needy Persons.
2. The Estimated Number of Persons Requiring Relief.
3. Limits of Monetary Grants.
4. An Outline of Details of Relief and Welfare Plans
5. Method of Securing Foodstuff, Other Essential Commodities, and Housing.

NOTE:

1. The estimated number of persons requiring monthly and direct relief by Prefecture because of unemployment, physical incapacity or other cause of dependency is now being concretely investigated and will be reported when the investigation is completed.

2. The estimated monthly cost of relief by Prefecture will also be reported after the completion of investigation.

ENCLOSURE I Outline of the urgency measures for the relief of needy persons.
(Decided on by the Cabinet Council, Dec. 15, 1945)

In view of the postwar conditions in the country, for those who are especially in needy circumstances, urgency relief measures will be taken as follows to meet the immediate needs of situation:

1. The present relief shall be extended to the needy persons in general and those who are included in the following categories and are in needy conditions.

1. Unemployed.
2. War sufferers.
3. Repatriates.
4. Families whose heads are abroad.
5. Wounded and disabled ex-servicemen and their families and bereaved families.

2. The relief will be administered in the following ways according to the actual living conditions of those in need of relief.

1. Expansion of facilities for lodging, food supply, and medical aids.
2. Supplying of clothing, bedding, and daily necessities.
3. Supplying of foodstuffs.

4. Vocational guidance.
5. Supply or loan of materials for the production of consumers goods for home consumption.

3. The relief shall be administration by the mayors of cities, the chiefs of towns, villages, or wards on the program made by each prefectural government, with the corporation of the chief of town council, the community council, social Welfare commissioners and social welfare organizations.

4. Relief expenditure.

The fund already in existence will be appropriated in accordance with the provisions of the present decision, and additional expenditure will be paid from other source specially to be instituted.

Remarks.

- (1) In the execution of the provisions of the present decision, emphasis will be laid, for the present, on the six big cities and localities where large numbers of repatriates are residing.
- (2) In the execution of the provisions of the present decision, social welfare commissioners throughout the country will be especially instructed to give their full and positive co-operation, in order to see their object effectively carried out.

ENCLOSURE II Number of persons expected to require relief Basic

<u>Class</u>	<u>Number of Persons</u>	<u>Relief Ratio</u>	<u>Persons Required Relief</u>	<u>Remarks</u>
Incapacities for living	760,000		760,000	(1)
Unemployed	8,666,116	0.50	4,340,000	(2)
Repatriates	900,000	0.95	860,000	
Others	<u>2,040,000</u>		<u>2,040,000</u>	
Total	12,366,116		8,000,000	

(1) 15 per cent, increase over 658,863 persons, the figure at the end of the fiscal year 1941.

(2) Addition of one family number on an average as against 4,333,058 persons, expected to be unemployed on the investigation made in September 1945.

ENCLOSURE III Limits of allowances

(1) Relief allowances for household numbers

<u>Class</u>	<u>Household Numbers</u>					
	<u>1 person</u> (yen)	<u>2 persons</u>	<u>3 persons</u>	<u>4 persons</u>	<u>5 persons</u> (Additional for each one Increase)	
Blackmarket prices	2.90	5.38	7.62	9.44	11.15	.80
Authorized prices	2.18	4.02	5.73	7.08	8.35	.60
Average of blackmarket and Authorized prices	2.52	4.70	6.66	8.24	9.75	.70
Estimates Allowances	1.73	3.22	4.56	5.64	6.67	.50

Remarks:

Progressive rate of increase is based on the ration provided in the laws relating to relief now in operation.

(2) Minimum of living expenses of a standard family.

(Estimate made by the Institute for Research in the Livelihood Problems of the Japanese, representing the state as it was in November 1945.)

Consumption unit for married couple and three children: 3.8

<u>Blackmarket prices (yen)</u>	<u>Prices</u>	<u>Standard expenses for allowances</u>
---------------------------------	---------------	---

1. Food and drinks	152.40	102.90	127.650
2. Residence	50.00	30.00	40.00
3. Water supply and lighting and heating	25.69	11.72	18.70
4. Clothing and personal Output	21.53	21.53	21.53
5. Insurance and sanitation	15.30	15.30	15.30
6. Education of children	8.24	8.24	8.24
7. Public dues	27.58	27.58	27.58
8. Transit and communication	8.10	8.10	8.10
9. Social intercourse	5.15	5.15	5.15
10. Recreation	2.00	2.00	2.00
11. Insurance	8.00	8.00	8.00
12. Others	10.00	10.00	10.00

NOTE:

1. Black market prices are based on those of the latest free markets.
2. Authorized prices are those presumed on the basis of the authorized prices.
3. Standard expense for allowances are the average of the blackmarket and authorized prices.

ENCLOSURE IV An outline of Details of Relief and Welfare Plans.

1. Relief is to be given, as a rule, at the home of a family requiring relief, but, in the case of a person who requires accommodation and protection he will be given access to a housing establishment run by a social welfare enterprise or to other institution intended for such accommodation.

2. To persons requiring additional supplies of food, substitute food and subsidy food as fresh fish and vegetables will be provided free of charge or at reduced prices, with a view to ensuring to them the calories necessary for maintaining the minimum standard of living.

This supplementary distribution of food is to be made at places of work by way of encouraging work, as well as at homes.

3. With regard to persons who require the provision of cooked food, those who dine at eating-houses by dint of "dining-out tickets" will be enabled to dine free of charge or at reduced prices. Steps will also be taken to encourage communal feeding at the places where persons requiring relief live in a body and at the employment houses or similar institutions maintained for the sake of such persons.

4. Persons requiring relief in the form of clothing, bedding, cooking utensils and other articles necessary for living will be provided with them free of charge or at reduced prices. Such articles are to be obtained by purchasing on the general market or in the locality concerned. In the dispensation of the relief, priority will be given to the more needy of repatriates and war victims.

5. Persons requiring housing accommodation will be accommodated in public housing establishments or similar institutions. In the case of persons who require monetary aid in regard to house-rent, such will be given within the limits of a reasonable house-rent.

6. Persons requiring medical treatment (including maternity care) will be given the benefit of hospitals, medical practitioners, pharmacists, midwives, etc., and traveling clinics will be made available to them, so that they may obtain medical treatment free of charge or at reduced cost. Arrangements will be also be speedily made for the distribution of home-use medicines.

7. In order to enable persons requiring relief to engage in work, the following steps will be taken:

(1) In the case of persons suitable for engagement in agriculture, coal digging, public works, etc., the necessary funds and articles will be given, so that they may be enabled, either single or in a body, to engage in work.

(2) To persons requiring aid in the procurement of vocational tools and instruments, minor capital funds, etc., such will be given or lent.

(3) In addition to the above, efforts will be made to utilize and increase establishments for giving vocational guidance, employment houses, co-operative workshops, etc. Sidework at home will also be encouraged.

8. In the case of persons with mental or physical incapacity, there will be established vocational guidance institutions, employment houses, co-operative workshops, etc. of a special character, and special protection will be afforded them in regard to their engagement in work.

9. Monetary grants will be made to supply the ##### when the measures mentioned under the preceding paragraphs are not sufficient to meet the required cost of living.

10. With a view to ensuring the effectiveness of relief work, the following measures are to be taken to meet the immediate needs of the situation:

(1) Enlargement of the central administrative machinery.

(a) To attach to the Social Affairs Bureau of the Ministry of Welfare an increased staff of officials charged exclusively with giving guidance in connection with relief, in order further to increase the effectiveness of the planning and guiding of relief work.

(b) To renovate and consolidate the structure and personnel of the existing central organizations increased in social welfare enterprises, with a view to making their activities more positive.

(c) To carry out investigations and researches relating to relief work, and to improve and enlarge establishments for the training and re-education of persons concerned with relief work.

(2) Enlargement of the local administrative machinery.

(a) To assign full-time guidance officials to each Prefecture to direct and supervise relief work, and also to increase other necessary officials to improve and enlarge the structure and personnel of the administrative machinery.

(b) To assign full-time guidance officials to Local Offices and Municipalities to deal with liaison and guidance concerning relief affairs on the first line.

(c) To form a Committee of experienced persons in each Prefecture to ensure a proper execution of relief enterprises.

(3) Improvement and enlargement of the first-line machinery.

(a) To obtain more capable persons as Social Welfare Commissioners, to increase their number, and, what is of particular importance, to increase the proportion of women members of the Social Welfare Commissioners.

(b) To enlarge social welfare establishments, to give them utmost assistance and encouragement, and to promote their positive activities.

(c) To hold lectures, to make inspection trips and to take other necessary steps for the benefit of the persons concerned, in order to activate relief enterprises in local communities.

ENCLOSURE V Method of Securing Supplies, Materials and Housing.

1. Food.

Sample food and substitute food will be distributed through the general ration system to needy persons who will be given the same opportunity of purchasing food as that of the general consumers.

No measures will be taken in order to secure articles especially for needy persons.

2. Clothing.

General ration will be equally given to needy persons, and moreover for war refugees and repatriates, from abroad a suit of clothes, an underwear and an undershirt will be secured for each person preferentially from the clothes secured for relief among the special articles and from newly produced clothes.

The other kind of clothes will be given from the special articles for relief.

Regarding bedding, 200,000 pieces of blankets or quilts will be secured.

3. Housing.

67,000 houses will be built and secured for needy persons who have families, and for single persons existing buildings and others will be accommodated to house 169,000 persons.

4. Medical treatment.

Sick persons who can be treated by home-use medicines will have them through the distribution of general ration and the necessary amount will be preferentially secured for them from the present stock of medicines.

Firstly public hospitals and sanatoria run by municipalities, trade unions etc., secondly the rest of medical institution will be available for those who need the medical treatment by specialists, and beds and other accommodation will be secured for them.

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
PUBLIC HEALTH AND WELFARE SECTION**

WEEKLY BULLETIN

**For Period
10 March to 16 March
1946**

SECTION I
WELFARE

General

Major R.E. Riordan, Acting Chief of the Welfare Division, departed for Korea during the week for the purpose of surveying welfare activities there, particularly as they relate to the repatriation program and UNRRA.

Welfare Administration

A conference was held with officials of the Social Bureau, Health and Welfare Ministry, to clarify additional matters relating to (SCAPIN-775) subject "Public Assistance". At the time of conference the Japanese submitted, informally, a program to implement the overall welfare and relief plan. This program is being circulated among interested SCAP Sections for their comment and concurrence. Details of the program will be announced at a later date.

Relief

The Japanese reported the alleged diversion of reserve relief supplies as ordered by Military Government Companies in the field. It was alleged that despite orders which prohibit distribution of these supplies, except upon authority of this Headquarters, certain units were using these foodstocks to supplement wages paid Japanese laborers employed by the Occupation Forces. An investigation is being made of the allegation.

Housing

A report was received from the Japanese officials of the Reconstruction Bureau and the Housing Corporation relative to the status of housing construction in Japan with particular reference to the Tokyo area. This report revealed that only 10 percent of the nation's lumber production was being channeled through government price and production controls due to government relaxation of its price and allocation controls over building #####. The following is a tabulation from the report showing the housing construction program in Tokyo as of 1 March 1946:

House prefabricated	30,255
Prefabricated units delivered to Tokyo	17,864
House sold	13,799
House for rent (owned by Government)	8,600
House completed and for rent	1,680
House completed but not occupied	472

Other billeting space constructed using converted barracks, etc., equal 105,000 square meters to accommodate approximately 17,500.

Repaired concrete buildings providing 121,500 square meters of space to accommodate approximately 20,250 persons.

<u>House Provided</u>	<u>Persons Accommodated</u>
13,799 houses sold (5 persons/house)	68,995
1,208 houses rented (5 persons/house)	6,040
Billets constructed	17,500
Billets repaired	<u>20,250</u>
Total	112,785

Estimated number of homeless families 333,333 representing approximately 1,500,000 persons

The cost of a standard prefabricated house of 6 1/4 tsubo (18 3/4 square feet) is 5000 yen. Rental price of such house is 35 yen per month.

Foreign Nationals

This Headquarters issued a directive to the Japanese Government to provide for enemy nationals who by reason of blocked accounts or other financial incapacity were unable to provide for themselves (SCAPIN-459) dated 19 December 1945. The Japanese officials contacted a group of Nazi-German to administer the program by giving 150 yen per month to each of an estimated 2000 Germans. This Headquarters stopped the payment of 900,000 yen to the Nazis, representing the amount allegedly required for a three-month period. During the week a conference was held with the Japanese officials and representatives of CIC in attendance. It was agreed that one non-Nazi located in each of the five enemy national areas in Japan would act as the welfare representative. These

non-Nazis will be selected by CIC and will meet in Tokyo on 19 March to organize their work and integrate their welfare activities among the needy enemy nationals.

SECTION II PREVENTIVE MEDICINE

General

Due to the continued high incidence of typhus in the Osaka-Kobe area, conferences were held this week with Military Government Public Health officers from I Corps and the 107th Group, officers of the USA Typhus Commission, representatives of Eighth Army Surgeon's Office and the Chief Surgeon, AFPAC. An officer from the Typhus Commission and the epidemiologist from this office have returned to Osaka to give further assistance in the control program there. Another officer from the Typhus Commission has gone to Kobe.

The sanitary engineer returned from Aomori this week on completion of the first zonal dusting for typhus control in that city. A program was set up for improved case finding, vaccination, focal zonal dusting. Control programs patterned after that of Aomori city are being extended into the prefecture.

Assistance is being given 32nd Military Government Company by this office and the Typhus Commission in the typhus control program in Tokyo.

Smallpox incidence remains high but the rate of increase has declined sharply. The vaccination program is proceeding throughout the country.

Sanitary Engineering

The water supply of Aomori city and sanitation in general were discussed with the sanitary engineer and Public Health Officer of the 75th Military Government Company. The water supply and treatment is considered satisfactory according to Japanese standards, but leakage from the distribution system is very high due to war damage. Repair of the system is very difficult due to the deep snow and cold weather. The importance of improving the sanitary disposal of wastes this spring for the protection of the health of the people was emphasized.

Nutrition Service

Preliminary results were reported on food consumption studies in the rural areas of Chiba, Kyoto, Kyogo and Okayama Prefectures. Average results on rural committees of 10 prefectures on a per capita per day basis were as follows:

	<u>Calories</u>	<u>Protein(gram)</u>
Animal	--	5.0
Vegetable	--	<u>48.3</u>
	1996	53.3

SOURCE OF FOOD

	<u>Calories</u> (Percent)	<u>Protein</u> (percent)
Ration	8.7	10.3
Free Market	3.5	7.7
Home Production	86.6	78.2
Gift	1.2	3.8

Eight prefectures and three large cities have not reported any results and no data have been obtained with regard to the results of physical examinations.

Port Quarantine

Quarantine and repatriation showed a large increase in incoming, and a slight decrease in outgoing persons during the week ending 10 March. To date no new cases of quarantinable disease have been reported for this period.

SECTION III ADMINISTRATION OF HOSPITALS

Forty five prefectures of 46 reporting showed a total of 199,466 beds available of which 91,028 were occupied.

An intensified program has been inaugurated to check former Japanese army and navy hospitals for compliance with Public Health and Welfare directive.

SECTION IV NURSING AFFAIRS

Reports from Japanese

An official letter has been received from the Ministry of Health (Mr. Miki) stating that permission has now been granted to the Public Health Nurses' Association to carry on as a Nurses' organization without domination of the men who have been in control. All the prefectures have been notified to this effect and told to reorganize the prefectural associations. This is a real milestone in the history of the nurses in Japan and it is felt that they will accept the responsibility. A full translation of the regulations is being prepared as well as letters to the prefectures.

The Midwifery Association of Japan, with 35,000 members, is eager to have government recognition. A conference was held with some of their officers and they are preparing a curriculum and standards which they would like to have adopted for midwives training. This will of course be one step forward toward the raising of their educational standards.

A meeting of Japanese nursing leaders and Ministry personnel is scheduled for 25 March 1946 for the purpose of determining needs and qualifications of the nursing profession, and to encourage them to raise their educational standards.

An inspection trip to Kyushu has been planned from March 18th to the 22nd to inspect and offer advice in regard to the new building that is to be erected by the Asahi Newspaper Company for training of public health nurses. Plans are to be made during this trip for a Public Health Nurses' meeting in April.

Korean

Lt. Hendershot is going to a disposition center to return to the United States. She has been first assistant to the Chief of Nursing Affairs.

The Korean translation of the revised two-year nursing curriculum has now been distributed to all schools of nursing south of the 38th parallel.

Plans are underway to send two Korean nurses to Lobenstine Clinic, Maternity Center, New York, for a course in midwifery. Applicants will be interviewed during the week of 11 March 1946.

Thirty five Korean public health nurses have been completed a refresher course given by the United States Government and thirty two of them have assigned to work in the provinces.

An inspection of the hospitals in the southern part of Korea was very encouraging. The standards are being raised and an increased interest in nursing was evident.

SECTION V VETERINARY AFFAIRS

General

A representative from the Veterinary Affairs Division departed on a field trip to southern Kyushu for the purpose of conducting a survey of Japanese veterinary affairs to establish liaison with Military Government officials.

The first of a series of conferences was held this week with leading Japanese veterinary educators of this area for the purpose of discussing ways and means of improving veterinary education and licensure.

Reports from Japanese

Animal Disease Report. The Ministry of Agriculture and Forestry, Animal Disease Section, reported that no new outbreaks of animal disease occurred during the week.

Laboratory Report. The Ministry of Agriculture and Forestry, veterinary laboratory, reported as follows.

Laboratory diagnostic services for specimens from the field in 1945:

<u>Name</u>	<u>Specimen</u>	<u>Positive</u>	<u>Negative</u>
Abortion, Horse	Blood serum	13	109
Abortion, Cattle	Blood serum	--	32
Abortion, Cattle	Fetus	1	33
Parasitic Disease, Cattle			
Dictyocaulus Viviparus	Lung	8	
Ascariasis	Feces	31	
Strongylosis	Feces	37	
Trichostrongylidae	Feces	4	
Parasitic Disease, Fowl			
Ascariasis	Feces	12	
Cestodes	Feces	5	2
Pullusum Disease, Fowl			
	Cadaver	23	
	Blood serum	25	5

Meat and Dairy Inspection

The Ministry of Health and Social Affairs, Sanitary Bureau, Veterinary Hygiene Section, submitted the following dairy inspection report:

Laboratory Examination

Milk samples examined	4,866
Bacterial counts not complying	86
Butterfat not complying	293
Dairy farm inspections	2,805

SECTION VI
DENTAL AFFAIRS

During the month of February 87 dentists were reestablished in practice. Five dentists died during the same period.

SECTION VII
SUPPLY

The distribution of Japanese medical supplies will increase in the near future. The increase in activity is occasioned by four steps taken to protect the health and welfare of the Occupational Forces and secondly to make Japan self-sufficient for medical needs; thus eliminating the necessity of the Army being forced to provide supplies for Japanese civilian use.

The first step taken to improve distribution was to speed up the movement of controlled medicines from producers to consumers. This was accomplished through advice and direction by the Division to Ministry of Health and Social Affairs. Formerly, controlled medicines moved from producers to the Central Control Company. A distribution plan was drawn up and the supplies were prorated to the prefectures. In January this system was revised so that the Central Company was permitted to make distribution and then inform the Ministry what had been done. This accelerated the movement from producers to the prefectures. There still remained, the problem of moving the supplies from the prefectural control agencies to the ultimate using agencies. Distribution to doctors, hospitals and others was planned four times per year and as a result critically needed items that were on hand were held up. Prefectural associations of doctors, dentists, veterinarians and pharmacists conferred with the local health authorities to devise a plan of distribution. This plan has now been modified and on 11 March the Ministry released a memorandum to all prefectures directing that effective at once distribution would be made as supplies were received from the producers through the Central Controlling agency. This new procedure should assist materially in getting needed medicines to consumers with dispatch.

The second step to increase distribution of Japanese medical supplies was the release, by the Ministry, of the plan to make the second distribution of returned military supplies. This Division worked on this plan with the Ministry and dispatched instructions and background material to Occupation Forces covering the necessary surveillance to be made to assure the success of the plan. The secondary distribution will amount to at least 65,000,000 yen and will distribute all returned military medical supplies to the extent permitted. The Japanese were directed to withhold approximately 30 percent of the supplies as a reserve against possible emergencies.

The third step in the program was to effect immediate distribution of home remedies amounting 51,000,000 yen and controlled medicines amounting to 1,500,000 yen. This material was packed for export prior to cessation of hostilities but was never shipped. The Japanese have been instructed to formulate and make effective a distribution plan not later than 25 March. It is known that there is an additional 22,000,000 of medicine in export warehouse. This matter will be followed and distribution made of this quantity as soon as accurate data is received. The effect of this additional distribution should be favorable as it will not only furnish needed home remedies and public confidence, but will have an adverse effect on the medicine black market.

The fourth step to increase the amount of available Japan medical supplies to consumers was the initiation of a plan to release excess stocks now held in the National Hospitals. These hospitals, some 119 in number, were formerly military hospitals and visits to two of them indicated excess stocks both expendable and non-expendable supplies. The plan to use these stocks will encompass both transfer to other users and to curtail the present allocations of stock to these hospitals until such time as their supplies are down to normal levels.

Distribution of specific items in short supply continues on schedule during the past week. Smallpox vaccine schedules were met and in several cases bettered. The prospects for future weeks were improved by the receipt of 7,000,000 doses from Kumamoto. The repatriation program, as pertains to medical processing at Chinese ports, progressed satisfactorily. Sufficient smallpox vaccine was provided to vaccinate all repatriates on the program. 500,000 cc of cholera vaccine was furnished which will cover the movement through the first week of May.

Setagaya National Hospital was visited and an inspection made of the narcotic stocks which were obtained from Yoga Depot, Tokyo, before the end of war, and from demobilized units after the surrender. Arrangements were made for the surplus stocks of narcotics to be removed from the hospital through the Tokyo-To Metropolitan Health Bureau, Pharmaceutical Section.

More than seven and a half tons of opium and two ships were seized in Osaka Port, Wakayama Prefecture. Seven Japanese have been taken into custody. The opium, which originated in Manchuria and was smuggled into Japan from Korea, was confiscated by United States Forces and stored in the 9th Medical Depot, Korea.

Cooperation with Japanese officials continued in the investigation of black market dealing in narcotics.

Records of receipts, manufacture and distribution have been requested from companies formerly manufacturing narcotics in Japan for study and tabulation by this Section.

The Health and Welfare Ministry reported that 45,677,000 individual doses of smallpox vaccine were produced during the month of February 1946.

A letter was forwarded to the Commanding General, XXIV Corps., requesting copies of any material containing information regarding manufacturers of medical supplies in Korea. Further, it was requested that specific information be given as to the locating of plants, production capacity, items that have been produced, or on which production is contemplated, and prevent limiting factors retarding production.

At the request of this Division a conference was called by the Economic and Scientific Section to discuss additional allocation of coal for manufacture of medical supplies. Representatives of this Division, ESS, Ministry of Health and Welfare, Ministry of Commerce and Industry, Chemical Industries Control Association and Japan Coal Distributing Company were present.

The importance of producing sufficient essential medicines to maintain excellent health conditions was emphasized. No definite conclusions as to the exact quantities of coal to be allocated for medical supply manufacturing was reached. A conference will be held on this subject 21 March 1946 and definite quantity will be decided upon at that time.

SECTION VIII

LEGAL

No report.

SECTION IX

DIRECTIVES TO THE JAPANESE

No directives were issued to the Imperial Japanese Government from this Section during the week.

CRAWFORD F. SAMS
Colonel, Medical Corps.

GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS

18 March 1946

AG 728 (18 Mar 46) PH

MEMORANDUM

SUBJECT: Information of General Application Pertaining to Directive Number (SCAPIN-214) file AG 728 (30 Oct 45) PH, this Headquarters, 30 Oct, 1945, Subject: Information on Japanese Animal Disease Control.

1. With reference to Memorandum Number (SCAPI-214), AG 728 (30 Oct 45) PH, this Headquarters to the Imperial Japanese Government, the following is published for the information of all concerned:

a. Purpose of Directive.

To promptly reestablish a self sufficient, indigenous veterinary service in occupied areas.

b. Results desired to accomplish.

- (1) Prevention and control of animal diseases transmissible to man which might seriously affect the health of the Occupation Forces or the civil population.
- (2) Prevention and control of animal diseases which might interfere with indigenous food supplies or draft animals.
- (3) Inspection of foods of animal origin in an efficient manner.
- (4) Rendition of reports containing reliable statistical data concerning veterinary affairs.

c. Manner of accomplishment.

- (1) Occupation Forces will gather and analyze current data regarding communicable animal diseases and insure that immediate action is initiated for the prevention and control of such diseases. This will require the enforcement of existing regulations concerning:
 - (a) Prohibition of movement of livestock except when accompanied by proper health certificate.
 - (b) Quarantine and isolation of animals found to be diseased.
 - (c) Proper disposal of dead animals infected material.
 - (d) Sanitation including disinfection of infected premises, vermin and rodent control.
 - (e) Immunization and quarantine of animals in infected areas.
 - (f) Preparation of notifiable disease reports.
- (2) Occupation Forces will gather and analyze current data regarding meat, meat food and dairy inspection and insure that an efficient service is being rendered. This will require the enforcement of existing laws and regulations concerning:
 - (a) Ante mortem inspection of all animals to be slaughtered.
 - (b) Post mortem inspection of all carcasses to be used for food.
 - (c) Products inspection: This includes cutting, processing, storage, refrigeration, cooking, smoking, canning, pasteurizing, manufacturing and distribution.
 - (d) Proper disposal of wastes and condemned parts.
 - (e) Sanitation of equipment and premises and freedom from vermin and rodents.
 - (f) Sanitation and control of dairy farms and milk plants, methods of pasteurization, bacteriological examinations, sediment tests, sterilization and cleaning, storage, refrigeration and distribution of dairy products. Health of dairy cows including tuberculin and other tests.
 - (g) Health of employees.
 - (h) The repatriation of reliable inspection reports.
- (3) Occupation Forces will investigate the activity of veterinary laboratories and stimulate the restoration of diagnostic, analytical, research, and manufacturing activities.

d. Detailed Information

- (1) Veterinary affairs in Japan are administered by two Ministries.

- (a) The ministry of Agriculture and Forestry.
 - (1) Animal Husbandry Bureau.
 - (a) Animal Disease Control.
 - (b) Port Quarantine.
 - (2) Veterinary Laboratory Section.
 - (a) Manufacture of Biologicals.
 - (b) Animal disease experiments.
 - (c) Diagnostic Service.
 - (b) Ministry of Health and Welfare.
 - (1) Sanitary Bureau.
 - (a) Veterinary Hygiene Section.
(Meal and Dairy Inspection)
- (2) Prefecture Veterinary Service is organized in a similar manner with meat and dairy inspection located in the Health and Welfare Section and animal disease control in the Agriculture Section of Prefecture Government.

e. General

- (1) The surveillance responsibility of the Occupation Forces will require investigations at local levels to determine status of compliance. Control of epidemic animal disease is of primary importance. Personal investigation of significant outbreaks accompanied by civilian officials is necessary in order to determine the efficacy of control measures in effect and the rendition of required reports.
- (2) Slaughter houses and dairy plants must be visited in order to determine the existence and adequacy of inspection. The frequency and accuracy of inspection. The frequency and accuracy of reports must be investigated in order to insure authentic statistical data.
- (3) Command instructions pertaining to the execution of surveillance will follow through command channels.

AG 334 (19 Mar 46) PH

MEMORANDUM

SUBJECT: Information of General Application Pertaining to Directive Number (SCAPIN 273), AG 334 (13 Nov 45) PH, dated 13 November 1945, subject: "Relief Board for Veterans".

1. With reference to Memorandum Number (SCAPIN 273) AG 334 (13 Nov 45) PH, this Headquarters to the Imperial Japanese Government, the following is published for the information of all concerned.
2. At the time of surrender, the Relief Board for Veterans had under its control thirty eight tuberculosis sanatoria, twelve mental hospitals and one leprosarium.
3. The purpose of the directive referred to in paragraph 1 above, is to remove control of the above mentioned facilities from quasi-military agencies and to broaden the base so that medical treatment and hospital care may be made available to civilians.
4. Actual transfer of these facilities from the Relief Board for Veterans to the Japanese Ministry of Health and Social Affairs will be made through the Home Ministry.
5. Responsibility that the provisions of the above mentioned directive are carried out rests with the Civil Affairs Teams.
6. Instructions pertaining to the execution of surveillance will follow through command channels.

GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS

16 March 1946

AG 440 (16 Mar 46) PH

MEMORANDUM

SUBJECT: Information of General Application Pertaining to Directive Number (SCAPIN 465), file AG440 (20 Dec 45) PH this Headquarters, 20 December 1945, subject: "Japanese Military and Naval Medical Supplies Received by Home Ministry from Occupation Forces".

1. With reference to Memorandum Number (SCAPIN 465), this Headquarters to the Imperial Japanese Government, dated 20 December 1945, the following is published for the information of all concerned.

2. It was intended that the returned Japanese Military medical supplies be utilized to support the civilian health program until such time as civilian economy is geared to post-war needs. The Japanese were to inventory the stocks returned and report same to the Ministry of Health and Social Affairs. The Ministry was to immediately authorize a distribution of twenty percent of the stocks in the prefecture wherein the supplies were located. Upon completion of this preliminary distribution; stocks were to be balanced between prefectures in order to equalize available stocks by population, and at the same time to authorize the distribution of an additional fifty percent. The remaining thirty percent is to be held as a reserve for possible emergencies. The balancing of stocks between prefectures and the authorization of the second distribution will be completed by 15 March.

3. The subject memorandum was released directing more vigorous efforts on the part of the Japanese authorities in not only accomplishing the necessary procedures improving the returned supplies but more important, to move the stocks from depots, dumps and collecting points to the consumers.

4. Command instruction pertaining to the execution surveillance will follow through command channels. As a guide for exercising proper surveillance the following check points are suggested:

- (a) Determine that prefectural authorities (Prefectural Health Officer) has taken possession of all returned military medical supplies.
- (b) Determine that the supplies have been properly inventoried by the Japanese and that reports of same have been sent the Ministry of Health and Social Affairs.
- (c) Determine that the prefectural health officials have received authority from the Ministry to make distribution to doctors, hospitals and other consumer agencies.
- (d) Determine that distribution plans are followed and that the supplies are actually moved to the consumers.
- (e) Ascertain that the prefectural health officials have copy of memorandum, subject; "Transfer of Medical Materials", 9 January 1946, Automobile Bureau, Ministry of Transportation to Governors of Prefectures. This Memorandum authorizes necessary transportation facilities to accomplish the movement of medical supplies.
- (f) Investigate storage points and ascertain that storage is adequate for the safeguarding of the medical supplies.
- (g) Advise that headquarters through channels of any corrective action that should be taken at the national level.

less Imperial Japanese Government

HEADQUARTERS
UNITED STATES ARMY MILITARY GOVERNMENT IN KOREA
Bureau of Public Health and Welfare
Seoul, Korea

SUBJECT: Weekly Report for Week Ending 23 February 1946.

DEPARTMENT OF PUBLIC HEALTH

ADMINISTRATION SECTION

1. Military Personnel

a. Seven additional Medical Corps officers reported for duty, bringing the total of newly assigned doctors up to twenty-eight. Orientation was completed and assignments were made. Twenty-three of these officers were assigned to provinces. Further specific assignments within provinces will be left to the discretion of provincial health officers. The remaining five were assigned to sections in the Bureau.

MEDICAL SERVICES SECTION

1. Personnel

a. 1st Lt. Lester Berk, MG, was assigned to the Medical Services Section during the week. He will supervise the re-organization and rehabilitation of the Infectious Disease Hospital. His assignment is to the Clinics and Dispensaries Branch of this Section.

b. Dr. Yun, T. W., resigned as Korean Chief of Section because of increasing difficulties in the maintenance of his private hospital. Dr. Kim, Ki Pan, was appointed Action Chief.

2. Institution

a. The hospitals of Seoul City are still experiencing considerable difficulty in obtaining rice because of a reduction in the rice ration.

b. Efforts are underway to procure 15,000 gowns from the Materials Control Corporation. These are suitable for operating room gowns or patient's garments. The gowns are to be sold through provincial outlets of the Chosen Medical Company in accordance with allocations made by the Bureau of Health and Welfare. Primary distribution will be to hospitals.

c. Provincial governors were instructed by letter with reference to admission procedure of lepers to the National Leprosarium. Monthly hospital report from were also sent to provincial offices with letters of explanation. Individual hospital reports will be made to provincial health officers, where consolidation and report to the national Bureau will be effected.

PREVENTIVE MEDICINE SECTION

1. Communicable Disease Control

a. There was no appreciable change in the communicable disease situation during the week.

b. 1,200,000 doses of Korean smallpox vaccine and 600 bottles of U.S. plasma have been allocated to the provinces.

c. Dr. Choi, the Korean head of the Section is working on plans for a "Smallpox Control Week" to be held in the latter part of March. 20,000 colored posters are being printed, as are pamphlets for an educational campaign. The necessity for vaccination, reporting, and isolation will be stressed. Material is also being prepared for radio broadcasts and news releases.

d. Capt. W. H. Wechter, Sn. C., newly assigned to the Section, is to organize an effective insect and rodent program for Southern Korea, with special emphasis to be placed on typhus and malaria control. A T/O has been

prepared for the national Bureau, the personnel of which will serve as the supervisory and educational body of the program. Provincial T/O for the operation of the control was also prepared, and an annual budget was submitted for the entire program.

e. The following recapitulation of communicable disease reports is for the period 1-15 February:

<u>Province</u>	Bac Dvs	Typhoid	Small pox	Typhu d	Relap Fever	Scar Fever	Diph	Menin -gitis	Mal
Kyonggi-do		3	62	34	3		1		
Cholla Puk		16	108	26			5		
Cholla Nam									
Chong Chong P		60	132	166			1		
Chong Chong N		14	126	8			5		
Kyong Sang N	1	30	226	2			10		
Kyong Sang P		51	275	21		1	8	3	
Kangwan-do		110	209	81	1		1	1	1
	1	284	1138	338	4	1	31	4	1

2. Tuberculosis Control

a. Dr. Han of the Section of Tuberculosis Control left for Taegu in Kyong-sang Pukto Province to speak on "Penicillin" at a conference of country health officers.

NURSING AFFAIRS SECTION

1. Personnel

a. 1st Lt. Doris Cowles, ANC, was returned to her assignment on Kyong Sang Pukto province. Previous orders directing her return to the United States were found to be in error.

2. Education

a. The training films, "The General Hospital", "Chain of Asepsis" and "Amputation" were shown to approximately 800 doctors and nurses from Seoul hospitals.

b. Captain Lucka talked to all student and graduate public health nurses in Seoul regarding the policies of the Nursing Affairs Section and the position of public health nursing in Korea. There had been a misunderstanding about the responsibilities of nurses in the provinces, resulting in their request for separate licensure.

3. Nurses' Clothing

a. Arrangements were made with the City government for the acceptance of hospital applications for shoes for nurses. The Nationals Control Corporation was contracted with a view of obtaining cloth for hospital nurses' clothing.

DENTAL AFFAIRS SECTION

1. Clinics

a. The inventory of former Japanese dental clinics in Seoul was completed this week. Approximately thirty of the sixty clinics were occupied by Koreans who had no license to practice dentistry. It was found that these Koreans had been serving apprenticeships under the Japanese dentists and had taken over the offices when the Japanese dentists left.

2. Personnel

a. Dr. Choi Ye Chung began to work in the Dental Affairs Section. He will be in charge of public health dentistry. A part of his program will be the distribution of literature on oral hygiene, radio talks and lectures to school children.

VETERINARY SECTION

Routine activities were carried out. There were no new important developments in the week.

SANITATION SECTION

1. Education

a. The School for Sanitary Engineers continued in progress. Topics for the week were "Insect-Borne Disease" and "Refuse Disposal".

2. General

a. Lt. Lowe and Mr. Chang returned from their field-trip studying water problems in three southern provinces. Two generally unsatisfactory conditions were found in most plants;

- (1) None of the plants had chlorine
- (2) Most plants were operated by persons unqualified for the work

b. Work on sanitary regulations continued to progress. The "Refuse Disposal" and "Restaurant Sanitation" regulations are nearly completed. Liaison with City Health officers is maintained in this work.

LABORATORY SECTION

1. National Chemistry Laboratory

a. Organic synthesis were prepared as follows:

- (1) 6Kg. CP glycerin for vaccine production.
- (2) 240 gm. malonic acid for amythal research.
- (3) 220 gm. Diethyl-iso-amyl malonate.
40 gm. p-amino-p-nitro diphenyl sulfide.
2250 gm. P-nitrochlorbenzene.

Note: "3" were prepared for sulfa research.

b. A sample of alcoholic beverage brought in by Kyonggi-do police was found to contain more than 1% of methanol. Sanitary chemistry is continuing the study on methods for examination of water.

2. Institute for Prevention of Investious Disease

	<u>New</u>	<u>Dispensed</u>	<u>On hand</u>
Typhoid	380,000 cc	12,680 cc	163,880
Smallpox	200,000 units	320,000 units	1,278,750 units
Rabies	10 Treat	12	6
Rabies for dogs	125 cc	--	125 cc
Fowl pest	20,000 cc	30,000 cc	7,500 cc

MEDICAL SUPPLY SECTION

1. Supplies

a. Approximately twenty-five additional truck-loads of captured Japanese medical supplies were sold to wholesalers during the week.

b. Final arrangements are completed for the handling of CAD basic medical units. Arrival of the units is being awaited.

c. The printing of maximum price lists for medical supplies is being delayed pending clarification of legal aspects by General Affairs.

2. General

a. The Chosen Medical Company was liquidated as of 15 February 1946. Approximately 870,000 yen was made available to the Property Custodian.

b. The translation of Narcotic Law No.99 was rewritten.

LEGAL & FISCAL SECTION

Routine daily activities. No particular problems or new developments were encountered during the week.

VITAL STATISTICS SECTION

1. Registration

a. It appears that prompt settlement will now be made in the dispute on vital statistics registration. Mr. Choi, Korean head of the Civil Section of the Bureau of Justice has drafted standard forms for death and birth reports. They include all information called for in previous forms and in addition contain other items considered necessary to satisfy the household laws. It was agreed to use the standard form for report of stillbirth as already printed, with the addition of one item to the form.

2. Statistics

a. The initial draft of a handbook of instructions for the tabulation of vital statistics within the provinces was completed. It is presently being studied and revised.

b. Life tables of Korea are being constructed from most recent data of mortality and population.

DEPARTMENT OF PUBLIC WELFARE

GENERAL AFFAIRS SECTION

1. Considerable time was spent by all section chiefs both Korean and MG in assigning Korean Personnel to temporary civil service positions. Much thought and care was used to assign persons in accord with ability and experience and yet not in conflict with Korean precedent and tradition. As a result of this care, the assignments are well understood by the Korean personnel and there has been a minimum of discontent among the employees.

2. 5,000,000 yen of 77,000,000 yen unexpended welfare funds were transferred to the Sanitation Section to be used for street cleaning and sanitation purposes in the city of Seoul.

3. Lt. Donald Roe, GHQ, returned from a 15 day tour to each provincial capital and reported on the conditions of the provinces. Main observations were the lack of trained personnel in the field; lack of continuity in administration; the difficulty of building up paid Government staffs to administer relief in place of the private relief societies; and the tendency, in a combined health and welfare set-up, to subordinate welfare to health matters. Under present conditions the most feasible remedy is a welfare field staff. Lacking the personnel for this, an effort will be made as an initial step to have a joint National Public Health and Welfare staff for field duty and interpretation.

4. Capt. Kenneth Yoon, Inf., was placed on D.S. with 100th MG Group, Chunchong, Kangwando, to assist in the organization and administration of the welfare program of that province.

GENERAL RELIEF SECTION

1. The MG Chief of Section departed for the United States leaving this staff position vacant. Mr. Robert Kelly is enroute to fill it.

2. The plan of closing seven Japanese refugee shelters was carried to a successful conclusion, leaving six shelters in operation. One of these is being used as an isolation hospital for communicable disease cases. The rate of typhus among these refugees is sufficiently high to cause concern. This has been discussed with the Provincial Health Department who have taken measures to insure every possible preventive measure.

3. West Gate Prison, which houses most Japanese Prisoners, was visited. Arrangements were made to secure a complete list of all those prisoners and to provide them with small comforts thru the Japanese Relief Society.

HOUSING SECTION

1. The chief activity of the Housing Section was to work with the Planning Secretariat in planning a national housing survey to establish needs of refugees, repatriates and others in both urban and rural areas. The survey is to be directed by Provincial Welfare Officers. The plan is ready and will be presented at the meeting of the Provincial Military Governors next week.

EMPLOYEE WELFARE SECTION

1. The staff study on the dissolution of the Conscripted Laborers Program has been processed thru Planning Secretariat and is now in the OCA for a decision. This program was planned by the Japanese Government as an incentive measure to induce Koreans to go to Japan to work as laborers. Money was to be sent from Japan in the form of benefits and subsidies (medical care, education of children, business enterprises, etc.) to the families of these men. Actually no funds arrived. Some money was appropriated by the Governor General from Korean tax funds for this purpose. In addition, the fund contains some wage remittances from Japanese employers. The reasons for dissolution are:

(a) It was war measure of the Japanese and neither the MG nor the Korean tax payer is responsible for its payments.

(b) The plan is too complicated and unwieldy for administration.

(c) The cost of payment would be exorbitant and would be unfair and heavy drain on the National Treasury.

(d) Identified wage remittances may be paid from existing funds and needy indigents can be cared for thru Welfare means.

(e) The Welfare Department can act as a collector of claims against both the Japanese Government and individual Japanese employers.

(f) Any balance will be placed in General Trust Account, Bank of Chosen, Korean Military Government with a complete accounting of all expenditures.

STATISTICS & RESEARCH SECTION

1. A six week training course for the research staff was begun. The first week was spent in orienting them to Public Welfare in theory and in practice. Lectures were given by Korean and MG Section chiefs and the class attended the Kyunggi-do Welfare Conference. Plans for the second week include a survey of refugee shelters and a housing study. These studies are for training purposes only and it is not expected that the results will be useful for planning. Upon the completion of the course, a social welfare survey of the entire Occupied Zone will be begun.

2. During this week, the roster of suggested members for the Welfare Advisory Board was completed: Mr. Oh, Chai Kyong (of the Institutional Staff) was appointed to serve as secretary.

INSTITUTIONS SECTION

1. Lt. Scherbacker USNR, MG Chief of Institutions Section, in visiting orphanages had found in many cases that the children were being served a diet of rice and salt water soup. Emergency measures were taken to supplement this, and a plan for supervisory visits by Korean staff members devised. In order to train these persons, a series of conferences with Dr. Han, the leading nutritionist in Korea, were held. He instructed them on proper diets, both weak and strong. This will enable them to be helpful to school staffs upon their visits.

2. MG staff (Branch Chief and Institution Section Chief) and two Korean institutional inspectors visited two private orphanages and two Old Peoples' Homes in Kaesong. The primary purpose was to train the Korean staff members. The orphanages selected are considered among the best in Korea. One - the Yu Rin Kwen - is the better operated according to American standards. The other has the better physical surroundings, but the boys were working nine hours per day spinning cloth for commercial purposes and attending school at night. Arrangements were worked out with the city MG team to have the hours of work reduced to five per day and to have school classes in the morning.

AMERICAN RED CROSS

1. Mr. Metsker completed a field trip to all provincial capitols to review ARC activities and status in the provinces. Under the Japanese the chief activity was fund raising with little voluntary contribution or participation. Few services were rendered. Since V-J Day, enforced contributions have ceased, and in each province a small nuclear staff is occupied in maintaining the status quo.

2. Word was received from Washington and confirmed by ARC theater commissioner that five additional ARC civilian relief members are enroute from Washington and points within this theater to join this staff.

1946**

SECTION I WELFARE

General

Captain Ralph J. Turner was assigned to this Division on temporary duty status and Mr. Harold W. Feldman assumed the position of Public Health Assistance Officer.

Welfare Service

Unofficial reports were received by this Section which indicated that juvenile delinquency was increasing in the major cities of Japan and that very inadequate care was being provided homeless and orphan children. A conference was called of Tokyo city welfare officials, the police and transportation authorities to discuss the problem and outline procedures to solve it. The Japanese police are responsible for the prevention of juvenile delinquency. Following the apprehension of a juvenile, he is placed in the custody of local welfare officials who in turn investigate the circumstances of the case and either return him to his parents or place him in one of the twenty orphanages in Tokyo. Second-offenders are referred to the Juvenile Court and if necessary are placed in a juvenile correctional home where their schooling is continued and they are taught some useful trade. Informal reports will be made to this Division each ten days indicating the number of children and the disposition made in each case.

Relief

An investigation was made in Tokyo of the method of distribution of Japanese Army-Navy blankets and winter clothing to relief recipients pursuant to SCAP Memorandum (SCAPIN 760) dated 21 February 1946. The distribution is being made through large department stores to individual recipients who have been investigated and given clothing withdrawal authorization by the local welfare committeemen, (Home-In). This inspection, made on a spot-check basis, indicated complete compliance with the SCAP Memorandum mentioned above.

An informal report was received from Tokyo welfare officials which showed that 35,717 persons in Tokyo received cash assistance amounting to 218,602 yen during the week ending 9 March 1946. These cash grants were made in accordance with the various relief laws. In addition, 16,207 persons received aid in kind, on which no momentary value could be placed by the Japanese officials.

SECTION II PREVENTIVE MEDICINE

General

An intensive typhus program is being carried out in the Osaka area with an officer from the USA Typhus Commission and the epidemiologist from this office advising the local Military Government Units. Recent reports show a reduction in the number of new case reported daily.

As the Tokyo typhus control program was not proceeding satisfactorily further conferences were held with members of the USA Typhus Commission, medical and sanitary officers of the 32nd Military Government Company, the prefectural governor and Health Bureau officials and the sanitary engineer from this office. Certain changes were made in Japanese administration and organization, and 1st Cavalry Division personnel are now supervising operations in the field.

The incidence of both smallpox and typhus remains high throughout the country. The Japanese vaccinating program for smallpox is continuing and typhus control programs are being carried out in many areas under the supervision of local Military Government Units.

Sanitary Engineering

A conference on the production and increased use of fertilizers was held at the office of the Natural Resources Section. This was attended by representatives of all interested SCAP Sections. The difficulties encountered in attempting to increase the production of commercial fertilizers were reviewed and a means of improving the transportation of raw materials and finished products was discussed as well as increase of production. Methods for increasing the use of nightsoil and other waste products for fertilizer were discussed and the necessity for proper treatment of this material for the protection of health.

General orders to prefectural governors and police chiefs have been prepared by the Sanitation Section of the Health Ministry requiring that immediate steps be taken to enforce sanitary laws. These orders include the requirement that all waste be properly collected and disposed of, drains cleaned and repaired, streets and public areas cleaned up and that measure to taken to eliminate all possible mosquito breeding places and to institute an active mosquito and fly control program.

Medical Examiner System

Formal conferences were held with all interested agencies in the Metropolitan Government of Tokyo and the National Ministry of Health. The experiences gained from the provisional system set up previously in Tokyo was reviewed and the revised plan finally agreed upon. Instead of large numbers of poorly trained part-time district examiners, working largely under police authorities, a central Medical Examiners Office will be created. The questions of recruitment of personnel, qualifications for the position, nature and scope of duties, and authority to be exercised were settled. The necessity was again made clear for highly trained experts in the field of forensic medicine and pathology possessing a good background in public health and protected in the performance of their duties from important political or personal influences. The development of the organization was entrusted to the Bureau of Health working in coordination with the professors of forensic medicine in Tokyo Imperial University and Keio University. The Ministry of Health agreed to develop similar organizations in five other large cities.

Municipal Civil Service System

As a by-product of activities concerned in developing the medical examiner system, discussion of the principles of an effective civil service system in a Municipal Government were introduced into the conferences. The desirability of improving the status of technical personnel in the government was made clear for such cases where reform were needed. The point was also stressed that the establishment of a merit system with adequate recognition and protection of civil service rights would attract a much more competent type of individual into a governmental career. The elements discussed were, the importance of defining the nature and scope of the work (job specifications), the salary and tenure of the job, the minimum requirements in training and experience, publication of the advertisement of the job in an adequate manner, and the procedure for selection and appointment of candidates, including competitive written and oral examination, and a suitably constituted Board of Examiners. The officials concerned agreed to study the problem carefully and submit a program for the Medical Examiner System as a working model (see above).

Poisonous Substances in Foods and Beverages

Information was obtained from several sources, including civilian publications and personal communications from medical authorities. At least three poisonous substances are being sold to the public at the present time without adequate control legislation. Two of these are sweetening compounds sold under the name of "shisoto". Para-nitro-orto-toluidine is known to cause death from liver necrosis and cases have been found both in Osaka and in Tokyo. Perillaldehyde oxime may cause death through paralysis of peripheral nerves. Sodium nitrate being sold as a substitute for table salt and ##### also caused a number of deaths. Although drastic penalties are provided by law at this time for the use of methyl alcohol in poisonous amounts in alcoholic beverage, the penalties for sale of the above substances are relatively mild by comparison and insufficient publicity is being given to their dangerous properties.

A conference was held with officials of the Ministry of Health who promised to take action including revision of the laws concerned with the sale of "powerful and poisonous drugs". They also agreed to amend the previous limitation on dulcin, a sweetening compound, inasmuch as it is comparatively harmless and its free use may reduce the demand for the poisonous substitutes.

Revision of Laws Concerning Foods and Drugs

In compliance with previous decisions, the officials of the Ministry of Health submitted a plan for expanding the activities of the government hygienic laboratory. A more throughgoing program is intended, dealing with adulteration and misbranding of packaged foods, beverages, drugs, vitamins and other substances intended for human consumption, with research activities for developing better remedies for use in medical treatment, and a Bureau of Standards to assay official and non-official remedies in production. The program was approved and its immediate enforcement recommended.

Revision of Medical Education

The third meeting of the Council of Medical Education was held 14 March 1946 with a membership of 18 present, representing the Ministries of Education and Health, Japan Medical Association, Tokyo and Osaka Imperial Universities, Keio and Jikeikai Universities and the Nippon Medical College. The 4-year medical course and a 1-year clinical internship before admission to a licensure examination were discussed and recommended unanimously. It was further voted that the medical curriculum should be devoted exclusively to medical subjects and that the pre-medical subjects should be taught before the medical course was begun, instead of being taught parallel with medical subjects as heretofore practiced in the Semmon Gakko. The eligibility requirements for admission to medical school will be discussed at the forthcoming meeting at which time the revision of the medical curriculum will be also considered. Further study was given to the problem of medical publications including procurement of recent publications from America and other countries.

Medical Education Reform

The fourth meeting of the Council of Medical Education was held Friday, 22 March. The issue of premedical education was discussed thoroughly and a program was submitted and voted upon whereby non-medical subjects would be excluded from the medical curriculum itself and required as prerequisites for admission to medical school. Accordingly, the necessity for raising the entrance requirement for admission to the remaining Semmon Gakko was brought up and voted upon. It was agreed that beginning 1 April 1947, admission to all medical schools would require a minimum of one full year of special pre-medical training to include foreign languages, mathematics and other pre-medical sciences, and the humanities; that beginning 1 April 1948 a minimum of two years would be required. The representatives of the Ministry of Education agreed to put this decision into effect at once. They further declared their intension of surveying the remaining Semmon Gakko from the point of view of their facilities for giving adequate medical education in line with the program for elevation of standards.

Repatriation

The Traffic of incoming and outgoing Japanese home island repatriates show a slight increase according to SCAP report. These figures, however, apparently cover repatriation elsewhere as well. The figures from the Japanese Repatriation Centers alone are not available until two weeks late due to poor communication.

The old China coast plague ports of Amoy, Ningpo and Foochow were reported as having plague. They are paramount endemic foci, whether reporting cases or not. There is no repatriation traffic from them direct.

Several vessels from Shanghai and Korea arrived with cases of smallpox at Hakata which were handled routinely.

The East coast of Kyushu was considered unsuitable for locating repatriation centers because of inadequate transportation and the proposal to use Beppu was dropped.

SECTION III ADMINISTRATION OF HOSPITALS

The status report of hospital beds available to Japanese civilians was 201,625 of which 90,272 were occupied. The Chief of the Administration of the Hospital Division is currently inspecting Japanese civilian hospitals in southern Japan.

SECTION IV NURSING AFFAIRS

Reports from Japanese

An announcement and invitation has been received to the graduation exercises of the Tokyo Central Red Cross Hospital to be held on 25 March 1946. The Nursing Affairs Division will be represented.

The first meeting of the educational group on nursing affairs will be held 25 March 1946 at 2:00 PM.

A copy of Midwives' Regulations (printed in Japanese) has been received.

Representatives of this Division made a trip to Kyushu in the interest of a project for Public Health Nurses that is being sponsored by the Asahi News Company.

A conference was held with Dean Gildersleeve regarding the education standards for nurses.

Personnel

Lt. Mary T. Colling was assigned to the Nursing Affairs Division as a Civilian nurse.

Reports from Korea

Material in report covers decisions made in seven meetings held by the Nurse and Midwife Licensure Board. Report is as follows:

I. Organization of the Committee.

a. 5 nurses, 4 doctors

b. Dr. K.S. Son, President, Dr. C.Y. Shai, Vice President, Mrs. Whans, Secretary

c. Committee rules:

1. To be called "The Committee of Investigation" for the quality of the nurses and midwives in Korea.
2. The purpose of the Committee is to inspect the quality of nurses and midwives and registration in Korea.
3. The period of membership is three years, but one may be re-enlisted for another term.
4. The meetings will be held in the Bureau of Public Health and Welfare.

5. The membership of the Committee is one president, one vice- president, one assistant to the president, one secretary, five ordinary members.
6. When more than half of the members present the meeting may be called to order.
7. The president may call a meeting whenever it is necessary.

II. Nursing.

a. Pre-entrance requirements to nursing schools.

1. Educational requirements: graduate of Junior High School.
2. Minimum age: full 15 years.
3. Students admitted once annually.

b. National Examination.

1. Student must be a full 17 years of age before taking examination.
2. Examination to be prepared and corrected by Licensure Committee.
3. Examination will be given annually in September.
4. National examination to be given in provinces under guidance of Public Health Nurses.

c. Requirements for Licensure.

1. Students who entered a school of nursing prior to 1 February 1946 will be licensed under the former Japanese law.
2. If a girl has worked in a hospital or for a physician in a nursing capacity for a period of three years prior to January 1946, but has not received a licensure to nurse, she will be allowed to take the National Examination within a two-year period. If she passes the examination she will be licensed.

d. Miscellaneous.

1. No obligatory period will be required after graduating from nursing school.
2. Nurses will register annually from January through 30 March.

III. Midwifery (Temporary regulation established).

a. Requirements for Licensure.

1. Midwives who obtained a license before 1 January 1946 will automatically be licensed.
2. Graduation from one of the recognized schools, such as Severance, Red Cross, and University Hospital before 1 January 1946.

b. National Examination.

1. The individual must be a nurse over 18 years of age.
2. She must hold a nursing license.
3. She must have had practice in gynecology for more than one year before 1 January 1946.
4. She must have passed the preliminary examination qualifying her for a midwife license.
5. Those midwives who have obtained a midwife license from other countries (recognized by the Committee) may take the examination.

IV. Current Registration and Examination for Licensure of Nurses and Midwives (for those not licensed in the above category).

a. Nurses.

1. Date of examination: 10 April 1946.
2. Place: Health Department of each Province.
3. Qualification:
 - i. Over 17 years of age.
 - ii. Three or more years of nursing experiences.
4. Subjects include in examination:
 - i. Theory.
 - ii. Physiology, anatomy, bacteriology, hygiene, maternal medicine, medical nursing, surgical nursing, pediatrics, gynecology, eye, ear, nose throat, dermatology, dental bandaging and sterilization.

b. Practical Nursing Examination.

1. Application period: 24-30 March 1946.
2. To be submitted at this time:
 - i. Application for examination.
 - ii. Picture.
 - iii. Personal history.
 - iv. Certification of nursing experience for more than three years.
 - v. Certificate of physical examination.
 - vi. Examination fee of 50 yen.

c. Midwives (preliminary examination).

1. Date of examination: 11 April 1946.
2. Place of examination: Health Department of each Province.
3. Tuberculosis:
 - i. Over 18 years of age.
 - ii. Over one years experience in midwifery.
4. Subjects include in examination:
 - i. Theory.
 - ii. Anatomy, physiology, hygiene, technique of sterilization, obstetrical nursing and gynecology.
 - iii. Practical examination.
5. Application Period: 24-30 March 1946.
6. To be submitted at this time:
 - i. Application for examination.
 - ii. Personal history.
 - iii. Certification of midwifery experience for more than one year.
 - iv. Certification of physical examination.
 - v. Examination fee of 50 yen.
7. Date for final examination for midwives will be the middle of May.

SECTION V
VETERINARY AFFAIRS

General

A survey of Japanese veterinarian affairs in southern Kyushu by a representative from the Veterinary Affairs Division is still in progress.

The second of a series of conferences held with leading Japanese veterinary educators resulted in the organization of a "Council on Veterinary Education".

Reports from Japanese

Animal Disease Reports. The Ministry of Agriculture and Forestry, Animal Disease Section, reported as follows:

NEW OUTBREAKS – 17-23 MARCH

<u>PREFECTURE</u>	<u>DISEASE</u>	<u>CASES</u>
Kumamoto	Texas Fever	2
Nagasaki	Blackleg	2
Shimane	Blackleg	1
Kagoshima	Anthrax	1 (Equine)

Control measures are immunization, quarantine and disinfection.

Monthly Summary for February 1946:

<u>Disease</u>	<u>Number of Cases</u>
Anthrax - bovine	5
- equine	3
Infectious Abortion - bovine	130
Texas Fever	2
Scabies - equine	3

Infectious anemia - equine	6
Strangles	1,074
Rabies	1
Pullorum - chicks	2,565

Control measures appear to be effective.

Meat and Dairy Inspection

The Veterinary Hygiene Section, Sanitary Bureau, Ministry of Health and Social Affairs, has submitted the following meat inspection report for January 1946:

	<u>Cattle</u>	<u>Calves</u>	<u>Sheep</u>	<u>Swine</u>	<u>Horses</u>
Number slaughtered	17,657	451	46	2,265	5,177
<u>Ante Mortem</u>					
Condemned	0	0	0	0	2
<u>Post Mortem</u>					
Totally condemned	8	0	0	0	9
Partially condemned	164	8	0	38	290
Viscera condemned	2,125	44	0	485	523

SECTION VI DENTAL AFFAIRS

No report.

SECTION VII SUPPLY

General

A program covering civilian requirements of typhus and rodent control supplies for Japan and Korea, during the six months period ending 31 December 1946, was prepared for submission to the War Department. A similar program was prepared covering supply requirements in Japan. Korean medical supply requirements are being included in the overall supply program for that command.

Captain Cummings departed on an inspection trip through the Northern prefectures including Hokkaido. Prefectural agencies will be checked for efficiency in distributing released Japanese army supplies and for new production.

Production and Distribution

In order to accomplish distribution of the home remedies and controlled medicines, packed for export prior to cessation of hostilities, the Welfare Ministry was instructed to formulate a plan for distribution by 25 March. On 22 March the plan was completed which instructed the Training Corporation (export company), previously responsible for storing the goods, to release them to the Central Control Company for immediate distribution. This action involving 5,000,000 yen of home remedies valued at 5,000,000 yen and 1,500,000 yen of controlled medicines, should materially improve the medical supply situation.

Smallpox production and distribution has been proceeding very satisfactorily and are ahead of schedule. Production at the Chemo-Sero Therapeutic Institute in Kumamoto has reached a point where a reduction is possible. A reserve of 10,000,000 doses will be maintained at that plant.

Visits were made to two national hospitals to determine the status of their medical supplies. Stockkeeping records and security measures were found to be excellent. No shortages were reported except in sulfa drugs and textiles. Ministry officials were instructed to take action to correct shortages.

This Division is in receipt of a report from the Central Medicine Control Company covering receipts and distribution of controlled medicines for February. Receipts amounted to 5,326,323 yen as compared to 3,666,525 yen in January. The value of February distribution was 7,525,368 yen or over twice the January distribution which amounted 3,124,898 yen.

Narcotics

Lt. A.S. Stefan began an inspection trip through northern Honshu and Hokkaido on matters relative to narcotic control. Inspection was to be made particularly of wholesale drug firms in the area which the Japanese Government nominated for approval as custodians of former Japanese army and navy medicinal narcotic stocks.

A letter was submitted to the Eighth Army and a memorandum submitted to major headquarters outlining suggested surveillance to assure compliance with a directive from this Headquarters to the Japanese Government. The subject of the directive was "Control of Narcotic Products and Records in Japan", file AG 441.1 (12 Oct 45) PH.

SECTION VIII
LEGAL

No report.

SECTION IX
DIRECTIVES TO THE JAPANESE GOVERNMENT

AG 700 (14 Mar 46) PH (SCAPIN 811), subject: "Plan for Collecting Correct Vital Statistics". This Memorandum directs the Japanese Government to submit a plan for the collection of vital statistics.

CRAWFORD F. SAMS,
Colonel, Medical Corps,
Chief, Public Health & Welfare Section.

7 Incls:

- #1 - SCAPIN 811
- #2 - Memorandum on SCAPIN 130
- #3 - Memorandum on SCAPIN 304
- #4 - Weekly Report PH&W Korea, 2 March 46.
- #5 - Weekly Report PH&W Korea, 9 March 46.
- #6 - Communicable Dis. Rpt. Japan, 9 March 46.

GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS

APO 500
14 March 1946

AG 700 (14 Mar 46) PH
(SCAPIN 811)

MEMORANDUM FOR: IMPERIAL JAPANESE GOVERNMENT

THROUGH: Central Liaison Office, Tokyo.

SUBJECT: Plan for Collecting Current Vital Statistics.

1. It is directed that the Imperial Japanese Government prepare a plan for the collection and compilation of certain vital statistics data, and that the proposed plan be submitted in writing in English, for approval of the Supreme Commander for the Allied Powers, not later than 5 April 1946.

2. The plan must provide for the compilation of the following data as a minimum:

- a) For deaths: Total number, number of infant deaths (those dying under 1 full year of life), total number at all other ages, by sex.
- b) For births: number by sex.
- c) For stillbirths: number by sex.
- d) For marriages: number
- e) For divorces: number

Each of the above figures must be tabulated separately for each prefecture and city. The basis of this tabulation by prefecture and city must be place of actual residence of the person involved and not place legal domicile (honseki).

3. The specified data will be collected and compiled monthly and transmitted to GHQ, SCAP not later than (2) months after the end of the month to which the data relates (i.e. May data by July 31st. June data by August 31st, etc.).

4. The plan will contain an outline of the changes in registration laws and procedures necessary to insure that births, deaths, stillbirths, marriages and divorces are reported at the place of actual residence (not "honseki"), as well as the steps to be taken to re-instruct local registration officials about the new procedures.

5. Upon approval by SCAP of the vital statistics plan, the Imperial Japanese Government will take immediate steps to establish the collection of current vital statistics by the methods given in the plan. Such collection will start with data for the month of May and continue.

FOR THE SUPREME COMMANDER

B.M. FITCH,
Brigadier General, AGD
Adjutant General.

GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS

APO 500
25 March 1946

AG 632 (25 Mar 46) PH

MEMORANDUM FOR: IMPERIAL JAPANESE GOVERNMENT.

THROUGH: Central Liaison Office, Tokyo.

SUBJECT: The Dojin-kai Hospital, Tokyo.

1. Reference is made to letter from Central Liaison Office, Tokyo, dated 19 March 1946, file C.L.O. Number 1282 (PP) subject: "Application Regarding Continued Functioning of Dojin-kai Tokyo Hospital".

2. Authority to continue functioning of the Dojin-kai Hospital, Tokyo, under the supervision of the Foreign Ministry is denied.

3. The Dojin-kai Hospital, Tokyo, will be transferred immediately to the administrative control of the Ministry of Health and Welfare.

FOR THE SUPREME COMMANDER

B.M. FITCH,
Brigadier General, AGD
Adjutant General.

GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS

25 March 1946

AG 632 (25 Mar 46) PH

MEMORANDUM

SUBJECT: Information of General Application Pertaining to Directive Number (SCAPIN 811-A) File AG 632
(25 Mar 46) PH, this Headquarters, 25 March 1946, subject: "The Dojin-kai Hospital, Tokyo".

1. With reference to Memorandum Number (SCAPIN 811-A) this Headquarters to the Imperial Japanese Government, the following is published for the information of all concerned.

2. The Dojin-kai Hospital, Tokyo, was sponsored and supported by the Dojin-kai (Society). The Dojin-kai was ordered disbanded by Memoranda to the Imperial Japanese Government SCAPIN 216 and SCAPIN 548.

3. As the purpose of the Dojin-kai Hospital, Tokyo, was for treatment of Chinese, Fromosans, and Korean nationals who will either be repatriated or lose their privilege of preferential treatment (SCAPIN 746), the need for a special hospital does not exist. The administration of this hospital is transferred from the Foreign Ministry to the Ministry of Public Health and Welfare. The hospital is not to accord special privileges to any nationality. Command instructions pertaining to the execution of surveillance will follow through command channels.

HAROLD FAIR,
Lt. Colonel, AGD

GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS

21 March 1946

AG 441.1 (21 Mar 46) PH

MEMORANDUM

SUBJECT: Information of General Application Pertaining to Directive Number (SCAPIN 130), file AG441.1 (12 Oct 45) PH, this Headquarters, 12 October 1945, subject: "Control of Narcotic Products and Records in Japan", to the Imperial Japanese Government.

1. With reference to Memorandum Number (SCAPIN 130), this Headquarters, to the Imperial Japanese Government, dated 12 October 1945, the following is published for the information of all concerned.

2. With reference to the planting, growth or cultivation of narcotic seeds or plants, the Japanese Government stated the prohibition was published before seeding time hence no destruction of plants was necessary. In order to assure that the prohibition in this regard is carried out, prefectural officials should be contacted and surveillance made to prevent planting, growth or cultivation of narcotic seeds or plants.

3. Since manufacture of narcotics is prohibited, clandestine manufacture in small plants may be undertaken. Liaison with prefectural officials to assure surveillance and positive action on all leads of information will prevent such manufacture. Packing and repacking of narcotics by registered, licensed dealers does not constitute manufacture.

4. Port surveillance to prevent exportation and importation of narcotics is necessary to eliminate smuggling. A recent attempt to smuggle 7.5 tons of opium into Japan resulted in the seizure of the opium and ships and the arrest of the crews.

5. A letter to Occupational Forces, file AG441.1 (2 Nov 45) PH, directed that all crude and semi-processed narcotic, suitable for storage, be taken into custody, reported to this Headquarters and stored in a central place for safekeeping. Heroin, adulterated narcotics, semi-processed narcotics, unsuitable for storage, and smoking opium and opium prepared for smoking were ordered destroyed after proper records were made for forwarding to this Headquarters.

6. Command instructions will follow through command channels pertaining to the execution of surveillance. The following procedure is suggested:

- a. Determine that prefectural authorities are cognizant of directive.
- b. Determine that former growers of the opium poppy are aware of the prohibition.
- c. Determine that all stocks of narcotics affected by the directive have been taken into custody by United States Forces (finished narcotic stocks with the exception of heroin and marijuana are not effected by the directive but Japanese military stocks of all kinds have been ordered taken into custody).
- d. Advise this headquarters of any corrective action that should be taken at the national level.

SUBJECT: Weekly Report for Week Ending 2 March 1946,

DEPARTMENT OF PUBLIC HEALTH

MEDICAL SERVICES SECTION

Institutions

A dispensary for the treatment of Korean Civil Service employees of the National Government was opened in the National Capitol Building this week. A Korean doctor is in direct charge of the dispensary. Supervision will be maintained by the Medical Services Section of this Bureau.

The Infectious Disease Hospital in Seoul is being reorganized. The wooden section of the hospital was condemned and smallpox patients were moved to the third floor of the newer section of the hospital. Isolation technique was initiated prior to transfer of the patients and will be enforced. Gowns, masks, and other items are being purchased.

A conference was held with government-owned or subsidized hospitals in Seoul. Instruction were given that graduate nurses and nurses' aides are to receive the complete cost of living differential, and that student nurses are to receive one fifth of this cost.

General

Registration forms for physicians have been prepared.

PREVENTIVE MEDICINE SECTION

Communicable Disease Control

Dr. Shoi, Korean head of the Preventive Medicine Section, is working on the establishment of a model public health center on the city of Seoul. This center will serve as a guide and model in helping provincial health officers to plan their own health centers.

A telegraphic report was received that nine persons were bitten by a rabid dog Cholla Mamdo. Vaccine for anti-rabic treatment was dispatched from the laboratory.

The following telegraphic reports of disease were received during the week.

<u>Province</u>	<u>District</u>	<u>Coordinates</u>	<u>Typhus</u>	<u>Smallpox</u>
Kyonggi-do	P aju Gun	(980-1670)	1	-
Kangwan-do	Chunchon	(1070-1682)	1	2
Chungchong Fukto	Tanyang Gun	(1120-1560)	-	(Indeterminable no. of scattered cases)
Chungchong Namdo	Tangjin Gun	(960-1560)	5	-
Chungchong Namdo	Popyeang Gun	(965-1475)	-	23
Chungchong Namdo	Sosan Gun	(945-1675)	-	75

Budgets for the coming year were prepared for the operation of the Anti-Tuberculosis Association.

Education

It is planned to publish a monthly magazine of Bogun (Public Health), to number about 50 pages, and with distribution of approximately 5,000 copies of each issue.

Nutrition

The "School Lunch Program" Is completed and will be activated as soon as financial details are arranged. In cooperation with the Chosen Flour Milling Company, a soybean milk powder has been developed as a substitute for whole milk. The preparation of Korean data on foods and food values is being continued.

Personnel

Capt. Simon C. Weiner has been appointed Chief of the Preventive Medicine Section, relieving 1st Lt. R. S. Bagnall who is assigned to the administration of local health affairs.

NURSING AFFAIRS SECTION

Inspections

Captain Lucka returned from an inspection tour of nursing affairs activities in Kyongsang Putko and Kyongsang Namdo provinces. Nursing affairs in Kyongsang Pukto were found to be progressing very well. 1st Lt. Doris Cowles, ANC, in that province now has a Korean counterpart on the person of Mrs. Cho. In Kyongsang Namdo the nursing problems were found to be numerous. There is urgent need for the assignment of a full-time American nurse to this province. Miss Stroup (Civilian nurse-Civil Service) remained in Fusan on a temporary basis and will assist in organizing the public health nursing in Kyongsang Namdo.

Lt. Rendaeshot, ANC, and Mrs. Hong left on 27 February to inspect Nursing activities in Chung Chong Pukto, Chung Chong Namdo and Cholla Namdo.

General

A report was received that the Korean pubic health nurse recently assigned to Chung Chong Namdo Province has already visited seven schools, held conferences with the teachers and lectured to the students.

DENTAL AFFAIRES SECTION

General

On 25, 26, and 27 February, examinations were given at the Seoul Dental College to 12 Korean dentists repatriated from China and Manchuria.

Plans were formulated and instructions sent out to each provincial health officer for the registration of each dentist and "crown-maker" who was previously licensed under the Japanese.

Letters were also sent to provincial health officers directing that plans be initiated for the formation of provincial dental associations so that problems relating to the profession may be correlated and submitted to the Dental Affaires Section of the national Bureau of Health and Welfare.

VETERINARY AFFAIRS SECTION

General

It is considered that rabies vaccine for dogs should be produced, and conferences were held with the Chief of Laboratory Section to effect manufacture in sufficient quantities to inoculate all dogs in a given community. The principal difficulty in production is that rabbits are not available.

Inspection of Cheji-Do Island by Lt. McCrory, VC, reveals that there are no dairies on the Island, all dairy cows having been killed by the Japanese. The only prevalent livestock disease is anthrax. Forty percent of all animals in Cholla Namdo Province are on Cheju Island.

SANITATION SECTION

Education

About thirty photographs were taken for use in the provincial program in sanitary education, and for historical records. Some twenty of these photographs are of water treatment plants and various phases of water treatment work. The remaining photographs cover insect control and refuse removal.

LABORATORY SECTION

Vaccine Production

The problems of diphtheria vaccine production was discussed with Dr. Kim of the Institute for Veterinary Research. It was decided to being the study in Fusan as well as to continue the work in the Seoul Laboratory. Animal foods for laboratory animals is difficult or impossible to purchase in the southern provinces. Purchase in Seoul and shipment to Fusan by rail has been found necessary.

Thirty-two boxes of 200-250 bottles each of typhoid vaccine were shipped to the provinces. This is the first large allocation of typhoid vaccine produced in Korea. The weekly average for production continues at about 350,000cc.

The problem of refrigeration for vaccines is becoming acute. Every effort is being made to repair present refrigeration facilities.

Anvang Veterinary Laboratory

The cattle are improving in weight and their condition is such that immunization can be begun as soon as a competent veterinarian can be trained at Fusan. The chicken farm at Anyang is ready for use. The pens have been treated with lime and all buildings cleaned. Efforts are being made to obtain wire for fencing.

National Chemistry Laboratory

Organic Synthesis:

- a. Preparation of 6 Kg. Glycerine (C.P.), for Vaccine production. Twelve (12) Kg. Glycerine (C.P.) were shipped (Pusan and Taigu).
- b. Synthesis of 120 gm. DDT.
- c. Synthesis of 10 gm. Sulfamethlthiazele.
- d. Synthesis of Intermediate compounds needed in the experimental synthesis of DDT and Amytal:

Chlorobenzene	230 gm.
Disthyl iso-Amylethylmelonate	200 gm.

Nutrition

- a. Nutrition Study: an additional 108 subjects were studies.
- b. At the request of the Bureau of Justice, AMG, an evaluation of prison diets (West Gate Prison) was begun.

Sanitary Chemistry

- a. Daily determination on Seoul tap water of:

PH	Total Solids	Sulfates	Residual Chlorine
Dissolved Oxygen	Total Hardness	Chlorides	Oxygen Consumed
Copper	Iron	Lead	Turbidity
Nitrites			
- b. Comparison of American and Japanese Standard Methods for the determination of Dissolved Oxygen.

Toxicology

Chung Chong Pukto specimen of table salt, is negative for:

Arsenic

Cyanides

Additional results will be reported later.

Inventory of Vaccines

	<u>Expended</u>	<u>On Hand</u>
Smallpox	676,000 doses	1,602,750 doses
Typhoid	35,880 cc.	128,800 cc.
Rabies	19 doses	2 doses
Foul Pest	5,000 cc.	2,500 cc.

MEDICAL SUPPLY SECTION

General

The Korean Pharmaceutical Affairs Committee at their weekly meeting approved the changes in Article 2 of the Korean Pharmacy Laws.

The Korean Narcotic Laws are being re-translated by the Monopoly Section of the Finance Bureau to insure accurate interpretation for a basis of proposed changes. Liaison will be maintained until final legislation is written.

Supplies

The Materials Control Corporation requested the identification of some bulk chemicals in their warehouses which were unlabeled. These were analysed at the Central Laboratory and were found to be barium chloride, sodium throsidfate, sodium bicarbonate, sodium carbonate, lactic acid, and tooth power mixture.

FISCAL & LEGAL SECTION

General

The processing of Section budgets for the Bureau was continuing through the week. The consolidated budget for the Bureau was ready fir submission at the week's end.

Drafting of the ordnance for licensure and registration of physicians was continuing by Mr. Whang.

VITAL STATISTICS SECTION

Registration

Standard Certificate Forms

Agreement in the use id the Standard Certificate forms for reporting births, deaths, stillbirth, marriages and divorces was finally reached between the Department of Public Health and Welfare and the Bureau of the Justice at the end of this report period. Four forms reflecting his version of birth, death, marriage and divorce standard certificate forms of report in accordance with the provisions of the Household Law and pervious practice were drawn up by Mr. Choi, head of the Civil Section of the Bureau of the Justice. These forms, with few minor exceptions, do not differ materially from those previously drawn by this section. These changes will be incorporated at the next printing of standard forms and made ready for use by 1 July 1946.

Meanwhile, a tentative agreement has also been reached by the two agencies in which the present three months' supply of standard forms previously printed by this Section will be used for registration purposes by both agencies, excepting marriage and divorce forms. Under a compromise reached by the Koreans, both have agreed to use two separate forms for three months. Thereafter, a single standard form will be used by both agencies. A study of these two forms at the time of this writing shows that minor changes recommended by Mr. Choi, in his proposed forms, can easily be written on the back of the present printed forms of this Section, without confusion to the public. There appears to be little reason why both agencies cannot use the same forms until the revision can be made at the next printing of standard forms. Negotiations to accomplish this are under way by the Korean heads of the two agencies.

Reports of Activity in the Field

Field Agents returned during the current report period and reported that interest in the new Vital Statistics program is good. However, they found that a number of problems are being encountered in general by all Provincial Officers which are worthy of note.

Progress in organization of Provincial Vital Statistics offices is being hampered due to a communication from the Provincial Affairs Bureau, prohibiting formation of new sections within Provincial Governments except by specific authorization from that office. The authority for the establishment of Vital Statistics sections is given in Bureau of Public Health and Welfare Memorandum No. 1 and the authority for the discharge of Vital Statistics functions is to be found in MG Ordinance 25. Notwithstanding the aforementioned references, it was found that the local governments were awaiting the promulgation of a new directive, or Ordinance, setting up the Vital Statistics organizations as a definite section or subsection of the Department of Health and Welfare. Discussions on the organization of a Provincial Health and Welfare setup are currently taking place between the Bureau of Provincial Affairs and this Bureau. The status of the Vital Statistics organization on the Provincial level will be dependent on the outcome of these deliberations.

The provinces of Kyungi-Do and Kangwon-Do had held meetings with district representatives on the establishment of new Vital Statistics offices on the gun levels of government. New registration procedures were explained and problems involving initial organization discussed.

Vital Statistics budgets for the fiscal year 1946-1947 have been submitted for all provinces. The emergency budgets to cover expenses for the period up to March 31st have likewise been submitted. At this writing the emergency budgets for Chun Chong Namdo, Kungsong Namdo, and Kyungi Do have been approved by this Bureau.

The extent of personnel recruitment for the Vital Statistics Affairs of the provinces had varied among provinces at the time of the visits by the field agents. There were found the following:

Kyungi Do	16
ChunChong Buhdo	2
Chun Chomg Namdo	3
Cholla Buhdo	6
Cholla Namdo	2
Kungsong Buhdo	1
Kungsong Namdo	1
Kangwon Do	2

Statistics

Slow but steady progress is being made in the completion of a Korean Index to the International list of causes of death.

Translation of Statistics forms for use by the Provinces is continuing.

A Maternal Mortality Study for the period 1938-1942 by province, age, month of occurrence and cause of death was begun.

A graph showing the monthly incidence and mortality rates of reportable communicable diseases for the period 1910-1942 was started.

DEPARTMENT OF PUBLIC WELFARE

GENERAL AFFAIRS SECT

The Chief of the Welfare Department addressed the meeting of Provincial Governors and informed them about:

- a. The expected arrival of five more staff members of the ARC Civilian Relief Unit and their possible services to the provinces.
- b. The expected arrival of 100-200 tons of relief supplies from Honolulu.
- c. The request to UNRRA to furnish a staff to operate relief and refugee shelters.

GENERAL RELIEF SECTION

The staff position of Chief of General Relief Section is still vacant. The section on Japanese Affairs reports:

- a. All funds of the Japanese Relief Society must be transferred to the General Trust Fund, Military Government of Korea by 15th March in accord with Finance Bureau Memo #15. This necessitates setting up procedures for care of Japanese refugees which up to now had been given by the Japanese Relief Society.
- b. The Japanese Repartiation train which left Seoul for Fusan on 26 February contained 834 persons of whom 489 were refugees. In accordance with present policy each refugee was furnished 30 yen for expenses.
- c. The list of Japanese prisoners submitted by West Gate Prison showed that of the 125 prisoners, 64 were convicted and 61 unconvicted. Further inquiry is being made.

INSTITUTIONS SECTION

Under the Japanese system, many orphaned children were placed in private foster homes. After placement there were no investigations, but payments continued to be made to the foster parents until the child became 14 years old. This section is training an investigator to inspect all such foster homes. On the initial visit, an individual record of each child will be made. Subsequent information will be added on future visits. It is expected that routine check-ups will be made at frequent intervals.

Two staff member of the Institutions Section are making an investigational survey of all institutions in the American Occupational Zone. They are cooperating with provincial and city officials in this. One of the results of this survey will be to institute uniform procedure for investigating institutions. Another will be to inform institutions of required standards of care and to help them to establish and maintain these standards.

HOUSING SECTION

The chief of this Section spoke at the meeting of the provincial governors. The organization and function of the National Housing Policy Board was presented together with a recommendation that similar boards be established in the provinces. In cooperation with Lt. Wanamaker of the Planning Secretariat, the nation wide housing survey plan was presented. The purpose of this survey is to secure factual data necessary to planning for housing needs on a national scale. Provinces were asked to cooperate in conducting this survey.

EMPLOYEE WELFARE SECTION

The staff study requesting that some plan be made to release postal savings of conscripted laborers now in deposit on Japanese facilities has been completed and forwarded to OCA thru Planning Secretariat. It was suggested that SCAP be asked to transfer these funds to Korean depositories for release on a rationed basis – perhaps 500 yen per month per person.

The study of revenues and expenditures of the Conscripted Labor Fund has been completed and is ready for submission to the Korean press. Release is delayed pending OCA's decision on the dissolution of the program.

EMPLOYEE WELFARE SECTION

The Research Trainee staff conducted a survey of refugee shelters. The compiled results show that 53.8% of the 613 refugees interviewed had remained in the shelters over a week. Their reason for this long stay was that Kyonggi-do was their destination but they could find no place to live. Certain other facts were presented which are considered of sufficient value to warrant their being forwarded to City Welfare Department. This will be done at the regular liaison meeting of the national-provincial-city welfare officers.

The committee of the WCA executive committee requested aid in re-organizing and reactivating this agency. They were requested to present a brief history of their past work together with an organizational and financial plan. They will be helped both to set up a working agency and secure a building.

AMERICAN RED CROSS SECTION

Attempts were made to insure all KRC property. It was ascertained that movable property can be insured for damage resulting from fire, flood, etc, when insurance is available thru local Korean agencies. However, building can not be insured until title to the land is changed from Prince Tokugawa to Korean Red Cross. The Board of Incorporations, which has not yet been appointed, can make the formal request to MG for this transfer.

A formal request for release of funds of the Kyonggi-do and Seoul Red Cross Chapters was submitted to the Finance Office. Favorable action was promised.

Contracts were signed for the cultivation of the land of Inchm TB Sanatorium – now closed. The food grown will be used for local hospitals.

A letter was submitted to all provinces asking for personnel and pay data.

HEADQUARTERS
UNITED STATES ARMY MILITARY GOVERNMENT IN KOREA
Bureau of Public Health and Welfare
Seoul, Korea

SUBJECT: Weekly Report for Week Ending 9 March 1946,

DEPARTMENT OF PUBLIC HEALTH

GENERAL

While the incidence of smallpox continues to be widespread, the disease is not now expected to get out of hand in any area. The production and wide distribution of Korean smallpox vaccine has made a fair control possible.

With the approach of warm weather, the typhoid and dysentery rates will be watched carefully. Malaria may also be a problem. Every attempt is being made to increase the production of typhoid vaccine.

Reports of typhus continue to be sporadic.

PREVENTIVE MEDICINE SECTION

Communicable Disease Control

As yet only fragmentary communicable disease reports have been received of the second half of February. It is expected that complete returns will be in during the following week.

One hundred and sixteen children from deaf, dumb and blind institutions were vaccinated with both American and Korean produced smallpox vaccine.

The "Smallpox Prevention Week" program was allocated radio time for dissemination of material written for the program.

1,200,000 doses of smallpox vaccine were allocated to provinces. Plans are being made to innoculate all Korean government employees in Seoul with typhus fever and smallpox vaccine.

Telegraphic reports of seven cases of typhus were received during the week ending 9 March. Six of these were in Kangwan-do Province, one in Chung Chong Namdo Province.

Nutrition

Work on the milk program for Korean schools was completed. Milk delivery will begin on 11 March. The pasteurizing plant will make distribution to eight depots where the milk will be picked up by the nearby schools. Milk will be issued on certification by school nurses and principals as to needs of children.

Samples of soybean milk powder were prepared and a formula developed. It is hoped to start commercial production soon.

General

Translation was made of Public Health Ordinance #2 regarding communicable diseases. Distribution will be made to provincial health officers. Two police ordinances on prostitution and venereal disease control are also translated for dissemination of provincial health officers.

MEDICAL SERVICES SECTION

Institutions

Captain Williams returned from an inspection tour of the tuberculosis sanitarium at Mason. Progress on the construction of the sanitarium is good. The building is scheduled for completion in April and will accommodate

approximately 250 beds. Nurses and nurses' aides are being trained to work in the hospital. Experienced medical help is being sought.

A staff study on the completion of Suwon Hospital was prepared for submission to OCA.

General

The Beard of Licensure and Registration decided that all Korean doctors will be required to register between 1 April and 15 June, 1946. All provinces are being notified.

A Korean business manager was employed for the Medical Services Section.

NURSING AFFAIRS SECTION

Education

The second class of public health nurses graduated during the week. Fourteen nurses were issued certificates at the commencement exercised. They were assigned to provinces as follows:

2 Provincial Health Department	- Cholla Namdo
2 "	- Cholla Pukudo
2 "	- Chung Chong Namdo
2 "	- Chung Chong Pukto
2 "	- Kyong Sang Pukto
1 "	- Kangwon-do
1 City Health Department	- Seoul
1 Government Employees Clinic, Capital Building, Seoul	
1 Dir. of Nurses, National Tuberculosis Sanitarium, Masan	

This now makes a total of 35 public health nurses trained through military government, with the following distribution:

15 - Kyonggi-do	2 - Cholla-Pukto
2 - Kangwon-do	2 - Cholla-Namdo
3 - Chungchong-Pukto	2 - Kyongsang-Pukto
3 - Chungchong-Namdo	<u>3 - Kyongsang-Namdo</u>
	32 Total

Three nurses are temporarily unemployed; one is ill; one has gone home to care for a sick relative; and the whereabouts of one other is unknown.

A letter was received on 6 March from Miss Ella Sharrocks (New York City) regarding Nursing Affairs' request in December 1945 for Maternity Center's (N.Y.) financing of two Korean nurses to study midwifery at Lobenstine Clinic. Plans are being made and names and qualifications of the two nurses have been requested. By radio, applicants will be asked to come to this Headquarters for interview the week of. 11 March.

The Korean translation of the revised two-year nursing curriculum has now been distributed to all schools of nursing south of the 389 line.

DENTAL AFFAIRES SECTION

General

During the past week, the Chief of the Dental Affairs Section met with the Seoul Dental Society and matters relative to the distribution of gold were discussed. It was proposed that a committee be selected to work out the distribution. It was further proposed to place the dentists in one of three categories, A, B or C, according to the size of their practice. Thus the amount of gold each dentist would be allowed to buy would be governed by the category he was placed in. Plans were also initiated for the distribution of mercury and silver.

The following press release was made on 8 March:

“All so called “crown-makers” who are licensed to make crowns in Korea must register with the Dental Affairs Section, Bureau of Public Health, Headquarters, Military Government, Seoul, Korea, through the local Provincial Public Health Officer. Registration will begin 15 March 1946 and end 15 April 1946. They will be issued a new license by the Military Government, which will give them the authority to make crowns. Any “crown-makers” who fails to register with the Military Government or who, after 15 May 1946, engages in making crowns without having in his possession a license issued by Military Government, will be arrested and subject to heavy fine or imprisonment or both. In order to register, the “crown-maker” must submit the following to Public Health Officer of the Province on which he lives:

1. “Crown-makers” license previously issued.
2. Personnel history.
3. Official family record.
4. The photographs.
5. Registration fee of 50 Yen.

The Korean Board of Dental License and Registration, under the auspices of the Military Government, has decreed that only those “crown-makers” who were previously issued a license to practice will be given a new license by the Military Government. After 15 May 1946, it shall be unlawful for an unlicensed “crown-maker” to make crowns”

VETERINARY AFFAIRS SECTION

Communicable Diseases

Recent information indicates that Rinderpest is increasing at alarming proportion north of the 389 parallel. The provincial veterinarians of adjacent provinces and their Korean counterparts have called to Seoul to discuss control measures.

Local outbreaks of fowlpest continue to be reported from through-out Korea.

Chungchong-Pukto reported two cases of rabies and four cases of blackleg for the month of February.

Supplies

Efforts are being made through the Materials Control Corporation to expedite the transportation of veterinary supplies from Cheju-do Island to the mainland. These supplies include 278 Japanese Army veterinary cases, and miscellaneous items such as horse-shoeing sets in lesser quantities. Distribution will be made to all provinces according to size and needs of the provinces.

General

Kyongsang-Namdo has employed twenty-eight veterinarians in the Department of Public Health and Welfare. Four are in provincial headquarters, three in the City of Fusan, and twenty-one are assigned to guns.

SANITATION SECTION

The activities of the Sanitation Section during the first week in March consisted in routine continuation of work already in progress. The sanitary regulations to be used by provincial and city inspectors were completed and distributed. Approximately thirty additional photographs were taken for use in the educational program.

LABORATORY SECTION

Inspections

The Institute for Veterinary Research was inspected by Captains Crecelius and Orr. The production of smallpox vaccine is most encouraging, 3,075,000 units having been produced at that institution in February. Production problems were discussed with the Japanese doctors Ochi and Nakamura. They have recently returned

from a trip to Japan for the purpose of collecting information and they should be permitted to remain in Korea until 1 April in order to complete papers. The premature release of Dr. Akazawa is complicating the glycerin problem. Certain work on the substitution of cane sugar for glycerin was understood only by him. Samples of glass laboratory equipment are being prepared for the Institute by a local firm, preparatory to large-scale production. A carload of animal food and two carloads of calves arrived during the inspection.

The Kitasato Institute was inspected by Captain Crecelius on 8 March. The illness of the Japanese Director, Dr. Homma, had halted all work for a week and there will be no new work for ten days. There is no replacement for Dr. Homma, and with his departure the Institute will cease to function. He should be allowed to continue his work until 1 April. On this date, in former years, the Institute was closed for the summer because of problems on refrigerating and calves. Fifty six new calves were awaiting vaccination on the date of inspection.

Institute for Prevention of Infectious Diseases.

Inventory of biological:

	Now	Dispensed	On Hand
Typhoid	206,700 cc	50,280 cc	84,420 cc
Smallpox	1,300,000 cc	612,400 units	1,290,350 units
Rabbies vaccine	10 units	12 units	0
Fowl pest	68,000 cc	18,000 cc	52,500 cc

National Chemistry Laboratory

Organic Synthesis:

1. Synthesis of iso-Amylethyl Barbituric Acid (Amytal). Amount prepared: 50 gm
2. Synthesis of DDT. Amount prepared; 800 gm.
3. Preparation of CP Glycerine from TG Glycerine. Amount prepared; 3kg.
4. Purification of iso-Amylalchol. Amount prepared; 1kg.
5. Synthesis of Diethyl-Malonate. Amount prepared; 100 gm.
6. Synthesis of 2-Amino-4, 6-dicholoropyrimidine. Amount prepared; 2 gm

Note: Item 3 used in production of vaccine.

Item 4 and 5 used in research on synthesis of Amytal.

Item 6 used in research on synthesis of Sulfadrug.

Drug Technology:

Shipped to Welfare, 500 boxes of assorted pharmaceutical prepararions (pills and solutions prepared here).

Nutrition:

Nutritional Survey made at West Gate Prison. A summary of Finding and Recommendations will be submitted separately.

Toxicology:

One specimen of salt, submitted for analysis by the Sanitation Section, Chungchong-Pukto Province, was found to contain a large admixture of Zinc Sulfate.

Biochemistry:

Thiamine content of rice submitted by West Gate Prison, was found to be approximately one-third that of average rice.

MEDICAL SUPPLY SECTION

The first shipment of approximately 360 CAD units was received on 9 March. Distribution to wholesale firms will be made within 30 days. The Korean catalog for the component parts of these units was proof-read and given to the Chose Printing Company for printing.

Captain Louis W. Reps, MAC, formally took over the Medical Supply Section, replacing Captain Paul W. Bogikes who become eligible for return to the United States.

VITAL STATISTICS SECTION

Registration

Preparations for the institution of the vital statistics system for the collection of birth, death, stillbirth, marriage and divorce data were made during the past weekly period. Instructions regarding the use of the standard forms, based on the agreement between this Bureau and the Bureau of the Justice were drawn. Field agents were oriented and briefed on what appeared to be the final decisions on registration methods and procedures. Plans were made to send out all field agents to the provinces by the 16th of March to assist in organizational work and the commencement of the use of the report forms. Letters were sent to all provinces requesting the scheduling of conferences of local and district registration officials during the month for the purpose of instructing them in the new procedures to be followed. The field agents will participate. Memoranda were sent to four provinces instructing them to call for the new forms at National Headquarters.

Statistics

Statistical tables of tuberculosis mortality for the period 1938-1942 were compiled by province, sex, age, and month of occurrence for the Medical Services Section.

Corrections to the translation of the Index for the Manual of Joint Causes of Death and the International List of Causes of Death, revision of 1939, continued. This phase of the project to provide a Korean index for use of provincial personnel is likely to be completed by the next report period.

Work on constructing provincial statistical tabular forms neared completion by the end of this report period.

Other statistical work performed and not completed include the following table:

- a. Tables on Maternal Mortality by Month, Age, Cause of Death, and Province.
- b. Tables on Infant Mortality by Month, Age, Cause of Death, Sex, and province.
- c. Tables on Stillbirths by Sex, Province, and Month.
- d. Tables on twenty-five selected cause of death, month, age, sex, medical attendance, and Province.
- e. Tables on birth, by sex, age of mother, Province, and month.

DEPARTMENT OF PUBLIC WELFARE

General

Job descriptions for staff positions now filled by MG personnel were completed so that competent civilians may be recruited. It was decided to ask for eight general social workers in addition to the present T/O. These social workers are to have had experience in the following fields: two in public assistance, two in child welfare, two in medical social work, and two in group work.

Information on the various funds welfare agencies is being compiled so that the Finance Bureau Memo #15 may be compiled with and the funds transferred to the General Trust Fund, MG of Korea by March 16.

The Branch Chief attended the meeting of the Korean Association of Social Workers at the Catholic Orphanage in Seoul and made a short address. He presented the great forward step that had been made by the establishment of the Bureau of Health and Welfare rather than the old system when such functions were subordinate parts of several other bureaus. He also stressed the philosophy of social work that the individual must be treated according to his proper worth and dignity.

GENERAL RELIEF SECTION

The staff position of Chief of this Section is still vacant. The officer in charge of Japanese affairs reports that plans are being completed for the new system of caring for Japanese refugees. The change of plan was necessitated by the Bureau Memo #15 mentioned above. All funds of the Japanese Relief Society are to be transferred and therefore, the Society can no longer care for refugees. All back accounts that are approved will be paid before transfer of the account and some money forwarded to Fusan to care for the interim period of the change over.

Japanese Affairs. The staff members of the Society are to be limited to 60 persons. All relief will be handled by the city welfare office, and refugees from northern points are to be transported direct to Fusan without a stop in Seoul.

The Japanese prisoners in West Gate Prison were finally contacted in company with a member of the Justice Bureau and it was ascertained that they receive the same food, have the same opportunity to work in the prison shops and attend religious services as the Korean prisoners. There is no partiality shown.

Toward the end of the week, four carloads of Japanese refugees arrived at Seoul Station from the north. Arrangements were made to feed them at the station. Their condition was found to be unsatisfactory and an MG officer departed for Kaesong to investigate conditions there to determine whether some better means of handling them could be devised.

INSTITUTIONS SECTION

The National Reformatory at Mokpo which was closed by the Japanese is due to reopen. It will care for pre-delinquent boys 14 years and under, child beggars, pilferers, school and home disciplinary problems, etc., who have not been arrested and for whom legal action is considered inadvisable at the time of admittance. Application for entry may be made by either the parents or police to the local myun, upper city district office head. After approval, they may be admitted for care. A press release on this was prepared.

During the week, seven boys from the National Orphanage secured employment in Seoul. Another change in that institution occurred when the two feeble minded girls who had lived there, were transferred to the Catholic Orphanage where they will be given special care. This the first recognition of the problem for the care of the feeble minded. It is planned to have a special institution for such children when more data on the extent of the problem has been obtained.

Institutions had been provided with a privileged source of grain supply for their inmates. The cancellation of this special source was considered. This would have made it necessary for them to buy it on the open market and, with the present scarcity, adequate amounts would have been almost unobtainable unless the entire staff devoted their time to standing in line at many stores. Conferences were held, and the special privileges continued to the amount of two hop per day per inmates. This conforms with the amount allowed by the Japanese.

HOUSING SECTION

Conferences were held with the Bureau of Mining and Industry, Provincial level, and at the Materials Control Corporation, concerning the purchase of materials from the stockpile of the Korean Residence Management Corporation. Money to provide these materials was appropriated in January of this year, but continued effort is necessary to obtain any materials.

The letters and survey forms for the national housing survey were approved and forwarded to the provinces.

EMPLOYEE WELFARE SECTION

The dissolution of the Conscripted Laborers' Program has been approved and the ordinance to effect same is being drawn up. A conference was held to determine the physical means of carrying out this dissolution and the following plan decided upon. Three or four teams of former employees of this program will be sent to the provinces to carry out the dissolution. Each team will consist of a supervisor, and auditor, and one or two general clerks. They will receive specific training for this before they begin their tour.

A report of the history and present status of the Conscripted Laborers' Program was presented to the Research Training group and they were asked to make individual decisions as to its disposition. The majority said they thought the money should be used for construction of factories to employ the laborers. Some preferred the building of libraries, schools and other cultural institutions. One recommended that farms be purchased and given to those who wished them. Not one thought that the money should be given direct to the laborers.

SUPPLY SECTION

A request was received from SCAP asking a plan of distribution of supplies now being gathered by church groups in the United States. The National Economic Board, Planning Secretariat, OCA, UNRRA, and Dr. Biggers, Medical Services Section were consulted and the following plan was forwarded:

- a. A single agency in U.S. should consolidate items.
- b. The distribution in Korea will be made thru Public Health and Welfare channels.
- c. Supplies are to be categorized.
- d. The size of the liaison mission in Korea is to be limited.
- e. All procedure will be coordinated with UNRRA.

A message was received from Mrs. Moses, chairman of the drive for relief supplies for Korea in Honolulu, saying that a shipment of 250 tons was leaving on March 6th. She was concerned because certain factions in Hawaii were endeavoring to use these supplies for political purposes and asked that measures be taken to prevent this. The Council of Churches in Hawaii were responsible for the drive. A press release was prepared giving the true statement of the source. It will be issued immediately to forestall any political capital being made by local parties.

RESEARCH AND ANALYSIS SECTION

The trainee class completed their orientation to Public Welfare and its relation to Public Health. The practical exercise of this week was a survey of nine hospitals in the city. This was planned by the group themselves in conference with the section chief and Dr. Lee, Director Health Branch and the results are being tabulated. Two lectures on Research methods were given.

AMERICAN RED CROSS SECTION

The staff study for organization of a Korean National Red Cross, including a suggested plan of organization and the composition of a Korean group interested in the organization has been completed and is ready for presentation to OCA for approval. The composition of the Korean group has been reviewed by Dr. H.H. Underwood and been given his approval as a representative group.

No additional staff has arrived but five persons are expected on the next ships in from Manila and the States.

Analysis of operation of the former TB Sanitarium operated by the Japanese Red Cross and located some five miles from Inchon has been completed. A conference with National and Provincial Public Health and Welfare officers is planned for the purpose of determining:

- a. The need for such an institution.
- b. Other purposes for which the institution might be used.
- c. Whether there was any need for the institution for use by Provincial or District authorities, and whether they might be willing to accept the cost of its operation.

An analysis of the services being given by the Seoul Red Cross Hospital and the two Red Cross Clinics operating in Seoul has been completed. It appears the hospital out-patient service and the clinic services might be greatly increased and extended to meet the needs for such services in the community. A conference will be asked of the Medical Services and Nursing Affairs Sections of the Bureau of Public Health in an effort to determine how these services might be expanded to fill needs indicated by these responsible sections.

Report forms have been developed to improve the regular reporting of the hospital and clinics. The new forms will be put into effect beginning with March.

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
PUBLIC HEALTH AND WELFARE SECTION**

WEEKLY BULLETIN

**For Period
24 March to 30 March
1946**

SECTION I WELFARE

General

The distribution of winter clothing continues to be made by the Ministry of Health and Social Affairs. Additional points of distribution were investigated and in the Tokyo area is being done through the department stores. In most cases the amount of clothing distributed was not adequate because of the available supply. So far no items of clothing being distributed could be identified as Japanese navy equipment and only Japanese army material has been distributed.

Welfare Administration

A conference was held with officials of the Social Affairs Bureau, Health and Welfare Ministry, regarding matters relating to a directive (SCAPIN-775) subject, "Public Assistance". The directive requires a monthly report to be furnished on the 25th of each month beginning with March, showing the number of families and individuals granted assistance and the amount of funds expended by prefecture. Plans have been made by the Health and Welfare Ministry to furnish the information for the month of March on the 25th of April.

Effective 1 April 1946 a more detailed report will be obtained from each prefecture. The report will indicate the number of persons, male and female, who received relief under each existing relief law together with relief which was issued in kind, such as clothing and food from Japanese army and navy supplies held in reserve for relief distribution.

SECTION II PREVENTIVE MEDICINE

General

Typhus. The typhus control programs are being continued in cities and towns having high incidence. The Epidemiologist from this Division has remained in the Osaka and Kobe areas assisting local Military Government officers in this work. The first cycle of zonal dusting has been completed in the Tokyo area and new zones and teams have been created as required for carrying on the program through the second cycle. In Yokohama control has apparently been effective to date with vaccination and focal dusting being carried out and dusting of incoming passengers at the principal railroad stations.

Typhus in Osaka. The typhus epidemic in Osaka is showing signs of abating. During the past week the average of daily incidence has been under one hundred cases. The second cycle of dusting has been completed and the next cycle should be completed in about three days due to the decrease in the number of reported cases.

Smallpox. Smallpox incidence shows some increase in several localities. The general vaccinating program is being continued by Japanese authorities.

Sanitary Engineering

Fertilizer Production. A conference was held by the fertilizer committee on increasing the production of commercial fertilizers. The importance of immediate action was emphasized to increase the yield of this year's crops. The Industrial Division of the Economic and Scientific Section is stressing the manufacture of nitrogenous fertilizers at this time as the most readily obtainable with present equipment and stocks of raw materials.

Mosquito Control. Conferences have been held on proposed mosquito control programs. Those attending were: Capt. Taylor, 5th Air Force; Capt. Bryan, Chief Surgeon's Office; members of the Virus Commission; representatives of the Chief Surgeon's Office and Eighth Army Surgeon's office; two entomologists from I Corps Malaria Survey Units. Methods of control to be used for the protection of occupational personnel and Japanese civilians were discussed. The need for active control programs by the Japanese is evident because of the shortage of trained and experienced personnel in the few Army Malaria Survey and Control Units remaining in this country. Japanese B encephalitis was discussed at some length and the best methods of control of this disease, as well as other mosquito-borne disease, were considered.

Translation of Orders to Prefecture. The following are translations of instructions that were given by the Ministry of Health and Social Affairs to prefectural officials. In some instances the translation is not satisfactory, particularly in paragraph 2 b (3). It is suggested that Military Government Units contact prefectural and local health enforcement authorities to see that they have received these instructions and to exercise surveillance over their execution.

Translation of Order for Improvement of Sanitation
from Ministry of Health to Prefectures

I

Director of Health Bureau.
Director of Prevention Bureau
for Infectious Diseases.

To: Prefectural Governors

Notification to Improve the Sanitation of Cities and Towns for the Prevention of Diseases.

Various measures recently taken for the clean-up of towns and cities are not satisfactory. This is regrettable not only from the point of view of beauty of the community, but also because of the present danger from diseases being brought to this country by repatriates. The season is close at hand when the dangers from mosquito-borne and enteric diseases will be very great. Therefore it is necessary to take preventive measures at once and enforce all sanitary laws immediately that living conditions may be improved and everything possible be done to prevent disease.

II

Chief of Health Division.
Chief of Prevention Section
for Infectious Diseases.

To: Director of Public Welfare of Tokyo;
Chief of Home Division of Prefectures;
Education and Welfare;
Metropolitan Police

Improvement of Sanitation of Cities and Towns.

As notified this day by Directors of the Bureau of Health and Prevention Bureau of Infectious Diseases, all laws regarding the above subject shall be enforced. The following items are noted for carrying out the public health and sanitation program in all cities and towns:

1. Arrangements shall be made for the complete collection and transportation of nightsoil, rubbish and other waste products.
 - a. Although a complete sewerage system is the ideal aim, for the time being every public organization will strengthen personnel, transporting equipment, and other facilities as necessary to remove night soil, garbage, and refuse.
 - b. Every town assembly, neighborhood association, and similar organization will clean their environs, drains, and graveyards. This will be done thoroughly in accordance with the laws for the prevention of infectious diseases. Every public agency will enforce those laws explicitly.
 - c. Those who use the nightsoil and other waste products will be required to properly store and distribute this material in a sanitary manner so as not to cause fly breeding or pollution of streams.
 - d. Latrines and nightsoil storage vaults will be so constructed as not to provide a place for fly breeding. Petroleum emulsion will be used as required to prevent fly breeding. Adequate storage will be provided in all vaults and they will be constructed so as to be fly tight.
 - e. (Not translatable)
 - f. Public agencies will provide for an adequate number of public latrines in suitable locations.
2. Proper care will be taken or disposition made of all water tanks and containers for fire protection, and other standing water.
 - a. In so far as possible all existing collections of water will be eliminated, leaving only minimum number necessary for fire protection. Where possible fire water holes be filled or drained so as not to collect rain water.
 - b. The remaining necessary collections of water for fire protection will be treated to prevent mosquito breeding by the responsible individuals or agencies in the following manner:
 - (1) Change the water periodically (generally once a week) using care that larvae do not remain on the inside surface of the container.

- (2) Treat the water with larvicide.
 - (a) Petroleum or petroleum emulsion; 10 grams per square meter, or enough to form an oil film on the surface. (Heavier oils will require a large quantity.)
 - (b) Paris green or Phenothiazine; Dilute 1: 50 with rice-bran or dust, using 1 cc for 10 sq. meters or surface area.
 - (c) Pyrethrum: Use 2 grams once or twice a month on 10 square meter surface area.
 - (d) Bleaching powder: At least 40 grams for 10 square meters surface area.
 - (e) Sleaching powder: At least 100 grams for 10 square meters surface area.
 - (f) 3% liquid kresoleum mykosol may be as a substitute for the above.
 - (3) Fish may be used in basing and pools, goldfish, killifish, top minnow, etc., 2 killifish or 1 gibol to 1 liter or water.
- c. Town Assemblies and Neighborhood Associations will clean and grade drains as required to remove all stagnant water.
 - d. Town Assemblies and Neighborhood Associations, with the cooperation of school boy and young men's associations if required, will pump out standing water, fill, grade, and ditch as necessary to eliminate collections of water.
 - e. The cemetery is an important breeding place for mosquitoes. Temples or shrines or public bodies responsible it is desirable to fill these with sand to eliminate these mosquito breeding places.

Laboratory Service

Reform of Medical Education. The fifth formal meeting of the Council on Medical Education was devoted to organization matters. In order to facilitate the work of the Council and expedite its program, subcommittees were designated for the most pressing tasks. These included subcommittee on curriculum, school inspection, textbook revision, national licensure examination, internships, and postgraduate medical training.

Penicillin. Standardization tests of Japanese produced penicillin have progressed to a sufficient extent to permit the Japanese to place their product on the market. Instructions as to content of each package, labeling, price, and testing of each lot are being formulated to send to the Japanese Ministry.

Nutrition Service

Personnel. Captain Agnes R. O'Donnel, HD, reported for duty 23 March 1946 as Assistant Nutrition Consultant. Capt. O'Donnel will give particular attention to nutrition in hospitals.

Nutrition Surveys. The Nutrition Consultant accompanied the Food Mission sent from the United States 20-26 March 1946 to obtain information with regard to the nutritional status of the areas visited. In all cases the general health of the people as it might be affected by nutrition, was good. There had not been any general serious reduction in baby weight. Nutrition problems of the areas were discussed with the Public Health officials of the prefectures visited.

New Nutrition Surveys. Plans for the nutrition surveys to be conducted in May were discussed with Dr. T. Oiso of the Ministry of Health. The surveys will include four new areas -Tohoku, Hokuriku, Shikoku and Hokkaido. During the surveys, a total of 148,000 persons will be given physical examinations and the food consumed by 14,700 families in three days will be determined. The results of the surveys will be summarized to give the average quantities of the major group of food consumed per capita.

SECTION III ADMINISTRATION OF HOSPITALS

The report of the bed capacity of Japanese civilian hospitals, for period ending 8 March, shows 2,973 hospitals with 203,442 beds of which 95,469 were occupied.

SECTION IV NURSING AFFAIRS

Reports from Japanese

Educational Council. The first meeting of the Educational Council was held on 25 March 1946 to discuss standards for the training program for nurses and midwives. The group was very alert and interested. Two committees were appointed and plans were discussed regarding the purpose of the Council and the goals to be accomplished. The next meeting will be held 11 April 1946.

Inspection Trip.

A three-day institute was held at Tohoku Imperial University in Sendai and this office was represented. A speech was made by the representative on public health nursing in America. Several hospitals were visited and a conference was held with the Japanese prefectural doctor. He promised to help the nurses get supplies for their work in Sendai.

Supply

A number of books, pamphlets and charts on nursing affairs have come to this Division from the U.S.

SECTION V VETERINARY AFFAIRS

General

A survey of Japanese veterinary affairs in southern Kyushu is still in progress and is being made by a representative from the Veterinary Affairs Division.

Reports from Japanese

Animal Disease Reports. The Ministry of Agriculture and Forestry, Animal Disease Section, reported two new cases of blacking in Nagasaki Prefecture. Control measures are immunization, quarantine and disinfection.

SECTION VI DENTAL AFFAIRS

No report.

SECTION VII SUPPLY

Production

Action has been taken to increase the production of DDT dusting powder from Japanese facilities. At the instigation of SCAP the Field Service Division, Office of the Quartermaster, Eighth Army, set up a program during January for the mixing of DDT concentrate with indigenous talcum. Considerable difficulty was experienced with the mining operation and as a result production has been limited. The large consumption of dusting powder during the last two months for typhus control has made it necessary to expedite local production until additional DDT may be received from the United States. At a conference held with representatives of the Eighth Army, Office of the Quartermaster, AFPAC, USA Typhus Commission, Natural Resources Section and Public Health and Welfare Section, it was decided to direct the Japanese Talcum Association to expedite movement of talc to the Tokyo area. A qualified officer will be assigned to the mixing plant to supervise and expedite production and efforts will be made to locate additional plant facilities.

Distribution

An additional 15,000 vials of typhus vaccine was released to the Japanese Ministry of Health and Social Affairs for distribution to ports in Japan to be used in vaccinating repatriates. Small amounts from Japanese production also have been released to ports.

Upon request of this Division the Ministry of Health and Welfare has dispatched telegraphic instructions to Aomori, Akita, Iwate and Fukushima Prefectures directing immediate distribution of an additional fifty percent of Japanese army and navy medical supplies. A report was received from IX Corps stating that those prefectures were withholding distribution pending further instructions from the Ministry. The Ministry recently held meetings in districts throughout Japan on this subject and reported that detailed instructions had been issued for immediate distribution. Upon investigation by a representative of Public Health and Welfare Section it was learned that prefectural officials were still of the opinion that further instructions would be forthcoming. The above incident is an illustration of the delays that are apt to occur in the operation of the distribution system. It is apparent that close supervision must be exercised by Occupation Force personnel to insure expeditious action.

Additional deliveries of typhus and cholera vaccine were made to the Uruga Reception Center for shipment to Chinese ports in connection with the repatriation program.

Major Cannon departed on a field trip to Kyoto, Osaka, Okayama and Kure for the purpose of observing distribution activities.

Narcotics

In a conference on the reorganization of the Japanese Narcotic Enforcement Agency, Japanese officials stated that they plan to have approximately 156 pharmacists in the field working as narcotic inspectors. It was agreed that the first stage of enforcement in Japan will necessarily be an educational program for the proper use and

handling of narcotics. An outline of the plan of organization setting forth the duties and responsibilities of the various echelons of enforcement will be submitted to this Division.

SECTION VIII
LEGAL

No report.

SECTION IX
DIRECTIVES TO JAPANESE

No directives were issued by this section to the Japanese Government during the week.

CRAWFORD. F. SAMS,
Colonel, Medical Corps.
Chief, Public Health and Welfare Section.

INCL: Report, Communicable Disease, 16 March
Report, Venereal Disease, 9 March

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
PUBLIC HEALTH AND WELFARE SECTION**

WEEKLY BULLETIN

**For Period
31 March to 6 April
1946**

SECTION I WELFARE

General

The Acting Chief of the Welfare Division, Major R.E. Riordan, returned from Korea where he surveyed welfare activities. A report of his observations is being prepared.

Welfare Administration

A conference was held with officials of the Social Affairs Bureau, Health and Welfare Ministry, to discuss the proposed Imperial Grant Foundation, National Relief Association, which was suggested by the Welfare Ministry as the agency to administer public assistance in Japan. Reasons for the inadequacy of this proposal were given, the chief one being that it does not meet the requirement (SCAPIN 775, "Public Assistance") of a single national government agency operating through prefectural and local government channels. It was concluded that the proposal be dropped and that the government concentrate its efforts towards an overall public welfare plan to be submitted to this Division by 30 April 1946, as directed.

Child Welfare

A report, requested on 20 March 1946, at a conference with welfare, railroad and Tokyo police officials, was submitted to the Welfare Division. It showed that a total of 105 orphan children were picked up in railroad stations and on the streets of Tokyo during the period 22 March to 31 March 1946. Of this number there was no information as to the former residence of 73 of the children. All were immediately placed in orphanages.

Social Insurance

Two visits were made to hospitals in conjunction with the Social Insurance and Advisory Mission of the Economic and Scientific Section. One was operated by the Board of Communications Mutual Aid Association, and the other by the Ishikawajima Health Association to view the care and services received by beneficiaries of the Social Insurance system. From the point of view of cleanliness, treatment and sanitary conditions, both hospitals were found to be above average for Japan, particularly the former which was regarded as outstanding.

SECTION II PREVENTIVE MEDICINE

General

Active typhus control programs are being carried on in areas of high incidence under the supervision of Military Government Units. The Epidemiologist from this office and two officers from the USA Typhus Commission have continued in assisting local Military Government Units in Osaka and Kobe. There has been a leveling off of new cases reported in Tokyo, and the downward trend of new cases reported daily has continued in Osaka. Control in Aomori has been reported as satisfactory with a decrease in daily number of new cases in the city. Control methods are being stressed in these surrounding areas. It is felt that the slow response to control measures in these epidemics are due to two causes; first, the difficulty in teaching Japanese workers control methods, second, the fact that DDT is an insecticide and not a rickettsial killing agent.

Smallpox incidence remains high throughout the country, but there are indications that the peak of the epidemic has been passed. The vaccinating program is being continued by the Japanese.

On 5 April, it was informally reported that repatriation ships, bound for Japan from China, had cholera aboard. There has been no cholera in Japan for many years. It is felt this intestinal disease, at this time of year, presented the greatest threat to the Occupation and to the Japanese people, of any hazard yet encountered. With the present state of sanitation of Japan, there was the potential of killing millions of individuals. In order to effectively shut out this disease from Japan, the following measures were taken:

All vessels with cholera aboard routed to the ports of Sasebo or Uruga where the vessel will be anchored well off shore and all personnel quarantined on shipboard for two weeks after the last case has been removed from the ship. While on shipboard in quarantine, all discharges from the body to be sterilized before disposal. All personnel to receive cholera vaccine before leaving the vessel. Cholera patients to be removed to hospital ships. Stool examinations on all personnel. No individual permitted to contact the vessel without the specific approval of the quarantine officers. Fishing prohibited in the vicinity of the ports.

Sanitary Engineering

A conference was held by the Fertilizer Committee with the Minister of Agriculture and the Minister of Industry and Commerce and their assistants. Reports were made of progress to date in increasing the production of commercial fertilizer. Difficulties encountered and means for surmounting these obstacles were discussed. Action taken by the Ministry of Health to improve collection of night soil and its transportation to rural districts was

brought to the attention of the Minister of Agriculture; the desirability and cooperating of the two Ministries in this phase was urged. The necessity for immediate action by all concerned to increase the production and distribution of fertilizers was stressed.

Conferences on Mosquito Control were held with members of the Neurotropic Virus Commission, representatives of the Chief Surgeon's Office, Eighth Army Surgeon's Office, Fifth Air Force Surgeon's Office, Agriculture and Fisheries Divisions of Natural Resources Section, and I Corps' Malaria Survey and Control Units. Proposed plans for airplane spraying of devastated areas where there are concentrations of occupational forces were discussed. The necessity of preventing indiscriminate spraying of the countryside was brought out to protect food crops and the sericulture industry. Definite plans will be presented next week after coordination between Eighth Army, Fifth Air Force, and Natural Resources Section, Civilian control measures will be carried out using the basic organization now set up for typhus control with modification where required, all under the supervision of Military Government Units. A school for training Military Government Sanitary and Public Health Officers, and Prefectural Health Officers to be in charge of mosquito and fly control programs, will be operated at Kyoto from 22 to 27 April. These officers will then train Japanese civilian teams in the prefectures and cities in proper methods of mosquito and fly control.

At a conference with Dr. Kawabata, Health Maintenance Section of the Ministry of Health and Social Affairs, the recent order from the Ministry to the Prefectures requiring improvement of sanitary conditions throughout the country was reviewed. The necessity of following up this order and seeing that it is enforced was emphasized. This Section of the Ministry will also aid in expediting the Japanese manufacture of larvicides, and investigate Japanese Army stocks of larvicide and mosquito control equipment.

A conference was held with Ministry officials and the Supply Division of this office on the production of rodenticides and rodent control equipment. Production of phosphoric poison and "Antu" is to start immediately, and manufacture of traps will be started as soon as possible. Japanese civilians will be trained in rodent control at ports where experienced men are available.

Laboratory Activities

Medical Examiner System. Since 1 April 1946, the newly revised system has been in effect in Tokyo. Reports will be brought to the Public Health and Welfare Section every ten days.

Reform of Medical Education. At the meeting of the sub-committee on Medical School Curriculum a revision of hours was formulated with particular emphasis placed on the practical side of the subjects taught and their relation to preventive medicine and public health in general. At the meeting of the sub-committee on Licensure Examination plans were drawn for a national law embodying the principles previously discussed in the general meetings of the Council on Medical Education. The terms of eligibility for examination will include a standard four years course of medical training plus an additional twelve months of internship in an approved hospital. Details on time and place of examinations, organization of a central Council on Medical Examination in the Ministry of Welfare, personnel of the Board of Medical Examiners, and the subjects and techniques of examination were discussed and agreed upon. The programs of both sub-committees will be submitted in the form of reports to the general meeting of the Council on Medical Education for discussion and vote.

Nutrition Surveys

Arrangements were made with the Bureau of Public Welfare, Tokyo Metropolitan Office, to obtain data on the per capita quantities of individual foods consumed in typical hospitals studies in the nutritional survey in Tokyo in February. Such data will indicate the types and kinds of food needed for a hospital and the extent to which the food supplies provides the necessary nutrient for health in addition to calories and protein reported for the surveys.

Arrangements were made to obtain data on the quantities and kinds of food used in the Sugamo Prison, Tokyo, for the purpose of reviewing the adequacy of the food supplied and whether it is too much or too little.

Plans were discussed with Dr. Oiso of the Ministry of Health and Welfare for a survey in May 1946. Also discussed with the Japanese Scientists, Prof. Kadoma and Dr. Saiki, the question of the relative size of Japanese in relation to other nationals especially those of the United States. Information was obtained on the height and weight of Japanese and the method of calculating the total daily requirements for the average man for data on basal metabolism.

SECTION III ADMINISTRATION OF HOSPITALS

An effort to improve conditions in civilian hospitals has resulted in the release of 20,000 pounds of butter to tuberculosis sanitarium.

The Japanese civilian hospital strength report for the period ending 15 March 1946 shows 2,977 hospitals with a bed capacity of 203,866 of which 96,068 were occupied.

SECTION IV NURSING AFFAIRS

A Public Health nursing survey was began in Kanagawa Prefecture as of 4 April 1946. This will include nursing, midwifery and health clinics. Each prefecture will be surveyed in course of time and as assistants in the department arrive. Surveys will be made as complete as possible.

SECTION V VETERINARY AFFAIRS

Report on Field Trip

A representative of the Veterinary Affairs Division returned from a survey of Japanese veterinary conditions in Kumamoto, Kagoshima, Miyazaki and Oita Prefectures. With the exception of dairy cattle, the number of animals is generally less than the 1944 census figures. Feeds are scarce, are being used sparingly and meat and milk production is consequently small.

Communicable disease of animals are being effectively controlled despite the shortage of veterinary supplies. This shortage has been relieved in some instances by the distribution of former military veterinary supplies. Prevailing animal diseases are anthrax, infectious abortion of cattle, pullorum disease and swine cholera.

Meat and dairy inspection is suffering from a shortage of technically trained personnel. Sanitation of food establishments is being neglected.

Reliable statistical data is being accumulated and proper reports are being rendered.

The one national serum laboratory in the area is active to the extent that it has completed the production of 300,000 cc of anti-anthrax serum and is preparing to produce an equal amount of anti-rhinderpest serum.

The education of veterinary students continues at two prefectural colleges.

Veterinary Education

The Council on Veterinary Education at its monthly meeting held on 4 April 1946, discussed changes in licensure, entrance requirements, curricula and rating of colleges, veterinary publications and the Veterinary Medical Association.

Reports from Japanese

Animal Disease Report. The Ministry of Agriculture and Forestry, Animal Disease Section, reported an outbreak of swine cholera in Kanagawa Prefecture. Two cases have occurred. Control measures are immunization and quarantine.

SECTION VI DENTAL AFFAIRS

A Memorandum was issued to the Imperial Japanese Government, AG 091.3 (21 Mar 46) CPC, (SCAPIN787-A), granting permission to withdraw the following amounts of precious metals for dental use; gold, 427 kgs.; silver, 1120 kgs.; platinum, 30 kgs. Those metals are to be withdrawn from the stocks owned by the Minerals Distribution Control Company, Ltd., held in custody by the Eighth Army at the Bank of Japan, Tokyo.

SECTION VII SUPPLY

In coordination with the Industrial Division, Economic and Scientific Section, further action was taken to develop Japanese facilities for the mixing of DDT dusting powder. Surveys were made of a number of plants which had been reported as potential producers. One installation was located which is able to grind and mix two tons a day and another is capable of grinding five tons. The minimum total production goal is ten tons a day. Present production is approximately two and one-half tons a day.

Production schedule for smallpox vaccine is being increased to provide sufficient vaccine for immunization of the total population of Japan, prior to 30 June 1946. The original program covered about seventy percent of the population.

Further emphasis is being placed on the manufacture of typhus vaccine. Representatives of the USA Typhus Commission will conduct a course of training at the Japanese Institute of Infectious Diseases. Steps have been taken to provide the necessary supplies and equipment for a demonstration laboratory at that institution. All laboratories scheduled to manufacture typhus vaccine will be represented at the training course.

Concurrence was given to the exportation of approximately 35,000,000 yen of patent medicines which were surplus to Japanese needs. These medicines were manufactured and turned over to the Japanese

Export-Import Company prior to the surrender and have been held in storage under the jurisdiction of that company. An additional increment of 75,000,000 yen is being returned to the Ministry of Health and Welfare for distribution within Japan.

The Welfare Ministry was requested to submit a detailed plan of production for each biological product in Japan. This plan is to include planned production for the period April 1946 through March 1947, institutes or factory where production will be accomplished and will be phased in three month periods.

The Welfare Ministry was requested to submit a detailed plan of production for sulpha drugs and was informed that production of sulpha drugs should be accelerated immediately.

An ample supply of Japanese manufactured cholera vaccine has been furnished all repatriation ports in Japan, in addition to the amounts shipped to Chinese ports. Distribution is being handled by established credits at laboratories located in Tokyo, Osaka and Kumamoto. Each port has been notified of the location of its credit allocation and directed to dispatch couriers to secure the vaccine. Subsequent distribution will be handled in a similar manner.

With a view to clarifying the supply situation in the prefectures of northern Honshu, the Ministry of Health and Welfare has scheduled a conference with prefectural officials which will be held at Yamagata on 12 April 1946. The conference will be conducted by the Chief of the Pharmaceutical Affairs Section, Ministry of Health and Welfare. The Governor or Vice-Governor of each prefecture has been directed to attend.

Teleconference was held with representatives of the San Francisco Port of Embarkation on the subject of "Typhus Control Supplies". Substantial shipments of typhus vaccine have been received by air. Shipment of additional stocks of DDT will be made by Fact water transportation.

Request was initiated for importation of 1000 tons of prophyllite rock from Korea to be used for mixing of DDT dusting powder. One hundred tons of ground talcum also is being imported.

Captain Cummings returned from a trip to northern Honshu and Hokkaido and Major Cannon returned from southern Honshu.

An inspection trip through northern Honshu and Hokkaido was completed by Lt. Stefan. Wholesale drug houses to receive custody of former Japanese military medicinal narcotics were inspected in Niigata, Sendai and Sapporo. Prefectural medicine control companies visited have ample stocks of narcotics and steps are being taken through the Ministry of Health to supply physicians and hospitals who are in short supply.

A visit to the Saitama prefectural medicine control company revealed full years' normal supply of narcopon on hand. The Takeda Pharmaceutical Company, Tokyo, reported that at least 6000 ampules of narcopon have been supplied to all prefectures in northern Honshu, and 30,000 to Hokkaido since the beginning of the year.

SECTION IX DIRECTIVE TO THE JAPANESE

AG 720.4 (6 Apr 46) PH (SCAPIN 865), subject "Quarantine Procedures for Cholera in Repatriates".

AG 435 (9 Apr 46) PH, (SCAPIN 871), subject "Control of Traffic in Poisonous Beverages".

CRAWFORD F. SAMS
Colonel, Medical Corps,
Chief, Public Health & Welfare Section.

GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS

APO 500
6 April 1946

AG 720.4 (6 Apr 46) PH
(SCAPIN - 865)

MEMORANDUM FOR: IMPERIAL JAPANESE GOVERNMENT.

THROUGH: Central Liaison Office, Tokyo.

SUBJECT: Quarantine Productions for Cholera in Repatriates.

1. The Imperial Japanese Government will take the following measures immediately to prevent the introduction of cholera into Japan by individuals being repatriated from China.

2. In the case of ships with repatriates from China which arrive without cases of cholera abroad:

a. Where the voyage has taken more than six days, all personnel will be inoculated with 1.5 cc of cholera vaccine and debarkation and processing procedures will be performed as usual.

b. Where the voyage from China has taken less than six days, all personnel will be held aboard the ship until six days have elapsed, the personnel physically examined for cholera, and if no cases are found they will be disembarked as described in paragraph 2 a. above. In the event cholera is found, the procedure will be as directed in paragraph 3.

3. Ships which arrive in Japan with cholera abroad will use only the ports of Uraga or Sasebo until directed otherwise by this Headquarters.

a. Ships will be anchored sufficiently far from shore to preclude the possibility of anyone swimming to shore or contamination from the vessel washing ashore.

b. All personnel will be held on board for fourteen (14) days after the development of the last case

c. Cases of cholera will be removed from the ship to a hospital ship provided for that purpose.

Before the Arrival of hospital ships at the ports of Uraga and Sasebo, cholera patients will be removed to the isolation maintained. Great care will be exercised in sterilizing all discharges from the patients (using 2% cresol solution), screening to protect from flies and isolation of attendants.

d. All personnel (except cholera patients) will be inoculated with 1.5 cc of cholera vaccine.

e. During the quarantine period the faces and urine of all personnel will be treated with a two percent cresol solution before being discharged into the sea.

f. A stool examination will be performed on all personnel to detect carriers. All carriers discovered will be isolated in the same place as cholera cases and kept until three negative stool specimens have been obtained at two day intervals.

g. The baggage and clothing of all personnel will be sterilized.

4. A hospital ship will be anchored off shore at the ports of Uraga and Sasebo to receive and treat cholera cases among the repatriates.

FOR THE SUPREME COMMANDER:

B. M. FITCH,
Brigadier General, AGD
Adjutant General.

GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS

APO 500
6 April 1946

AG 720.4 (6 Apr 46) PH

MEMORANDUM

SUBJECT: Information of General Application Pertaining to Directive Number (SCAPIN - 865) File AG 720.4 (6 Apr 46) PH, this Headquarters, dated 6 April 1946, subject: "Quarantine Procedures for Cholera in Repatriates.

1. With reference to Memorandum Number (SCAPIN - 865) this Headquarters to the Imperial Japanese Government, the following is published for the information of all concerned.

2. Cholera is reported aboard incoming repatriation vessels from China. This is the beginning of the epidemic season for intestinal diseases and sanitary conditions in Japan are very poor at present. This makes a sweeping epidemic of cholera a real possibility.

3. Every effort is to be made to erect a barrier to the introduction of the disease to Japan. To attain this end:
a. The principle of allowing no case ashore will be applied by transferring cases from passenger vessels to hospital ships except initially before hospital ships can be anchored at the two ports of Uraga and Sasebo. It will be necessary to use the most rigid isolation technique at the shore hospitals where cases will be brought before the arrival of hospital ships. Most careful surveillance of this procedure is essential.

b. Allowing only ports where the quarantine facilities are adequate to be used by ships with cholera. At present these are Uraga and Sasebo. It is anticipated that within a month the port of Hakata will be available.

c. Ships from China without cholera may use the ports of Kagoshima, Kure and Hakata.

d. On ships which have cholera aboard, all personnel will be quarantined on the vessel for fourteen days after the appearance of the last case. All personnel immunized with 1.5 cc of cholera vaccine. Stool examinations made to determine carriers. Surveillance to be exercised to assure that these procedures are carried out, that the ship is anchored at a sufficient distance from the shore so that personnel cannot swim ashore, that discharges from the vessel are not washed ashore and that all personnel are physically examined for cholera before disembarking. The vibrio of cholera will live in sea water.

e. The passengers and crew of these vessels will be treated in the same manner.

4. The most critical points in this program are:

a. Strict isolation technique of the cholera cases which must be brought shore before hospital ships can be made available.

b. The detection of carriers.

c. The prohibition of persons from visiting cholera ships while anchored in quarantine or from personnel escaping from quarantine.

APO 500
9 April 1946

AG 435 (9 Apr 46) PH
(SCAPIN - 871)

MEMORANDUM FOR: IMPERIAL JAPANESE GOVERNMENT.

THROUGH: Central Liaison Office, Tokyo.

SUBJECT: Control of Traffic in Poisonous Beverages.

1. Memorandum for the Imperial Japanese Government AG 435 (18 Dec 45) PH, subject as above, 18 December 1945, is rescinded.

2. The Imperial Japanese Government will enact and rigidly enforce appropriate enactments to provide:

a. That possession of, and selling or trading in, any food or beverage containing methyl alcohol in excess of 1 mg. per cc., or other poison in toxic amount, will be punishable by a fine of not less than 2000 nor more than 10,000 yen, or penal servitude of not less than three nor more than fifteen years, or both such fine and penal servitude.

b. That beverages containing methyl alcohol in amounts exceeding 0.2 mg. per cc., and not exceeding 1 mg. per cc. may be sold provided that each bottle or container bears a label stating plainly in both English and Japanese the methyl alcohol content of the beverage.

3. English translations of such enactments and samples of the labels proposed to be used in accordance with the terms of paragraph 2b hereof will be forwarded in duplicate to this Headquarters immediately upon preparation and prior to publication.

4. Direct communication with the Chief, Public Health and Welfare Section this Headquarters, is authorized respecting further details in the execution of the terms of this Memorandum.

FOR THE SUPREME COMMANDER:

B.M. FITCH,
Brigadier General, AGD
Adjutant General.

GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS

APO 500
9 April 1946

AG 435 (9 Apr 46) PH

MEMORANDUM

SUBJECT: Information of General Application Concerning Memorandum for the Imperial Japanese Government AG 435 (9 Apr 46) PH, (SCAPIN - 871) subject: Control of Traffic in Poisonous Beverages, dated 9 Apr 1946.

1. With reference to the above numbered memorandum, the following is published for the information and guidance of all concerned.

2. The purpose of this Directive is to establish a vigorous penalty for the illicit possession, sale or barter of beverages containing methyl alcohol (methanol) in dangerous concentrations. Its particular targets are those individual black market operators who trade or sell untaxed liquors with high methyl alcohol or other poisonous content. The memorandum is not intended to cause prosecution of authorized bona fide distillers or manufacturers whose beverages contain innocuous concentrations of methanol unavoidable in the manufacturing or distilling methods employed.

3. The standard Japanese test for the presence of methanol in beverages differs from the more sensitive USP test which the Japanese are not equipped to perform. Where the standard Japanese test gives a negative result, the USP test of the same sample will frequently show a small amount of methanol. Such an amount, however, will not be toxic except in amounts of the beverage which are prohibitively large for human consumption.

4. Commanders will be guided by the following considerations in enforcing the terms of the memorandum above referred to and in the control of the manufacture and sale of beverages containing methanol:

a. All alcoholic beverages manufactured and sold will contain not over 1 mg. of methyl alcohol per cc. Where the methyl alcohol content exceeds 0.2 mg. per cc, such content will be stated in English and Japanese on a label affixed to each bottle or other container.

b. Where the beverage in question contains a greater quantity of methanol than 1 mg. per cc of beverage, it will be destroyed.

c. Unauthorized or illicit distilleries or manufacturing facilities and those of individuals, companies or associations failing to conform to the above standards will be closed and may be destroyed.

HEADQUARTERS
 UNITED STATES ARMY MILITARY GOVERNMENT IN KOREA
 Bureau of Public Health and Welfare
 Seoul, Korea

SUBJECT: Weekly Report for Week Ending 23 March 1946,

DEPARTMENT OF PUBLIC HEALTH

GENERAL

1. The survey of the sanitary conditions of jails and prisons, begun in the middle of February, was completed during this week. The following over-all picture was drawn from reports by public health officers throughout Korea:

- a. Overcrowding of cells is a universal fault.
- b. Latrines are primitive and many cases unsatisfactory, being of the bucket-and-carry type.
- c. Water supplies for drinking and washing tend to be minimal. In many places city water is not being piped to the vicinity of cell blocks; water is supplied in buckets for drinking and minimal washing only.
- d. Kitchens on the whole are satisfactory. A number of jails have no kitchen, but patronize outside restaurants, some of which are not within reasonable proximity. A common fault is the outdoor transport of food from kitchen or restaurant to cell blocks in uncovered containers.
- e. Cells are unheated and poorly lighted.
- f. Dusting with DDT is common if not universal.
- g. Doctors are assigned to larger provinces, most of which have their own hospitals; smaller institutions have doctors on call.
- h. General cleanliness varies greatly, many places appearing neatly swept and cared for, other with dirty walls and littered floors.

2. In conferences with the Bureau of Police and the Bureau of Justice, this Bureau developed a set of sanitary standards for monthly inspections of jails and prisons (Exhibit I). Two-fold criteria were applied to reach these standards: (a) desirability from the health aspect, and (b) feasibility of achievement with respect to the problems of procurement and construction involved. In the execution of this program, it is proposed to bring all but the most minor discrepancies encountered to the direct attention of the National Bureau concerned for correction, with the coordination and cooperation that has been assured, the present faults in sanitation of Korea jails and prisons should shortly be alleviated if not eliminated entirely.

PREVENTIVE MEDICINE SECTION

1. During the week all civilian (Korean) employees of Military Government in Seoul were given booster doses of typhus vaccine. Now employees were given smallpox vaccinations and complete typhus series. Immunization cards were distributed with vaccination data entered. Total smallpox vaccinations were 2,519; typhus inoculations 2,668.

2. In the future, requests for vaccines and biologicals will be sent directly to the Preventive Medicine Section of the Bureau of Health and Welfare. To prevent deterioration of supplies enroute, provincial health officers have been instructed to send either military or Korean courier to Seoul to effect delivery to provinces when allocations are made.

3. The following semi-monthly communicable disease reports were received during the week:

	Typhoid	Small pox	Typhu s	Scar. Fever	Diph	Mengt's	Bacr Dvs	Enceph alitis	Para- typhoid
Chungchong Nam									
16-28 Feb.	149	385	24	3	8				2
Cholla Namdo									
16-28 Feb.	23	495	1		4	17			
1-15 Mar.	52	416	2	12	4	22			1
Kyongsang Puk									

1-15 Mar.	72	239	16	15	1				
Kyongsand Nam									
1-15 Mar.	126	330	10	1	16	2	1		
Kangwan-do									
1-15 Mar.	125	114	20		2	22	1	4	3

No report has been received from Chungchong Namdo for the first Bi-monthly period of March.

4. Letters were sent to provincial health officers directing them to control the allocation of venereal disease drugs. All of the bismuth subsalicylate and most of the sulfathiazole and mapharsen is to be frozen by provincial health officers and sold to wholesalers only to hospitals and clinics having facilities for VD treatment. These venereal disease drugs should reach the provincial drug wholesalers in the near future.

MEDICAL SERVICES SECTION

1. Doctor Robert Wilson, director of leprosaria, returned from a month's stay at Sorokdo Leprosarium. Approval has been obtained from the National Property Custodian for requisitioning land adjacent to the Yosu Leprosarium.

2. It was proposed by Dr. Wilson that the Yosu Leprosarium and the Sorokdo Leprosarium be merged into one national organization. This suggestion has considerable merit: both leprosaria are in the same locality; patients could be transferred from one to the other without difficulty; the more advanced cases could be kept at Sorokdo; arrested cases could do farming at Sorokdo which would help to support both leprosaria; with both leprosaria under one directing head operation could be carried out much more economically; and one school for nurses and attendants could be used for both places. It was decided that Dr. Wilson should write to the Mission for lepers in New York to obtain permission for the merger. At present the leprosaria will be kept under independent management. However, Dr. Wilson as director of leprosy work for Korea will be able to coordinate the activities of both.

3. At a conference held with representatives of the American Red Cross, the provincial health officer, the city of Inchon health officer, and the director of medical services, it was decided that the tuberculosis sanitarium at Inchon should be reopened after required repairs have been made. The engineering officer of the Bureau of Public Health and Welfare will make a survey of the installation before repairs are done.

NURSING AFFAIRS SECTION

1. It has been decided to move the facilities of the Graduate Nurses' Institute from its present location in the Bureau of Health and Welfare Building to the Red Cross Hospital. The change will be made during the coming week. The new location will accommodate about 60 students, and will be generally more suited for the teaching program.

2. The first meeting to organize a Korean Nurses' Association was held at Severence Hospital on 22 March. It will be strictly a Korean organization. American nurses will not participate except when assistance is requested.

3. Following radio and press announcements, the Korean staff of the Nursing Affairs Section are interviewing licensed midwives for the purpose of:

- a. Selecting two whose names and qualifications may be sent to Lovenstie Clinic, New York, for training. (page 3, Weekly Report, 9 March)
- b. Selecting twelve who will take the first midwifery refresher course at the Seoul City Hospital.

DENTAL AFFAIRES SECTION

1. A letter was written to each Korean Provincial Health officer with instructions to submit a report of the dental conditions existing at present in the Primary School.

2. Registration and licensure of dentists began the 15th of March and will continue thru the 15th of April. At present only 15 registrations have been submitted and licenses issued.

VETERINARY AFFAIRS SECTION

1. Plans were made to use “rabbit virus” for vaccination of cattle against Rinderpest. The “rabbit virus” is an attenuated virus, therefore, it was considered necessary to send veterinarians, 14 in number, to the Fusan Veterinary Laboratory for training in the technique of handling and administering this virus in cattle. It may become necessary to vaccinate 100,000 cattle in the provinces of Kyonggi-do and Kangwan-do. The exact number to be vaccinated will depend upon the progress of Rinderpest north of the 380 parallel. Rabbits are needed badly to produce the virus. A letter was directed to provincial veterinarians requesting immediate survey of rabbits available and report to the national office.

2. An information letter on rabies is being for circulation to all provinces.

SANITATION SECTION

1. Emphasis continued on “National Clean-up Week”. Arrangements were made to use approximately 60 trucks and 100 trailers in the drive. Some prisoners will be used for labor.

2. The Kasan water treatment plant and water reservoir was inspected by the Sanitation Section. The plant is in the American Occupied Zone, while the water reservoir is in Russian Occupied Territory. The treatment plant is in good condition. The chlorinator was clogged and was not being used, although chlorine was available. The caretaker of the reservoir stated that the water level was the lowest it has been in five years.

LABORATORY SECTION

1. General

a. Wiring facilities of the Biological Laboratory have been completely overhauled, making possible the installation of new machinery, and effecting a reduction of fire hazards.

b. Work started on the installation of a new sewer and telephone system for the laboratory. The “innoculating room” for the production of typhoid vaccine is being enlarged.

c. Investigation was begun for a plant for the Koreans to manufacture alcohol which will be used for medicinal purposes and for the production of Ether.

2. Biological Laboratories

a. A series of six (6) shots of Diphtheria on two (2) houses for the production of Diphtheria Antitoxin was completed. Tests for potency were begun.

b. Dr. Lee, veterinarian, reported to the Anyang Laboratory as Director. He was formerly with the Veterinary School in Suwon, and has six (6) years experiences in vaccine and Rinderpest work.

c. Inventory of Biologicals:

Product	New	Dispensed	On hand
Typhus vaccine	-	2,000 cc	4,260 cc
Typhoid vaccine	130,000 cc	40,000 cc	554,340 cc
Smallpox vaccine	-	373,000 doses	913,350 doses
Rabies vaccine	-	12 doses	-
Typhoid diagnostic antigen	-	80 cc	1,400 cc
Para A diagnostic antigen	-	80 cc	1,560 cc
Para B diagnostic antigen	-	80 cc	1,880 cc
Typhus diagnostic antigen	2,000 cc	-	2,000 cc
Diphtheria serum	-	10 cc	238 cc
Fowl pest	-	10,000 cc	5,500 cc

All other biologicals remain the same.

3. National Laboratories

a. Original Synthesis:

- (1) Synthesis of 2-Amino-pyrimidine. Amount prepared; 100 grams.
- (2) Synthesis of p-Amino-Pl-nitro-diphenylsulfide. Amount prepared; 68 grams.
- (3) Synthesis of Chlorobenzene. Amount prepared; 1,000 grams.
- (4) Preparation of Absolute Alcohol. Amount prepared; 2,000 grams.

(5) Preparation of C.P.Glycerin. Amount prepared; 6,000 grams.

Note: Item 1 and 2 used in the Research on the Synthesis of Sulfadrag.
 Item 3 and 4 used in the experimental production of DDT.
 Item 5 used in the production of vaccine.

b. Drug Technology:

Sub-coating of Pills; Experimental Findings:

- (1) Whale wax constitutes a very desirable sub-coating material.
- (2) Ten grams whale wax will coat 1,000 grams, pills or tablets.
- (3) Melted wax is preferable to solid wax.
- (4) Sub-coating time must not exceed 5 minutes.

c. Toxicology:

(1) One specimen of "NIHON METAL", test for Lead and Tin. (Lab.#441) Findings:

Pb 5.84%
 Sn 92.69%

(2) One specimen of "Liver" submitted by Department of Public Health, 99th Mil. Gov. Gp., Taegu, Korea, test for heavy metals.

(As, Pb, Bi) (Lab #445)

Findings:

Arsenic negative
 Lead negative
 Bismuth negative

Notes: Quantity of specimen was too small for absolute results.

(3) One specimen of "Whiskey" submitted by the Asahi Brewery Co., test for methyl alcohol. (Lab #446) .

Findings: Negative.

d. Biochemistry:

(1) Seven (7) specimens of Korean Kimchi were analyzed for Thiamine content. Results are expressed in terms of gamma -

Thiamine per 100 mg.	
Specimen #1 - 34.63	Specimen #4 - 49.36
Specimen #2 - 24.04	Specimen #5 - 50.73
Specimen #3 - 61.08	Specimen #6 - 33.77
Specimen #7 - 20.94	
Average ----- 39.22	

e. Vegetable Drugs:

(1) Quantitive analysis of eight (8) Korean plants commonly employed for medical purposes:

Name of Vegetable Drug	Water	Ash	Acid-insel	Ash	Alcohol-sel-extract
1. Dogenia	7.27%	30.05%	3.87%		6.70%
2. Fles Caryophylli	5.18%	3.42%	0.59%		24.71%
3. Felium Digtible	6.39%	7.53%	0.90%		34.11%
4. Rosa Multiflora	6.55%	4.94%	0.53%		3.52%
5. Sinapis Cernura	3.23%	5.01%	0.94%		13.55%
6. Fractus Catalpae	6.67%	4.88%	0.60%		13.73%
7. Herba Artemissia	7.59%	5.57%	1.34%		16.74%
8. Daphne Wen-Wa	8.11%	5.48%	1.21%		15.16%

MEDICAL SUPPLY SECTION

1. Work was completed on the submission of requirements figures to the National Economics Board for the Import-Export Program for the period 1 July 1946 to 31 March 1947. All departments of the Bureau of Public Health and Welfare submitted their individual requirements to the Medical Supply Section, where they were reviewed and consolidated. Justification of the program was explained in material submitted to the National Economics Board with the figures.

2. The Distribution Sub-Section completed the unloading of eight railroad cars full of medical supplies for the assembly of the 360 Basic Medical Units. These supplies have arrived as component parts only, and not as assembled units. Who Korean Medical Supply Company, an independent commercial organization, has been engaged for the task of warehousing the items received and assembling them into the complete assortments of drugs and supplies representing Basic Medical Units. Thus far, 320 tons of these supplies have been landed, and the eighth cars unloaded are the first of 27 cars loaded at Inchen to arrive at Seoul. A ship which will be unloaded after certain Quartermaster items which occupy the upper holds are disposed of. The entire supply of 360 Basic Medical Units has a total weight of 2,174 tons, which leaves a balance still due to arrive in Korea of 1,624 tons.

3. Work was completed during the week on a comprehensive price schedule, for manufacturers', wholesalers and retailers, to be published as soon as the printers schedule will permit in the official gazette. This schedule will establish maximum prices for all common drugs and medical supplies, including Japanese and Korean drugs now available, the supplies in the Basic Medical Units, and supplies to arrive under the Emergency Import and the general Import-Export programs.

VITAL STATISTICS SECTION

1. Registration

a. Registration activities during the present report period consisted chiefly in formulating promotion and publicity materials for use in conjunction with the new vital statistics registration procedures to be inaugurated 1 April 1946. Newspaper material and radio speeches were written up in both Korean and English.

b. Final drafts of the Standard Certificates of Birth, Death, Stillbirth, Marriage and Divorce to be used in the revisions which will be printed three months hence were completed. These drafts were worked up jointly by the Bureau of the Justice and this Bureau. Mr. Choi, head of the former Bureau, having represented the interests of the Civil Section of his Bureau.

c. Meanwhile, field agents were active in the provinces at the several conferences of local registrars. The Korean Chief Field Agent, Director, and the United States Army Officer in Charge will leave by the end of the next report period for inspectional trips throughout all provinces south of the 38th.

2. Statistics.

a. Tables of Maternal Mortality were completed as were Tables of Stillbirths by Province and City. The chart of communicable diseases by month of occurrence is still under construction.

b. The Index to the two hundred causes of death according to the International List was completely translated by the end of this report period. This Korean Index is the second part of a project to make available in the Korean language, the findings of the last decennial congress of users of the International List of Causes of Death. When his index is finally catalogued, the Index together with the list will be printed into book form and made available to all physicians, hospitals, registrars and other vital statistics personnel in southern Korea. This project when completed will be a substantial contribution to Korean medical science and public health.

DEPARTMENT OF PUBLIC WELFARE

GENERAL AFFAIRS SECTION

1. Several staff changes were effective during this week. Lt. Scherbacher formally became director of the branch to replace Capt. Glacken who departed for the United States. Lt. Conway joined the staff and was assigned to be Section Chief for General Relief. Capt. Yoon returned from temporary duty with the 100th MG Group where he had worked from 20 February to 23 March assisting in the organization and administration of the welfare program in that area. He studied the facilities and needs for institutional services, surveyed the refugee program, and acted as liaison with other departments and agencies to increase and improve services.

2. Major Riordan from SCAP arrived to conduct a survey of the welfare program. There have been many conferences with the staff members and a field trip to Pusan, Taegu, and Taejon has been planned. Lt. Conway will accompany him.

3. Conferences were held with Foreign Affairs and Finance Bureau concerning the problems of refugees returning from China. Certain financial difficulties result from the lack of exchange between the two countries. All Chinese money is confiscated and no arrangement has been made to provide an adjustment. It was decided to add an item to the Welfare budget to allow a payment of 1,000.00 yen for each adult and 500,000 yen for each child at the port of entry. This is the amount that refugees from other places are allowed to bring with them. Since neither Foreign Affairs nor the Finance Bureau have any budget, the payments will be made through Welfare finances but the arrangement will be purely of a bookkeeping nature.

4. The Military Governor inspected several refugee relief shelters, the new refugee camp site, an orphanage and the Seoul relief warehouse.

GENERAL RELIEF SECTION

1. Lt. Conway began his orientation to this section by reviewing reports, bulletins, etc. He left two days after his assignment to accompany Major Riordan on a field trip to three selected cities.

2. Special trains for Japanese Refugees coming from north on the 38° parallel enroute to Pusan have been discontinued because there was not sufficient traffic to warrant them. Special cars are being attached to the regular trains to accommodate those who are returning to Japan. This has necessitated other arrangements as to feeding and medical care. These adjustments have been made. Entire care of Japanese Refugees is now in the hands of the local welfare units.

INSTITUTIONS SECTION

1. The problems raised by stray vagrant children who attach themselves to military units came to attention this week again when the two children who were referred to the National Public Health and Welfare for emergency care were readmitted to the Red Cross Hospital. They were having constant fever, and were unable to take any food but liquids. Exact diagnosis of their illness has not been made.

2. The National School for the Blind and Deaf has increased its facilities by the addition of adjacent property which includes four buildings. This property was formerly owned by a Japanese family. Formalities have been completed and the transfer made. Plans are underway to make necessary alterations and repairs so that it will be available for use in the near future.

3. A radio and loud speaker have been installed in the National Orphanage. This is the first recreational equipment that has been provided to this institution. One case of meningitis was diagnosed. The sick person - one of the farmers at this school - was removed to the hospital and all precautionary measures taken to prevent spread of the disease.

HOUSING SECTION

1. Appointment Order #77 which was issued this week brings to completion many weeks of work of this section. Chun, Ye Yong was appointed as director of the Korean Residence Management Corporation and National Housing Policy Board was reestablished. This Board has been meeting and working for some time on various matters pertaining to rental rates, supply problems and low cost housing projects. No official action could previously be taken, however, as the Board had no legal existence.

2. Another important forward step in the housing field was taken with the exhibit of Model Home Plans which was given by the Korean Architectural Association.

3. The interest of Cholla Pukto Province in housing was noted in a report received from that district stating that they are building one new home in each village. This is an individual village project and may be an impetus to private enterprise.

EMPLOYEE WELFARE SECTION

1. The order authorizing the dissolution of the Conscripted Labor Program has been signed by the Military Governor and will be printed in the Gazette. Press releases have been written informing the people of the plan and method of this dissolution. They will be submitted to General Affairs and Bureau of Public Information for

approval before being released. A time limit, as yet undetermined, will be established for paying identified wages and for acceptance of ##### claims for unpaid wages. Finance Bureau has agreed to release all funds of the association for this. Major Riordan, now visiting this branch, will obtain and forward details of the organization in Japan, funds of deposit there and any records of payments by employees, etc. This information will be of considerable help in making an equitable settlement of the fund.

SUPPLY SECTION

1. The supply section has been concerned with establishing a means of marking salvaged GI clothing which is now available for issue to relief recipients. There were many difficulties and the final solution has been to dye all possible items. Estimates are being prepared for the dying of the supply of GI undershirts new enroute from Eighth Army Headquarters.

2. Several times in the past week, groups and individuals have appeared and requested that certain relief supplies be given to the group they are sponsoring. Definite statements have always been made that there will be no discriminations in the issue of supplies - all will be given through regular Public Health and Welfare channels and will be issued on a basis of need. It would appear that Koreans are becoming relief minded in a categorical sense rather than considering individual need.

RESEARCH AND ANALYSIS SECTION

1. The first outline of the survey of social welfare in the American. Occupied Zone was presented to Provincial Affairs and received their approval. The final draft, complete with schedules and charts, will be submitted by the first of April.

2. The last week of orientation and special training of the research specialists is finished. The next week will be occupied with the gathering of necessary statistical material and background data of the various provinces, gun, bu, and eup to help in the initial planning the details and to test the validity of the samples selected to represent each area.

3. The YWCA committee presented the rough draft of their plan to reactivate their agency. Several suggestions were made and they will report back in two weeks. One of the decisions to be made involves whether or not a membership and money raising campaign will be conducted on a local or national level. Another is the main line of endeavor - this may be work with women refugees, recreation, for working girls, or educational classes in home management. It is hoped that the complete plan will be approved before Dr. Helen Kim, new in the U.S. as Korean representative to the International YWCA Conference, returns.

AMERICAN RED CROSS SECTION

1. Work has been received that the staff study on the organization of a Korean National Red Cross has been approved by the OCA and the Planning Section and has been referred to the Military Governor for his final approval.

2. A meeting was held during the week with Dr. Koo Jah Hueng to inform him of the progress of the staff study and to ask that the Korean citizens group be asked to consider the personnel of committees which might advise the Welfare Branch in such present Red Cross activities as the Seoul Red Cross Hospital, the Nurses' Training Program, the clinics in Seoul, and the Incheon Tuberculosis Hospital. The Committees would be activated immediately upon the final approval of the staff study.

3. A conference was held on Wednesday, 20 March, at which were present Capt. Blumenthal, Chief of the National Medical Services, Major Jeaurum, Kyonggi-do Provincial Health Officer, Lt. Bohrens, Incheon Health Officer, Lt. Sakey of the National Welfare Branch and representatives of American Red Cross Civilian Relief, to discuss the possible reopening of the Incheon Red Cross Tuberculosis Hospital. It was decided the hospital would be put into operating condition without delay and would be reopened either as to whether the sanatorium would be Red Cross operated should be delayed until a Korean Red Cross authority had been established and could make the decision. In the meantime, the assistance of Captain Collins, consulting engineer for the Bureau of Public Health and Welfare, has been secured to estimate the repairs needed and to advise on having the work done.

4. During the week, inspection of a building formerly owned by the Seoul Red Cross Commission, known as the Maternity and Lying-in Hospital, was made. The building and its adjacent properties are presently being used

for living quarters and also as the headquarters for Women's Patriotic Organization. It is understood the building has never been used as a maternity or lying-in hospital and does not seem adequate for such a purpose. However, it might be admirably adopted for use as a clinic and the possibility is to be explored by Mr. Spees with Capt. Huff.

5. During the week, inspection of the two Red Cross clinics in Seoul were reported by Capt. Blumenthal. He observed that the clinics were not serving as many patients as their staff and facilities might accommodate and recommended working with Capt. Huff, Seoul City Health Officer, in attempting to increase their service. Mr. Spees of the Civilian Relief staff, plans an early conference with Capt. Huff to discuss ways and means of carrying out Capt. Blumenthal's recommendation. The clinics were also inspected during the week by the assistant director and Mr. Spees and the inspection bore out Capt. Blumenthal's report.

6. During the week some further discussion has been held with officers of the Welfare Branch as to the assignments of the additional members of the Civilian Relief staff soon to arrive in Korea. Aside from the two people who will be assigned to work at the National level, it seems agreed that the remaining staff should be attached to the provincial Health and Welfare Bureaus of the provinces having the largest cities. These staff persons would be expected to assist in other areas of health and welfare as well as in work with the organization of the Korean Red Cross activities.

7. Some progress has been made during the week on a suggested outline for the organization of local chapter activities and some organizational charts have been drawn up.

8. The possible use of Japanese medicines by the Pusan Red Cross clinics and dispensary has been presented to the National Medical Supply Section for consideration.

9. Work has been received from Washington that surplus American Red Cross supplies of medicines and surgical dressings in Honolulu have been released to the Honolulu Commission for Relief of War Sufferers in Korea for shipment to Korea. These supplies will be part of the relief and medical supplies which the Bureau of Public Health and Welfare has agreed to distribute for the Commission. The exact quantity of dressings being turned over to the Commission is not known but it had been previously indicated that a rather substantial stock pile was warehoused in Honolulu. The supplies were surplus after the end of hostilities.

Major, U.S.P.H.S.
Acting Director
Bureau of Public Health and
Welfare

HEADQUARTERS
UNITED STATES ARMY MILITARY GOVERNMENT IN KOREA
Bureau of Public Health and Welfare
Seoul, Korea

18 March 1946

SUBJECT: Sanitary Inspections of Jails and Prisons.

TO: All Provincial Governors (Attn: Provincial Health Officers)

1. All jails and prisons are to undergo sanitary inspection at monthly intervals. The following standards recommended by this Bureau have the concurrence of the Bureau of Police and Bureau of Justice:

a. General Cleanliness:

Walls and floors should be kept clean, with no rubbish or waste lying about

b. Latrines:

Each cell should be equipped with a clean well-kept squat type covered latrine or its equivalent.

c. Water:

The supply should be adequate for drinking and washing purposes. A faucet for drinking water should be located in each cell block corridor or reasonably close by; if unsafe, the water should be boiled before drinking. Washing facilities should be provided and prisoners made to bathe upon entry and at weekly intervals thereafter.

d. Delousing:

Prisoners should be dusted with DDT upon entry and thereafter every two weeks. (For maximum effectiveness this dusting should follow a bath.)

e. Food:

This should be supplied from a sanitary kitchen on the premises or from an approved restaurant in the immediate vicinity. Food carried into the cells from outdoors should be in closed containers or covered with clean cheese-cloth, paper or similar acceptable material.

f. Crowding:

Each cell should provide approximately twenty-five (25) square feet of floor space per occupant (i.e., for an average cell measuring twelve feet square, maximum desirable occupancy would be six (6) prisoners).

g. Heating:

During cold weather, a minimum of two blankets or their equivalent in bleeding should be furnished each prisoner, with an extra blanket for each available for issue if needed.

h. Lighting:

There should be a source of illumination (electric) in each cell.

i. Medical Care:

There should be a doctor assigned to and present at the larger prisons. Smaller institutions must have an assigned doctor available on calls.

2. Minor deviations from these standards easily remediable by the local prisons or jail authorities will be referred to them for correction; and in this regard it is suggested the cooperation of the prison doctors (if any) be enlisted by the health authorities. Discrepancies other than these (and repeatedly uncorrected minor faults) will be reported promptly to this Bureau for reference to and action by the Bureau concerned.

WILLIAM R. WILLARD
Major, U.S.P.H.S
Acting Director

Y.S. Lee, M.D.
Director of Public Health
and Welfare (Korea)

EXHIBIT I

“NATIONAL CLEAN-UP WEEK MARCH 24-30”

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
PUBLIC HEALTH AND WELFARE SECTION**

WEEKLY BULLETIN

**For Period
7 April to 13 March
1946**

SECTION I WELFARE

General

Lt. Colonel N. B. Neff, Former Commanding Officer of the 81st Military **Military** Government Company in Kochi and Tokushima Prefectures joined the welfare Division Staff this week as Acting Chief of the Division.

Public Works Program

Representatives of the Welfare Division attended a conference called by the Advisory Committee on Labor, Economic and Scientific Section, to discuss a proposed draft of policies for a Japanese Public Works Program. Of special interest to this Division, were two proposals which were incorporated into the draft: (1) a flexible budget for the Public Works and Public Welfare Programs which could shift the bulk of support to one or the other, depending upon the need (2) preference to recipients of public assistance for employment on public works projects, insofar as is possible.

Conditions in Korea

Major R. E. Riordan submitted a report on conditions found in Korea during his recent visit there of about three weeks duration. The purpose of the trip was to acquaint this Headquarters with the organization of welfare activities in Korea, and chief problems. The greatest problems appeared to be housing, food, clothing and materials in that order. A falling off of repatriation from Japan was noticed, the chief problems being the 1000 yen limitation on funds in the face of inflation, the tendency of refugees to settle in overcrowded urban areas and the lack of sufficient welfare facilities especially at lower levels. Refugee processing stations in Seoul and Pusan and the reception center at Teigu were found to be reasonably efficient. Organization of Welfare Administration on national and local and voluntary levels were described, the main problem being the lack of trained personnel. An UNRRA program for Korea had not been decided as yet due to the question of the barrier existing at the 38 parallel.

Private Welfare Agencies

Following a series of informal inter-departmental conferences, a radio was sent to WARCOS outlining reasons for recommending that voluntary relief supplies from the United States for Japan be handled through the Japanese Government rather than private agencies. Chief reasons were (1) that sponsorship of private agency activities at this time would tend to weaken and confuse our directives for a single governmental agency to assume responsibility for relief, and (2) private organizations in Japan lack centralized control and are ill-equipped to distribute relief supplies effectively. Similar proposals received from WARCOS with respect to Korea were referred to Korean authorities for recommended reply.

SECTION II PREVENTIVE MEDICINE

General

The Epidemiologist and Acting Chief, this Division, returned during the week from Osaka where he had been occupied for approximately three weeks with the control of a typhus epidemic in that area. This epidemic is now apparently well under control, not over 40 suspected cases having been reported on any single day since 6 April. A check was also made on the progress of the typhus control program in Kyoto Prefecture, particularly in the cities of Kobe, Nishinomiya and Amagasaki. A third area dusting program has been completed in the above areas and a consistent reduction in the number of reported cases is to be expected. The full effect of the program, however, will probably not be felt for at least another week. A separate memorandum will be submitted concerning the above trip.

A conference was held with representatives of the Eighth Army Surgeon's Office, members of the Typhus Commission and interested Military Government Officers, concerning the control of typhus fever in Kanagawa Prefecture. A satisfactory program of civilian typhus control has been set up in the prefecture and five medical officers and 100 enlisted men are being detailed to assist the local Military Government Company in the supervision of the program.

Outbreaks of cholera have been reported on several SCAJAP Liberty ships bringing repatriates from south China (Canton) to Japan. At the present time all of the cases and suspects are concentrated at the port of Uruga. Sasebo, however, has also been designated to receive cholera patients. It is contemplated that all ships carrying cholera patients and all suspects will be handled at these two ports.

A visit was made to the port of Uruga in company with the Port Quarantine Officer, this Section, and Dr. Yamaguchi, Chief of the Quarantine Section of the Ministry of Health and Social Affairs. In the short time available during this visit the quarantine area for suspects was selected, plans were made for the isolation and

treatment of further cases and consultation was held with the Laboratory director concerning additional supplies and personnel which would be needed there.

A conference was held on 13 April which was attended by representatives of the Chief Surgeon's Office, AFPAC; Surgeon's Office, Eighth Army; Surgeon's Office, Fifth Air Force; Natural Resources Section and this Section, on the subject of insect control, with particular emphasis on spraying by means of airplane. Concurrence of Natural Resources Section was obtained on the spraying of a number of metropolitan and urban areas where troops are concentrated and final plans were formulated for submission to the Chief of Staff. At this same meeting, final plans were also made for the insect and rodent control school which will be held at Kyoto during the week of 22 April for Military Government Medical and Sanitary Officers and for Japanese prefectural officers.

Sanitary Engineering

A conference was held on mosquito and other insect control with the Virus Commission, officers from Chief Surgeon's Office, Fifth Air Force Surgeon's Office, Eighth Army; Surgeon's Office, Malaria Survey and Control Units, and Natural Resources Section. Proposed plans for airplane dusting and the effect on food production were discussed. Natural Resources Section reported favorably on most areas under consideration for central and southern Honshu and Kyushu. The proposed program for the insect control training school to be held in Kyoto from 22 April to 27 April was reviewed. Final arrangements were made for instructors and supplies.

At a conference with the Virus Commission, Supply Division of this Section, Import and Export Division of the Economic and Scientific Section, Agricultural Division of Natural Resources Section, and Japanese officials concerned, Japanese supplies on hand and that can be produced were discussed. Further information is to be obtained on emulsifying agents for use with pyrethrum.

Laboratory Activities

Transmission of Cholera through sea food: Reference to Japanese sources of information disclosed the recognized role in Japan of sea food obtained from contaminated waters in the spread of cholera. A large epidemic of cholera occurred in Tokyo in 1922, largely from that source. Responsible officials in the Welfare Ministry have already taken action to curtail the spread of cholera from shore areas surrounding repatriation ports in which ships reporting cases of the disease are anchored, and have warned the population against the dangers of eating inadequately cooked fish.

Clinical Diagnosis of Typhus Fever: A short talk was given before a group of medical corps officers participating in the communicable disease program under SCAP. In the clinical diagnosis of typhus fever, the importance epidemiologically of recognition of milk ambulatory cases was stressed, especially in children. The concept of typhus as a form of diffuse vascular disease was re-emphasized and the possibility was mentioned of making its diagnosis in case of uncertainty by careful study of the pulse.

Reform of Medical Education: Several conferences were held with various committees of the Council on Medical Education and considerable progress was made toward establishing a national licensure examination administration, standards for medical curriculum, medical school facilities, hospital facilities for internship, and development of a postgraduate program for practicing physicians.

Nutrition Service

A conference was held with Professor K. Simoda, Director, Metropolitan Institute, Domestic Science, Osaka, with regard to nutrition investigations conducted in the Institute. Four studies on the effect of 20 or 30 percent reductions in caloric intake showed an initial rather heavy loss in body weight with subsequent lower losses. Body weight losses for 28-day periods were of the order of 1.5 kilograms. Considerable work has been done in the Institute on the losses in the vitamin content in preparation, preservation and storage of food.

Education Film

Plans were outlined for an education film or set of slides on food and nutrition for instruction in attaining an adequate dietary.

Consumption of food in Prison

Reviewed the quantities of food consumed in Sugamo Prison, Tokyo. Suggested to S-4 the procedure for nutritional accounting in prison operation.

Nutrition Surveys

A conference was had with Dr. T. Oiso, Ministry of Health, Imperial Japanese Government, on the plans for nutrition surveys in May. Dr. Oiso is now indoctrinating those concerned with the surveys at the prefectural

level with regard to the techniques for reducing the food consumption data to quantities of foods as well as nutrients. A meeting with the Nutrition Committee of the Japanese Government was arranged for 15 May 1946. Data on the physical examinations of the population will be available 3 May. There has been delay in compilation and reproduction of the report. A special request was conveyed to the Nutrition Consultant to review the progress of the surveys in May.

Vital Statistics

A detailed plan for the complete reorganization of the vital statistics system of Japan was submitted to SCAP by the Japanese Government in response to directive (SCAPIN 811). This plan, which was worked out in cooperation with the Public Health and Welfare Section, provides for extensive changes in basic registration laws and in operating procedures throughout the country. To make new procedures effective, it will be necessary to print and distribute new forms and instructions, and to re-instruct some 10,000 local clerks and officials in the revised methods. The plan has now been approved by SCAP and the Japanese Government has been instructed to put the new methods into operation (SCAPIN 975-A).

The new system for vital statistics has two distinct parts. Under one part of the plan, there will be collected monthly crude birth, death, infant death, stillbirth, marriage and divorce rates. These rates will be available for each city and prefecture and will be collected so promptly that complete national figures will be compiled with a delay of only about four weeks.

The second part of the plan makes it possible to analyze vital events in complete detail. Factors such as age, cause of death, place of residence, etc., will be available. Such data will be collected on a somewhat slower schedule. According to the facilities and personnel available, these detailed statistics will be collected either for the country as a whole or on the basis of a scientifically designed sample.

SECTION III ADMINISTRATION OF HOSPITALS

A tour of several national and private hospitals reveals there still is an unequal distribution of supplies between the two types of hospitals but that this discrepancy is being gradually corrected. The proportion of civilians now being admitted to former Army and Navy hospitals is increasing.

SECTION IV NURSING AFFAIRS

Reports from Japanese

Copies of the following reports have been received from the Japanese Ministry of Health and Social Affairs and are on file in this office;

- a. The Standard Curriculum for Public Health Nurses Training Schools, 1946.
- b. The Curriculum for Nursing Training of Japan Medical Treatment Cooperation (two year course).
- c. The Curriculum of Keio University Nursing Training School (one year course).
- d. The Curriculum of Keio University midwife Training (one year course).
- e. Designated Regulations of Public Health Nurses Training School (#346 Instructions of Ministry of Public Health and Social Affairs issued in June 1945 - Reformed No.62 Instruction of Ministry of Health and Social Affairs issued in February 1946).
- f. Necessary Factors for the License of Clinical Nurses, Public Health Nurses, and midwives, 28.

Education

The second meeting of the Educational Council for nurses was held 11 April 1946. Training school curricula, the request for short refresher courses for nurse instructors, and demonstration school in Tokyo were discussed.

A committee was appointed to study the curriculum and the needs. Results and suggested plans will be submitted. It was decided to institute a refresher course at once, in order to acquaint the head nurses with methods of teaching. A sub-committee was appointed which met and planned a course of study for this group. The course which is to begin in May, will cover 114 hours, with classes twice a week, for five hours a day. American nurses have been requested to help in this program. The Civil Information and Educational and Public Health and Welfare Section of GHQ, SCAP; Welfare and Educational Ministry; and the Japanese Red Cross, St. Lukes Hospitals, have been consulted in connection with this program.

The Demonstration School, including the merging of St. Lukes' students with Red Cross students, and the faculties of both schools participating in the program is now under discussion. The entire committee voted for the

establishment of a Demonstration School in Tokyo in which a model training program could be carried out with full supervision of nurses' practical work on the wards. No decision on this question has been reached.

Surveys

Survey of Kanagawa Prefecture is being continued. Special forms have been prepared for this survey and are on file.

Personnel

Miss Ella Sharrocks, civilian nurse arrived from the states and is being assigned to XXIV Corps, Korea, for duty.

SECTION V VETERINARY AFFAIRS

Summary of Field View

A representative of the Veterinary Affairs Division returned from an investigation of the death loss of horses and a survey of Japanese veterinary affairs in Okita Prefecture.

Chronic equine infectious anemia aggravated by winter hardships has been temporarily named the cause of death of many horses in Okita prefecture. Investigation by two Japanese veterinarians is still in progress. The death rate at this time has decreased and no further action is deemed necessary.

The prevailing animal diseases are those of horses. There is an acute shortage of medicines, though this situation was slightly relieved by the distribution of former military supplies. Meat and dairy inspection exist, but it is not too efficiently practiced. Reliable statistical data is being accumulated and proper reports are being rendered.

Reports from Japanese

Animal Disease Report – The Ministry of Agriculture and Forestry, Animal Disease Section, reported that no new outbreaks of communicable animal disease occurred during the week.

Meat Inspection Report – The Ministry of Health and Social Affairs, Veterinary Hygiene Section, has submitted the following report of Meat Inspection activities for the month of February 1946 (46 prefectures).

	<u>Cattle</u>	<u>Calves</u>	<u>Sheep</u>	<u>Swine</u>	<u>Horses</u>
Number of slaughtered	21,508	533	55	2,626	36,932
<u>Ante Mortem</u>					
Condemned	1	0	0	0	0
<u>Post Mortem</u>					
Totally condemned	11	0	0	0	0
Partially condemned	255	6	0	16	247
Viscera condemned	2,822	34	0	638	415

Dairy Inspection Report – The Ministry of Health and Social Affairs, Sanitary Bureau, Veterinary Hygiene Section, submitted the following Dairy Inspection Report for the month of January 1946 (44 prefectures).

Special Milk

Milk samples examined	132
Over bacterial standard	1
Under butterfat standard	0
Farm Inspection	27

Ordinary Milk

Milk samples examined	11,981
Over bacterial standard	547
Under butterfat standard	2,831
Farm Inspection	71,775

Goat Milk

Milk samples examined	52
Over bacterial standard	5
Under butterfat standard	5
Farm Inspection	53

SECTION VI DENTAL AFFAIRS

During the month of March, 203 dentists were re-established in practice. In the same period, 15 dentists died. There remain 2,947 who are not practicing because of shortage of equipment and housing.

SECTION VII SUPPLY

Narcotics

On 8 April 1946, this section received an interim report on the Kooun Maru opium case from the Criminal Affairs Section, Ministry of Justice. A conference was had with Ministry of Justice and Ministry of Home Affairs officials on 11 April to discuss the case and its prosecution in Japanese courts. It was emphasized to the officials that no one had been promised immunity in this case and that energetic efforts should be made to obtain evidence and prosecute everyone, including high officials, criminally involved in the opium smuggling case.

On 11 April, Japanese Government officials were told to submit informally a plan for the transfer of former Japanese military narcotic stocks from the custody of United States Forces at the 29th Medical Depot, Yokohama, to approved wholesale drug houses.

In order to establish an import program of narcotics for the legitimate medical needs of Japan, taking into account the present civilian and former Japanese military stocks of narcotics, the Japanese Government will submit informally within ten days for adjustment an estimate of narcotic requirements for the balance of 1946 and for 1947.

Completed annual and quarterly forms required by the Permanent Central Opium Board for world control of narcotics have been received from the Japanese Ministry of Public Health and Social Affairs and have been forwarded to the War Department for the attention of the Bureau of Narcotics.

Vaccines

Smallpox vaccine production during January, February and March totaled 96,102,000 doses. Sufficient quantities have been distributed to 35 prefectures for vaccination of the entire population. One hundred percent distribution will be made to the remaining prefectures in the near future.

The cholera vaccine program now being set up calls for production of 100,000,000 cc of crude vaccine at the earliest possible date.

An Additional increment of 35,000 vials of typhus vaccine has been made available to the Japanese for use at quarantine stations. It is estimated this amount will cover repatriation needs through 15 May. Due to lack of Japanese refrigerating facilities deliveries will be made in three phases.

Production

Production quota for X-ray film has been increased from 15,000 square meters per month to 25,000. Steps are being taken to determine requirements for developing and fixing powders and increase production accordingly.

Continued efforts were made to provide a supply of DDT dusting powder by utilizing Japanese production facilities. DDT concentrate has been made available to several manufacturing establishments and assistance has been given in securing a supply of talcum to be used as a diluent. So far, the Japanese have not demonstrated the ability to produce sizable quantities of dusting powder. The plant which estimated production capacity as ten (10) tons a day is producing approximately three (3) tons. Due to the urgent need for dusting powder, an officer from the Supply Division has been detailed to assume supervision of the plant operation.

Penicillin produced by two (2) Japanese firms has been approved for distribution. Strict controls have been placed over production and distribution to insure that quality standards as set up by representatives of Public Health and Welfare Section are maintained and that distribution is made on an equitable basis.

SECTION VIII DIRECTIVES TO THE IMPERIAL JAPANESE GOVERNMENT

AG 053 (12 Apr 46) PH, (SCAPIN 975-A), subject: "Plan for Collecting Current Vital Statistics". The above was an administrative memorandum approving the plan submitted under the requirements of (SCAPIN 811) 14 March 1946.

AG 370.05 (13 April 46) PH, (SCAPIN 989-A), subject: "Non-compliance with Existing Directives, Resulting in Unsanitary Conditions Aboard Repatriation Ships". The above was an administrative memorandum issued, with surveillance, for non-compliance with directive (SCAPIN 822) 16 March 1946, subject: "Repatriation".

CRAWFORD. F. SAMS
Colonel, Medical Corps,
Chief, Public Health & Welfare Section.

GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS

APO 500
12 April 1946

AG 053 (12 Apr. 46) PH
(SCAPIN 975-A)

MEMORANDUM FOR: IMPERIAL JAPANESE GOVERNMENT.
THROUGH: Central Liaison Office, Tokyo.
SUBJECT: Plan for Collecting Current Vital Statistics.

1. The plan submitted by the Imperial Japanese Government for the collection of vital statistics (C.L.O. No. 1556 PP. 4 April 1946) is approved.

2. The Japanese Government is directed to take immediate steps to put the plan into operation, to provide adequate personnel in national and local offices to administer the plan, and to proceed with such changes and improvements in the statistical system and organization as are necessary to obtain efficient operation of the plan.

3. As developed, details of the program regarding types of tabulation, use of complete or sampling methods, etc., will be reviewed by Supreme Commander for the Allied Powers.

FOR THE SUPREME COMMANDER:

B. M. FITCH
Brigadier General, AGD,
Adjutant General.

GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS

APO 500
13 April 1946

AG 370.05 (13 Apr. 46) PH
(SCAPIN 989-A)

MEMORANDUM FOR: IMPERIAL JAPANESE GOVERNMENT.
THROUGH: Central Liaison Office, Tokyo.
SUBJECT: Non-Compliance with Existing Directives, Resulting in Unsanitary Conditions
Aboard Repatriation Ships.

1. Reference is made to paragraph 1d Annex IV and paragraph 2 Annex V to Memorandum for the Imperial Japanese Government, file AG 370.05 (16 Mar. 46) GC (SCAPIN – 822) dated 16 March 1946, subject: “Repatriation.”

2. General Headquarters, SCAP, has information of non-compliance with directive mentioned in paragraph 1 above. Specific defects are that on some repatriation ships:

- a. Doctors are either unqualified, negligent or uninstructed in the proper performance of their duties aboard ship.
- b. There are insufficient medical aid men to assist in maintaining an efficient medical service.
- c. Sick bay is in an unsanitary condition.
- d. Totally inadequate medical supplies are being furnished.
- e. Families of patients are permitted to live in sick bay area.
- f. There is insufficient supply of bedding to equip sick bay.

3. The Imperial Japanese Government will take immediate steps to correct these defects, institute a procedure which will prevent re-occurrence on all repatriation ships by assuring that assigned medical personnel are instructed in the proper conduct of standard recognized medical methods aboard ships and that sufficient supplies are aboard to accomplish this purpose.

4. A written report of the measures taken will be rendered to GHQ, SCAP, not later than 20 April 1946.

FOR THE SUPREME COMMANDER:

B. M. FITCH,
Brigadier General, AGD,
Adjutant General.

GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS

APO 500
13 April 1946

AG 441.1 (13 Apr. 46) PH

MEMORANDUM

SUBJECT: Information of General Application Pertaining to Memorandum Number (SCAPIN 229), File AG 441.1 (2 Nov. 45) PH, GHQ, SCAP, 2 November 1945, subject: "Discussion of Heroin in Japan", to the Imperial Japanese Government.

1. With reference to Memorandum Number (SCAPIN 229), GHQ, SCAP, to the Imperial Japanese Government, dated 2 November 1945, the following is published for the information of all concerned.

2. The Memorandum prohibits the possession, use, sale, purchase, gift, receipt, distribution or transportation of heroin or any salt, compound, preparation of combination thereof and orders all heroin in Japan delivered into the custody of United States Forces, place and date of delivery to be as designated by the appropriate Army Commanders.

3. In a letter from GHQ, SCAP, File AG 441.1 (2 Nov. 45) PH, subject: "Security of Certain Narcotic Products in Japan", United States Forces were directed to take custody of and destroy this heroin after appropriate records had been made for forwarding to GHQ, SCAP. Reports received to date indicate only twenty prefectures have delivered the heroin to appropriate Army Commanders. It is considered sufficient time has elapsed for the accomplishment of the objective of the directive. Action is desired to expedite delivery of the heroin to the custody of United States Forces in the remaining prefectures.

4. Command instructions will follow through command channels pertaining to the execution of surveillance. The following procedure is suggested;

- a. Determine that prefectural authorities are cognizant of directive, and have confiscated and collected all heroin in each prefecture.
- b. Establish liaison between prefectural officials and tactical units to facilitate delivery of the heroin.
- c. Determine that all heroin has been taken into custody by United States Forces.
- d. Advise GHQ, SCAP of any corrective action that should be taken at the national level.

13 April 1946

AG 370.05 (13 April 46) PH

MEMORANDUM

SUBJECT: Information of General Application Pertaining to Directive Number (SCAPIN – 822) 16 March 1946, subject: "Repatriation."

1. Instances have been noted of repatriation ships having been inadequacy staffed with qualified medical personnel, and furnished insufficient medical supplies to perform properly the required medical functions.
2. Due to the danger of increased contagious and infectious diseases in crowded ships during the summer months, strict vigilance must be maintained by all concerned to prevent unsanitary conditions arising.
3. Japanese medical personnel on repatriation ships should be instructed to:
 - a. Maintain personnel on duty in the sick bay 24 hours daily.
 - b. Maintain definite hours of sick call.
 - c. Make daily inspection of steerage; spot checking passengers and baggage for disease and vermin.
 - d. Make daily inspection of food and water and the utensils and personnel utilized in its preparation.
 - e. Assure adequate ventilation.
 - f. Destroy all rodents and vermin.
 - g. Isolate contagious patients.
 - h. Disinfect former bedding and clothing of patient.
 - i. Disinfect room from which patient was removed.
4. Repatriation ships upon arrival at port should be boarded and a check made for evidences of non-compliance. If personnel of Allied Forces made the voyage they should be queried regarding non-compliance.

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
PUBLIC HEALTH AND WELFARE SECTION**

WEEKLY BULLETIN

**For Period
14 April to 20 March
1946**

SECTION I WELFARE

General

Mrs. K. Sexsmith, Director of civilian relief, American Red Cross, for Japan, was assigned to the Welfare Division to assist with the reorganization program of the Japanese Red Cross.

Welfare Administration

A series of conferences were attended which were held by the Labor Advisory Committee and Finance Division of Economic and Scientific Section, to discuss preliminary proposals of the Finance Ministry regarding the annual budget. These conferences included discussions on allowances for public welfare, public works program and social insurance. Details will be announced after final approval of the budget by the Finance Ministry.

Private Welfare Supplies

Based on policy recommendations from Korea, a reply to WARCOS inquiry was made reaffirming the previous recommendations on the handling of relief supplies to be sent by a single coordinating private agency in the United States. Private agency representative could handle the work but their activities would come under military control.

Mr. G. F. Batt, a recent arrival in Japan, representing the service committee of the Federated Council Churches of Christ in America, visited the Welfare Division. Mr. Batt was a missionary in Japan from 1921 – 1942 and has returned with another representative to lay the ground work for the reestablishment of private welfare and missionary activities. Our recommendations to WARCOS as to policy for the handling of voluntary relief supplies from the United States for Japan and Korea explained and Mr. Batt was invited to communicate freely with this office on matters of mutual interest.

Child Welfare

Pursuant to previous conferences with Japanese railroad, welfare, and police representatives, the Welfare Ministry submitted to this Division a program for the treatment of homeless children picked up in the streets or in railroad stations. This program establishes child protection committees in each prefecture to administer, supervise and raise standards of child care, especially in institutions and to keep records showing the history of each case.

Social Insurance

A field trip covering Kyoto, Nara, Osaka, Kobe was made by Major Riordan and representatives of the Labor Advisory Committee, Economic and Scientific Section, for the purpose of observing the operation of Social Insurance programs at the various levels of government. Conferences were held with Japanese medical association officials, labor leaders, employee representatives, Tonari-gumi (group leader), neighborhood association officials; also prefectural, city and village officials. The general feeling was prevalent that in the face of inflation doctors were unable to meet living costs from their fees, and that a breakdown in the Social Insurance program has resulted. Definite recommendations for improvements in the system are being prepared by members of the inspecting party.

SECTION II PREVENTIVE MEDICINE

General

Activities of this Division during the week were concerned principally with the supervision of quarantine against the importation of cholera by Japanese repatriates from South China. All ships bearing cholera have been concentrated at Uraga or are enroute to that port. Patients are being treated at Nobi Hospital, approximately four miles from Uraga, suspects are quarantined in a compound at Tai-sen-gakko (Uraga port area) while the remainder of the contacts remain under shipboard quarantine at an anchorage about three miles off shore. Alteration of shipboard latrines and disinfections of all excrete have been ordered.

Verbal instructions were issued to Japanese officials to supply adequate personnel of all categories to cope with the emergency situation. Specific directions were given to them to correct obvious deficiencies in the technique of isolation at both the Nobi Hospital and the isolation quarters at Tai-sen-gakko.

Conferences with Cavalry Brigade Commander, the Commanding Officer, 12th Cavalry, the Commanding Officer, Port of Uraga and his surgeon, were held concerning problems in connection with repatriation of cholera cases. Six Medical Corps officers were placed on temporary duty with the First Cavalry Division to assist the Surgeon of the Port of Uraga.

The repatriation vessels were moved three miles off shore and the technique in disposal of excreta corrected. A small river boat was obtained from SCAJAP and anchored in the anchorage of the fourteen repatriation vessels. This ship is to serve as a headquarters for the quarantine personnel.

A newly converted hospital ship has been procured from SCAJAP and is to be at Uruga by the beginning of next week.

COMNAVJAP has been requested to furnish a patrol for the anchorage, to enforce quarantine and to prevent any unauthorized communication with the shore.

The Port Quarantine Officer returned from Sasebo, which had also been designated as a port for the reception of cholera cases. Up to the present time, however, no such cases have been received there.

A report by Capt. Bouchelle, Public Health Officer, 94th Military Government Group, on the recent phases of the typhus control program in Osaka Prefecture, is attached as an inclosure.

Sanitary Engineering

Conference was held this week with the Supply Division, Ministry officials, and representatives of the Japanese Insecticide Manufacturer's Association. All concerned were urged to increase the production of effective insecticides to the maximum. Information is being gathered on various emulsifying agents available in Japan for use with pyrethrum.

Recommendation was made to Chief of Staff with the concurrence of the Chief Surgeon and Natural Resources Section for the approval of the policy of airplane spraying with DDT for the control of disease bearing insects in certain areas having large concentrations of troops. Studies reveal that this method of control can be used in specific areas without having a detrimental effect on food production of the country.

Detailed plans and programs were completed for the insect and rodent control school to be held at Kyoto next week for Military Government Public Health and Sanitary Officers, and Japanese Prefectural Health Officers.

Laboratory Activities

Diagnosis of Cholera Infection in Repatriation Port: On a visit to the Uruga Repatriation Port, 15 April 1946, the laboratory facilities were inspected at the Kurehama center in which examinations for cholera carriers are carried out. According to the local authorities specimens are collected for examination several times from each person on board a suspected vessel. The techniques employed in the laboratory appeared adequate. About 350 proved carriers were detected thus far.

Reform of Medical Education: Important changes in the medical curriculum were formulated by the Council on Medical Education aiming toward increased emphasis on practical training over the lecture method. Standards for hospitals providing internship were established. A full month of the internship will be devoted to practical public health training in approved health centers. Standards were established for medical school facilities, including attached hospitals, and coordination was achieved with the Japanese Medical Association to provide an extensive program of postgraduate medical education for practicing physicians throughout the country.

Nutrition Service

Nutritional table with reference to quantities and kinds of food used in Sugamo Prison were given to Capt. Egokvist, (Price Control and Rationing) as requested. Findings for this conclusion were obtained from the two lists of foods (one from Allied Government sources and the other from Japanese Government sources); submitted to the nutritional section by Colonel Robert M. Hardy, Commanding the Sugamo Prison.

Estimated calories and discussed with Price Control and Rationing Officer on ration of food for Allied Nationals and others. Only tentative data were available.

Hospital Survey

Report on Nutrition Survey of hospital patients was obtained 19 April. For three days nutritional status of the patients was observed and data on food consumption were recorded. The four types of Japanese hospitals under nutritional study were: Kiyose, tuberculosis; Inogashira, mental; Hiro-o and Shitaya, general. Plans have been discussed with Dr. Lorvada (Bureau of Public Welfare) for a visit to Hiro-o Hospital and others next week.

City Survey

Average results of the physical examinations made in February 1946 on the Nutrition Survey of cities and surrounding prefectures by the Ministry of Health and Welfare, Imperial Japanese Government, as well as, data from nutrition surveys of Tokyo in December 1945 were submitted. The physical symptoms related to nutrition tended to be less prevalent in the prefectures surrounding Tokyo than in the other prefectures or cities.

Quarantine Service

Statistics for the week ending 20 April, are not yet available but the characteristic is an ever increasing number of incoming and a decreasing number of outgoing repatriates passing through quarantine.

The past week, seven Liberty Ships from Canton located to capacity arrived at Uraga with a very large number of Cholera cases. The quarantine station at Tai-sen-gakko (Uraga) has been satisfactorily organized to handle this emergency.

SECTION III ADMINISTRATION OF HOSPITALS

Japanese Civilian Hospital Strength Report for the period ending 15 March 1946, shows 2,977 hospitals with a capacity of 203,866 beds, 95,944 of which were occupied. Out-patients for the same period number 237,586.

Venereal Disease Control

Conferences with Japanese officials of Tokyo-To concerned with venereal disease control and the Surgeon's Office of Provost Marshal, Tokyo, revealed that there was a shortage of hospital beds for the treatment of these diseases. Throughout Japan hospital beds are less than half occupied. It was pointed out to those officials that a venereal disease should be regarded as any other contagious disease and that there was no reason for not using available bed space in any general or contagious disease hospital. Instructions were issued to make 500 beds available for this purpose.

SECTION IV NURSING AFFAIRS

Reports from Japanese

A committee from the Physical Culture Program in Kyushu sponsored by the Asahi News Company visited this Section. They stated that there was some difficulty in regard to the land and a conference was held with Mr. Zaccono (Legal Officer). Further investigation will be made by Mr. Zaccono and report will be made about the land. The representatives from Kyushu also brought program of Public Health meetings to be held there during the early part of May with invitations to several officers in the Public Health and Welfare Section to participate in the program. Meetings will be held in several prefectures of Kyushu.

The pictures that were taken of the Japanese hospitals concerning nursing activities had their first showing and were reviewed by this Section.

A small informal meeting was held at the Japanese Red Cross Central Hospital in regard to a National Nurses Association (Clinical Nurses). Miss Yamamoto had been president but is unable to carry on, hence she submitted her resignation and a temporary chairman was named. Plans are now underway for the association to begin to function again as a nursing organization.

First prefectural survey has been completed (Kanagawa).

SECTION V VETERINARY AFFAIRS

General

The Chief of the Veterinary Affairs Division departed for Korea to meet with the Veterinary personnel of USANGIK.

Report from Japanese

Animal Disease Report: The Ministry of Agriculture and Forestry, Animal Disease Section, reported one case of swine erysipelas in Miyazaki Prefecture.

SECTION VI DENTAL AFFAIRS

The Council on Dental Education was formed 15 April 1946, composed of members representing all phases of the dental profession.

SECTION VII SUPPLY

Narcotics

A Memorandum of General Application Pertaining to Memorandum Number (SCAPIN 229) 2 November 1945, to the Imperial Japanese Government, subject: "Disposition of Heroin in Japan" was issued setting forth that sufficient time has elapsed for the confiscation and destruction of heroin in Japan. Since reports have been received

from only twenty prefectures in Japan, action to expedite the accomplishment of the objective of the directive was directed.

A visit to the Utena Medicine Manufacturing Company, Tokyo resulted in approximately 32 pounds of medical morphine and an undetermined amount of codeine phosphate being removed to the Tokyo Medicine Company for inventory. One thousand 25 gram bottles of procaine, which has been reported in short supply, was discovered and distribution directed.

Production

The Japanese Government was directed to submit an import program covering requirements of DDT products for the period 1 July 1946 to 30 June 1947. Initially, it will be necessary to import considerable quantities of finished products but since talcum and pyrophyllite rock are available in Japan and Korea, steps will be taken to develop local facilities for mixing of larvacide and louse powders from the DDT concentrate. Insecticide spray may also be produced locally but importation of oil and several other diluents will be necessary.

Approximately 100,000 pounds of DDT dusting powder was produced during the week. This production was accomplished by placing the manufacturing plant engaged in the project under the direct supervision of an officer from Supply Division. Prior to assigning an officer to exercise direct supervision over plant operations, the weekly production had never exceeded 20,000 pounds.

Concurrence was given to the exportation of 488 tons of agar which was surplus to Japanese requirements.

The Welfare Ministry submitted a complete production program covering all types of vaccines and sera. This program will provide sufficient biologicals for Japanese use. At the present time, priority is being given to the production of cholera vaccine.

Distribution

Fuel continues to be a critical commodity for medical manufacturing purposes. Recommendations have been submitted to Economic and Scientific Section, covering specific requirements of coal at the various biological manufacturing laboratories.

An additional increment of 24,000 vials of typhus vaccine was released to the Japanese Health Ministry for shipment to repatriation ports.

Shipment of medical supplies and equipment and DDT to Chinese ports for medical processing of repatriates was completed. Request has been received from Commanding General, China Theater, for an immediate shipment to Manchuria to cover initial repatriation needs. An additional shipment will be required 1 June to be followed by others as requirements are definitely determined.

A conference was held on the subject of "Supplies for Mosquito and Fly Control Program". Indigenous Japanese materials will be used to the extent available. Pyrethrum extract, paris green and phenothiazine are some of the most important items desired for this program. Since pyrethrum is to be used in an emulsion, it will be necessary to furnish considerable quantities of emulsifying agents. These items are to be supplied through normal Japanese supply channels.

The War Department has been advised to cancel any reserve of anti-typhus units now being held for Japan and Korea. Report has been received that 41 units are being held in an overall reserve for the Western Pacific. Future requirements for these units will be met by requisitioning component parts. This action will obviate the necessity of assembling and shipping complete units of equipment; also it will prevent the accumulation of excesses which are bound to occur under a system of unit assembly supply.

A visit was made to the House of Bethany Sanatorium with a War Correspondent representing the Catholic News Service. It had been reported that importation of relief medical supplies had become necessary due to inability of the Japanese Government to furnish a minimum level of medical supplies and equipment to the several sanatoria operated by the "Works of Bethany" organization. These hospitals were having difficulty in securing an allotment of supplies through the local hospital association. Three x-ray machines were on hand but no film was available. For some reason the hospital had not been informed that sufficient film was on hand in local wholesalers plants. The representative of the Tokyo-To Health Department who was present at the conference will take action to insure an equitable distribution of medical supplies for the hospitals.

Reports are still reaching SCAP Headquarters to the effect that the Ministry of Health and Welfare has not authorized distribution of an additional 50 percent of Japanese Army and Navy supplies. Orders covering this distribution were issued to each prefecture during early March. These orders were confirmed at regional meetings held throughout Japan during March which were attended by officials from each prefecture. At that time, a definite plan was presented which indicated the items that were to be shipped between the prefectures. The orders for distribution and the detailed plans have been carefully checked by representatives of the Supply Division and are considered to be sufficient authority for initiation of action on the part of prefectural officials. Seventy percent of all Japanese Army and Navy supplies have now been authorized for distribution with the remaining 30 percent being held in reserve.

SECTION VIII
LEGAL AFFAIRS

No report.

SECTION IX
DIRECTIVES TO IMPERIAL JAPANESE GOVERNMENT

None.

CRAWFORD F. SAMS,
Colonel, Medical Corps,
Chief, Public Health and Welfare Section.

4 Incls:

- #1 – Report of 94th Mil. Govt. Group concerning typhus in Osaka.
- #2 – Weekly Communicable Disease Report, 6 April 46.
- #3 – Weekly Venereal Disease Report, 30 March 46.
- #4 – Corrected Report of Epidemic Typhus Fever since Week ending 2 March 46.

HEAD QUARTERS
94TH HQ & HQ DET MIL GOVT GP

APO 660 (Osaka, June)

11 Apr. 46

Subject: Typhus Epidemic, Osaka, Japan

TO : CO, 94th Hq & Hq Det Mil Govt Gp, APO 660

1. This report is a follow up of a previous one dated 20 Mar. 46.

2. Program of area dusting.

a. Beginning 19 Mar. 46 in conjunction with the 25th Infantry Division those areas of Osaka where typhus cases were congregated were dusted by 215 teams consisting of 5 Japanese dusters, one policeman supervisor, one interpreter, and two enlisted personnel. These teams were known as area teams. Their duties were to go into the designated area, dust every person living there in his own home, and at the same time dust all extra clothing, mats, blankets, and articles of that nature. Dusting was done essentially as outlined in TB Med 194 except that it was done between each layer of clothing. The first round of dusting covered 390 separate areas of Osaka Prefecture.

b. Simultaneously focal dusting and vaccination were carried out by 85 focal teams which were of the same composition as the area teams with the addition of two nurses (or technicians) who were equipped to administer vaccine. New cases were reported to the 94th Hq & Hq Det Mil Govt Gp by 1600 hours each day. These names and addresses were in turn passed on to the 4th Infantry which sent the focal teams to the various addresses. Every house within 100 yards of that of the sick man and every person living in those houses were dusted in the same manner as that used by the area teams. In addition, the 100 persons living closest to the typhus patient were vaccinated with 1 cc of typhus vaccine.

c. During 14 days (19 Mar – 1 Apr) required for the first complete dusting of the areas outlined 1,306,360 persons and their homes were dusted with 201,757 lbs DDT (0.15 lb DDT per person). In addition, 132,574 persons were vaccinated with 1 cc of typhus vaccine.

d. Upon the completion of this first area dusting new areas were marked out on the basis of one area for every group of two or more cases located less than 2 blocks apart. Due to the decreasing number of new typhus cases these areas were much smaller in size and fewer in number than those in the preceding program. 188 areas were redusted. During the three day period, 2 April through 4 April, 90,013 persons and their homes were dusted with 16,106 lbs of DDT (0.18 lb DDT per person). 22,026 persons were vaccinated with 1 cc typhus vaccine each during this period. 222 area teams and 63 focal teams were used for this phase of the program.

e. After 4 April only focal dusting and vaccinating were continued. The number of focal teams was set at 63, the number to be gradually decreased as the need for them disappeared.

3. Present situation.

a. The drop in daily incidence of new cases which started on 8 Mar after a high of 277 on 7 Mar has continued to the present. 25 new cases were reported for 8 April.

b. Contacts of new cases are dusted and vaccinated each day by teams of Japanese under the supervision of personnel from the 4th Inf Regt of the 25th Inf Div.

4. Conclusions

a. Several factors have played a part in the control of this epidemic.

(1) Mass dusting of Osaka City, Fuse City, and Sakai City 16 – 19 Feb brought about the decline started on 8 Mar.

(2) This decline was aided by continued focal dusting under the Japanese, but the possibility of a return to higher figures could not have been prevented without the program of area dusting carried out 19 Mar – 4 April.

b. It is not possible to say where the benefits from one program left off and the other began. But the continued decrease in number of new cases after 7 April should probably be attributed to the area delousing

carried out in conjunction with the 25th Division. The decline previous to that can hardly be attributed to anything but the mass delousing of 16 – 19 Feb.

MCLEMORE BOUCHELLE /s &/t

Public Health Officer

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
PUBLIC HEALTH AND WELFARE SECTION**

WEEKLY BULLETIN

**For Period
21 April to 27 March
1946**

SECTION I WELFARE

Public Assistance

A report was submitted by the Japanese Welfare Ministry on public assistance rendered in March in compliance with SCAP Memorandum. Only 19 prefectures were covered by the report. Poor communication was the reason given for inability to report on all prefectures. However, reports from all prefectures will be rendered separately as soon as received.

Briefly in the 19 prefectures reporting, 275,425 families (representing 1,010,083 individuals) and 34,011 unattached persons received relief in March. This represented a total of 1,044,094 individuals. Total outlay was 28,176,375 yen, or approximately 27 yen per individual per month.

Certain discrepancies appeared such as wide variations in some cases in grants between prefectures, and incomplete coverage of relief categories. There will be corrected as soon as instructions can be disseminated to all prefectures.

Housing

Accented activity was apparent in housing this week as Labor Advisory Committed, ESS called several meetings in connection with their Japanese Public Works Program. Forestry, Price Control and Rationing, Industry, Mining, Public Welfare and other sections were represented. Agreement was reached that the Ministry of Welfare should build up a shelf of projects and that Economic Stabilization Board should be the deciding group in which projects would be eliminated. Housing was increased in priority and amounts from 300,000 houses planned in 1946, to 1,000,000 for the year and a six year program of 1,000,000 per year. It was generally agreed that the lumber was forthcoming by equalization of projects.

Liaison

Reorganization and fact finding on the Japanese Red Cross Society is progressing with a complete analysis of their funds, expenditures and future program as the goal of the inquiry. Meetings have been held with the Board of Councilors which were productive of satisfactory results.

Labor

A representative of the Welfare Division attended two conferences between the Labor Advisory Committee, ESS, and officials of the Imperial Ministry of Health and Social Affairs in which plans for the creation of Labor Ministry were explored. While still in the formulative stage, it appears that a new ministry for labor will be created in the Imperial Cabinet.

Field Trip

On 22 April a representative of the Division returned from a field trip to Niigata, Miyagi, Yamagata, Akita and Aomori Prefectures. Military Government Companies were visited regarding the distribution of Japanese army and navy winter clothing (SCAPIN 760) and also public assistance (SCAPIN 775).

It is the general opinion of Military Government Companies that much more clothing and food is in the prefectures than has been reported. If all supplies had been reported the 30 percent set aside for relief would be much greater than present inventories show.

Prefectures have done very little regarding Memorandum to Imperial Japanese Government (SCAPIN 775) subject, Public Assistance.

Social Work Education

A representative of the Welfare Division conferred with Mr. S. Kato, Chief of the Protection Bureau of the Welfare Ministry, and Mr. M. Fukuyama, Chief of the Business Section of the National Social Work Association, relative to a program of education in social work in Japan. The latter organization, composed of public and private agencies in Japan, had been active in this field, but not since the outbreak of war. It still operates to a limited extent as a coordinating agency and handles a welfare employees benefit fund. Mr. Fukuyama is to submit a plan for training social workers and for in-service training for those now engaged in this field.

Lt. Comdr. A. E. Crafts of the Education Division of the Civil Information and Education Section was consulted on this matter and is making a study from the point of view of curriculum in social work.

SECTION II PREVENTIVE MEDICINE

General

The quarantine for cholera at Uraga is functioning in a satisfactory manner. While new cases continue to be discovered and isolated the rate of increase is definitely declining.

The ship Konei Maru has been put into use as a quarters ship and floating quarantine headquarters. Approximately 20 Japanese physicians and 80 nurses of the quarantine service are living aboard.

The hospital ship Charles Lummis (VU-002) which was ordered to Uraga was returned to Yokohama for further minor modifications in view of the fact that it is to be used entirely for contagious (cholera) patients. It was estimated that the work would be completed in about five days and that the Lummis would again be available by 30 April.

Following a conference with G-3 Repatriation, a radiogram was dispatched by the G-3 Section to ##### emphasizing the necessity for more effective quarantine at Chinese ports of embarkation as a prerequisite for the continued smooth flow of repatriation from that area.

Sanitary Engineering

The training school on insect and rodent control was held this week in Kyoto with representatives of all Military Government units attending the first three days of the week and public health officials from all prefectures attending the last three days. Lectures and discussions were held on Japanese insect-borne diseases, their vectors and manner of transmission. Demonstrations of control measures were given in both urban and rural areas using both U.S. and Japanese supplies. Instructions were given for the organization and uses of insect and rodent control teams in all prefectures and cities.

Laboratory Activities

Control of Japanese B Encephalitis: At a conference in Kyoto devoted to a training course in Insect and Rodent Control for military government public health officers and Japanese health officials, the laboratory consultant discussed the etiology, epidemiology and geographic distribution of Japanese B Encephalitis. Among the elements stressed were the potential danger of this disease, particularly to non-immune occupation personnel and others not previously exposed to repeated mild sub-infective doses of the virus, also its widespread prevalence during the summer months in all of Japan except Hokkaido, generally in mild and unrecognized form but occasionally in major epidemic form, and its transmission by mosquito bite from some as yet unknown animal source of contagion other than man. This disease is now the principal mosquito-borne disease of Japan and is far more prevalent and potentially far more dangerous, especially during certain unusually hot summers, than malaria, dengue or filariasis. Rigorous mosquito control is the only practicable method of prevention that can be employed at present. Although the native population is generally thought to be largely immune, the proportion of susceptible persons among them is constantly growing, either from the wearing off of immunity previously acquired or by the continuous addition to the population of non-immune children. The last great epidemic occurred in 1935. Instructions have been drawn to govern laboratory procedure for diagnosis in suspected cases in order that the earliest phase of an epidemic during coming months may be recognized quickly and permit the speediest possible utilization of protective measures in U.S. army personnel, including vaccination.

Council on Medical Education: The report of the Subcommittee on National Licensure Examination was read and accepted in the general meeting of the Council. The measures for enforcement of the program will become effective shortly to include the next graduating class becoming eligible for examination during this coming October.

Nutrition Service

The calculation on basic calorie levels for the adult Japanese from data available was completed.

Nutrition study was made on three Japanese hospitals – Imperial Gift Hospital, the Metropolitan Police Hospital, and the Hiro-o Hospital. Dr. Tenada, Bureau of Public Welfare, and Miss Taniwara, Nutritionist, accompanied the Nutrition Consultant, Public Health and Welfare Section, on those visits.

The Nutrition Department of the Imperial Gift Hospital was under the direction of Miss Shi####. Observation was made of the nine nutrition students preparing and serving a meal. The equipment was excellent and this hospital seemed to be the only one of the three in line with modern theories of nutrition. The Metropolitan Police Hospital and the Hiro-o, each has one nutritionist but both had little authority in carrying out nutritional duties. With the exception of calculation on a few special diets all food problems were done by the doctor. It was interesting to note that all food service was carefully weighed.

Conference was had with Dr. Oiso regarding the May survey. A schedule for the opening of the survey was checked. The first week of the surveys Dr. Oiso plans to observe the southern area in action.

SSECTION III ADMINISTRATION OF HOSPITALS

The Japanese Civilian Hospital Strength Report for period ending 22 March 1946 shows 2,980 hospitals with a capacity of 203,721 beds, 99,125 of which were occupied. Out-patients treated for a like period numbered 254,630.

SECTION IV NURSING AFFAIRS

Reports from Japanese

Written reports from committees on Nursing Education have been received, containing results of committee work.

Nursing Educational Council met again on 24 April 1946 and discussed curriculum, licensure and refresher course for head nurses, which is to open 2 May 1946. The Council voted that a three year basic training course be given for all nurses and midwives. During the third year a nurse could choose a specialty and after graduation she could take Post Graduate course, if desired, in her chosen field of work.

The Japanese Medical Association held its meeting 27 April and this section was asked to present Public Health Nursing to the doctors.

Personnel

Civilian Nurse Consultant (Miss Lane) has reported for duty.

SECTION V VETERINARY AFFAIRS

Reports from Japanese

Weekly Animal Disease Report: The Ministry of Agriculture and Forestry, Animal Disease Section, reported that no new outbreaks of communicable animal diseases occurred during the week.

Monthly Animal Disease Report: The Ministry of Agriculture and Forestry, Animal Disease Section, has submitted the following summary of animal disease for March, 1946:

<u>Disease</u>	<u>Number of Cases</u>
Blackleg	1
Infectious abortion of cattle	
Trichomoniasis	171
Bang's Disease	9
Vibric abortion	1
Texas fever	18
Anthrax (bovine)	2
Swine plague	2
Swine cholera	7
Swine erysipelas	1
Rabies (canine)	2
Strangles	406
Equine infectious anemia	29
Equine infectious abortion	9
Pullerum	495

Daily Inspection Report: The Ministry of Health and Social Affairs, Veterinary Hygiene Section, submitted the following Dairy Inspection Report for the month of February, 1946:

<u>Special Milk</u>		
Farm inspections		26
Number of farms	10	
Milk samples examined	61	
Over bacterial standard	0	
Under butterfat standard	0	
Plant inspections	69	
Over bacterial standard	1	
Under butterfat standard	1	
Volume of milk (litters)	16,707	

<u>Ordinary Milk</u>		
Farm inspections		8,714
Number of farms	40,974	
Milk samples examined	4,693	
Over bacterial standard	537	
Under butterfat standard	2,727	
Plant inspections	4,353	
Over bacterial standard	376	
Under butterfat standard	757	
Volume of milk (litters)	5,106,392	

<u>Goat Milk</u>		
Farm inspections		92
Number of farms	231	
Milk samples examined	67	
Over bacterial standard	7	
Under butterfat standard	4	
Volume of milk (litters)	25,344	

SECTION VI DENTAL AFFAIRS

No report.

SECTION VII SUPPLY

General

A representative of the Supply Division attended the meeting on mosquito and fly control program for Japan, held in Kyoto. This meeting was attended by medical officers or sanitary officers from all Military Government Companies in Japan. Discussions were held concerning basic policies with respect to production, distribution of returned Japanese military supplies, and requisitioning of supplies required for civilian use. Plans for the production of penicillin in Japan were outlined. Information was furnished concerning materials required for mosquito, fly and rodent control programs.

A visit was made by a Supply Division representative to the Osaka Imperial University Laboratory. This laboratory is an excellent physical plant and has sufficient technicians and equipment for good operation. The laboratory is meeting the production schedule of vaccines as established by the Welfare Ministry. They are furnishing scheduled requirements of cholera vaccine and smallpox vaccine to designated ports for vaccinating repatriates.

A representative of the USA Typhus Commission, who recently visited all southern ports, reported that sufficient vaccines were on hand to vaccinate repatriated personnel.

Distribution

Reported shortages of medicinal narcotics in the northern prefectures of Honshu were investigated. Maldistribution rather than actual shortages were responsible for the reports, and corrective measures have been taken.

An additional requirement of DDT and typhus vaccine has been submitted to the War Department. This requirement was necessitated by the opening of the Manchuria repatriation program and expected early initiation at repatriation in Russian areas.

Shipment of medical supplies and DDT for processing 115,000 repatriates was made to Hultae, Manchuria.

During a conference with officials of the Welfare Ministry it was emphasized that supply operations at repatriation ports must be improved. Several reports of deficiencies and irregularities were given to the responsible officials for immediate corrective action. This matter also was reported Commanding General, Eighth Army with request that closer supervision be exercise over supply activities at ports.

Production

The Japanese are experiencing difficulty in obtaining glassware for packing of vaccines. A list covering all types and sizes of bottles, required for the entire program, has been submitted to ESS, with request that production be instituted as soon as possible.

Request was submitted to ESS for importation of 2900 tons of tale rock from Korea. The Japanese have not as yet demonstrated the ability to mine tale rock in quantities required and Natural Resource Section recommended steps be taken to import until a sufficient supply of accountable quality is made available in Japan. Shipment of 1000 tons of prophyllite rock also has been requested from Korea.

Production of DDT dusting powder during the last week amounted to 150,000 ponds. Facilities are being increased and production of twenty tons per day is planned effective 1 June.

Narcotic Control

Preliminary steps were taken to establish a narcotic import program in Japan and Korea. Requirements for medicinal narcotics for legitimate medical needs will be established taking into account civilian and former Japanese military stocks of narcotics.

Reports were received that Japanese repatriates are attempting to smuggle opium and morphine into Japan, and several seizures have been made at the ports of entry. At the direction of Narcotic Control Officers, GHQ, SCAP, a 23-pound cache of raw opium was seized in Osaka. Investigation is being continued by the Japanese police.

SECTION VIII LEGAL AFFAIRS

No report.

SECTION IX DIRECTIVES TO IMPERIAL JAPANESE GOVERNMENT

AG 400 (26 Apr 46) PH, (SCAPIN 905) subject: "Non-compliance with Existing Directives, Resulting in Lack of Reserve Relief Supplies and Inadequate Distribution of Relief Clothing."

The above was an administrative memorandum issued, with surveillance, for non-compliance with existing directives (SCAPIN 473) and (SCAPIN 760) on relief.

Crawford F. SAMS
Colonel, Medical Corps,
Chief, Public Health and Welfare Section

4 Incls:

- #1 – Memo to IJG (SCAPIN 905)
- #2 – Memo to (SCAPIN 905)

- #4 – Weekly Venereal Disease Report, 6 April 1946

GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS

APO 500
26 April 1946

AG 400 (26 Apr 46) PH
(SCAPIN 905)

MEMORANDUM FOR: IMPERIAL JAPANESE GOVERNMENT.

THROUGH: Central Liaison Office, Tokyo.

SUBJECT: Non-Compliance with Existing Directives, Resulting in Lack of Reserve Relief Supplies and Inadequate Distribution of Relief Clothing.

1. Reference is made to paragraphs 2c, 3 and 4 of Memorandum for the Imperial Japanese Government, File AG 400 (21 Dec 45) PH, (SCAPIN 473) dated 21 December 1945, subject: "Reserve Supplies Held for Relief Distribution" and paragraph 2 of Memorandum for the Imperial Japanese Government, File AG 400 (21 Feb 46) PH, (SCAPIN 760) dated 21 February 1946, subject: "Distribution of Winter Clothing Held for Relief Purposes".

2. Information of non-compliance with directives mentioned in paragraph 1, above has been received. Specific defects are as follows:

- a. Distribution of relief supplies has been made in some Prefectures without the specific authorization of the Supreme Commander for the Allied Powers.
- b. Variations found in inventories of reserve relief stocks have not been promptly reported to SCAP.
- c. Copies in English of all regulations and instructions promulgated in connection with the plan of distribution of reserve relief supplies have not been furnished the Supreme Commander for the Allied Powers.
- d. Distribution of all winter clothing and blankets held for relief purposes has not been commenced in some Prefectures.
- e. The Ministry of Health and Social Affairs, acting as agent of the Imperial Japanese Government, has failed to allocate and distribute reserve relief supplies among Prefectures based upon the needs in each area.
- f. No effort has been made in some Prefectures to properly store, safeguard, and rotate supplies to prevent their deterioration and pilferage.

3. The Imperial Japanese Government will take immediate steps to correct these defects and will institute procedures which will prevent recurrence by assuring that all prefectural and local government officials concerned are fully informed as to their duties and responsibilities in connection with reserve relief supplies.

4. A written report of the measures taken will be submitted to the Supreme Commander for Allied Powers, not later than 3 May 1946.

FOR THE SUPREME COMMANDER:

B. M. FITCH,
Brigadier General, AGD,
Adjutant General

GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS

APO 500
26 April 1946

AG 400 (26 Apr 46) PH

MEMORANDUM:

SUBJECT: Information of General Application Pertaining to Directive Number (SCAPIN 905) 26 Apr. 1946, subject: "Non-Compliance with Existing Directives, Resulting in Lack of Reserve Relief Supplies and Inadequate Distribution of Relief Clothing".

1. With reference to Memorandum for the Imperial Japanese Government, file AG 400 (26 Apr 46) K, (SCAPIN 905) dated 26 Apr. 1946, the following is published for the information of all concerned.

2. The failure of the Imperial Japanese Government and Prefectural and local governments to comply with directives of SCAP to establish, maintain and distribute reserve relief supplies from former Japanese Army – Navy stocks has been brought to the attention of General Headquarters, Supreme Commander for the Allied Powers, and to require corrective action.

3. Command instructions pertaining to the execution of surveillance required in connection with Memorandum mentioned in paragraph 1, above, have been dispatched through command channels. The following is a general statement regarding Occupation Force responsibility for surveillance of the directive.

- a. Inspections made of the operation of the Reserve Relief Supply plan should include sample checks of food and clothing storage locations to insure adequacy of facilities and measures taken to prevent deterioration and pilferage of supplies.
- b. All winter clothing and blankets held for relief distribution should be distributed pursuant to previous directives of General Headquarters, Supreme Commander for the Allied Powers. No distribution of food stocks held as a relief reserve has been authorized by Supreme Commander for Allied Powers, with the exception of the distribution of food stocks subject to early deterioration. Whenever possible stocks so distributed will be replaced from other Japanese Army and Navy supplies turned over to the Japanese Home Ministry.
- c. Inspections of distribution points should be made to verify that no discrimination or preferential treatment is being provided individuals or groups of needy persons.

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
PUBLIC HEALTH AND WELFARE SECTION**

WEEKLY BULLETIN

**For Period
28 April to 4 May
1946**

SECTION I WELFARE

General

Major G.K. Wyman left the Welfare Division to return to the United States under Readjustment Regulation.

Public Assistance

Returns from 21 more prefectures were submitted bringing to a total of 40 the number of prefectures reporting public assistance granted in March 1946. In the 40 prefectures 488,452 families (representing 1,805,813 individuals) and 52,651 unattached persons received relief in March. This represented a total of 1,858,239 yen, or approximately 24 yen per individual per month.

Representatives of the Japanese Welfare Ministry submitted to the Welfare Division, PH&W Section, a progress report and a draft of proposed legislation for a comprehensive governmental program of public assistance. Pending the enactment of legislation in the forthcoming Diet session the Japanese government has taken special measures to put an overall relief program into practice as of 30 April 1946 previously directed by SCAP, Memorandum, 27 February 1946 (SCAPIN 775), according to reports the proposed legislation for "a living protection act" assumes overall governmental responsibility for public assistance for all categories of indigent persons. It was expected that new legislation could be enacted by July at which time existing relief laws would be abrogated. The report indicated definite action toward compliance with SCAP Directives. The Japanese representatives were instructed to proceed with their efforts along these lines, to specifically include in the legislation statements regarding recognition on the part of the Japanese Government of its responsibility in relieving and helping prevent suffer and hardship, and further assurances that relief would be given equally according to need and without discrimination or preferential treatment.

Reserve Relief Supplies

Based on investigations and inspections made by representatives of the Welfare Division and verbal reports from the Eighth Army Military Government Section, a memorandum (SCAPIN 905, 26 April 46) was issued to the Japanese Government regarding its failure to comply with SCAP directives on the handling of reserve relief supplies and the distribution of winter clothing. Specific instances of non-compliance were outlined and a report on corrective measures taken was required by 3 May 1946.

Private Relief Imports for Korea

Based on recommendations from Korea a reply was dispatched to the War Department concurring in the release of a special shipment of 100 tons of medical supplies made available for Korea by the Church Committee for Relief in Asia. Distribution will be made in accordance with the requirements of the Military Government in Korea.

Housing

A final meeting was held this week on the subject of "Japanese Civilian Housing" with Japanese Government personnel present who could assist in the breaking up of the "bottle-necks" existing in the housing program. Discussions developed which indicate a closer coordination between the various sections of the Japanese Government and the Housing Cooperation.

Red Cross

In the program and reorganization development of Japanese Red Cross, approval was granted for a Nurses Training Demonstration school to begin on or about 1 June 1946 with the combined student bodies and faculty from St. Luke's College of Nurses and Japanese Red Cross of nurses assisted by five American nurses to be procured by PH&W Section, SCAP.

An inquiry and welfare message service was set up for increased service to Japanese people at Japanese Red Cross National Headquarters.

SECTION II PREVENTIVE MEDICINE

General

Prepared Memorandum for Imperial Japanese Government requiring the revaccination against smallpox of all individuals not showing satisfactory evidence of a successful vaccination since 1 February 1946.

Conference with Dr. Ishibashi and Ogawa of the Ministry of Health and Social Affairs concerning implementation of the above Memorandum and distribution of necessary supplies.

Conferred with Dr. Ishibashi who was advised to include malarial fever and Japanese B Encephalitis in the text of reportable communicable diseases, pending publication of a formal memorandum to that effect.

Arranged through Statistical and Reports Section for the reproduction of graphic charts on communicable diseases for use by the Section Chief.

Insect and Rodent Control

Prepared Memorandum for Imperial Japanese Government directing the appointment of insect and rodent control officers in each prefecture and directing the organization of control teams and programs in the prefectures and in subordinate administrative units, as outlined in the conference and school held at Kyoto between 22 April and 27 April 1946.

Conferred with Chief of Section and with Lt. Reest of Planning Division, Civil Information and Education Section, concerning the organization of a publicity campaign on the control of insect and rodent borne diseases. Material is in preparation for presentation to a press conference to be held on 8 May 1946. Plans are being formulated for a publicity and educational program to be carried on by newspapers, radio and moving pictures throughout the country. Press releases and outlines for radio talks are being prepared.

Conferences were held with Japanese manufacturers regarding increased production of larvicides, insecticides and rodenticides by Japanese firms.

Reports from several areas indicate that active measures are already being taken to improve general environmental sanitation and to implement the control programs outlined at the Kyoto conference.

Sanitary Engineering

Water Supply: Continued demands by U.S. Occupational Troops for high chlorination of municipal water supplies in several cities in Kyushu were reported by Japanese Liaison Officer from that area and the Health Section of the Ministry of Health and Social Affairs. Procurement demands for chlorine are impossible to fill because of shortage of chlorine. Dosages of from four to six ppm for residuals of 20 ppm in the distribution systems appear excessive to this office for approved municipal water systems and have been the subject of several conferences with Chief Surgeon's Office and Office of Chief Engineer, AFPAC. This has resulted in the dispatch of a letter from Chief Engineer to Eighth Army requesting an investigation of chlorination procedure in Kyushu and correction of conditions found contrary to present policy.

Laboratory Activities

Procedures in Diagnosis of Japanese B Encephalitis: Because of the importance of detection of early cases of this disease as a means of warning of an impending epidemic, a set of instructions was prepared for use by military government public health officers and by medical officers in charge of occupation troops, governing procedures to be followed in collection and shipment of specimens. All specimens for diagnosis will be examined in the Neurotropic Virus Commission Laboratory, 42nd General Hospital, Tokyo. Inasmuch as specimens of cerebrospinal fluid require immediate freezing to protect any virus present against deterioration, supplies of dry ice will be procured through the Supply Division and made available to all hospital installations in Japan, Korea and the Ryukyus. Specimens for diagnosis in suspected cases will be obtained from native civilians as well as from occupation personnel and their dependents.

Preventive Vaccination against Japanese B Encephalitis: Conference was held with the Preventive Medicine Division of the Chief Surgeon's Office regarding organization of the vaccination program for occupation personnel in compliance with instructions from The Surgeon General directing pre-epidemic prophylactic vaccination against this disease. In view of the fact that the earliest threat of the disease occurs in areas furthest south, such as Okinawa, priority in supply of vaccine will be given to such areas until adequate amounts are available in the theater for all personnel affected by these instructions.

Laboratory Diagnosis of Cholera Carriers at Uruga Repatriation Port: A second visit was made to the laboratory at the Kuriyama Receiving Station of the Uruga Port and the facilities and organization were inspected. With the newly added supplies and personnel it is estimated that the capacity of the laboratory will be increased to accommodate the maximum repatriation load of the port within a week or less. At present the work load is light because of rough weather interfering with debarkation.

Council on Medical Education: Final reports were received and accepted from the Subcommittees on Internship, Medical School Curriculum, Medical School Facilities, Revision of Textbooks, and Postgraduate Medical Education, compelling all current agenda of the Council.

Council on Pharmacy and Therapeutics of the Japanese Medical Association: In order to obtain data on relative priority value of medicines requested by the Welfare Ministry for importation an invitation was sent to the

Japanese Medical Association, representing all Japanese medical practitioners, to send its representatives to a conference. Acting on this invitation the Association proceeded to organize a Council on Pharmacy and Therapeutics to serve as an advisory body on this and cognate matters. On 3 May 1946, the Council visited the Public Health and Welfare Section and was addressed by Colonel Sams. The Council will study the import list and submit its recommendations to the Supply Division in the near future.

The Council is planning to set up machinery for an expanded program aimed at raising standards of drug manufacture in general and at comparing the clinical efficiency of many drugs new employed by physicians with no other guidance than the manufacture's lable. Recommendations will be formulated for measures to control unethical practices in the sale of medicines and the advertising and sale of powerful drugs directly to the laity. The membership of the Council will include representatives of the Welfare Ministry, Ministry of Commerce and Industry, Medicine Control Corporation, Pharmacology Departments of Universities, Pharmacists' Association, Pharmaceuticals Association, and Pharmaceutical Manufacturers' Association. A representative from the Public Health and Welfare Section of SCAP will attend such conferences as concern the Section's interests.

Nutrition Service

Nutrition surveys began according to schedule May 1 and will continue until May 30. The 29 prefectures of Japan to be covered in this survey are:

Hokkaido	Tochigi	Shizuoka	Kyoto	Ehime
Iwate	Gunma	Aichi	Osaka	Kochi
Akita	Saitama	Toyama	Hyogo	Fukuoka
Miyagi	Chiba	Ishikawa	Wakayama	Saga
Fukushima	Tokyo	Fukui	Okayama	Kumamoto
Ibaraki	Kanagawa	Shiga	Hiroshima	

Urban, rural mining and other special districts will be included.

During the three days each family will keep a record of food intake. Also, quality and quantity of consumed material per male adult and per capita per day.

The Tokyo City survey was postponed from the first week of May until the last week of the month because of the increasing typhus rate. Dr. Oiso will be in Tokyo during the Tokyo nutritional survey to personally check on the incoming reports.

A meeting with several Japanese women nutritionists was arranged for next week.

Quarantine Procedures

The week ending 5 May, listed the largest concentration of ships in quarantine in one port for cholera in the maritime history of the Orient at least if not the world began to subside. Some 54,998 repatriates from Canton, China, beside 12,000 to 15,000 from Haiphong, Indo-china, have been in quarantine abroad approximately 15 ships.

A 1,500 bed general hospital and a hospital ship are being used for symptomatic cholera cases with an overflow of around 2,000 carriers convalescents and suspects, quartered in barracks at the quarantine station near Port Uraga.

Otherwise, the normal flow continued at the various repatriation centers.

SECTION III ADMINISTRATION OF HOSPITALS

A survey is being made in the Kanto district for suitable prefectural or governmental hospitals which may be designated to receive and treat venereal disease cases in areas warranted by sufficient concentration of allied troops.

Hospital bed report as of 8 May, there are 2,998 hospitals with a 204,718 bed capacity and a 101,461 patient enrollment.

SECTION IV NURSING AFFAIRS

Reports from Japanese

The midwifery committee sent in a report on the continuation of education of midwives. This report consisted of suggestions for short courses to be given every five years for midwives. The short course would be sponsored by Japan Midwives' Association.

Representatives from the Red Cross Hospital, St. Lukes' College of the Nursing, and Public Health and Welfare met at Red Cross Hospital to draw up the agreement for merging of the two student bodies in a Refresher Course. The Course opened 2 May 1946 at the Red Cross Hospital, Tokyo.

Personnel

Miss Lane, civilian nurse reported for duty. Lt. E. Matheson from 361st Station Hospital reported on temporary duty for 30 days, beginning 29 April.

SECTION V VETERINARY AFFAIRS

General

The Chief of the Veterinary Affairs Division returned from a field trip to Korea. Veterinary activities were surveyed and liaison established with Military Government and XXIV Corps officials.

Korean Veterinary Service was found to be weak and disrupted because of the capture of Japanese Veterinarians who occupied all key positions and the lack of qualified Korean replacements.

Governmental Organization

Structure of the Agency is as follows:

Bureau of Veterinary Affairs in the Department of Health and Welfare at National Headquarters, Seoul.

Veterinary Section in the Bureau of Health and Welfare at each Provincial Headquarters.

Provinces divided into districts.

Korean veterinarians, on a civil service status, have been appointed to every district, provincial office and national headquarters.

Military Government veterinary officers are functioning effectively at national and provincial levels. Each veterinary officer has a Korean counterpart acting in a similar capacity who is being trained for the position.

Education

Veterinary education is handicapped by the departure of Japanese teachers and the presence of only one school of college level teaching veterinary medicine. Ninety two percent of Korean veterinarians are graduates of provincial middle schools on a high school level, where they receive a combination agriculture and veterinary course principally of a didactic nature.

Military Government plans to remedy this situation by increasing the schools of college level from one to three; eliminating middle school veterinary education, raising entrance requirements and consolidating the facilities and teachers now scattered throughout the various provinces.

Licensure

Graduates of middle schools are examined and licensed to practice and graduates of Suwon Agricultural College are granted license without examination. Approximately 1,000 Korean veterinarians are licensed at the present time.

Livestock Industry

Animal strength in Korea as determined by the last census:

Dairy cattle	2,000
Work oxen	1,062,000
Swine	636,000
Sheep	48,000
Horses	35,000
Chickens	2,983,000
Dogs	225,000

These figures are indicative of the fact that the dairy industry is negligible and the main veterinary problems as far as cattle are concerned have to do with native Korean work oxen. The horses are principally Korean ponies. However, approximately 6,000 Japanese army horses were disposed of in Korea. Many of these have been

slaughtered for food due to the meat shortage and the small size of the Korean farm which is unsuitable for horse power.

Animal Disease Control

Prevailing animal diseases are anthrax, blackleg, glanders, rabies, swine, plague, swine erysipelas, fowl cholera, fowl pest, hemorrhage systemicemia, tuberculosis, rinderpest and foot and mouth disease. Animal disease control measures appear to be effective.

The Russians have reported the presence of rinderpest in the areas north of the 38th parallel and all cattle in the two provinces located in the American Zone bordering the parallel are to be immunized for the second time during the months of May and June as a precautionary measure. Outbreaks of fowl pest and rabies have been effectively controlled. Isolated cases of anthrax and blackleg have not been allowed to spread.

Dairy Inspection

Since there are only 2,000 dairy cows, this industry is minor. Practically all milk is sterilized by heating to 195 to 200 degrees. Sanitation is neglected and cows are in poor condition. Inspection does not so much beyond periodic testing of cattle for tuberculosis. The method of dispensing of reactors is unsatisfactory since owners are only requested to remove them from the herd for one year. The last test showed 23 percent of the dairy cattle infected with this disease.

Meat Inspection

Under the Japanese, abattoirs in the larger cities were very well constructed, equipped, and managed. However, by the repatriation of all trained Japanese, the remaining Koreans have been left a large problem with only a small amount of knowledge. Definite improvement, however, is being made in regard to the use and cleanliness of equipment under the tutelage of American Veterinary Officers. At present, meat inspection completely ignores the examination of lymph glands, which are most important and concerns itself principally with the search for parasites. A school for meat inspectors is being organized in Seoul for the instruction of all concerned.

Laboratories

The National Institute for Veterinary Research located at Pusan is one of the largest and best laboratories in the Orient. This and other laboratories are better equipped with material than personnel, however, in coordination with the laboratory section, Military Government Department of Public Health and Welfare, Korean replacements are being trained to take the place of repatriated Japanese.

Supplies

A shortage of drugs and instruments is being partially alleviated by captured Japanese army equipment. The deficit will be further relieved by the arrival of CAD Units.

Conclusions

Under the guidance of United States Army Military Government Veterinary Officers, the Koreans are making improvement and after a few years of education, training and experience, should possess as good a veterinary service as any country in the Orient.

Reports from Japanese

Animal Disease Reports: The Ministry of Agriculture and Forestry, Animal Disease Section, reported as follows:

New Outbreaks 28 April – 4 May

<u>Prefecture</u>	<u>Disease</u>	<u>Cases</u>
Ehime	Anthrax (bovine)	1
Kagoshima	Anthrax (bovine)	1
Gunma	Anthrax (bovine)	1

Control measures are immunization, quarantine and disinfection.

Rabies Control

The Governor of Tokyo Prefecture submitted a translation of Ordinance Number 3, concerning domestic dog control. This ordinance contains rules reporting, registration, identification, restraint, rabies immunization and control, and penalties for violation.

An accompanying report shows that rabies immunization was ordered to be applied to all dogs in the prefecture during the months of April and May and that a total of 2,289 out of a dog population of 5,093 had been inoculated during February and March 1946.

SECTION VI DENTAL AFFAIRS

Production of controlled dental items for March amounted to 2,104,500 yen.

SECTION VII SUPPLY

General

The Health Ministry submitted a plan covering distribution of penicillin. A control committee has been appointed to allocate production. The Committee consists of three physicians from the Imperial University and one from Keio University. Cost appears to be the main problem at present. The proposed ceiling price is 423.00 yen for 30,000 oxford units. A study is being made on this subject with a view providing penicillin at reasonable cost.

Production

Production of DDT hand dusters is now progressing according to plan. The quo of 10,000 initially established may be revised if investigation indicates a need for a large quantity for insect and rodent control purposes. A distribution plan has been established by the Welfare Ministry. These hand dusters are being distributed to prefectural health officials and distribution will continue as rapidly as stocks are produced.

Check sheet prepared and forwarded to ESS outlining supply needs for the mosquito and fly control program. The basic supplies needed was outlined. It was requested that investigation of potential manufacturers of insecticides, emulsi-flying agents, phenothiazine and spraying equipment be made and that every effort be made to accelerate Japanese production of these items at the earliest possible date. Preliminary investigation revealed that 375 tons of pyrethrum had been earmarked for export and that 750 tons of pyrethrum had been allocated for production of insecticides. Check sheet to ESS requested that this quantity be frozen for the mosquito and fly control program.

Conferences have been held with officials of the Welfare Ministry to accelerate production of supplies required for the mosquito and fly control program and to establish a distribution system for distributing these supplies. Several manufacturers have been selected and will be ordered by the Welfare Ministry to immediately begin maximum production. All supplies for this program will be shipped to the prefectural health officers. Stocks of necessary raw materials have been located with the exception of soap, gasoline and kerosene. Necessary contact with officials of the Commerce and Industry Ministry and representatives of ESS will be made in order to assure needed quantities of these items.

Japanese production of medicines required for treatment of venereal disease is being accelerated. Small quantities have been distributed to all prefectures. Manufactures have been selected by the Welfare Ministry to produce quantities needed for the next six months.

Distribution

One hundred and sixty thousand pounds of DDT mix was produced and disturbed to the using agencies. Increase from 10 to 13 tons of mix daily is now being planned and will go into 6 May 1946.

Initial shipments of rodent control supplies were made by Japanese Welfare Ministry to reception centers at Hakata and Kagoshima. A complete program for rodent control has been approved for all repatriation ports and supplies are being procured.

Steps were taken to provide all ships quarantined at Uruga with a constant level of ten days supply of staple foods and a six day supply of supplementary items. This is in addition to daily re-supply which includes fresh fish and vegetables.

Difficulty has been experienced in shipments of supplies to repatriation ports in China and Japan because of insufficient transportation and personnel available to the Repatriation Relief Board which has been responsible for the shipments. At conferences with Japanese officials concerned it was assured that sufficient trucks would be allocated and additional personnel made available to this board in order to speed up operations.

Supplies are being gathered and packed for a second shipment to Hulutae, Manchuria sufficient for processing 700,000 repatriates.

An additional shipment of typhus vaccine was made on 28 April to reception centers at the Japanese repatriation ports as follows:

Uruga	410 vials
-------	-----------

Maizuru	200 vials
Ujina	720 vials
Otake	1440 vials
Hakata	2160 vials
Senzaki	1080 vials
Sasebo	2160 vials
T####	1800 vials
Nagoya	<u>1800 vials</u>
Total	11,770 vials

Narcotics

An administrative directive, subject: "Custody and Distribution of Japanese Military Medicinal Narcotics Stocks" number (SCAPIN 913) as dispatched to the Japanese Government 1 May 1946 requiring that a governmental agency be designated to effect transfer of custody from United States Forces to approved wholesale drug houses. The directive requires that security and hand to hand receipt for narcotics be maintained.

A memorandum containing information of general application pertaining to the above directive was distributed to the Occupation forces. The memorandum lists approved wholesale drug houses to receive custody of the narcotics and suggests necessary surveillance measures.

The records of Koto Pharmaceutical Company, Limited, General Head Office, Tokyo, covering the manufacture, production and sale of narcotic drugs by this company from 1930 to 1945 have been investigated, tabulated and analyzed by a narcotic investigator, Public Health and Welfare Section and a report prepared thereof. The Koto Company manufactured cocaine hydrochloride and tropacocaine in one of their drug manufacturing plants located in Shizuoka Prefecture.

Approximately 1,000 kilograms of heroin hydrochloride, a high-tension, dangerous narcotic, and other adulterated narcotic drugs collected from IX Corps area Japan, were destroyed in Yokohama by officers from Surgeon's Office, Eighth Army and Narcotic Control Officers from SCAP. While the value of the narcotics in illicit traffic would amount to millions of dollars, nothing was destroyed that could be used for the legitimate medical needs of the Japanese people.

Enforcement of strict narcotic control by Japanese courts, as required by SCAP directives, was indicated by the four year prison sentence handed down by a local court in Saga Ken to a Japanese who stole five kilograms of raw opium, later recovered. This is the first sentence imposed in connection with the 7.5 tons of smuggled opium seized in Wakayama Ken.

Through an investigation and search directed by Narcotic Control Officers, Public Health and Welfare Section, SCAP, two Japanese who are principals in the illegal sale of 23 pounds of opium in Osaka for 130,000 yen were arrested in Oita Prefecture, Kyushu. The opium is in the custody of United States Forces, and the defendants will be prosecuted in Japanese courts.

GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS

APO 500
1 May 1946

AG 441.1 (1 May 46) PH
(SCAPIN 913)

MEMORANDUM FOR: IMPERIAL JAPANESE GOVERNMENT

THOROUGH: Central Liaison Office, Tokyo.

SUBJECT: Custody and Distribution of Japanese Military Medical Narcotic Stocks.

1. Your attention is directed to the Memorandum from GHQ, SCAP, file AG 441.1 (4 Dec 45) PH, 4 December 1945, subject: "Custody and Distribution of Japanese Military Medical Narcotic Stocks", and to the list of whole sale drug houses submitted in your C.L.O. No. 322 (1.1), 22 January 1946. The list as submitted is approved.

2. You will designate an agency of the Imperial Japanese Government to receive, receipt for and deliver the narcotics into the custody of approved wholesale drug houses.

3. Security and hand to hand receipt for the narcotics will be maintained.

4. Further distributed and accounting will be in accordance with paragraphs 4 and 5 of the referenced GHQ, SCAP memorandum.

5. Direct communication with the Narcotic Control Officer, Public Health and Welfare Section, GHQ, SCAP, is authorized to effect release of the narcotics from the custody of United States Forces to the Imperial Japanese Government.

FOR THE SUPREME COMMANDER

B. M. FITCH,
Brigadier General, AGD
Adjutant General.

GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS

AG 441.1 (1 May 46)PH

MEMORANDUM.

SUBJECT: Information of General Application Pertaining to Directive Number (SCAPIN 913), file AG 441.1 (27 Apr 46) PH, GHQ, SCAP, 27 April 1946, subject: "Custody and Distribution of Japanese Military Medical Narcotic Stocks", to the Imperial Japanese Government.

1. With reference to Memorandum Number (SCAPIN 913) GHQ, SCAP to the Imperial Japanese Government, the following is published for the information of all concerned.

2. The memorandum directs the Imperial Japanese Government to designate a government agency to receive, receipt for and deliver former Japanese military medicinal narcotics into the custody of approved wholesale drug houses for further distribution as required in paragraphs 4 and 5 of memorandum number (SCAPIN 384) file AG 441.1 (4 Dec 45) PH, subject: "Custody and Distribution of Japanese Military Medicinal Narcotics". The approved wholesale houses are as follows:

- a. Hokkaido – Hokkaido Local Medicine Distribution Company, N.8, 2-chome, Minami Ichijo, Sapporo city.
- b. Miyagi Ken – Sennando Wholesale Drug House, No. 32 Kawara-machi, Sendai City.
- c. Niigata Ken – Niigata Local Medicine Company, No. 1718, Furucho, Torijubancho, Niigata City.
- d. Tokyo To – Sankyo Company, No. 888, 1-chome, Nishishinagawa, Shinagawa Ku, Tokyo.
- e. Tokyo To – Takeda Pharmaceutical Industries Ltd., No. 1, 1-chome Gofukubashi, Nihonbashi, Tokyo.
- f. Osaka Fu – Gohei Tanabe and Company, Ltd., No.21, Doshumachi, Higashiku, Osaka.
- g. Osaka Fu – Dai Nippon Medicine Manufacturing Company, No. 23, 3-chome, Doshumachi, Higashiku, Osaka.
- h. Osaka Fu – Takeda Pharmaceutical Industries, Ltd., No.27, 2-chome, Doshumachi, Higashiku, Osaka.
- i. Okayama Ken – Okayama Medicine Manufacturing Company, Shoshamachi, Kbigun.
- j. Kagawa Ken (Shikoku) – Kagawa Local Medicine Distribution Company, No.3233, I Arai, Hachiokamura.
- k. Fukuoka Ken (Kyushu) – Fukuoka Medicine Distribution Company, No.8, Kitafunemachi, Fukuoka City.

3. The former Japanese military medicinal narcotics to be released to the Imperial Japanese Government have been concentrated and inventoried in the 9th Medical Depot, Kobe, and the 29th Medical Depot, Yokohama. Direct communication with the Narcotic Control Officer, GHQ, SCAP, is authorized to effect transfer of custody from United States Forces.

4. When the transfer of custody is effected, command instructions will follow through command channels pertaining to the execution of surveillance. The following procedure is suggested:

- a. Determine that narcotic stocks are kept under proper security.
- b. Maintain periodical surveillance to assure that stock records are being properly prepared and forwarded as required.
- c. Advise GHQ, SCAP, of any corrective action that should be taken at the national level.

4 May 1946

AG 725.11 (4 May 46) PH
(SCAPIN – 920)

MEMORANDUM FOR: IMPERIAL JAPANESE GOVERNMENT

THROUGH: Central Liaison Office, Tokyo

SUBJECT: Appointment of Insect and Rodent Control Officers.

1. Reference is made to Memorandum number (SCAPIN 48), dated 22 September 1945, Subject: "Public Health Measures."

2. The Imperial Japanese Government is directed to appoint a full time Insect and Rodent Control Officer in each prefectural (Ken) health office. This officer to be responsible for the organization, training, operation, supervision and coordination of all insect and rodent control personnel and activities within the prefecture.

3. The number and organization of subordinate units in counties (Gun), Cities (Shi) and towns (Machi) will depend upon prevailing local conditions in the several prefectures, as outlined during the conference held at Kyoto from 22 April to 27 April 1946. Prefectural insect and rodent control officers will submit to the Ministry of Health and Social Affairs plans for their respective prefectures based upon consultation with the director of the prefectural health office and the local Military Government Public Health Officer.

4. The Ministry of Health and Social Affairs will require prefectural insect and rodent control officers to make such periodic reports of activities and consumption of supplies as may be deemed necessary.

5. The Imperial Japanese Government will submit a written report to the GHQ, SCAP, not later than 15 May 1946 concerning the action taken to comply with this Memorandum.

FOR THE SUPREME COMMANDER:

B. M. FITCH
Brigadier General, AGD
Adjutant General

GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS

MEMORANDUM:

SUBJECT: Information of General Application Pertaining to Memorandum Number (SCAPIN – 920) file AG 725.11, (4 May 46) PH, GHQ, SCAP, 4 May 1946, Subject: “Appointment of Insect and Rodent Control Officers.”

1. With reference to Memorandum Number (SCAPIN – 920), GHQ, SCAP, to the Imperial Japanese Government, the following is published for the information of all concerned.

2. The Memorandum directs the appointment of permanent Insect and Rodent Control Officers in each prefectural health department and directs further the establishment of an organization for insect and rodent control along the lines laid down at the school held at Kyoto from 22 April to 27 April 1946.

3. Command instructions relative to the execution of supervision will follow through command channels. It is suggested that:

- a. Liaison be established between prefectural health departments and the public health and sanitary officers of the respective Military Government Companies to expedite the organization, training and supervision of subject units.
- b. Periodic field inspections be made by officers of the Public Health and Welfare Section to observe the programs of insect and rodent control activities and to give necessary technical advice.

MEMORANDUM FOR: IMPERIAL JAPANESE GOVERNMENT
THOROUGH: Central Liaison Office, Tokyo.
SUBJECT: Vaccination against Smallpox

1. Reference is made to Memorandum Number (SCAPIN – 610) dated 16 January 1946, Subject: “Smallpox Vaccination of Japanese civilian”.

2. The incidence of smallpox among the inhabitants of Japan has not decreased to the extent that could normally be anticipated had proper vaccination technique been employed, in view of the amount of vaccine used and the number of persons vaccinated.

3. Investigation has disclosed serious defects in vaccination technique, evidenced by the fact that numerous parties presently suffering from smallpox claim to have been vaccinated within the past two months. It has been discovered that alcohol or solutions of phenol far in excess of permissible strength are being used for cleaning the skin prior to vaccination, thus destroying the active virus and nullifying the effect of the entire vaccination procedure.

4. The use of alcohol or phenol solution for the cleaning of the skin prior to smallpox vaccination is prohibited. Acetone will be used for this purpose or; in case of necessity, soap and water.

5. The Imperial Japanese Government will require all Japanese nationals to appear for revaccination against smallpox. All individuals will be revaccinated who do not show satisfactory evidence of a successful vaccination since 1 February 1946.

6. Adequate stocks of vaccine and acetone have been determined to be available. The Imperial Japanese Government will distribute the necessary supplies to the several prefectures as needed.

7. The above services, or the materials necessary for the administration thereof, will be made available to foreign nationals presently resident in Japan.

8. This program will be completed by 25 May 1946. A written report will be submitted to GHQ, SCAP, not later than 30 May 1946.

FOR THE SUPREME COMMANDER:

B. M. FITHC,
Brigadier General, AGD,
Adjutant General

MEMORANDUM

SUBJECT: Inspection of General Application Pertaining to Memorandum Number (SCAPIN – 921), file AG 720.3, (4 May 1946) PH, GHQ, SCAP, 4 May 1946, Subject: “Vaccination against Smallpox”.

1. With reference to Memorandum Number (SCAPIN – 921), GHQ, SCAP, to the Imperial Japanese Government, the following is published for the information of all concerned.

2. The Memorandum directs the revaccination, before 25 May 1946, of all Japanese who do not show satisfactory evidence of a successful vaccination since 1 February 1946, a successful vaccination is one which is followed by a definite, visible response, whether immune, vaccinoid or vaccinia. Absence of any response is not an immune reaction but represents a vaccination failure.

3. Investigation has disclosed serious defects in vaccination technique, evidence by the fact that numerous patients presently suffering from smallpox claim to have been vaccinated within the past two months. It has been discovered that alcohol or solutions of phenol far in excess of ##### strength are being used for cleaning the skin prior to vaccination, thus destroying the active virus and nullifying the effect of the entire vaccination procedure.

4. Command instructions relative to the execution of supervision will follow through command channels. It is suggested that:

a. Local Military Government companies see that prefectural health departments obtain the necessary materials and set up a plain for the most expedition accomplishment of the program directed.

b. Military Government at Public Health Officers maintain general surveillance over vaccination technique, with particular reference to the solution used for the cleaning of the skin prior to vaccination. Radical changes in actual vaccination procedure are not contemplated at the present time.

MEMORANDUM FOR: IMPERIAL JAPANESE GOVERNMENT

THOROUGH: Central Liaison Office, Tokyo

SUBJECT: Manufacture of DDT in Japan.

1. Memorandum to the Imperial Japanese Government, file AG440 (8 Oct 45) PH, subject: “Manufacture of DDT in Japan” dated 8 October 1945, is hereby revoked.

FOR THE SUPREME COMMANDER:

B. M. FITCH,
Brigadier General, AGD,
Adjutant General.

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
PUBLIC HEALTH AND WELFARE SECTION**

WEEKLY BULLETIN

**For Period
5 May to 11 May
1946**

SECTION I WELFARE

Public Assistance

Reports from the last prefectures on public assistance granted in March 1946 were received this week from the Japanese Government. For all prefectures, 615,263 families (representing 2,265,030 individuals) and 63,785 unattached persons received relief in March. This represents a total of 2,328,815 persons. Amount granted was 49,297,874 yen, representing an average of 48 yen per unattached person as against 15 yen per family person.

Welfare Conference

A conference of about 250 representatives of welfare groups throughout Japan representing some 10,000 welfare workers in both public and private fields including some Homen-Iin (district volunteers) was attended by Colonel Sams, Chief, Public Health and Welfare Section and Mr. Feldman of the Welfare Division. The general purpose of the conference was to discuss the raising of standards in social work.

Colonel Sams explained our efforts as an attempt to replace the outmoded ideas "charity", "benevolence" and "gifts" to the poor from the ruling classes by an enlightened, democratic program of public assistance as an obligation of a government acting as the servant, not the ruler of the people.

Private Relief Imports

A radio from the War Department advised of the creation of Licensed Agencies for Relief in Asia (LARA) representing members of the American Council of Voluntary Agencies for Foreign Service (ACVAFS) who desire to operate a program of relief for civilians in Asia. Clearance was requested for two persons to represent LARA in Japan.

Population Movement

Due to the acute housing shortage and continued food shortage the Imperial Japanese Government was directed to continue in force the directive controlling movement of persons from rural to urban areas until 30 September 1946.

Foreign Nationals

A field trip was made to Yokohama to contact the International Relief Committee regarding eligibility requirements for relief and the various kinds of relief offered. It was learned that only those foreign nationals who were without funds to meet the minimum necessities of life were eligible for relief. Hospitalization arrangements have been made on a fee basis for foreign nationals in catholic Hospital in Tokyo.

Reserve Relief Supplies

The Imperial Japanese Government submitted its first report for the month of March in accordance with paragraph 41, Memorandum (SCAPIN 352) 26 November 1945, subject: "Reserve Supplies Held for Relief Distribution".

The report was incomplete in that only 41 prefectures were reported and the source of supplies added to stock was not indicated. No explanation was given as to the amount of supplies that were withdrawn because of spoilage, transfer or issued to needy persons.

Action is being taken to assure accurate reports in the future.

Confusion exists on the part of the Japanese so far as the issuance of food in danger of spoilage or deterioration.

The Supreme Commander has not authorized the release of food held in reserve for relief except in cases where there is danger of spoilage or deterioration. This is authorized in letters, GHQ, SCAP, AG 400 (26 Apr 46) PH, subject, "Non-Compliance with Existing Directives Relating to the Establishment, Maintenance and Distribution of Reserve Relief Supplies", and Memorandum for the Imperial Japanese Government, AG 388.3 (16 Oct 45) GD (SCAPIN 151), subject: "Materials, Supplies and Equipment to be turned over to the Imperial Japanese Government by Allied Forces".

Red Cross Activities

In a series of program planning and reorganization meetings, of greater importance was the one held at the National Headquarters, Tokyo, of Japanese Red Cross Hospital with National Headquarters representatives of 15 prefectures in which hospitals were damaged, destroyed, or not available for Red Cross use.

Plans and procedures were outlined for repair, reconstruction and reactivation of hospitals and hospital service in the prefectures.

SECTION II PREVENTIVE MEDICINE

General

A press conference was held with representatives of the Japanese press and news agencies to inaugurate an educational and publicity campaign directed toward the control of insect and rodent borne diseases during the coming months. The importance of environmental sanitation was discussed and it was stressed that the participation of the individual householder and the public as a whole must be obtained for such measures to be successful.

In a conference with representatives of the Civil Information and Education Section and the Ministry of Health and Social Affairs discussions were held concerning the coordination of the educational program already started by the Ministry with the plans of CI&E and this Section. It was recommended that the present liaison officer between the Ministry and CI&E be maintained and his activities continued.

Dr. Ogawa of the Ministry of Health and Social Affairs was instructed concerning carrying out of the recently directed revaccination program against smallpox. It is believed that with judicious distribution present stocks of vaccine will be adequate.

In a conference with Legal Advisor and Dr. Ishibashi of the Ministry of Health and Social Affairs instructions were issued concerning alleged violation of SCAP directive abolishing licensed prostitution and lack of clinics to be subsidized by the central government.

Sanitary Engineering

Insect and Rodent Control. Further conferences have been held with the Supply Division, Public Health and Welfare Section, and Ministry of Health officials regarding the Japanese manufacture of insecticides, larvicides, rodenticides and insect control equipment. Several of these are now in production, and production rates will be materially increased. Distribution of phosphoric poison and Antu has already been made to some ports. The manufacture of rat traps pyrethrum emulsion, and phenothiazin is being expedited and plans for their distribution are now being made. Representatives of the Ministries concerned and manufactures are holding meetings three times a week to promote the manufacture and distribution of these materials.

Laboratory Activities

Organization of a Council on Pharmacy and Therapeutics in the Japanese Medical Association. Under the spur of current shortages, the Japanese Medical Association organized its Council on Pharmacy and Therapeutics to establish a policy-making organ concerned with production, standardization, and distribution of much needed medicines. The immediate problem which hastened its organization was the necessity for establishing priorities on proposed import items under a ceiling of 3000 tons.

Other problems to be taken up by the Council include the control of advertising and sale of potentially harmful drugs (sulfanilamide derivatives, hormone preparations, sedatives) to the laity without medical supervision and the establishment of an authoritative agency for comparing the clinical effectiveness of various drug products in common use. The Council will maintain an effective liaison with SCAP in order to program against possible opposition from commercial interests.

Press Conference on Measure Being Taken to Reform Medical Education. In a press interview 6 May 1946 the accomplishments to date of the Council on Medical Education were reported. The background for its work was discussed briefly, with emphasis given to the need for improved public health education, particularly to physicians, the poor distribution of physicians in spite of an overall surplus, the domination of academic cliques, and the persistence of outworn methods of instruction introduced into Japan from Germany before the first World War. The Council on Medical Education was composed of representatives of the Welfare and Education Ministries of the Japanese Government, Imperial and private medical schools, and the Japanese Medical Association. By coordinate action a number of recommendations were made and subsequently adopted as government policy for revision of existing standards in medical education. A national examination will be held at least twice yearly for all candidates for licensure. To be eligible candidates must have completed a standard four year course of medicine in an approved medical school and minimum of 12 months of internship in an approved hospital, including one month in a health center of prefectural level with practical field work in public health. Standards for a revised medical curriculum and training facilities were established, contrived to weed out inferior schools, also an extensive program for postgraduate medical education to serve the needs of former graduates including physicians returning from military service.

Future agenda of the Council include improved standards for premedical education, qualification of faculty members, qualifications of specialists, standardized medical nomenclature, and adequate living facilities for hospital interns.

Nutrition Service

Report on Nutrition in Japan to Mr. Hoover. The nutritional status and food requirements of the Japanese were presented to Mr. Hoover and his aides by Colonel Sams, 5 May 1946. Discussions were had with Mr. Hoover's aides on technical details the following day. Mr. Pate was particularly concerned with regard to the feeding of school children and pregnant and lactating women. Little formal attention has been given to the provision of supplementary foods in schools.

Nutrition Surveys. Nutrition surveys are progressing in various parts of Japan but compilation of data has not proceeded far enough to state results. Dr. Oiso, the Japan Ministry Nutritionist, is in southern Japan observing surveys.

Personnel: Colonel Howe returned from temporary duty in China with the Food Mission from the United States.

SECTION III ADMINISTRATION OF HOSPITALS

The Japanese Civilian Hospital Strength Report for the period ending 5 April 1946 shows 2998 hospitals with a 204,718 bed capacity, 101,461 of which are occupied. There were 248,203 out-patients treated during this period.

SECTION IV NURSING AFFAIRS

A complete survey of Nurse Training and Midwifery programs in two prefectures began during the past week. (Aomori and Akita).

In Kyushu this month, a number of short refresher courses are being held in various prefectures. This office was represented in a meeting in Fukuoka, Beppu and Nagasaki. Each place Public Health Nursing in America was presented and the program here in Japan outlined.

SECTION V VETERINARY AFFAIRS

General

Field Trip to Shikoku – A representative of the Veterinary Affairs Division is conducting a survey of Japanese veterinary conditions on the island of Shikoku.

Inspection of Oshida Institute

The Oshida Institute located in Tokyo was visited and its biological laboratory is primarily engaged in the production of phenol killed rabies vaccine. Equipment, methods and final product were found to be satisfactory.

Reports from the Japanese

The Government of Tokyo Prefecture has submitted a translation of Ordinance Number 3, pertaining to domestic dog control and the following report on rabies immunization:

Number of dogs registered	5093
Number injected for rabies	2289

Unvaccinated dogs will be injected during the month of May. Metropolitan police will capture and impound stray dogs.

Animal Disease Report

The Ministry of Agriculture and Forestry, Animal Disease Section, reported the following new outbreaks of disease during the period 5-11 May:

<u>Prefecture</u>	<u>Disease</u>	<u>Cases</u>
Miyazaki	Athrax (equine)	1
Chiba	Swine erysipelas	1

Control measures are immunization and quarantine.

SECTION VI

DENTAL AFFIARS

No report.

SECTION VII SUPPLY

Production

The production of vaccines is progressing satisfactorily. Approximately 40,000,000 individual doses of smallpox vaccine have been produced for revaccination purposes and necessary quantities will be distributed to all prefectures for the revaccination program.

Definite plans have been made by the Welfare Ministry for production of supplies required for the mosquito and fly control program. Manufacturers have been selected and were called to Tokyo on 8 May 1946 for a conference. Production capacity was determined and quantities of production allotted to each manufacturer. Necessary raw materials have been obtained with the exception of petroleum products. A meeting was called with representatives of the Petroleum Section, G-4, Natural Resources Section, Commerce Ministry and Welfare Ministry to request assistance in obtaining necessary quantities of petroleum products.

A meeting was called by ESS officials with representatives of various glassware manufactures, glassware association members and Commerce Industry officials to begin manufacture of glassware for the medical laboratories of Japan. Check sheet was submitted to ESS requesting that action be taken to produce certain quantities of bottles, ampoules and vials in order that glassware would be available for distributing vaccines. The production will be phased monthly and the Welfare Ministry will direct shipment to laboratories as stocks are produced. Manufacturers indicated willingness to produce required glassware. This action will assure sufficient glassware for distributing vaccines.

Distribution

Excess medical supplies in National Hospital are being prepared for distribution. Inventories will be submitted to the Welfare Ministry by 15 May, and actual distribution will be in process soon thereafter.

DDT mix is now being produced at 13 tons daily, and is being distributed to the using agencies almost as fast as it is being made and packed.

Authorization was given for export of 8000 x-ray films, 350 gallons of developing powder and 350 gallons of fixing powder to Korea to relieve a critical shortage of x-ray supplies.

Request was received from Commanding General, United States Army Forces in China, to provide necessary supplies to process 300,000 repatriates at Hankow, China as a measure to confine the cholera epidemic in that area. Supplies were gathered, packed and shipped by express arriving at Hakata on 9 May.

Supplies for processing 700,000 repatriates at Hulutao, Manchuria were dispatched from Tokyo on 10 May enroute to Sasebo where water lift is to be provided.

In response to a request from Commanding General, Army Land Forces, Southeast Asia, a directive to the Japanese Government was issued to the effect that all repatriation vessels departing for Netherlands East Indies would be provided with sufficient smallpox vaccine to vaccinate repatriates carried on the return voyage. As an additional measure to take care of certain ships already dispatched without vaccines aboard, 124,000 doses were placed aboard the hospital ship Hikawa-Maru sailing for Morotai.

On 6 May an additional shipment of typhus vaccine was distributed to repatriation ports in Japan as follows:

Uraga	57,600 cc
Maizuru	14,400 cc
Ujina	14,400 cc
Otake	50,400 cc
Senzaki	50,400 cc
Hakata	43,200 cc
Sasebo	43,200 cc
Tanabe	43,200 cc
Nagoya	43,200 cc

Narcotics

As requested informally by the Narcotic Control Office, Public Health and Welfare Section, a list of prices for the sale of narcotics from the compounders or firms repackaging narcotics down to the dispenser were submitted

by the Pharmaceutical Section, Sanitary Bureau, Ministry of Health and Social Affairs. The prices are considered not out of line with prices of other pharmaceutical products.

The plan for the reorganization of the Japanese narcotic enforcement machinery in the national and prefectural governments was received. Ultimate responsibility for maintaining proper security and control for narcotics rests with the Pharmaceutical Section of which Mr. Kamiya is Chief, Mr. Yasumi, his assistant, has general control of narcotics.

Lt. Comdr. Speer made a three day inspection trip to Kobe and Osaka. At Kobe the former Japanese military medicinal narcotics, taken into custody by United States Forces in I Corps area and now stored for safekeeping in the 9th Medical Depot pending redistribution, are being securely guarded. The Chief of Police of Osaka and the Chief Procurator of Osaka were interviewed and directed to take swift and positive action against narcotic burglaries. Since the burglary of narcotics from the Sankyo Company, Osaka, was called to the attention of prefectural authorities on 3 May 1946 by the Narcotic Control Officer through the PSO, Ministry Government, Osaka, four arrests have been made and 55 five gram bottles of morphine, out of a total of 1130 stolen, have been recovered. An unconfirmed report was received from Kobe that the remainder of the morphine had been recovered there. Period to action by SCAP authorities no arrest had been made ever a period of a month after the burglary.

A quantity of narcotics considered insecurely stored by the Osaka Medicine Distribution Company was moved to Takeda Pharmaceutical Industries, Ltd. for safekeeping. The Pharmaceutical Section, Ministry of Health and Social Affairs, has been advised of the action taken and directed to enforce proper security for all narcotic stocks.

SECTION VIII LEGAL AFFAIRS

General

The Chief of the Legal Affairs Division returned 13 May 1946 from a trip to Kumamoto. Purpose of the trip was to secure necessary facts to dispose of the question as to nature of the future ownership and operation of Kumamoto Chemo and Serotherapeutic Institute. Conferences were held with Lt. Volk and Lt. Col. Link of the 93rd Military Government Company, and Dr. Odawara, founder of the institute. Instructions were given that specified information was to be supplies. Lt. Volk was to come to Tokyo with information and arrive on or about 9 May.

In Fukuoka, in conference with Lt. Bagot and Major Adkins of C.I.C, Major Christiansen of the 6th Marines, and with Prefectural Governor in regard to land owned by physical Cultural Institute and presently controlled by the United States Army, arrangements were made for release of forty acres to be used to build school for public health nurses, which Nursing Affairs Division considers to be a worthy project.

In a conference with Mr. Tachibana, Mr. Kimuri and Mr. Mori of Welfare Ministry, budgetary questions were taken up and arrangements made to receive copy of supplementary budget.

From representatives of Japanese Miscellaneous Liquor Producers Association and representative of Finance Ministry, was received a satisfactory type of label which is to be placed on bottles of liquor having a methyl alcohol content between 0,2 and 1,0 mg per cc. Label was approved and permission granted to have it posted on neck of bottle.

SECTION IX DIRECTIVES TO THE IMPERIAL JAPANESE GOVERNMENT

AG.440 (9 May 46) PH (SCAPIN 1187-4), subject: "Request for shipment of Medical Supplies to Japanese Nationals in Manchuria".

AG.450 (10 May 46) PH (SCAPIN 942), subject: "Supply of Smallpox Vaccine to Repatriation Ships Leaving for Netherlands East Indies".

AG.091 (11 May 46) PH (SCAPIN 944), subject: "Control of Population Movements".

AG.323.31 (11 May 46) PH (SCAPIN 945), subject: "Reorganization of Governments Public Health and Welfare Activities".

AG.400 (11 May 46) PH (SCAPIN 1205-A), subject: "Incomplete Report Submitted in Compliance with Existing. Directive Regarding Reserve Supplies Held for Relief Distribution".

SUBJECT: Information of General Application on Pertaining to Directive Number (SCAPIN - 942), file AG 450 (10 May 46) PH, GHQ, SCAP, 10 May 1946, subject: "Supply of Smallpox Vaccine to Repatriation Ships Leaving for Netherlands East Indies".

1. With reference to Memorandum Number (SCAPIN - 942), GHQ, SCAP to the Imperial Japanese Government dated 10 May 1946, the following is published for the information of all concerned.

2. The Japanese Government has been directed to place sufficient smallpox vaccine aboard each repatriation ship leaving for the Netherlands East Indies to vaccinate the repatriates carried on the return voyage. This means that each vessel should be provided with 5,000 doses of vaccine which is available in reception centers at all repatriation ports in Japan.

3. Military surveillance in connection with this directive will involve:

a. Checking the reception center to see that vaccine is available.

b. Verifying that each ship has the required amount of vaccine aboard before sailing and that it is stored under refrigeration.

MEMORANDUM FOR: IMPERIAL JAPANESE GOVERNMENT.

THROUGH: Central Liaison Office, Tokyo.

SUBJECT: Control of Population Movements.

1. Reference is made to paragraph 1 and 2, Memorandum for the Imperial Japanese Government, File AG 091 (8 Jan 46) PH, (SCAPIN 563), dated 8 January 1946, subject: "Control pf Population Movements".

2. In view of the failure of the Imperial Japanese Government to meet the critical housing shortage in urban centers together with the lack of adequate food distribution, the Imperial Japanese Government will continue in force the provisions of the directive mentioned in paragraph 1, above, until 30 September 1946, File AG 091 (8 January 46) PH, (SCAPIN 563) dated 8 January 1946, subject: "Control of Population Movements".

FOR THE SUPREME COMMANDER:

B. M. FITCH
Brigadier General, AGD,
Adjutant General.

GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS

APO 500
11 May 1946

AG 091 (11 May 46) PH

MEMORANDUM.

SUBJECT: Information of General Application on Pertaining to Directive Number (SCAPIN 944),
File AG 091 (11 May 46) PH, GHQ, SCAP, 11 May 1946, subject: "Control of
Population
Movements".

1. The Imperial Japanese Government was directed by SCAP Headquarters, 8 January 1946, to restrict population movements from rural to urban areas, and to submit a plan to General Headquarters, SCAP, for approval, outlining the method by which this would be accomplished, File AG 091 (8 Jan 46) PH, (SCAPIN 563) dated 8 January 1946. The Japanese Government acknowledged this directive, 10 January 1946 (CLO No. 127 (G 2)) and on 30 January 1946, submitted a plan (CL 450 (1.1)) which was accepted by SCAP Headquarters, File AG 091.4 (2 Mar 46) PH, (SCAPIN 651-A), subject: Control of Population Movements".

2. The purpose of this directive was to restrict population movements from rural to urban areas because of housing shortages, food distribution difficulties, unemployment, and sanitation and public utility breakdowns. The terminal date of this directive was 31 May 1946, and due to the housing situation becoming progressively worse, and in view of the critical food condition, SCAP Headquarters has directed that the Imperial Japanese Government further extend this restriction from 31 May 1946 to 30 September 1946.

3. The Imperial Ordinance regulates and controls population movements from rural to urban areas by forbidding persons from moving their residence to any of the areas designated by the Minister of Home Affairs (cities with population of 100,000 persons or more) until those persons have obtained a permit from the mayor or chief of the town or village permitting the movement. Certain exceptions are made as to specific groups which are:

- a. Persons engaged in work necessary for the rehabilitation of National Economy.
- b. Officials of governmental or municipal offices located in the above-mentioned areas and members of the family supported by them.
- c. Teachers and families supported by them, students of schools located in these areas.
- d. Persons returning from a foreign country or overseas territory.

4. Command instructions pertaining to the execution of surveillance required in connection with memoranda mentioned in paragraph 1, above, have been dispatched through command channels. The following is a general statement regarding Occupation Force responsibility for surveillance of the directive.

- a. Inspection made of local prefectural administration should include a review of record keeping procedures, and type of investigations made, if any, to support the request to change domicile. Suggestions for improvement or changes should be included in reports rendered GHQ, SCAP, through channels.

MEMORANDUM FOR: IMPERIAL JAPANESE GOVERNMENT.
THROUGH: Central Liaison Office, Tokyo.
SUBJECT: Reorganization of Governmental Public Health and Welfare Activities.

1. In order to cope adequately with the emergency health and welfare situation, as directed by Memoranda numbered (SCAPIN 48) 22 September 1945, and reorganize the administration of health and welfare activities to provide for the following administration of functions:

- a. A Bureau of Health, the responsibility of which will be public health (maternity, child, and adult hygiene), health education, vital statistics activities and nutritional of functions:
- b. A Bureau of Medical Treatment, the responsibility of which will be general affairs (medical relief programs), administration of hospitals, administration of sanatoria, medical affairs, pharmaceutical affairs (distribution) drug production (including biologicals) and pharmaceutical standardization.
- c. A Bureau of Preventive Medicine shall be established, the responsibility of which will be those concerned with sanitary engineering, communicable diseases and chronic infectious diseases.
- d. A Bureau of Social Affairs, the responsibility of which will be those in connection with public assistance, public welfare and the procurement and disposition of materials necessary to implement such functions.

2. The administration of other continuing activities and functions of the Ministry of Health and Welfare is not affected by this Memorandum and may be a matter for future consideration.

3. The Imperial Japanese Government will cause to be established in prefectural governments a Bureau of Health and a Bureau of Welfare whose functions will include those outlined for the Ministry of Health and Welfare, as shown in paragraph 1 of this Memorandum, which will act as the operating agency for public health and welfare activities.

4. Functions of operation in connection with this Memorandum will be performed as far as possible at prefectural and local levels. Matters of policy, technical matters and overall coordination of health and welfare activities are functions of the national government.

5. The reorganization as a result of this Memorandum will be subject to modification by action of the Japanese Diet.

FOR THE SUPREME COMMANDER:

B. M. FITCH
Brigadier General, AGD,
Adjutant General.

GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS

APO 500
11 May 1946

AG 091 (11 May 46) PH
(SCAPIN 1205 -A)

MEMORANDUM FOR: IMPERIAL JAPANESE GOVERNMENT.
THROUGH: Central Liaison Office, Tokyo.
SUBJECT: Incomplete Report Submitted in Compliance with Existing Directive Regarding Reserve Supplies Held for Relief Distribution.

1. Reference is made to the March report submitted in accordance with paragraph 41, Memorandum for the Imperial Japanese Government, File AG 400 (26 Nov 45) PH, (SCAPIN 352) dated 26 November 1945, subject: "Reserve Supplies Held for Relief Distribution".

2. The report was incomplete and the following exceptions are taken:

- a. Only 41 prefectures were reported.
- b. Report was submitted much too late. Reports required under this directive should not reach SCAP Headquarters later than the 25th of the following month.
- c. The source of supplies added to the stock during the month was not indicated in any of the prefectural reports.
- d. No explanation was given as to the amount of supplies that were withdrawn because of spoilage, transfer or issued to needy persons.
- e. The number of families and persons represented in the families and single persons to whom supplies were issued during the month was reported by only six prefectures.

3. Food from reserve supplies held for relief was reported distributed in one prefecture. The Supreme Commander for the Allied Powers has not as yet authorized the distribution of food except in cases where there is danger of spoilage or deterioration.

4. A written report as to the action taken to insure accurate reports in the future will be submitted to the Supreme Commander for the Allied Powers not later than 20 May 1946.

FOR THE SUPREME COMMANDER:

B. M. FITCH
Brigadier General, AGD,
Adjutant General.

GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS

APO 500
11 May 1946

AG 400 (11 May 46) PH

MEMORANDUM.

SUBJECT: Information of General Application Pertaining to Directive Number (SCAPIN 1205 -A)
11 May 1946, subject: "Incomplete Report Submitted in Compliance with Existing
Directive Regarding Reserve Supplies Held for Relief Distribution".

1. With reference to Memorandum for the Imperial Japanese Government, File AG 400 (11 May 46) PH, (SCAPIN 1205 -A), 11 May 1946, the following is published for the information of all concerned.

2. The monthly report submitted by the Imperial Japanese Government and Prefectural Governments failed to furnish the information required in previous directives.

3. Food from reserve supplies held for relief was reported distributed in one prefecture. The distribution of food has not been authorized by the Supreme Commander for the Allied Powers except in cases where there is danger of spoilage or deterioration.

4. Command instructions pertaining to the execution of surveillance required in connection with Memorandum mentioned in paragraph 1, above, have been dispatched through command channels. The following is a general statement regarding Occupation Force responsibility for surveillance of the directive.

- a. Inspections made of the reporting procedure to insure that reports contain accurate information and are submitted at the time required.
- b. Inspections to insure that food from reserve supplies held for relief are not distributed until authorized by the Supreme Commander for the Allied Powers except in cases where there is danger of deterioration or spoilage.

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
PUBLIC HEALTH AND WELFARE SECTION**

WEEKLY BULLETIN

**For Period
12 May to 18 May
1946**

SECTION I WELFARE

General

Captain R. J. Turner was relieved from temporary duty with the Welfare Division for redeployment to the United States.

Major R. E. Riordan left for a field trip to prefectures in Southern Honshu, Shikoku and Kyushu to inspect the operation of the Japanese public assistance program, particularly with reference to the handling of reserve relief supplies.

Housing

At a conference attended by representatives of this Section and officials of the Japanese Reconstruction Board approval was given the Japanese proposal to permit utilization of extra rooms in large residences for the housing of homeless persons and families. This proposal is in the nature of a change to the "Temporary Control of Residences Law", recently approved was by the Japanese Cabinet. Such accommodations would be made available either voluntarily by the home owner, or if necessary by governmental action based on decisions by a citizen's board to be appointed for that purpose. All decisions would be subject to judicial review. Concurrence of the Government Section was obtained in approving the proposed amendment to the law.

Reserve Relief Supplies

A plan for the distribution of a reserve supply of 100,000 tons of imported wheat now in custody of Eighth Army and earmarked for persons in need of public assistance was agreed upon at a conference between welfare and price control and ration representatives of GHQ, SCAP, Eighth Army, the Welfare and Agricultural Ministry officials of the Japanese Government. Upon receipt of authorization from Headquarters, SCAP, the Welfare Ministry will effect distribution to persons certified as indigent by accredited welfare workers in designated localities. The Welfare Ministry will operate in coordination with Agriculture and Transportation Ministries, through the facilities of the Food Control Corporation and existing distribution points.

A Memorandum (SCAPIN 1205-A) was issued to the Japanese Government citing the inadequacy of its March report on reserve relief supplies, and instance of release of reserve foods without authority. In reply, the Japanese submitted a copy of instructions issued to the prefectures to insure accurate, complete and prompt reports in the future. In addition, a conference was held with prefectural officials to clarify instructions.

Red Cross

As three day conference was held by representatives of the Japanese Red Cross Society Headquarters Staff, members of the standing council and eight of the larger chapters of the society to discuss the recommendations of the society officials, working in conjunction with Public Health and Welfare-American Red Cross representative for the reorganization of the society.

Recommendations approved were:

Standardization of Red Cross Membership, creation of new service departments with more power for the promotion and operation of their service; accepted services to be carried out by the society; plans for the financing of chapters and the national society and changes in the membership of the National Governing Board.

It was decided that on the chapter level, corresponding changes in organization would be made.

SECTION II PREVENTIVE MEDICINE

General

A Memorandum for the Imperial Japanese Government (SCAPIN 1274-A) was issued directing that malarial fever and Japanese B encephalitis be added to the list of reportable communicable diseases. Malaria is to be separated into primary and recurrent cases.

A conference was held with members of the Planning and Educational Division of CI&E and representatives of the Ministry of Education for the purpose of formulating a coordinated educational program on sanitation, insect and rodent control designed for use in the primary and secondary school systems. Detailed plans are to be submitted by the Ministry.

Cholera

Two cases of Asiatic cholera were reported in one family in Tokyo during the week, both were confirmed. No connection could be determined between these cases and those at Uruga. A careful check was made of the measures taken by the Public Health Section of the local Military Government Company, Communicable Disease

Control Section, Metropolitan Health Bureau, as to the extent and thoroughness of the control measures taken. These were deemed adequate. The source of the infections were apparently from sea food.

Bacteriological studies on fish and shellfish taken in the Tokyo Bay area are being made by the Metropolitan Health Bureau to determine the presence and extent of contamination by the cholera vibrio and the varieties of fish or shellfish subject to such contamination.

A project was initiated at the Uruga repatriation port to study the effect of sulfonamide medication (sulfadiazine or sulfaguanadine) on the duration of the carrier state in cholera.

A number of ships, including one hospital ship have been cleared and released from quarantine at Uruga and the passengers offloaded. Nine liberty ships still remain in quarantine.

Sanitary Engineering

Water supply. Conferences were held with the Industrial Division of the Economic and Scientific Section and representatives of the Chemical Control Association regarding the reported decrease in liquid chlorine production during May. This is due principally to failure of the importation program to replenish salt stocks. At a few plants it was reported that excess stocks on hand would necessitate some decrease in production. This is evidently due to failure of the Japanese to properly allocate and distribute this critical material. Requisitions from municipal authorities should be forwarded to the Water Works Association who are responsible for allocation for water treatment. Every effort will be made to maintain production at the maximum possible with the limited quantity of salt available.

Discussions with the Water Supply Consultants of the Office of Chief Engineer and Eighth Army Engineer reveal that the water supplies of several cities having large concentrations of troops have been restored sufficiently to permit their use by occupational forces as soon as chlorine becomes available in sufficient quantities. Repair of distribution systems is progressing slowly. Chlorinators are being repaired and new ones are being obtained where increased capacity is required from the Isomura and Leybold Companies. The Yokohama supply is maintaining a satisfactory system with a dosage of 20 ppm. The engineers were informed that this office does not favorably consider, at this time, requests that several cities have made for increasing water supplies by new construction or expansion. In all cases that have come to our attention, restoration and repair of existing facilities will provide an adequate supply, according to Japanese standards, without new construction at the source or treatment plant.

Insect and Rodent Control

The Health Section of the Ministry of Health reported 15 May on action taken to date in compliance with the Memorandum to the Imperial Japanese Government on the Appointment of Insect and Rodent Control Officers. An order from the Ministry to prefectural governors dated 10 May; directed the appointment of control officers and the organization of control teams in each city.

Nutrition Service

A conference was held 14 May 1946 with members of the Imperial National Nutrition Institute. The discussion with the director, Kuichi Sugimoto and his Committee included training requirements for nutritionists and plans for future work of the Institute. This Institute has made studies on human nutrition as well as laboratory experiments on small animals.

On 17 May a meeting of the Japanese Bureau of Welfare was attended by Colonel Sams and Captain O'Donnell to hear the discussion on the "Food Situation in Tokyo". A central Japanese committee was formed to assure a fair distribution of the Emergency Relief Ration.

Nutrition Survey

Nutrition surveys were observed with Dr. Terada and his nutritionist Miss Hagawara of the Tokyo Metropolitan Office, Bureau of Public Welfare. Physical examinations were in progress. Over three hundred persons had been examined the first day.

Personnel

Colonel Howe with Dr. Oishi, Ministry of Health and Welfare, are observing nutrition surveys around Toyama and Kanagawa.

Quarantine Service

The number of outgoing repatriates remained at normal low levels, while the incoming retained the present normal flow, around 90,000 per week.

The number of ships in quarantine at present is nine, all at Uruga. Eight of these are the remains of the cholera fleet mentioned in previous reports. A large number of passengers disembarked from these vessels are now domiciled at the Kurihama repatriation center pending their release from quarantine.

SECTION III ADMINISTRATION OF HOSPITALS

The Japanese Civilian Hospital Strength Report for the week ending 19 April shows 3,007 hospitals with a bed capacity of 205,212 of which 105,318 are occupied. There were 223,112 out-patients treated during this period.

SECTION IV NURSING AFFAIRS

Plans for the Nurses' Demonstration School in Tokyo (Central Red Cross Hospital) are well underway. A number of meetings have been held at which time curriculum, faculty and supplies have been discussed. The faculty of the two schools will share in the lecture hours and nurses will teach partical nursing to the students. The curriculum has been placed on a college basis and the number of weeks for practical work on wards has been set at 48 weeks. The school will open on the first of June. There will also be one first year student from each Red Cross Hospital (40) sent to take this course. This will make a student body of 420.

The Council of Nursing Education had its regular meeting at which time the new curriculum for the school of Japan was presented. The hours and subjects were all accepted but the time of practical training on wards must be reconsidered at another meeting held regarding this problem.

A committee on licensure was appointed which will work on rules governing the licensure of nurses and midwives.

Surveys of nursing activities in two prefectures were completed.

A radio talk has been given at Radio Tokyo through the CI&E Section, to the Japanese concerning the Nursing Profession.

SECTION V VETERINARY AFFAIRS

General

A survey of Japanese veterinary conditions on the Island of Shikoku by a representative of the Veterinary Affairs Division is still in progress.

Reports from Japanese

The Ministry of Agriculture and Forestry, Animal Disease Section, reported that no new outbreaks of animal disease occurred during the week.

Monthly Animal Disease Report, April 1946. Following is a summary of the Monthly Animal Disease Report for April 1946, submitted by the Animal Disease Section, Ministry of Agriculture and Forestry:

<u>Disease</u>	<u>Number of Cases</u>
Anthrax	4
Bovine infectious abortion	35
Equine infectious abortion	21
Scabies	2
Swine Erysipelas	2
Equine infectious anemia	6
Pullerum chick	1858

Monthly Dairy Inspection Report, March 1946. Following is a summary of the Dairy Inspection Report for March 1946, submitted by the Veterinary Hygiene Section, Sanitary Bureau, Ministry of Health and Social Affairs:

<u>Special Milk</u>	
Farm inspections	30
Milk samples	26
Over bacterial standards	0
Under butterfat standards	0
<u>Ordinary Milk</u>	
Farm inspections	2476
Milk samples examined	9799

Under butterfat standards	2344

Plant inspections	3536
Over bacterial standards	355
Under butterfat standards	705

Goat Milk

Farm Inspections	41
Milk sample examined	44
Over bacterial standards	3
Under butterfat standards	1

Monthly Meat Inspection Report, March 1946. Following is a summary of the Meat Inspection Report for March 1946, submitted by the Veterinary Hygiene Section, Sanitary Bureau, Ministry of Health and Social Affairs:

	<u>Cattle</u>	<u>Calves</u>	<u>Goat</u>	<u>Sheep & Swine</u>	<u>Horses</u>
Number slaughtered	14,398	1,070	46	3,472	3,330
Ante Mortem Condemned	1	1	0	1	2
Post Mortem Condemned					
Total carcass	15	1	0	1	1
Partial carcass	152	28	0	25	246
Viscera only	2,208	94	0	1,057	401

SECTION VI
DENTAL AFFAIRS

The dental ordinances have been compiled in Korean and their translation into English will start this week. Registration of dentists in four Korean provinces has been completed.

Japanese equipment in the hands of Koreans who did not hold a dental license has been turned over to Military Government Company through Property Custodian.

SECTION VII
SUPPLY

Production

Action has been initiated to import certain quantities of critically needed finished medicines, critical raw materials for accelerating manufacture of essential medicines, and dental materials. The total quantity was approximately 2600 tons. This quantity is for the period 1 July 1946 to 31 December 1946. The items for importation were selected from recommendations made by Welfare Ministry, Japan Medical Association and personnel of Public Health and Welfare Section. Importation of this material and finished medicine to Japan will alleviate critical shortages and prevent disease and unrest among the Japanese people.

Approximately 8900 hand dusters had been produced on 15 May 1946 and it was expected that 10,000 would be produced by 25 May 1946. Order was placed for manufacture of an additional 10,000 and that a stock level of 5,000 would be maintained. These hand dusters are being distributed to prefectural health officials by the Welfare Ministry.

A total of 3,048,930 cc of finished cholera vaccine had been produced by 4 May 1946, according to reports submitted by laboratories to the Welfare Ministry. Approximately 10,000,000 cc of raw vaccine had been produced by 4 May 1946. The Welfare Ministry was instructed to prepare 5,000,000 cc of the raw vaccine into the finished product at the earliest possible date in order that a vaccination program could be carried out in the Tokyo, Yokohama area. This was necessitated by the fact that two cases of cholera have been confirmed in the Tokyo area.

A third conference was called by a representative of the Industrial Division, ESS, on the manufacture of glassware needed by medical laboratories for distribution of vaccine. A manufacture was designated and sufficient raw materials have been allocated to accomplish planned production. The manufacturer indicated production could be accomplished in approximately six weeks. Production is scheduled to begin on 1 June 1946.

Weekly conference was held on action taken to produce mosquito and fly control supplies. All manufacturers have been selected and concerted efforts are being made to furnish raw materials to these manufacturers to assure immediate production.

Distribution

A distribution of rat poison has been made to each of the prefectures in which repatriation ports are located. Port rodent control programs may be supplied from these stocks.

Plans for the purchase and distribution of insect and rodent control materials have been completed by the Health and Welfare Ministry. Briefly, the plans provide for purchase by the Ministry and direct distribution to prefectures. Allocation within prefectures will be a responsibility of the Prefectural Insect and Rodent Control officer. An English translation of the plans together with diagrams showing the flow of supplies are attached as a matter of information to field agencies.

The Health Ministry has issued instructions to prefectural officials authoring use of supplies and equipment now on hand and suitable for insect and rodent control programs. Method of payment for the materials is to be determined later and should not delay use of available supplies and equipment.

Narcotics

As a result of efforts of Narcotic Control officers in urging Japanese officials to make prompt and through investigations of narcotic violations, two fugitives were apprehended in Oita Prefecture by Tokyo detectives dispatched by the Home Ministry and Ministry of Justice. At the time of the arrests five pounds of crude opium, a revolver and 80 rounds ammunition were seized. In addition, the former prefectural police chief of Saga was suspended and placed under arrest in his home pending investigation of his activities in connection with the seizure of 7.5 tons of opium in Wakayama Prefecture in March 1946.

As part of SCAP's narcotic control program a suggestion was made to officials of Takeda Pharmaceutical Industries, Ltd., Tokyo Branch, in February of this year that they construct a model vault for safely storing narcotics. The vault has been completed on 15 May 1946. The vault is fireproof of steel and concrete construction and is equipped with heavy steel door with combination lock. Other SCAP approved narcotic wholesalers are beginning to take similar measures to secure narcotics.

Medicinal narcotic import requirements for Korea and Japan were submitted. The requirements are estimated to the end of 1947.

SECTION VIII LEGAL AFFAIRS

General

The Chief of the Legal Division met with representatives of the Japanese Liquor Industry and arranged for setting up a uniform system throughout Japan for testing methyl alcohol in liquors. Mr. Ikebe of 42nd General Hospital will teach six laboratory technicians how to make the Denges Test, who in turn will teach 34 others, making a total of 40. These technicians will be employed in continuously testing whiskey and alcoholic beverages. Manufacturers will have every batch of liquor tested before putting it on the market.

Arrangements have been made with Finance Ministry to legalize the possession of certain buildings now occupied by the Chemo Ser-Therapeutic Laboratory in Kumamoto.

SECTION IX DIRECTIVES TO THE IMPERIAL JAPANESE GOVERNMENT

AG 400 (15 May 46) PH (SCAPIN 1240-A), subject: "Non-Reporting of Japanese Army-Navy Reserve Food Supplies, Improper Storage of Clothing and Failure of Distribution of Clothing Earmarked for Transfer".

AG 710 (18 May 46) PH (SCAPIN 1274-A), Subject: "Reporting of Certain Communicable Diseases". This was to include malarial fever and Japanese B encephalitis to the communicable disease report.

SECTION X
KOREA

The following is a summary of the report received from Korea for the week ending 4 May 1946.

BUREAU OF PUBLIC HEALTH

General

Reports on Military Government and Korean personnel indicate splendid cooperation and good progress in public health operations.

Medical Service

Cholera was reported and confirmed among repatriates arriving on board a liberty ship from China. Quarantine measures and medical examinations have been carried out. The immunizing of all Korean Government employees against plague, smallpox, typhus and cholera is being performed. Malaria reported among refugees from New Guinea is being controlled by atabrine treatments. Four cases of cholera have been confirmed in the vicinity of the city of Taijon.

Korean Veterinary Affairs

Instructions for licensure procedure have been distributed to all provinces.

The spread of rinderpest in the Russian occupied zone has been brought under control and legal action prohibiting movement of cattle across the 38th parallel into the American zone, withdrawn.

Two Korean veterinary students from Suwon Agricultural College have been admitted to the Foreign Affairs English School, where they will prepare for study in America

A Korean veterinarian has been appointed head of the Meat Inspection Sub-Division of the Bureau of Veterinary Affairs.

No new outbreaks of communicable animal diseases have been reported.

Nursing Affairs

Office space was arranged for the headquarters of the Korean League of Social Workers at the Chung Do Settlement, Seoul. The League plans an educational program in social work.

BUREAU OF PUBLIC WELFARE

Public Works

The province of Kyongsang Namdo requested a public works program to relieve unemployment and furnish detailed descriptions of the projects to be undertaken. Such a program was recommended following a military government staff study. The study also recommended extension of such plan to other provinces.

Refugees

A plan was agreed upon to establish a courier truck service twice a week for refugees from north of the 38 line arriving at Kangnung for processing at the Chunchon refugee shelter.

Housing

Eight hundred and seventy six new dwellings in Seoul and Inchon are 30-90 percent completed. Estimates of material necessary for completion were submitted by the Korean Residence Management Cooperation.

Relief Supplies

Ninety four thousand blankets at 100 yen each were allocated to the Welfare Supply Bureau under the Export-Import program.

Child Welfare

A survey was began to investigate the adequacy of diets of children attending 12 schools in Seoul.

CRAWFORD F. SAMS
Colonel, medical Corps,
Chief, Public Health and Welfare Section

3 Incls:

- #1 – Plans for distribution and insect and rodent control supplies with attached charts
- #2 – Weekly Communicable Disease Report for week ending 4 May 46.
- #3 – Weekly Venereal Disease Report for week ending 27 April 46.

I. METHOD OF DISTRIBUTION OF VERMIFUGE SOLUTION MAKING VERMIFUGE-CHRYSANTHEMUM AS MATERIAL. (Diagram, annexed paper A)

(1) Welfare Ministry shall make a purchase in block of manufacture from Control Union of Japan Vermifuge-chrysanthemum Industry, and shall give instructions for local distribution toward local government office to the said Union and at the same time make information about the quantity of distribution to the local government office. The said Union, according to the instruction, shall send goods to local wholesale dealers (wholesale dealers in patent medicines) and at the same time report to Welfare Ministry the date of the completion of sending goods.

(2) The local wholesale organization shall report to the local governmental office about the name of the article and its quantity on receiving goods.

(3) The local governmental office, according to the report of allotment from Welfare Ministry shall previously give to cities, towns and villages and health centers under its jurisdiction instructions about the quantity of distribution to local wholesale organization, and at the same time shall inform the quantity of distribution to every city, town and village and health center.

The said wholesale organization, according to the instruction, shall send goods to cities, towns, villages and health centers, and at the same time report to the local government office the date of the completion of sending goods.

(4) As for the expenses needed for the said distribution, the expenses of packing and transportation from Control Union of Japan Vermifuge-chrysanthemum to local wholesale organization shall be defrayed by Welfare Ministry and the expenses from local wholesale organization to ultimate distribution shall be defrayed by local government office.

2. Method of Distribution of Other Vermifuges

(Vermifuge Emulsion, Insect Powder, Insect Ribbons, etc.)

(Diagram, annexed paper B)

(1) Welfare Ministry shall make a purchase in block of manufacture from Patent Medicines Control Co., Ltd, and shall give instructions for local distribution toward local government office to the said company and at the same time make information about the quantity of distribution to the local government office.

The said company according to the instruction, shall send goods to local wholesale dealers (wholesale dealers in patent medicines) and at the same time report to Welfare Ministry the date of the completion of sending goods.

(2) The local wholesale organization shall report to the local government office about the name of the article and its quantity on receiving goods.

(3) The local government office, according to the report of the allotment from Welfare Ministry shall previously give to cities, towns, and villages and health centers under its jurisdiction instructions about the quantity of distribution to local wholesale organization, and at the same time shall inform the quantity of distribution to every city, town, and village and health center.

The said wholesale organization, according to the instructions, shall send goods to cities, towns and villages and health centers, and at the same time, report to the local government office the date of the completion of sending goods.

(4) As for the expenses needed for the said distribution, the expenses of packing and transportation from Patent Medicines Control Co., Ltd., to local wholesale organization shall be defrayed by Welfare Ministry and the expenses from local wholesale organization to ultimate distribution shall be defrayed by local government office.

A DISTRIBUTION PLAN OF SPRAYERS
EXTERMINATING FLIES, MOSQUITOS, AND INSECTS

(Distribution Diagram in the annexed paper)

I. Raw Materials

The Ministry of Welfare will make efforts to secure the raw materials manufacturing the sprayers and guide the producers as well for the Ministry of Commerce and in Industry.

II. Course of Distribution

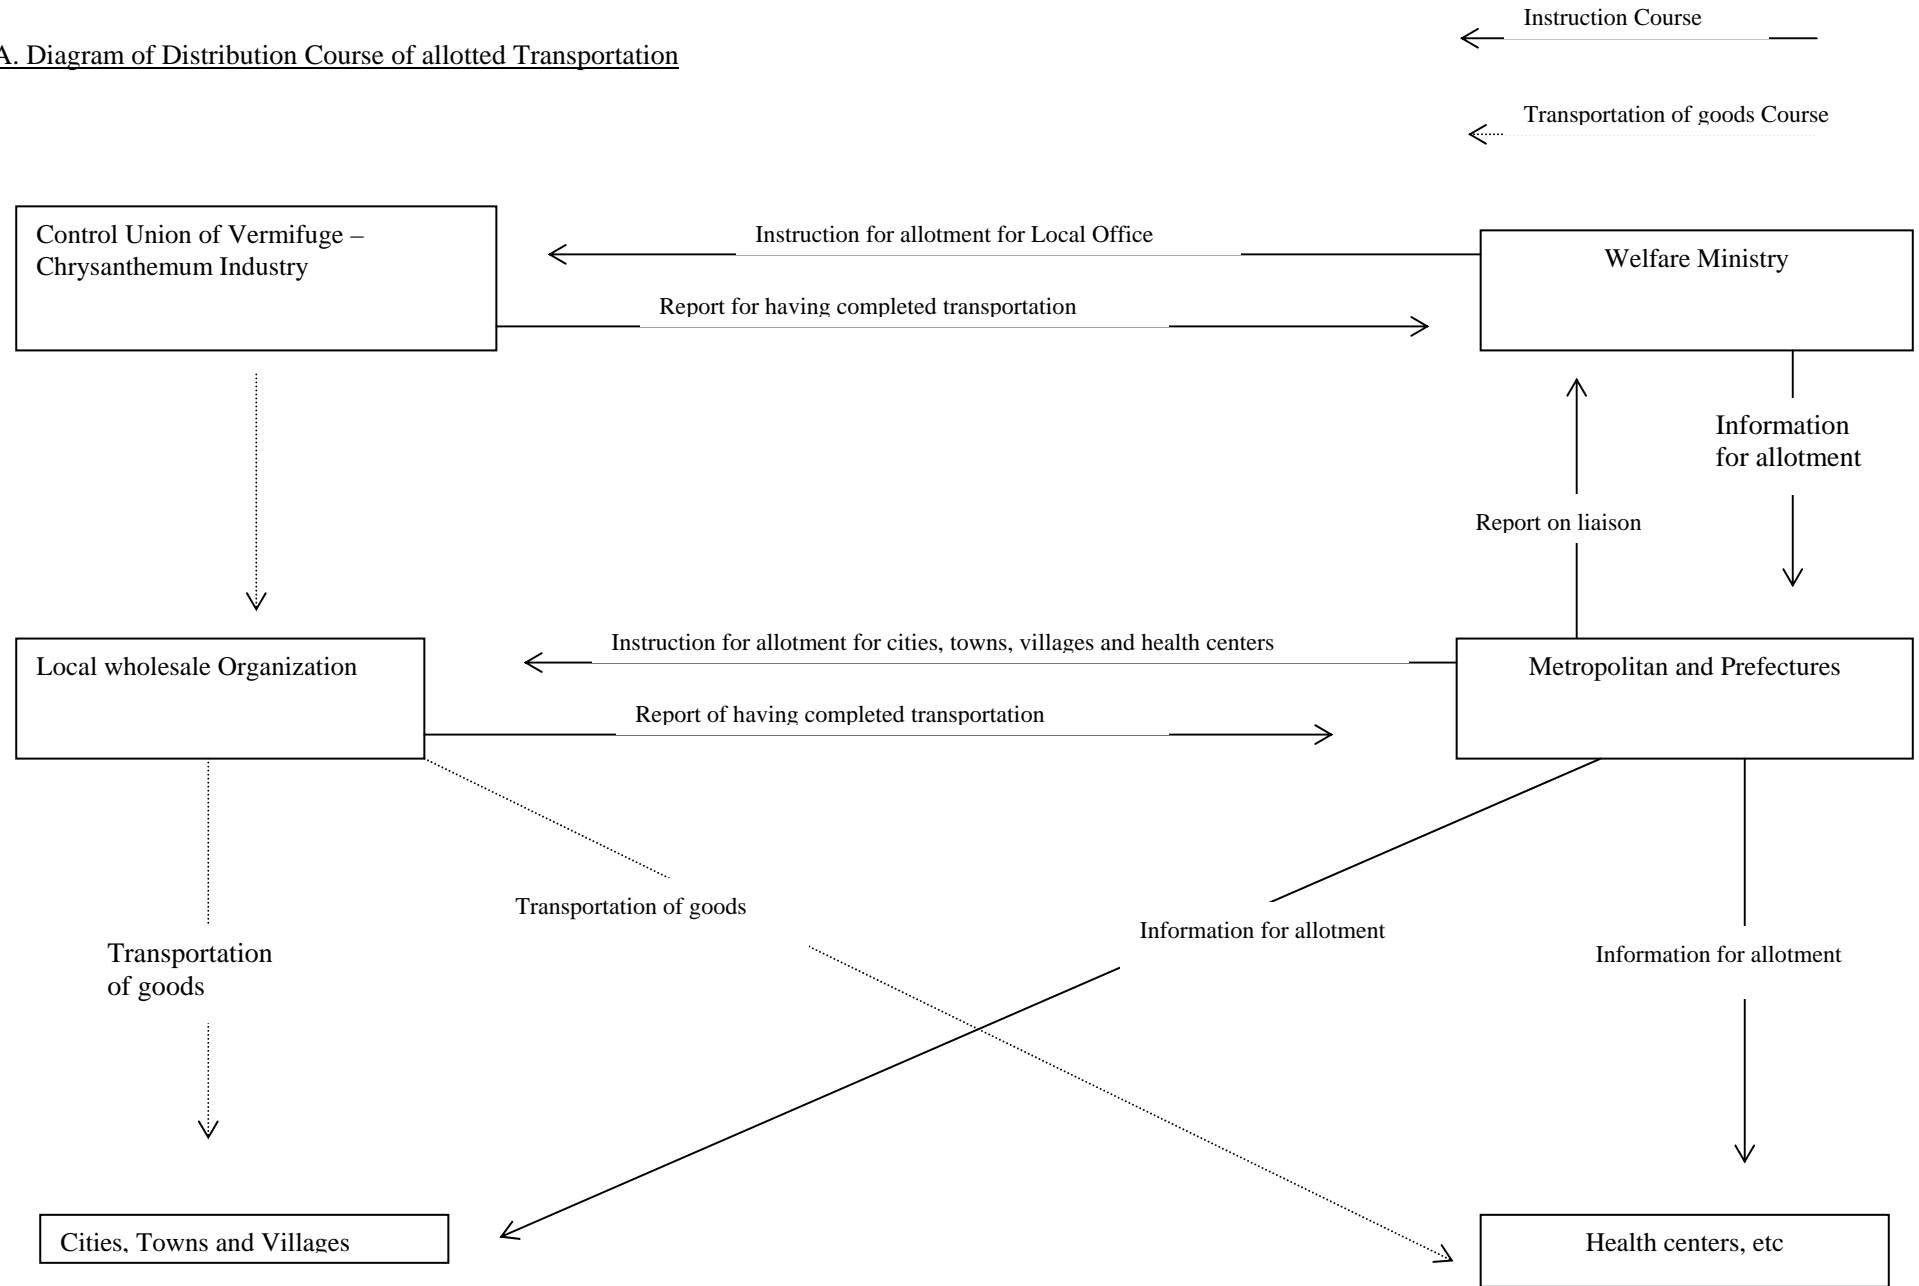

The Ministry of Welfare will direct the number of allotment by prefectures for the producers when necessary, and report to the prefectures the fixed number of distribution.

The prefectural offices will fix the number of distribution for cities, towns and villages under the jurisdiction on the basis of the real situation and they will do the distribution.

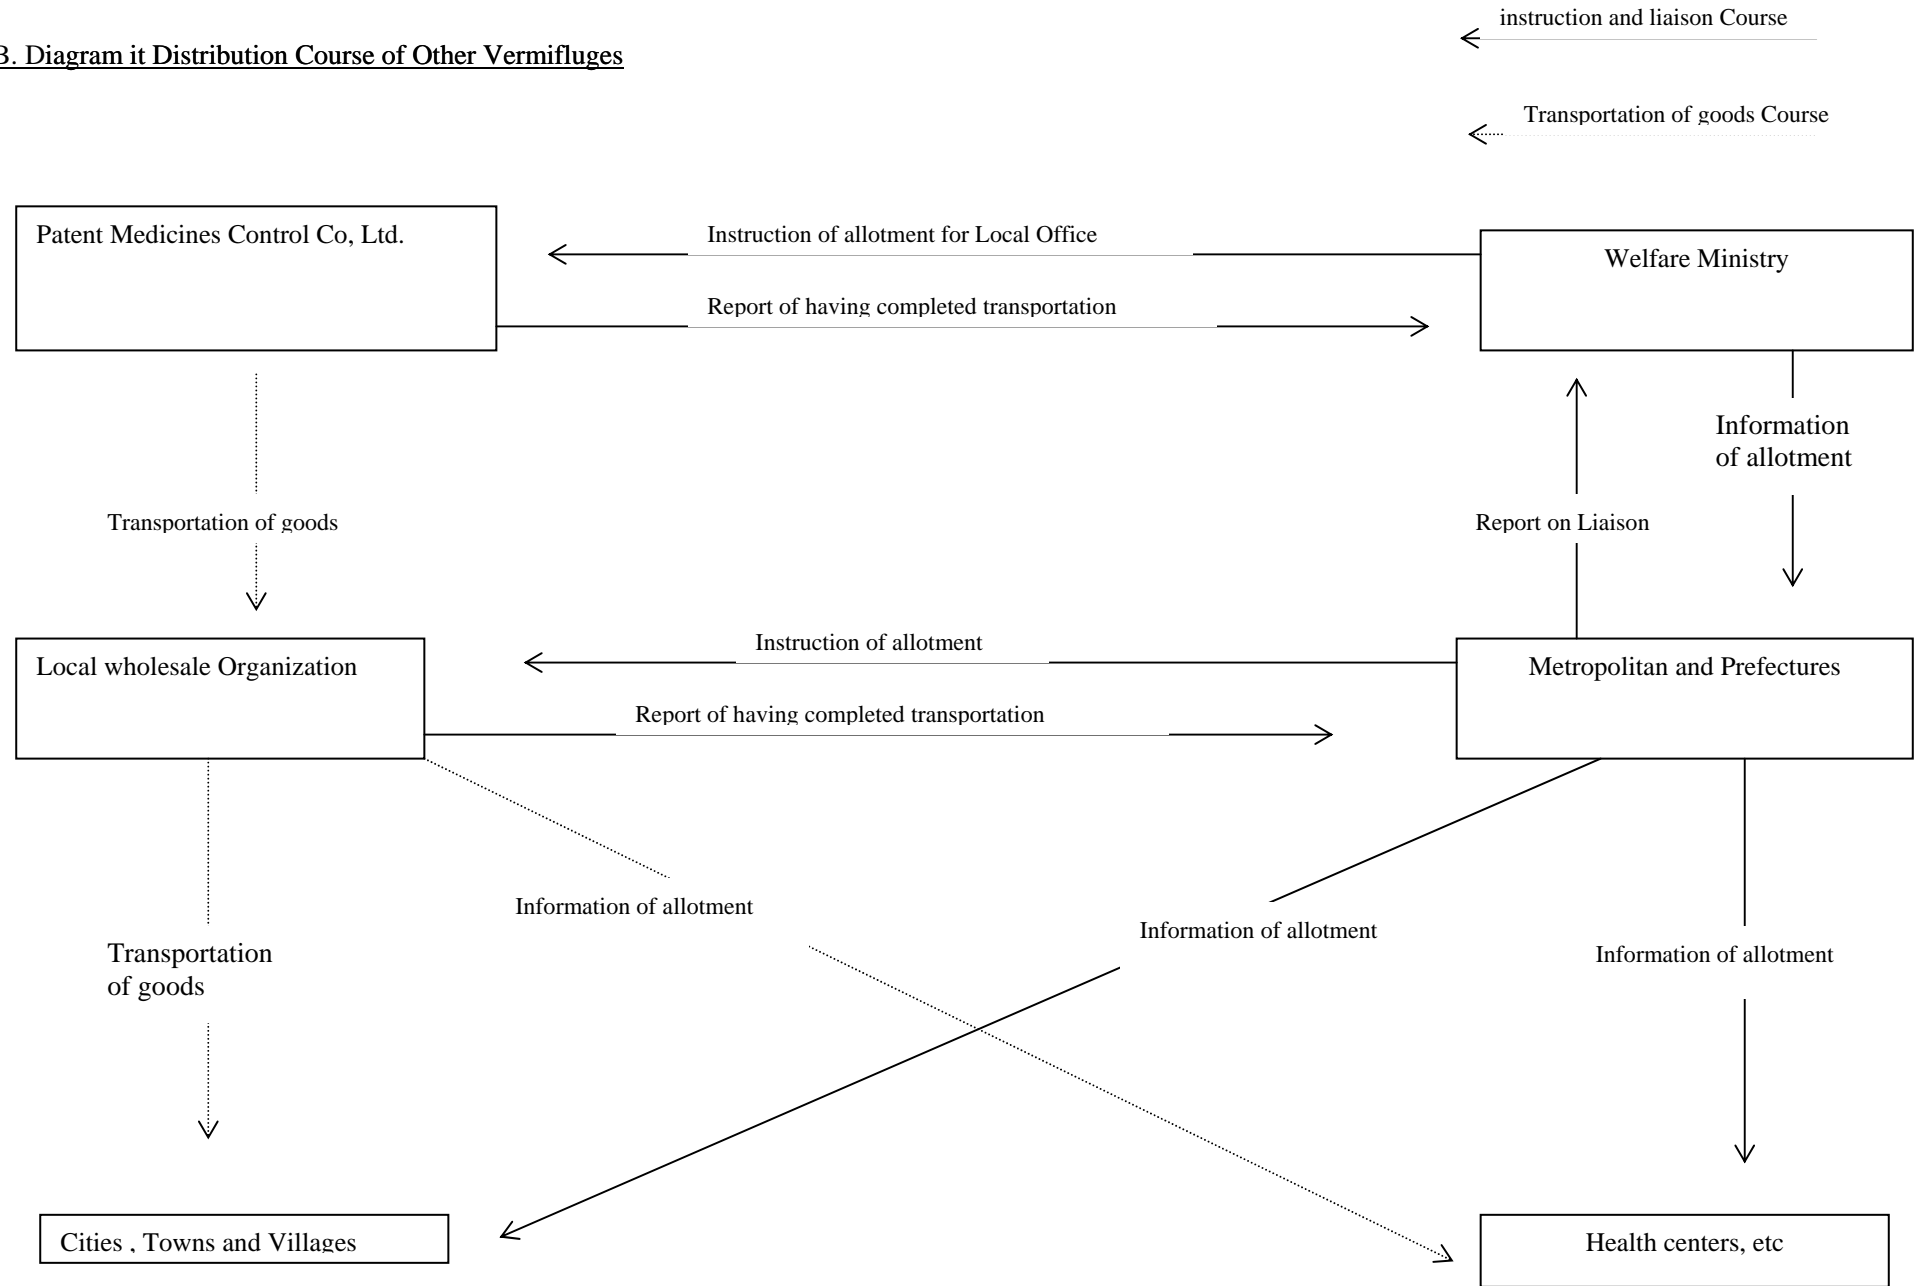

The producers will forward the goods to the prefectural offices according to the director of the Ministry of Welfare.

The purchase of the goods will be made by the prefectural offices on bloc in the same way as the case of DDT duster.

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
PUBLIC HEALTH AND WELFARE SECTION**

WEEKLY BULLETIN

**For Period
19 May to 25 May
1946**

SECTION I WELFARE

Voluntary Social Agencies

A series of conferences were held with representatives of the Welfare Ministry and officials of the National Relief Association to clarify the role to be played by voluntary, non-governmental, non-profit agencies in the welfare field. The value of the agencies as separate and independent bodies operating under government regulations and SCAP policies was stressed. They may be reimbursed by the government on a basis of actual assistance rendered. Insofar as they provide care other than or in addition to "adequate food, clothing, shelter, and medical care" which the government is required to furnish all indigent persons. Financial support from the government in the form of lump-sum grants or subsidies cannot be made to voluntary relief agencies under Memorandum of 27 February 1946 (SCAPIN 775).

Voluntary Relief Imports

A radio from the War Department designated Rev. McKillop and Miss Rhoades as the authorized representatives being sent to Japan to represent LARA, (Licensed Agencies for Relief in Asia) in the distribution of voluntary contributions of relief supplies for Japan and Korea.

SECTION II PREVENTIVE MEDICINE

Japanese B Encephalitis

Dr. A.B. Sabin of the Neurotropic Virus Commission arrived in Japan 21 May 1946, for duty with the Public Health and Welfare Section in connection with the study and control of Japanese B encephalitis.

Colonel D. Kuhns, Commanding Officer, 19th Medical General Laboratory, visited this Section during the week and consulted with Dr. Sabin and members of this Section particularly on laboratory aspects of studies on Japanese B encephalitis.

A conference was held with Colonel Kuhns, Dr. Sabin and officials of the Government Institute for Infectious Diseases concerning available information on Japanese B encephalitis and the possibility of procuring laboratory space at the Institute for use by the Neurotropic Virus Commission.

Cholera

Reports were obtained on bacteriological examination of approximately 600 specimens of fish and shellfish taken in Tokyo Bay, submitted by five of the nine fishermen's associations operating in metropolitan Tokyo. All specimens were reported negative for contamination by cholera. Reports on specimens submitted by the remaining fishermen's associations will follow.

Cholera at the Uraga repatriation center remains under strict control. The majority of the ships of the group originally quarantined have been cleared and their passengers offloaded.

Typhus and Smallpox

There continues to be a decline in the incidence of both smallpox and typhus fever. The great majority of the typhus cases still occurring are located in the greater Tokyo area, while most of the other cases reported are in the prefectures north of Tokyo.

Insect and Rodent Control

A press conference on the control program on insect and rodent borne diseases was held with editors and reporters of some twenty-odd Japanese magazines. Particular emphasis was laid upon the nature and methods of transmission of dysentery, typhoid, para-typhoid fevers, and Japanese B encephalitis.

Sanitary Engineering

Water Supply. At a conference with the Industrial Division of the Economic and Scientific Section and representatives of the Ministry of Health and Social Affairs, Japanese Water Works Association, and Soda Industries Control Association, efforts were made to coordinate the activities of the Japanese agencies concerned in providing a more equitable allocation and better distribution of chlorine for water treatment. Sufficient chlorine is now being produced to treat all municipal supplies at pre-war standards, if proper requisition is made by the cities for allocation by the Water Works Association and distribution by Soda Industries Control Association.

Insect and Rodent Control

The Health Section of the Ministry of Education presented plans for sanitary education in the school at a meeting with the Civil Information and Education Section. This will include public health education, improvement of sanitary conditions, and control of insects and rodents. The draft of an order from the Ministry to prefectural governors initiating this program in all schools was approved. Radio programs have already started and will be continued on the Infant's Hour, Students' Hour, Teachers' Hour, and as "Sanitary Memos" in other spots. Articles and news items are to be published under School Hygiene, and pamphlets and posters are to be made and distributed by the School children. Practical application of sanitary measures and insect and rodent control is to be effected at all schools. The Ministry of Health and Social Affairs has had posters made showing how diseases may be transmitted by flies and mosquitoes and has exhibited them at principal street intersections in Tokyo. Work is progressing on the publication of pamphlets and additional posters for wide distribution for education of the general public in sanitation and insect control.

Conferences have continued with the Supply Division of this Section and Ministry of Health officials for the promotion of the manufacture of insecticides, larvicides and spraying equipment. Particular emphasis has been placed upon the production of phenothiazine and pyrethrum emulsion concentrate. A conference was also held with the Petroleum Division of G-4 and the Petroleum Advisory Group, for the allocation of oils to supplement Japanese stocks for the manufacture of pyrethrum emulsion concentrate.

Sanitation in Housing Projects

Sanitation in reconstruction and emergency housing projects was discussed with the chairman of the planning board of the Ministry of Home Affairs and their sanitary engineer. It is expected that city water supplies will be used in all developments, and either flush or "semi-flush" toilets will be installed in locations having existing sanitary sewers. In other areas provisions will be made for the storage and at least partial digestion of nightsoil before its use is permitted on gardens. Privies must be constructed so as to be fly tight, provisions be made for proper storage and disposal of garbage and refuse, and consideration be given to basic principles of rat-proofing in construction of homes.

Nutrition Surveys

Nutrition surveys in Tokyo began on 23 May 1946. Physical examinations and food consumption studies were observed in the following Kus: Kyobashi, Sugunami, Kanda and Honjo. Methods of tabulating and calculating data were observed and discussed at the Ku level.

Conferences were held with Dr. Terada, Chief of Public Health Bureau, Tokyo, and Dr. Oisi, Ministry of Health and Welfare, on the remaining nutritional schedule for the May surveys.

SECTION III ADMINISTRATION OF HOSPITALS

In Korea, lepers who ran away last fall have been returned to hospitals. Food and hospitalization have been improved.

The Japanese Civilian Hospital Strength Report for the week ending 26 April 1946 shows 3008 hospitals with a capacity of 204,400 beds, 102,517 of which were occupied. This marks the first decline in number of beds occupied since the rise started 11 January 1946. For the same period there were 242,058 out-patients.

SECTION IV NURSING AFFAIRS

A conference was held at the Central Red Cross Hospital regarding supplies that will be needed for the Nurses Demonstration School to open in June. The list of supplies, including coal for operating room equipment, was checked and approved and a requisition has been made. Hospital and nurses' quarters have been dusted with DDT powder prior to the St. Lukes' student nurses moving into the quarters.

A conference was held with the subcommittee on curriculum for schools of nursing in Japan. Clinical requirements and qualifications for schools of nursing were discussed. The findings and recommendations will go before the Central Council to be voted upon at the next meeting.

Special services were held by Japanese, 23 May 1946, at St. Lukes' Hospital (now occupied by the 42nd General Hospital) for replacing of the lighted cross, on the tower, which was taken down during the war by order of the Japanese Government for use as scrap material. Permission was obtained through General Headquarters to rebuild and replace the cross, which has been accomplished. English Bishops, American Chaplains from 42nd General Hospital, Japanese Bishop and a number of Army personnel along with representatives from General Headquarters were present.

The subcommittee on licensure for nurses met on Saturday 25 May 1946, and discussed types of examination to be given as prefectural examination to all nurses and midwives. American methods were discussed

concerning types and length of time for written and practical examinations. This will again be brought up before the Central Council at its next meeting.

Personnel

Lt. Matheson has received her discharge from the Army Nurse Corps and is now assigned to Nursing Affairs Section as civilian nurse.

Special Activities

Articles on general nursing and nursing education have been published in several Japanese magazines and newspapers including New Life and the Nippon Times. A lecture given at Toshima Infectious Disease Hospital on American Nursing methods has appeared in a Japanese medical magazine.

SECTION V VETERINARY AFFAIRS

General

Survey of Japanese Veterinary Affairs, Shikoku: The following is a summary, by prefecture, of the surveys of Japanese Veterinary affairs, Shikoku, conducted 5 – 20 May 1946:

Kochi: The veterinary personnel report is as follows: Health Section, eight; Agriculture Section, ten; and licensed veterinarians, sixty.

The dairy industry is minor. Laboratory control of bottled milk consists of infrequent specific gravity, butterfat and bacterial determinations. Farms are inspected every other month but such inspection is accomplishing little as regards sanitary operations and improved herd health. The program for the annual tuberculin testing of dairy cattle is not in effect.

All slaughter houses maintain official inspection in application of sanitary practices of meat handling. Repairs to facilitate disposal of wastes, storage of hides and bones are generally needed.

Animal diseases are now being temporarily controlled. Former military medical supplies, soon to be distributed, will fall short of satisfying immediate needs for veterinary medicines.

Tokushima: The veterinary personnel situation is as follows: Health Section, four; Agriculture Section, seven; and licensed practitioners, seventy.

The dairy industry here is of consequence and includes some milk processing. Farms and plants are inspected monthly. Plant sanitation was fair. Standard milk bottles and new caps are in use at most dairies and all milk is heat sterilized before use. Laboratory examinations include specific gravity, butterfat and bacterial determinations. The tuberculin testing of dairy cattle during the current year has not been initiated.

All slaughter houses maintain official inspection. The disposal of plant wastes and condemned parts without physical or chemical sterilization, also the outdoor storage of hides and bones constitutes potential disease reservoirs and public nuisances.

An allotment of former military veterinary supplies was received and distributed in April. This approximated 50 percent of the immediate need.

Kagawa: The veterinary personnel situation is as follows: Health Section, six; Agriculture Section, eight; and licensed practitioners, seventy.

The dairy industry is of importance and some butter is manufactured. Dairies are inspected three times annually by a ken official and twice per week by a local police inspector. The inspection consists of a check of the health of cattle and employees, general sanitation, operating practices and laboratory tests of bottled milk. Regulation bottles and new milk caps are in use. The 1946 tuberculin test is being applied. Four hundred and fifty two head have been examined and four reactors found.

All slaughter houses maintain official inspected. The construction of these establishments was above average. Disposal tanks for plant effluent and condemned parts were sufficient in capacity, in good repair and properly functioning.

Former military supplies sufficient to meet immediate needs have been distributed.

Ehime: The veterinary personnel situation is as follows: Health Section, three; Agriculture Section, seven; and licensed practitioners, seventy.

The dairy industry is minor. Dairy inspection is accomplished mainly by the local police with little supervision or assistance from prefectural officials. Farms are visited once per year by a ken official for the purpose of applying the tuberculin test. The 1946 examination has not been inaugurated. Police inspection of dairies is twice per month. Sample bottles of milk are collected and the specific gravity, butterfat and bacterial counts determined. Dairies were found in various states of repair and standard milk bottles and caps are not in use. Bottled milk is heat "sterilized" before use.

Slaughter houses are officially inspected. Slaughter establishments are below the Japanese average in construction and state repair. Improved post mortem technique, application of sanitary practices of meat handling and repairs to facilitate adequate disposal of wastes and storage of hides and bones are generally needed.

Conclusions: Prevailing infectious diseases are tuberculosis, anthrax, blackleg, swine erysipelas, strangles and pullorum. There are being effectively controlled for the present.

The annual examination of dairy cattle for tuberculosis, interrupted in 1945 by war conditions, is being resumed.

The acute shortage of drugs needed for general practice has been considerably relieved by the distribution of former military supplies.

The efficiency of meat and dairy inspection is variable, though generally deficient. Lack of technically qualified personnel, travel limitations and shortages of equipment were noted as reasons.

All officials are in agreement on matters reports and reporting.

Surveillance by Military Government personnel of Japanese compliance with SCAP Directive AG 728 (30 Oct 45) PH, subject: "Information on Japanese Animal Disease Control" has been instituted and is stimulating the reestablishment of Japanese veterinary service.

Veterinary Educational Reform

The Council on Veterinary Education held its monthly meeting on 22 May 1946 at which time reports were presented on progress made concerning the raising of educational standards.

Reports from the Japanese

Animal Disease Report. The Ministry of Agriculture and Forestry, Animal Disease Section, reported the following new outbreak of disease during the period 19-25 May 1946.

<u>Prefecture</u>	<u>Disease</u>	<u>Cases</u>
Chiba	Swine Erysipelas	1

Control measures are immunization and quarantine.

SECTION VI DENTAL AFFAIRS

For the eleven month period ending 28 February 1946, a total of 1,738,945.43 yen in insurance was paid for the dental treatment of 751,712 beneficiaries.

SECTION VII SUPPLY

Production

Weekly conference with representatives of the Welfare Ministry, Japanese Government, revealed that action has been taken to obtain sufficient pyrethrum to being production of pyrethrum emulsion. Manufacturers have selected and sufficient pyrethrum has been furnished to manufacturers for production of approximately 875,000 gallons of emulsion during 1946. Conferences were held with G-4, Petroleum Section, Import and Export Division, ESS and the Petroleum Advisory Group to request that 1,100,000 gallons of fuel oil #2 and 60,000 gallons of #62 octane gasoline be furnished from U.S. stocks for use in the Mosquito and Fly Control Program. The above specified quantities will be furnished from U.S. stocks immediately upon receipt of request from the Board of Trade, Japanese Government, to include these quantities in the present petroleum import program. The Welfare Ministry has been urged to take action with the Board of Trade to have this request submitted immediately. Pyrethrum emulsion will be distributed to all prefectures on a national scale direct from manufacturers.

A request has been submitted to import DDT concentrate, kerosene, methylated naphthalene and thanite to cover Japanese civilian requirements for the year 1 July 1946 to 30 June 1947.

Large quantities of pyrophyllite and tale have been located in Japan and necessary mixing and milling machinery are available. Provided the Japanese Government is furnished with 100 percent DDT concentrate they will be able to manufacture large quantities of insecticide, power and spray. This method will relieve the burden of transporting and distributing DDT products, at present being accomplished by the occupation forces.

Distribution

As action on a report from Military Government units in Shikoku that Japanese military medical supplies have not been distributed promptly in that area, representatives of the Welfare Ministry and Central Medicine Control Company were directed to hold a conference at Takamatsu, Kagawa prefecture on 25 May. Any

misunderstandings will be cleared up at that time, and the officials will remain until distribution is proceeding smoothly.

Every prefecture has now been furnished a supply of hand dusters for application of DDT. Production is continuing and a reserve is being built up for distribution later as required for disease control programs.

Shipment of a 100 bed Japanese hospital for repatriates at Hulutao, Manchuria, has been requested by Commanding General, United States Army Forces in China. Supplies are being gathered, packed and marked by the Welfare Ministry. Shipment is to be completed by 25 May.

Additional typhus vaccine was delivered to repatriation ports as follows:

Uruga	1,800vials
Senzaki	2,520 "
Hakata	2,880 "
Sasebo	2,160 "
Kagoshima	2,160 "

A circular of information has been prepared concerning DDT, copy of which is enclosed. There is no objection to releasing this information to prefectural health officials. Additional copies may be secured by request to this office.

Narcotics

In the reorganization of the Ministry of Health and Social Affairs required by (SCAP 945), 11 May 1946, a separate entity, probably a Narcotics Section, will be established. This Section will have as its sole function narcotic regulations, control and enforcement in Japan.

Ministry regulations prepared as a result of (SCAP 644) 22 January 1946, were approved by (SCAPIN 1319-A), 23 May 1946. Monthly reports to be furnished SCAP by the Japanese Government will give information to assure strict enforcement of the regulations which require that all narcotic dealers be properly classified, registered and licensed annually. Sales by registrants are regulated and will be made a matter of record. Periodic reports and inventories will be prepared by all narcotic dealers and submitted to the Japanese Government. All narcotic records will be preserved for five years. Narcotic officials will inspect these records and the security facilities for storing narcotics. Violation of any of the provisions of the regulations is subject to a penalty of not more than three years penal servitude, a 5000 yen fine or both. Promulgation of the regulations will mark the greatest step forward the Japanese Government has ever made toward eliminating illegitimate narcotic traffic in Japan.

The narcotic production and sales records of Hoshi Pharmaceutical Company, Ltd, Tokyo, over a fifteen year period were graphically presented in an analytical report prepared by Mr. Joseph Bransky, Narcotic Agent, working with the Narcotic Control Officers, after a study several weeks. The report conclusively illustrates the loose, ineffectual and perhaps at times purposeful lack of control exercised over narcotics in Japan.

SECTION VIII LEGAL AFFAIRS

No report.

SECTION IX DIRECTIVES TO THE IMPERIAL JAPANESE GOVERNMENT

Memorandum issued to the Imperial Japanese Government during the past week was: AG 441.1 (23 May 46) PH, (SCAP IN 943), subject: "Establishment of an Effective System for Narcotic Control in Japan".

CRAWFORD F. SAMS
Colonel, Medical Corps,
Chief, Public Health & Welfare Section.

3 Incls:

#1 – Circular of Into concerning DDT.

#2 – Communicable Disease Report for Week 11 May 1946.

#3- Venereal Disease Report for Week 4 May 1946.

INFORMATION CONCERNING DDT

Technical DDT is a fine white powder which varies from yellowish white to white in color. Storage at high temperatures or exposure to sunlight does not cause deterioration. Under conditions of high humidity it tends to cake. Some producers offer a product so treated as to prevent hard clumping.

DDT acts both as a contact poison and a stomach poison for insects. The toxic effect is exerted principally on the nervous system and results in characteristic "DDT tremors", progressive paralysis and death. DDT when applied in the form of a spray or powder will continue to kill insects which come in contact with treated areas for several weeks or months.

DDT is a toxic substance to humans and care should be exercised in handling. All persons working with this material should be well trained in methods of application. Poisoning may occur from ingestion of DDT or by absorption of solutions of DDT through the skin. Therefore care should be taken to prevent contamination of foods (particularly butter, milk, etc) by DDT. Contact with oil and organic solved DDT spray solutions should be avoided. Inhalation of dusts containing DDT is not particularly dangerous, but when the dust cloud is dense use of respirators is advisable.

DDT Insecticide Preparations: DDT may be incorporated in the preparation of various insecticidal and miticidal formulas.

A. Dusts

Insecticide power, louse

DDT (concentrate).....1 part
Pyrophyllite.....9 parts
To from a 10% DDT content dust.

Larvicide DDT, power, dusting

DDT (concentrate).....1 part
Talcum.....9 parts
To from a 10% DDT content dust.

Manufacture of 10% DDT Insecticide Dusts: "Either pyrophyllite or talc can be mixed with DDT to produce louse powder. While 10% is used in the standard Amy product, the concentration is not critical and from 5% to 10% will be effective. The pyrophyllite or talc should be neutral or very slightly acid. Alkaline dusts will cause the DDT to decompose.

"A hammer mill should be used for this operation. Do not attempt to use a stone mill, ball mill, paint mill or edgerunner, since the frictional heat developed will cause the DDT to soften and cake-up. A hammer mill of the blade type is to be preferred to the saddle type.

"If either the pyrophyllite of the DDT is lumpy, break up the larger lumps by hand and mix 25 pounds of DDT with 25 pounds of pyrophyllite. This mixing can be done in any type of mechanical agitator or in a tumbler drum. Put this mixture through the hammer mill once, then add 200 pounds of additional pyrophyllite. Mix and put through the hammer mill a second time. Do not try to put unmixed DDT through the hammer mill.

"Blade type hammer mills should be available in plants which formerly ground pyrethrum flours for export".

In the specifications for DDT louse powder as used by the Amy the following is stated:

90% should pass U.S. Standard mesh #325
99% should pass U.S. Standard mesh #100
99% of the finished material should go through the U. S. Standard mesh #80

The approximate particle size corresponding to these meshes are as follows:

Mesh #325: 44 Micra
Mesh #100: 149 Micra
Mesh # 80: 177Micra

B. Solutions: Several types of solutions for use as sprays may be prepared.

a. Insecticide Spray, residual effect

DDT (concentrate).....5%
Methylated naphthalene.....15%
Kerosene..... 80%

For use in the control of roaches, bedbugs, mosquitoes, houseflies, phlebotomus flies, fleas, ants, etc. A solution, giving residual effect, may be prepared by dissolving 7 pounds DDT concentrate in one gallon of kerosene. Use at rate of one quart per 250 square feet.

b. Insecticide, liquid, finished spray

DDT (concentrate).....1.0%
Thanite.....2.5%
Kerosene.....96.5%

For use as a general insecticide where the spray is applied directly on the insect by means of an ordinary hand spray gun. This spray should not be used to give a residual effect as the DDT content is too low.

c. Insecticide spray, delousing (stock solution)

DDT (concentrate).....6%
Benzyl benzoate.....68%
(ethyl p-amino benzoate)
Tween 80 (wetting agent).....24%

Prior to use dilute with 5 parts (by volume) of water to from 1% DDT content.

Designed for use on individuals against louse infestation of the hairy parts of the body. This spray is lousicidal and ovicidal. 2/3 ounce required per individual. Solution may also be used in the treatment of Scabies, by application to affected parts.

d. Insecticide DDT emulsion concentrate

DDT.....25%
Xylene.....65%
Triton x-100 (emulsifier).....10%

To be used as a 2% water dilution for louse proofing of clothing. May also be used in emulsions for preparation of larvicides, residual spraying against mosquitoes, flies, bedbugs, etc.

For impregnation of clothing, mosquito bar, etc., dilute 1:11 by weight to from 2% aqueous emulsion. 30 gallons is sufficient for 125 suits of winter (50% wool) underwear (or garments of similar weight). One quart of solution per suit of underwear is required. 2% of dry weight of garment should be DDT.

List of component ingredients of DDT insecticide products:

DDT - Technical (concentrate)
Dusts
DDT - technical
Pyrophyllite
Talcum
Solutions and sprays
DDT - technical Benzocaine (ethyl p-amino benzoate)
Methylated naphthalene Xylene
Thanite Kerosene – Diesel oil – Fuel oil
Benzyl benzoate Tween – 80 (wetting agent)
 Triton x-100 (emulsifier)

PUBLIC HEALTH AND WELFARE SECTION**

WEEKLY BULLETIN

**For Period
26 May to 1 June
1946**

SECTION I WELFARE

Public Assistance

The monthly report from the Japanese Government for April on public assistance covered 30 prefectures. Those failing to submit completed returns by 25 May 1946 were: Hokkaido, Iwate, Akita, Saitama, Chiba, Kanagawa, Yamanashi, Nagano, Kyoto, Hyogo, Wakayama, Hiroshima, Kochi, Fukuoka, Nagasaki, and Kagoshima. For the 30 prefectures approximately 1.5 million different persons received public assistance under the various laws. Amount of assistance granted was approximated by 34.4 million yen. In Tokyo alone, the relief load dropped from approximately 279,000 persons in March to 80,000 in April; whereas in Osaka, it rose from 51,000 in March to 140,000 in April. An examination of such radical fluctuations is being made to determine if they are due to carelessness in compiling statistics or due to actual changes in the overall public assistance picture.

Reserve Relief Supplies

An extensive fire in the Mura of Tajima, Fukushima Prefecture on 20 May 1946 resulted in the destruction of approximately half of the city's dwelling houses. Four hundred and fifty five houses were destroyed and three hundred others damaged. Twenty four hundred and twelve persons were made homeless.

To meet this emergency situation, SCAP authorized the release of 3000 rations for a four day period. The supplies were taken from those held in reserve by the Japanese Government which formerly were Japanese Army and Navy stocks. The Japanese Red Cross supplies emergency first aid, medical and hospital care.

On 27 May 1946, Lt. Col. Neff accompanied by Capt. Blackburn, Eighth Army Welfare officer and a representative from both the Home, and Health and Welfare Ministries inspected the storage former Japanese Army and Navy stores in open fields near Urawa, Saitama Prefecture.

It was found that under the supervision of the 79th Military Government Company, these stores were now being moved to warehouses in Urawa, Omiya and neighboring villages.

Items of particular interest were 345,000 cow hides in good condition, now available for manufacturing into footwear. Another item of interest was 4000 tons of soy beans. The aforementioned supplies are to be utilized in relieving the shortages now existing in the large urban areas.

SECTION II PREVENTIVE MEDICINE

General

Conferences were held with Group Captain Corbett and Wing Commander Stuart, medical officers representing BCAIR and BCOF respectively on various aspects of civil public health problems. Japanese B encephalitis, schistosomiasis, cholera and venereal diseases were discussed, together with their possible relation to and effect upon the British Commonwealth Occupation Forces.

A meeting was arranged between these officers and the Surgeon, Eighth Army, to discuss problems of an operational nature .

Conferences were held with a representative of the Civil Intelligence Division G-2, concerning investigation of a Kyodo (Japanese) press release to the effect that the majority of 267 vagrant and "wayside" deaths in Tokyo during April were due to starvation. This was not borne out by the Medical Examiner's reports, on the basis of which a maximum of approximately 20 percent can be attributed to malnutrition and/or starvation. Investigation is being continued.

Lt. Col. Hargett, USPHS arrived on 27 May for duty as Port Quarantine Officer Public Health and Welfare Section, vice Colonel Vance B. Murray, relieved.

Japanese B Encephalitis

A conference was held with representatives of the Ministry of Health and Social Affairs and the Institute for Infectious Disease concerning policy relative to the distribution of encephalitis vaccine for civilian use. Vaccine will be available for approximately 20,000 persons and it was decided to use 18,000 doses for children and 2,000 for individuals over 60, all in Okayama prefecture.

Eight medical corps officers, a vital statistician and a member of the Neurotropic Virus Commission will proceed to Okayama to supervise this work. All suspected cases in this prefecture will be hospitalized and diagnoses confirmed by laboratory methods. Japanese health officials have been instructed in their procedures.

Cholera

An unconfirmed report was received of two cases of cholera in Shizuoka prefecture. Both cases were allegedly members of wedding party. A later report, also unconfirmed, stated that the patients, both male, had died and that the diagnosis had been confirmed by post mortem. Investigation is being made both by the Ministry and by the Military Government Public Health Officer of Shizuoka Ken.

Sanitary Engineering

Water Supply -- The Bureau of Sanitation of the Ministry of Health and Social Affairs has issued a letter to Prefectural Governors dated 16 May 1946 on the Sanitation of Water Supplies. This order marks a definite step forward in the consideration of sanitation and treatment of water supplies in Japan, and with proper enforcement should result in raising the standards of municipal water supplies throughout the country. A summary of the order is attached to this bulletin.

Insect and Rodent Control -- A letter dated 26 April 1946 has been transmitted by the Ministry of Health and Social Affairs to Prefectural Governors on enforcement of Rodent Control. This letter outlines measures to be taken for the control of rodents throughout the country, and particularly in the part cities by using both traps and poisons. Active measures are to be taken immediately in all cities where government quarantine stations are located and also Tokyo, Yokohama, Kobe Osaka, Niigata, Otaru, Kawasaki, Nagasaki, Shimizu, Yokkaichi, Onomichi, Hozaki, Miike, Tsuruga, Nanao, Fushiki, Aomori, Nemuro, Muroran, Kushiro, Hakodate, Maizuru, Meji, and Shimonoseki. Necessary supplies and equipment will be requisitioned from the Section for Infectious Disease of the Ministry of Health and Social Affairs. Results of the rodent control program will be reported to the Ministry.

Radio talks have been given on sanitation and insect control by Japanese officials and preparation of future releases for press and radio is continuing. Production of Japanese manufactured larvicides appears to be progressing satisfactorily. Forty-three tons of pyrethrum emulsion concentrate will be delivered for distribution to prefectures on 3 June 1946.

Sanitation in Korea -- The Bureau of Sanitation has reported that sanitary conditions in Ansong were found to be unsatisfactory. Recommendations were made for general cleaning and for the improvement of wells. An industrial hygiene inspection was made of the Yung Dung Po Cotton Mills. Housing conditions and most of the plant was satisfactory. Recommendations were made for improving latrine water conditions.

Nutrition Surveys

The Conduct of nutrition surveys was observed in various parts of Tokyo. Nutrition surveys were completed this week throughout Japan which are being calculated and tabulated. Final results are expected in June.

Moving and still pictures were taken of the physical examinations in the health centers and the collection of data on food consumption in the homes. Pictures were taken of the actual rationing of fish from the storage plant to the market center.

Dr. Kuwabara of the Metropolitan Office was appointed nutrition liaison officer for this section in connection with nutrition surveys.

Quarantine Service

Principal activities for the week consisted of filming the activities of repatriation at the Uraga quarantine station. The object of the film is to depict the work of processing repatriates with special attention to cholera control measures.

SECTION III ADMINISTRATION OF HOSPITALS

The Japanese Civilian Hospital Strength Report shows 3008 hospitals with a capacity of 204,400 beds, 102,517 of which are occupied. For the same period, there were 242,058 out-patients.

SECTION IV NURSING AFFAIRS

General

Since last week a number of important conferences have been held regarding the problems found in the schools of nursing in Japan. Raising the nursing standards and endeavoring to put nursing on a professional basis necessitates changes in curricula, subject matter, hours, weeks and months to be spent in practical work, theoretical work and affiliation. The subcommittee on licensure met and are now ready to bring before the Council of Nursing Education their proposal for a National Examination for licensure of nurses and midwives. Details have been worked out by the committee for the appointment of board and council members, the number and length of time to

serve. Areas that Japan will be divided into and the representatives that will be selected from each area have been prepared. The license will be issued by the Ministry of Health and examinations will be held twice a year. Those now holding license but who have not had the practical hospital refresher courses will be given an opportunity at the end of the period to qualify for an examination. Those who have had approved training and are qualified for examinations will be allowed to take the examination and if satisfactory receive a license. At the end of a specified time all licenses will be either renewed or discontinued and every nurse and midwife will be required to hold a certified license, given by the new board.

All "individual training" is to be discontinued. Hospitals with less than 100 beds will not support training schools for nurses. Each school of nursing with 100 beds will have at least three full time nurse instructors.

The plans have been carefully worked out by representatives of hospitals, Ministry of Education, Ministry of Public Health, nurses, midwives and representative of GHQ on nursing affairs, and were presented to the Council of Nursing Education for approval. The plans will then be placed before the Ministry for presentation to the Diet in the fall session.

The Model Demonstration School for Nursing opened officially at the Japanese Central Red Cross Hospital 1 June 1946. Special services were held with members of Public Health and Welfare Section participating in the program with Japanese officials. The school will carry the regular three year program.

Council of Nursing Education held its regular meeting 31 May 1946. Subcommittees presented their findings and plans which were passed.

The American National T.B. Association (Dr. Kendal Emerson) has given written permission to have T. B. nursing books translated and printed. The first booklet has been translated into Japanese for use by nurses.

SECTION V VETERINARY AFFAIRS

General

The slaughter houses in Hachioji and Fussa were surveyed during the week. Ante and post mortem is satisfactory but sanitation is deficient.

Reports from Japanese

Animal Disease Report – The Ministry of Agriculture and Forestry, Animal Hygiene Section, reported the following new outbreak of disease during the period 26 May – 1 June 1946.

<u>Prefecture</u>	<u>Disease</u>	<u>Cases</u>
Saitama	Swine Cholera	1

Control measures are immunization and quarantine.

SECTION VI DENTAL AFFAIRS

The Council on Dental Education at their meeting held 30 May voted to:

- a. Establish a National Board of Examiners.
- b. Require three years of pre-dental training thereby raising dental schools to university standards.
- c. Establish coeducational system in dental schools.
- d. Eliminate the requirement of internship.

SECTION VII LEGAL AFFAIRS

No report.

SECTION VIII SUPPLY

Production

Weekly report of the Welfare Ministry regarding production of supplies required for mosquito and fly control program indicates positive action has been taken to effect production of pyrethrum emulsion. Five manufacturers have been selected for this production. The plan specifies production of 875,000 gallons of pyrethrum emulsion during June 1946. Necessary action has been taken with ESS and G-4 to obtain 1,100,000 gallons of fuel oil and 60,000 gallons of gasoline for the manufacture of the emulsion. Sufficient pyrethrum flowers have also been obtained to accomplish this production. Approximately 43 tons will be produced by 3 June 1946. Distribution will be made to all prefectures as rapidly as possible.

Medical Department officers of the 109th Military Government Group reported that 178 fifty-five gallon drums of ether had been located in Miyagi prefecture. A portion of this quantity will be utilized for the production of typhus vaccine. Distribution will be made to all prefectures for hospital use.

Approximately 375 tons of DDT dust was mixed by Japanese manufacturers during the month of May 1946. A large quantity was utilized in the Tokyo area to combat the current typhus epidemic.

Approximately 36 tons of emulsion for home use has been produced and the order for distribution was issued on 31 May 1946. The ingredients of this emulsion are as follows:

Cresol	25%
Orthodichlorbenzene	40%
Alcohol	15%
Kali soap	20%

Distribution is being effected to all prefectures. This emulsion is packaged in five gallon cans and is suitable as a disinfectant for home use.

Through the positive assistance of a representative of the ESS a sizeable increase of coal has been allocated for manufacture of medicines and vaccines during the month of June 1946. It is expected that this allocation will be of great benefit in increasing production of vaccines and essential medicines.

Approximately 500 tons of chlorosulphonic acid has been allocated per quarter for manufacture of sulfa drugs. This quantity is a considerable increase over previous allocations and it is therefore expected that production of sulpha drugs will be increased accordingly.

Distribution

A representative of the Supply Division returned from a field trip to Southern Japan in connection with distribution of medical and sanitary supplies. Conferences were held in each prefecture visited which were attended by local Military Government representatives and prefectural officials. It was found that Japanese inventories were inaccurate and that distribution had not been made according to instructions of SCAP. Officials attempted to get out of responsibility for this neglect by blaming their subordinates. These inspections were made in company with a representative of the Military Government unit concerned and they were requested to continue surveillance over this distribution. The policies and action at SCAP level were explained concerning implementation of these policies at the prefectural level.

Each repatriation port has been shipped 1800 rat traps of Japanese manufacture for use in the rodent control programs. The ports of Sensaki and Sasebo are to be furnished two power dusters each for dusting repatriates with DDT. Shipment is being made by the Welfare Ministry.

Additional supplies to complete shipment of the 100 bed hospital for Hulutao, Manchuria left Tokyo on 1 June enroute to Sasebo.

Japanese B encephalitis vaccine and equipment for vaccination procedures were furnished the Welfare Ministry to be used in the Encephalitis Control program at Okayama under the direction of the Neurotropic Virus Commission.

Narcotics

Estimated medicinal narcotic import requirements for Japan for 1947 were submitted to ESS, Import-Export Division, 28 May 1946. Present civilian stocks are believed sufficient for the balance of 1946.

In an investigation directed by Narcotic Control officers, Japanese police arrested five defendants engaged in the unlawful manufacture, possession and sale of approximately 1400 ampules of heroin solution. The heroin has been confiscated and the defendants will be tried in Japanese court.

CRAWFORD F. SAMS
Colonel, Medical Corps,
Chief, Public Health & Welfare Section.

3 Incls:

#1 – Copy of “Sanitation of Water Supplies”.

#2 – Communicable Disease Report for week of 18 May 1946.

#3- Venereal Disease report for week of 11 May 1946.

SANITATION OF WATER SUPPLIES

Letter dated 16 May 1946 (Ei-hatsu 383) from the Ministry of Health and Social Affairs to Prefectural Governors emphasizes the importance of sanitation of water supplies in the prevention of disease. The following action is directed:

a. Precautions will be taken to protect the source of the supply from contamination by human or animal excretions.

b. Adequate chemicals and technical personnel shall be provided for proper operation of filtration plants. Rates of filtration will be carefully controlled in accordance with the design.

c. Chlorine disinfection shall be enforced. Necessary amount of liquid chlorine will be provided, or if this is unobtainable, bleaching power shall be substituted. Dosage will be such as to provide a residual chlorine content of 0.1 ppm to 0.4 ppm at taps in the distribution system.

d. Personnel of water departments shall periodically undergo a medical examination, especially bacteriological examinations of excreta for carriers of disease. New employees will be given a medical examination when hired.

e. By repair of main pipes, and repair or discontinuance of services, leakage from distribution systems shall be maintained at less than 30 percent.

f. To improve the sanitation of water supplies, water experts, engineers or others with the necessary knowledge shall be obtained to give short courses to operators and workmen. Also, those who do not already belong should be urged to offer their applications to the Japanese Water Works Association for the advancement of general knowledge in this field.

Enclosed with this letter was a report of experimental research performed at the Tokyo Prefectural Laboratory on the efficiency of disinfections of water with chlorine.

1946**

SECTION I WELFARE

Public Assistance

The Japanese submitted reports on public assistance for April from all prefectures except Kochi. Using figures submitted by Military Government officials for Kochi, the report for Japan showed a total of about 2.7 million persons on relief. Approximately 49 million yen was expended. Deducting 505,000 yen in repayments to the government for relief granted, net grants amounted to about 48.5 million yen, or an average of 18 yen per person.

The total figures are not wholly comparable with those of March in that only the April report included payments under more laws, eliminated duplicate counting of persons receiving aid under more than one law, and accounted for repayments made to the government for aid granted.

Widespread variations were found to exist between the Japanese reports for March and April in many prefectures. These were largely due to a shift, in either direction, with emphasis placed on emergency relief measures ("Protection other than Laws") depending upon local resources. A comparison of relief case load and expenditures as reported by the Japanese Welfare Ministry on the one hand, and Military Government units on the other, showed a wide variation in some instances. An improved and uniform system of public assistance statistics is being developed but in the meantime closer liaison between Military Government units and Japanese welfare offices is indicated to at least insure that reports from Japanese to the Welfare Ministry and the Military Governments are not contradictory.

Voluntary Relief Imports

With the concurrence of SCAP, the War Department is sending Miss Rhoades and Reverend McKillop to Japan to represent LARA (Licensed Agencies for Relief in Asia) in arranging for distribution of voluntary relief supplies from the United States to Japan and Korea, under policies of military authorities in both areas.

Conditions in Yokohama

Representatives of the Welfare Division visited destitute areas in Yokohama, accompanied by the wife and the mother of the Governor of Kanagawa Prefecture. Prefectural Welfare officials, Eighth Army and Kanagawa Military Government officials, and Father Bitter, Rector of Saint Sophia University in Tokyo. Places visited were a tent for homeless persons, a shelter for the aged, a "shanty-town" area for Okinawans, and sand-stone cave dwellings. In general, these persons appeared to be living on a bare minimum amount of the necessities of life. These were obtained in various ways, such as relief ration tickets, or small garden patches, waste from army kitchens, or help from neighbors. Evidence of actual disease or starvation (or a combination of both) was noticed in the case of three individuals but on the whole signs of starvation was not readily apparent. In the case of the tent group, the recent death of one person, whose body lay wrapped in rags, was attributed to inability to persuade doctors to visit and prescribe treatment.

In a subsequent conference, Welfare Ministry officials were informed of the above conditions and directed to take immediate steps to remove the tents, close the caves and provide these persons with other places of shelter, hospital care or homes and to give them adequate aid as directed in SCAPIN 775, on "Public Assistance", dated 27 February 1946.

Field Trips

During the period 15-28 May, a liaison field trip was made to Southern Honshu and Kyushu. The trip revealed large scale discrepancies between the reported amounts of foods held for welfare reserve and the actual amount on hand. Some of these misrepresentations were honest misunderstanding of what was required in the Japanese reports to Military Government Companies. In other cases deliberate false reports were made by Japanese officials. The trip has resulted in action being taken requiring the Ministries of Home and Welfare to submit without delay a true and accurate report of the former Japanese army and navy stocks held for relief purposes.

Conferences

The past week was important in that several conferences were held at national level emphasizing the importance of accurate reports being submitted at prefectural levels. The Japanese Government was informed of the inaccuracy of their reports and the necessary action that was expected of them. The result has been that the Japanese Home Ministry and Welfare Ministry have determined to take joint action in the formation of auditing teams to operate at prefectural levels to produce records in the field that are based on facts. These teams will be equipped to answer questions now disturbing prefectural officials and to guide the prefectural officials in fulfilling the requirement of reports requested by local Military Government Companies.

Red Cross

In line with changing policies of Japanese Red Cross Society for the first time, all members of the National headquarters staff were brought together for a staff meeting. The president in addressing the group outlined the changes to be put into effect and the reorganization plans of the society. He made an appeal for the cooperation of all to bring about the changes as soon as possible.

SECTION II PREVENTIVE MEDICINE

General

A conference was held with representatives of the Government railways regarding the use of DDT residual spray for disinfestations of railways cars. They were informed that this material would not be available for the treatment of cars other than those now receiving routine disinfestations; namely, those assigned for use of the occupation forces. It is understood that present plans call for the completion of rehabilitation of passenger equipment by August. This, including a general cleaning, will be of greater value than spraying with DDT.

A conference was held with a representative of the Planning Division, CI&E Section, relative to completion of a staff study concerning a program being produced by CI&E of publicity and public education, in sanitation in general and in the nature and control of insect and rodent-borne diseases.

A meeting of the Council on Medical Education was attended at which time a report was received from the subcommittee on inspection of medical schools and teaching. Certain modifications in the membership of the Inspection Committee were suggested and a revised report is to be submitted at the next meeting.

Smallpox

A memorandum was prepared for dispatch to the Imperial Japanese Government granting a delay of thirty days in the completion of the recently directed smallpox revaccination program.

Diphtheria

Because of the diversion of production facilities from the manufacture of diphtheria toxoid to that of cholera vaccine, a postponement in the inauguration of the diphtheria immunization program is necessary. It is contemplated at present that this program will start by 1 September and will be completed by 15 October 1946.

Cholera

One case of cholera was reported as having occurred in a repatriate from Shanghai; patient became ill on the day of disembarkation at Hakata repatriation center. The remaining 3,462 passengers were dispersed before the diagnosis was made. Japanese Welfare Ministry has been instructed to these passengers insofar as possible and to keep all prefectural health officers on the alert for the occurrence of cholera in this group.

Japanese B Encephalitis

A report (telephone) was received of a suspected case of Japanese B encephalitis in Nagano prefecture. Investigation of this report continues.

Venereal Diseases

A conference was held with the Venereal Disease Control Officer for the Office of the Provost Marshal, Tokyo area, and the Venereal Disease Control Officer 32d Military Government Company. Problems were discussed relative to the difficulty of maintaining segregation and quarantine of infected female patients in the face of present food shortages and inability of the patients to obtain adequate rations.

Sanitary Engineering

Water Supply. The Japanese Waterworks Association reported that they had contacted all cities which had formerly used chlorine in water treatment. Of the cities which had replied, fifteen reported chlorinators out of repair. These were advised to contact local Military Government Units for assistance in obtaining repair or replacement at Isomura or Leybold Companies now operating under control of Eighth Army Engineer. Difficulties due to transportation, distribution, and shortage of cylinders will be corrected by the Soda Industries Control Association. Thirteen plants on Kyushu reported inability to obtain chlorine due to excessive demands of 2nd Marine Division for certain cities. It is expected that investigation of this situation by Eighth Army Engineers will correct this condition.

Insect and Rodent Control. Reports from I Corps and 106th Military Government Group areas indicate that all prefectures in these areas have sanitation and general cleanup programs in operation. Insect control teams have been organized and trained, and are operating in some cities. It has been reported by the Ministry that

Japanese-produced calcium arsenite larvicide is being distributed to prefectures. This material may be used in a manner similar to Paris green.

Information has been received that some Prefectural Health Departments do not have money available for carrying out the sanitary and insect control problem. Ministry officials have stated that orders to Prefectural Governors directing the appointment of Insect and Rodent Control Officers, the organization of sanitary teams, and the institution of the sanitary program should have been sufficient to release money from the prefectural reserve funds controlled by the Governor. Budget estimates for the program have been prepared by the Ministry of Health and Social Affairs and discussed with the Ministry of Finance for presentation to the next Diet.

Sanitation in Korea. The Bureau of Sanitation has reported the organization of a malaria and fly control program, coordinated with similar work of tactical troops. This has been organized for year-around insect control work with personnel employed on an annual basis. Technicians who have been attending a refresher course at the Institute for Prevention of Infectious Diseases have been given a course in determination of residual chlorine.

Quarantine Service

Activities at the Uraga repatriation reception center were surveyed.

Steps were undertaken to provide modern equipment for the fumigation of ships with hydrogen cyanide at the quarantine station of Ujina. A model demonstration port using HCN will be established and Japanese trained in this method of fumigation of ships.

Measures were instituted to utilize the reception centers of Uraga and Sasebo for the processing of repatriation ships from Shanghai which were declared to be cholera ports. The reporting of cholera from Korea particularly from the port of Pusan has necessitated stopping repatriation through that port.

Nutrition Surveys

Nutrition survey reports were reviewed with the Japanese Bureau of Public Health. Simplified method for calculating data was suggested by the Nutrition Consultant.

May survey results were submitted and an analysis of the data was made showing the caloric consumption of the following Tokyo kus:

Ushigama, Akasaka, Hongo, Fukagawa, Omori, Arakawa, Oji, Itabashi, Adochi, Katsushika, Edogawa.

SECTION III ADMINISTRATION OF HOSPITALS

The Japanese Civilian Hospital Strength Report shows 3011 hospitals with a capacity of 204,711 beds, 103,709 of which are occupied. For the same period, there were 236,323 out-patients.

SECTION IV NURSING AFFAIRS

General

The refresher course is progressing satisfactorily at the Red Cross Hospital.

The Demonstration School is underway except for several problems regarding administration which have arisen. These have been discussed and the future of the school looks very good. The Financial Committee composed of representatives of two schools, SCAP representatives and two Japanese Ministries met to discuss what share of the budget each would assume for supplies and operating expenses. It was decided that the schools would share according to number of students and if more money was needed later on the Ministry would help. However, if other schools are opened as National Schools, it will be necessary to have a regular budget set up by the Ministries. This plan is to be discussed with the Educational Minister and a decision will be presented later.

Approval has been received for five American Civilian nurses to be on the Staff of the Demonstration School.

Surveys of prefectures are being continued.

Subcommittee on (National) refresher courses met this week and made plans to set up courses for nurses and midwives in order to enable them to qualify for National Examination. These plans will be brought before the Council on Nursing Education Monday, 10 June, for discussion and approval.

SECTION V VETERINARY AFFAIRS

General

A conference was held with Group Captain Corbett and Wing Commander Stuart, medical officers representing BCOF and BCAIR respectively, regarding the quarantine of animals imported by BCOF for food purposes. The plan calls for the importation of 2000 sheep from, Australia every two months for Indian troops.

It was decided to apply Japanese quarantine regulations to these animals and to call upon the Japanese government for quarantine inspection.

Personnel

Capt. Robert W. Finch, VC, was transferred to the 105th Military Government Group at Sendai.

Reports from Japanese

Animal Disease Report. The Animal Hygiene Section, Ministry of Agriculture and Forestry, reported that no new outbreaks of disease during the period 2-8 June 1946.

SECTION VI DENTAL AFFAIRS

No report.

SECTION VII SUPPLY

General

Several preliminary discussions were held with member of the Japanese Pharmaceutical Association and Deans of Pharmacy Schools relative to the establishment of a Council on Pharmacy and the adoption of a Standard Curriculum for Pharmacy Schools.

Production

The price of penicillin has been established at 400 yen for a vial of 30,000 oxford units. This action was taken by the Price Control and Rationing Division, ESS and the Finance Ministry, Japanese Government. The price of 400 yen will not cover cost of production and it was therefore necessary for the Japanese Government to grant subsidies to manufactures. All penicillin produced will now be distributed to hospitals in accordance with allocations made by a central committee established by the Welfare Ministry.

Weekly conference with representatives of the Welfare Ministry regarding production of mosquito and fly control supplies indicates a favorable trend. Approximately 20,000 gallons of pyrethrum emulsion has been produced. Production will be accelerated by manufacturers immediately upon receipt of U.S. stocks of fuel oil and gasoline. All necessary action for obtaining petroleum products has been taken and physical movement of stocks to manufactures will begin at an early date.

Approximately 10,000 three gallon knapsack sprayers have been scheduled for production by the end of July. Approximately 5,000 insecticide sprayers suitable for spraying rice paddies and large fields are scheduled for production by the end of July. Distribution will be effected as rapidly as production is accomplished. All available Japanese spraying equipment and spraying equipment obtained through army supply channels must be utilized until Japanese production is accomplished. Quantities of calcium arsenite is being distributed to all prefectures on Kyushu Island, Shikoku Island and all prefectures on Honshu Island south on Tokyo. Calcium arsenite may be utilized on the same manner as Paris Green.

The Japanese Government has been directed to allocate 900 tons of pyrethrum flowers for the mosquito and fly control program. Approximately 300 tons per month are to be furnished during June, July and August.

Distribution

Plans are progressing for the allotment of funds from the Japanese Government to the Welfare Ministry to be used for training field inspectors to check distribution of Japanese medical supplies for the Pharmaceutical Affairs Section, Welfare Ministry, and to expedite distribution by Medicine Control Companies in the prefectures.

The Administrator, Naval Shipping Control Authority for Japanese Merchant Marino has directed that each repatriation vessel be supplied with DDT and dusters to be used in delousing repatriates while enroute, U. S. Army units now furnishing DDT to the reception centers at repatriation ports were directions take sufficient additional DDT available to meet this demand. Ship's masters have been directed to procure the necessary supplies from the reception centers.

Steps were taken to provide necessary motor transportation for the Virus Commission operating at Okayama. Vehicles were shipped from Kobe Base.

Narcotics

This Division concluded a report of detailed survey made of the Production, Manufacture and Distribution of Narcotic Drugs by the Sankyo Company, Ltd, Main Office, Tokyo, Japan, to cover period from 1930 through 1945.

A narcotic control officer attended the first meeting at the Ministry of Welfare of a series of meeting designed to acquaint representatives of all prefectural offices with the provisions of impending narcotic legislation. The formation of a national narcotic enforcement agency was discussed in detail.

Investigation by a narcotic control officer and a representative of the Tokyo Metropolitan Welfare Office resulted in the arrest of a Korean in illegal possession of 25 grams of cocaine. Information obtained from him regarding a large dealer in blackmarket narcotics operating in Iwate Prefecture was turned over to the Ministry of Welfare.

SECTION VIII LEGAL AFFAIRS

General

A field trip was made to Osaka. The purpose of the visit was to investigate the facts submitted in a petition by the Grace Kindergarten. The problem was deemed to be local and arrangements were made with local Public Health Officer, Lt. M. Kaplan to negotiate a satisfactory solution.

At a conference with representatives of the Ministry of Justice, it was informally agreed that legislation would be submitted to the Cabinet for promulgation of a suitable ordinance making the mere possession of sale of food or beverages having a methyl alcohol content of more than 1mg per cc illegal, and subject violators to the penalties provided in Memorandum to the Imperial Japanese Government, AG 435 (9 Apr 46) PH, (SCAPIN 871), subject: "Control of Traffic in Poisonous Beverages".

SECTION IX DIRECTIVES TO THE IMPERIAL JAPANESE GOVERNMENT

None.

SECTION X SUMMARY OF REPORT FROM KOREA

Welfare

A training program for medical social workers is being prepared by Mrs. E. B. Cohen, new War Department Civilian Employee, member of the Welfare Staff.

An American Red Cross Civilian Relief Staff member was sent to Taejon to assist in the care of refugees in Chungchong Namdo.

The National Property Custodian has returned control of properties outside of Seoul to the Korean Residence Management Corporation. Rentals collected by the Custodian since 15 August 1945 will be returned to the Corporation.

A gift of about 500 bundles of abandoned Japanese personal property was received by the Welfare Bureau from the Kamebo Department Store for relief distribution.

The Korean women's Police Division began with an organization of 22 women who are undergoing a training course.

Nursing Affairs

Inspections of hospitals and Maternity Center continued to be made and progress in satisfactory. Hospital personnel are interested and are cooperating willingly.

Movies have been made on modern nursing and after the preview these will be show in the Korean theatres to aid in the educational program. Institute enrollment is now 58 nurses and interest continues to be keen. Conferences and meetings have been held and participated in by the various representatives of the Bureau of Public Health and Welfare. Publicity pictures have been taken of the work by Time and Life Magazine reporters. Books on "Nursing of Children" were received from The Surgeon General's Office, and one will be loaned to each of the Provincial Health Departments.

J. U. WEAVER
Colonel, Medical Corps,
Deputy Chief, Public Health and Welfare Section.

2 Incls:

#1-Communicable Disease Report - 25 May 1946.
#2- Venereal Disease report - 18 May 1946

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
PUBLIC HEALTH AND WELFARE SECTION**

**WEEKLY BULLETIN
For Period
9 June to 15 June
1946**

SECTION I
WELFARE

Public Assistance

The rapid breakdown of ration distribution on urban areas, caused by prefectural government's inability to ship surplus stocks from the rural area, resulted in the necessity of releasing reserve stocks for immediate distribution. This represented the first release of food stocks held in reserve for relief emergencies. The amounts represented:

<u>Kgs</u>	<u>Type</u>	<u>Prefecture</u>
420,000	Biscuits and Canned Goods	Tokyo-To-Kanagawa
372,000	Food Concentrates (Surplus from Saitama Prefecture especially for hospitals and institutions)	Tokyo-To
4,342	Biscuits and Canned Goods (Disaster)	Fukushima Ken (Tajima Mura)

Welfare Organizations

The National Relief Association, a quasi-governmental agency, submitted a report this week indicating they are participating or controlling about 500 institution for the relief of repatriates, poor and needy. This organization was originated shortly after the close of the war and has had successive reorganization under the following names: Soldiers Relief Association, War Sufferers Relief Society (Onshi Zaidan Engokai), Imperial Grant Association, and War Calamity Relief Association.

The work of the Association is to supplement the Public Assistance Directive, SCAPIN 775, 27 February 1946, but does not relieve the Imperial Japanese Government of the responsibility of providing for the needy the basic necessities of life, health and shelter.

Disaster Relief in Fukushima Ken, Tajima Mura

An example of excellent, coordinated disaster relief was given when the 88th Military Government Company, with the cooperation of prefectural welfare officials went to the rescue of the five victims at Tajima Mura at 0200 on 20 May 1946. The school, police station, railroad station and 455 homes were destroyed making 412 individuals homeless. The Food Association at Tajima did not have sufficient food supplies to provide for the victims.

The following supplies were given to the victims:

Biscuits	1930 Kgs.	455 families	2412 persons
Canned Goods	2412 (1 lb can)	455 families	2412 persons
Bean mash	200 Kamme		
Soy	5 Kaku		
Salt	1000 Kgs.		
Cigarettes	2600 each		
Charcoal	455 bales		
Children's pants	500 each		
Slacks (Monpei)	800 each		
Blankets	800 each		
Sundry clothing items	9190 each		
Kitchen utensils	Assorted		

The supplies were for a five day period. Rehabilitation work began immediately and temporary houses, 12' x 18', are being constructed for 200 impoverished families and the remaining 255 families are rehabilitated with friends or relatives. The situation indicated full use of accepted welfare procedures. Food certificates were prepared and issued by the Tonari-Gumi to the heads of families.

Food used in the disaster has been replaced by non-perishable foods on hand.

The disaster relief program was conducted in a very credible and professional manner from its origin to the detailed reports necessary in accounting procedure.

Joint Inspecting Teams, Home and Welfare Ministry

The Japanese inspecting teams, ten in number, mentioned in last weeks report have been organized and will leave this week for various prefectures to audit the relief and supply accounts. These teams are equipped with credentials and will report to the respective Military Government Companies in each prefecture.

Child Welfare

A letter was dispatched to the Commanding General, English Army, requesting surveillance of the activities of the Japanese Government in connection with the care and treatment of homeless adults, juveniles, waifs, and vagabonds. Specific reference was made to the activities of the Prefectural Child Protection Committees, the aid given to such persons, the housing facilities provided, the system of case-record keeping, and the segregation of juveniles from adults and criminals. A report on the progress and effectiveness of the Japanese program is to be submitted to GHQ, SCAP, on or before 15 July 1946.

The deplorable conditions under which delinquent children are kept in two jails in Yokohama, visited by welfare officials of GHQ, SCAP, and English Army, were pointed out to Japanese Home and Welfare Ministry officials. Similarly, unwholesome provisions for detention of children were reported in other areas, especially large urban centers. The Japanese Government was instructed to investigate these conditions, institute corrective measures, and report progress and action taken by 30 June 1946.

Private Welfare

Mr. G. E. Bott, representative of the Federated Council of Churches of Christ in America, and a representative of the Welfare Division, Public Health and Welfare Section, accepted an invitation to attend a one-day conference in Tokyo of the Federation of Christian Social Work Agencies. Present were 40 delegates representing some 100 private welfare agencies out of an original pre-war 300. These agencies are hospitals, orphanages, settlements, kindergartens, nurseries, homes for aged, etc. The delegates were said to represent some 3000-5000 Protestant interdenominational agency works. Common problems and ways in which these agencies could help and advise the government on overall welfare matters were discussed. The welfare policies of SCAP were briefly explained by the representative of Welfare Division, PH&W Section, in an effort to enlighten Japanese in establishing a welfare program for all Japanese subjects. He stated that Federated Christian Social Workers' organization and others like it, representing experienced workers in the welfare field, were looked to for leadership in achieving the goal of an integrated and well balanced relief and welfare program.

Red Cross Activities

The Welfare Ministry agreed to reimburse the Japanese Red Cross Society the total amount of money expended by the society since 1 January 1946, for repatriation activities. Japanese Red Cross will continue to provide Red Cross nurses in numbers as required and requested by Minister of Welfare, the expenses of which will be borne by the Ministry.

SECTION II PREVENTIVE MEDICINE

General

At the invitation of the Medical Society of Yamanashi Prefecture, a lecture was given at Kofu to an audience of several hundred persons, including members of the Medical Society, nurses, and medical students. Control of communicable disease constituted the principal topic of discussion, with special reference being made to those diseases which are expected to become of most importance in the near future, namely, enteric and other insect-borne diseases, including Japanese B encephalitis.

A meeting was held of the subcommittee on School Inspection of the Council on Medical Education. A revised plan was worked out for the nomination of a larger number of inspectors by the Council.

A meeting of the Council on Education was held at which the above mentioned plan was submitted. The plan was adopted by the Council.

Typhus Fever

In the face of a general decrease in typhus fever incidents throughout the remainder of the country, a fresh outbreak of this disease was reported in Hokkaido, localized principally in Sapporo and Otaru. Two medical officers and requested supplies of typhus vaccine were dispatched to the focal area.

Cholera

Confirmed or suspected cases of cholera were reported from several widely separated localities during the week.

Two cases were reported in Fukushima-Ken. No relationship with infected repatriates has thus far been established, although it is suspected in two instances.

The largest number of cases reported in any single locality was reported to be in the northern portion of the island of Tsushima, located between Kyushu and Korea, where over 20 cases have been reported up to the present time. The infection was apparently imported by smugglers or other illicit shipping from Korea.

Several cases have been traced to repatriation ships from Shanghai arriving at Hakata or Sasebo. These cases have occurred in spite of the quarantine of the ships for the presently prescribed minimum period of six days, counted from the date of departure from the port of origin.

On the basis of reports of suspected cholera, two ferries on the Aomori-Hakodate run were placed in quarantine and provisions made to isolate all passengers. The suspicion of cholera was not confirmed; repatriates, however, who had disembarked from cholera infected ships at Hakata were placed in quarantine for surveillance and routine cholera clearance.

Japanese B Encephalitis

Cases of suspected Japanese B encephalitis were reported in Nagano and Miyagi Prefectures. Investigation of these cases continues.

Sanitary Engineering

Water Supply. Concurrence was given to a request for importation of liquid chlorine from the United States for treatment of water supplies in cities having large concentrations of occupational personnel. Additional chlorine will be released from U. S. Army stocks for the same purpose. Allocation of chlorine will be in accordance with priority list of cities set up by the Engineer, Eighth Army.

Reports indicate that the principal problem in the restoration of municipal water supplies to pre-war levels continues to be repair of the distribution systems. Every effort should be made to reduce the extremely high leakage in many cities both to increase the pressure in the systems and the available supply with the coming of the summer season.

Sewage Treatment. A conference was held with the Tokyo Sewerage Department, on operation of sewage treatment plants in Japan. Inspections have shown that while several cities have very good, modern treatment plants, few if any are being operated satisfactorily. This is due principally to a lack of trained personnel to provide the laboratory control so necessary for the proper operation of activated sludge plants. It appears that the only real solution to this problem is through the improvement of sanitary engineering education in this country which has already been started. Sanitary Engineers with Military Government units can improve existing conditions by giving advice and assistance to the Japanese sewerage engineer and plant operators.

Insect and Rodent Control. Conferences have been held with officials of the Ministry of Health and Social Affairs regarding the sanitation and insect and rodent control program. Phenothiazine larvicide is being produced and distributed as ten percent phenothiazine in talc on order of the Ministry. It is stated that better distribution of the toxic agent is obtained with this dilution. The Japanese recommend a dosage to provide 0.1 gram of phenothiazine per square meter of water surface Anopheles larvae and 1.0 gram per square meter for Aedes and Culex larvae. A wetting agent has not been used with this larvicide although it is considered desirable. Field checks are necessary to determine the most effective dilution and rate of application.

Two of the four radio talks by Health Ministry officials on sanitation and insect and rodent control have been given, and arrangements have been made for the remaining two - Infectious Disease Transmitted by Insects, and, Supplies and Equipment to be Used in the Control Program. Releases for magazines and other radio programs have been prepared by this office.

A demonstration of Tokyo sanitary teams in action in a typical city area was given this week for medical officers. This included the cleaning of ditches, elimination of insect breeding places, larviciding of breeding places with Japanese and American products and equipment, and instruction of householders in control measures.

Quarantine Service

A visit was made to the Sasebo and Hakata repatriation reception centers and activities inspected. Recommendations were drawn up designed to strengthen the quarantine against cholera at all reception centers.

Control of smuggling boats between Korea and Japan continues to be unsatisfactory. Measures are under way to spot this traffic. Cholera outbreaks at Tsushima, Ikishima and Yobuko area were apparently initiated by these boats.

While some epidemic typhus and smallpox continues to be encountered aboard repatriation ships, control measures are satisfactory.

Nutrition Surveys

Figures on the nutrition survey completed in May are still in the tabulation process. The Japanese nutrition liaison officer, Dr. Kuwabara is endeavoring to furnish the Tokyo results and some from other prefectures as soon as possible.

Motion pictures were taken on the distribution of rice, vegetable and a supply of U. S. Army flour.

Several conferences relating to the critical food situation took place during the week. All are concerned with the problem of where and how to meet the situation. The recent nutrition survey will be a background for this information.

SECTION III ADMINISTRATION OF HOSPITALS

The Japanese Civilian Hospital Strength Report shows 3010 hospitals with a bed capacity of 205,429 beds, 102,640 of which are occupied. For the same period, there were 224,053 out-patients treated.

Effective 10 June 1946, Colonel Harry G. Johnson assumed duties as Chief, Hospital Administration Division.

SECTION IV NURSING AFFAIRS

General

Prefectural surveys of School of Nursing are continuing and the fifth prefecture was completed this week.

Medical books and two large Anatomical Charts for the Model Demonstration School were received this week from 29th Medical Depot. These books will be used by American and Japanese teaching staff in the school.

The Nursing Affairs Division, PH&W Section, was represented in the Chiba Prefecture at the Public Health Nurse meeting, 14 June 1946.

SECTION V VETERINARY AFFAIRS

Meat and Dairy Hygiene School

A four day Meat and Dairy Hygiene School is in progress in the Ministry of Health and Social Affairs. In attendance are 51 veterinary inspectors representing all prefectures in the northern one-half of Japan. The Veterinary Affairs Division, PH&W Section, is furnishing educational material and assisting in the instruction.

Reports from Japanese

Animal Disease Report – The Ministry of Agriculture and Forestry, Animal Hygiene Section, reported the following new outbreaks of disease during the period 9-15 June, 1946.

<u>Prefecture</u>	<u>Disease</u>	<u>Cases</u>
Saitama	Swine Erysipelas	1
Chiba	Swine Plague	1

Control measures are immunization and quarantine.

Equine Infectious Anemia

This disease is endemic in Kumamoto Prefecture. During the month of May and June, 283 cases have been reported of which 93 died or were destroyed. Control measures are; inspection, slaughter of suspects, and in positive cases payment of indemnity, with quarantine and disinfection. The incidence is rapidly decreasing and control measures appear to be effective.

Report of Research Activities by the Veterinary Hygiene Laboratory Ministry of Health and Social Affairs.

The following research activities are in progress:

- a. The phosphatase Test for the degree of pasteurization of milk.
- b. Methods of detection of added water in milk.
- c. The Score Card system for sanitation inspection of dairy farms and plants.
- d. Bacteriological meat inspection standards.
- e. The salmonella group or organisms in slaughtered animals.
- f. Disinfection of infected meat.
- g. The utilization of sour milk.

- h. Standardization of the bacteriological examination of milk and milk products.
- i. The bacteriological grading of milk.

SECTION VI DENTAL AFFAIRS

A meeting was held with responsible officials of the Welfare Ministry regarding production of dental materials, which is believed satisfactory. The lack of funds to purchase expensive equipment, the shortage of suitable space to establish dental offices, the fact that all transactions are handled by frozen check, and the inclination of the manufacturers to sell at black market prices are the factors delaying dentists in obtaining necessary equipment and materials. A report is being submitted by Welfare Ministry officials indicating the following:

Dental equipment now being used by dentists.

Present production.

Stocks on hand in all distributing agencies and manufacturers that has not been sold.

Quantity of equipment necessary to equip, 3000 dentists during the period 1 July to 30 December 1946.

SECTION VII SUPPLY

Production

Production of supplies required for the mosquito and fly control program is progressing according to plan. Action was taken with the Ministry of Transportation to expedite movement of fuel oil and gasoline into the hands of manufacturers of pyrethrum emulsion. Expeditious distribution of pyrethrum emulsion to prefectures was also stressed and cooperation is expected in this connection.

A request was submitted for production of necessary chemicals required for developing X-Ray film, be accelerated to meet minimum needs in Japan for the period 1 July 1946 to 31 December 1946.

Distribution

At the request of the Nursing Division, supplies were made available from Japanese sources to equip a nurses training school at the Central Red Cross Hospital, Tokyo.

Steps were taken to raise Japanese standards regarding the storage of vaccines. In many cases vaccines have been stored and shipped without benefit of refrigeration. Welfare Ministry officials concerned were directed to devise means for handling which would meet accepted minimum standards.

A plan was approved for distribution of 5,010,000 oxford units of locally produced penicillin.

Reports received from the Medicine Control Company regarding the receipts and distribution of Japanese Army and Navy medical supplies show that during the month of May the value of medicines distributed was approximately five million yen. This indicates a definite upward trend as total distribution during February, March and April was only slightly over two million yen.

Narcotics

This Division is now making a detailed survey of the production, manufacture and distribution of narcotic drugs by the Takeda drug Company to cover the period from 1930 to 1945.

Visits were made to several pharmacy schools and the deans were interviewed in connection with the Pharmacy program.

An investigation of Yokohama Relief Hospital and Sumida Hospital in Yokosuka was made as a result of a letter received by this Division alleging narcotic violations. One minor blackmarket violation was discovered.

SECTION VIII LEGAL AFFAIRS

General

Approval of proposed legislation by the Finance Ministry was given. The legislation provides that beverages having a methyl alcohol content of between 0.2 and 1.00 mg per cc must be clearly labeled as such. It also provides for the imposition of a fine or imprisonment for violators.

In a conference with The Ministry of Health and Welfare, it was agreed that the expenses which the Japanese Red Cross had been bearing in connection with repatriation activities should be taken up by the Health and

Welfare Ministry in the future. The past expenditure of the Japanese Red Cross after being determined by an audit, would be reimbursed.

SECTION IX DIRECTIVES TO THE IMPERIAL JAPANESE GOVERNMENT

AG 720.3 (11 Jun 46) PH, (SCAPIN 1013), 11 June 1946, subject: "Report on Revaccination Against Smallpox".
AG 435 (Jun 46) PH, (SCAP 1473-A), 14 June 1946, subject: "Control of Traffic in Poisonous Beverages".
AG 043 (15 Jun 46) PH, (SCAPIN 1482-A), 15 June 1946, subject: "Amendment to Plan for Collecting Current Vital Statistics".

SECTION X SUMMARY OF REPORT FROM KOREA For week ending 1 June 46

Preventive Medicine

The outbreak of cholera in Southern Korea is continuing. Principal focus of the disease is in Pusan. Several cases have also been reported from Mokpo and sporadic cases elsewhere.

Hospital Administration

As of 1 June 1946, the Masan Tuberculosis Sanatorium was opened.

Plans are underway to establish a health center in Seoul. This center will have clinics for diagnosis of tuberculosis, venereal diseases and eye diseases. There will be established in addition, a maternal infant and child health clinic. A course for public health nurses will be established in connection with the center. Treatment will be carried out in hospitals which are affiliated with the center.

Nursing Affairs

Inspections continued to be made of the various hospitals and refresher courses.

Plans were made for the course in Nursing Administration and supervision to begin 10 June 1946. The establishment of the third Public Health Nursing Course for licensed nurses was proposed and approved. This course is of three months duration and the tentative date is 24 June 1946.

Veterinary Affairs

The Bureau of Veterinary Affairs reports as follows:

Twenty five hundred cc pneumonia vaccine, 20 cc anthrax vaccine and 40 cc of tuberculin were sent to Chungchong Pukto.

Conference with Agricultural Bureau concerning animal taxes to support veterinary care of livestock. It was agreed that funds for this purpose will be approved upon written application from the Korean Agricultural Association.

Conference with Public Relation Office concerning the photographing of the serum and rabbit-virus method of rinderpest immunization.

Two cases of rabies with two people and 13 dogs bitten and one case of blackleg were reported from Kyongsang Pukto.

Dental Affairs

Licenses to practice dentistry have been issued to 398 applicants in U.S. occupied zone of Korea. Of this number, 204 are located in Seoul.

Supply

The new price schedule is nearing completion. This list contains over 1000 items, including raw materials. New amendments have been drafted to existing pharmaceutical laws which will authorize registration of all persons who sell, manufacture or compound medicines.

These amendments were submitted to the Government Council, Bureau of the Department of Justice.

Allocation plan covering distribution of raw materials to manufacturers was completed.

Shipment of an additional allocation of medical supplies was made to all provinces.

J. U. WEAVER

Colonel, Medical Corps,
Deputy Chief, Public Health and Welfare Section.

2 Incls:

#1-Communicable Disease Report, 1 June 46.

#2- Venereal Disease report - 25 May 1946

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
PUBLIC HEALTH AND WELFARE SECTION**

**WEEKLY BULLETIN
For Period
16 June to 22 June
1946**

SECTION I WELFARE

Public Assistance

In response to several requests for the release of summer clothing of Japanese army-navy stocks being held for relief, the Imperial Japanese Government has been directed to release them (SCAPIN 1563-A). Nothing in the directive will be construed as to prohibit gratuitous issuance of this material to needy persons.

Foreign Nationals

The Ministry of Agriculture and Forestry has informed SCAP that a special ration for foreign nationals has been in operation for sometime. The Japanese Government clarified specific group treatment as follows:

a. American-born Japanese who can prove their American Citizenship will receive supplementary rations on the same basis as other United Nationals. This order was issued by the Ministry of Agriculture and Forestry to the Governors of Tokyo and Kyoto, 14 May 1946.

b. Filipinos married to Japanese Will receive the Japanese ration.

c. Bonin Islanders of the first American, British, Portuguese descent evacuated to Japan in 1944 will in the first two instances, receive supplementary rations accorded to United Nationals and in the last instance the same as Neutral Nationals.

d. European women married to Japanese will be treated as occidentals as will their children and be given the United Nationals or Neutral Nationals' ration as the case may be.

e. The rations indicated above are as follows which are the monthly allowances per person.

<u>Item</u>	<u>United Nationals</u>	<u>Neutral Nationals</u>
Sugar	1.5 Kin (1b.)	1 Kin
Butter or substitute	2 lbs.	2 lbs.
Oil	3 go	2 go
Canned food	7 lbs.	5 lbs.
Beef	300 momme	300 momme
Flour	500 momme	400 momme
Sweet potato	3 kan	3 kan

Shelters for Homeless Persons

Roganji Temple, Tokyo, has been set aside as a domicile for homeless persons in Tokyo by the Tokyo-To Welfare Department. Two employees of the Welfare Department have been employed and live there. The occupants range from infants to aged persons and have been picked up from all parts of Tokyo.

The persons receive 1.1 yen per day allowance plus any private donations from persons visiting the Temple. There are approximately 100 persons being cared for with an ample supply of bedding, blankets and mats. A medical student is in attendance for first aid. Community cooking is practiced.

Control of Population Movements

In answer to inquiries, regarding why certain cities of over 100,000 population were not included in the provisions of the directive, (SCAPIN 944) 11 May 1946, subject: "Control of Population Movement", it was explained that the purpose of the directive was to prevent the flocking of people to war-torn areas where normal facilities have broken down and undue hardships would result from lack of food and shelter. Cities which were not bombed are able to absorb the normal shift of population.

SECTION II PREVENTIVE MEDICINE

General

Conferences were held with the Chief of the Communicable Disease Section of the Metropolitan Health Department concerning a threatened strike by the Federation of Metropolitan employees. A later conference on this same subject was held with representatives of the Labor Division, ESS and Labor Officer, 32nd Military Government Company. It was pointed out that health and sanitary services must function uninterruptedly and that any union demands directed toward control of or interference with technical direction or operation could not be entertained. The "strike" commenced on 22 June but assurances have been received from both the governor and from the union that there would be no interruption of services.

A conference was attended which had been called to discuss and formulate an agreement with Soviet authorities concerning a contemplated exchange of repatriates between Japan and northern Korea. Agreement was reached on several points.

A detailed report by prefectures was received from the Welfare Ministry relative to completion of the smallpox revaccination program directed by Memorandum (SCAPIN 921) of 4 May 1946.

No new cases of cholera have been reported during the week outside of repatriation ports.

Sanitary Engineering

Insect and Rodent Control. A press conference was held on the control of intestinal and insect-borne diseases. Particular emphasis was placed on the individual's part in this health program, improved sanitation and control of flies and mosquitoes around the home.

It has been reported that DDT is being sold on the open market in some cities. As it seems very doubtful that Japanese are producing this material in sufficient quantities to permit general sale, an investigation as to the source is being made. Strict control must be maintained over U.S. stocks to prevent their reaching illegal channels.

Laboratory Activities

Herbert Volk, Lt. (jg) MC-USNR, Laboratory Consultant, reported for duty in the Public Health and Welfare Section on 19 June 1946.

Conferences were held reviewing the Medical Examiners System preparatory to drafting a directive establishing the program on a nation-wide basis.

The penicillin assay laboratory was inspected. Tentative approval to continue operation was granted.

Application from Welfare Ministry to grant "permission for sale of penicillin" produced by Tamagawa factory, Wakamoto Drug Manufacturing Co., Ltd., not favorably considered at this time. Product produced currently does not meet minimum specifications.

Nutrition Service

On 17 June, the Nutrition Consultant, PH&W Section with representative from the Bureau of Health visited China City and surrounding villages to inspect the community kitchens. During the rice planting season these kitchens are set up and managed by the heads of each village. The purpose is to assure the community of adequate nutritional needs. Several kitchens were visited and preparation and distribution of food was observed and photographed.

Nutrition survey reports are beginning to come in. Results will be tabulated as soon as possible, and information gathered will be used to determine future nutritional needs.

SECTION III ADMINISTRATION OF HOSPITALS

The Japanese Civilian Hospital Strength Report shows 3012 hospitals with a bed capacity of 205,934, of which 103,418 are occupied. For the same period there were 240,910 out-patients treated.

SECTION IV NURSING AFFAIRS

General

Three schools of nursing were surveyed in the Tokyo area. It is noted that there is a growing interest evidenced in the improvement of the nursing education courses. Personnel of the schools surveyed requested any assistance available. The survey of the schools in Iwate Prefecture was started.

Education

Several meetings of the Demonstration School Management were held with representative from this office attending. Problems discussed were the establishment of the eight-hour day for the student and graduate nurses, segregation of patients on wards according to type of medical service, procurement of food supplies. Talk was given to a group of thirty-five faculty members regarding the purpose of and plans for the Demonstration School.

The Refresher Course for Graduate Nurses, held at the Red Cross Hospital is about two-thirds completed. The entire group of ninety nurses still continues in attendance. These nurses have already carried back to their own school and put into practice many of the procedures taught in the course.

The Council on Nursing Education held its regular meeting on 21 June. Two reports were presented and accepted. The report of the subcommittee on Supplementary Training recommended and outlined the content of a one-year's course which would make up the deficits in the training of the presently licensed nurses and enable them to apply for the proposed national examination for the licensure of graduate nurses. The subcommittee on Licensure of Graduate Nurses presented two revisions of its earlier report, one limited the length of time during which presently licensed nurses will be eligible to apply for the national examination, the second increased the

membership of the Central Council to fifteen members, and provided for representation on the Council from all districts in Japan.

SECTION V VETERINARY AFFAIRS

General

Veterinary Educational Reform. The Council on Veterinary Education held its monthly meeting on 19 June 1946 at which time various subdivisions presented reports concerning progress made toward raising educational standards.

Meat and Dairy Inspection School. For the purpose of improving meat and dairy inspection procedure in Japan, a four day school extending from 11-14 June 1946 was held at the Ministry of Health and Social Affairs. Chief inspectors from all prefectures north of Shizuoka were in attendance.

Reports from Japanese

The Ministry of Agriculture and Forestry, Animal Disease Section, reported no new outbreaks of animal disease occurred during the week.

Monthly Animal Disease Report for May 1946. Following is a summary of the monthly animal disease report for May 1946, submitted by the Animal Disease Section, Ministry of Agriculture and Forestry.

<u>Disease</u>	<u>Number of Cases</u>
Anthrax	2
Blackleg	1
Brucellosis	3
Trichomoniasis	61
Texas fever	51
Swine cholera	2
Swine erysipelas	2

Report of Research Activities by the Veterinary Laboratory Section. Ministry of Agriculture and Forestry.

The following research activities are in progress:

- a. Fowl pox vaccine.
- b. Fowl pest virus.
- c. Bovine tuberculosis, serum diagnosis, chemical analysis of bacillus tuberculosis.
- d. Cattle plague, antigen for complement fixation test.
- e. Bovine abortion
 1. Brucella abortus, immunization
 2. Vibrio fetus, diagnosis and immunization
 3. Trichomonas
- f. Swine cholera, virus studies.
- g. Equine contagious abortion, vaccine and serum.
- h. Equine infectious anemia, diagnosis, immunization and curatives.
- i. Bovine piroplasmiasis, curatives.

SECTION VI
DENTAL AFFAIRS

For the period ending 15 May 1946, 109 dentists whose offices were destroyed have been rehabilitated.

SECTION VII
SUPPLY

General

Officers of this Division investigated a report of black market dealings in DDT and found stocks of U.S. produced DDT in the hands of Japanese who had been employed as members of dusting teams engaged in typhus control work. The extent of the illicit dealings are not known at this time and further investigations are being conducted.

This Division is experiencing some difficulty in arranging for prompt payment to manufactures for supplies and equipment produced insecticide and rodent control programs. In order to accomplish these programs it is necessary that manufactures be reimbursed expeditiously and that supplies and equipment be allocated to Prefectural Insect and Rodent Control officers for use as required. The Legal Division, PH&W Section is studying the subject. In the meantime distribution is being made to prefecture with the understanding that financial transactions will be settled at a later date.

Production

The possibility of producing HCN in Japan is being explored. Approximately 50,000 pounds would be required annually for fumigation of Japanese ships. This material should be substituted for the present antiquated sulphur method of fumigation.

The production of hand dusters is being adjusted to maintain a stock level of 20,000.

Monthly report for May 1946 on production of vaccines indicates a favorable trend. Vaccine in the quantities listed below were produced during April and May 1946:

Vaccine	<u>April</u>	<u>May</u>	<u>Total</u>
Unit cc			
Cholera	15,000,000	20,000,000	35,000,000
Triple Typhoid	4,484,000	12,000,470	16,484,470
Typhoid	3,481,349	1,137,720	4,619,069
Smallpox	7,346,425	16,243,945	23,590,370
Typhus	67,350	240,850	308,200
Diphtheria Toxoid	244,000	185,590	429,590

These figures indicate the production of vaccines that have been assayed. Additional quantities were produced but the products had been tested at the end of May. Diphtheria Toxoid production will be accelerated during the month of June. Production of small quantities in April and May was necessitated by the urgent need for a large production of cholera vaccine.

The production of 10,000 each Sprayer, Liquid, continuous spray, two quart, has been requested at the earliest possible date. These sprayers can be utilized within cities for spraying of small standing bodies of water.

The supply requirements for the mosquito and fly control program for 1947 have been complied. Approximately 3,000,000 gallons of pyrethrum emulsion will be required for this program. It was requested that a minimum of 400 tons of pyrethrum flowers be made available from this year's crop for the 1947 program. This was necessary in order that production of pyrethrum emulsion can be accomplished and distributed prior to the mosquito and fly season. Approximately 1,800,000 gallons of fuel oil #2 and 96,000 gallons of gasoline were also requested for this program. It is planned to produce pyrethrum emulsion for distribution not later than 1 May 1947 for the 1947 program.

Distribution of rat poison has been made to all prefectures.

Weekly report of the Welfare Ministry regarding production of supplies for the mosquito and fly control program was satisfactory. Fuel oil and gasoline has been delivered to the manufacturers of pyrethrum emulsion and sizeable production is expected for week 24-29 June. Approximately 100 knapsack sprayers, 3 gallon type and 100 sprayers for spraying rice paddies and fields will be forward to Fukuoka, Nagasaki and Saga prefectures in the immediate future since some cholera cases have appeared in these prefectures.

Distribution

Mal-distribution of medical supplies and equipment continues to be a problem. Aggressive action is being taken to redistribute supplies in National Hospitals. There are still many other stocks which for various reasons have not reached normal trade channels. Prefectural medicine control companies have been instructed to make distribution without reference to the various local associations which have, in the past, attempted to allocate supplies but as a general rule have only delayed distribution. Military Government field personnel should check on the activities of control companies to insure that supplies are not being hoarded. It is evident that most of these companies do not intend to revise long standing policies until forced to do so.

Reports from the Medicine Control Company indicate that during the month of May, 18,202,963.75yen worth of controlled medicines were produced, and 29,933,122.43yen worth of controlled medicines distributed. This is an increase of 100 percent over distribution in April.

Distribution of necessary medical supplies for the conducting of bacteriological examinations for cholera to the repatriation centers and ports, are now in progress. A field representative from this office is now making a personal tour to the ports involved to ascertain the receipt of these supplies, and to assist the port officials in their procurement, if necessary.

Plans are now being formulated for a national distribution of surgical instruments and appliances, by the welfare Ministry and the Central Instrument Control Association. The distribution of both returned military and civilian produced surgical appliances and equipment will, in the very near future, be set up on a systematic basis.

Narcotics

Investigations conducted by narcotic control officers resulted in the arrest of two black market dealers in narcotics and the confiscation of 530 ampules of narcocon. Also a Japanese doctor and nurse were apprehended. They were supplying geisha narcotic with narcotics, selling a half gram for as high as 500yen. Both of the cases will be tried Japanese courts.

SECTION VIII
LEGAL AFFAIRS

No report.

SECTION IX
DIRECTIVES TO THE IMPERIAL JAPANESE GOVERNMENT

None

J.U.WEAVER,

3 Incls:

- #1 - Instr. on Procedures for Diagnosis of Japanese B Encephalitis.
- #2 - Communicable Disease Report for week ending 8 June 46.
- #3 - Venereal Disease Report for week ending 1 June 46.

GENERAL HEADQUARTERS
UNITED STATES ARMY FORCES, PACIFIC
OFFICE OF THE CHIEF SURGEON

11 June 1946

INSTRUCTIONS ON PROCEDURES FOR DIAGNOSIS OF JAPANESE ENCEPHALITIS

These instructions supersede those on same subjected dated 17 May 1946.

I. Education Program for Medical Personnel: TB MED 181 and 212 will be read by all medical officers and they will be carefully briefed on the urgent necessity for detecting and reporting the earliest cases of this disease in order that all major commands in Japan, the Ryukyus, and Korea may have ample warning to take immediate protective measures. Inasmuch as the disease occurs during the month of July, August, and September, and generally appears first in areas farthest south, medical personnel stationed in such areas will maintain particularly close watch, not only in occupational personnel and their dependents, but also in the civilian population, particularly the younger age groups, through liaison with local Military Government units, and transmit such information without delay, through proper channels, to the Office of the Chief Surgeon.

The greatest stress will be given to (1) the serious nature of this disease (case fatality rates have been as high as 40-75 percent), (2) the high susceptibility of non-natives contrasted with the native population which has long been exposed to the disease and, (3) the fact that this disease is the most serious mosquito-borne disease of Japan and Okinawa.

II. Instructions to Medical Officers for Diagnosis of Japanese B Encephalitis: Suspected cases of encephalitis will be transferred immediately to a general or station hospital for a complete diagnostic work-up. Drowsiness, lethargy, mental confusion, and disorientation, and semi-coma or complete coma in the more severe cases, occurring in association with high fever, nuchal and spinal rigidity, leukocytosis and pleocytosis constitute the most important manifestations for diagnostic purpose. Purposeless movements athetosis, tremors, incoordination, difficulties in speech ranging from slurring to complete aphasia, may also be seen. Lumbar puncture will be performed in all febrile cases with any manifestation suggestive of involvement of the nervous system. Pleocytosis, ranging from 22 to 660 white cells per cu. mm., was found in the cerebrospinal fluid of all serologically proved cases of Japanese B Encephalitis previously encountered in American military personnel. The cells are usually predominately mononuclear, but in the first few days after onset a predominance of polymorphonuclears may occur. The sugar in the cerebrospinal fluid is within normal limits, and the protein which as a rule is only slightly increased early in the disease, is usually present in greater concentration during convalescence. It should be borne in mind that poliomyelitis and other syndromes, of as yet unknown etiology, exhibiting fever, nuchal and spinal rigidity, and pleocytosis may also be encountered, and the clinical diagnosis of encephalitis shall be made only in patients with signs suggestive of cerebral or cerebellar involvement. However, all suspected virus diseases of the nervous system will be investigated by serological methods.

III. Specific Diagnosis: A specific diagnosis of Japanese B Encephalitis virus infection can be made only in the laboratory. For practical purposes the diagnosis will be based on the demonstration that complement fixing or neutralizing antibodies for the virus, which were either absent or present in low concentration during the early stage of the disease, have developed or appeared in sufficiently increased titre during later stages or convalescence. Blood will be taken on all cases of suspected virus infection of the nervous system, including suspected poliomyelitis, at the following intervals:

1. As soon after onset as possible.
2. 14 days after onset (or if the patient is in a terminal state just before death).
3. 28 days after onset.
4. Other specimens upon request of the Virus Commission Laboratory.

IV. The procedure for collecting and shipping specimens will be as follows:

1. 20 to 30 cc of blood will be drawn in a dry syringe under sterile precautions and allowed to clot in a sterile container.
2. If the hospital is in the immediate vicinity of Tokyo, the clotted blood should be obtained early in the morning and sent by special messenger to the Virus Commission Laboratory, 42nd General Hospital, Tokyo. If for any reason the clotted blood cannot be sent immediately it should be stored in an ordinary refrigerator (not dry ice).
3. At hospital from which specimens cannot reach the Virus Commission Laboratory, 42nd General Hospital, Tokyo, within 24 hours, the blood should be kept in a refrigerator until the serum can be drawn

off and centrifuged under sterile conditions. Blood or serum should be placed in a sterile screw capped bottle or tube and properly labeled with the patient's name, ASN, hospital and date blood was drawn. Where screw capped containers are not available the container should be stopped with a rubber stopper held tightly in place with adhesive tape. For transmittal the bottle or tube should be placed in a condom and later tied in a knot at the top to keep out water after which it will be placed in a thermos bottle or other closed container filled with cracked ice

4. The first blood specimen will be accompanied by an abstract of the history, clinical findings, laboratory data, dates and type of encephalitis vaccination if any, and any other data which may be pertinent. Subsequent blood specimens will be accompanied by a summary of the progress notes. No serological work will be done on specimens which are not accompanied by such notes.

5. The staff of the Virus Commission Laboratory will carry out virus isolation studies on cerebrospinal fluid, blood, stools nasopharyngeal washings, saliva, etc., but such specimens should not be forwarded except when specifically requested by the Virus Commission Laboratory.

V. Autopsy Material: Autopsy will be performed as soon after death as possible. If the hospital is in the immediate vicinity of Tokyo request should be made to the Office of the Chief Surgeon, GHQ, AFPAC, for a representative of the Virus Commission Laboratory to be present at the autopsy. This representative will arrange for obtaining suitable specimens for virus isolation. The following technique will be used in obtaining suitable pieces of brain tissue for animal inoculation:

1. After reflecting the scalp, towels or gauze will be used to cover and tie back the hair to keep it out of the operating field.

2. The calvarium will be thoroughly washed with alcohol, as will the instruments used in sawing through it and removing it.

3. The dura will be washed with alcohol and sterile scissors and forceps will be used to reflect it.

4. Approximately one cubic centimeter pieces of gray matter will be taken with the sterile scissors and forceps from the frontal, parietal and occipital regions of the cortex of both sides and put into a sterile container.

5. Using the same sterile scissors and forceps to cut nerve trunks, tentorium, etc., the entire brain will be removed and placed on a sterile towel with the ventral surface facing up. Using the sterile instruments the following additional pieces of brain tissue will be obtained: Cerebellar cortex from each side, thin slices from on or the other side of the midbrain, pons, and medulla, and a piece of the cervical cord. These pieces will be added to the others in the sterile container.

6. If dry ice is available, the pieces of nervous tissue thus removed should be put in a sterile, tightly-rubber-stoppered (held in place with adhesive) or screw cap, thick glass bottle or tube, and no liquid of any kind should be added. The bottle is to be surrounded by dry ice and immediately sent by courier to the Virus Commission Laboratory. If there is no dry ice, the tightly closed bottle or tube should be put in a condom which will be tied in a knot to keep out water, surrounded by cracked ice and forwarded immediately by courier as above.

The presence of multiple lesions in all parts of the gray matter of the cerebral cortex (not only the motor area as in poliomyelitis) and in the Purkinje cell and molecular layers of the cerebellar cortex in cases of Japanese B Encephalitis and their absence in cases of bulbar poliomyelitis, governs the selection of pieces for rapid preliminary histological examination. The entire remaining brain and spinal cord should be fixed in a large quantity of 10 percent formalin (at least 5 to 10 times the volume of tissue to be fixed). Both olfactory bulbs should also be included. The brain should be sliced in a number of different areas (without completely severing continuity) and pieces of paper should be inserted in the cuts to permit better fixation.

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
PUBLIC HEALTH AND WELFARE SECTION**

**WEEKLY BULLETIN
For Period
23 June to 29 June
1946**

SECTION I WELFARE

Field Trip to Northern Japan

A representative of the Welfare Division completed a 12 day field trip to Sapporo, Morioka, Yamagata, Fukushima, and Utsunomiya to study the Japanese welfare program in operation. Conferences were held with military government officials, Japanese prefectural and city welfare representatives, homeni-in (voluntary district welfare commissioners). Visits were made to public and private orphanages, old age home, jails, prisons, reformatories, home for juvenile delinquents, and shelters for the homeless.

Both military government and Japanese governmental agencies were usually found to be inadequately staffed for proper supervision and administration of welfare takes. Improvements were noted in keeping uniform case records and granting aid in accordance with standard schedules of allowances. The homeni-inn generally appeared to have too little time or facilities necessary to handle increasing relief needs, although they seemed sincere and conscientious. The need of program for training persons in welfare work to assume leadership in relief program was apparent.

Care of Vagrants

A visit was made to the processing center organized in Yokohama five weeks ago by the prefectural government for collecting vagrants, providing temporary care and reforming them to appropriate agencies for control. The third (one -to-two day) vagrant collection drive was underway. About 150 persons of all age groups were fed, bathed, sprayed with DDT, given clean shirts and slacks, interviewed, given medical examinations and haircuts. According to the findings they were then sent to orphanages, old age asylums, homes for delinquent children, hospitals, or other appropriate institutions. The ablebodied were provided with shelter on the grounds and assisted in obtaining employment. Chief difficulty was experienced with the problem of persons leaving institutions mostly because of food shortages. On the whole the project represented a definite and commendable effort towards a program of aid for vagrants and waifs, by coordinating the facilities of various public and private agencies.

School Lunches

A conference was held with interested sections of SCAP regarding plans for providing school lunches to all children of Japan when the fall school term begins. Emphasis was placed upon the various programs instituted by England, Holland, Norway and other European countries. England felt the program so necessary that school lunches were provided during the years of the war at the expense of all other rationing programs. A study recently conducted reveals the wisdom of England's plan. The children of the British Isles are strong and their health standards have been greatly improved. The same is true in other countries that have engaged in similar programs.

Serious consideration is being given to encouraging the Japanese Government to inaugurate a supplemental feeding program during the coming school term. It was the concensus of the conference that the program should be initiated by CI&E Section in coordination with Natural Resources, ESS, PH&W and other interested sections.

Housing

The following is an excerpt from the Nippon Times, 29 June 1946, and is quoted because of its interest to all housing programs.

"On 26 June, SCAP ordered the Japanese Lumber Company, Ltd., dissolve in accordance with (SCAPIN 1037). The Japanese Lumber Company, Ltd., is a privately owned, government controlled monopoly dominating all phases of the lumber industry in Japan.

"Replacing the monopolistic concern SCAP ordered the government to permit revival of previously prohibited voluntary, democratic associations of existing private lumber interests which can work with the government in the future to intensify lumber production efforts in Japan.

"SCAP ordered all laws giving the Japanese Lumber Company legal existence abrogated."

With the abolition of the monopoly, lumber for home building is expected to flow more freely to those who have been previous denied.

Red Cross Activities

Chapter Service, a new department in the Japanese Red Cross Society has been established. Two Japanese general field representatives have been appointed to begin work immediately in reorganization of Red Cross Chapters. The appointment of a woman to this position marks the first time a woman has been placed in an executive position in society.

SECTION II PREVENTIVE MEDICINE

General

A short school for newly assigned public health officers to Military Government Companies in the IX Corps area was held at Corps Headquarters, at Sendai, under the sponsorship of the 105th Military Government Group. Representatives of the Preventive Medicine Division addressed the officers on the following subjects: Public Health in Japan; Arms and Policies of Public Health and Welfare Section, SCAP; Water Supply; Insect and Rodent Control, and others.

Insect and Rodent Control

Further conferences were held with representatives of the Welfare Ministry in an effort to procure funds from the several prefectures for the financing of the insect and rodent control program. A new order is to be issued to the prefectural governors, in a more forceful and definite language. Investigation will be made of prefectures allegedly unable to carry the program.

Laboratory Activities

Application from Welfare Ministry to grant "permission for sale of penicillin" produced by Urawa factory, Yoshima Chemical Company, Ltd., was favorably considered following an inspection of the plant.

Conferences were held with officials of the Welfare Ministry and Tokyo Imperial University Infectious Disease Institute. An Association of Penicillin manufactures is to be formed. While this session will be primarily organizational in nature, constructive plans for materially increasing penicillin production will be stressed.

Nutrition Conferences

On the 24th of June 1946, a discussion was held with Miss Hayawara, Nutritionist, regarding Japanese recipes for the use of whole wheat in the dietary.

Information was obtained by Nutrition Consult on the method by analysis of food products at the Food Research Laboratory, Fugnawa, Tokyo.

A meeting of the Committee on Nutritional Efficiency of the Imperial Academy of Science was attended by the Nutrition Consultant 26 June 1946.

An inquiry was made as to the significance of the following statement made in the Nippon Times 27 June 1946 and attributed to the Metropolitan Food Department, Tokyo: "a resident in the Metropolitan Area was consuming on the average of 265 gram of staple food and other supplementary foodstuffs per day or obtaining barely 881 calories". This estimate was based on the distribution of rationed staple foods with an estimate of the amount of similar foods purchased on the black market. It did not refer to the total average food consumption.

The subject of school lunches was discussed with representatives of CI&E, NRS and PH&W. It was agreed that school lunches were desirable. The subject was left for further consideration in relation to the food supplies available, the extent of the lunch, or whether it should be a complete or supplement to the average Japanese dietary.

A lecture was given by the Nutrition Consultant at Kyobashi City Hall on 28 June on the use of Japanese food to obtain the maximum benefit from the food available.

Port Quarantine

Cholera continues to be the foremost quarantine problem. Approximately a dozen foci are known at present in Japan. The majority of these are believed to be the result of importation of the infection from Korea via illegal shipping. Active measures are underway to prevent further importation and eliminate presently established foci.

Only at Sasebo and Hakata are cholera cases, suspects or contacts being held in quarantine.

Action is currently underway to increase facilities at most reception center for handling of cholera infected or suspect vessels. The laboratory at the Sasebo center is being moved and its capacity to examine stool specimens for cholera increased to 15,000 per day.

Aggressive action has been taken in an effort to suppress those draft engaged in smuggling between Korea and Japan in order to stop further possible introduction of disease from Korea.

SECTION III ADMINISTRATION OF HOSPITALS

The Japanese Civilian Hospital Strength Report shows 3015 hospitals with a bed capacity of 208,466 of which 105,690 are occupied. For the same period 246,998 out-patients were treated.

SECTION IV
NURSING AFFAIRS

General

The survey of school nursing in Iwate Prefecture was completed. Rumors have been circulated regarding the proposed national examination for the licensure of graduate nurses. As a result, the directors of the schools and many of the individual nurses have asked for information.

Education

A class in nutrition was taught in the refresher course, and four classes in history of nursing in the Demonstration School by a representative from the Nursing Affairs Division.

A meeting was held for the Japanese supervisors, head nurses, instructors of the Demonstration School with Dr. Oshima, Director of the hospital presiding and a representative from this office attending. Problems discussed were the inter-relationships between the ward personnel and teaching staff, responsibilities of the supervisors and head nurses in the education program, participation by the staff of American nurses in the program and problems in ward management.

SECTION V
VETERINARY AFFAIRS

General

As a result of a conference with representatives of Natural Resources Section, SCAP, with reference to the disease hazards and feed shortages incident to the importation of horses into Japan by the Chinese Army and sheep by BCOF. The following action was taken by G-4 Section, SCAP, prohibiting importation except when specifically approved by SCAP.

- a. Imperial Japanese Government, AG 091.31 (21 Jun 46) GD, (SCAPIN 1523-A)
- b. Memorandum for representatives of Allied Governments, AG 091.31 (19 Jun 46) GD.
- c. Memorandum for Commanding General, Eighth Army, Commanding General Pacific Air Command and Commander Naval Activities, Japan, AG 091.31 (19 Jun 46) GD.

Reports from the Japanese

Animal Disease Report The Animal Disease Section, Ministry of Agriculture and Forestry, reported that no new outbreaks of disease occurred during the period 23-29 June 1946.

SECTION VI
DENTAL AFFAIRS

Report from the Japanese

The Japanese Dental Association revealed that its present sources of income are:

- | | |
|---|-------------|
| a. Membership free | 200,000 yen |
| b. Commission for collecting
Insurance bills, which amounts to 10 percent. | 70,000 yen |
| c. Commission for distributing supplies. | 193,000 yen |

SECTION VII
SUPPLY

General

Information has been received from the War Department to the effect that under present policies, insecticide, freon aerosol will not be supplies to civilians in liberated or occupied areas.

Production

Approval was given ESS to release 930 kilograms gold, 5661 kilograms silver and 30 kilograms of platinum to the Japanese Government for production of medical instruments and dental use for the period 1 July 1946 to 31 March, 1947.

A report submitted by the Welfare Ministry regarding dental equipment and material indicate that sizeable quantities are being produced. Plans for production of sufficient equipment for 3000 dentists during the period 1 July 1946 to 31 December 1946 was submitted. Additional allocation of raw materials will have to be obtained to effect this production.

Weekly report of the Welfare Ministry regarding of production of supplies required for the mosquito and fly control program indicates considerable quantities of petroleum products have now been furnished all manufacturers and it is ex-pected that a large quantity of pyrethrum emulsion will be produced during week 24-30 June 1946. Approximately 40,000 gallons were produced during week 17-23 June 46.

Investigation of the status of glass syringe manufacturing in Japan revealed that present production is satisfactory. Approximately 150,000 are being produced monthly in 23 factories scattered throughout Japan. Syringes are being produced in the following sizes 2 cc, 5 cc, 10 cc, 20 cc, 50 cc and 100 cc.

Distribution

Orders were issued by the Welfare Ministry to all governors of prefectures regarding disposition of medical supplies taken from repatriation ships upon arrival in Japan. These supplies will be delivered to National Hospital and used to supply hospital ship handing repatriates.

The Japanese Medical Instrument Control Company and Osaka branch of Japanese Medical Instrument Control Company have been delegated by the Welfare Ministry to handle the distribution of surgical instruments and the appliances. Important items of surgical instruments will be given priority in distribution to the consumers. During the early part of July ninety-two types will distributed and similar programs will follow.

Distribution of Pyrethrum emulsion to Tokyo, Aichi, Niigata, Kyoto and Hyogo amounted to 47,330 gallons.

A total of 4280 kg of insecticide powder were distributed to Chiba, Gifu, Shizuoka, Aichi, Niigata, Toyama, Ishikawa and Fukui prefectures.

Preparations are now underway for the shipment of 250,000 cc of cholera vaccine and 20,000 vials of typhus vaccine to Hulutao, Manchuria for repatriates.

A shipment of 18,900 gallons of insecticide spray, DDT, residual effect is being made to repatriation ports for disinfestation of ships carrying repatriates.

Narcotics

Further investigation in the geisha area of the Mukojima district, Tokyo, resulted in the arrest of doctor selling morphine at exhorbitant prices to geisha addicts in the closing of a factory illicitly compounding narcotics for sale to doctors at blackmarket prices. The investigations are being directed by a narcotic control officer, a former federal narcotic agent, who with a Japanese narcotic inspector will shortly begin a tour of every prefecture in Japan to acquaint prefectural narcotic inspectors with modern enforcement and investigative procedure.

On 19 June 1946, new Japanese Welfare Ministry Narcotic Regulations, as required by SCAP, became effective. These regulations revolutionize narcotic controls in Japan. One of the principle features is that all narcotic dealers will be properly classified and registered by 19 July 1946 and will be required to submit periodic reports accounting for all narcotic transactions.

SECTION VIII LEGAL AFFAIRS

General

Two distilleries for the manufacture of whiskey which had been closed because their products showed more than the minimum tolerance for methyl alcohol were visited at the request of the Finance Ministry, with a view of allowing them to reopen. Samples of their products were taken and will be tested. If tests indicate product is safe for consumption, request to allow them to reopen will be made to Provost Marshal's Office in Tokyo.

Conference with Ministry of Health to assure adequate financing of the Insect and Rodent Control Program resulted in securing of funds to carry program until the Diet can on budget.

SECTION IX DIRECTIVES TO THE IMPERIAL JAPANESE GOVERNMENT

AG 438 (29 Jun 46) PH (SCAPIN 1600-A), subjects "Information Concerning DDT", 29 June 1946.

J. U. WEAVER
Colonel, Medical Corps
Deputy Chief, Public Health & Welfare Section.

2 Incls:

#1 - Communicable Disease Report for week ending 15 June 46.

#2 - Venereal Disease Report for week ending 8 June 46.

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
PUBLIC HEALTH AND WELFARE SECTION**

**WEEKLY BULLETIN
For Period
30 June to 6 July
1946**

SECTION I WELFARE

Field Trip

A visit was made by representatives of LARA (Licensed Agencies for Relief in Asia) Mission, and the Welfare Division to the Seibo-no-Sono Old Ladies Home in Totsuka (Kanagawa-Ken). The home is operated by the Franciscan Missionaries of Mary with a staff of 45 Sisters. Thirty old ladies are being care for in a large barracks formerly used by the Japanese Navy. There is ample room for 70 more old ladies, but the usual problem of food shortages prevented admitting larger numbers. The Sisters were meeting this problem partly by raising food on 16 acres of surrounding land.

SECTION II PREVENTIVE MEDICINE

General

There has been 104 cases of cholera or cholera suspects reported in Japan since 15 June 1946. New cases have appeared in Hiroshima and Okinawa kens on Honshu, and Kagawa ken on Shikoku during the week. The case densities are in Fukuoka, Saga and Hiroshima. This week the Acting Chief, Preventive Medicine Division is visiting foci areas for the purpose of investigating and improving control measures.

To date no confirmed cases of Japanese B encephalitis have occurred. Suspected cases have been reported in the following prefectures: Hiroshima, Shimane, Gifu, Nagano, Miyagi, Yamagata and Akita.

A conference was held with the venereal disease control officers of Provost Marshal's Office, Tokyo Area, the 32nd Military Government Company and PACUSA. Preliminary plans were discussed and it was decided to hold a weekly venereal disease control meeting. The SCAP consultant will act to correlate and coordinate the activities of the various individuals. The venereal disease control officer of Eighth Army will attend next week's session.

Sanitary Engineering

Reports have been received that the former excessive chlorination of municipal water supplies used by troops in Kyushu has been reduced to a reasonable amount. Cities throughout the country are now chlorinating to prewar standards. Many have increased the dosage where chlorine is available in accordance with the Health Ministry recommendation of 16 May 1946. Due to the shortage of chlorine cylinders, it is important that all empty cylinders be returned to the chemical plants promptly.

Improvement has been made in some cities in the collection and disposal of waste products in the past few weeks. Because of the importance of proper collection and disposal of this material at this time of year in the control of enteric diseases, action is being emphasized in every community to provide adequate collection and disposal facilities.

A conference was held with CI&E Section and representatives of the Health Ministry on the progress of the health education program for the general public. Six radio talks have been given by Japanese health officials and three more are scheduled. Several magazine articles have been written and press releases have had regular distribution. A movie is now in process on mosquito control under the supervision of the Health Ministry, and one on fly control is to be produced. Most prefectures have films on the control of various diseases including dysentery which will be shown as soon as approved by CCD.

Vital Statistics

The new monthly vital statistics report form as directed under provision of SCAPIN 811, 975-A, and 1482-A, was presented and explained by the Chief of the Vital Statistics Division to the assembled representatives of each prefectural government office in Japan. The assembly was under the direction of the Cabinet Bureau of Statistics and held at Hakone.

A sufficient supply of forms were on hand for distribution to the representatives for use during the month of July by the 11,000 local governments. The need for the collection of current and accurate vital statistics was stressed. For efficiency, the due dates of monthly reports were emphasized where as the prefectural offices must receive the reports by the 10th of each month, the Cabinet Bureau of Statistics by the 20th of the month and the consolidated reports forwarded to GHQ, SCAP, by the 27th of the month.

Maritime Quarantines

The cholera situation at ports of entry show current improvements and no vessels are known to have arrived during the past week with cholera aboard. Repatriation from Shanghai is almost complete. As Shanghai has been infected with cholera for some time, the termination of repatriation will lessen the threat of further cholera importation into Japan. Smallpox, typhus, and other communicable diseases are not serious port quarantine

problems at present. Further progress has been made in improving conditions for the reception and processing of repatriates.

Laboratory Activities

Plans have been completed for the organization of an "Association of Penicillin Manufactures". The first meeting, to be held 10 July 1946, will be attended by representatives from SCAP, the Welfare Ministry, the Japanese Penicillin Board and various manufacturers.

The Kitasato Institute was inspected by the Laboratory Consultant. Typhus vaccine production was carefully examined. The question of financial support to the Institute was referred to the Supply Division. The laboratory officials stated that large sums were frozen in the production of typhus vaccine and that this money could not be realized until the vaccine was sold this fall. The question of governmental subsidation is being investigated.

SECTION III ADMINISTRATION OF HOSPITALS

The Japanese Civilian Hospital Strength Report shows 3021 hospitals with a bed capacity of 205,903 beds, 105,572 of which are occupied. For the same period there were 224,053 out-patients treated.

The Committee on standards for hospitals of the Japanese Medical Association met in first formal session on 3 June 1946, at the Japanese Medical Association Building in Tokyo. Dr. Hanaoka, President of Chiba Prefectural Medical Association acted as chairman. The following questions were presented:

- a. The large number of small private hospitals in Japan.
- b. Institutions under a certain size (to be determined after free discussion and deliberation) must not be classed as hospitals. These clinics to have a time limit placed on the treatment of patients. No cases requiring more than a few days treatment are to be admitted.
- c. Classification of hospitals after a careful investigation by qualified inspectors.
- d. Follow up inspections and failure to comply with standards to be cause of reduction in classification.
- e. With the exception of the teaching hospitals attached to reputable medical school, "open" hospital policy to be instituted.

SECTION IV NURSING AFFAIRS

General

The refresher course is progressing very well at the Red Cross Hospital in Tokyo. Cooperation and interest continues at a high point. Motion pictures were taken of the morning session and the afternoon demonstration work in the classroom. The pictures were shown to the class of students and they were well pleased with the results. The course will be completed on 25 July 1946.

The second booklet translated from English into Japanese, on "What You Should Know About Tuberculosis" has just been completed. Permission for its use has been obtained from Dr. Emerson of National Tuberculosis Association.

The prefectural surveys continue and much interest has been shown by the authorities in the prefectures. Many of the doctors have shown a greater interest by desiring information for raising standards in their training schools. Lectures and conferences have been held, by request, to give information regarding the various types of programs re: nursing in America, with considerable interest being shown.

An inspection tour was made in Korea on Nursing Affairs and various educational projects were visited in Seoul. The cholera set-up at Inchon was visited but because of the floods other hospitals at Inchon could not be reached.

Demonstration School. - Lt. Thompson who is now on TDY until discharged from the Army Nurse Corps is acting as assistant director of the school of nursing which is progressing effectively. Several staff meetings have been held and many problems have been brought up concerning the hospital administration and the school of nursing. Some of the outstanding problems are: lack of water for the Operation Room, T.B. Ward and for use in toilets; the problem of food for patients and getting the central kitchen set up for operation; there is marked lack of help for orderly and laundry work. The laundry is in poor condition and with the lack of soap and water makes it almost impossible to use at present time. The need of DDT spraying again in the school, was reported. This has been accomplished. There now is much better cooperation among all concerned and it is felt that later on there will be a mutual understanding with the program running more smoothly.

SECTION V VETERINARY AFFAIRS

Reports from the Japanese

Animal Disease Report. The Ministry of Agriculture Forestry, Animal Hygiene Section, reported the following new outbreaks of disease during the period 30 June - 6 July 1946.

<u>Prefecture</u>	<u>Disease</u>	<u>Cases</u>
Gunma	Swine Erysipelas	1

Control measures are immunization and quarantine.

SECTION VI DENTAL AFFAIRS

No report.

SECTION VII SUPPLY

Production

Necessary arrangements were made to furnish approximately 2,000,000 cc of Japanese produced cholera vaccine to the island of Kyushu for immunization of all individuals in Fukuoka, Nagasaki and Saga prefectures. This action was necessary due to an outbreak of cholera in these prefectures.

A conference was held with representatives of Welfare Ministry, Japan Dental Association and Dental Materials Control Company for discussion of the production and distribution of dental equipment and materials. Present production plans were submitted and production for the month of June was submitted. Sizeable quantities of all equipment, with few exceptions, are being produced. The Japan Dental Association indicated that they were not in accord with the present distribution of equipment. The very high prices on all equipment is limiting distribution. The Japan Dental Association was instructed to submit proposed changes in the distribution system and recommendations with respect to prices of dental equipment.

Distribution

Distribution of 20,000 hand dusters has been made by Japanese Welfare Ministry to prefectures, ports, railways and to China for use in connection with repatriation and other disease control programs.

Thirty six hundred vials of typhus vaccine were shipped to Maizuru Reception Center by the Japanese Welfare Ministry.

Eleven hundred vials of Japanese B encephalitis vaccine were shipped to Okayama Prefecture by the Japanese Welfare Ministry to complete the inoculation program now in process under the supervision of the U.S. Virus Commission.

Narcotics

As a result of insistence by Narcotic Control officers that an investigation be made by the Ministry of Justice regarding the criminal liability of Tsuneo Masuda, Chief of the Yobiko Police Station, in the Wakayama Contraband opium case, a report from the Ministry of Justice shows that after such an investigation had been made Masuda was ordered held as a defendant for trial in Japanese court.

Dr. Yasumi, Records Chief of the Pharmacy Section, Ministry of Welfare, reported that all narcotic wholesalers have been supplied with uniform report forms and that the Pharmacy Section is organized to receive, record and tabulate such reports beginning with July.

Eighth Army has been notified that the Sanitary Bureau of the Ministry of Welfare has been designated to receive, receipt for and deliver into the custody of approved wholesale houses Japanese military narcotics now held by the Eighth army and that a representative from the Sanitary Bureau and a Narcotic Control Officer from SCAP will call at Eighth Army Headquarters to effect such delivery.

SECTION VIII LEGAL AFFAIRS

General

Conferences were held with the Japanese Ministry of Health and Social Affairs on the following subjects:

a. Financing of Insect and Rodent Control Problem, The Ministry will investigate the possibility of marking direct payment to manufacturers of equipment and supplies and thereafter seek reimbursement from the

various prefectures of their respective 5/6th portion as required by law. In the meantime immediate action will be taken to relieve the financial distress of the manufacturers by having some of their "blocked funds" released. In addition, the Ministry will renew their promise that payment in full will be made deliveries already accomplished.

b. Enforcement of regulations requiring physicians to report suspected cases of Japanese B Encephalitis. - The existing Japanese laws are sufficient to secure enforcement. Physicians not complying will be reported to local Medical Associations, which will act upon the matter and if necessary will recommend to the Prefectural Governor that the non-complying physician be suspended from the practice of medicine for a period of six months. This, of course, does not preclude any action in addition thereto, that the Provost Courts may take for violations of pertinent SCAP directives on the subject. All doctors in the Okayama Prefecture will be advised by the Health Ministry of the importance and necessity of reporting suspected cases immediately.

c. Medical Examinations System. Provision has been made in some of the larger cities to have autopsy made in cases of suspected death caused by infectious diseases, poisoning, or unknown cases. The system will be extended as soon as sufficient funds are secured.

SECTION IX DIRECTIVES TO THE IMPERIAL JAPANESE GOVERNMENT

None.

SECTION X SUMMARY OF WEEKLY REPORT IN KOREA – WEEK ENDING 15 JUNE 46

Public Welfare

Over 7,000 Japanese refugees reaching Seoul were cared for in accommodations intended for 3,000 resulting in sanitation hardships. Completion of a tent area has temporarily relieved this situation.

Consideration is being given by the Seoul Welfare Department for closing a licensed prostitution area and using houses for refugees. Such action was successfully carried out in Taejon.

An in-service training course for institutional supervisors has been arranged and will be conducted by Mr. Kenifich of the American Red Cross Civilian Relief Staff.

Repairs are in progress at the National Orphanage and the National Blind and Deaf School.

Difficulties have been experienced in unloading and warehousing army surplus articles to be used for civilian relief. The warehouse has been broken into on the average of every third night in spite of a 24 hour Korean police guard. Many laborers have been apprehended for pilfering supplies.

The preliminary charter for a National Korean Red Cross Society has been reviewed by the Department of Justice. It was referred to the Korean Citizens' Group to complete the drawing up formal articles of incorporation.

Nutrition

The nutritive value of "Haingmyun soup" was determined by the Bureau of Laboratories.

The low cost feeding program of the Welfare Advisory Board was discussed on 14 June by Public Welfare.

Hospital Administration

The Tuberculosis sanitarium at Mason is open with 15 patients. Many more applications are being processed.

Plans are under discussion for the establishment of a provincial leprosarium at Pusan.

The second part of National Medical examination will be held in July.

Nursing Affairs

The entire nurses' educational program is progressing rapidly. One course for midwives, and the two for nurses continue with great interest.

Conferences have been held re registration and licensure and materials is about ready to be put into Nurse and Midwife Practice Acts.

Inspections in Prefectures continue with encouraging result being obtained.

Veterinary Affairs

Horseracing was forbidden in Taegu until the animal were properly tested and inspected.

An agreement was reached with the Bureau of Sanitation and Public Health Director whereby veterinary personnel will inspect all foods of animal origin including fish and poultry.

Three hundred and seventy three thousand cc of rinderpest serum was sent to Kangwon-do.

Supply Activities

An examination for pharmacists is to be held in Seoul during July. This information has been disseminated to all provinces.

The Bureau of Commerce has been furnished a price list on surplus items of army stocks being sold to apply against the import program.

The manufacture of three new pyrethrum insecticides was approved and gasoline allocated for that purpose.

Distribution of the third allocation of CAD supplies was initiated. A shipment valued at approximately 10,000,000 yen was made to Kyonggi-do.

J.U.WEAVER
Colonel, Medical Corps,
Deputy Chief, Public Health & Welfare Section.

2 Incls:

#1- Communicable Disease Report for week ending 22 June 1946

#2- Venereal Disease Report for week ending 15 June 1946

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
PUBLIC HEALTH AND WELFARE SECTION**

WEEKLY BULLETIN

**For Period
7 July to 13 July
1946**

SECTION I
WELFARE

Public Assistance

Completed public assistance statistics for the month of May were received from Eighth Army and the Japanese Welfare Ministry.

The report showed a total of 2,182,493 different persons on relief in Japan, a decrease of about 500,000 from the preceding month. Net grants amounted to 40,464,855 yen, or about eight million yen less than in April.

Largest Changes in the numbers of persons assisted, according to the Japanese report , were as follows:

<u>Prefecture</u>	<u>No. of persons assisted</u>	
	<u>April</u>	<u>May</u>
Wakayama	453,711	14,345
Kanagawa	18,731	97,919
Tokyo-to	74,422	142,872
Yamaguchi	39,294	13,284
Shimane	38,456	12,689

Changes were said to be largely due to shifts in emphasis of grants under the “Protection Other Than Laws”, “Military Aid Law” (with removal of special benefits or preferential treatment), and “Other Protection Work”, the three chief categories under which relief was granted.

In the reports for April, wide inconsistencies were noted between the Japanese and the Military government reports as to relief grants, and numbers of persons assisted in at least 25 prefectures.

Action to simplify, reduce, and standardize the contents of monthly reports with a few towards greater accuracy, practicality, and value, is being made coincident with the completion of uniform statistic tables.

Private Relief Imports

The first organizational meeting of a committee of about 30 persons was called by the LARA (Licensed Agencies for Relief in Asia) representatives, Rev. Mckillop and Miss Rhoads, in Tokyo. Represented were PH&W Section, SCAP, the Japanese Home Ministry and Welfare Ministries, and various welfare institutions, hospitals, and agencies. The committee will serve to advise the Japanese Welfare Ministry on matters pertaining to the type of relief supplies to be requested and the method of handling, storage, and distribution to the needy through private relief agencies.

Child Care and Protection

An increasing awareness of the deplorable treatment or neglect of waifs and children in jails was evidenced in reports submitted to GHQ, SCAP, by the Japanese Welfare Ministry. The Ministry’s representatives investigated conditions in Yokohama and Tokyo at the investigation of SCAP Welfare representatives and conferred with Japanese prefectural officials with a view toward adopting corrective measures. A social worker with ten years experiences as a mother-and child protection worker and visiting nurse was added to the Japanese Relief Section of the Social Affairs Bureau to handle child care and protection problems.

Foreign Nationals

A field inspection trip was made to the Foreign Nationals Food Distribution Point in Tokyo in which it was reported that surplus U.S. Army and Navy canned were being distributed. It was found that most of the canned goods were in badly dented cans, many swollen and that the foreign nations were given opportunity to hand-pick their purchases.

Foreign nationals were given a six months supply of seven pounds per month per person or a total of 42 pounds per person for the six months period.

Inasmuch as the supply is in such poor condition and deprives the person receiving it from further issue of canned goods for six months, an adjustment will be made to supply these people in the further with better canned goods as it is released.

This store takes care of 1404 foreign nationals.

Prefectural Investigating Teams

Joint-teams of the Home and Welfare Ministry's, sent throughout the various prefectures to audit prefectural accounts, have found widespread errors in reported figures and amounts on hand.

The investigating teams report close coordination and cooperation between Ministry Government Companies and the Prefectural auditing teams.

The auditing teams reflected a desire and willingness on the part of the Japanese Government, at the national level, to correct and take immediate disciplinary action in flagrant cases of non-compliance on all violations brought to the attention of Japanese Home and Welfare Ministries.

Red Cross Activities

Miss Isobel C. Auld, American Red Cross was assigned to this Section as field representative in the reorganization of the Japanese Red Cross. She will assist in the development of Chapter Service. Because of limited staff, the reorganization will be done on a demonstration basis in a selected group Chapters. Two Japanese Red Cross general field representatives have been appointed to work with her with field service beginning in the near future. Miss Auld will assist with the training and supervision of the Japanese Red Cross field representatives and in the actual reorganization of the chapters.

SECTION II PREVENTIVE MEDICINE

General

Cholera. Fifty-seven cases or suspected cases of cholera were reported this week from Fukuoka, Hiroshima, Nagasaki, and Saga Prefectures. The Acting Chief, Preventive Medicine Division, made an inspection trip of areas of cholera prevalence, and now is in Korea to investigate cholera control measures there.

Japanese B encephalitis. Approximately 20 suspected cases of Japanese B encephalitis have been reported in Japan, but to date no cases have been confirmed.

Dysentery and Typhoid. Dysentery is showing some increase particularly in Gunma, Ibaraki, Kagoshima, Kumamoto, and Miyazaki. There has been a general decrease in number of typhoid cases reported from all prefectures, except Hiroshima and Hokkaido where rates continue at a comparatively high level.

Sanitary Engineering

Water Supply. Chlorination of water supplies in five port cities in Kyusyu has been increased to 3.0 ppm residual in the distribution system as a cholera control measure. This should be considered as an emergency measure only and should be reduced as soon as possible. Special effort is being made to protect the sources and reservoirs from contamination.

A shortage of aluminum sulphate for water treatment was reported by the Water Works Association and Health Ministry due to the recent exportation of this material to Korea. Conference with the Economic and Scientific Section have resulted in some changes in allocation and increased production to insure adequate supplies for water treatment.

Waste Disposal. A large proportion of the sludge produced at sewage treatment plants was formerly barged to sea or otherwise wasted. Steps are being taken to have all digested sludge collected by Agricultural Associations for use as fertilizer. This is now being in Tokyo and Osaka.

Insect and Rodent Control. The budget of the Ministry of Health and Social Affairs of about 62,000,000 yen for the control program has been approved by the Ministry of Finance. Prefectures will be notified promptly of their allocations by the Ministry. The budget estimate is for the total labor cost plus 50% of the cost of supplies and equipment.

Arrangements for the production of two motion pictures on mosquitoes and flies have been made with Toei Cinema Studio. The script of the former has been approved by this office.

A report has been received from the Health Ministry showing the number of Insect Control Officers, assistants, and sanitary teams that have been appointed and organized in each prefecture. Niigata and Ishikawa failed to submit a report, and Osaka and Ibaraki did not report number of teams organized.

Laboratory Activities

The initial meeting of the "Assistant of Penicillin Manufactures", was held 10 July 1946 at the Welfare Ministry. In addition to representatives from SCAP, the Japanese Welfare Ministry and the National Penicillin board, 25 manufacturing firms were represented. Approximately 30 scientists from various Universities also attended.

The main point stressed was the necessity for interchange of ideas and problems which the individual concerns have had. For Penicillin production to succeed, close cooperation of all is an absolute necessity.

Attention was directed that membership in the association is open to any manufacturer contemplating the commercial production of penicillin.

Though there has been a steady decline in the incidence of new cases of smallpox in Japan, certain foci still have abnormally high rates.

A meeting was held with the Chief of the Health Bureau of Welfare Ministry to ascertain the progress of the smallpox re-immunization program in correlation with the above.

Approximately 10,000,000 Units of vaccine are presently stored in Osaka. Since this vaccine is some 6 - 7 weeks old, potency assays were ordered before it would be released for use. This is being carried out and the results will be known 18 July 1946.

Medical Examiner System

Operational flaws which have arisen in the plan which was operating in the Tokyo area have been revised. After a sufficient period of observation, it is intended to establish Medical Examiner Systems thru out Japan patterned after the Tokyo plan.

Venereal Disease

The weekly conference was attended by the Eighth Army Venereal Disease Control officer. Weekly meeting will continue with plans for a nationwide Venereal Disease Control symposium to be held in about 1 month with representatives from the local Military Government Companies; tactical forces and Japanese Public Health Officials attending.

Investigations are being instituted of reported instances of non-compliance with SCAPIN 642 relative to abolishing Prostitution contracts. It has been requested that any instances on no-compliance with this directives be reported to General Headquarters, Supreme Commander for the Allied Powers.

Nutrition Activities

Lt. K.G. Shea, nutrition officer from Korea Public Health and Welfare Section spend several days, on temporary duty at this office relative to the Public Health nutritional program which includes:

- a. A hot lunch program for Korean school children.
- b. Soybean milk for babies.
- c. Plan for education of dietitians in hospitals.

Nutrition Surveys

A comparison of the results of the nutrition survey in Tokyo in May with those in December and February indicate that the caloric intakes in Tokyo in May was approximately 600 calories less than the results in December 1945 and 300 calories less than average city February.

SECTION III ADMINISTRATION OF HOSPITALS

The Japanese Civilian Hospital Strength Report shows 3018 hospitals with a bed capacity of 207, 242 beds, 106,757 of which are occupied. For the same period there were 273,955 out-patients treated.

On 5 July the Council on Medical Education met and took specific action regarding the selection and appointment of Medical School inspectors. Thirty inspectors are to be appointed for candidates recommended by the leading Medical Schools.

The sub-committees considering the Post-Graduate Training program reported progress. The problem of Post-Graduate Education will be responsibility of the Japanese Medical Association.

SECTION IV NURSING AFFAIRS

General

Executive meeting of the new Demonstration School had its first meeting 10 July 1946 in Red Cross Headquarters. Representatives from Red Cross Hospital, Headquarters, St. Lukes and GHQ were present. The school program is progressing satisfactory. Adjustments have been difficult but with time it is felt sure many of the administrative problems will be solved.

Minor plumbing repairs have been made, main diet kitchen is being reconditioned, dormitory has been sprayed and the hospital will be sprayed and dusted with D.D.T. Hospital supplies are coming in slowly.

Student schedules, ward supervision and student government problem are being ironed out. Affiliation with a near by hospital is being planned for the students.

The refresher course is holding its place in interest and enthusiasm. This week Occupational Therapy was taught by Miss Gillespie of the 42nd General Hospital with a display of articles. The nurses made stencils and started articles in leather which they were allowed to keep. This class was extremely interesting and practical. A teaching film on Typhus and Malaria Control was shown to the students. They all feel that the course is worthwhile and many requests have come from the nurses for educational help in their respective hospitals.

The Medical Officer of 32nd Military Government Company, has been contacted re: visiting the School of Nursing in Tokyo. He desires to be notified when possible as he would like to visit some of the schools with our nurses on their inspection trips.

SECTION V VETERINARY AFFAIRS

General

Field trip to Tochigi Prefecture. Japanese Veterinary conditions in Tochigi prefecture were surveyed during the week. Accompanied by representative of the 80th Military Government Company and the Prefecture Government, dairy farms, milk plants, slaughter houses, experimental farms and stallion depots were visited.

Livestock Industry. As a result of the elimination of the Japanese Army there is a trend toward more dairy cattle and fewer horses.

Feed is plentiful and livestock are in good condition. Animal disease control measures are effective.

Meat Inspection. Ante and post mortem meat inspection is being maintained in all slaughter houses. Sanitation is comparatively good in all but one establishment visited.

Dairy Inspection. Practically all milk is sterilized by heating from 195 to 200 degrees fahrenheit, in autoclaves. Milk plants are comparatively clean and sanitary. Sanitation on dairy farm is neglected but the cows are in good condition. Tuberculin testing is in progress.

Conclusions. Under the guidance of officers from the 80th Military Government Company the Veterinary service in this Prefecture appears to be functioning in an approved manner and rapidly approaching pre-war standards.

Animal Disease Report. The animal Disease Section, Ministry of Agriculture and forestry reported that no new outbreaks of disease occurred during the period 7 – 13 July 1946.

SECTION VI DENTAL AFFAIRS

No report.

SECTION VII SUPPLY

General

Pyrethrum emulsion and other supplies and equipment for the current insect and rodent control program are being shipped to prefectures, based on allocations made by the Welfare Ministry. Under Japanese law 5/6 of the cost of such supplies must be paid for from prefectural funds. Since the program was initiated on a national scale, prefectural officials seem to feel that they have no financial responsibility in the matter and have been reluctant to provide the required funds. Military Government officers should impress upon prefectural officials the necessity for providing funds to cover this program.

In order to expedite supply of essential medical supplies and equipment, the Welfare Ministry has in a number of instances, instituted production programs based on known needs. Production of hand dusters for spraying DDT dust was handled in this manner. These dusters are now available in considerable quantities at several manufacturers but are not being ordered by prefectures. One prefecture reported that Japanese produced dusters were not necessary since they were receiving a sufficient supply of U.S. produced equipment. This situation indicates the necessity for determining requirements at the prefectural level and submitting firm requests to the Welfare Ministry. Unless the Ministry receives orders from prefectures it is very difficult to justify requests for allocations of critical materials. Prefectural health officials should estimate their requirements of supplies and equipment for health control purposes at least six month in advance. Firm orders should then be placed with the Welfare Ministry for delivery as required. This office has instructed the Welfare Ministry to notify all prefectures of the need of submitting advance estimates of requirements. Military Government officers should coordinate this

subject with prefectural health officials to insure that appropriate estimates are submitted and that funds are made available to cover cost of supplies and equipment.

Production

A study has been made of the production schedules of the Instrument Control Company with respect to manufacture of microscopes with dark field attachments. Present production is partially negligible but an augmented program has been set up. Each prefecture should immediately advise the Welfare Ministry as to total requirements of microscopes with dark field attachment. This will permit the Ministry to make an intelligent estimate of total needs and schedule production accordingly.

Upon request of this Division, Economic and Scientific Section has investigated the availability of chemicals for manufacture of X-Ray fixing and developing powder. It was found that a critical shortage exists at the present time. The Japanese Photographic Sensitive Control Association has submitted a plan which it appears will provide a sufficient amount of these materials. Economic and Scientific Section will receive a bi-weekly report on the status of this program and render assistance when required.

Following is a resume of insecticide production to date:

Insecticide for killing adult fly - Total produce to date 35,000 kg Formula as follows:

Vegetable Oil	21%
Sodium Hydroxides	3.6%
Creosote Oil	54%
Cresol or Pine Oil	13%
Water	8.4%

Insecticide for killing adult fly and mosquito - Total produced to date 47,270 kg

Formula as follows:

Fatty Acid	10%
Potassium hydroxide	2%
Alcohol	2%
Phenol	6%
Light Oil	77%
Water	3%

Pyrethrum Emulsion - Total produced to date 187,830 gallons.

Approximately 40,000 kg of an insecticides formula as follows has been produced to date:

Creosol	25%
Orthodichlorbenzene	40%
Alcohol	15%
Kali - soap	20%

A total of 12,204 kg of phenothiazins (larvicide) has been produced to date. Production of rat poison is approximately 4,250 kg.

Distribution

In order to assure that no supply bottleneck would impede the processing of repatriates, a member of the Supply Division, accompanied by a representative of the Repatriation Relief Board, visited seven of the repatriation ports. A week was spent at Sasebo where supplies for a new laboratory were produced from National Hospitals and former Japanese Army and Navy supplies available in Saga Prefecture. A complete list of items needed at each port was obtained and follow-up is being made to assure rapid supply action by the Welfare Ministry.

Instructions relevant to the disposal of medical stores being received via repatriation shipping involve the release of such stores to the Chief of Quarantine Service at the respective ports who are responsible for forwarding

inventories to the Welfare Ministry. An equitable plan for distribution will then be issued and instructions for shipping furnished the port.

36,000 vials of typhus vaccine were released to the Welfare Ministry. 27,000 vials will be shipped to Hulutao, Manchuria, 3,600 vials to Hakata and 5,400 vials to Sasebo.

Reports from the Medicine Control Company indicate that during the month of June 7,784,540.06 yen of Japanese army and navy medicines were received and 8,194,252.69 yen worth distributed. This represents an increase of approximately 100% over transactions in May.

Narcotics

Lt. Stefan, Assistant Narcotic Control Officer, SCAP and a narcotic Inspector, Tokyo, explained new narcotic control regulations to the following groups: Tokyo Pharmacists' Associations, Pharmacists of Tachikawa ward, the ward heads of doctors' Associations; and the doctors of Meguro and Shinagawa wards. Interest of the registrants was evidenced by the many intelligent questions being asked.

Narcotic control officers, SCAP and Mr. Kamiya, Pharmacy Section, Ministry of Public Welfare, in a conference with Major Gordon, Commanding Officer, 29th Medical Depot, Yokohama, concluded arrangements for the release of Japanese military narcotics now in the depot, to the custody of approved wholesale houses through the Japanese Government. Necessary precautions are being taken for safe transfer of custody.

Sankyo Company, Ltd., Tokyo, one of the approved control wholesale houses for the custody of former Japanese military medicinal narcotics, completed the construction of a narcotic storage vault. Among the security features for the safe storage of narcotics provided by the Sankyo Company are guard attendants each time the vault is opened, a burglar alarm system and siren.

SECTION VIII LEGAL AFFAIRS

A series of conferences were held with The Ministry of Health to determine the adequacy of budgetary appropriation to carry on programs ordered by this section. Action to secure necessary funds are already under way, and a report will be made to this section within a week stating the results of the negotiations to secure more funds from the Finance Ministry.

SECTION IX DIRECTIVES TO THE IMPERIAL JAPANESE GOVERNMENT

AG 400 (13 Jul 46) PH, (SCAPIN 1713-A) Subj: Reserve Supplies Held for Relief Distribution.

AG 400 (13 Jul 46) PH, (SCAPIN 1721-A) Subj: Request for Shipment of Clothing and Daily Necessities to Japanese Seamen in South Regions.

SUPREME COMMANDER FOR THE ALLIED POWERS
PUBLIC HEALTH AND WELFARE SECTION**

WEEKLY BULLETIN

**For Period
14 July to 20 July
1946**

SECTION I WELFARE

Reserve Relief Supplies

A memorandum was issued to the Japanese Government (SCAPIN 1713-A), dated 13 July 1946, authorizing the distribution of approximately 50% of reported reserve relief supplies of former Japanese Army and Navy biscuits and canned foods in 32 prefectures experiencing the most serious food shortages. The authorized amounts consisted of 3,163,800 Kgs. of biscuits, and 5,952,100 Kgs. of canned foods. Distribution is to be made without charge to persons requiring supplementary public assistance at home or in public or private welfare institutions. Priority, as far as possible, is to be given to children, pregnant women, mothers of young children, and to the sick and the aged. The above amounts were in addition to some 796,000 Kgs of reserve foods previously authorized for distribution. Allocations were based partly on numbers of persons requiring assistance according to Japanese estimates, and in some cases on special reports of conditions in certain areas.

Representatives of this section visited two (2) Mitsui Warehouses in Tokyo to inspect some 297,293 Kgs of food concentrates and 15,251 liters of vitamin fruit juices from former Japanese air corps stocks, recently transferred from Saitama Prefecture. The stocks were well packed and in good condition. They were authorized for distribution to 161 various public and private welfare institutions in Tokyo-To, and to 58 in Kanagawa-Ken in proportion to the number needy persons in these institutions. Actual distribution was expected to begin the following week.

Public Assistance

A welfare representative of this section, attended a conference on the subject of the draft law on "Daily Life Security" at the invitation of the Central Association of Social Welfare in Tokyo. Present at the conference were some 40 persons including members of the Japanese Diet, officials of the Welfare Ministry, prominent educators, social workers and heads of public and private Social Welfare agencies. Free discussion took place concerning details of the proposed law. Emphasis was placed on the need for training qualified welfare workers, and the improvement of the Homen-iin (volunteer district welfare commissioner).

Social Work Education

A new section, called the "General Affairs Section" was established in the Social Affairs Bureau of the Welfare Ministry. One of its chief functions is the development of Social work education in Japan. For this purpose an experienced educator and settlement worker was assigned to the new section to devote full time to this problem. Tentative plans call for the development of a one-year course in Social work for Collage graduates, a three-year course for Middle-school graduates, and an in-service training program for persons presently engaged in welfare work.

A representative attended a city wide meeting of 1,000 Tokyo-To Homen-iin, and explored with them the concept of public assistance as a matter of right versus charity as a matter of "radiance from above".

The duties of the volunteer welfare workers was emphasized, and the duties and responsibilities of welfare clients in given factual information relative to their individual situations was pointed out.

Foreign Nationals

Instructions were issued to the Imperial Japanese Government, standardizing the supplementary ration made available to foreign nations and assuring its continuance.

The above was contained in Memorandum for the Imperial Japanese Government, SCAPIN 1069, "Ration for United Nations Nationals, Neutral Nationals and Stateless Persons".

The Japanese Government is required by 25 July 1946, to submit to General Headquarters, Supreme Commander for the Allied Powers, for approval, lists of foods supplementary to the regular Japanese ration which will cover the minimum nutritional requirements for the persons indicated in paragraph 2 of this directive. These lists will contain suitable food for a basically rice dietaries and non-rice dietaries. Upon approval The Imperial Japanese Government will assure General Headquarters, Supreme Commander for the Allied Powers, that the food will be made regularly available through normal rationing channels for purchase.

Nothing in this directive will be constructed to change the food ration for enemy nationals as contained in SCAPIN 459.

Commanding General, Eighth Army will require frequent inspections of foreign nationals supply points of the Japanese Government to assure that food of sufficient quantity and quality is regularly made available for purchase by foreign nationals.

Japanese officials are required to give advance warning when articles of food must be substituted in sufficient time to report the changes to General Headquarters, Supreme Commander for the Allied Powers.

Japanese officials are also required to give efficient and courteous treatment in their relations with foreign nationals.

The Commanding General, Eighth Army is requested to exercise surveillance in enforcing the terms of the directive and to take corrective action in cases deemed necessary.

Red Cross

The training course for the newly assigned Japanese Red Cross general field representatives was completed by the American Red Cross field representative. A schedule for chapter survey visits is to begin on 22 July, for the six northern prefectures including Hokkaido.

SECTION II ADMINISTRATION OF HOSPITALS

The Japanese Civilian Hospital Strength Report shows 3032 hospitals with a bed capacity of 209,612 beds, 108,592 of which are occupied. For the same period there were 240,910 out-patients treated.

SECTION III VETERINARY AFFAIRS

Reports from Japanese

Animal Disease Report. The Ministry of Agriculture and Forestry, Animal Disease Section, reported the following new outbreaks of disease during the period 14-20 July 1946.

<u>Prefectures</u>	<u>Disease</u>	<u>Cases</u>
Iwate	Swine Plague	2
Iwate	Swine Erysipelas	3
Kumamoto	Texas Fever	13
Wakayama	Anthrax	1 c
Miyagi	Anthrax	3 h
Hiroshima	Blackleg	1
Oita	Blackleg	1

Control measures are immunization and quarantine.

Monthly Animal Disease Report for June 1946. Following is a summary of the monthly animal disease report for June 1946, submitted by the Animal Disease Section, Ministry of Agriculture and Forestry.

<u>Disease</u>	<u>Number of Cases</u>
Brucellosis	16
Trichomoniasis	4
Texas Fever	13
Swine Plague	3
Swine Erysipelas	4
Rabies	2
Strangles	138
Equine infectious anemia	26
Pullorum (chick)	289

Monthly Meat Inspection Report May 1946. Following is a summary of the Meat Inspection Report for May 1946, submitted by Veterinary Hygiene Section, Sanitary Bureau, Ministry of Health and Social Affairs.

	<u>Cattle</u>	<u>Calves</u>	<u>Goats</u>	<u>Swine</u>	<u>Horses</u>
Number slaughtered	11,150	1979	88	4305	3100
Condemned					
Ante mortem	1	1	0	0	3
Post mortem					
Total	8	0	0	2	4
Partial	199	8	0	30	278
Viscera	2266	77	0	1472	442

SECTION IV DENTAL AFFAIRS

There were 272 dentists re-established in practice during the month ending 15 June.
The rehabilitation program is 59% completed to date.

SECTION V NURSING AFFAIRS

General

The Prefectural surveys are being continued and much interest has been shown among the doctors and nurses in various areas.

The final committee meeting of the Refresher course was held 18 July 1946 at Red Cross Hospital. Plans for the awarding of the certificates were made and the program discussed. All bills were paid out of fees collected for course. Plans have been made for the nurses to meet every month in order to discuss current nursing problems.

Plans have been made for the Demonstration School to have student affiliation in September in the Children and Women's Hospital (Aiiiku Hospital). This will be a great step forward in Nursing Education here. Affiliation with other institutions to include maternity work in progressing satisfactorily.

SECTION VI SUPPLY

General

Approval was given for the removal of 159 medicines from the controlled distribution list. This leaves a total of 178 items of medicines being distributed by the Central Medicine Control Co. The medicines removed from the control list are considered to be the least important of those distributed by the Control Company, and the supply exceeds the demand.

Production figures are being closely watched and it is planned to remove additional medicines from the control list as production approaches demand.

A total of 19 medicines were added to the controlled list. These included mainly sulfonamide preparations which had not been previously controlled due to the fact that production was practically negligible. Production is now being increased it will be necessary to apply controls in order to insure an equitable distribution.

Production

A representative visited all factories producing pyrethrum emulsion. Production was found to be excellent. A small shortage of 50 gallon drum cans exists but action has been taken to correct this situation. All factories have sufficient materials to produce the quantity planned. Large quantities have already been distributed throughout Japan. All prefectural military government teams have been requested to determine that this pyrethrum emulsion is being utilized correctly and as quickly as possible after receipt by prefectural health officials.

The production of spraying equipment is progressing slowly. Employees of the factory were victims of a dysentery epidemic for a period of ten (10) days which delayed the program. Spraying equipment will be distributed as rapidly as possible.

Current literature on the production of penicillin has been forwarded to the Headquarters and Headquarters detachment of all Military Government regions with instructions to encourage all manufactures interested in large scale production of penicillin.

Distribution

Reports from The Medicine Control Company indicate that during the month of June, 19,919,842.29 yen of controlled medicaments were purchased for distribution, and 31,871,126.56 yen were distributed through national trade channels.

Recent field visits have indicated the possibility that DDT products may have been issued to Japanese Agencies without the proper accounting being made. All issues of U.S. Army supplies to the Japanese are to be covered by forwarding signed receipts in duplicate to the Economic and Scientific Section, GHQ, SCAP.

Narcotics

On the morning of 19 July 1946, Tokyo-To narcotic officials reported registrations in Tokyo under the new narcotic regulations had reached approximately eight thousand. It is estimated this figure represents about 90 percent of the narcotic dealers in Metropolitan Tokyo eligible for registration. The remaining 10 percent are expected to register by the close of business on 20 July 1946.

At a round table discussion attended by Narcotic Control officers, officials of the Welfare Ministry Pharmacy Section, a Tokyo Narcotics Inspector, and several druggists and doctors, various problems connected with the newly enacted narcotic regulations were explained and discussed. The discussion was frank and free ranging in subject from the sometimes autocratic demeanor of Japanese officials to the sometimes cynical and do-nothing attitudes of Japanese doctors and druggists. The meeting ended in a feeling of unanimity, however, with promises of cooperation from all sides.

Taro Kamiwada, a former captain in the Japanese Navy, who in Korea consigned three tons of opium to Suyeo Yamashita, principal defendant in the Kondo Opium Case, has been arrested in Japan, according to an informal report from the Tokyo Procurator's Office. The arrest brings the total number of defendants in the Kondo opium case to nine.

Enactment of new Japanese narcotic regulation has made further consignment of seized Japanese medicinal narcotics or of other Japanese medicinal narcotics in the custody of Allied Forces to the Ninth Medical Depot, Kobe, or the Twenty-ninth Medical Depot, Yokohama, unnecessary. Instructions have been given to deliver such narcotics into the custody of narcotic officials in the Sanitary Bureau of the local prefectural government. The narcotics will ultimately be delivered to SCAP approved wholesale drug houses under instructions given to the prefectural narcotic officials by the Welfare Ministry.

SECTION VII PREVENTIVE MEDICINE

General

Cholera. A total of 100 cases of cholera or suspected cholera has been reported from Hiroshima Ken. There has been 33 deaths to date. Control measures are being carried out and are considered effective. The Acting Chief, Preventing Medicine Division is in Korea confering on cholera control measures there.

Japanese B encephalitis. Two new suspected cases of Japanese B encephalitis have been reported as of 20 July. One case reported from Muroto Etagaki which has had 2 previous cases with 1 death.

Dysentery. There is some increase in dysentery particularly in Ehime ken, 58 cases being reported to date.

Typhus. Typhus does not present a problem. Only occasional cases are now being reported.

Sanitary Engineering

Water Supply. Shortage of chlorine cylinders in the United States is delaying the shipment of chlorine for treatment of supplies in cities having large concentrations of occupational personnel. Japanese cities are being urged to return empty cylinders promptly to maintain possible production of chlorine in this country.

Insect and Rodent Control. Production of Japanese manufactured larvicides has increased rapidly in the past few weeks. These are now being distributed in fairly large quantities to all prefectures. Larvicidal control work has been delayed by lack of spraying equipment, but this is now being distributed from Japanese manufacturers. Both supplies and equipment are now available from U.S. Army stocks.

An effective insect control program has been reported in progress in Kochi, Shikoku, where the mosquito population is said to be the lowest in many years.

Port Quarantine

Cholera continues to be the disease of primary concern. Approximately 45 cases are being held in quarantine at the four repatriation ports of Hakata, Sasebo, Senzaki and Uruga. Some thousands of contacts are also in quarantine at these some ports. No cholera is known to exist at the other six repatriation centers.

Available evidence indicates cholera to be present very near to Hulatao. So far as known, the disease is not present in Hulatao itself.

The Port Quarantine Consultant visited the Senzaki and Hakata repatriation centers and found considerable improvement in the physical plant.

Laboratory Activities

The laboratory consultant accompanied by a representative from the Welfare Ministry conducted a preliminary inspection of biological laboratories in the Osaka, Kobe and Kyoto areas.

Many instances of poor sanitary conditions, unsterile technique, and wide differences in technical procedures were observed. The resultant material will be distributed to Military Government teams for future reference.

Preliminary tests on the smallpox vaccine stored in Osaka have been completed and have been found to be equivocal. Further assays will be done before the vaccine is either condemned or approved.

Medical Examiner System

On this same trip, conferences were held with Japanese Medical Examiners of the above 3 cities. Considerable differences, both in the actual operation and even more marked, in their system of keeping records were found. A standard basic plan is now being tested in the Tokyo areas and will be distributed if operational tests prove satisfactory.

Venereal Disease

Conferences were held with officials from the tactical forces, local military government, and Japanese prefectures of the aforementioned three places.

Favorable comment was voiced to the plan for holding regional VD control sessions with representatives of the above group. First such meeting is planned for September for the Tokyo area; subsequent sessions to cover the rest of Japan.

Attention was directed to SCAPIN 642, and investigations for specific instance of non-compliance with said directive are being carried out. Such reports should be forwarded to this office.

SECTION VIII DIRECTIVES TO THE IMPERIAL JAPANESE GOVERNMENT

AG 430 (19 Jul 46) PH, (SCAPIN-1069) Subj: Ration for United Nations' Nationals, Neutral Nationals and Stateless Persons.

AG 430 (19 Jul 46) PH, 19 July 1946, Subj: Information of General Application Pertaining to Memorandum, Number (SCAPIN-1069), 19 July 1946, Subj: "Ration for United Nations' Nationals, Neutral Nationals and Stateless Persons".

SECTION IX SUMMARY OF REPORT FROM KOREA FOR WEEK ENDING 29 JUNE 46

Public Welfare

A five day conference of Provincial Welfare Officers opened on 25 June and began a series of discussions mainly to orient Koreans in their duties. Execution of duties in connection with welfare is left to the Koreans counterparts with only supervision being exercised by military personnel. Excellent results were obtained in the form of suggestions by Korean delegates.

Flood and disaster relief were given priority consideration during the week. Mr. Paul Chavehadze ARC, and Lt. Frank Convey, Welfare Bureau and Captain Blumenthal, Bureau of Health, were appointed as committee for flood and disaster relief.

Kyongzang Namdo's was allocated 285 boxes of relief supplies donated by Hawaiian Council of Churches, Honolulu, Hawaii.

Statistics

Korean repatriates have used 161,000 tons of food effecting two million persons since October 1945. About 170,000 families have been re-housed and 180,000 families remain in need housing.

At present there are 74 temporary refugees shelters with capacity of 31,720 persons.

Hospital Administration

Establishment of a Health Center in Seoul, is in progress.

Veterinary Affairs

Conferences were held with leading educators concerning the location of the new proposed Veterinary College. Under consideration are Pusan, Suwon and Seoul.

Conferences were held with various Bureaus in the Public Health Department concerning the duties of Veterinarians in the field. It was decided that they will be responsible for the inspection and licensing of food establishments in addition to the inspection of foods of animal origin.

Letters were forwarded to all Provincial Governors explaining the duties and responsibilities of Regional Veterinarians. The American occupied zone has been divided into three regions with the three northern Provinces in region one, the three southwestern in region three.

Nursing Affairs

Survey and inspections continue in the provinces. Plans are underway to establish a branck of the Nursing Arts Institutes at Pusan in August where a one month concentrated program will be held for nurses from Chejudo, Cholla Namdo, Kyongsang Pukto, and Kyongzang Namdo.

A recruitment program for highly qualified nursing school candidates is being planned for July and August.

Bureau of Pharmaceutical Affairs

General. A list of supplies available for export to North of 38 degrees was compiled and submitted to NEB.

Manufacturing. Two manufacturing concerns were allocated Nitric Acid for the manufacture of bismuth subnitrate. An allocation of 36,000 yards of muslin from CAD supplies was released for the manufacture of adhesive tape. Two medicines advertised as being good for Cholera were tested and proven false. Further manufacture has been prohibited.

Distribution. Approximately 12 tons of emergency medical supplies were sent to Taegu for treatment of Cholera. Shipments of disinfectants for use in the cholera epidemic were made to Cholla Namdo and Cholla Pukto.

J.U. WEAVER,
Colonel, Medical Corps,
Deputy Chief, Public Health & Welfare Sections

2 incls:

#1 - Communicable Disease Report for week ending 6 July 1946.

#2 - Venereal Disease Report for week ending 29 June 1946.

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
PUBLIC HEALTH AND WELFARE SECTION**

WEEKLY BULLETIN

**For Period
21 July to 27 July
1946**

SECTION I WELFARE

General

Mr. Milton J. Evans, a recent arrival from the United States, joined the staff of the Welfare Division as Welfare Services officer.

Public Assistance

Returns from 38 prefectures concerning public assistance statistics for the month of June 1946 showed a total of 1,851,639 different persons on relief. Grants totaled 32,991,430 yen.

Relief Supplies

Distribution of some 372,000 Kgs. of former Japanese air corps food concentrates from Saitama Prefecture began in the Tokyo-To and Kanagawa-Ken areas. Representatives of the Welfare Division, PH&W, the Tokyo-To Welfare Department of relief supplies, and the Welfare Ministry visited the Asylum for destitute persons near Itabashi Station, Tokyo to observe the distribution and use being made. Approximately 1200 aged, sick persons, waifs, orphans, abandoned infants, and displaced persons were under the care of the asylum.

Hospital Care

A report was received from the Japanese Welfare Ministry on the number of in-patients on relief in 56 main hospitals in Tokyo Metropolitan area as of 31 May 1946. The report showed:

<u>Number and Type of Hospital</u>	<u>Number of Patients</u>	
	<u>Paying</u>	<u>Free</u>
10 Mental Hospital	1326	903
22 Sanatoria	2631	1626
11 General Hospitals	1312	295
4 Maternity Hospitals	52	20
9 Contagious Hospitals	<u>950</u>	<u>727</u>
Total 56 Hospitals	6271	3571

Red Cross

The appointment of Prince Tadatsugu Shimazu, president, Mr. Taiichi Hara and Mr. Asaji Akagi, vice presidents of the Japanese Red Cross society is of outstanding importance in the progress of the reorganization of the Society. It has placed the organization under the leadership of well qualified officers who have a thorough knowledge of Red Cross activities with authority to take immediate action on necessary changes in reorganization and the development of the services of the society.

SECTION II ADMINISTRATION OF HOSPITALS

The Japanese Civilians Hospital Strength Report shows 3039 hospitals with a bed capacity of 209,699 beds, 110,759 of which are occupied. For the same period there were 266,587 out-patients treated.

SECTION III VETERINARY AFFAIRS

Reports from Japanese

Distribution of Army Horses after Surrender. Following is a summary of a report submitted by the Japanese Demobilization Ministry concerning the distribution of Army horses after surrender.

Number sold to officers and men.	
(Average 300 yen).	13,572

Number sold to Ken horse associations. (Average 300yen) for resale to farmers (Average 1000 yen)	46,105
Number presented to institution without cost.	7,998
Total	67,675

Animal Disease Report. The Ministry of Agriculture and Forestry, Animal Disease Section, reported the following new outbreaks of disease during the period 21-27 July 1946.

<u>Prefecture</u>	<u>Disease</u>	<u>Cases</u>
Hokkaido	Texas Fever	6
Nagano	Swine Erysipelas	1

SECTION IV DENTAL AFFAIRS

The production of 76 controlled dental items during June amounted to 1,218,329 yen.

SECTION V NURSING AFFAIRS

The three months refresher course for the graduate nurses of the Tokyo Hospitals closed 25 July. Program and the awarding of the 83 certificates took place at the Central Red Cross Hospital.

A conference was held with Dr. Oata, Medical Journal Publisher and Dr. Hashimoto, St. Lukes International Medical Center, relative to publishing the Journal of Nursing. Concurrences obtained with C.I. & E. on material which was cleared and released for printing. Tuberculosis booklets cleared and will be printed by (The Journal of Medical Arts & Science).

SECTION VI LEGAL AFFAIRS

Mr. Miyayama of Ministry of Education reported that the Finance Ministry had allocated the sum of 253,872 yen to the Institute of Infectious Diseases to further the study of Japanese B encephalitis. An additional sum of 90,365 yen will be granted by the Education Ministry.

The Ministry of Communications reported that as a result of the capture of postal records on Poloa by Allied Military forces no record of the account of the Korean Self Governing Association (chosun Jin Jichi Kai) have been found. Efforts to located the account are continuing.

SECTION VII SUPPLY

General

A meeting was held with representatives of the Welfare Finance and Home Ministries and the Medicine Control Company concerning the high cost of medicines. SCAP was represented by Economic and Scientific and Public Health and Welfare Sections.

It was learned that request for increase in prices originate with the manufacturers and are screened by the Medicine Control Company, prior to submission to the Welfare Ministry. Recommendations of the Welfare Ministry are forwarded to the Finance Ministry for final action.

Increase in cost of medicines was reported to be due to rising cost of raw materials and labor, with the latter being the most important factor. All Ministries are of the opinion that present prices were at a level consistent with operating cost and reasonable profits. In order that SCAP may be able to make a further study of the problem, request was made for report of cost analysis on 25 important medicines.

The question of prices for returned Japanese Army and Navy supplies was also discussed. It was learned that these prices are essentially the same as is being charged for new production. The Welfare Ministry had advocated lower prices but apparently was over-ruled by the Ministry of Commerce and Industry and Finance. The latter ministry advanced the theory that the Japanese people were actually benefiting by high prices since the total proceeds of the sale of these supplies are deposited to the credit of the national welfare fund. The Welfare Ministry pointed out that even though prices were reduced to retailers, physicians and hospitals, it is quite likely that physicians would charge the same price for these medicines as is being charged for corresponding items from new productions.

The three interested ministries were instructed to make an immediate study of all phases of this subject with a view to formulating a plan which would permit expeditious disposal of these supplies at reasonable prices.

An additional meeting will be called by interested SCAP sections as soon as the ministries have completed the preliminary studies.

Production

Distribution of pyrethrum emulsion has been made in quantities specified below. The symbol X10 indicates emulsion for dilution with 10 parts of water and X30 indicates emulsion requiring dilution with 30 parts of water.

<u>Prefecture</u>	<u>Dilution</u>	<u>Quantity (gallons)</u>

Distribution will continue as production is accomplished.

Distribution

Visit to Tokyo-To Medicine Distributing Company warehouses revealed a fair amount of returned Japanese Army and Navy medicaments awaiting distribution. The company officials stated that distribution would be made as soon as reports from the Doctor's Association were received. It was pointed out to the officials that these supplies should be distributed to retailers, and not to wait for the reports from the Doctors' Association. The officials promised to get these items to the retailers in the immedi-future.

Shipment of 150,000 cc of cholera vaccine was made by air to Peiping, China, for repatriation use at Hulutao.

Narcotics

Arrangements for the release of Japanese military medicinal narcotics from the custody of United States forces to SCAP approved Japanese wholesale houses were concluded and six truck loads of the narcotics were moved from the 29th Medical Depot, Yokohama, to the vaults of wholesale drug houses in Tokyo. The narcotics were moved under a Japanese armed police guard, and hand-to-hand receipt for the narcotics was maintained through SCAP narcotic control officers and representatives of the Japanese Government.

Approximately 10,000 narcotic dealers in Tokyo-To submitted narcotic inventories and registered between 19 June and 19 July 1946.

SECTION VIII PREVENTIVE MEDICINE

General

The acting division chief returned from a trip to Korea during which cholera control procedures were observed and communicable disease control activities in general were discussed.

Conferences were held with the director of the Public Health and Welfare Department, Korea, relative to present and anticipated personnel problems.

Cholera

An inspection was made by members of the Division of the area in Yokosuka, Kanagawa prefecture, where an outbreak of cholera had been reported. Advice and assistance were given relative to institution and enforcement of adequate quarantine and control measures.

Sanitary Engineering

Water Supply. With the higher summer demand, some cities are reporting a shortage of water in certain areas. This situation is not unusual in Japan, but is aggravated this year in the bombed cities due to high leakage from distribution systems. Greater effort is necessary in these cities to repair or discontinue leaking services and small mains.

Plans are being made by the Health Ministry with the cooperation of the Japanese Water Works Association for the improvement of treatment plant operation and water laboratory technique. Courses are to be given for the education of re-education of operators and technicians and it is expected that potable water standards will be revised. A plan is being worked out for licensing operators and technicians successfully completing the course which will increase their rating and salary.

Sanitation of Repatriation Ports

The Ministry of Health and Social Affairs has appointed Mr. Gonda and Mr. Tanaka to investigate and improve sanitation in repatriation ports. Mr. Gonda will supervise all waste disposal and insect and rodent control, and Mr. Tanaka will supervise the water supplies and washing facilities.

Insect and Rodent Control. Conferences have been held with Sanitary Officers from Shikoku, Tokyo-Kanagawa and Utsunomiya. Effectiveness of the control program apparently varies greatly in different areas, according to the interest and activity of responsible officials. Several prefectures have reported expansion of the program from larger to smaller cities. Some prefectures have an active poster and pamphlet campaign, and at least one is organizing a lecture series for education of the general public.

Scripts have been reviewed for a newsreel on sanitation and insect control and a film on mosquitoes and mosquito control.

Port Quarantine

Accumulated evidence indicates that cholera is present in ports of Manchuria and that ships coming from Manchurian ports should be carefully examined for possible presence of cholera aboard. The same applies to vessels coming from Korea and China.

Eight additional Medical officers specially trained in port quarantines procedures arrived in Japan from the United States for quarantine duty. This will in part, make up for the loss of experienced quarantine officers being returned to the United States.

Nutrition Film

Advice was given by the Nutrition Consultant to representative of the Japanese Recording and Films Producers on a series of educational films to be shown to the Japanese Public on use and nutritive value in the dietary of dried wild leaves.

Nutrition Surveys

Partial data were received from the Japanese Government on the May Nutrition survey. A summary of the results are submitted in the following table.

Data on Nutrition Surveys, Japan
December 1945, February 1946 and May 1946

Average caloric consumption, per capita per day in Japanese cities.

Number examined in Tokyo, December 1945, 16020, May 1946, 13097; Four cities, February 1946 10401, May 1946, 14,426; Prefectures February 1946, 37,836, May 34,758.

SECTION IX DIRECTIVES TO THE IMPERIAL JAPANESE GOVERNMENT

AG 710 (21 Jul 46) PH, (SCAPIN-1074) Subj: Prevention of Introduction of Cholera into Japan.

AG 710 (21 Jul 46) PH, 21 July 1946, Subject: Information of General Application Pertaining to Directive Number (SCAPIN-1074) File AG 710 (21 Jul 46) PH, General Headquarters, Supreme Commander for the Allied Powers, dated 21 July 1946, subject: "Prevention of Introduction of Cholera into Japan".

SECTION X SUMMARY OF REPORT FROM KOREA FOR WEEK ENDING 6 JULY 46

Public Welfare

Problem of financing the return of Japanese refugees from North of 38° parallel as well as those of the U.S. zone appears nearing a definite solution. The Department of Commerce has requested a cost analysis from Welfare Branch as a basis for levying charges against the Japanese Government to cover the expense of repatriation.

General Relief

Report was made that Solicitation on streets for "flood sufferers" had degenerated in some cases to merely a racket. The matter is being investigated by Provincial Welfare Office.

Training Section

Preparations were made for in-service training course for public assistance workers. The course will be held at Civil Service Training Academy.

Welfare Supply

Relief supplies donated by the Church Committee for Relief in Asia and valued at over \$126,000 arrived aboard the S S Carl E Todd.

Veterinary Affairs

At a conference of representatives of Agricultural Middle Schools it was decided to delete the veterinary curricula.

A tuberculosis conference was held and it was decided that an eradication program will be pursued.

Veterinary licensure examination will be held in October.

Six cases of rabies have been reported.

Nursing Affairs

Inspection tours of various hospitals continue and conditions are improving.

Expansion of the Maternity program at City Hospitals is now being planned.

Conferences have been held with Red Cross representatives regarding development of a Red Cross nursing service.

Preventive Medicine

There is an apparent increasing incidence of cholera in Southern Korea. Some of the cases reported have just been confirmed. In areas where laboratory facilities are not available all cases are carried as cholera. Reporting is late from some areas due to Communication difficulties.

The total number of cases of cholera for this period was 1,862 with 1,122 deaths. Many of the cases have occurred earlier but were reported during this period.

Reports from all provinces indicate that effective control measures have been established.

Sanitation

An emergency program has been worked out providing for sanitary supplies to be kept in strategic areas and sanitary precautions that are to be followed.

This bureau is to procure all non-medical supplies for shipment to cholera areas.

Supplies for civilian insect and rodent control are to be turned into tactical supply depots from which the Military Government units can make the necessary requisitions.

Port Quarantine

The Commanding General, USA MGIC has been given complete responsibility for all quarantine measures affecting civilians. The director of Public Health & Welfare, has been designated as his representative. Cholera control is to have first priority on supply, transportation and personal.

Nutrition

Composition and nutritive values of "dried Do-Ra-Si" (dried root of *Platy Condon glacum*, Nakai) was determined. 296 Calories/100 grams.

J.U. WEAVER
Colonel, Medical Corps,
Deputy Chief, Public Health & Welfare Section

2 Incls;

#1 – Communicable Disease Report for week ending 13 July 1946.

#2 – Venereal Disease Report for week ending 6 July 1946.

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
PUBLIC HEALTH AND WELFARE SECTION**

WEEKLY BULLETIN

**For Period
26 July to 3 August
1946**

SECTION I
WELFARE

Public Assistance

A conference was held with Mr. Kawai, Welfare Minister and Mr. Kasai, Director of Social Affairs Bureau, Welfare Ministry, to discuss the status of the new over-all welfare legislation, now in committee discussion by the Japanese Diet.

The Welfare Minister expressed the appreciation of his staff for the counsel of this office in promulgating a liberal and democratic approach to the drafting of the welfare legislation now before the Japanese Diet. Mr. Kawai expressed the belief that "This legislation, would be the first to eliminate the charity stigma and in its place, institute the spirit of guaranteeing the social life of the people, by the Japanese Government, as a government duty".

In discussing family relief allotments it was pointed out to the Welfare Minister that no set family relief grants could be established due to varying costs of supplies in different Prefectures and further that by directive (SCAPIN-775, dated 27 Feb 1946) no maximum is to be placed on the amount of relief furnished to prevent hardship. The five basic principles for determining a family's relief needs were outlined to the Welfare Minister, namely; (1) Prevailing price levels, (2) Size of family, (3) Age of family member and activity, (4) Assets, (5) Health.

Distribution of Relief Goods from Reserve Supplies. The Welfare Ministry reported on the distribution of Relief Goods (former Japanese Army and Navy stocks) for the month of June 1946. The report reflected a total of 655,031 persons (639,817 persons in families, 15,214 single persons) in 46 Prefectures were recipients of the following relief goods:

Biscuits	208,337,494 Kgs.
Canned Goods	344,011,320 Kgs.
Clothing	307,443 items.

Emergency Assistance. Approval was given to release 1630 Kgs. of canned food and 2256 Kgs. of biscuits, formerly Japanese Army and Navy stocks, for victims of fire disasters in Niigata Prefecture. Approximately 2500 persons were affected and were in need of this emergency relief as requested through the Welfare Section, Eighth Army Military Government.

Licensed Agencies for Relief in Asia. Miss Rhoads and Reverend McKillop, representatives of LARA (Licensed Agency for Relief in Asia) and a representative from this office departed for Korea to assist in formulating procedures covering the importation and distribution of LARA supplies in the Korea area.

Tokyo-To Welfare Institutions. A representative of this office section visited three of eight so called "Healthy Houses" belonging to Tokyo-To. These tuberculosis preventorium, located in Shizuoka Prefecture, have capacity for about 800 juveniles at a time, but due to the current food problems, are only operating at one-third capacity. Until the shortage of food stuffs and medical supplies cases, these installations will operate on a part-time basis only.

Prefectural Investigating Teams. A second report has been filed by above teams, with GHQ, SCAP in reference to irregular distribution of reserve Army - Navy food stocks held for relief purposes. The prefecture concerned was Okayama. Disciplinary action will be taken by the Home and Welfare Ministry.

July 20 1946 instructions were issued (Sha-hatsu No. 559) to all Governors of prefectures regarding procedure in future distribution of "Reserve Supplies Held for Relief." File AG 400 (13 July 46) PH (SCAPIN-1713-A). These instructions charge the Governor to distribute impartially and without cost to only the needy and helpless. Governors were cautioned to prevent this food from falling into illegal channels. The governor was further advised to work closely with Military Government officials in this program. The Inspection Teams will continue to audit the prefectural welfare program.

Foreign Nationals. 25 July 1946 the Imperial Japanese Government replied to Memorandum for Imperial Japanese Government subject "Ration for United Nations' Nationals, Neutral Nationals and Stateless Persons" file AG 400 (19 July 46) PH, (SCAPIN-1069) submitting the following dietaries:

Basically rice dietaries:

<u>Items</u>	<u>Quantity</u>	<u>Remarks</u>
Rice	4.4 Kg.	In case rice is unavailable 4.4 Kg. of flour or 22 Kg. of Irish potatoes or sweet potatoes will be furnished.
Misc.	100 Momme	Can be substituted by 1 lb. of canned food according to choice of rationee.
Shoyu	2 go	
Edible oil	1 go	
Sugar	40 Momme	
Canned Fish	5 pounds	

Basically non-rice dietaries:

<u>Items</u>	<u>Quantity</u>	<u>Remarks</u>
Sugar	1.5 Kin	
Butter	2 lbs.	
Edible Oil	3 go	
Canned foods	7 lbs.	
Lean Beef	200 Momme	
Four Wheat	500 Momme	
Irish or Sweet Potatoes	3 Kan	If potatoes are unavailable 600 Momme of flour will be substituted.

Reply was made 30 July 1946 accepting the Japanese plan with the following exceptions:

Paragraph 2 above last item, to read, "If potatoes are unavailable, 500 Momme of flour will be substituted and addition thereto 100 grams of leafy vegetables will be substituted."

Nations enumerated in surveillance instructions, in regard to SCAPIN-1019, were repeated to the Japanese Government with Taiwan residents in Japan included providing these residents are certified Chinese Nationals by the Chinese Consular Affairs Division of the Chinese Mission.

The Japanese Government will be required to furnish the Foreign Nationals at the place from which they now receive their ration.

Effective date shall be 15 August 1946.

The supplementary ration to be in addition to the full Japanese ration and both to be furnished regularly.

SECTION II ADMINISTRATION OF HOSPITALS

The Japanese Civilian Hospital Strength Report shows 3049 hospitals with a bed capacity of 208,517 beds, 108,977 of which are occupied. For the same period there were 272,386 out-patients treated.

SECTION III VETERINARY AFFAIRS

Reports from Japanese

Animal Disease Report. The Ministry of Agriculture and Forestry, Animal Disease Section, reported the following new outbreaks of disease during the period 28 July to 3 August 1946.

<u>Prefecture</u>	<u>Disease</u>	<u>Cases</u>
Chiba	Swine Erysipelas	2
Gunma	Swine Erysipelas	2
Hokkaido	Texas fever	1

SECTION IV DENTAL AFFAIRS

The fourth general meeting of the Council on Dental Education met 29 July 1946. The curriculum as recommended by the sub-committee was unanimously approved by the council. Progress reports were rendered by other sub-committees.

All legislation proposed by the Council has been approved by the Bureau of Legislation and is expected to be passed by the Diet so as to be effective 1 September 1946. Appropriations for effecting Council proceedings and National Board affairs has been approved by the Finance Ministry.

SECTION V NURSING AFFAIRS

Reports from Japanese

The institute of Public Health has prepared and presented a program for the training of Medical personal which includes 50 Graduate Nurses. This course is to begin in September and will be held in Tokyo. Full plans as to curriculum, length of course for different groups and how candidates are selected are on file. This is pertaining to the Ordinance of Educational Function of the Institutes of Public Health.

Conference was held with Japanese Nurse in Osaka, (she has been the Editor of the Nurses Association Magazine "The Nurse") re: the continuation of the magazine. Back copies of the magazine were requested and one copy has been sent to C.I. & E., (Press & Publication Section) for information re: status of magazine. Another conference was held re: the official status of the magazine and the possibility of an editorial staff. As the National Nurses' Association is not officially functioning we cannot appoint Board members for the magazine but will plan to have the magazine start functioning with the understanding that as soon as the Association can meet an editorial board will be named and the magazine will become the official organ of the Association,

Two more Prefectural Surveys were completed this week. This completes ten prefectures in Japan.

The Demonstration School "clean up" program continues. Material for sheets and pillow cases has been obtained and they are being made. Uniforms will be made next. Space for nursery has been set aside in hospital and is being cleaned up. Central supply room has been designated and is being cleaned up. Cooperation seems much better. Staff meetings continue.

SECTION VI LEGAL AFFAIRS

No report.

SECTION VII SUPPLY

General

It is apparent that health officials, at the prefectural level, are not familiar with supply programs that have been developed for disease control purposes. In spite of the fact that materials are available in prefectures and have been for sometime, this office still receives reports that the Japanese Government is unable to supply required items. Upon investigation, it is usually found that sizeable quantities of vaccines and insecticides are on hand without the knowledge of local health officials.

Since a supply system must be developed at the prefectural level, which can handle this problem in an efficient and expeditious manner, it is particularly important that military government personnel take steps to acquaint prefectural officials with present supply policies and procedures. Action must be taken to effectively utilize supplies and equipment now being furnished. As soon as possible these activities must be extended to include estimates of future requirements.

In addition to insect and rodent control material there is available at the present time sufficient vaccine and sera to meet all requirements. As soon as arrangements are completed at the national level, DDT products will be

turned over directly to the Japanese Government in sufficient quantities to cover disease control program. These products will be distributed to prefectures for use as directed by prefectural health officials, under supervision of military government personnel.

Production

A check sheet was submitted to ESS outlining the contemplated import program of DDT products and requesting that necessary action be taken to provide sufficient suitable containers to package these products after they have been refined by the Japanese Government.

A meeting was held with representatives of the Welfare Ministry to determine cholera vaccine requirements and method of distribution. It was decided to maintain 10,000,000 cc as reserve stock until 15 September 1946. Requirements during the interim period are to be furnished by designated laboratories for specific prefectures. The quantity needed will depend upon incidence of cholera since vaccination will be conducted in only the danger areas.

Production and distribution of pyrethrum emulsion to all prefectures in Japan is continuing according to schedule.

Continued efforts are being made to increase production of essential medicines. The principal limiting factor at present is the fact that all controlled items must be sold to the Central Medicine Control Company. The Central Medicine Control Company reimburses the manufacturers by means of frozen checks which results in the manufacturers limiting production of controlled items insofar as possible. The manufacturers are producing non-controlled items in order that they can effect sale to several wholesalers thereby receiving cash for all sales.

Distribution

Shipment of 8,000,000 cc's of Japanese produced cholera vaccine was made to Korea. This shipment completes 10,000,000 cc allocation requested by Korea.

Estimates are being prepared by the Medical Treatment Section, Quarantine Relief Board, Welfare Ministry, on requirements of cholera and typhus vaccine for the repatriation program for Ryukuans from 15 August to 31 December 1946. The ports involved are: Kagoshima, Kure, and Sasebo. An estimated amount of 322,770 cc of cholera and typhus vaccine will be required to complete the inoculation program for these repatriates.

Several items were removed from the controlled list of sanitary goods. Sanitary goods include rubber products for hospital use, some types of dressings and miscellaneous items of hospital supplies. Surgical dressings are not included in this category as these items are handled by the Sanitary Materials Control Company.

Narcotics

A report received from the Welfare Ministry shows approximately 1,500 narcotic addicts in Japan although five prefectures including Tokyo-To have not yet reported. Investigations directed by SCAP-narcotic control officers indicate the report does not present a true total since many prostitutes are narcotic addicts, and have not been reported to the Japanese Government by doctors who charge exorbitant prices in supplying narcotics for this illicit traffic.

Another six truckloads of former Japanese military medicinal narcotics were transferred, valued at approximately 3,500,000 yen represent about 80 percent will be transferred during the week beginning 5 August 1946.

A reorganization prepared by the Welfare Ministry will establish a Narcotic Section in the Medical Supply Bureau to regulate and control narcotics in Japan through similar organizations at prefectural levels. The Narcotic Section will replace the Narcotic Division, Pharmacy Section, Bureau of Hygiene in the Japanese Government. The prepared reorganization will improve effective narcotic control in Japan.

SECTION VIII PREVENTIVE MEDICINE

General

Reemployment of government officials who had been discharged because of incompetence and/or non-cooperation with occupation officials. Dr. Katsumata is going to investigate this and wishes to know the names of any officials dismissed in the future.

Conference was held with Dr. Bamba, Chief of Communicable Disease Section, Bureau of Public Health, Hokkaido. We enumerated difficulties in the control of communicable diseases such as poor transportation and communication and the lack of personal in the Public Health Bureau.

A trip was made to the Uruga repatriation center in company with Miss Strahler, representative of the International Red Cross Committee at Geneva. An inspection was made of the Mikawa Maru, a Japanese hospital ship which was in port at the time of visit.

Cholera

2 additional cases of cholera developed in the isolated contacts in the Kanagawa outbreak. 4000 stool examinations were done in the Otsu area, Kanagawa prefecture, and one carrier was found.

Cases of cholera continue to occur in Southern Honshu and Kyushu. 25 Cases were reported from Yamaguchi prefecture, 22 of which were Koreans seeking illegal entry. Hiroshima which had reported 101 cases up to 22 July 1946, has reported no further cases during the past week.

Sanitation

The Consultant on Mosquito Abatement, Commission on Virus and Rickettsial Diseases has made a partial investigation of the insect control program in Japan and has submitted a preliminary report. Pertinent observations are quoted for the information of Public Health officers in the field.

“The control of mosquitoes, which is principally a function of local governments, should be considered to be (as a phase of sanitation) one of the functions of the public health authorities, expect that in the control of rice field mosquitoes it may be considered to be a function of the Agriculture authorities.

The mosquito control problem can be divided into three main sections.

Control of the container breeding species, principally Aedes albopictus (the dengue vector), and Aedes togoi.

Control of the foul water breeding species, principally Culex pipiens pallens, and Armigeres obturbans.

Control of the rice field breeding species, principally Culex tritaeniorhynchus (suspected to be the principal vector of Japanese B encephalitis), and Anopheles hyrcanus siensis, the malaria vector.

“The best progress in mosquito control in Japan in 1946 has been made with relation to the container breeding species. In many cities and villages most of the concrete water containers, used for holding water for fire protection, have been turned over or otherwise eliminated as mosquito breeders. However, the greater part of this work had been done at the order of our military personnel prior to the organization of Japanese civilian mosquito control. In the opinion of competent Japanese observers, this work has noticeably reduced the numbers of mosquitoes in certain Japanese cities so far in 1946, as compared with previous years.

“Personal investigation of Japanese civilian insect and rodent control teams warrants the following tentative conclusions:

“On the average, the results so far accomplished are rather meager.

“In limited areas where teams have been well organized and supervised fairly good mosquito control is being obtained, when the basic defects in Japanese sanitation are considered. The most obvious improvement is in the reduction of the container breeding group of mosquitoes.

“In most instances these teams perform their work inadequately, perfunctorily and with little understanding of principles or methods. Especially, they do not thoroughly understand that effective mosquito abatement of the container breeding and foul water breeding types of mosquitoes requires the most careful, painstaking and detailed inspection to locate all mosquito breeding places, any of which are partially concealed and often difficult to find.

“In some areas practically no attempt has been made to organize these teams, and they are not yet functioning.

“In some areas the Japanese are given no assistance with equipment and supplies from our military government, and they are required to depend entirely upon Japanese equipment and supplies, regardless of their adequacy. In other areas apparently little attempt has been made to require the Japanese to utilize their own equipment and supplies, and their program depends, very largely upon the use of American military equipment and supplies.

“The numerous Japanese cemeteries are sources of many mosquitoes of the container breeding group (paragraph 4 previous). In some areas good control has been obtained under direction of Malaria Control

Detachments by requiring the cemetary caretakers to fill all the water-containing holes in the monuments with coarse sand or fine gravel. This practice should be made compulsory throughout Japan.

“Until an adequate solution for the complex problem of excreta disposal in Japan has been worked out, it appears to be most probable that the only measure of control of mosquito breeding in the Japanese privies (benjos) and other sanitary containers of liquid fecal matter which can be expected to be successful is the heavy application of 5% DDT residual spray to the surfaces immediately adjacent to the containers (such as sidewalls and ceilings or cover). Under this treatment the banjo or cesspool becomes a death trap for the mosquitoes breeding in foul water”.

Port Quarantine

The port quarantine consultant is on an inspection tour of the repatriation centers in South Honshu and Kyushu.

The VO27 with 2506 passengers from Hulutao put in at Maijma but cholera was found to be aboard and it was ordered to proceed to Sasebo.

The illegal entry of Koreans continues to be a major problem in the prevention of the introduction of cholera into Japan. 22 stowaway Koreans with cholera were apprehended at Shimonoseki, Yamaguchi prefecture.

The eight officers trained in port quarantine who arrived last week have been inspecting facilities at the repatriation center at Uraga.

Due to outbreak of cholera among repatriates arriving from Hulutao, all repatriation from Hulutao has been stopped until the situation warrants resumption.

SECTION IX DIRECTIVES TO THE IMPERIAL JAPANESE GOVERNMENT

AG 430 (30 Jul 46) PH, (SCAPIN-1094) Subj: Ration for United Nations' Nationals, Neutral Nationals and Stateless Persons.

SECTION X SUMMARY OF REPORT FROM KOREA FOR WEEK ENDING 13 JULY 1946

Welfare

General. A telegram announcing the availability of relief supplies donated by Koreans in Japan for the benefit of flood sufferers in Korea was received through XXIV Corps Headquarters.

Bureau of Housing. Pending authority for the establishment of a National Housing Authority to alleviate critical housing conditions, the adoption of adobe construction has been propesd and is under consideration. A translation in Korean of a U.S. Government pamphlet on adobe construction has been completed. To insure successful adaptation of this form of building material to Korea climate and resources, the construction of a demonstration house is contemplated. If the experimental structure meets the test satisfactorily, permission for the publication and dissemination of the pamphlet will be requested.

Bureau of Welfare Supply. A shipment of relief supplies, including the Hawaiian consignment, was dispatched to Cholla Pukto by L.S.T.

Shoes purchased from the Material Control Corparation were sorted and those considered unusable were sold for scrap at 200 yen per case. The net return for the sale was 80,800 yen.

Bureau of Welfare Institutions and Agencies. Mr. F. Eugene Keneflick, American Red Cross Civilian Relief Representative has completed a preliminary survey of institutions for dependent children in Seoul. The survey revealed that one-third of the eighteen children's institutions maintain approved standards. Mr. Keneflick will assist the Seoul Welfare Office in the formulation of measures to raise the standards of those in need of corrective action.

Korean National Red Cross. The approval of the articles of incorporation for the organization of the Korean National Red Cross is expected during the coming week. It is planned to appoint various committees at meetings scheduled to be held in the near future.

Hospital Administration

Korean Physicians in government service will be allowed to engage in the private practice of their profession, provided practice is carried out after regular duty hours.

Supply

Distribution. The third allocation of CAD Medical Supplies was distributed to four provinces. Shipments approximated 130 tons and were valued at 11,000,000 yen.

Medical supplies from the Japanese Relief Society were allocated to Seoul city relief.

Manufacturing. An allocation of gasoline was made to production for manufacture of insecticide.

The Chosen Manufacturing Supply Company was ordered to manufacture 720 tons of alcohol for medicinal use.

Nursing Affairs

On July 10, 1946, the third public health nurses course was opened. Eleven students were present. Plans are being discussed re: proposal to include the school of Nursing at Seoul University Hospital under University Administrative Control rather than the Department of Public Health. Inspection trips are being continued.

Preventive Medicine

There is a slight improvement in the cholera situation. The rigid travel restrictions, the efforts of the personnel, and the educational program are showing results.

There has been a total of 1,009 new cases and 858 new deaths reported in this period. This is a decrease of 853 cases and 264 deaths from the previous week.

A full report on other communicable diseases has been submitted from all provinces.

Sanitation

A supply of calcium hypochlorite ampules and Halazone tablets was procured and a distribution plan is in effect.

Progress is being made on plan for plumbing and waste disposal in the schools. A revision of the ordinance providing for the licensing of eating establishments is being prepared. The Department of Health will only issue certificates of sanitation. Included in the ordinance will be the duties and responsibilities of the sanitation section.

An effort has been made to coordinate the procurement of water treatment chemicals. It was recommended that all requisitions be made by Economic Section, Department of Commerce. The Bureau of Sanitation would act in an advisory capacity.

J. U. WEAVER
Colonel, Medical Corps,
Deputy Chief, Public Health & Welfare Section

2 Incls:

- #2 – Venereal Disease Report for week ending 13 July 1946.

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
PUBLIC HEALTH AND WELFARE SECTION**

WEEKLY BULLETIN

**For Period
4 August to 10 August
1946**

SECTION I WELFARE

Public Assistance

Complete statistics from 46 prefectures covering public assistance granted for the month of June 1946, gives following information:

Number of different persons assisted	2,194,336
Total amount of relief grants	41,231,612 yen

Tokyo-To Yoikuin (Poor House).

Representatives of this section with a representative of the Welfare Ministry made a re-inspection of this Tokyo-To institution to further observe general conditions which were alleged, through news reporting channels, to place the institution in the category of "a place of horror". This institution, near Itabashi Station. The buildings are temporary quarters which were procured after the permanent installation was destroyed by fire. There are 1588 inmates being cared for at this time (516 adult females, 763 adult males, 37 juvenile females and 272 juvenile males) of this total 275 are hospital patients. Those hospitalized were in a serious condition when received by the institution (injuries, illness, malnutrition etc.) which has progressed to the point that very few are capable of recovery. All other inmates appeared to be receiving as high a standard of care as the shortage of food stuffs, institutional supplies and equipment would permit. To raise the standard of care, specific recommendations were made to the Welfare Ministry through Mr. Saito, Japanese Liaison with the Welfare Ministry. These recommendations were relative to supplying the shortage aforementioned. The institution reflected a creditable attempt, on the part of the institutional officials, to provide a maximum of care and protection with the minimum of supplies and equipment, which are at their disposal.

Foreign Nationals

Additional nationals were added to those enumerated in SCAPIN-1094 paragraph 2b. They are:

Cuba	Egypt	Salvadol
Philippines	Brazil	New Zealand
Mexico	British Commonwealth of Nations	

The above are contained in SCAPIN-1112 (7 Aug 46) PH.

Red Cross

Survey visits to 4 prefectures by Japanese Red Cross general field representatives inaugurated field service to chapters from National headquarters. In accordance with the new plan of organization of the society three administrators of departments have been employed. This leaves only 2 vacancies in administrative personnel to staff the 10 departments of National headquarters.

SECTION II ADMINISTRATION OF HOSPITALS

The Japanese Civilian Hospital Strength Report shows 3068 hospitals with a bed capacity of 208,582 beds, 110,927 of which are occupied. For the same period there were 267,657 out-patients treated.

On 6 August 1946, the Council of Standards for Hospitals met in the building of the Japanese Medical Association, Tokyo. This meeting, the second formal conference of the committee, was devoted entirely to the presentation of a plan, prepared by the Hospital Administration Division of Public Health and Welfare Section, to facilitate the formation of the general committee and sub-committees and to direct them in considering specific factors.

On 9 August 1946, the Council on Medical Education convened in this headquarters. Consideration was given to various requests from Senmon Gakko schools to exempt their graduates for the one year's intern ship which will be required of all medical graduates henceforth. The committee concluded that no exceptions would be made.

SECTION III VETERINARY AFFAIRS

General

Two sausage factories located in Tokyo engaged in the manufacture of balogna in cellophane caeing, were surveyed during the week. Manufacturing methods parallel those in the United States and ingredients are similar

except for the use of horse meat. All meat is obtained from slaughter houses maintaining ante and post mortem inspection but the sausage is not manufactured under the supervision of an inspector.

Cooking and smoking temperatures are adequate for the production of a safe product.

Sanitation compares favorably with similar establishments located in the United States.

Reports from Japanese

Animal Disease Report. The Ministry of Agriculture and Forestry, Animal Disease Section, reported the following new outbreaks of disease during the period 4-10 August 1946.

<u>Prefecture</u>	<u>Disease</u>	<u>Cases</u>
Chiba	Swine Erysipelas	1
Shizuoka	Swine Erysipelas	1
Iwate	Swine Erysipelas	2
	Swine Plague	5
	Texas Fever	2
	Swine Plague	3
Tokyo	Swine Plague	3
Fukuoka	Anthrax	20

SECTION IV DENTAL AFFAIRS

No report.

SECTION V NURSING AFFAIRS

Supplies for the Nurses Training Demonstration School are being obtained. Sheets and pillow cases have been made and delivered, coal estimates were made for the running of the school with a reply expected in a few days. This coal is to be used for operating central kitchen, demonstration autoclaves, operating room twice a week and heating water. Samples for uniforms have been secured, one of which will be selected for the school. The diet of the nurses has improved and there is now a better variety of food. The progress of the nursery is moving rapidly and all are satisfied with plans. Lesson plans and translations for teaching nursery procedures have been prepared.

The chief of the Army Nurse Corps (WD) is observing nursing affairs in Japan.

SECTION VI LEGAL AFFAIRS

No report.

SECTION VII SUPPLY

General

Numerous requests are being received for small quantities of supplies and equipment required for specific purposes in the various prefectures. The majority of these are received directly and the necessity therefore has not been substantiated by the responsible officials. It is very difficult to take final action on requests of that nature. In most instances it is necessary to refer them to the Welfare Ministry who most in turn secure further information from the prefecture.

From a study of these requests, it is apparent that prefectural officials are not assuming any supply responsibility. The Welfare Ministry is now organized to take positive action on supply matters at the national level and it is essential that some such organization be established in prefectures under supervision of the health officer. Supply requests of a medical nature should be channeled to this agency for initial action. In the event that the supplies are considered necessary and cannot be furnished from local sources, a definite request must then be forwarded to the Welfare Ministry for further action.

A recent instance of failure to take proper supply action was a request received at this headquarters for a small supply of x-ray film. This film was to be used in the physical examinations of Japanese nationals employed by the occupation forces. At the time the request was received over 17,000 sq. meters of x-ray film were available in commercial warehouses in Tokyo and information and procedures for securing x-ray films had been supplied all prefectural health officers. The only action necessary was to place an order at one of the designated film manufacturers.

Military Government officers should make every effort to develop a supply organization at the prefectural level, which will be able to advise and assist hospitals, physicians, dentists and veterinarians on supply matters.

Production

Investigation of the Yamonouchi Pharmaceutical Company was made. The Yamonouchi Company is producing a sizeable quantity of sulonamides and concerted efforts will be made to assist this company to increase production.

Necessary action was taken to obtain 2,000 bales of cotton, now being imported from the United States, for production of absorbent cotton and bandaged. Additionally 1,000,000 square yards of gauze material will be obtained.

Distribution

In response to a request from Peiping Group Headquarters four 200-bed Japanese field hospitals are being prepared for delivery to Hulutao via repatriation shipping. It is expected that delivery can be made by 21 August. Procurement, packing, making and shipment will be handled by the Welfare Ministry under the supervision of SCAP.

Narcotics

The first violation of the new Japanese narcotic regulations since the close of the registration period 19 July 1946 was uncovered by SCAP. Narcotic Control officers and a Japanese narcotic inspector in an investigation conducted in Tokyo and Saitama Prefectures. Sales made by non-registered persons resulted in the seizure of 500 ampules of morphine hydrochloride and the arrest of two Japanese. The investigation is continuing and additional arrests are expected.

In the first of a series of visits to every prefecture in Japan for the purpose of educating prefectural narcotic officials in their duties, Urawa, Saitama Prefecture, was visited by a SCAP Narcotic Control officer and a Japanese narcotic inspector. Talks were given on the proper and punctual preparation of reports, investigative methods and the necessity of absolute honesty and integrity in narcotic enforcement.

One of the outstanding results of new narcotic regulations which require an inventory be submitted at the time of dealer registration is the receipt of large quantities of medicinal narcotics by SCAP-approved wholesale drug houses from prefectural authorities. These narcotics might have been diverted to illicit traffic had it not been necessary to declare all stocks to Japanese narcotic officials and to account for all narcotics so declared.

SECTION IX PREVENTIVE MEDICINE

General

The chiefs of the Public Health Departments of all prefectures are now in conference. This is the first general meeting since the beginning of hostilities.

Cholera

Cholera continues to be potentially a major problem. During the past week 59 new cases have been reported 9 of which were reported from prefectures where cholera has not previously been reported. These prefectures are Osaka, Aichi, and Toyama. The cases in Aichi and Toyama developed in persons who had contact with repatriates from the port of Maizuru.

Many of the cases reported from Kyushu and Southern Honshu are among Koreans who entered the country illegally.

Dysentery, Typhoid and paratyphoid.

The incident of dysentery continues to use and has approached the 1945 rate. There has been a slight rise in the incidence of typhoid during the past week but it is still below the 1945 rate.

Nutrition Surveys

The third set of nutrition surveys of the Japanese people in cities and rural areas is being conducted during the month of August.

The progress of the surveys is Osaka, Shiza, and Kyota Prefectures was observed.

Average Consumption of food from the May nutritional survey in Tokyo and the four cities of Nagoya, Osaka, Kure and Fukuoka are given in the following table:

Average consumption of foods or Groups of Foods, in Grams Per Capita Per Diem, in Tokyo, Five Cities
(Tokyo, Nagoya, Osaka, Kure, Fukuoka) Four Cities excluding Tokyo and 18 Prefectures as found in
Nutrition surveys by the Imperial Japanese Government in May 1946

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
PUBLIC HEALTH AND WELFARE SECTION**

WEEKLY BULLETIN

**For Period
11 August to 17 August
1946**

SECTION I WELAFARE

Public Welfare Legislation

On 12 August 1946 the Japanese sub-committee on welfare unanimously approved the Welfare Legislation (Daily Life Security Act) which was officially referred to the Japanese Diet (House of Representatives) on Saturday, 17 August 1946. This proposed legislation marks a new era in governmental approach to the welfare of its people and is exemplified by Article I which reads; "The object of this law is to promote social welfare by means of the government taking whole responsibility in furnishing necessary assistance to persons who are in need, equally without discrimination or preference."

Public Assistance

This office was officially advised on 12 August 1946 that the Welfare Ministry had directed the Chief of Section of Relief, Tokyo-To, to take necessary action to meet the needs at Tokyo-To Yoikuin (Poor House) as recommended after investigation of the situation on 10 August 1946.

Field Trip to Korea

An 8-day visit to Seoul and vicinity and to Taejon, capital of the Province of Chungchong Namdo was completed by representatives of Licensed Agencies for Relief in Asia (LARA), and a representative of this section. A number of hospitals, orphanages, refugee aid stations, displaced persons camps and other welfare projects were visited. Conferences were held with Military Government and Red Cross officials on various aspects of welfare. Arrangements were agreed upon for the initiation of shipments not to exceed 500 tons of relief supplies per month from LARA agencies for distribution in Korea in accordance with current policies established by correspondence with War Department, SCAP and Korean authorities. These are subject to formal acceptance by the agencies concerned. Emphasis was given to the need for medical supplies and equipment, and juvenile foods. Relief for flood sufferers and displaced persons seemed to be the major problems.

Child Welfare

The report submitted by the Social Affairs Bureau of the Japanese Welfare Ministry covered a roundup of homeless and destitute juvenile and adults in Tokyo-To for the period 22 June to 5 July 1946. A total of 870 persons were given some care, including 180 females. Most of them were found in Shitaya-Ku and Shiba-Ku and taken to temporary protection facilities. As of 5 July, 663 were still receiving temporary care, 158 had run away, 43 were returned to their families or sent to institutions, and 6 died. Of the total, 357 were children under 18 years of age who were taken to the Tokyo-To orphanage. 43 of these ran away and 26 sent to their homes or to institutions.

Red Cross

Special emphasis is now being placed on the reorganization of Japanese Junior Red Cross in the elementary and secondary schools.

In conferences held with representatives of the Ministry of Education and the Education division C. I. & E. discussions were made as to the program of Junior Red Cross and its related school interest.

SECTION II ADMINISTRATION OF HOSPITALS

The Japanese Civilian Hospitals Strength Report shows 3072 hospitals with a bed capacity of 207,985 beds, 112,225 of which are occupied. For the same period there were 281,731 out-patients treated.

SECTION III VETERINARY AFFAIRS

Reports from Japanese

Animal Disease Report. The ministry of Agriculture and Forestry, Animal Disease Section, reported the following new outbreaks of disease during the period 11-17 August 1946.

<u>Prefecture</u>	<u>Disease</u>	<u>Cases</u>
Gunma	Swine Erysipelas	1
Nagasaki	Blackleg	1

Monthly Animal Disease Report for July 1946. Following is a summary of the monthly animal disease report for July 1946, submitted by the Animal Disease Section, Ministry of Agriculture and Forestry.

<u>Disease</u>	<u>Number of Cases</u>
Brucellosis	7
Trichomoniasis	5
Texas Fever	9
Swine Plague	8
Swine Erysipelas	12
Blackleg	3
Anthrax	24
Strangles	58
Equine Infectious Anemia	29
Equine Infectious Abortion	13

SECTION IV DENTAL AFFAIRS

The Tokyo Dental College has purchased buildings in Chiba prefecture for conversion into a pre-dental school.

The price paid was 1,700,000 yen, which bore the approval of the Ministry of Education.

Classes will start in September. This is epoch making in the field of dental education in Japan for it marks the first practical step in raising the standards to university level.

SECTION V NURSING AFFAIRS

Demonstration School

A meeting was held at the hospital concerning the uniform for student nurses. It was agreed that they would all wear white until such time as blue material is available. By having white it will make it possible for the student to continue wearing the uniform after graduation. A uniform pattern was selected and the tailor will make 4 uniforms for each student nurse omitting the fourth year students (20) who are finishing Public Health training.

Plans have been made for student affiliation in Mental Nursing at Matsuzawa Hospital of Tokyo. The director, Dr. Muramatsu, said it will be necessary to receive final consent from Tokyo-To Health Office. Conditions at the hospital seemed satisfactory for the affiliation and the director was interested in the program.

The affiliation in Pediatrics with the Aiku Hospital will begin on 9 September 1946, at which time 20 students will attend a 6 week course.

SECTION VI SUPPLY

Production

Substantial quantities of pyrethrum emulsion were produced and distributed during the week ending 16 August 1946. Large quantities have now been distributed to all prefectures. Production and distribution of Japanese sprayers is being accomplished as rapidly as possible. In those prefectures where a shortage of spraying equipment exists, improvised sprayers should be utilized insofar as possible since pyrethrum emulsion will lose much of its strength within 45 days after manufacture. All pyrethrum emulsion produced during 1946 must be utilized during 1945 due to the fact that the product will be rendered noneffective prior to the summer season of 1947.

Distribution

In response to a request from Peiping Headquarters, ten carloads of Japanese hospital supplies have been dispatched from Tokyo enroute to Hulutao, Manchuria, where they will be used in caring for Japanese repatriates. In addition 8,000 pounds of vaccines were shipped by air to Peiping for use in initial inoculations of repatriates in the vicinity of Harbin, Manchuria.

Reports from the Medicine Control Company, indicate that the purchases of controlled medicine during the month of July 1946 amounted to 15,619,666.48 yen and the sales amounted to 20,113,114.05 yen. The July sales were below those of June and explanation has been requested from the Medicine Control Company. The returned army and navy medical supplies transactions for July were as follows: Purchases amounted to 3,341,426.53 yen and the sales were 3,517,291.08 yen. The July activities were also below those of June. The explanation given by the Medicine Control Company as to the reason for the decrease was the non receipt of complete prefectural returns, also that much of the purchases and sales were on low-priced items.

Narcotics

An investigation directed by Narcotic Control Officers resulted in the arrest of the Chinese and the seizure of a half-pound of morphine which the Chinese attempted to sell for 50,000 yen. A quantity of saccharin, with a black-market value aggregating 200,000 yen was also seized in the course of the investigation and will be turned over to the Tokyo Metropolitan Welfare Bureau for proper distribution.

The final shipment of returned Japanese Military narcotics consisting of four and one-half truckloads, was made to wholesale houses from the 29th Medical Dept, Yokohama.

SECTION VII PREVENTIVE MEDICINE

General

108 new cases of Cholera has been reported and involves four new areas where it has not been previously reported. The rate of spread, however, is slow and tends to indicate that control measure are being applied and are effective. The prefectures from each of which several cases were reported during the week are: Toyama, Osaka, Aichi, Yamaguchi, Fukuoka and Kumamoto. Six cases were also reported in the city of Tokyo, the first since the middle of May.

The only communicable disease showing a sharp increase in dysentery, the rate curve of which is very similar to that of the corresponding period of the preceding year, but which now is threatening to run even more sharply.

Sanitary Engineering

Water Supplies. With the receipt of U.S. chlorine, the Commanding General, Eighth Army directed the Tokyo-To Government to chlorinate all water supplies to U.S. Army standards at the earliest practicable date. Eighth Army has requested data from all cities having concentrations of occupational personnel to determine suitability of the civilian supply for use of U.S. personnel, and to establish a priority list for distribution of U.S. chlorine to supplement the Japanese Supply.

Shortage of water has been reported in several cities. This emphasizes the need for expediting repair of distribution systems to lower present excessive rates of leakage.

Sewage Treatment. Because of the unsatisfactory operation of trickling filters at the Tokyo Mikawashima Plant, experiments are being conducted at the Government institute of Public Health to determine best range of stone sizes and graduation in the bed. A discussion was held on Western practice in stone filter design.

Insect and Rodent Control. Active measures for the control of insects and rodents were observed in all the cities visited on the recent field trip to Kyusyu. The control program was reported as progressing satisfactorily in all the larger cities in the Region. Due to the shortage of equipment and supplies, the major effort until the first of August was on sanitary cleanup, cleaning of drains, and establishment of collection system for night soil and garbage. These are now considered generally satisfactory. Both U.S. and Japanese larvicides have now been received, and are being used regularly by the sanitary teams with the limited spraying equipment available. Efforts are being made to obtain additional equipment from both U.S. Army and Japanese sources.

Port Quarantine

Approximately 350 persons are apprehended each day while attempting to enter Japan illegally. This includes Japanese entering Hokkaido from Sakhalin and the Kuriles as well as Koreans attempting to enter the country principally by way of the Japan Sea coast of Chugoku and Kyushu regions. It is not known what percentage of the total number of illegal immigrants is represented by the above figure. A naval patrol has been established in the waters between Japan and Korea in an attempt to reduce this illicit traffic, with its attendant importation of crime and disease, particularly cholera at the present time.

The repatriation of Senzaki has been ordered closed for normal repatriation until it can be cleared of cholera cases and other Koreans awaiting deportation.

The Japanese Government has been directed to establish a center at Hakodate for the assembling and processing of persons apprehended while attempting to enter Hokkaido illegally.

Nutrition Bureau

Data was compiled on the nutrition surveys conducted in the Prefectures in May 1946. The following table relates to the changes in body weight in the original 19 Prefectures surveyed in February 1946.

Average deviation of the body weights of Japanese of all ages in 19 Prefectures surrounding the 5 cities surveyed for the Japanese standard weights for a given height and age in percentage of the number of individuals examined. The percentages refer to the number of individuals who varied more than 10 per cent in May 1946.

City and Prefectures	Number	Less Percent	Weight Kg	No Change Percent	Gain Percent	Weight Kg
Tokyo City						
Ibaraki	4220	17.1	4.9	73.9	9.0	5.6

#1 – Communicable Disease Report for week ending 3 August 1946.

#2 – Venereal Disease Report for week ending 27 July 1946.

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
PUBLIC HEALTH AND WELFARE SECTION**

WEEKLY BULLETIN

**For Period
18 August to 24 August
1946**

SECTION I WELFARE

Public Assistance

The "Daily Life Security legislation passed the Japanese House of Representatives and is now before the House of Peers where a special committee has begun hearings on the bill. Action on the legislation by the House of Peers is expected within the coming week. The legislation implements SCAP policy for a government program of adequate assistance to all persons in need without discrimination or preference.

Relief Commodities (supplemental)

One million two hundred thousand candy bars were turned over gratis to the Welfare Ministry by the Agriculture Ministry for Relief distribution. These candy bars are a portion of the six million bars recently purchased by the Agriculture Ministry from U. S. Occupation Forces. The bars allocated to the Welfare Ministry are to be distributed for relief purposes in the following areas and quantities:

Tokyo	88,640 bars
Kanagawa	48,620 bars
Osaka	404,725 bars
Kyoto	164,345 bars
Hyogo	187,575 bars
Aichi	306,095 bars

Waifs in Tokyo-To

The Welfare Ministry was notified to officially direct the Tokyo-To Welfare officials to take immediate steps to remedy the increasing number of waifs who are on the streets, in railroad stations, in parks and around billets and office buildings of the Occupation Forces. Officials of Social Works Bureau, Tokyo-To, as a result, are concentrating on waif problem and have enlisted the cooperation of local police. The present plan of controlling waifs has shown a marked improvement. Recommendations for bettering the functioning of the waif intake system and directing that waif intake stations be placed under cover, as soon as possible, were made to Tokyo-To Welfare officials.

Homeless Persons

A report was received from Commanding General, Eighth Army, concerning the activities of the Japanese in behalf of homeless adults and juveniles in need of protection and care. The report included findings in 37 prefectures by Military Government teams. A supplementary report was expected concerning the remaining 9 prefectures. In some areas definite attempts to provide for such persons were being made but for the most part the program directed by the Welfare Ministry in April had not progressed beyond the planning stage. Lack of facilities, food supplies, and trained personal hampered progress. In some instance the Military Government teams have taken steps to effect greater effort on the part of the Japanese. Certain details of the report were discussed with an official of the Welfare Ministry with a view towards stimulating action and follow-up work between the central and prefectural welfare offices.

Social Work Education

The first meeting of the newly organized Committee on Social Work Education was held on 19 August 1946 at the office of the Central Association of Social Workers in Tokyo. The Committee hopes to work out the details of tentative plans drawn up by representatives of the Social Affairs Bureau of the Welfare Ministry and the Association, for a one-year professional course and a 3-weeks regional in-service training course in social work starting in October 1946.

SECTION II ADMINISTRATION OF HOSPITALS

The Japanese Civilian Hospital Strength Report shows 3079 hospitals with a bed capacity of 208,401 beds, 112,581 of which are occupied. For the same period there were 286,852 out-patients treated.

SECTION III VETERINARY AFFAIRS

Reports from Japanese

Animal Disease Report. The Ministry of Agriculture and Forestry, Animal Disease Section, reported the following new outbreaks of disease during the period 18-24 August 1946.

<u>Prefecture</u>	<u>Disease</u>	<u>Cases</u>
Fukuoka	Anthrax	15
Fukushima	Swine Plague	10
Nagano	Swine Erysipelas	1
Hokkaido	Texas Fever	2
Shimane	Blackleg	2

SECTION IV
DENTAL AFFAIRS

The production of dental materials for July amounted to 2,738,921 yen as compared with 1,218,329 yen for the preceding month.

SECTION V NURSING AFFAIRS

Demonstration School

Arrangements have been made with Dr. Muramatsu, Doctor of Matsuzawa Psychiatric Hospital, for the student Affiliation in Psychiatry, beginning in November 1946.

Refresher Course Nurses met at Communication Hospital for their first monthly meeting. Hospital problems were discussed. Sixty attended the meeting.

Press conference was attended by this Division with Colonel Blanch field (WD) at Radio Tokyo.

SECTION VI SUPPLY

Distribution

A second shipment of 8,000 pounds of vaccines was made by air to Peiping for repatriation purposes. Shipment of the four 200 bed hospitals for Hulutao was completed with the dispatch of eight additional carloads of supplies to the port.

An additional release of typhus vaccine amounting to 16,920 vials was made to the Welfare Ministry for use by the repatriation ports as follows:

Uraga	2,520
Senzaki	3,600
Hakata	5,400
Sasebo	5,400

A cost analysis of 25 important controlled medicines is being made to determine cause for the tremendous increase in prices within the past year. This factor is apparently retarding the distribution of medicines to the ultimate consumer.

A meeting was held with representatives from the Tokyo-To Health Officials, Control companies, distribution agencies, Medical Association, and drug Retailers' Association to discuss distribution problems, and determine means of improving the existing system. It has been requested that a plan be formulated by the Medical Associations to be presented to the Welfare Ministry on improving the present system of allocation and distribution from the National to Prefectural levels.

Narcotics

A Narcotic Council officer supervised the return of 700 cases of Japanese military narcotics from the Eighth Army to the Japanese. These narcotics will be distributed for the legitimate medical needs of the Japanese people. The above completes the transfer of Japanese military narcotics to approved wholesale forms.

An investigation in Tokyo which had resulted last week in the arrest of two people and seizure of half a pound of morphine was continued in Kobe and an additional person, acting as middleman, was arrested there. One or two further arrests are expected.

A survey is being conducted of narcotic records of the Dai Nippon Pharmaceutical Company, Ltd.

Production

Production report submitted by the Welfare Ministry for the month of July indicates an upward trend in production of medicines, biologicals, sanitary materials and dental materials. Production of X-ray film continues to exceed demand.

The production of pyrethrum emulsion and phenothiazine for the mosquito and fly control program continues to be excellent. Production of sprayers is expected to reach 10,000 by the end of August. Approximately 4500 sprayers have been distributed to prefectures. The following figures indicate distribution of sprayers and phenothiazine:

<u>Prefecture</u>	<u>Semi-Automatic Sprayers</u>	<u>Knapsack Type</u>	<u>Phenothiasine Powder</u>
Hokkaido	50	48	1000
Aomori	150	48	200
Iwate		48	125
Miyagi		48	275
Akita	10	48	150
Yamagata	50	48	175
Fukushima	20	48	225
Ibaraki	10	48	150
Tochigi	10	48	225
Gunma	10	48	250
Saitama	50	48	350
Chiba	20	48	375
Tokyo			3800
Kanagawa	20	98	1450
Yamanashi		48	100

Ehime	10	48	375
Kochi	10	48	175
Fukuoka	40	100	1000
Saga	50	120	150
Nagasaki	30	120	1000
Kumamoto	20	48	375
Oita	10	48	375
Miyazaki	10	48	250
Kagoshima	10	48	300

SECTION VII LEGAL AFFAIRS

A Formosan was apprehended and imprisoned for violation of the Narcotic Laws. The case will be presented to the Provost Court.

A conference was held regarding the Public Works Program designed to relieve the Japanese unemployment problem, through an extensive program of government spending in building necessary public works.

The Minister of Welfare will arrange application for necessary funds for public works projects from the Economic Stabilization Board.

SECTION VIII PREVENTIVE MEDICINE

General

Members of this Division previewed a fifteen minute film on mosquito control produced by Toei Studios for the Ministry of Education under technical supervision of the Welfare Ministry and general guidance of the Civil Information and Education Section. The film was found to be excellent and it is contemplated that it will receive nation-wide distribution to commercial cinema theaters.

A block association meeting in Tokyo, was attended and a talk was given to the members on enteric diseases, epidemic typhus and environmental sanitation, particularly as it affects and may be affected by the individual and the householder.

Cholera

Cholera has been reported for the first time in the following prefectures: Ishikawa, Tottori, and Wakayama. Cases were also reported in Shimane, where the last and only case had been reported on 3 August.

The history of previous cholera outbreaks in Japan points to the period of late August and most of September as being that of highest incidence and greatest danger. Accordingly, the strictest vigilance must be maintained, now and for several weeks to come.

Dysentery

The incidence of dysentery continues to rise and now exceeds that for the corresponding period of 1945.

Sanitary Engineering

Water supplies. City water departments have been slow in taking advantage of the Japanese Public Works Program for the relief of unemployment. The Japanese Water Works Association has been urged to have the cities submit proposals for repair of water systems immediately, giving an outline at the proposed project, estimate of labor required, estimated cost of labor and materials, and justification for the project.

Sanitary Engineering Education

A report of activities of the Council for the Advancement of Sanitary Engineering was made at a recent meeting. Plans have been completed for the one year courses in Plumbing and Heating, starting in September, and Water Supply and Sewage starting in January. The latter course is for recent middle school graduates entering the employment of municipal water and sewage departments. The expanded sanitary engineering course in the Imperial University will start with the next school year in April. Standards will be recommended for sanitary engineering courses in other universities. A study will be made of sanitary and plumbing codes for the purpose of establishing certain standard regulations for all cities.

Port Quarantine

The conduct of quarantine procedures relative to the Repatriation Program continues to be the major work of the Port Quarantine Section. At the present time, the center of quarantine activity is the island of Kyushu. There, the two repatriation ports of Sasebo and Hakata are handling a heavy traffic of repatriates, many of whom must be held in quarantine because of the presence, in their numbers, of cholera. The processing of cholera ships had previously been confined to Sasebo but, in the past week, Hakata has been directed to prepare to handle cholera. To add to the medical facilities there, a hospital ship has been dispatched to Hakata.

Sasebo continues to function as the out-processing port of Koreans apprehended for illegal entry. In this connection it has been reported that the smugglers have been using an island shuttle system to land the Koreans who continue to be taken into custody in quantity.

The Port of Senzaki remains closed to repatriation shipping pending the eradication of cholera there.

Nutrition Surveys

The conduct of nutrition surveys in Sapporo and the surrounding areas was observed from August 20-25 by the Nutrition Consultant, Public Health and Welfare Section and a representative of the Japanese Ministry of Health.

A nutritional survey report covering data on physical examinations of the additional four cities (Sapporo, Sendai, Kanazawa and Matsuyama) was submitted.

Nutrition Service

To familiarize the Japanese people with the correct preparation of recently issued United States food, experiments are being conducted on those food items by the Japanese Nutritionists under the supervision of Public Health and Welfare, and C. I. & E. Sections, SCAP, at the Central Health Center, Tokyo. Radio broadcasts and magazine publications by the Japanese Nutritionists will convey this information to the public.

SECTION IX
DIRRECTIVES TO THE IMPERIAL JAPANESE GOVERNMENT

AG 430 (20 Aug 46) PH, (SCAPIN-1143) Subj: Ration for United Nation's Nationals, Neutral Nationals and Stateless Persons.

J. U. WEAVER
Colonel, Medical Corps,
Deputy Chief, Public Health & Welfare Section.

2 Incls:

- #1 - Communicable Disease Report for week ending 10 August 1946.
- #2 - Venereal Disease Report for week ending 3 August 1946.

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
PUBLIC HEALTH AND WELFARE SECTION**

WEEKLY BULLETIN

**For Period
25 August to 31 August
1946**

SECTION I WELFARE

Public Assistance

A report on Public Assistance for the month of July 1946, covering 36 prefectures, was received from the Welfare Ministry. The complete report will be forwarded upon receipt of the Public Assistance reports from the 10 remaining prefectures. The report for 36 prefectures is as follows:

Number individual persons assisted	1,715,773
Total grants	336,094,218 yen
Receipts (refunds on relief grants)	<u>89,311 yen</u>
Net grants	36,004,907 yen

Waifs in Tokyo-To

Temporary waif Intake Stations in each ward (36 wards in all) have been established to expedite the handling of waifs and plans are underway to establish one or more permanent Intake Stations, to adequately handle waifs during the winter months.

The Welfare Bureau, Tokyo-To "pick-up report" on vagrants for the period 29 July 1946 to 28 August 1946 is as follows: Number of vagrants picked up - 787 (Adults - 420; children - 367). The waifs, after emergency care at Intake Station (hair cut, bath, medical aid, cholera inoculation, clean clothes) are sent to Tokyo-To Yoikuen for further case study. They are then placed in orphanages and every attempt is being made to effect adoption or child placement. Increased interest by the Welfare Ministry and Tokyo-To Welfare Bureau, in the field of vagrant care, is in evidence and improvements are noted.

Tokyo-To Yoikuin (Poor House)

The Chief of Protection, Tokyo-To Yoikuin, stated that the institution is now receiving increased amounts of supplemental food, soap, powdered and canned milk. This is in compliance with recommendations transmitted to the Welfare Ministry on 9 August 1946.

The staff of this institution has been very cooperative in an effort to raise the standards of institutional care. This is particularly commendable considering the inadequate supplies and equipment that have been available.

Relief Commodities (supplemental)

The 1,200,000 candy bars that were to be distributed by the Material Section, Welfare Ministry (reference PH&W Weekly Bulletin, 18 August to 24 August 1946) as supplemental relief were withheld due to irregularities of relief figures.

A new Schedule of Distribution was drawn up and the candy is now being distributed in conformity with the following corrected distribution plan:

Tokyo	199,000 bars
Kanagawa	201,000 bars
Osaka	396,000 bars
Aichi	100,000 bars
Kyoto	174,000 bars
Hyogo	130,000 bars

Red Cross

Miss Lisette M. Anderson, special representative Civilian Relief, American Red Cross, has been assigned to the Red Cross Liaison Section, Welfare Division, to assist in reorganization of chapters of the Japanese Red Cross and development of the Japanese Junior Red Cross.

SECTION II ADMINISTRATION OF HOSPITALS

The Japanese Civilian Hospital Strength Report shows 3092 hospitals with a bed capacity of 209,978 beds, 120,259 of which are occupied. For the same period, 295,668 out-patients were treated.

SECTION III VETERINARY AFFAIRS

General

A field trip was made to Tokyo College of Agriculture and Forestry for the purpose of surveying the Veterinary School. Middle School graduates are admitted and the course is three years in length. The instruction is largely didactic and there is a shortage of books and instructional equipment.

Reports from Japanese

Animal Disease Report. The Ministry of Agriculture and Forestry, Animal Disease Section, reported the following new outbreaks of disease during the period 25-31 August 1946.

<u>Prefecture</u>	<u>Disease</u>	<u>Cases</u>
Fukuoka	Anthrax	1
Oita	Anthrax	2

SECTION IV DENTAL AFFAIRS

Income for the fiscal year ending 31 March 1946 from all sources for the eight dental schools in Japan amounted to 7,741,893.63 yen. Expenditures for a like period amounted to 546,972.36 yen.

The cost per year per student is 960 yen.

SECTION V NURSING AFFAIRS

Lessons on Nursery Procedures are being translated into Japanese for the Nurses. Permission has been requested from the Florida State Department of Health to use parts of the Manual on Midwifery for reprinting in Japan. Several chapters of the Manual are being translated from English into Japanese, pending approval for reprinting.

SECTION VI SUPPLY

Distribution

An additional shipment of hospital supplies and 50,000 pounds of DDT insecticide powder was dispatched to Hulutao, Manchuria thus satisfying all current medical requirements for processing and caring for repatriates at that port.

Visit to three (3) National Hospitals in the Tokyo area revealed that excess medical supplies had not been entirely removed and turned over to prefectural officials for distribution. Action is being taken by both the Welfare Ministry and local officials to expedite the removal of excess supplies from these hospitals.

Production

All pyrethrum emulsion produced for the mosquito and fly control program has been distributed throughout Japan. Approximately 1,811,000 gallons were produced and distributed.

A study of Japanese requirements for absorbent cotton, gauze and bandages has been made and quantities necessary to maintain minimum health standards for 1 year have been determined. Approximately 45,000 bales of cotton will be required to accomplish necessary production.

A large quantity of antu (rat poison) has been produced and distribution has started. All major ports and large cities will be given priority on distribution now in progress. Approximately 4,100,000 3-gram packages will be produced and distributed by 25 September. This product will not be sold on the open market. Retail drug dealers' associations in each prefecture will allot quantities to neighborhood associations and the neighborhood associations will collect payment from individuals. Continuous production and distribution will be effected.

Narcotics

Eight defendants were sentenced to penal servitude for periods ranging from 4 months to 5 years in Tokyo District Court on 26 August 1946 for violation of the Japanese narcotic laws. Procurators are being admonished to demand prison sentences rather than fines for violators, since only by the imposition of heavy penalties, which act as deterrents, will Japanese officials be able to properly enforce the narcotic laws.

Since the completion of registration of all narcotic dealers in July 1946, a survey of stocks of narcotic retailers, practitioners and hospitals has been undertaken by Japanese officials as directed by SCAP Narcotic Central Officers. Any unopened packages of narcotics in excess of a six to eight month's supply for the particular dealer are being reported to the Minister of Welfare who will direct that such excess stocks be sold, as provided for

in the new narcotic regulations, to a local wholesale dealer. As a result of this action narcotic stocks will be accumulated in wholesale houses and will be made available to all regularly licensed dealers.

Inspections of narcotic stocks of two national hospitals by SCAP Narcotic Control Officers and Japanese prefectural narcotic inspectors revealed these hospitals were holding a ten to twelve year supply of some narcotic items. Action was taken to rectify this situation, as outlined in the preceding paragraph, minimizing loss of narcotics through some form of diversion or by fire or theft.

SECTION VII PREVENTIVE MEDICINE

Cholera

There appears to be some diminution in the incidence of cholera in the country as a whole, although sporadic cases are still being reported from new areas where it had not previously been reported.

A summary report was received from the Welfare Ministry, giving the following data for cholera, as of 23 August 1946.

Cases (confirmed)	739
Suspects	92
Carriers	196

Anthrax

A report was received of 42 cases of human anthrax, with six deaths, in Fukuoka-Ken. These were in addition to a number of cases in animals. All cases occurred during the month of July and no cases have been reported since 30 July 1946.

Insect and Rodent Control

A final conference was held with Mr. Harold F. Gray, Consultant to the Secretary of War and at present in Japan with the Virus Commission on mosquito abatement. Mr. Gray presented his final report and recommendations to members of this Division, the Virus Commission and representatives of the Welfare Ministry. Several lines of experimentation were agreed upon for the coming year.

Venereal Disease Control Activities

The acting Division Chief accompanied the Venereal Disease Control Officer, Tokyo Area, Provost Marshal's Office during recent raids and observed technique and procedures used by the Metropolitan Police in apprehending and interrogating infected females and holding them for examination.

SECTION VIII VITAL STATISTICS

On 27 August 1946, the Cabinet Bureau of Statistics submitted to SCAP, its first monthly report of vital statistics. This was in compliance with Part 1. of the Plan for Collecting Current Vital Statistics, which was approved by SCAPIN 975-A, on 12 April 1946, to become effective on 1 July 1946.

There are approximately 11,000 local government offices which receive reports of birth, death, stillbirth, marriage and divorce in Japan. Part 1. of the Plan provides for a monthly summary report by each local office of births, deaths and stillbirths by sex, and , in the case of deaths, a tabulation of deaths in two age groups; infants under one year, and all others.

On the tenth of each month, the mayor of each city, or head of each ward, town or village, forwards the monthly summary report, on standard forms provided by the Cabinet Bureau of Statistics by the twentieth of the month. This office compiles a monthly report for all declarations made in Japan during the preceding month, and submits a monthly report to SCAP.

During July, 161,871 births were reported. In comparison to the last available figures for July of 1943, this represents a reduction of approximately 5 percent. On the other hand, there were 133,506 deaths reported, an increase of more than 30 percent. It is interesting to note that the number of deaths of infants under one year (11,977) declined 24 percent below the last available figure, which was for 1942. Stillbirths (7,245) decreased 14 percent below the last available figure in 1941. Marriages totaled 43,866, a decrease of more than 18 percent below the 1943 figure. The number of divorces reported was 8,067. Monthly figures for recent years are not available, but in 1938, there were 3281 divorces reported. The 1946 figure therefore, is almost 146 percent greater than that reported eight years previously, the last available figure, notwithstanding the fact that the population increase over that period was less than 5 per cent.

The figures reported for the month of July 1946 are provisional and represent what is reported during the month. The event need not necessarily have taken place during the same month as the month represented by the report. However, the number of delayed registrations generally balances itself from month to month. This would not be true for births occurring in December however, because the Japanese practice of considering an infant as being one year old at the time of birth, would make an infant born on the last day of December, two years old on the first day of January of the following year is frequently practiced. There is another reason for this practice, which is based on the superstitious belief that a child born in the month of January is considered to lucky.

Infant deaths in this monthly report are not based upon the Japanese practice of estimating age, but upon European age. Therefore, they are comparable to figures used in American practice.

Although the increase in deaths (all ages) may have been expected, it may also have been expected that the number of infant deaths would rise, rather than decline sharply. It is true that the number of births have decreased, but the number of infant deaths decreased proportionately much more. It will be necessary to observe several monthly reports, before definite conclusions can be drawn on infant mortality.

The decrease in the number of marriages from that recorded in 1943 is understandable, but the reason for the sharp increase in divorces is not clear. However, it is possible that current proposals to revise the marriage laws which may make it possible for the wife to sue the husband for infidelity, definitely concerns the practice of maintaining concubines. Husbands, in order to avoid such suits, may be obtaining divorces in anticipation of the passage of such laws. Most of the divorces at the present item are obtained by mutual consent and not by court action.

SECTION IX DIRECTIVES TO THE IMPERIAL JAPANESE GOVERNMENT

AG 053 (28 Aug 46) PH&W, (SCAPIN-2080-A) subj: "Amendment to Plan for Collecting Current Vital Statistics." Due to progress being made by the Japanese Government on the Plan for Collecting Current Vital Statistics, the date for completion has been advanced from January 1947 to 1 October 1946.

AG 400 (30 Aug 46) PH, (SCAPIN-1169) Subj: "Receipt and Distribution of Relief from Licensed Agencies for Relief in Asia." This directive confirms the Japanese Governments' verbal acceptance of the offer of relief supplies from LARA and outlines the necessary administrative procedures.

1 September to 7 September
1946**

SECTION I
WELFARE

Vagrant Control in Tokyo-To

The Social Relief Section, Tokyo-To Social Works Bureau, now has the full responsibility of the vagrant problem in Tokyo-To. Mr. T. Kida was appointed the Chief of the Social Relief Section on 1 September 1946.

A regular "pick up" schedule has been put into effect. For purposes of administration Tokyo-To is divided into four sections (districts) which embraces the 36 wards. Seventy (70) police stations located in the ward areas are cooperating with the Social Works Bureau in the vagrant control program.

The vagrant problem centers around ten (10) areas and the major effort, will be in and around these sections, which are:

Kogimachi	Shitaya	Kanda	Asakusa	Kyobashi
Shinagawa	Shiba	Yotobashi	Yostuya	Ogi

Semi-permanent (sheltered) "Vagrant intake stations" are to be established at the following places: Ueno (1 Oct 46), Shinjuku (1 Nov 46), Asakusa (30 Sept 46) and Shiba (30 Nov 46). The establishment of these intake stations, before the winter season, coupled with an intensified system of vagrant pick up and a monthly inspection program of institutions (public and private) caring for vagrants is a definite attempt on the part of Tokyo-To officials to improve the control and care of vagrants.

Public Assistance

The Japanese Diet passed the "Daily Life Security" Bill on 6 September 1946. The Bill will become a law o/a 1 October 1946.

Children's Institutions

A visit was made by representatives of PRO and PH&W Section to two branches of the Tokyo-To Yoikuin (Poor House) located on Chiba-Ken. One was the AWA RINKAI GAKUEN ("Seaside Institution") in Tateyama operating at full capacity in caring for 165 physically subnormal orphans. The other was the JIDO GAKUIN ("Children's Institute") in HOTA opened 10 August 1946 and now accommodating 20 physically sub-normal vagrant orphans. The latter has a capacity for 100 children which is expected to be fully utilized as soon as arrangements are completed for obtaining the necessary food supplies. Both institutions are ideally situated in rural-seashore areas and are representative of the more progressive type of institutions of this kind in Japan. An additional branch of the "Poor House" the seventh, is scheduled to be opened near Itabashi in Tokyo this month. It has a capacity of 100 and will be used to house homeless children.

Reserve Relief Supplies

According to reports to the Japanese Welfare Ministry from 22 prefectures, about 12% of the canned foods and 17% of the biscuits have been distributed to needy persons. A total of about 10,000 tons, representing about one half of existing stocks of former Japanese Army and Navy supplies held in reserve for relief purposes, have been authorized by SCAP for release in 32 prefectures. About 2,500,000 pieces, or 81% of relief clothing have been distributed in all prefectures except one, according to information from the Welfare Ministry.

Licensed Agencies for Relief in Asia

The Imperial Japanese Government, having accepted the offer of relief supplies from LARA, was instructed by Memorandum (SCAPIN-1169, 30 Aug 1946) to be prepared to receive "guard, transport, store and distribute these relief supplies being donated by private agencies in the United States.

Plans are being worked out by the Welfare Ministry to accomplish and implement this memorandum, in time for the initial shipment.

Japanese Red Cross Society

The Ministry of Education has granted approval to the Japanese Red Cross Society, to reorganized Junior Red Cross group in all elementary and secondary schools.

A detailed plan of organization and program, has been prepared by the Junior Red Cross Section of the National Society, with the object of incorporating Junior Red Cross activities in the new course of study, as an in-school youth organization.

A series of one day meetings, with school principals, teachers and representatives from Japanese Junior Red Cross Department, Ministry of Education and Red Cross Liaison Division will be held September 18 in the Tokyo Chapter. The program of Junior Red Cross and its application to the present and future curriculum of the schools will be presented. Teachers from prefectures surrounding Tokyo will be in attendance.

SECTION II ADMINISTRATION OF HOSPITALS

The Japanese Civilian Hospital Strength Report shows 3,102 hospitals with a bed capacity of 211,082 beds, 117,689 of which are occupied. For the same period were 301,619 out-patients treated.

SECTION III VETERINARY AFFAIRS

Reports from Japanese

Animal Disease Report. The Ministry of Agriculture and Forestry, Animal Disease Section, reported the following new outbreaks of disease during the period of 1-6 September 1946.

<u>Prefecture</u>	<u>Disease</u>	<u>Cases</u>
Chiba	Swine Plague	9

SECTION IV DENTAL AFFAIRS

The total number of students enrolled in the eight dental schools for the current year is 5644.

SECTION V NURSING AFFAIRS

Programs for Prefectural Institutes and Conferences have been received. The Shikoku District which includes four prefectures will have joint meetings for Public Health Nurses 26-27-28 September and Public Health and Welfare Section has been requested to send a representative. Arrangements have been made to have representation there for two days to speak to Public Health Nurses. Niigata Prefecture will hold its Public Health meeting in October and Hokkaido will hold its Public Health Nurses meeting 3 November. Representatives from this section will attend.

A Nursing procedure manual is being compiled by the staff of Demonstration School, to be printed in Japanese and distributed to students.

SECTION VI SUPPLY

General

The conference was held with the Japanese press and was devoted to a report of progress in connection with the production and distribution of medical supplies and equipment. The vaccine program was discussed in detail. Members of the press apparently did not realize that sufficient vaccines were available from Japanese production.

A meeting of the Pharmaceutical Education Council was held 3 September at which time the curriculum prepared by the sub-committee was approved. This curriculum sets up a standard 4-year course of study. Before the 4-year course of study is placed in effect, some revision of existing policies will be necessary. This matter is now under study.

Distribution

At the request of Peiping Headquarters 500,000 cc of triple typhoid vaccine were dispatched to Hulutao, Manchuria, for use in processing repatriates.

Narcotics

Information reaching SCAP Narcotic Control Officers indicates the Japanese are becoming increasingly cognizant of the probability of severe court sentences for violators of the narcotic laws. In continuation of this program three defendants pleaded guilty in Tokyo Local Court this week and received sentences of 2 years, 1 1/2 years and 1 year penal servitude for illicit narcotic transactions.

Many former dealers in narcotics have made application to the Ministry of Health and Social Affairs for licenses as compounders and producers of narcotics. Most of these applications have been denied since investigation has revealed inadequate security against fire and theft. Six applications, considered to be a sufficient number at the present time, have been approved.

The first in a new series of monthly reports to be filed by the Japanese Government was received as a result of a SCAP Directive requiring submission of certain information after the enactment of new narcotic regulations. This report lists the number of registrants in each classification as follows:

<u>Classification</u>	<u>Number</u>
Compounder	6
Producer	6
Central Wholesaler	13
Local Wholesaler	76
Retailer	6,289
Practitioner (doctors, dentists, veterinary surgeons and hospitals)	62,844
Exempt Narcotic Dealer	8,077
Research	<u>None</u>
Total	77,311

The report further shows the total narcotic stocks of all compounders, producers and wholesalers in Japan. These narcotics constitute a working stock for the medical needs of the Japanese people.

SECTION VII PREVENTIVE MEDICINE DIVISION

General

Major Warren R. Bradlee, Sanitary Engineer, departed this Section on 6 September for return to the United States. Major Bradlee had occupied this position since its establishment in September 1945. Necessary activities of the Sanitary Engineer will be assumed temporarily by the acting Chief of Division, pending the expected early arrival of the new Sanitary Engineer.

A press conference was held with representatives of the Japanese news agencies and papers. A report was made on the present status of incidence of various acute communicable diseases and analysis made of disease trends.

A symposium on infectious diseases, held at the 42nd General Hospital under the auspices of the Chief Surgeon's Office, was attended and considerable information of value obtained.

Cholera

Asiatic cholera appears very definitely to be on the decline. No outbreaks in new areas have been reported.

Typhus Fever

Sporadic cases of epidemic typhus fever are being reported from widely scattered areas. Some of these cases are alleged to be "Manchurian fever", a variety of endemic (murine) typhus rather than epidemic typhus.

In any cases, however, it is not too early to give serious consideration to the typhus problem and Military Government Public Health Officers are urged strongly to being as soon as possible to formulate plans and definite program directed toward the control of typhus fever during the approaching autumn and winter.

Port Quarantine

Incoming repatriation has recently dropped to about 45,000 per week as compared to about 150,000 per week in June. Activities are principally in the parts of Hakata and Sasebo. As the great majority of repatriates are coming from cholera areas, Manchuria and Korea, a considerable amount of laboratory work is necessary to detect infected persons. Delay incident to cholera detection and quarantine of infected groups has markedly increased the average time repatriates are held in quarantine. Koreans seeking to enter Japan illegally continue to present a serious quarantine problem. Approximately 12,000 such persons apprehended for unauthorized entry are being held in quarantine, principally at Sasebo. Cholera among these persons has necessitated considerable effort for its elimination. It is believed that a considerable portion of the cholera currently present in Japan is the result of infected persons entering the country by clandestine routes.

The repatriation program for returning Ryukyans presently in Japan to their home islands is currently under way. These emigrants are being given special quarantine processing at the ports of Nagoya, Ujina, Sasebo and Kagoshima, to prevent their carrying serious epidemic disease with them to their homes.

Nutrition Surveys

Nutrition surveys in the Hokkaido area during the month of August were reviewed. They were progressing with satisfaction.

Attention was given to the utilization of recently released U.S. dried corn. The nutrition section of the Ministry of Health was encouraged to study methods of cooking corn and dried vegetables in conjunction with the University of Agriculture and Forestry also the Tokyo City Nutrition section.

Radio broadcast on the experiment and proper preparation of U. S. Army food supplies released to the Japanese people were given by a Japanese nutritionist representing the Ministry of Agriculture and Forestry. A receipe booklet is in the making and will be released for publication to various Japanese newspapers.

SECTION VIII LEGAL AFFAIRS

A memorandum to the Imperial Japanese Government was prepared directing compliance with paragraph three of AG 726.7 (21 Jan 46) PH.

Arrangements were completed with the Provost Court for the trial of two Formosans who are accused of violating the Japanese Narcotic Law.

SECTION IX MEMORANDUM TO THE JAPANESE GOVERNMENT

AG 726.1 (6 Sep 46) PH, (SCAPIN-1183) 6 September 1946, Subj: Abolition of Licensed Prostitution in Japan.

J. U. WEAVER
Colonel, Medical Corps,
Deputy Chief, Public Health and Welfare Section.

2 Incls:

#1-Communicable Disease Report for week ending 24 August 1946.

#2- Venereal Disease Report for week 17 August 1946.

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
PUBLIC HEALTH AND WELFARE SECTION**

WEEKLY BULLETIN

**For Period
8 September to 14 September
1946**

SECTION I WELFARE

Public Assistance

The completed public assistance report from the Welfare Ministry for July 1946 showed a total of 2,178,159 persons on relief, representing a decrease of 16,277 from the previous month. Net grants amounted to 47,632,577 yen, representing an increase of 6,488,834 yen over June.

An English translation of a letter from the Welfare Ministry to all prefectural governors dated 11 July 46, was received by the PH&W Section. The letter in part authorized the use of government funds to subsidize the establishment of new privately operated welfare institutions. Officials of the Welfare Ministry were advised that this authorization was in violation of SCAPIN 755, 27 Feb 46, which requires the Japanese Government to assume financial support and operational responsibility for a public assistance program without delegation to any private or quasi-official agency. The officials were accordingly instructed to revoke these instructions to the prefectural governments. This action is not to be construed so as to prevent the use of government funds to reimburse established private agencies on an individual case-cost basis for the care given to persons in need of public assistance.

Social Work Education

The Welfare Ministry submitted to PH&W Section, an estimate of expenses for a one-year professional course in Social work and an in-service training program, both expected to begin in October 1946.

Net expenses amounted to 753,404 yen, including salaries, travel expenses, scholarships, and administrative and supply expenses. The former course is to be conducted by the Central Association of Social Work under Welfare Ministry auspices. No objection was raised by the PH&W representative to a request from the Welfare Ministry to finance these programs with unexpended funds from the 3,000,000,000 yen appropriation for public assistance.

Relief for Enemy National

Field inspection was made of the Hakone Area to determine the adequacy of relief being furnished some 200 families of women and children of German extraction who are refugees from the Netherlands East Indies. These families were originally interned in 1939 in the N.E.I., under the administration of the Allied Forces. Later, the Japanese Government moved them (in 1941) to Japan. Upon the arrival of the Occupation Forces in Japan they came under U.S. administration. Although responsibility for their care is that of the Japanese Government the Supreme Commander for the Allied Powers is exercising surveillance over them.

The approaching winter necessitates additional planning to meet the needs for housing, clothing, fuel, medical supplies and services.

SECTION II ADMINISTRATION OF HOSPITALS

The latest complete statistical report received from the Japanese Government, as of 9 August 1946, reveals 3,166 hospitals in operation in Japan.

These hospitals have a bed capacity of 211,643 of which 117, 203 are occupied. For the week ending 9 August 1946, 301,916 out-patients obtained treatment in out-patient Clinics.

SECTION III VETERINARY AFFAIRS

Reports from Japanese

Animal Disease Report. The Ministry of Agriculture and Forestry, Animal Disease Section, reported the following new outbreaks of disease during the period of 8-14 September 1946.

<u>Prefecture</u>	<u>Disease</u>	<u>Cases</u>
Oita	Anthrax	2
Kanagawa	Anthrax	1
Kyoto	Texas Fever	1

Monthly Meat Inspection Report for July 1946. Following is a summary of the monthly meat inspection report for July 1946, submitted by the Veterinary Hygiene Section, Sanitary Bureau, Ministry of Health and Social Affairs.

	<u>Cattle</u>	<u>Calves</u>	<u>Sheep & Goats</u>	<u>Swine</u>	<u>Horses</u>
Number Slaughtered	19,707	1,041	128	4,191	4,920
Condemned Ante Mortem	1	0	0	0	3
Post Mortem					
Total	5	0	0	0	5
Partial	606	8	0	43	267
Viscera	3,458	27	0	1,138	566

SECTION IV DENTAL AFFAIRS

Tokyo Dental College officially opened the first dental school under university standards. One hundred and twenty students were enrolled in the first year pre-dental course.

SECTION V SUPPLY

Distribution

An exhibition of American produced surgical, dental, and x-ray instruments and appliances is being conducted by the Japanese Medical Association in Tokyo 11, 12, and 13 September inclusive for doctors, dentists, manufacturers and medical students throughout Japan. Approximately 4800 visitors inspected the exhibit.

Action is now in process to remove all distribution control from items of dental equipment and supplies. Production control will remain in force. Approximately 76 items have been under distribution control. Gold, silver, platinum and mercury will continue to be allocated by the Nippon Dental Association. The effect of this action will be watched with interest as it represents the first effort to restore unrestricted commercial operation in the distribution of a particular group of supplies.

An additional release of 50,000 pounds of DDT dusting powder was authorized for shipment to Hultao, Manchuria, for use in the repatriation program.

Production

Production of X-ray film during August was 16,484 square meters, exceeding all previous monthly production. Approximately 90,000 square meters has been produced during the past six (6) months. A total of 17,378 square meters was sold during August, exceeding all previous monthly sales. Stock on hand at the end of August totaled 16209 square meters.

The following figures indicate production of DDT dusters and spraying equipment to 7 September:

DDT Dusters	20,000
Knapsack Type Sprayers	4,050
Semiautomatic Sprayers	1,900
Hand Sprayers 1/2 gallon	1,500

Production of this equipment will continue until adequate quantities are available to meet demand. Production to date has been hampered by financial difficulties. Necessary corrective measures are being taken by the Welfare Ministry Japanese Government.

Concurrence was given for importation of 1000 tons of Benzene for medicine production utilization during last quarter 1946.

Approximately 50,000,000 cc of cholera vaccine has been produced. Production will continue until the danger of cholera epidemics has subsided.

Request of the Japanese Government to export crude medicine during 1947 and importation of various roots, herbs and barks for production of patent medicines was disapproved. Basic raw materials are in urgent demand and must be conserved for production of essential medicines.

Narcotics

Investigations made by SCAP Narcotic Control Officers resulted in factual information being obtained, including a statement by a Japanese official, that false records regarding the amount of heroin manufactured in Japan from 1930 to 1940 were prepared and submitted to the League of Nations by the Japanese Government. The false figures, "planned figures" showed only a fraction of true production. The investigation is being continued.

Two persons arrested for illegal possession of narcotics after an investigation directed and participated in by Narcotic Control Officers, were each sentenced in Tokyo Provost Court on 12 September 1946 to three years penal servitude at hard labor and fined 50,000 yen.

Local and Central wholesalers of Narcotics in Tokyo-To assembled at a meeting attended by Narcotic Control and National and Tokyo-To narcotic officials. The duties and responsibilities of narcotic wholesalers under new narcotic regulations were discussed. Narcotic control officers pointed out that while first consideration must be given to secure storage of narcotics by reliable firms the long range control program depends on the judgment and cooperation of wholesalers in the sale of narcotics to licensed dealers, and upon the prompt and accurate preparation and forwarding of periodical reports as required by the new narcotic regulations.

SECTION VI PREVENTIVE MEDICINE

An address was delivered by the acting Division Chief before the graduating class of the Medical School of Tokyo Imperial University. The significance and responsibilities of this, the first class to be graduated since the cessation of hostilities and the beginning of the Occupation, were emphasized. Following the address there was an animated discussion period, particular interest being shown in medical education and practice in the United States.

A conference was held with representatives of the Ministry of Education and of the Riken Studies regarding the production of a proposed film on the fly, intended chiefly for showing in grade schools, before children of elementary and secondary school age.

Nutrition Surveys

Data was obtained from the Imperial Japanese Government industries in Nutrition surveys for May 1946. The accompanying table presents the per Capita per day Consumption of Nutrients and foods of families of workers in four mines. Hokkaido, Fukushima, Fukuoka, of one Copper mine in Akita and railway workers in Tokyo.

RESULTS OF NUTRITION SURVEYS, JAPAN

SECTION VII
DIRECTIVES TO THE IMPERIAL JAPANESE GOVERNMENT

NONE

J. U. WEAVER
Colonel, Medical Corps,
Deputy Chief, Public Health and Welfare Section.

3 Incls:

#1 - Communicable Disease Report for week ending 31 August 1946.

#2 - Venereal Disease Report for week 24 August 1946.

#3 - Summary Report of Communicable Diseases in Japan for five week period ending 31 August 1946.

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
PUBLIC HEALTH AND WELFARE SECTION**

WEEKLY BULLETIN

**For Period
15 September to 21 September
1946**

SECTION I WELFARE

Reserve Relief Supplies

According to a report from the Welfare Ministry, 97,429 Kg. of biscuits and 420,014 Kg. of canned goods from former Japanese Army and Navy stocks held for reserve relief, were distributed because of disasters or danger of spoilage in 10 prefectures between 5 July and 25 July 1946. In each case, permission was obtained from local military authorities prior to distribution.

Fukusei Byoin (Leprosarium)

A representative of this section with a representative of LARA (Licensed Agencies for Relief in Asia) made an inspection of this institution to observe the condition of the patients, who were reported to be in need of additional food, clothing, bedding and medicine.

This institution (established 50 years ago) is located in Fujika Mura, Koyama, Shizuoka Prefecture. There are three main buildings (administrative, nurses's home and hospital) located on 76,300 tsubo of land. The land is apportioned as follows

Farm	20,000 tsubo (tsubo-6' X 6')
Forest	25,000 tsubo
Field	30,000 tsubo
Buildings	1,300 tsubo

There are 73 patients being cared for at this time (24 adult females, 42 adult males, 2 juvenile females, and 5 juvenile males) with adult avera

1 ページ欠損

treatment with a minimum of supplies. Investigation revealed that the institution is not receiving regular rations of food and other supplies to which it is outlined. To raise the standard of care and further, to rectify the irregularities existent in the Japanese rationing at this point, a conference will be held with those Japanese officials responsible, on Monday 23 September 1946.

Foreign Nationals

17 Sept 1946, Supreme Commander for the Allied Powers, called the attention of the Imperial Japanese Government that they had failed to comply with (SCAPIN-1143) "Ration for United Nations' Nationals, Neutral Nationals and Stateless Persons." The non-compliance directive (SCAPIN-1207) PH required the Imperial Japanese Government to submit a report by 18 Sept 1946 in English all instructions issued by them implementary (SCAPIN-1143) also the directive ordered the Japanese Government to make available at once the full Japanese ration and supplementary ration according to the individuals choice.

Population Movements

The Home Ministry requested that the limitation of movement of persons from rural to urban areas be extended until 30 November 1946. The request was approved.

Red Cross

Special assistance in the reorganization of Junior Red Cross was begun by Miss Lisette M. Anderson, ARC Special Field Representative assigned to Welfare Division. Visits were made to 5 schools in the Tokyo-To chapter area to study school activities in the interest of the development of a Junior Red Cross program. Miss Anderson, also assisted in preparing the program for a series of Japanese Red Cross conferences, for teachers, and was one of the speakers at the initial meeting.

Miss Isabil C. Auld, ARC special representative, has completed plans to begin field visits to Red Cross chapters, accompanied by Japanese Red Cross field representatives.

A field visit was made to Yokosuka by staff representatives to make a survey of Red Cross activities in Yokosuka Branch, Kanagawa chapter.

Red Cross Liaison representative attended a conference of representatives of C.I. & E. and other sections to lay plans for a national Safety Campaign in which the service of Japanese Red Cross would be included. The services would include Junior Red Cross and the safety programs of the society.

The resignations of two national directors of the Japanese Red Cross Society (Personnel and General Affairs) were accepted and replacements assigned.

SECTION II ADMINISTRATION OF HOSPITALS

The latest complete hospital statistical report received from the Ministry of Health and Welfare for the week ending 16 August 1946, shows 2,953 hospitals in operation in Japan with a bed capacity of 210,643 of which 123,501 are occupied. During the same period 289,920 persons received out-patient treatment.

Much interest has been expressed by members of the Japanese Medical profession, in the reorganization of the Japanese Medical Association and the removal of the society from Governmental control. The work of reorganization of the association, patterned somewhat after the American Medical Association, is progressing somewhat slowly, but satisfactorily.

SECTION III VETERINARY AFFAIRS

Report from Japanese

Animal Disease Report. The Ministry of Agriculture and Forestry, Animal Disease Section, reported the following new outbreaks of disease during the period 15-21 September 1946.

SECTION IV DENTAL AFFAIRS

There were 335 dentists reestablished in practice during the month ending 15 August 1946.

SECTION V NURSING AFFAIRS

Plans have been completed for the establishment of a second Refresher Course, for instructed of head and general nurses. This course will be held two days a week, for a week period, at the Saisei Kai Hospital, starting 1 October 1946.

SECTION VI SUPPLY

General

The production of equipment required for disease control programs has reached the point where further issues of U.S. produced equipment should not be necessary, except in emergencies. DDT hand dusters, knapsack and pump type sprayers and liquid insecticide sprayers are now in quantity production and available for distribution. Requests from Japanese sources for use of U.S. produced equipment of this type should be carefully screened and approved only in those cases where it is determined that Japanese equipment is not immediately available to meet an emergency situation.

Requests from prefectures for Japanese equipment should be addressed to the Welfare Ministry, attention: Pharmaceutical Affairs Section. A report is desired of any failures to secure the required items.

Requests are being received for use of DDT on projects which do not appear to fall within the category of disease control programs. From a review of these requests it would seem that availability of DDT is often used as a basis of requisition instead of actual need. It is necessary that requirements for insecticides as well as other materials be submitted on long range programs and it is possible that stocks will at times exceed immediate requirements. At present a stock pile is being built up for use during the winter months when it is expected that the incidence of typhus fever will increase.

DDT is being imported only for disease control purposes on a disease and unrest basis. It is anticipated that ample stock will available for authorized usage.

Distribution

During the month of August 29,294,334.10 yen of controlled medicines were purchased from the Medicine Control Company. Sales of controlled medicines amounted to 29,151,394.42 yen. Those figures represent a considerable increase over the previous month.

Purchase of Japanese Army and Navy medical supplies and equipment for August totaled 1,295,751.49 yen and sales amounted to 1,363,948.93 yen. The volume for August is only about 1/3 of that for July and represents a very unsatisfactory trend.

The failure to dispose of former Army and Navy supplies is due mainly to a lack of interest in this subject, at the prefectural level. The Welfare Ministry has authorized prefectural authorities to dispose of 70% of all items.

Until these supplies are removed from caves, dumps and remote depots, inventoried and reported to the Welfare Ministry, it is not possible to effect distribution. Aggressive efforts must be made by prefectural officials to warehouse, segregate, and inventory all stocks of those items. It is understood that the high prices being charged for former Army and Navy supplies is delaying distribution, to a certain extent. This subject is now under consideration and it is expected that a price reduction will be announced shortly. However, disposition cannot be made until all items are properly inventoried and reported to the Welfare Ministry.

Three hundred liters of Japanese produced plague vaccine were shipped to Peiping, China, for processing repatriates.

Production

Monthly report for August of the Ministry of Health and Welfare on production of vaccine indicates continuing excellent progress. Following figures indicate production of finished vaccines for August.

<u>Vaccine</u>	<u>Quantity produced</u>	<u>Stock on Hand 31 August</u>
Cholera	12,221,200 cc	9,146,375 cc
Plague	629,850 cc	629,850 cc
Typhus	267,300 cc	108,100 cc
Triple Typhoid	7,208,010 cc	5,015,733 cc
Smallpox	295,300 individual	668,340 individual
Diphtheria Antitoxin	55,900 cc doses	518,070 cc
Diphtheria Toxoid	4,647,900 cc	8,456,700 cc
Tetanus Toxoid	-----	110,000 cc

Approximately 2,383,650 cc of Crude Cholera Vaccine and 2,295,240 cc of Crude Triple Typhoid Vaccine also was on hand at the end of August.

Production of spraying equipment for week 9 - 14 September

Knapsack Type Sprayer, 3 gallon	802
Semi- Automatic Pump Type	150

Weekly production of spraying equipment is being distributed to all procedures. Military Government personnel should contact local prefectural health authorities to determine that this equipment is properly stored and being conserved for the Insect and Rodent Control program for 1947. Production will continue until sufficient equipment is available to carry out an adequate program for 1947.

Controlled medicines	22,220,216 yen
Non-controlled medicines	75,215,251
Patent Medicines	80,440,198
Sanitary materials	6,678,216
Dental materials	1,293,541

Production of antipyretics, sulfadruugs, and drugs for venereal disease treatment showed marked increase in August. Production of anesthetics continues to be far below actual needs. Definite corrective measures are being taken to stimulate production.

Request for release of precious metals to the Japanese Government for production of medical items during last quarter 1946 was decreased by approximately 50%. Amounts requested were considered greater than actual production capacity. Request included platinum, palladium, gold and silver.

Narcotics

Information received recently by SCAP Narcotic Control Officers indicates a number of Japanese merchant seamen are in possession of small quantities medicinal narcotics. One investigation made involved a doctor and a seaman aboard a ship anchored in Yokohama Bay, but failed to show any evidence of a large scale operation or

conspiracy. It appears Japanese doctors have carelessly prescribe narcotics in too large amounts leaving excess narcotics in the possession of seaman who dispose of it illegally. Investigation of all such incidents is continuing.

Narcotic officials of Tokyo-To are being trained in the procedure of making inspections of the stocks and records of registered narcotic dealers by Narcotic Control Officers. Two national hospitals visited to date have had a great quantity of excess narcotics, have not kept proper records, and have been functioning both as a hospital and as a pharmacy with a great number of out-patients. The above conditions have been corrected and a promise of cooperation obtained from hospital officials.

The monthly narcotic report for July revealed that no sales of narcotics had been made by wholesalers to retailers, hospitals, doctors and other registered dealers. It is anticipated the same condition will be shown in the August report. It is believed these dealers are waiting for a distribution of narcotics by control comparing which is impossible under the new narcotic regulations. Accordingly, the national Japanese narcotic officials have been asked informally to submit evidence to the Narcotic Control Officers that explicit instructions have been given to all dealers through prefectural officials that each dealer may buy narcotics in legitimate amounts by presenting a properly executed order form to the registered local wholesaler in his district.

SECTION VII LEGAL DIVISION

English translations were received from the Home Ministry, of all laws and regulations passed to implement directive on Abolition of Licensed Prostitution in Japan. They are currently being studied to determine adequacy and compliance with SCAPIN request.

SECTION VIII PREVENTIVE MEDICINE

General

Mr. Edmond A. Turner, Sanitary Engineer, joined the Preventive Medicine Division on 18 September.

Conferences were held with representatives of studies preparing or planning anti-tuberculosis feature strips and lantern slides. Advice and criticism on proposed material were given and certain revisions suggested.

Cholera

There was a marked decline in the reported incidence of Asiatic Cholera, with the exception of three or four prefectures, and the danger of a nationwide epidemic has lessened.

Epidemic Diseases, General

Military Government Public Health Officers are requested to report promptly to GHQ, SCAP, any and all cases of smallpox, epidemic typhus or cholera (or yellow fever and plague, should they occur) coming to their attention, as required by AFPAC Regulations. Recently, reports from numerous areas have not been received with customary promptness and regularity.

SECTION IX CONSULTANTS

Port Quarantine

Only seven repatriation reception centers remain in active operation: Hakata, Sasebo, Ujina, Otake, Kagoshima, Nagoya and Uruga. Hakodate, Maizuru and Senzaki are on stand-by status to reopen on 10-day notice, if necessary. The very great bulk of repatriates are currently passing through Hakata and Sasebo.

Approximately 50,000 repatriates per week are processed through repatriation centers: about five thousand outgoing Koreans and Ryukyans and the balance incoming Japanese.

Koreans apprehended for illegal entry into Japan continue to constitute a serious quarantine problem. Approximately ten thousand are currently hold in quarantine. Upon completion of quarantine, they will be returned to Korea.

The four ports of Kagoshima, Sasebo, Ujina and Nagoya are presently engaged in processing outgoing Ryukyuan. Latest figures reveal 3,812 evacuated for week ending 15 September 1946.

Cholera remains a problem and places a heavy load on quarantine operations. Approximately 35 ships with 48,000 persons aboard are constantly held for either suspect or proven cholera. Quarantine against cholera at repatriation contacts appears to be effective. The eleven or twelve hundred cases of cholera in Japan this summer are largely the result of clandestine entries from Korea.

Nutrition Surveys

Surveys of the food problems in Mental and T.B. Hospitals were continued, Mental Institutions observed in the beginning of the week were: Jiundo, Inogashira, Karasu Yama, and Umegaoka Hospitals. Nakano and Kiyose Sanatorii were visited 19 September 1946.

The Nutrition Consultant received, in a press conference for C.I. & E., the results of the nutrition surveys in May, the problem of utilizing corn and U.S. Army foods by the Japanese and the Nutrition problems in Japan.

Results of Nutrition Surveys May 1946 conducted by the Japanese Imperial Government.

Average caloric and nutrient intake and grams of various classes of food consumed in 9 cities and 27 Prefectures in May 1946 in comparison with 5 cities and 19 Prefectures surveyed in May 1946.

SECTION X
MEMORANDUM TO THE IMPERIAL JAPANESE GOVERNMENT

AG 430 (17 Sep 46) PH, (SCAPIN-1207) 17 September 1946, subj; Ration for United Nations' Nationals, Neutral Nationals and Stateless Persons.

AG 430 (17 Sep 46) PH, 17 September 1946, Subj; Information of General Application Pertaining to Memorandum Number (SCAPIN-1207), 17 Sep 1946, subject "Ration for United Nations' Nationals, Neutral Nations and Stateless Persons"

J. U. WEAVER
Colonel, Medical Corps,
Deputy Chief, Public Health and Welfare Section.

2 Incls:

#1 - Communicable Disease Report for week ending 7 September 1946.

#2 - Venereal Disease Report for week ending 31 August 1946.

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
PUBLIC HEALTH AND WELFARE SECTION**

WEEKLY BULLETIN

**For Period
22 September to 28 September
1946**

SECTION I WELFARE

Because of the difficulty in obtaining, quickly and accurately, statistical and other information from the Welfare Ministry, it was recommended that an Information and Statistical Section be established within the Welfare Ministry thereby giving a definite source of contact for all persons concerned with obtaining information on the administrative and operational phases of the Ministry.

The Japanese officials concerned were in accord with the recommendations and the Vice Minister, Welfare Ministry stated that an Information and Statistical Section will be established. The Welfare Ministry felt that it would take considerable time before the new section could become very effective, due to the amount of time it would require to set up reporting procedures to receive statistics, reports, etc. from the prefectural levels. It was agreed that establishing an adequate Information and Statistical Section could not be an "overnight" accomplishment, but the importance of immediate action in organizing the new section was emphasized.

Population Movements:

The Imperial Japanese Government has passed Imperial Ordinance No. 442 dated 27 September 1946 extending the restriction of the population movements from rural areas to urban areas until 30 November 1946. All conditions as prescribed in previous restriction movements continue in effect.

Private Relief Supplies Storage

Representatives of PH&W inspected LARA storage facilities with a delegate from that private relief organization, and representatives of the Welfare Ministry and of Kanazawa Prefecture.

Space in section "D", Mitsui Bussan Kaisha, will provide storage for 350 metric tons of supplies at one time. The warehouse is fireproof, rodent proof, light and dry and affords loading and unloading under shelter in all weather. Located in central Yokohama, it is easily accessible to truck loading and unloading from Yokohama dock-side, and for repackaging and shipping of supplies to using agencies.

Joint Investigating Committee

A Joint Investigating Committee (Home Ministry and Welfare Ministry) is investigating the conditions in Fukusei Byoin (Leprosarium) and to further investigate the reported irregularities of rations in foodstuffs and other supplies in Fujika Mura, Koyama, Shizuoka Prefecture. (Reference: Weekly Summary, Public Health and Welfare Section, for period 15 to 21 Sept 46). The report of this committee is to be submitted on or before 30 Sept 1946.

SECTION II ADMINISTRATION OF HOSPITALS

The following report, received from the Japanese Government for the week ending 23 August 1946, shows with the exception of Kagoshima Prefecture, which failed to report, 2920 hospitals in operation in Japan with a capacity of 207,748 available beds, of which 111,510 beds are occupied. Out-patients treated during the same period totaled 289,567.

The reorganization of the Japan Medical Association is underway. Many and varied suggestions continue to arrive from divergent groups within the Japan medical profession. The present Japan Medical Association will present its plan of reorganization to Public Health and Welfare Section on 30 September 1946.

Difficulty is being experienced in obtaining Japan wide representation of doctors who will take an active interest in this essential organization. Any doctors, particularly those not in the Tokyo or Osaka areas, who are interested should be encouraged to participate. Most of the interest expressed so far are from those two cities.

SECTION III VETERINARY AFFAIRS

General

Dr. Marion W Scothorn reported for duty on 27 September, as Assistant Chief of the Veterinary Affairs Division.

A representative of the Division attended a meeting of the Imperial Milk Association in Tokyo and delivered a talk concerning the importance of maintaining high standards in milk production. This is a national body organized for the purpose of promoting increased production and improved sanitation.

Reports from Japanese Animal Disease Report. The Ministry of Agriculture and Forestry, Animal Disease Section, reported the following new outbreak of disease during the period 22-28 September 1946.

<u>Prefecture</u>	<u>Disease</u>	<u>Cases</u>
Chiba	Swine plague	1
Iwate	Swine plague	26

Monthly Animal Disease Report for August 1946. Following is a summary of the monthly animal disease report for August 1946, submitted by the Animal Disease Section; Ministry of Agriculture and Forestry.

<u>Disease</u>	<u>Number of Cases</u>
Anthrax	22
Blackleg	2
Brucellosis	17
Trichomoniasis	104
Texas Fever	45
Swine erysipelas	2
Swine plague	10
Equine scabies	1
Strangles	192
Equine infectious anemia	123
Pullorum - chick	1426

SECTION IV NURSING AFFAIRS

Surveys have been completed, of schools of nursing in Okayama Prefecture.

A representative of the division, attended a group meeting of Graduate and Student Nurses at the Okayama University Medical College, School of Nursing and gave a short lecture on, Basic Nursing Education. At a group meeting of Health officers, Business Managers and Public Health Nurses from Okayama Health Centers, a lecture was presented on Public Health Program in the United States. At a convention of Public Health Nurses on Shikoku, lectures were given on "Generalized Public Health Nursing Program in the United States" and "Basic Nursing Education in the United States."

A conference was held between the President of the Japanese Nurses' Association and the Chairman of the Board of Directors of the Public Health Nurses' Association, to plan a joint meeting of the two associations for October.

The Manual for Midwives, Florida State Health Department has been translated into Japanese, mimeographed, and is currently being studied by the Midwifery Committee of the Nursing Education Council.

SECTION V SUPPLY

Production

Production of equipment for Insect and Rodent Control program for week 16-21 September, was as follows:

DDT Dusters	500
Knapsack Type Sprayer, 3 gallons	816
Semi-automatic sprayer, pump type	120

Distribution

An additional requirement for medical supplies to be used for repatriation at Hultao was received from Peiping Headquarters. The items requested along with certain additional instruments for the hospitals at Hultao were dispatched to the port. The total shipment amounted to four railway carloads.

Narcotics

A series of conferences have been held with officials of the narcotic division, Ministry of Welfare Pharmaceutical Section, to acquaint each with the proper performance of his duties. Particular emphasis was placed upon the submission of prompt, correct periodical reports.

The arrest of a licensed veterinarian by Tokyo narcotic officials, revealed he had obtained narcotics to satisfy his addiction, by stealing them from a total of 17 hospitals while posing as a narcotic inspector. Registrants are being warned that the verification of a narcotic officials' credentials is the responsibility of the registrant.

The survey of Narcotic pharmaceutical companies' records, which is nearly completed, has revealed that the Japanese Government, over a long period of time, falsified reports in an attempt to cover up the large amounts of narcotics actually produced.

SCAPIN 1231, dated 26 September 46 directs the Imperial Japanese Government to remove from public office immediately, Yoshisake Yasumi, Pharmacy Section, Bureau of Hygiene, Ministry of Health and Social Affairs and to further exclude him from government service. Subject Japanese national participated in furnishing false Japanese Government reports to the Permanent Central Opium Board, League of Nations, during the period 1931 to 1939. In addition, in his official capacity, he made false statements to Narcotic Control Officers, Public Health and Welfare Section.

SECTION VI PREVENTIVE MEDICINE

General

Dr. Oscar M. Elkins, who will be in charge of Venereal Disease Control, arrived and reported for duty 26 September.

A conference was held with representatives of the Scientific and Technical Division, ESS, to facilitate exchanges of information and to orient each section in their representative activities.

A meeting was held with Miss W.V. Eskrigge, newly appointed Liaison officer for the Civil Information and Education Section. A program for publicity for typhus prevention was outlined.

Yaws. The presence of approximately 40 cases of yaws, in Rykyuans awaiting repatriation, was reported by Dr. Yamaguchi, Chief, Quarantine Section, Welfare Ministry. Plans for their treatment and disposition were arranged.

Cholera. The incidence of cholera continues to decline. At the present time the majority of cases occurring are concentrated in Hiroshima and Kagoshima.

Reports. Telegraphic and/or radio reports of epidemic diseases, as required by AFPAC regulations, are still not being received. It is essential that these reports be received promptly in order that measures for prevention and control of epidemics or major outbreaks may be instituted and kept up to date.

Sanitary Engineering, General. Conferences were held with Dr. Kawahata, Welfare Ministry, on 22 and 27 September, to discuss the budget set up for repair and construction of water supplies. A list of water supplies, showing proposed expenditures, has been submitted for review by this division. A conference was held with the Industry Division of ESS to discuss the availability of chlorine. A heavy demand is being made upon the available supplies for textile and paper industries. Some progress has been made in civilian production of chlorine but the shortage of salt remains the chief limiting factor.

Water Supplies. The city of Tokyo supply is being chlorinated under supervision of Eighth Army engineers to meet Army specifications. The chlorine being procured partially from both Army and civilian sources.

SECTION VII CONSULTANTS

Nutrition

A program to establish nutritional accounting in Japanese hospitals in Tokyo, indicated progress. A plan for monthly nutritional accounts, was developed with the Tokyo Metropolitan Office.

The nutrition consultant, attended a meeting of several of the Scientific Nutritionists in Japan, held at the Medical Treatment Corporation Building, 23 September 1946. The problem of establishing a national nutrition council was discussed.

SECTION VIII VITAL STATISTICS

During September, the second step in the Plan for Collecting Current Vital Statistics (SCAPIN 975-A) was completed. This will go into effect 1 October 1946.

New declaration forms of birth, death, stillbirth, marriages and ~~divorce~~ have been designed, printed and distributed to approximately 11,000 local government offices. All declarations, excepting those of stillbirths, are under the administrative supervision of the Justice Ministry. The stillbirth declarations are under the administrative supervision of the Ministry of Health and Welfare. Although a medical certification form has been used previously by the Japanese, this will be the first time that a declaration form has been used for stillbirths.

Paralleling the series of declaration forms, there is a series of standard forms provided all local government offices by the Cabinet Bureau of Statistics. These will be used as a basis of obtaining transcripts of information contained on the declaration forms. This information will be sent to the prefectural statistical offices, on the fifteenth of each month following the month being reported, from which it will be forwarded to the Cabinet Bureau of Statistics for tabulation by the end of the month.

It is expected that the Monthly Vital Statistics Report for October will carry cause of death information, in addition to the present numerical report.

Two conferences of prefectural health officers were held in September for the purpose of introducing the new stillbirth declaration form. Approximately half of the health officers met in Tokyo and the remainder in Kyoto. Fifteen conferences of district and lower court judges and their chief clerks were called by the Justice Ministry during September for the purpose of introducing the declaration forms of birth, death, marriage and divorce. They, in turn, will explain the forms to the local government offices.

In August, 176,660 were declared in Japan, compared with 161,871 in July, an increase of 14,789. Deaths totaled 126,845 representing a decrease of 6,661 below the figure for the preceding month. The number of stillbirths (7,532) was only slightly higher. Marriages (43,426) decreased 440 below the July figure; ~~wheras~~, divorces (8,960) increased 893.

Infant deaths under one year of age numbered 10,828 in August, compared with 11,977 in July, a decrease of 1,149.

SECTION IX MEMORANDUM TO THE IMPERIAL JAPANESE GOVERNMENT

AG 095 (26 Sep 46) PH, (SCAPIN 1231) Subj: Removal of Yoshisuke YASUMI, Pharmacy Section, Bureau of Hygiene, Ministry of Health and Social Affairs.

AG 095 (26 Sep 46) PH, 26 September 1946, Subj: Information of General Application Pertaining to Memorandum Number (SCAPIN-1231), 26 Sep 1946, subject: Removal of Yoshisuke YASUMI, Pharmacy Section, Bureau of Hygiene, Ministry of Health and Social Affairs.

J.U. WEAVER
Colonel, Medical Corps,
Deputy Chief, Public Health & Welfare Section.

2 Incls:

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
PUBLIC HEALTH AND WELFARE SECTION**

WEEKLY BULLETIN

**For Period
29 September to 5 October
1946**

SECTION I WELFARE

Public Assistance

The new Daily Life Security Law and the Imperial and Ministerial Ordinances for its enforcement, became effective 1 October 1946. Advance copies, in English, were submitted to the PH&W Section by the Welfare Ministry. Following are general features of the Law and the Ordinance.

The Daily Life Security Law:

Establishes government responsibility for providing adequate assistance to needy persons equally without discrimination or preferential treatment.

Defines the role of governmental agencies and public and private welfare institutions operating under the Law.

Extends living expenses, medical treatment, birth aid, occupation aid, and funeral aid to all categories of needy persons.

Specifies extent of financial participation in public assistance program on the national, prefectural and local levels, the national government bearing ##### of the costs.

Rescinds the Relief Law, Military Aid Law, Child Protection Law, Medical Relief Law, and War Damage Protection Law.

The Imperial Ordinance:

Replaces the ordinances for the enforcement of the Relief Law, Military Aida Law, Child Protection Law, Medical Relief Law, and War Damage Protection Law.

Defines the work of the district welfare commissioners.

Provides for the granting of public assistance, in cash or kind, to be issued not more than a month in advance.

Provides aid also, in the form of occupational establishment, vocational rehabilitation, business loans, instruments and materials needed for carrying on a trade or skill.

Defines the medical assistance to be given under the law, including services of trained nurses for expectant mothers.

Provides for loans or grants to pay for funeral expenses.

Describes the system of financial aid from the national treasury to the prefectures, for public assistance to persons and welfare institutions.

The Ministerial Ordinance:

Elaborates on several of the provisions of the Law.

Specifies the information to be furnished on applications to establish or abolish welfare institutions, applications for aid and for funeral expenses.

Stipulates various reports required in connection with the establishment and operation of welfare institutions, the circumstances of welfare recipients, and medical treatment rendered.

Provides for the investigation of welfare institutions by prefectural authorities.

Repeals earlier ministerial ordinances for the enforcement of the old relief laws.

Child Welfare

The Welfare Ministry has issued instructions to Tokyo, Kanagawa, Kyoto, Osaka, Hyogo, Aichi, and Fukuoka prefectures to establish additional government facilities for homeless children. The program calls for 19 temporary protection stations to which homeless children are sent, 7 “discrimination” stations where they are examined, and 10 protection centers for necessary care and treatment. An appropriation of 26,897,850.00 by the Welfare Ministry has been made for these facilities, which includes the expenses of protection committees and training of personnel. The 7 major prefectures will submit projects and plans for Welfare Ministry approval, by 15 October 1946.

Foreign Nationals

The Imperial Japanese Government has increased the "A" diet (rice dietary) in Instruction #1939, dtd 2 October 1946. The following dietaries are effective in all of Japan as of 2 October 1946, retroactive to 15 August 1946.

For United Nation's Nationals, Neutral Nationals, and Stateless Persons (depending on choice of individual).

"A" (Rice Diet)

Rice	4.4 kg
Shoyu	3 go
Edible oil	3 go
Sugar	1 kin
Canned food	5 lbs
Flour	600 momme
Potatoes	1 kan

"B" (Non-Rice Diet)

Sugar	1.5 kin
Butter	2 lbs
Edible oil	3 go
Canned foods	7 lbs
Beef, lean	200 momme
Flour	500 momme
Potatoes	3 kan

List for Axis Nationals:

Sugar	1 kin
Butter	1 lb
Edible oil	3 go
Canned food	5 lbs
Flour	400 momme
Potatoes	3 kans

Chinese citizens will be certified by the Chinese Mission in Japan as to citizenship. Other Nationals will be certified by their respective missions or other reliable sources.

Distribution of Japanese Supplies for Relief Purposes

The Japanese Government submitted their report for the month of August 1946 covering the distribution of former Japanese Army and Navy supplies, held in reserve, for relief purposes. The report included all prefectures with the exception of Kagoshima and reflected the following information on persons receiving these supplies.

Number of families	610,942
Number of persons in families	1,990,236
Number of single persons	<u>64,581</u>
Total number of persons	2,054,817

To date, approximately 34% of the biscuits and 32% of the canned foods authorized for release by SCAP, have been distributed.

Private Welfare Institutions

On 25 September 1946, directive from the Welfare Ministry to Prefectural Governors was issued, subject: "More Emphasis on Protection of Accommodated Needy". It required the immediate check-up of protectees, date of their registration in private welfare institutions, determination of the amount of expense payable to institutions for

indigent care and last, the payment of these expenses without delay. The directive called attention to irregularities in distribution of goods (rations) and states, there shall be a satisfactory distribution for civilian use.

The majority of private welfare institutions are affected by this directive. The additional money they are entitled to receive will give them additional funds for; raising standards of care, securing additional institutional supplies and making minor institutional building repairs and improvements. For example: The Fukusei Byoin (Leprosarium - reference Weekly Summary, WD/PHW, for period 22-28 Sep 46) is to receive immediately all funds due them since the beginning of their fiscal year (1 April 46) through Oct 46, which amounts to approximately 32,550 yen.

Red Cross

Phase one, of the reorganization of the Japanese Red Cross Society having been completed, Mrs. Katherine Sexsmith, ARC, left PH&W Section to return to the U.S. Mrs. Sexsmith will be succeeded by Mr. Thomas L. Metsker, ARC, as Area Director, Civilian Relief for Japan.

The Japanese Red Cross Society continues its gradual reorganization program, and by the end of 1946, will be in a position to offer services long dormant.

For the week ending 30 August 1946, the Japanese Civilian Hospital Strength Report shows 2963 hospitals, with a bed capacity of 210,862 beds, 113,329 of which are occupied. There were 305,333 out-patients treated.

SECTION III VETERINARY AFFAIRS

General

A representative of the division conducted a survey of dairy farms, in the vicinity of Tachikawa, which are engaged in the production of goat milk. Sanitation is largely disregarded and no quality tests are applied. Because of a shortage of concentrate feeds, production is low. The milk is consumed in the raw state, by the inmates of Tokyo Municipal Poor House.

The Nishitama Milk Plant, a branch of Tokyo Milk Company, located in Mizuko village was visited and its activities surveyed. This comparatively modern establishment processes and bottles 185 gallons of milk daily. Equipment consists of receiving vats, pasteurizer, tubular cooler, bottling and capping machine, refrigerator and laboratory.

Quality tests consist of bacteriological, butterfat, acidity and specific gravity determinations. Sanitation and housekeeping are comparatively good.

Reports from Japanese

Animal Disease Report. The Ministry of Agriculture and Forestry. Animal Disease Section, reported that no new outbreaks of disease occurred during the period 29 September to 5 October 1946.

SECTION IV NURSING AFFAIRS

Miss Dorothy Toom reported for duty, as Nursing Education Instructor.

Surveys on facilities, professional and technical data have been completed and reports filed, on schools of nursing and midwifery in Tokyo-To, Kagawa and Tokushima Prefectures.

A representative from this division attended a meeting of the clinical nurses and midwives of Kagawa Prefecture. Lectures were given on Nursing Education. Lectures on nursing as a profession, were also given to the students of the Takamatsu and Marugame City Girls' High Schools.

The second Refresher Course in the Tokyo area, for head nurses and instructors of nursing, started on 1 October. Classes will be of six hours, two days a week, for a twelve week period. Instructors will be Japanese nurses, with representatives from this division assisting in some lectures. The Saisei Kai Hospital is providing classroom and demonstration room facilities, and has furnished the demonstration room with five patient units for demonstrating and practicing nursing arts.

A three day institute has been held for nurses from National Hospitals. Schedule of lectures was patterned after the first Refresher Course.

A committee meeting has attended at the Kofuen Sanatorium in Kanagawa-ken, to discuss the establishment of a refresher course for graduate nurses employed in the hospitals of the Japanese Medical Services Corporation. It was decided the course will be held for an eight week period, six days weekly, eight hours a day, with the total hours roughly apportioned to one-half spent in lectures and conferences, and one-half in practical work in the demonstration room, laboratory, and on the wards. Students will be from 25-30 years of age, graduates from a hospital of the Corporation, with five years active nursing experience, either supervisors or eligible candidates for supervisory positions, and currently employed in hospitals of at least 300 patient capacity. The program will start on or about 14 October.

Representative from this office attended a meeting of the Tokyo Nurses Association at which time a general discussion was held regarding a national meeting.

SECTION V SUPPLY DIVISION

Production of DDT dusters and spraying equipment during the week 23 to 28 September 1946.

DDT Dusters	600
Knapsack Sprayers, 3 gal capacity	870
Semi-automatic, pump type sprayer	130

The penicillin manufacturing plant of the Wakamoto Pharmaceutical Company was inspected to determine sanitary conditions with a view to approving this company for manufacturing and distributing their penicillin output. The plant is considered satisfactory and the Welfare Ministry will be notified accordingly.

Distribution

The Welfare Ministry has forwarded a letter to each prefecture, directing that a report be submitted prior to 20 October, showing the following information on each item of supply, essential to the prefectural sanitation program.

Amount used during 1946.
Amount on hand available for issue as of 31 December 1946.
Quarterly requirement for 1946.

Since this report will provide the basis for 1947 production of insect and rodent control materials, care should be taken to insure that prefectural officials are prompt and accurate in its preparation.

Steps being taken for the cancellation of contracts negotiated between Koeki Eidan (Japanese Trading Corporation), now under liquidation, and pharmaceutical manufacturers, for the manufacturing of medicaments for export purposes. The above cancellation will release for domestic use, through normal trade channels, approximately 80,000,000.00 worth of patent and home remedies.

Narcotics

SCAPIN 1240, dated 30 September 1946, approves the request of the Japanese Government to add the Shionogi Pharmaceutical Company Ltd., Osaka, to the list of SCAP-approved wholesale drug houses to have custody and distribution of Japanese Military Medicinal Narcotics. The addition was necessitated because heretofore only limited storage space was available in Osaka.

Instances, of practitioners using more or less stock formulas of narcotics to treat practically all of their patients, have come to the attention of SCAP Narcotics Control Officers. The doctors concerned were interviewed and agreed to limit use of narcotics to only those cases in which use of narcotics is indicated. It is believed this situation is quite prevalent in Japan. In addition, the fact that narcotics are seldom indicated in the treatment of animals should be brought to the attention of dealers and veterinarians. The assistance of the Veterinary Affairs Division, Public Health and Welfare Section, has been obtained in furthering this phase of the Narcotic Control program.

A report outlining the activities and accomplishments of Narcotic Control in Japan has been prepared and forwarded to the War Department for the attention of the Commissioner of Narcotics, Treasury Department for presentation to the United Nations Commission on Narcotic Drugs.

A rough draft of the Japanese Government monthly narcotic report for August was found to be in error by the Narcotic Control Officers. Military Government officials should emphasize to registered wholesale dealers and prefectural narcotic officials that accurate and complete reports submitted promptly to the Japanese Government constitute the backbone of Narcotic Control Activities. Any narcotic dealer or government official who is negligent in the preparation and forwarding of required reports, should not be tolerated, since such action hinders the preparation of the monthly narcotic report from the Japanese Government as required by SCAP, and ultimately obstructs the entire narcotic control program.

SECTION VII PREVENTIVE MEDICINE

General

Further conferences were held with the Policy and Planning unit, C.I. & E., relative to the projected anti-typhus campaign.

Laboratory Activities

Inspection was made of the Wakamoto Medicine Manufacturing Company's plant in Tokyo. No objection was seen to the proposal of the Welfare Ministry to license this plant for the production of penicillin.

Venereal Disease Control Activities

Conferences were held with the V.D. Control officers of Eighth Army, Tokyo and Yokohama Military Government, and Tokyo and Yokohama Provost Marshal's Office. General problems of mutual interest were discussed. Methods of work were analyzed.

Civilian institutions for the control of venereal diseases in the Tokyo and Yokohama area visited and medical techniques observed.

Sanitary Engineering

A conference was held with Dr. Kitaura, President of the Society of Domestic and Sanitary Engineering, on the setting up of sanitary engineering courses in the universities during the coming academic year. Courses in biology and bacteriology are being given in the College of Medicine; courses in water purification are being set up in the College of Engineering. It is hoped that classes in plumbing and heating will be started in January.

The probability of combining certain selected courses to form a College of Sanitary Engineering was discussed. Dr. Kitaura hopes eventually to achieve this goal.

A budget break-down was submitted by the Welfare Ministry for the proposed expenditure of monies allocated to the Welfare Ministry from the 6 billion yen appropriation for relief employment. It is felt that the amount allocated for sanitation, repair of water supplies and sewerage, and night-soil handling facilities is inadequate. Further conferences on this subject have been scheduled for the coming week.

At the request of Mr. Watanabe, Kokumin-Kyoiku-Sha, publishers, articles were prepared on waste disposal methods and practices commonly used in the United States.

Insect and Rodent Control

A moving picture on mosquito control, produced by this Section, was previewed. Additional scenes and more extensive titling are to be added to make the film complete.

SECTION VIII CONSULTANTS

Port Quarantine

The past few days have seen a slight increase in the number of cholera cases brought from the mainland to Japan, on repatriation vessels. As of 5 October, there were six confirmed cases on hand at Hakata and 19 at Sasebo

as compared to one at Sasebo and none at Hakata, the week before. The overall trend, however, is towards a disappearance of cholera among repatriates to Japan. Cholera quarantine of vessels has already considerably decreased and on this account it is expected that increasing numbers of repatriates can now be handled.

Anticipating an increasing incidence of typhus and plague in the areas from which persons are being repatriated to Japan, study is being made of the present rat control measures at reception centers, to determine if increased rat control activities, both aboard ships and on shore, is indicated. "ANTU", the new highly effective rodent poison will be used in any rodent control program and technical information relative to its use has been disseminated during the past week.

Nutrition Surveys

The Nutrition Consultant attended a meeting of the Vitamin B1 Committee in Kobe, 2 October. Vitamin B1 requirements for Japanese were discussed.

SECTION IX MEMORANDUM TO THE IMPERIAL JAPANESE GOVERNMENT

AG 441.1 (30 Sep 46) PH, (SCAPIN-1240) subj: Custody and Distribution of Japanese Military Medicinal Narcotics Stocks.

AG 441.1 (30 Sep 46) PH, 30 September 1946, Subj: Information of General Application Pertaining to Memorandum Number (SCAPIN-1240), 30 September 1946, subject: "Custody and Distribution of Japanese Military Medicinal Narcotic Stocks", to the Imperial Japanese Government.

CRAWFORD F. SAMS

- #2 - Venereal Disease Report for week ending 14 September 1946.

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
PUBLIC HEALTH AND WELFARE SECTION**

WEEKLY BULLETIN

**For Period
6 October to 12 October
1946**

SECTION I WELFARE

Public Assistance

The first monthly public assistance report under the newly established uniform reporting procedure was submitted to PH&W Section by the Welfare Ministry. The report, covering activities in Japan for the month of August 1946, showed the following:

Total number of persons not in instruction assisted	2,886,307
Net Cash grants	90,882,091 yen
Cost of assistance granted in kind	10,754,684 yen
Number of persons assisted in public or private institutions at government expense	66,991

Chief causes of dependency of persons not in institutions were damaged property, children without support, unemployment and health reasons, in the order named.

These figures represent an increase, over previous months, of approximately 24% in the number of persons assisted and an increase of approximately 127% in the amounts expended for public assistance.

The Director of Social Affairs Bureau of the Welfare Ministry, attributed the increases to the following reasons:

Instructions to the prefecture, from the Welfare Ministry, to liberalize the extent and coverage of public assistance. Meetings with the prefectural governors and welfare chiefs in June and July were called by the Welfare Ministry for this purpose.

The recent disbursement of funds to the prefectures by the National Government for public assistance. Previously the prefectures had to advance the necessary funds, usually by borrowing.

Publicity on the new "Daily Life Security Law" which further emphasized the trend towards a mere liberal attitude in the granting of public assistance.

It was also believed the use of the new uniform reporting procedure influenced the August figures. The report indicates an encouraging beginning towards liberalization of public assistance in Japan. A Japanese welfare official predicted a still further increase in assistance for the month of September.

The August report, consisting of four tables in both Japanese and English texts and used uniformly throughout Japan, contains further details on public assistance for each prefecture on the following:

Date on the number of families and unattached persons assisted; repayments to the government for assistance granted; number of persons in private and public institutions, by type of institution; number of persons assisted not in institutions, by chief causes of dependency; and the type and cost of assistance granted in kind.

Relief Supplies

The Welfare Ministry, reported as of September 1946, 39% of the biscuits and 41% of the canned foods from former Japanese Army and Navy stocks, authorized for distribution by SCAP, have been released in 32 prefectures. Ten thousand tons, about half of the original stock, was the approximate amount authorized for release.

Another report showed that 301,287 kg of concentrated foodstuffs and 14,224 liters of fruit juices, from former Japanese Air Corps stocks, were distributed to 225 public and private welfare institutions in Tokyo-to and Kanagawa-Ken. Two of these institutions in Tokyo and two in Yokohama were visited by representatives of PH&W Section and the quantity of foods reported delivered was found to be correct. The above distribution was authorized by SCAP on 13 Jun 46.

Red Cross

A plan for regular semi-weekly conferences with the president and department directors of Japanese Red Cross has been initiated. The purpose of the regular conference is to provide for planned discussions of subjects in which there is mutual interest. Continuous individual and staff conferences have been held during the week in an effort to evaluate staff services to date and to project staff activities on a planned basis in the future.

SECTION II ADMINISTRATION OF HOSPITALS

For the week ending 6 September 1946, the Japanese Civilian Hospital Strength Report shows 2670 hospitals with a bed capacity of 210,978 beds, 115,235 of which are occupied. There were 310,649 out-patients treated.

On 4 October the Council of Medical Examiners met and elected 17 leading physicians to act as medical examiners. This body will compile and conduct the National examinations for Medical Licensure.

SECTION III
VETERINARY AFFAIRS

General

A representative of the Division made an inspection of slaughter houses, milk plants and dairy farms in the Tokyo area for the purpose of ascertaining the efficiency of inspection methods and sanitation. In most establishments improvements were noted. In those where defects were found to exist corrective measures were recommended.

Reports from the Japanese

Animal Disease Report. The Ministry of Agriculture and Forestry, Animal Disease Section, reported the following new outbreaks of disease during the period 6-12 October 1946.

<u>Prefecture</u>	<u>Disease</u>	<u>Cases</u>
Fukui	Anthrax	1

SECTION IV
DENTAL AFFAIRS

A committee was appointed by the President of the Japanese Dental Association to study the revision of the Association.

SECTION V
NURSING AFFAIRS

Miss Eleanor Carlson reported for duty as Director, School of Nursing.

A representative attended a conference at the Medical Treatment Board, Welfare Ministry. Subjects discussed were: purpose and obligation of the Medical Treatment Board; National Hospitals and Sanatoria organization and administration; organization and administration of the nursing schools attached to these institutions; curricula; nursing personnel policies; possible affiliations for student nurses; and refresher courses for graduate nurses.

A group of Japanese nurses holding administrative positions have formed a study group to discuss problem of administration and supervision in hospitals and schools of nursing, also methods of advancing the nursing profession. Subject of the first meeting was "Nursing Organizations." Mr. Zaccone, Legal Consultant of PH&W discussed organization charters, constitutions and by-laws. Representative from this division attended the meeting.

Demonstration College of Nursing-Staff Education Program has been organized for the supervisors and staff nurses. First meeting will be held 14 October. First unit of program: Nursing procedures.

The translation of the Handbook on Tuberculosis for Public Health Nurses by Violet W. Hodgson has just been completed. Copyright privileges were received from National Tuberculosis Association of U.S.A. (Dr. Emerson).

SECTION VI
SUPPLY

General

Definite information has been received from the Office of the Surgeon General concerning availability of typhus vaccine during the 1946-47 Typhus Season. Due to production difficulties, it will not be possible to supply total estimated import requirement. Although anticipated deliveries will be in excess of the amount provided last year, it will be necessary that field agencies exercise close supervision over the use of typhus vaccine in order to insure that this vaccine is being used to the maximum advantage.

Production

Production of DDT Dusters and Spraying Equipment during period 30 September – 5 October:

DDT Dusters	560
Knapsack Sprayer, 3 gallon	852
Semi-automatic sprayer, pump type	130

The penicillin plant of the Shin Nippon Kogyo Company, located in Odawara City, was inspected on 9 October. The general condition of the factory was considered satisfactory and the plant has been approved for penicillin manufacture and sale. Present production is small due to limited factory space and equipment. A new factory is under construction and additional equipment has been ordered. Sizeable production will be effected upon completion of the new factory on or about 1 December 1946.

Production and sales of X-ray film during September 1946:

Quantity produced:	14,353 square meters
Quantity sold:	14,319 square meters
Stock on hand 30 Sept.	16,243 square meters

Approximately 20% of the Japanese output of film was utilized for production of X-ray film.

Weekly report of the Welfare Ministry reference production of Cholera vaccine indicated a quantity of approximately 3,000,000cc on hand at the end of September. In view of the near close of the cholera season and the fact that only a small number of cases have occurred during the past three (3) weeks, it is not considered necessary to maintain over 1,000,000 cc as reserve stock during the month of October. Proper officials of the Welfare Ministry were notified accordingly.

An inspection of the Tokyo-To Blood Plasma Laboratory was made on 10 October. The Tokyo-To Laboratory is the only producer of blood plasma in Japan. Approximately 300 bottles consisting 200 cc of dried blood plasma are being produced monthly. Sales are being made to Tokyo-To hospitals, doctors in Tokyo area, and in emergencies, to other facilities throughout Japan. An index card system indicating potential blood donors has been established. All blood donors are between the ages 20 – 25 years. Physical examinations are conducted periodically and blood tests are accomplished prior to taking blood. No plans have been made by the Japanese Government to carry out production of blood plasma on a national scale.

Distribution

A review of Military Government Semi Monthly Occupation Activities Reports indicates that some Military Government Teams are experiencing difficulties in securing vaccine to carry out prescribed immunization programs.

The above matter has been reported to the Welfare Ministry for necessary corrective action. Sufficient vaccines are being produced to meet all requirements in Japan, with the exception of typhus vaccine. Prefectural Health Officials should contact the Pharmaceutical Affairs Section, Japanese Welfare Ministry, for their requirement of biologicals.

The Welfare Ministry approved a plan submitted by Tokyo-To to hold a "bazaar" or sale of 500,000 yen worth of returned Japanese Army and Navy Medical Supplies to doctors and hospitals in Tokyo-To. This will be a test sale and will to the basis for similar sales on a national scale.

The bazaar of sale will be held in a large department store in Tokyo. Doctors will be limited to 15 different types of medicaments and 160 different types of surgical instruments.

There will be on sale a selection of 250 various types of medicaments and 150 various types of surgical instruments. Sale will be held from 15 October through 19 October 1946.

Sales to Dentists and Veterinarians are planned for in the near future.

Narcotics

A Narcotic Investigator, on loan from the Bureau of Narcotics, Treasury Department, has completed his survey of production and sales records of former manufacturers of narcotics in Japan. Final reports of the survey have been field, and the investigator has returned to the United States.

The Chief of the Pharmacy Section, Welfare Ministry, informed the Narcotic Control Officer the YASUMI, Yoshisuke, in conformity with SCAPIN 1231, dated 26 September 1946, was removed from Government Service on 3 October 1946. T. Mizuno has been designated Head of the Narcotic Division, replacing YASUMI.

While on an inspection visit to a large hospital in the Tokyo area, the Narcotic Control Officer was informed by the Chief Pharmacist that use of narcotics in the hospital has dropped 50 percent since the effective date of the new Narcotic Regulation.

SECTION VII PREVENTIVE MEDICINE DIVISION

General

A press conference was held with representatives of Japanese news agencies. The present status of typhoid and paratyphoid fevers and dysentery was discussed and a report made on the incidence of these disease during 1946, particularly as compared with 1945. It was pointed out that cholera has, by now, been almost completely

eradicated, and the total number of cases during the recent out-break was held down to approximately 1200. Over 34,000,000 persons were immunized against cholera during this summer.

It was further pointed out that the expected September peak of incidence of typhoid and paratyphoid fevers did not materialize this year, the September incidence of typhoid fever being less than half of that in the corresponding month of 1945, and that of paratyphoid fever approximately four-fifth that of the corresponding period of 1945. The incidence of dysentery followed closely that of the previous year and reached approximately the same peak in August. This year, however, there was a decrease in September as compared to the previous year, and the incidence now appears to be declining somewhat more rapidly than it did during the same period of 1945.

Dr. Albert P. Knight, Pediatrician, arrived and reported for duty.

Typhus

Representatives from the Ministries of Welfare, Education and Transportation, Japan Medical Association and the Japan Women's Medical Association, attended a conference on the Anti-Typhus Campaign. The purpose of the conference was to formulate policies, coordinate media and prepare definite plans well in advance of the danger season for typhus.

Insect and Rodent Control

A movie-picture on flies and fly control, sponsored by the Ministry of Education and intended for use in schools, was previewed. The technical production is excellent and wide-spread distribution of this film will be a factor of considerable value for public education in sanitation.

Venereal Disease Control

The Venereal Disease Control Officer in the Welfare Ministry, was directed to initiate information and educational material for the public and distribute it through the prefectures. He is also in the process of gathering information from his prefectural venereal disease control officers which will show what personnel and public facilities are available for a national program.

Sanitation

A conference was held with a representative of the Welfare Ministry and the Chief of the Section of Water Supply, Tokyo Municipality, on city water supplies. Chlorination of water supplies was discussed. It was brought out that the present production of chlorine will be cut in half, the total possible production as much as 80% by removal and conversion of plants by the reparations commission.

The excessive chlorination (2 p.p.m.) of civilian supplies by the Army (Eights Army Engineering Section) was discussed. So far chlorine from the States has been made available for this purpose, and will remain so for approximately the next six months. After an inspection of six of the largest filter plants (82% of the Tokyo supply) it is apparent that the excess chlorination is necessary, at least until such time as all major breaks and leaks in the distribution system have been repaired and a consent pressure can be maintained on the system at all times. There is also the danger of faulty operation at the plant due to lack of trained personnel, insufficient supplies, particularly aluminum sulphate, and war damage to the physical equipment.

Inspection

Tokyo area water works installations were inspected, in company with representatives from the Tokyo Area Engineer's Office, the Office of the Surgeon, Eighth Army, and the Tokyo water commission. The inspection concerned (1) the operational procedure and (2) the chlorine residuals with the idea of approving the Tokyo supply for use by the troops without further treatment. One hundred fifty sampling stations are established where chlorine residual tests are made daily by the civilian employees and weekly by the army. Bacteriological samples are also taken from these stations weekly. So far the sampling indicates that the supply better than passes the U.S. Treasury standards for drinking water. The following installations were visited:

Kanamachi – Filter Plant
Hongo – Reservoir
Yodobashi – Filter Plant
Suginami – Filter Plant

Udawa – Well Pumping Station
Chofu – Filter Plant
Tamagawa – Filter Plant
Lower-Kinuta – Filter Plant

SECTION VIII CONSULTANTS

Date on food consumption is not entirely complete because of the need for checking the records by the Ministry of Health and Welfare before they are reported. The results on the nutrient consumed in the four cities other than Tokyo-surveyed in February and May are as follows:

Average nutrients in grams and calories per capita, per day from nutrition surveys in Nagoya, Osaka, Kure and Fukuoka, Japan.

	February 1946	May 1946	August 1946
Adult Male Unite	0.865	0.823	0.824
<u>Protein</u>			
Animal	15.6	17.0	10.0
Vegetable	45.0	41.1	44.5
Total	60.6	58.1	54.5
<u>Calories</u>			
Ration	1092	1128	910
Free Market	443	385	458
Home Production	53	49	110
Gift	89	41	48
Total	1677	1603	1526

General

Discussions were held with representatives of the Economic Stabilization Board and the Ministry of Health and Welfare on the function of a National Nutrition Council in relation to the Economic Stabilization Board.

The fourth set of nutrition surveys will take place in late October and November in the cities of Tokyo, Nagoya, Osaka, Kure, Fukuoka, Sapporo, Sendai, Kanazawa at Matsuyawa and in prefectures of Gumma, Tochigi, Ibaragi, Saitama, Tokyo, Chiba, Kanazawa, Shiga, Fukuoka, Sagi, Kurnamoto, Hokkaido, Iwate, Miyaga, Toyama, Ishikawa, Fukui, Ehime and Kochi. It is desirable that Military Government Officers, particularly Medical Officers, observe the surveys and thus indicate official recognition of their importance. The dates of surveys may be obtained from the Japanese Chiefs of Health Sections.

SECTION IX
MEMORANDUM TO THE IMPERIAL JAPANESE GOVERNMENT

AG 440 (11 Oct 46) PH&W, (SCAPIN-1261), subject: Production and Distribution of Supplies and Equipment for Disease Control Purposes.

AG 44 (11 Oct 46) PH 11 October/1946, subject: Information of General Application pertaining to Memorandum Number (SCAPIN-1261), 11 October 1946, subject: "Production and Distribution of Supplies and Equipment for Disease Control Purposes", to the Imperial Japanese Government.

CRAWFORD F. SAMS
Colonel, Medical Corps
Chief, Public Health & Welfare Section

#2 – Venereal Disease Report for week ending 21 September 1946.

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
PUBLIC HEALTH AND WELFARE SECTION**

WEEKLY BULLETIN

**For Period
13 October to 19 October
1946**

SECTION I WELFARE

Alleged Welfare Organizations

Certain Japanese associations and organizations have recently used the term “welfare” to describe their activities. It is necessary to clarify this term.

Any business engaged in the production of essential consumer’s commodities, including industrial, agricultural and fisheries products, and commodities necessary to the production of such essential consumer’s goods, is needful and useful for the welfare of a society.

Organizations engaged in the business of “relief”, frequently named or referred to as welfare organizations, are given over to using all of their facilities for the care and assistance of indigent persons, such care and assistance being rendered without cost to the recipient.

The above paragraphs define the board category of the term “welfare” as against the specific meaning of the term “relief” and/or welfare organizations fully engaged in the business of relief.

Organizations and associations who seek special recognition under the name of “welfare” and imply they are a relief activity, are to be judged on the meaning of the term “welfare” and “relief” as defined above.

Child Welfare

Key officials of the Japanese Welfare, Home, Education, Finance and Justice Ministries participated in a conference called by this section to discuss the pressing need for a vigorous, coordinated program on a nationwide scale, in behalf of the large numbers of children in Japan, in need of care and protection. All were in agreement that present agencies and facilities were inadequate and insufficiently coordinated, and resolved to cooperate in the formulation of specific and concrete plans to develop an improved program. Another meeting has been called for 8 November, at which time, a program to be arranged by joint action of the above Ministries will be presented to PH&W Section.

St. Joseph’s Home (Orphanage)

Inspection was made of the St. Joseph’s Home, by section representatives at the request of the Saitama Military Government Team.

The St. Joseph’s Home is located in Kitakatsu, Shika-gun, Minami Sakurai. It had its’ origin through the mutual interest of the Saitama Military Government Team and the Missionary Sisters of Christ the King. Several former Japanese military barracks in this area were released by the Occupation Forces, and one of these barracks buildings, with ample surrounding land for institutional agricultural purposes, was assigned to this Missionary Order by the Saitama Prefectural Government for the establishment and operation of a children’s home.

The building is in excellent repair and with the exception of adequate heating facilities, it meets a standard approved for institutional child care. There are facilities for clinical care and an isolation ward. Indoor and outdoor recreational facilities are installed such as swings, slides, sandpiles, playroom and minor equipment. The ground within the home’s area is sufficient to provide supplemental vegetables to regular rations and it was noted to be under partial cultivation, which reflected good care and management.

There are only 10 children in the home as the child care problem in Saitama has not presented as big a problem as was anticipated. The home can accommodate 75 children and the Saitama Military Government Team with concurrence of the Sisters, has recommended that the home be utilized to capacity and orphans and abandoned children from adjacent prefectures, particularly in the congested Tokyo-To area, be transferred to St. Joseph’s home, not to exceed 65 children. The children to be accommodated are girls, infants and boys under 10 years of age.

American Red Cross – International Activities

Conferences have continued during the week with the President and other executives of the Japanese Red Cross in reference to their problems being encountered in reorganization. In order to establish and maintain close liaison with the planning and programming activities of JRC, consultant service has been assigned to the Vice-President responsible for coordination of plans and programs at the national and chapter levels. The consultant will be primarily responsible for the assembly and documentation of basic information concerning past, present and future planning of Japanese Junior Red Cross supplies, including gift parcels and seeds. The Japanese Red Cross will plan for the distribution of such supplies. The will also develop a program for distribution of general relief supplies, should they be called on for such assistance, at a future time.

SECTION II MEDICAL SERVICES

General

The Administration of Hospitals Division of this Section has been re-designated as the Medical Service Division. Additional functions of this Division are now medical education and organization of Medical Associations besides the previous function of administration of Japanese hospitals.

Hospital Strength Report

For the week ending 13 September 1946, the Japanese Civilian Hospital Strength Report shows 2980 hospitals, with a bed capacity 211,280 beds, 113,500 of which are occupied. There were 307,760 out-patients treated.

Korean Affairs

Inquiries received recently from individuals and through official channels indicate that a lack of understanding may exist in the minds of some as to the exact situation with regard to hospitals and similar institutions in Korea which were formerly operated by churches, missions and other charitable groups. For the benefit of those people, a word as to the existing situation may be of value.

Inasmuch as Military Government is the only government in United States occupied Korea, this government exercises supervision over all hospitals, whether public, private or charitable, insofar as the meeting of acceptable standards is concerned. For obvious reasons, the Military Government also closely controls the operation of all public (provincial and city) hospitals whose source of operating funds is the government. Because of the fact that transfers of funds from sources outside of Korea into this county have been prohibited for so long, many of the institutions formerly operated by churches, missions and similar groups were shut off from their sources of funds and either had to close or were in danger of doing so. Many or all of these institutions had long records of valuable service and it was deemed desirable to assist at least a few of them to remain in operation if at all possible. To accomplish this some of the institutions were taken over to be operated by Military Government as provincial or national institutions until such time as the setting up of an international money exchange and the initiation of commercial shipping to Korea would permit the original agencies to once again assume the responsibility for operation.

At the present time the following listed institutions are dependent wholly or in part on funds received from Military Government:

Severance Hospital	Seoul
Presbyterian Hospital	Taegu
Taegu Leprosarium	Taegu
Yosu Leprosarium	Yosu
Yongdong Salvation Army Hospital	Yongdong

As such time as appropriate church or mission agencies are in a position to fully support and supply these institutions it is planned to return them to such agencies and to relinquish governmental control except insofar as they will be required to meet certain standards pertaining to all hospitals.

Some of the inquiries received have had to do with the possibility of reopening former mission or church hospitals which are now closed. Here again, one of the primo factors influencing a decision on such a question will be whether or not the agency proposing the reopening will be able to fully support and supply the hospital. Available supplies, like funds, are limited and since only approximately fifty per cent of available hospital facilities are now in use, it is felt that to open many additional facilities would serve only to dilute further the limited funds and supplies without meeting any real need.

SECTION III VETERINARY AFFAIRS

Reports from the Japanese

Animal Disease Report. The Ministry of Agriculture and Forestry, Animal Disease Section, reported the following new outbreaks of disease during the period 13-19 October 1946.

<u>Prefecture</u>	<u>Diseases</u>	<u>Cases</u>
Miyazaki	Anthrax	1
Kyoto	Texas Fever	1
Saga	Texas Fever	6
Nagasaki	Texas Fever	24
Kumamoto	Texas Fever	15

Monthly Dairy Inspection Report for August 1946. Following is a summary of the monthly dairy inspection report for August 1946, submitted by the Veterinary Hygiene Section, Sanitary Bureau, Ministry of Health and Social Affairs.

<u>Special Milk</u>	
<u>Farm Inspections</u>	18
Sample examined	27
Over bacterial standards	0
Under butterfat standards	0
<u>Plant Inspections</u>	29
Over bacterial standards	0
Under butterfat standards	0
<u>Ordinary Milk</u>	
<u>Farm Inspections</u>	6305
Milk samples examined	4479
Over bacterial standards (c)*	381
Under butterfat standards (d)*	909
<u>Plant Inspections</u>	2768
Over bacterial standards (c)*	507
Under butterfat standards (d)*	501
<u>Goat Milk</u>	
<u>Farm Inspections</u>	49
Milk samples examined	65
Over bacterial standards (d)*	4
Under butterfat standards (c)*	7

- (a) 50,000 per cc
 (b) 3.3 percent
 (c) 2,000,000 per cc
 (d) 3.0 percent

SECTION IV DENTAL AFFAIRS

The total number of dentists rehabilitated during September was 918

SECTION V NURSING AFFAIRS

The 1st edition of the Japanese Journal of Nursing was published this week.
 The enrollment at the Tokyo Demonstration School, as of 18 October, is 207.

SECTION VI SUPPLY

Production

The report of the Welfare Ministry, Japanese Government on the production of biologicals during September 1945 indicates production was:

<u>Vaccine</u>	<u>Crude Vac.</u>	Qty. Produced	Stock on Hand 30 Sept.	
		<u>Finished Vac.</u>	<u>Crude Vac.</u>	<u>Finished Vac.</u>
Cholera	1,853,200 cc	2,970,540 cc	1,644,760 cc	2,439,290 cc
Plague	—	194,500 cc	—	524,400 cc
Typhus	—	29,330 cc	—	63,320 cc

Production of DDT Dusters and spraying equipment during the period 7 to 12 October:

DDT Dusters	500
Sprayer, 3 gallon, knapsack type	846
Sprayer, Semi-automatic, pump type	140

Total Production during 1946:

DDT Dusters	22,100
Sprayer, 3 gallon, knapsack type	8,236
Sprayer, Semi-automatic, pump type	2,570

The quantity of petroleum products for the Mosquito and Fly Control program for summer season 1947 has been determined and necessary action has been taken to include necessary quantities in current import programs. Manufacturers of pyrethrum emulsion, for desired quantity needed during 1947, have been selected by the Japanese Government. Extraction of pyrethrum required for this program will begin in November 1946. This procedure will be finished by 1 January 1947. Actual production of finished pyrethrum emulsion will begin on 1 April in order that definite quantities will be distributed on or about 1 May 1947.

Distribution

Reports from the Cental Medicine Distributing Company indicates an increase in the transactions of returned Japanese Army-Navy medicaments. The volume in yen value was 3,365,482 yen compared to 1,363,948 for the proceeding month.

An increase in the volume of distribution of returned Japanese Army-Navy medical instruments was indicated on the report submitted by the Japan Medical Instrument Control Company; 104,709.28 yen were distributed, compared to a distribution of 27,999.08 for the preceding month.

Test sale of returned Japanese Army-Navy medical supplies now being conducted in a department store in Ueno, Tokyo-To, for doctors and hospitals, has proven the most expeditious method for the distribution of this class of medical supplies. Plans are now being formulated by the Welfare Ministry for similar sales throughout Japan.

Narcotics

Progress of the Narcotic Control Program indicates the feasibility of allowing licensed Japanese Narcotic agencies to repackage wholesale stocks of narcotics. This has made possible the revision of the 1947 import program to permit importation in large sized containers which will result in considerable saving in import cost. The revised Narcotic import requirements were furnished ESS on 14 October 1946.

An investigation of a minor diversion of former Japanese Military medicinal narcotics has revealed an instance of what may be unlawful distribution to crew members of narcotics remaining in a ship's dispensary after use of the ship as a repatriation vessel had been discontinued. Under present Japanese laws a ship's master can be held originally responsible for such diversion. The investigation is being continued.

SECTION VII
LEGAL AFFAIRS

The Health Officers of those cities having a Medical Examiner (Tokyo, Yokohama, Kyoto, Osaka, Nagoya, Kobe), should take steps to assure that the results of autopsies performed on cadavers are being made known to local Japanese police, for proper action, where it appears there has been a violation of law. All cases where death results from drinking methyl alcohol, or from eating of poisoned food, should be investigated by Japanese police, not only to prevent further distribution of the poisoned food or liquor, but to secure prosecution of the guilty persons in the local criminal courts.

SECTION VIII
PREVENTIVE MEDICINE DIVISION

General

A press conference was held with representatives of Japanese news agencies, at which, the present program of diphtheria immunization was explained and discussed.

A conference was held with the Chief of the Bureau of Health, Welfare Ministry. A report was received that 4000 letters of diphtheria toxoid has been manufactured and will be delivered to prefectures.

Venereal Disease Control

A conference was held with the liaison officer of the Policy and Planning Unit, Civil Information and Education Section, to further the initiating of a venereal disease information and education program for the Japanese public.

Plans are being made to gather venereal disease data from both Military Government and Japanese prefectural health officers. Previously unavailable data is being sought, by prefectures and for the country as a whole, relative to types of sources, number of in-patients and out-patients under treatment for venereal disease, sex and occupation of patients, case holding, contact tracing, number and location of hospitals and treatment centers and special problems of specific areas. A letter has also been sent to the Director of the Department of Health and Welfare in Korea, requesting information on venereal disease control activities in Southern Korea.

Water Supply

An appeal was made to this section by a representative of the Welfare Ministry to request a revision of the test of chlorine plants slated for removal under the reparations program. It was claimed there would not remain sufficient capacity to satisfy Public Health requirements. This is not in agreement with data in possession of the Industry Division of the Economic and Scientific Section. The matter, however, is being restudied in collaboration with the Industry Division.

A conference was held with the Vice-President of the Japan Waterworks Association, who is working on the compilations of data on the present status of water supply systems, including repairs necessary and estimated cost for materials and labor.

Environmental Sanitation

The Welfare Ministry was instructed to submit a report on the present status of the teams organized under the Insect and Rodent Control program, the report to include the number of teams, the total personnel comprising the teams and the status of their training, so far as it can be evaluated.

Port Quarantine

With the end of the railroad strike in Korea the way has been opened for resumption of normal repatriation activities. Approximately 7,400 Koreans who illegally entered Japan have now been shipped from Sasebo where they previously constituted a considerable obstacle to the flow of incoming repatriates. The situation has been further eased at Sasebo and Hakata by the transfer of excess shipping, awaiting unloading at these ports, to the Kure Area for offloading there.

As negotiations for the repatriation of Japanese from the Russian Areas progress favorably, the ports of Maizuru and Hakodate are being reactivated to receive and process repatriates. The Port Quarantine Division is visiting these stations to aid in readying them for this traffic.

SECTION IX CONSULTANTS

Nutrition Surveys

On 22 October a conference was attended with representatives from SCAP and the various Japanese Ministries in relation to school lunches.

Attached are the results of Nutrition Survey in 19 Prefectures in Japan. Nutrients are given in Grams and Calories per Capita per day for May and August 1946.

AVERAGE RESULTS OF NUTRITION SURVEYS – JAPAN – 19 PREFECTURES *

SECTION X
MEMORANDUM TO THE IMPERIAL JAPANESE GOVERNMENT

AG 430.2 (14 October 46) ph, 14 October 1946 subject: Information of General Application Pertaining to Directive Number (SCAPIN – 482), 11 December 1945, subject: “Nutritional Surveys of Civilian Population”.

CRAWFORD F. SAMS
Colonel, Medical Corps
Chief, Public Health & Welfare Section

2 Incls:

#1 – Communicable disease Report for week ending 5 October 1946.

#2 – Venereal Disease Report for week ending 28 September 1946.

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
PUBLIC HEALTH AND WELFARE SECTION**

WEEKLY BULLETIN

**For Period
20 October to 26 October
1946**

SECTION I WELFARE

Financing Public Assistance

The Welfare Ministry has allotted 650,000,000 yen to the prefectures for public assistance expenses under the Daily Life Security Law, for October, November, and December, 1946. The budget through December 1946, totals 2,015,769,000 yen out of the 3,000,000,000 yen appropriation for the fiscal year ending March 1947.

Public Welfare Publicity

Since 7 Sept., the Welfare Ministry has sponsored meetings in 17 cities to publicize the Daily Life Security Law. A like number are scheduled in other cities through 8 November. The meetings are conducted by Welfare Ministry officials themselves, or by such organizations as the Central Association of Social Workers, Central Welfare Committee-men's Association (Minsei iin) and prefectural welfare departments. The C.I & E. Information Division, at the request of this Section, has begun a series of conferences with Japanese Welfare and Education officials to stimulate further publicity of the new Law by lectures, radio talks, press and magazine articles, pamphlets, and movie shorts.

SECTION II MEDICAL SERVICE

For the week ending 20 September 1946, the Japanese Civilian Hospital Strength Report shown 2982 hospitals with a bed capacity of 211,485 beds, 111,926 of which are occupied. There were 305,739 out-patients treated.

On 22 and 23 October the council for reorganization of the Japan Medical Association; met in first formal session, to consider the reorganization of the Japan Medical Association into a democratic, self-governing body, divorced from governmental control and enunciating as its purpose, the maintenance of ethical standards; advancement of the service of medicine; the dissemination of medical knowledge and the promotion of the interest of the profession for the welfare of the public.

SECTION III VETERINARY AFFAIRS

General

For the purpose of improving inspection methods, the Veterinary Hygiene Section, Ministry of Health and Welfare has adopted the "Score Card System" of dairy farm inspection.

The card recommended by the United States Public Health Service Milk Ordinance and Code was used as a guide. Dairy cows, barns, milking, handling milk and utensils are given a numerical rating based on 100 as a perfect score. A farm must score 50 or more in order to be approved.

Reports from Japanese

Monthly Animal Disease Report for September 1946. Following is a summary of the monthly animal disease report submitted by the Animal Hygiene Section, Ministry of Agriculture and Forestry.

<u>Diseases</u>	<u>Number of Cases</u>
Anthrax	2
Blackleg	0
Brucellosis	0
Trichomoniasis	43
Texas Fever	76
Swine Erysipelas	1
Swine Plague	36
Equine Scabies	1
Strangles	334
Equine Infectious Anemia	62
Pullorum Chick	368

Animal Disease Report

The Ministry of Agriculture and Forestry, Animal Hygiene Section, reported that no new outbreaks of disease occurred during the period 20-26 October 1946.

Monthly Meat Inspection Report for August 1946

Following is a summary of the monthly meat inspection report for August 1946, submitted by the Veterinary Hygiene Section, Sanitary Bureau, Ministry of Health and Welfare.

	<u>Cattle</u>	Calves	<u>Sheep & Goats</u>	<u>Swine</u>	<u>Horses</u>
Number Slaughtered	21959	849	100	2664	6091
Condemned					
Ante Mortem	2	0	0	0	3
Post Mortem					
Total	2	0	0	0	6
Partial	262	7	0	85	348
Viscera	3501	34	0	825	715

SECTION IV DENTAL AFFAIRS

A committee composed of the President, Vice-president, five prefectural delegates, three professors and five practitioners has been appointed by the president of Japanese Dental Association to study the reorganization of the Association along democratic principles.

SECTION V NURSING AFFAIRS

In Weekly Bulletin for period 13-19 October, statement regarding enrollment at the Tokyo Demonstration School is in error. This should be corrected to read, "The patient census at the Tokyo Demonstration School, as of 18 October, is 429."

Facilities at the Tokyo Demonstration School are gradually being expanded. The Central Supply Room has been started and the Central Diet Kitchen is now functioning.

In conjunction with C.I. & E., press representatives from Japanese Magazine publishers attended a press conference at Radio Tokyo in which news information on "Standards of Nursing" will be dissiminated to the general public.

SECTION VI SUPPLY DIVISION

Production

Production of DDT Dusters and Spraying Equipment during period 14-19 October:

	<u>14-19 Oct</u>	<u>Total Produced</u>
DDT Dusters	550	22,650
Sprayers, Knapsack type, 3 gal.	884	9,120
Sprayers, Semi-automatic, pump type	208	3,250

The current production program for spraying equipment will be completed in the near future. This program was set up for production of 9600 sprayers, Knapsack type, 3 gallon and 3410 sprayers, semi-automatic, pump type.

Officials of the Welfare Ministry have been instructed to recomputed requirements and place additional orders accordingly. A total of 40,000 DDT Dusters has been established for current program.

Report of the Health and Welfare Ministry indicates production of medical supplies during September as follows:

Controlled medicines	21,763,796 yen
Non controlled medicines	74,554,512
Patent Medicines	75,933,727
Sanitary Materials	3,112,892
Dental Materials	1,786,339
Biologicals	10,927,932

The above figures approximate those for the months of July and August. A decrease of approximately 5,000,000 yen occurred in the production of patent medicines during September as compared to production of patent medicines during August.

Report indicated production of sulfonamides as follows:

Sulfonamide	3,304 kg
Disulfanilamide	224 kg
Acetylsulfanilamide	1,437 kg
Sulfathiazole	119 kg
Sulfamethiazole	282 kg
Sulfaguanidine	457 kg
Sulfapyridine	336 kg

In order to provide sufficient sulfathiazole for treatment of gonorrhea, officials of the Health and Welfare Ministry were requested to place special emphasis on immediately accelerating production. Plans have now been completed for production of 1000 kgs in November, 1520 kgs in December and 2000 kgs monthly during 1947.

Additional emphasis is being placed on production of typhus vaccine. Plans have been made for production of 10,000,000 cc by 1 April 1947.

Distribution

Reports from the Central Medicine Distributing Company indicated that the purchases of controlled medicaments from manufactures during preceeding month amounted to 28,259,852.47 yen, which was slightly lower than that of the previous month. The sales amounted to 32,842,220.61 yen. This amount exceeded the previous month's activities by 3,000,000 yen.

Narcotics

According to the narcotic report from the Japanese Government for the month of August, the total number of narcotic registrants in Japan has reached a total of 80,352, an increase of 3,041 over the month of July when registration of narcotic dealers was inaugurated under new narcotic regulations.

The breakdown of the registrants by classes is as follows:

Compounders	6
Producers	6
Central Wholesalers	12
Local Wholesalers	191
Retailers	6,377
Practitioners	65,517
Except Narcotic Dealers	<u>8,243</u>
Total	80,352

Information furnished by the report indicates enforcement activities are improving since sizeable quantities of narcotics were seized from illicit traffickers. No large thefts of narcotics were reported. It is imperative that Japanese prefectural narcotics authorities maintain close liaison with other prefectural agencies, especially in obtaining prompt reports of narcotic arrests, seizure, thefts, and ##### for forwarding to the Narcotic Division, Ministry of Health and Social Affairs.

The report also shows that retailers and practitioners are being supplied narcotics from local wholesalers in minimum amounts for legitimate medical purposes as provided by Japanese narcotic regulations.

These arrests were made as a result of investigation activities directed by Narcotic Control Officers. Among the arrests was to third in a series resulting from narcotics being diverted into illicit channels from the dispensaries of ships formerly operating as repatriation vessels.

The Narcotic Control Officer returned from Korea where he rendered assistance and technical advice in connection with Narcotic Control activities in Korea.

SECTION VII PREVENTIVE MEDICINE

General

Two motion pictures were provided, concerning mosquito control and fly control respectively. The mosquito control film is intended for showing to the general public, whereas that on the fly is intended primarily for use in schools and among children. Both films are technically excellent and will be of considerable values in the program of public education.

A film strip on epidemic typhus fever and its control was reviewed at the same time. This film strip was produced during the early part of the year and approximately five hundred prints are, at present, in circulation.

A conference was held with the Chief of Section, the Military Government Public Health Officer, Eighth Army, and interested divisions and consultants of this section to formulate a program for the forthcoming Military Government Public Health Officers' Conferences to be held at Kyoto and Sendai.

Typhus Control

Conferences were held during the week with the Typhus Control Officer of the Welfare Ministry, at which the following was accomplished:

Training programs were scheduled for Sapporo, Hokkaido, 7 and 8 November, and for Akita City, Akita, on 12 and 13 November.

The subject matter for the classes was outlined in detail and a program prepared.

Qualified lecturers were obtained for the courses.

Plans were made for the holding of similar courses at a later date in the other regions of the country.

Water Supply

It is estimated that at the present time plants in the Tokyo water supply system are producing 25% over their rated capacity. The supply of water however, remains inadequate even though the total leakage has been reduced from approximately 80% to less than 50% during the past year. Work is continuing on the reduction of leakage, and it is hoped this can be brought down at least to the 25% which was considered normal.

Sewage Disposal

An inspection was made of the Kohoku Sewage Disposal Plant. The plant is in a poor state of maintenance. Treatment of sewage at this plant is made extremely difficult by the fact that the solid content of the sewage treated is exceedingly low, the sewage being diluted by storm water and waste water from bathing facilities and other sources.

Insect and Rodent Control

Reports have been received from the Japanese sources to the effect that many of the insect and rodent control teams in the prefectures have ceased to function and their personnel has been scattered. Prefectural health officers are requested to look into the present status of the teams in their respective prefectures as it is desired that these teams should not disappear with the passing of the mosquito season. Rodent control activities must be pursued at all times, and in the winter there remains the problem of lice and epidemic typhus fever.

Venereal Disease Control

Inspection trips to the field in company with venereal disease control officers of the Welfare Ministry, Prefectures or local governments show common errors of procedure. Some of these can be corrected locally, others can only be changed by action at the national level.

No venereal disease control programs exist for the general population, attention being focused entirely on prostitutes, entertainers, and in some instances, waitresses.

Public facilities are not being used due to the belief of prefectural Venereal Disease Control Officers that they have no jurisdiction of Venereal Disease Control work in non-prefectural establishments. This has led to distribution of the work to private physicians who, while they accept our drugs, are difficult to supervise and instruct, and have little or no concern for a public Venereal Disease Control program.

Common technical deficiencies noted in a number of areas, which can be corrected locally are:

Overcrowded, noisy examining rooms. Patients should be examined singly with only the clinician and nurse present. Too many men clerks and registrars are present in women's clinics and should be replaced by women.

Poor lighting, so that it is obvious that the clinician cannot make a through inspection.

Clinicians work too mechanically as though the motions were learned by rote and as though every patient presented the pathology.

Inadequate utilization of diagnostic and laboratory aids.

Physical inspections are done in one room by one clinician, while slides and other laboratory preparations are obtained by another doctor. Each patient should be placed on the examining table and draped so that a complete inspection can be done at one time, by the same clinician. No other patients should be in the examining room unless two or more examinations are being conducted at the same time behind screens or partitions.

An insufficient number of women are being diagnosed clinically as having gonorrhea. In the absence of culture facilities it is well known that smears will only find about one-third of the cases of chronic gonorrhea in women.

Insufficient preparations of materials from Ekene's glands are being obtained.

The clinician should wear gloves while examining patients.

A request for basic information of the existing Venereal Disease program in each prefecture will soon be sent out to each prefectural health officer. When this information is assembled, it will give a complete survey of the program as it exists in Japan at the present time.

Port Quarantine

On Wednesday 23 October the Liberty Ship R.L. Stevenson was inspected at the Mikami dockyards, Yokohama. This ship had been prepared for cyanide fumigation by Japanese personnel. The object of the inspection was to determine whether or not the Japanese fumigators were qualified for this work. It was the opinion of those present that preparations had been adequate and were indicative of a satisfactory degree of technical knowledge on the part of the Japanese. GHQ, Eighth Army and COMNAVJAP were represented at this inspection for which arrangements were made by the Port Quarantine Consultant, in cooperation with the other offices concerned.

SECTION VIII CONSULTANTS

Nutrition Division

The Annual meeting of the Japanese Nutritionists was held in Takarazuka Japan, 21 and 22 October. Col. C.F. Sams, MC Chief of Public Health and Welfare Section, Col. Paul E. Howe SnC, Nutrition Consultant and Miss Agnes R. O'Donnell of PH&W, addressed the group. Particular attention was given to the conduct of nutrition survey.

Nutrition Survey

Comparative results of nutrients in grams and calories and various classes of food per capita for the May and August nutrition surveys for Mines and Railway Works are given in the attached tables.

SECTION IX VITAL STATISTICS

The number of births reported in September totaled 193,526, representing an increase of almost 20 per cent above the July figure. The quarterly birth rate (July-September) was 28.8 per 1000 population. Deaths reported in September numbered 117,513, a decrease of 12 per cent below the July figure. The quarterly death rate was 20.5 per 1,000 population.

Stillbirth reported were 7,379, only slightly higher than the number in July. The quarterly stillbirth rate was 166.0 per 1,000 births.

Marriages increased sharply (39 percent) above the July figure, totaling 61,102. The quarterly marriage rate was 8.1 per 1,000 population. Divorces also increased greatly (44 per cent) above the July figure. The quarterly divorce rate was 1.6 per 1,000 population. The ratio of marriages to divorces (5.2 to 1) was not greatly different from that in July (5.4 to 1).

Infant death decreased considerably (22 per cent) below the July number. The quarterly infant mortality rate was 60.7 per 1,000 live births.

MONTHLY VITAL STATISTICS REPORT

Number of Births, Deaths, Stillbirths, marriages and Divorces Reported

According to Prefecture, in September 1946

Area	Births	Deaths	Stillbirths	Marriages	Divorces
All Japan	193,526	117,513	7,379	61,102	11,639
Cities of 30,000 and over	56,603	32,667	2,506	16,136	3,289
All other places	136,923	84,846	4,873	44,966	8,350

SECTION X
MEMORANDUM TO THE IMPERIAL JAPANESE GOVERNMENT

NONE

CRAWFORD F. SAMS
Colonel, Medical Corps
Chief, Public Health & Welfare Section

2 Incls:

- #1 – Communicable Disease Report for week ending 12 October 1946.
- #2 – Venereal Disease Report for week ending 5 October 1946.

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
PUBLIC HEALTH AND WELFARE SECTION**

WEEKLY BULLETIN

**For Period
27 October to 2 November
1946**

SECTION I WELFARE

Child Protection Committees

On the 15 April 1946, the Welfare Ministry issued an order to all prefectures on the subject, "The Execution of Emergency Measures for the Protection of Waifs and Other Children." There are many prefectures in which this directive is not being carried out.

This order among other instructions directed that every prefecture is to establish a Committee of Child Protection. This committee to consist of :

Government officials managing special works including protection for children.

Educators.

Judges and public procurators.

Directors of reformatories.

Police officers.

Persons engaged in social work.

Doctors.

Officials of institutions engaged in child care.

Volunteer lay persons interested in this program.

The order also stressed that "protection shall never be neglected in guiding and protecting children."

Prefectures that have not established these "Child Protection Committees" are to do so immediately and emphasis is to be placed on the matter of child welfare.

Subsidies to Private Welfare Institutions

SCAP policy on government financial support of private welfare institutions as announced in SCAPIN-775, 27 Feb 46 on "Public Assistance" was interpreted and clarified at a conference of representatives of PH&W Section and the Welfare Ministry on 30 Oct as follows:

National government funds will not be used to provide lump sum grants to private welfare institutions except as stated in the following paragraphs.

Government funds, national, prefectural, or local, may be used for the restoration, repair, or expansion of existing private welfare institutions providing care for indigent persons, only if such projects are found to be the most economic and feasible means of providing for these persons in a given locality. In no case will government funds be expended for such purposes where other public or private institutions exist which can adequately meet the need.

Whenever possible, priority in the allocation of funds for projects mentioned in the preceding paragraph, will be given to public welfare institutions.

No grants will be made by national, prefectural, or local governments for the establishment or re-establishment of private welfare institutions.

Where public welfare institutions are not adequate or available, persons requiring or available, persons requiring public assistance in institutions may be placed in private institutions. In such cases government funds may be used to reimburse these institutions (including hospitals) up to an amount not to exceed the average per capita cost of care. This will be determined on a basis of current operating expenses after deducting income.

Wherever funds from the national treasury are used for projects authorized above, prior approval must be obtained from the Welfare Ministry.

All subsidies by the National Government since 30 April 1946 in violation of any of the above provisions will be discontinued at once. They may not be resumed except by special permission from SCAP on individual cases.

The Welfare Ministry officials were instructed to impart this information to subordinate levels of the government and to rescind all laws, ordinances, and instructions insofar as they are in conflict with the above.

SECTION II MEDICAL SERVICE

For the week ending 27 September 1946, the Japanese Civilian Hospital Strength Report shows 2992 hospitals operating with a bed capacity of 213,795 beds, 114,498 of which are occupied. There were 415,123 outpatients treated.

SECTION III VETERINARY AFFAIRS

General

A representative of the division attended a conference of Prefectural Chiefs of Milk and Meat Inspection held in the Ministry of Health and Welfare and delivered an address revelant to the actual procedure of installing the "Dairy Score Card" system of dairy farm inspection. In conjunction with this conference a visit was made to dairy farms in the Hachioji area where each farm was scored by each Prefecture Chief followed by a discussion of errors made in scoring.

The principle defect noted was a tendency to score too high, because of a lack of knowledge of sanitary requirements.

Prefecture Chiefs were informed they would be held responsible for the efficiency of inspectors, in the enforcement of instructions set forth in the "Dairy Score Card" system.

Reports from the Japanese

Animal Disease Report. The Ministry of Agriculture and Forestry, Animal Disease Section, reported the following new outbreaks of diseases during the period 20-26 October 1946.

<u>Prefecture</u>	<u>Diseases</u>	<u>Cases</u>
Kanagawa	Swine Erysipelas	1
Gunma	Swine Erysipelas	1

SECTION IV SUPPLY

General

Dr. J.W. Foster has reported to Public Health & Welfare Section for duty as consultant in connection with production of penicillin.

Representatives of the Supply Division attended the monthly meeting of the Japanese pharmaceutical Manufacturers Association in Osaka and visited a number of pharmaceutical plants in that vicinity.

Several insecticides have been placed on the market in small containers bearing a label which would indicate that the contents included DDT. The value of these products is questionable since actual DDT content is usually negligible. The Ministry of Health and Welfare has issued instructions to the effect that in the future DDT powder will be marketed only in 10% strength and in containers of not less than 10 lb capacity. This action was intended to restrict sales of items containing insufficient quantities of DDT. At the same time any worthwhile DDT products will be marketed in sufficient strength and quantity to be of some value in public health programs.

Production

Production of DDT Dusters and spraying equipment during period 21-26 October:

DDT Dusters	550
Sprayer, Knapsack Type, 3 gallon	825
Sprayer, Semi-automatic	210

Officials of the Health and Welfare Ministry reported that the price of penicillin has been reduced to 200 yen per vial of 30,000 oxford units with a subsidy of 90 yen furnished by the Japanese Government. Previous price of penicillin was 400 yen per vial of 30,000 oxford units with 180 yen subsidy by the Japanese Government.

A conference was held 1 November with representatives of the Ministry of Health and Welfare on the subject of penicillin production. The main outline of the organization and objectives of the penicillin program were presented and discussed.

On 29 October a party including Dr. Foster, Major Bourland and Captain Cummings made an inspection visit to the following two penicillin plants.

Kawasaki factory of Meiji Sangyo Kaisha, Ltd.
Teikokusha Agric. Chem. Company.

The operating procedures were observed briefly and suggestions for improvements made at several steps in the process. The Meiji Plants impressed the party in size, condition and equipment and may be rated Class A. The Teikokusha Plant is still laboratory scale, quite ill equipped for production and rates Class D.

Distribution

The Japanese National Red Cross is contemplating distribution of the large amount of medicines and other medical supplies held as a reserve for emergency use in their headquarters warehouse. Distribution of these supplies will be made to the Red Cross hospitals throughout Japan.

Narcotics

A program to obtain a record of all narcotic addicts in Japan, whether presently using narcotics or not, has been inaugurated. The Ministry of Welfare is preparing a sample form in blank to be completed on each addict. Pending the receipt of this sample form, one copy of which is to be retained by the prefecture and another copy forwarded to the Ministry of Welfare, the following information will be obtained from all addicts as rapidly as possible: Prefecture, date, name of addict (including aliases), sex, place and date of birth, personal description, years in city or district, if transient other places of abode, means of livelihood, date of narcotic addiction, date of first narcotic arrest, date and charge of first non-narcotic arrest, reason for addiction, present and recent availability of drugs, present source of supply, cures, local rendezvous, addict associates or acquaintances, source of supply of these persons, complete criminal history, signature and stamp of addict.

The Ministry of Welfare was instructed to complete the removal of excess stocks from retailers, hospitals, doctors, dentists and veterinary surgeons to local wholesale houses by 15 December 1946. It is desired that stocks of wholesalers show the actual amount of narcotic working-stocks in Japan as of 31 December 1946.

Hospitals inspected by SCAP – Narcotic Control Officers continue to report they are gratified, that under the new narcotic control system they can buy necessary narcotics at a fair price, only a small amount need be purchased at one time since there is no compulsion to buy large stocks for eventual shortages, and resorting to the blackmarket is not only illegal but unnecessary.

On 25 October an investigation, directed SCAP-Narcotic Control Officers and participated in by a Tokyo Narcotic Inspector and police of Arakawa Police Station, resulted in the arrests of the racketeer-head of Asakusa Ward (who ostensibly was doing business as an entertainment booking agent), a criminal lawyer, and a convict currently in jail for murder. To date three pounds of opium powder, one-half pound of codeine, and one-half pound of narcocon have been seized. The investigation is continuing.

SECTION V PREVENTIVE MEDICINE

General

Lt. Col. Charles M. Wheeler reported for duty as consultant on typhus fever.

Diphtheria

The seasonal rise in the incidence of diphtheria has apparently been checked. The latest available official reports show that the incidence has remained almost constant for three weeks at approximately 70/100,000/anum.

Typhus Fever

Plans were completed for the projected typhus control training program to be held in Sapporo and Akita City for Japanese health officers. Final details were worked out with Drs. Shibayama and Yosano of the Bureau of Health, Welfare Ministry.

Dr. T. Tsuchita, Chief, and Dr. C. Ito, Assistant Chief, of the Osaka Prefectural Health Section visited this office and presented tentative plans for typhus control in Osaka. Minor changes and additions were suggested, and

the problem of supply procedure was discussed. The practicability and importance of making louse counts were stressed, as was the importance of louse control measures not involving the use of DDT.

Venereal Disease Control

In the prefectures visited to date, Prefectural Health Officers and Venereal Disease Control Officers were advised to establish additional clinics in order to furnish service to the inhabitants in the large centers of population and not merely those which happen to be near troop concentrations. Military Government Health Officers are urged to stimulate this type of development in all prefectures.

Clinicians were directed to make more clinical diagnoses. In the absence of culture facilities and with the known deficiencies of smears as diagnostic aids, it is believed that the majority of infected cases are being missed at the present time and allowed to return to their work of infecting the population.

Water Supply

Water supplies are generally adequate in quantity, due to the recent increase in rain fall. Work continues on the distribution systems in war damaged areas, and considerable improvement in leak stoppage is apparent.

A program for investigation of semi-public and individual supplies is being studied with a view to making available, information and facilities for improving these supplies.

Waste Disposal

Lack of improvement in the collection and disposal of refuse has been attributed to the premium placed on transportation and the low wages paid to workers in this type of activity.

Insect and Rodent Control

The potential danger due to the prevalence of rodents is expected to increase with the approach of winter, when rats are driven by cold weather and the lack of natural food sources into closer contact with humans. The possibility that some of the typhus may be murine in nature adds to the importance of the problem. Educational programs designed to facilitate control both by individuals and by groups are being formulated. The manufacture of traps and poisons and training in the proper use thereof are being stimulated by the Welfare Ministry.

Port Quarantine

Information from Korea indicates that the cholera situation there continues to warrant strict Quarantine Control of those people who are being out processed as repatriates to Japan. Such measures as a routine 6-day quarantine period serve not only to prevent the advent of more cholera to Japan but also to prevent the tie-up of needed shipping, since repatriates, among whom cholera is found, must be quarantine on shipboard on arrival in Japan.

Cases of smallpox and louse-borne typhus have begun to appear in incoming repatriates. In anticipation of a continued and increasing incidence of these diseases, general provisions governing their Quarantine management have been added to present directives.

It has recently been provided that lepers may be repatriated to Japan. According to latest reports five lepers have been received at Sasebo and arrangements are being made for their transport to Leprosaria in Japan.

SECTION VI CONSULTANTS

Nutrition

Results of the food consumption studies in the August nutrition survey in the rural areas in 27 prefectures are as follows:

RESULTS OF NUTRITION SURVEYS -JAPAN- 27 PREFECTURES, 1946

Nutrients in grams and calories, and grams of various classes of food consumed per capita per day

<u>Others</u>	3.1	

The average results by regions should show differences in food patterns for various parts of Japan. Comparison of the results of the August survey with the previous May survey, however, failed to show marked differences in the amounts of various classes of food consumed, in the surveyed regions. The recorded variations show a higher consumption of wheat, other grains and vegetables in August.

Chief, Public Health & Welfare Section

2 Incls:

- #1 – Communicable Disease Report for week ending 19 October 1946.
- #2 – Venereal Disease Report for week ending 12 October 1946.

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
Public Health and Welfare Section**

**WEEKLY BULLETIN
For Period
3 November - 9 November
1946**

SECTION I WELFARE

Social Work Education

The opening ceremony for the new one-year professional course in social work, was held on 9 November 1946 in the auditorium of the Japanese Red Cross Headquarters, under the auspices of the Central Social Work Association.

The ceremony was attended by approximately 125 persons, including 51 students, who were selected from 120 applicants, member of the Social Work Educational Committee, representatives from the Welfare Ministry and representatives from Public Health & Welfare Section, SCAP. Those addressing the group were Mr. Akagi (Director of the Central Social Work Association and temporary head of the social work school), Mr. Fukuyama (Secretary of the Social Work Association), Mr. Ito (Vice Minister, Welfare Ministry) and a representative of Welfare Division, PH&W, SCAP.

The courses of study and training are scheduled to begin on 11 November 1946 in Tokyo. The student's ages range between 21 years-30 years and represent 20 prefectures. All the students are college or university graduates and have varying backgrounds, such as Buddhist priests, Shinto priest, farmers, industrial workers, teachers, government employees and physicians.

The Welfare Ministry, in its attempt to orientate government personnel in the significance of new social trends and to coordinate their efforts in effecting an efficient administration of the new "Daily Life Security Law" is sponsoring a series of "in-service" training courses for government workers. The first of these training courses is scheduled at Otsu, Shiga Prefecture, between the dates 11-20, November 1946.

Public Welfare Conferences (Eighth Army)

The Public Welfare Division, Military Government Section, Headquarters, Eighth Army held two conferences (I Corps, Kyoto, 22-23 Oct 46) (IX Corps, Sendai, 4-5 Nov 46) on subject "Public Welfare".

The conferences proved very beneficial as they afforded ample roundtable discussion for the representatives of Military Government Teams, Headquarters Staff, Eighth Army and Headquarters Staff, SCAP.

The subjects discussed included; "United Nation's Nationals, Stateless Persons and Enemy Nationals," "International Relief Committee," "Reorganization of the Japanese Red Cross," "Child Welfare Programs," "Public Assistance under the Daily Life Security Law," "Responsibilities of the Public Welfare Officer", and "Licensed Agencies for Relief of Asia."

Mimeographed material on "Public Assistance", "Public Assistance under the Daily Life Security Law" and "Child Welfare", which were discussed at the conferences has been forwarded to each Military Government Team.

Public Assistance Report for September 1946

The Welfare Ministry's public assistance report for the month of September showed a decrease in persons assisted and an increase in grants over the previous month. Comparative figures for both months are shown below:

	<u>AUG</u>	<u>SEPT</u>
Number of persons (not in institutes) assisted	2,886,307	####
Number of persons in institutes asstd. by Govt.	66,991	####
Total number of persons assisted	2,953,298	####
Net cash grants	Yen 90,882,091	####
Cost of grants in kind	10,754,684	####
Total grants	101,636,775	####

"Unemployment" replaced "damaged property" as the chief reason for dependency. Other chief reasons were listed as "children without support", "health problems", and "old age", in that order.

Widest fluctuations in prefectures in the number of persons assisted in September as compared with August are shown below:

<u>Prefecture</u>	<u>August</u>	<u>September</u>
Miyazaki	339,658	33,767
Gifu	118,289	169,636
Shimane	23,920	37,794
Saga	14,354	18,794
Kagoshima	72,816	110,471
Hiroshima	43,664	55,849
Osaka	126,823	148,952
Niigata	79,324	101,258
Ibaraki	41,291	62,204
Miyagi	57,531	78,900
Iwate	74,186	59,451

The report did not ascribe special reasons for these fluctuations except that it attributed most of the decreases as being due to a drop in persons being aided by irregular material grants.

Red Cross

Mr. Philip Ryan, Director International Activities Department, Insular & Foreign Operations, American Red Cross, National Hqs, spent the week in Japan reviewing the International Activities program.

The Japanese Red Cross will celebrate "Annual Red Cross Day" on 15 November. A special program for that day is planned at the National Hqs. The Chief of Section, Public Health & Welfare, and the Theater Commissioner of the American Red Cross have accepted invitations to participate in the program. The Directors of all the local Red Cross branches have been asked to have special programs on that day.

Japanese Junior Red Cross officials have agreed to have an initial statement of the objectives of the Junior program ready for incorporation in the revised course of study for elementary and secondary schools by not later than 1 December 1946. It was also decided that the Demonstration ##### Schools in Tokyo would be asked to serve as a demonstration school for initia##### new Junior Red Cross programs. Survey material necessary for basing requ##### for American Junior Red Cross supplies has been completed and a request for the material is being prepared.

SECTION II MEDICAL SERVICE

For the week ending 4 October 1946, the Japanese Civilian Hospital Strength Report shows 3013 hospitals with a bed capacity of 214,101 beds, 114,528 of which are occupied. There were 278,254 outpatients treated.

SECTION III VETERINARY AFFAIRS

General

A representative of the division conducted a survey of veterinary affairs in Saitama Prefecture. Ante and post mortem meat inspection is being maintained in all slaughter houses.

Post mortem procedure is faulty in that insufficient lymph glands are incised by many inspectors and sanitation is frequently neglected.

Pasteurization of milk is faulty due to recording and indicating thermometers being out of repair. Much dairy farm equipment is old, rusty and in poor condition. The tuberculin test of dairy cows and bacterial examination of milk are being neglected.

The officials concerned were instructed to institute the necessary corrective measures.

Reports from the Japanese

Animal Disease Report. The Ministry of Agriculture and Forestry, Animal Disease Section, reported the following new outbreaks of disease during the period 3-9 November 1946.

Prefecture	Disease	Cases
Chiba	Swine Erysepelas	1

SECTION IV DENTAL AFFAIRS

Authority has been granted for the establishment of a dental hygiene section in the Tokyo Metropolitan Health Center.

SECTION V NURSING AFFAIRS

Survey of Schools of Nursing

To date, 27 prefectures of the 47 prefectures in Japan, have been surveyed. In connection with these surveys, many hospitals, clinics, and similar institutions have been inspected. These surveys determine the existing standards in the various schools of nursing, and also enable the Public Health and Welfare Section to ascertain the number of schools that will be eligible to continue to function when the new legislation is passed, governing the standards of schools of nursing. Efforts are made to get as nearly complete a picture as possible, and information is obtained relative to curricula, educational standards, physical set-up, and degree of training.

It has been found, that a large number of the schools surveyed to date are in good condition and with some assistance, could continue with a standardized training program.

Nursing Education

The two tuberculosis pamphlets mentioned in previous bulletins have been translated into Japanese and published for the information of nurses engaged in tuberculosis education. Copyright privileges were given by the National Tuberculosis Association of America.

Nurses Association

The Japanese Nurses Association is scheduled to hold its first meeting in Tokyo on 22, 23, and 24 November. This organization is composed of the midwives, clinical, and public health nurses of Japan.

SECTION VI SUPPLY

General

Several manufacturers are producing vaccines of various descriptions for oral administration. One firm is producing quite substantial quantities of typhus, cholera and dysentery vaccine.

Although the Health and Welfare Ministry has not recognized the value of oral vaccine, a number of laboratories have been licensed to produce this material. With a view to conserving critical materials, the Welfare Ministry is not allocating controlled raw materials for the purpose of manufacturing oral vaccine. This restriction does not apply to research projects.

Distribution

An emergency shipment by air of 25,000 vials of Typhus Vaccine was made to Korea in order to aid their program, pending the arrival of their requirements from the United States.

Production

The Welfare Ministry submitted information on Sulpha drugs and their forms of uses that have been approved officially and are so listed in the Japanese Pharmacopoeia, also the officially recognized "Official National Formula". They are listed as follows:

- Japanese Pharmacopoeia
 - Sulfamine
 - Di-Sulfamine

- Official National Formula
 - Sulfapyridine
 - Injection of Sulfapyridine
 - Sulfathiazole
 - Tablets of Sulfathiazole
 - Injection of Sulfathiazole

 - Sulfamethylthiazole
 - Tablets of Sulfamethylthiazole

Injection of Sulfamethylthiazole
Sulfaguanidine
Injection of Sulfaguanidine
Injection of Acetsulfamine

Production of DDT Dusters and Spraying equipment during period 28 October 2 November:

DDT Dusters	517
Sprayer, Knapsack, 3 gallon	98
Sprayer, Semi-automatic	212

The present program of production is almost completed. A new program has been established and production of total quantities indicated below will be produced under this new program:

DDT Dusters	80,000
Knapsack, Sprayer, 3 gallon	40,000
Sprayer, Semi-automatic, pump type	15,000
Sprayer, 2 quart, Hand	50,000

Textile requirements for one year for production of medical supplies have been estimated as follows:

Sanitary Materials - 45,000 bales raw cotton	
Medicines	
Silk Cloth - 36"x25 yd. pieces	6770 yards
Silk yarn	154000 yards
Sutures - Silk yarn - 6000 lbs.	

This information has been furnished ESS.

Necessary action was taken to stimulate Japanese production of x-ray film to provide approximately 5,000 square meters monthly for use by U.S. Occupation Forces in Japan.

Narcotics

The narcotic report for the month of September from the Japanese Government indicates considerable progress is being made in levelling narcotic stocks since sales by local wholesalers during the month were balanced in almost all cases by the amounts received from the excess stocks of retailers and practitioners.

Complaints from retailers and practitioners have been heard to the effect that local wholesale houses are not conveniently located with respect to accessibility for all narcotic dealers because of transportation difficulties. The report from the Japanese Government shows local wholesale houses are now established in every prefecture and in all except eight prefectures there are more than two such wholesalers. The number of registered wholesale houses will be increased gradually. Japanese officials have been instructed to carefully determine the reliability of the wholesaler as well as the security of the storage space provided before licensing and registering any additional firms.

Japanese narcotic officials from all the eastern prefectures of Japan gathered in Tokyo 8 November 1946. Throughout the day SCAP-Narcotic Control Officers, Japanese Narcotic officials in the Welfare Ministry, and Japanese narcotic enforcement officers trained by SCAP-Narcotic Control Officers instructed the prefectural narcotic officials in the many phases of narcotic control. Corrections in procedure to be made in individual prefectures as derived from monthly reports and other sources of information were discussed with the officials concerned. A similar meeting for prefectures in the southern and western part of Japan will be held in Kyoto 12 November 1946.

According to a report received from the Ministry of Justice all 17 defendants in the Wakayama Opium Case were found guilty and sentenced 31 October 1946. Ten of the seventeen sentences were suspended. The procurator and the Ministry of Justice considered 8 of the sentences too light few the offense committed and have entered an appeal.

SECTION VII PREVENTIVE MEDICINE

Typhus Control

The typhus control consultants are actively engaged in putting into operation a vigorous typhus control program. At the present time they are in the field conducting training programs for Japanese prefectural health officials in cooperation with Military Government health officers. The typhus control training team began their work at

Sapporo and will work at south during November and December. At least one training conference is scheduled for each region.

On 5 November 1946 a magazine press conference was held with representatives of the Japanese press. This conference was devoted to a general discussion of typhus, emphasizing that typhus is a louse borne disease. Early symptoms, need of transmission and control measures were emphasized. Special emphasis was placed upon what the individual and community group could and should do to control typhus without resorting to immunization and DDT dusting. The importance of prompt reporting of every suspected case of typhus to the family doctor or health officials and cooperation with health authorities and typhus control teams was stressed.

Typhus Control Supplies

Information received indicates that a number of Military Government health officers and prefectural health officers have gotten the impression there is a shortage of DDT supplies for typhus control purposes. Public Health and Welfare Section has been informed that adequate stocks of DDT supplies are available for the necessary typhus control procedures. Military Government health officers are urged to survey their DDT requirements and to place requisitions without delay through proper channels, if this has not already been done.

Venereal Disease Control

Education work during the past week emphasized the following points. The laity were urged to establish venereal disease control councils in each community. These councils should be formed from representatives of progressive peoples' societies, women's clubs, labor union, business men's civic clubs, the press, welfare agencies, school systems, religious societies, police and court authorities and representatives from the medical and allied professions. These are the societies which enable the prefectural venereal disease control officer to carry out continuous education work among the people.

Physicians were again impressed with the medical impracticality of the routine examinations of prostitutes as a means of controlling the spread of infections from these sources. It was emphasized again that clinicians should make the majority of their diagnoses of infections in prostitutes on a clinical basis, since repeated studies of unselected groups of prostitutes have shown 60% - 90% of these women to be infected. The routine examinations as observed in several clinics show that only two to five percent positive diagnosis is being made in groups of known prostitutes. Obviously this is in error and a false security is obtained.

Requests for basic venereal disease control data have been distributed and should now be in the hands of the Military Government health officer in each prefecture. It is expected that Military Government health officers will cooperate whole heartedly in the collection of this data which is urgently needed in order to formulate plans for a long range venereal disease control program on a national basis.

A press conference was held with representatives of the Japanese press. This was one of a series of press conferences designed to acquaint the public with the venereal disease problems and to arouse them to concerted action in controlling venereal disease.

Port Quarantine

"Foreign Quarantine Regulations for Japan", SCAP Circular #10, has been published during the past week. These regulations govern the entry into and exit from Japan of all individuals as well as Aircraft and Surface vessels. The Health measures provided for in these regulations will be put into operation by the Commanding General, Eighth Army, using such Japanese facilities as are available.

SECTION VIII COSULTANTS

General

The Nutrition Consultant observed surveys in Miyagi and Tochigi Prefectures in the course of which the improved septic tank type toilet and improved kitchen arrangement was observed in Chickazono Village, Tochigi prefecture. This is a demonstration project for the reduction of parasitic infection which claimed to be resulting in improved health.

Nutrition Surveys

The fourth series of nutrition surveys which are in progress throughout Japan for the month of November began in Tokyo on the 4 November 1946.

Results of the physical examination in the nutrition surveys of 27 prefectures in August are presented in the following table. There was no change in the occurance of symptom associated with nutrition deficiencies.

WEEKLY BULLETIN

SECTION I WELFARE

School Lunch Program

Culminating a series of conferences attended by the Ministries of Health and Welfare, Finance, Agriculture and Forestry; Home Affairs, and the Economic and Scientific Section, Natural Resources Section, Civilian Education and Information, and Public Health and Welfare Section, SCAP, a nation-wide school lunch program was confirmed. This program will originate in the urban center schools, prepared to handle student feeding and will be supplementary in nature, in the initial stages. As experience is gained, and as sources of necessary nutritional items are assured, the program will be expanded to the rural areas and will, in time, include all primary and secondary school children. A school lunch program is necessary to give the students, now in training for their role in a democratic Japan, a body strengthening suppliment to a meager diet. It is also necessary to assure a continual low incidence of tuberculosis and other infections diseases. It is estimated that the development of the entire program will require a minimum of three months.

Child Placement (Foster Home Program)

Certain metropolitan areas claim they are finding it difficult to handle many of the “children of the streets” who have taken to a life of aimless existance and are experimenting with sending these children away from the city to farms and fishing villages, where they may be apt to more readily mend their ways under nature’s influence.

A well planned child placement program (foster homes) for orphaned and/or deserted children is to be commended, but a word of caution is necessary at this time.

Japan is a maze of small family enterprises and every precaution must be taken to insure that a child placed in a foster home is not placed there through purchases, lease or under the guise of adoption and become the victim of involuntary servitude and for labor abuses. It is not necessary to elaborate on the corrupt practices that may develop in a program of this nature, unless it is under constant surveillance.

The labor laws in Japan do not extend any protection to minors working in enterprises operated by “members of the same family”. Until such time as the labor laws give full protection to minors, every precaution must be exercised in the development of any child placement program for exacting safeguards and surveillance against the abuse and subversion of the program, otherwise the program will defeat its purpose and will be another guise for exploiting the homeless child and the orphan in “family enterprises”.

Japanese Red Cross

At the request of the Junior Red Cross Director, concrete suggestions for training leaders and teacher-sponsors have been developed and presented in a series of conferences.

The extent of Junior Red Cross participation in the contemplated new school lunch program is being considered. The initial draft of Junior Red Cross objectives to be included in the revised courses of study for schools has been completed.

The final draft of the revised rules and regulations of the Red Cross have been translated and reviewed. At a meeting of the standing council, plans for the reorganization of the National Headquarters were approved.

SECTION II MEDICAL SERVICE

For the week ending 11 October 1946, the Japanese Civilian Hospital Strength Report shows 3011 hospitals in operation, with a capacity of 213,491 beds, 112,850 of which are occupied. There were 282,027 out-patients treated.

SECTION III

Report from the Japanese

The Ministry of Agriculture and Forestry, Animal Disease Section, reported the following new outbreaks of disease during the period 10-16 November, 1946.

<u>Prefectures</u>	<u>Disease</u>	<u>Cases</u>
Hyogo	Blackleg	1
Saitama	Swine Erysipelas	1
Tokyo	Swine Erysipelas	1
Kumamoto	Texas Fever	17
Nagasaki	Texas Fever	6

SECTION IV

DENTAL AFFAIRS

For the month ending 15 October there were 39 dentists reestablished in practice.

SECTION V SUPPLY

Production

A symposium on theoretical and practical aspects of penicillin production was held under the leadership of Dr. Foster at the Ministry of Health. Some 400 University scientists and representatives of each penicillin manufacturer from all over Japan attended these lectures. The following penicillin plants were inspected on 8-12 November:

Morinaga at Mishima
Shin Nihon Kogyo Ltd. at Odawara
Sanyoyushi Co. Ltd. at Nagoya
Banyu Co. Ltd. at Okazaki

The Sanyoyushi Company is considered to be the only plant so far seen in Japan which has high class large scale heavy equipment and an appreciation of factory scale methods for penicillin. The engineering proficiency of this company also is impressive for penicillin. This organization doubtless will have one of the largest penicillin plants in Japan if not in the world, and seems likely to be first in truly factory scale production. They were urged to draw up flow sheets and engineering design and seek any necessary aid from SCAP as soon as possible. This plant will be pushed to the limit by this office for it has the possibility of being the first in production and can serve as an instructive model and leadership for other plants. In October a total of 24 million units was produced in Japan.

While on a recent trip to Osaka a complaint was registered that doctors in that prefecture were unable to purchase hypodermic needles. The Welfare Ministry was notified and a check was made of the above complaint.

It was found that there is a sufficient supply of hypodermic needles in Japan and that the doctors were being notified through their prefectures the names of dealers from whom purchases can be made.

Distribution

Arrangements were completed for the shipment of 100,000 vials of U.S. Typhus vaccine via water transportation to Korea.

The pharmaceutical Affairs Section, Japanese Welfare Ministry, is requesting all prefectural health officers to submit their requirements for V.C. clinics and laboratories, and necessary action will be taken by the Ministry in securing the requested supplies for them.

At the request of the Quarantine Officer, PH&W, arrangements were made to have 96 kilograms of Japanese produced Salfanilamide ointment sent in equal amounts to the following ports, for treatment of dermatitis suffered by repatriates awaiting shipment to destination:

Nagoya, Kagoshima, Sasebo and Ujina.

Medical supplies declared excess by repatriation ports have been taken into custody by the Japanese Quarantine Bureau, and distribution of these supplies were made to ports which are in need of medical supplies. Excess medical supplies being returned from Hulutao are also being distributed accordingly.

Narcotic Control

A survey of the narcotic activities of drug manufacturers in Japan Proper from 1930 to 1945, a total of eight reports, is being forwarded to the War Department for the attention of the Commissioner of Narcotics, Treasury Department, Washington, D.C.

A visit was made to Kyoto by the Narcotic Control Officer, Assistant Narcotic Control Officer, and a narcotic inspector of Tokyo-To to attend a meeting of all the prefectural narcotic officials of the southern half of Japan and Welfare Ministry narcotic officials. Talks covering all aspects of the new narcotic laws were made by the Narcotic Control Officers and Welfare Ministry officials. Emphasis was placed on the leveling of narcotic stocks and proper disposition of narcotic addicts, Narcotic warehouses of the Takeda, Tanabe and Dai Nippon drug companies were examined. Their appointments and security features showed considerable improvement since last visited by the Narcotic Control Officer.

The above meeting, plus a previous meeting in Tokyo on 8 November 1946 of all prefectural narcotic officials of the northern half of Japan completes the preliminary orientation of all prefectural narcotic officials in Japan. At both meetings the officials were advised that either a Narcotic Control Officer or a Welfare Ministry narcotic officials would, upon a month's notice, go to any prefecture in Japan to help in the solution of any particular narcotic problem that might arise.

SECTION VI PREVENTIVE MEDICINE

General

A conference was held with the Chief of the Acute Infectious Disease Section, Welfare Ministry, to discuss possibilities and methods for expediting the collection and forwarding of current communicable disease reports. It was agreed that venereal disease reports would be advanced one week, to conform with other communicable disease reports. It was agreed further that all reports should be forwarded by prefectural health officers as soon as possible after the end of the week for which the report is submitted. Military Government health officers are urged to assist prefectural health officers in this project.

Sanitary Engineering

Inspections were made of water supplies, water works and waste disposal facilities at Sapporo, Aomori, Akita and Niigata. Further confirmation was given to the previously held impression that there are many physically satisfactory waterworks installations presently producing water of questionable quality because of poor operational technique.

Plans are being developed to set up training schools for waterworks operators, the source designed to run for three months and to cover operation of filters and other equipment chemical treatment, bacteriological examination and other pertinent subjects. The presentation is to be in a manner understandable to sub-professionally educated operators.

Insect and Rodent Control

Numerous cities are currently conducting programs of rodent poisoning using Antu with flour or rice meal as bait. Programs were observed in Tokyo, Aomori and Niigata; varying degrees of success were being achieved, commensurate with the skill used in mixing and sitting out the baits.

Typhus Control

Two-day training courses in louse-borne typhus fever and its control were conducted in Sapporo and Akita City for health officers of Hokkaido and the Tohoku region respectively. Health officers of subordinate administrative units also attended.

Special emphasis was placed upon educating the Japanese public in louse control methods not involving the use of DDT. This was done not because of any shortage of DDT but to counteract a tendency to rely upon it as a cure all, while neglecting other simple, common sense measures. DDT is regarded as an effective agent, particularly valuable in case of an actual or impending epidemic.

Venereal Disease Control

The venereal disease control officer in the Welfare Ministry has been directed to continue efforts to establish venereal disease control clinics in health centers through-out the prefectures, and to use national hospitals for venereal disease in-patients.

The medical and epidemiologic inadequacies of the system of routine examination of prostitutes were stressed in order that clinicians will increase their efforts to make diagnosis of gonorrhea on a clinical basis.

Studies are being compiled which it is believed will establish venereal disease control on sound public health principles, and which will clarify the function of the Police, the Courts, the Welfare agencies, and Public Health Departments.

Port Quarantine

Foreign Quarantine regulations for Japan, published during the previous week, have disseminated to the authorities concerned with their enforcement. Since Japan's Foreign Commerce is expected to increase it is anticipated that additional ports shall have to be recognized as ports of entry. Plans have been formulated during the past week to hold a series of conferences to settle this and other matters in connection with enforcing the new regulations. Plans are also being formulated to redeploy experienced personnel now working on repatriation to the work of Port Quarantine at such ports as shall be opened to commercial traffic with Japan.

The repatriation program continues to function smoothly, although isolated cases of smallpox, typhus and cholera continue to appear.

SECTION VII CONSULTANTS

Legal

A series of conferences were held with representatives of Ministry of Health and Welfare on the provisions of the bill to be presented to the Diet on Licensure of Nurses. The bill is complete, and subject to some proposed changes, will be presented at the December session of the Diet.

Nutrition Surveys

November nutrition surveys in the Matsuyama, Toyama and Kyoto areas are being observed by the Nutrition Consultant.

The first session of the National Foodstuffs and Nutrition Inquiry Commission met at the Prime Ministers official residence the 13 November. The Chief of Public Health and Welfare Section, Col. C.F. Sams was in attendance. Aims of the nutrition Commission were explained by the Vice-Chairman.

The average percentage of individuals in the August Survey of four Coal mines, one copper mine and Tokyo Railway Workers showing symptoms associated with nutritional deficiencies are given in the attached table.

NUTRITION SURVEY MINES - AUGUST 1946

Percentage of individuals showing symptoms associated with Nutritional deficiencies.

The mines included are Joban coal mine in Fukushima, Mitsui Miike and Mitsui Yamano coal mines in Fukuoka, Bibai coal mine in Hokkaido.

(total 4 coal mines), and copper mine in Akita. The findings for Tokyo Railway Workers are shown for comparison, along with the May results.

17 November to 23 November
1946**

WEEKLY BULLETIN

SECTION I WELFARE

Extension of Restrictions of Civilian Population Movement

The Home Ministry requested an extension to 31 March 47 on the restrictions of free movement of civilian population in Japan. The Home Ministry considered the extension request necessary inasmuch as there has been no appreciable change in the food and shelter situation in the urban areas, with the exception of Toyobashi city and Toyama city, which were recommended to be excluded in the extension request. The return of the legal residents of the aforementioned cities is to begin after 30 November 1946.

The request of the Home Ministry was approved as presented and an Imperial Ordinance revising Imperial Ordinance No. 542 (“Urgent Measure Concerning the Control of Population inflow into urban Areas”) has been issued.

Field trip to Kyushu, Shikoku, and parts of Honshu

A representative of this Section held conferences and visited Welfare Institutions with Military and Japanese Welfare officials on Kyushu and Shikoku Islands and Kure and Kyoto Prefectures. The purpose was to gain first hand information as to the operation of welfare programs particularly as they relates to the Daily Life Security Law. Despite shortages in trained personnel, food and clothing relief supplies, funds, and housing facilities and increasing awareness of the provisions of the Daily Life Security Law, and progress in its administration was noted. One of the greatest needs appeared to be education in modern welfare practices. Some prefectures have already started regular meetings of welfare officials and Minsei-Iin (volunteer welfare committee-men) with a view towards raising present standards of welfare administration and public assistance.

Development of Childrens Bureau

Conferences involving the SCAP Sections of Public Health and Welfare and Civil Information and Education, and the ministries of Health and Welfare, Home Affairs, Finance and Education, have culminated in definite plans for the creation of a Childrens Bureau within the Health and Welfare Ministry.

A final meeting between the Ministries and the Health and Welfare Section has resulted in a decision to develop this Bureau by establishing three sections; First (concerned with orphaned and abandoned children, and prevention of cruelty to children); second (concerned with the care of sub-normal and under privileged children); third (concerned with mother and child care and health, pre and post natal care).

Growing concern over the lack of direction and planning for children in and out of the home has served to force the planning for special programs of care for all children.

Prefectural and municipal committees are being organized to plan and supervise particular programs designed to meet local child welfare problems.

Red Cross

Conferences have been held with Japan Delegate of International Red Cross Committee preparatory to the Japanese Red Cross assuming responsibility for “International Correspondence and Welfare Inquiries” after 1 December 1946.

A visit was made to the Yokosuka Naval Base as the request of the Naval Base Commander to confer on the establishment of a chapter of the Japanese Red Cross in Yokosuka.

SECTION II MEDICAL SERVICE

For the week ending 18 October 1946, the Japanese Civilian Hospital Strength Report shows 3011 hospitals with a bed capacity of 214,527 beds, 111,426 of which are occupied. There were 288,821 out-patients treated.

SECTION III VETERINARY AFFAIRS

General

The Ministry of Health and Welfare was directed to inaugurate a campaign for the annual immunization of dogs against rabies and to keep GHQ, SCAP informed concerning results obtained by rendering a monthly report showing number immunized and number of cases or rabies.

Reports from the Japanese

The Ministry of Agriculture and Forestry, Animal Disease Section, reported the following new outbreaks of disease during the period 17 to 23 November 1946

<u>Prefecture</u>	<u>Disease</u>	<u>Case</u>
Kumamoto	Anthrax	1
Mie	Anthrax	1
Nagano	Swine Erysipelas	1
Iwate	Swine Plague	24

SECTION IV DENTAL AFFAIRS

The second meeting of the Professors and assistant Professors of Operative Dentistry of all the dental schools in Japan was held in Tokyo 22 November to discuss better teaching methods.

SECTION V NURSING AFFAIRS

The Japanese Nurses, Public Health Nurses and Midwives Association had its first meeting 23 to 24 November in Tokyo. New constitution and By-Laws have been rewritten with democratic principles as the basis. "The aim of this Association is to advance high ethical and professional conduct; to promote professional knowledge and skill; to encourage cooperation among nurse and midwives, to encourage educational advancement in every proper way". A special fund has been started for the Association by the Medical Journal Company to be used for scholarships to outstanding nurses. Approximately 120 nurses represented 47 prefectures.

Yamaguchi prefectural survey of schools of nursing was completed this week.

The second edition of the magazine Public Health Nursing and the Journal of Nursing has been published.

The Demonstration School has arranged 2 week affiliation for student nurses at the Kindergarten in Kamakura.

SECTION VI SUPPLY

General

The shortage of electric power is impeding, to some extent, the production of essential medical supplies and equipment. A plan is being formulated which will permit uninterrupted production of essential items. Due to the critical power shortage it will not be possible to assign pharmaceutical manufacturing plants an unrestricted class one priority, since many firms are producing home remedies and other items not particularly essential to the health program.

A study is now in process by the Ministry of Health & Welfare to determine specific commodities and quantities thereof, essential to the health of the nation and manufacturers will be allocated adequate power and fuel to accomplish this program. As an emergency measure the Japanese Government is issuing instructions to the effect that a continuous supply of power and fuel must be provided for vaccine production and storage. This authority applies only to vaccine laboratories that have been assigned production quotas by the Health & Welfare Ministry and to the specific quantities set up by the Ministry.

Military Government officers should exercise supervision to insure that prefectural authorities provide the necessary allocation of power and that vaccine laboratories utilize the power in the production of established quotas. Following is a list of vaccine laboratories producing under ministry control. Each laboratory has a record of the quota assigned by the Ministry:

<u>Name</u>	<u>Location</u>
Government Institute of Infectious Diseases	Tokyo, Japan
Kitasato Institute	Tokyo
Chiba Prefectural Institute	Nakayama
Chiba Medical College	Chiba
Hokkaido Co. Ltd.	Sapporo
Toshiba Institute	Niigata
Osaka Imperial University	Osaka

Meguro Institute	Osaka
Kumamoto Biological Institute	Kumamoto
Kyoto Imperial University Lab	Kyoto
Nagoya Imperial University	Nagoya
Aichi Prefectural Institute	Nagoya
Torii Co. Ltd.	Sapporo
Osaka Bacteriological Inst.	Osaka
Osaka Serum Institute	Osaka
Sukegawa Institute	Tauchiura (Ibaraki Pref.)
Tohoku Boeki Inst.	Sendai
Ishigami Institute	Osaka
Kobe Eisei	Kobe
Kumamoto Jikken Inst.	Kumamoto
Nitto Hoken Inst.	Kyoto
Yashima Pharm. Co.	Urawa (Saitama Pref.)
Hokuriku Kessei Inst.	Kanazawa - Ishikawa Pref.
Kyoto Biseibutsu Inst.	Kyoto
Takeda Pharm. Co.	Yamaguchi Pref. - Hikaru Factory
Tokyo-To Prefectural Laboratory	Tokyo
Kanagawa Prefectural Laboratory	Kanagawa
Niigata Prefectural Laboratory	Niigata

Production

Report of the Welfare Ministry indicates production of the principal biologicals during October as follows:

<u>Vaccine</u>	<u>Quantity Produced</u>	<u>Stock on Hand 31 Oct.</u>
Cholera	845,450 cc	3,264,870 cc
Typhus	104,650 cc	26,050 cc
Triple Typhoid	497,325 cc	3,576,650 cc
Smallpox	1,290,000 doses	2,741,930 doses
Diphtheria Antitoxin	246,730 cc	709,065 cc
Diphtheria Toxois	7,171,653 cc	728,540 cc

A production program of sanitary materials has been initiated. Imported American cotton is being utilized for this program. Allocation of American cotton, from the quantities for domestic use in Japan, for production of sanitary materials has been made as follows:

July-Sep 46	1000 bales
Oct-Dec 46	3500 bales
Jan-Mar 47	5000 bales

Report of the Welfare Ministry on production of Medical Supplies during October was as follows:

Controlled Medicines	Yen 21,658,005
Non-controlled medicines	51,935,345
Patent Medicines	84,480,106
Sanitary Materials	1,152,008
Dental Materials	1,281,480
Biologicals	7,432,874

A list of 65 essential medicines needed in priority of their importance was submitted by the National Medical Association for approval by the Welfare Ministry.

This list represents more than 25,000 licensed medical doctors who answered the questionnaire sent out by the National Medical Association to ascertain from these doctors their opinion of necessary essential medicines needed in their practice.

The list was divided into five categories according to their importance, each category further sub-divided according to priority of their importance.

The Welfare Ministry has accepted the list in full and will notify the Pharm. Mfg. Companies to initiate production of essential medicines in priority as stipulated on this list.

Distribution

An emergency shipment of 1120 vials of Typhus Vaccine was made by air to the Commanding Officer, Formosa Repatriation Team in Kiirun, Formosa, for inoculation of repatriates.

Reports from the Central Medicine Distribution Company indicate a large increase in the distribution of returned Japanese Army - Navy Medical Supplies. This was mainly due to the sale of these supplies recently held in Tokyo-To. The activities in controlled medicaments showed a decrease from the previous month's transactions.

The Welfare Ministry was requested to make a survey on the needs of V.D. control supplies required by all prefectures, and will aid in their procurement, so that the Venereal Disease control program may be carried out successfully in all prefectures.

Narcotics

Instructions have been issued by Japanese Narcotic officials, Ministry of Welfare, that manufacture of tropococaine from Datura Stramonium by a synthetic process will not be permitted since the tropococaine thus manufactured has the same chemical structure as tropococaine manufactured from coca leaves which is prohibited under SCAP directive. Since the quantity possible to manufacture under the synthetic process is small and the cost correspondingly high; the action was concurred in since any exception will only open the door for a host of exceptions.

During an inspection trip to Ibaraki Prefecture, assistance was given in narcotic investigations and the prefectural activities of the narcotic officials revised. These officials are levelling stocks to a six-month's supply, have delivered all known stocks of heroin to Occupational Forces, have determined no opium poppies or marihuana is growing in the prefecture, have held meetings to acquaint doctors with the new narcotic regulations especially the procedure for obtaining narcotics by means of order forms, and are making inspections of at least one hospital, doctor, druggist or wholesaler each day.

Reports from Osaka show that a considerable quantity of heroin now held unlawfully is being confiscated and the offenders prosecuted. The Osaka prefectural officials seem to be fully aware of the problem and are acting accordingly.

Central Wholesalers of narcotics in Tokyo and Osaka have prepared a letter to all local wholesalers explaining the necessary procedure for purchase under the new narcotic regulations. The letters also caution local wholesalers not to acquire a stock of narcotics in excess of actual operating needs. An appendage to the letter lists the narcotic stocks available for purchase and gives the unit narcotic content of each preparation. This action should eliminate confusion relative to such purchases.

SECTION VII PREVENTIVE MEDICINE

General

An orientation conference was held at Kyoto on 19 and 20 November, for Military Government Health Officers of the I Corps and BCPF areas, including the Tokai-Hokuriku, Kinki, Chugoku, Shikoku and Kyushu regions. Members of the Division lectured on Epidemiology, Venereal Disease Control, Tuberculosis, Typhus Control and Sanitation. Field demonstration of typhus control and rat control were held.

Venereal Disease Control

The Venereal Disease Control Officer in the Japanese Prefectural Health Department is the person charged with establishing and conducting the Venereal Disease Control program in each prefecture. This work must be done with the advice and supervision of the Military Government Health Officer, but should not be carried on by him personally. The program will be more finally established, more extensive, if given to the Japanese to do with as much teaching by the Military Government Health Officer as possible.

Private practitioners are not to be overlooked, who treat most of the venereal disease patients. The Military Government Health Officer might well render technical advice to private practitioners in our methods of diagnosis, treatment, contact tracing and case holding.

The Japanese Venereal Disease Control Officer should set up public exhibits of Venereal Disease Control Information. He should put out advertising of the existence of venereal diseases, signs and symptoms of these

diseases, and where the public can go for the diagnosis and treatment of these diseases. In general, he should have a system in operation which can be inspected, improved and guided by the Military Government Health Officer.

Typhus Control

Demonstrations and lectures were provided as a part of the orientation courses for Military Government Health Officers of I Corps at Kyoto, 19 November 1946.

In Osaka, the third of the series of lectures and demonstrations in typhus and its control for prefectural health officials was held 21 to 23 November 1946.

A new team for teaching typhus control procedures has been organized in Korea. This team consists of representatives from Korean Public Health Offices, Military Government, Department of Public Health and Welfare, and the Surgeon's Office, XXIV Corps. The team will visit each province in Southern Korea, conducting a program on typhus and typhus control designed to reach provincial and city health authorities. A sound educational and publicity campaign is underway. A moving picture covering cholera, smallpox and typhus is nearing completion. Manufacture of 10% DDT dust in a mill at Inchon is being investigated.

Insect and Rodent Control

The insect and rodent control activities are being carried on throughout the year as a continuous program, utilizing as much as possible the same teams and the same individuals. At the present time emphasis is being placed upon rodent control as an adjunct to the measures being taken to control louse borne typhus. The importance of reorganization and retraining of teams used in the control of typhus, insects and rodents cannot be over emphasized. Recent inspections and conferences indicate that many towns and prefectures are not giving this matter the attention it deserves. Military Government Health Officers have been informed to stimulate the town and prefectural health officials to carry out a more vigorous program.

Water Supplies

Progress is being made in some locations on excessive lack of stoppage. There still remains, an inadequate amount of supplies because of an increase in demand due to a fluctuation in the population and inadequate supply of raw water.

Tuberculosis Control

A program for the prevention and control of tuberculosis has been presented to the Ministry of Health and to the Japanese press. It is based upon five steps:

Patients with active lesions who have left the tuberculosis hospitals are to be induced to return by supplying necessary food and funds.

The latest diagnostic procedures and treatment as advised in American, Japan and other countries will be recommended to Japanese physicians in the form of a manual.

Concentration on case finding and individual control has been resumed through talks to various nursing and teaching organizations. This will be extended to include examination of school children and the necessary follow-up.

A Child Welfare Bureau is to be established to cooperate in Anti-Tuberculosis education.

The program as outlined above will be extended to include adult workers in industry and various organizations.

SECTION VIII CONSULTANTS

Nutrition Surveys

The Nutrition Consultant reviewed nutrition surveys in conjunction with the Military Government Medical Officer in Matsuyama, Fukui, and Chiba Prefecture 15, 17 and 22 November respectively. The nutritional accounting used in the penitentiaries was reviewed in Matsuyama. The accounting is satisfactory with regard to staple food but does not report information on supplementary foods in such way as to present a satisfactory nutritional evaluation of the dietary.

SECTION X DIRECTIVES TO THE IMPERIAL JAPANESE GOVERNMENT

NONE

CRAWFORD F. SAMS
Colonel, Medical Corps

SUPREME COMMANDER FOR THE ALLIED POWERS
PUBLIC HEALTH AND WELFARE SECTION**

WEEKLY BULLETIN

**For Period
24 November to 30 November
1946**

SECTION I WELFARE

Licensed Agencies for Relief in Asia (LARA)

The first overseas shipment of LARA relief supplies from the United States, for distribution in Japan, arrived at Yokohama on 30 November 1946. The shipment consisted of the following relief items:

Milk (powdered whole)	182,130 lbs
Salt	120,000 lbs
Noodles	15,000 lbs
Spaghetti	35,000 lbs
Soup (dehydrated)	6,000 lbs
Sandy (hard)	6,695 lbs
Flour (rice)	200,000 lbs
Meal (Multiple purpose)	64,089 lbs
Canned food (misc.)	6,741 lbs
Milk (Dry skim)	4,000 lbs
Vitamins	721 lbs
Clothing (renovated)	47,436 lbs
Shoes (used)	6,741 lbs

LARA relief supplies will be centrally warehoused in Yokohama at the warehouse of Mitsui Bussan Kaisha Ltd., where they will be segregated and distributed to the using agencies.

Under the provisions of SCAPIN-1169, dated 30 August 46, the Imperial Japanese Government will assume sole responsibility for security, movement, allocation and distribution of these relief supplies from dockside to the using agency and will, prior to the distribution of the supplies, inform SCAP of the plan of allocation. The Imperial Japanese Government will also report monthly to SCAP on LARA relief supplies received and distributed.

The operation of the Welfare Ministry and LARA in the administration and allocation of these relief supplies is as follows: The Welfare Ministry has selected an operating committee of recognized welfare officials from public and private agencies to advise with the representatives of LARA and the Welfare Ministry relative to relief items needed, priority of such needs, institutions and agencies (public and private) experiencing the greatest need, and the establishment of acceptable standards governing their eligibility.

Foreign Nationals

Tokyo-To opened a central store in which staple-foods, meats and potatoes are now purchased in the one location, instead of requiring purchasers to go to several sections of Tokyo to make their purchases. The store is located on the Ginza where the original staple goods were sold. The store contains signs informing Foreign Nationals of the various types of rations they are entitled to and a suggestion box where foreigners are asked to make suggestions for improvements.

Public Assistance Reports

Visits to prefectures by a Welfare representative of this section revealed that there is need for more contact between Military Government and prefectural Welfare officials concerning the uniform monthly public assistance reports prepared in English and Japanese texts. It is desired that all Military Government Welfare Officers obtain a copy of the four tables comprising the report together with explanatory notes if no copies are on hand. (Prefectural Welfare offices should have copies available in both languages). The contents of these reports would be discussed with Japanese officials each month with a view towards ascertaining current relief load and improving accuracy of reports. This should be accomplished by the 10th of each month to permit forwarding by the prefectures to the Welfare Ministry by the 15th of the month.

Relief Supplies

This section raised an objection to a request from the Welfare Ministry for permission to buy and distribute 700,000 sets of "futon" (bedding) and 1,400,000 blankets and to repair and improve housing for some 46,430 repatriated families. Cost for these activities was placed at 1,185,365,000 yen, of which part is returnable to the government through taxes. Assurance was received from the Japanese officials that this program would benefit not only repatriates but all categories of needy persons equally and without discrimination or preferential treatment. The Welfare Ministry plans to request the necessary funds from the Finance Ministry. Approval was given for the

release of 450,000 kgs of canned food and biscuits (former Japanese Army and Navy stocks) in Hokkaido. These supplies were released in order to effect their transfer to relief distribution points throughout Hokkaido prior to the severe winter season, which makes normal transportation facilities more difficult. These relief supplies are to be distributed as the need arises.

Japanese Red Cross Society

A meeting of local chapter executives was held by the Japanese Red Cross Society on 26-27 November 1946 for the purpose of familiarizing the Chapter personnel with the revised statutes, and regulations governing the National Organization and informing them on the proposed plans for the reorganization of local chapters. These meetings were attended by one or more representatives from each of the local chapters, which gave emphasis to the interest of the chapters in the progressive reorganization of the National Red Cross Society.

SECTION II
MEDICAL SERVICE

For the week ending 25 October 1946, the Japanese Civilian Hospital Strength Report shows 3015 hospitals with a bed capacity of 214,476 beds, 110,355 of which are occupied. There were 280,426 out-patients treated.

SECTION IV
DENTAL AFFAIRS

As a general meeting of the Council of Dental Education a group of dentists were elected from which the Ministry of Education may appoint five to serve as school inspectors for a term of two years.

SECTION V
NURSING AFFAIRS

Demonstration School of Nursing

The agreement for affiliation of students with the kindergarten school in Kamakura has been cancelled. The prefectural survey of schools of nursing was completed for Hiroshima.

SECTION VI
SUPPLY

General

The question of providing adequate medical care and treatment for Japanese nationals employed by the Japanese Government, to work for the Occupation Forces, has been brought to the attention of this office.

Directive (SCAPIN-48) dated 22 September 1945, subject: "Public Health Measures", required the Japanese Government to provide medical care and treatment for the Japanese people and to furnish necessary supplies and equipment required for that purpose. This directive applies with equal force in the case of Japanese nationals employed to work for the Occupation Forces. Letter AG 720 (22 Oct 45) PH, dated 22 October 1945, subject: "Public Health and Welfare procedure in Japan", addressed to Occupation Forces Commanders announced the following basic policy on this subject:

"The basic policy, which is to make the Japanese Public Health and Welfare personnel self-sufficient by the effective use of their own equipment and supplies, will be adhered to by all concerned."

The Health and Welfare Ministry is advising all prefectural governors of their responsibilities in this connection and directing that necessary action be taken to insure that employees working for the Occupation Forces are provided adequate medical care and treatment. Military Government medical officers should contact Occupation Forces Commanders in their area and made necessary arrangements for the medical care and treatment of Japanese nationals employed for the Occupation Forces. U.S. produced medical supplies and equipment will be used for this purpose only when it has been determined that Japanese supplies cannot be made available. Should it become necessary to utilize such supplies, requisition will be submitted by Military Government Medical Officers in accordance with existing instructions on this subject. Japanese supplies are to be issued by Japanese agencies direct to hospitals, clinics and dispensaries in accordance with normal operating procedures.

Steps which are to be taken to provide necessary medical care and treatment will depend on the local situation. In some instances it may only be necessary to notify Occupation Forces Commanders of nearby Japanese hospitals, clinics or dispensaries which are available. On the other hand, the establishment of additional facilities may be necessary where large numbers of employees are involved.

Distribution

The Welfare Ministry has ordered all prefectural governors to conduct sales of returned Japanese Army-Navy Medical supplies to hospitals, doctors, dentists and veterinarians in their prefecture.

Advertising by newspapers and through the Medical Associations will be made prior to the sale. Each authorized purchaser will be certified by their respective medical association and issued a credit card entitling them to purchase, of their choice, the number of items which they will be credited with. These credits will not be transferable. Each purchase made represents a credit.

The above sale will be a means for complete distribution of the medical supplies in question to all practitioners and hospitals, and will greatly aid them in securing their much needed medicaments and supplies.

Production

Production report of the Welfare Ministry for the month of October indicates production of various types of medicines, dental materials, sanitary materials and biologicals as follows:

Controlled medicines	yen	21,658,005
Non-controlled medicines		61,035,345
Patent Medicines		84,480,106
Sanitary materials		1,152,088
Dental materials		1,281,490
Biologicals		7,432,974

This production indicates no appreciable change from the preceding four (4) months. A decrease of approximately 12,000,000 yen occurred in production of non-controlled medicines and a corresponding increase occurred in production of patent medicines.

The production of sulpha drugs increased greatly during October. A total of 8905 kgs. was produced which is approximately a 40% increase over any previous monthly production.

Production of antipyretics showed continued excellent progress.

Production of anesthetics and venereal disease drugs is still not adequate and additional emphasis is being concentrated on this production.

Sanitary materials production is being accelerated by virtue of allocation of American cotton to this program.

Biological production showed continued excellent progress with the exception of typhus vaccine. A total of 252 tons of mixed commercial feeds has been allocated by the Agriculture Ministry to sources furnishing eggs for the typhus vaccine production program. Continued emphasis will be placed on increasing this production.

Dental material production is still not adequate to meet current needs.

Narcotics

The Narcotic Control program in Japan was discussed by a representative of the Supply Division, Public Health and Welfare Section, at meetings in Kyoto and Sendai attended by Military Government Health Officers throughout Japan. Emphasis was given to the fact that new narcotic regulations in Japan closely resemble the narcotic laws of the United States with which the medical officers are familiar.

Four packages containing narcotics illegally transmitted through the mails were received by the Narcotic Control Branch. Arrests have been made in all but one case, and the narcotics have been turned over to Japanese enforcement agencies for further investigation and prosecution.

An investigation was made by SCAP Narcotic Control Officers and Tokyo-To Narcotic officials concerning the failure of Sankyo Company to incorporate a quantity of bulk codeine phosphate and Japanese hydrochloride in their regular monthly report. The narcotics were securely stored and were reported by the Sankyo Company as soon as the error was detected. The Sankyo Company was instructed to move all narcotics into the specially constructed narcotic vault and to rectify the monthly inventory system to prevent such errors which will not be tolerated in the future.

SECTION VIII PREVENTIVE MEDICINE

General

A second orientation conference for Military Government Health Officers was held at Sendai on 25 and 26 November. This conference was attended by Health officers of the IX Corps area, including the Hokkaido, Tohoku and Kanto regions and the Tokyo-Kanagawa Military Government District. The program was similar to that held at Kyoto during the previous week.

Reporting

When making telegraphic or radio reports of epidemic diseases to GHQ, Military Government Health Officers are requested to furnish the following information:

Date of reporting by the Japanese authorities.

Address, if practicable, by shi, machi, or gun.

Name and age of the patient and address by mura are not required or desired. It is also requested that addresses be stated in their original form and not be translated into English.

Typhus Control

This section has noted that in some instances typhus cases are not being reported until 10 to 12 days after the onset of symptoms of headache and fever. This lag in reporting or suspected typhus cases is very dangerous as it delays the institution of control measures. Control measures instituted this late are little more than gestures. Most cases should be reported, processed and control measures instituted not later than the second day. Military Government Health Officers should keep a very close check on typhus case reports and institute corrective action when reports show time intervals longer than two days. The public must be educated to early reporting of all sudden headache and fevers. The attending physician must also be instructed to report any such cases seen by them immediately. Failure on the part of physicians to report cases promptly may necessitate the institution of punitive measures.

The Tokyo Conference, or prefectural health officers of the Kanto Region, on typhus control was held on 28 and 29 November 1946.

Education and Publicity

The Ministry of Health is continuing and expanding their program of education and publicity on typhus fever as well as other public health problems throughout Japan.

The outline of the general working plan as submitted by the Ministry of Health is as follows:

The Ministry of Health furnishes basic information for use by health officials of each Prefecture. Such information, in addition to locally obtained material, is incorporated in the preparation of posters, radio broadcasts, newspapers, articles, etc., by each prefectural health office.

Ministry of Health Program

Radio: Twice a month (15 minute broadcast) by health officials.
Twice a week (5 minute broadcast) on typhus and other health problems.

Newspaper: Twice a month rather detailed articles on typhus.
Bi-weekly, later daily, articles on what people can do to assist in the control program.

Magazine: Articles in health magazines, farm magazines and popular magazines based on magazine press conferences.

Slide films: 35mm. film strips illustrating typhus and typhus control, dusting techniques.

Charts and Posters: A group of 24 semi-comical colored posters have been prepared illustrating general symptoms, home control measures, role teachers may play in education of school children and adults. Reproductions in preparation for display in railway stations, schools, etc.

Kamishibai: Persons employed to show these picture charts with a running commentary before schools, public gatherings, neighborhood associations, etc.

Prefectural program: Each prefecture has been directed to make newspaper publication, lectures, radio broadcast, leaflets, placards, Kairanban publicity, etc. at expense of each prefecture.

Venereal Disease Control

Examinations performed on unselected groups of prostitutes show that 50% to 90% of such patients are infected with one or more venereal diseases. Periodic examinations which do not find enough infections to come within this range are missing infected cases. Prefectural venereal disease control officers should be warned against relying entirely on the laboratory diagnosis as a means of finding cases of gonorrhoea. In the absence of sufficient cultures, such diagnosis must be made clinically. In general at this time, since diagnostic facilities are inadequate, public interests would be best served by treating more patients in spite of inconclusive laboratory reports. Patients started on treatment must receive the full course of the sulfonamide drug being used.

SECTION IX CONSULTANTS

Nutrition Survey

Calories and Protein of the August Nutrition Survey for Tokyo's 35 Ku's are given in the following table. The Ku's listed in accordance with increased Calorie intake. Average for entire 35 Ku's 1828 Calories. Average result for the May Survey was 1352 Calories. The difference is due largely to the extent to which the low ration was available. In May it was not issued regularly whereas in August the ration was met with imported foods.

CITY OF TOKYO - FOOD SURVEY - AUGUST 1946

SECTION XI
INSTRUCTIONS TO THE IMPERIAL JAPANESE GOVERNMENT

On some occasions SCAP instructs the Imperial Japanese Government verbally on matters that it is desired to have executed. In order to keep Military Government officers informed as to what instructions have been given on public health and welfare matters a listing of these subjects will be made in this bulletin as they occur.

Establishment of a Child Welfare Bureau in the Ministry of Health and Welfare (see Weekly Bulletin PH&W 17 Nov to 23 Nov 1946).

Establishment of a School Lunch Program (see Weekly Bulletin PH&W 10 Nov to 16 Nov 1946).

SECTION XII
DIRECTIVES TO THE IMPERIAL JAPANESE GOVERNMENT

NONE

CRAWFORD F. SAMS
Colonel, Medical Corps
Chief, Public Health & Welfare Section

3 incls:

#1 - Communicable Disease Report for week ending 16 November 1946.

#2 - Venereal Disease Report for week ending 9 November 1946.

#3 - Weekly Summary Report of Cases and Deaths From Communicable Diseases in Japan Week Ending 16 November 1946.

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
PUBLIC HEALTH AND WELFARE SECTION**

WEEKLY BULLETIN

**For Period
1 December to 7 December
1946**

SECTION I WELFARE

Public Assistance

A letter dated 21 November 1946 from the Ministry of Health and Welfare to the prefectural governors authorized a 50% increase in cash relief allowances. The new daily allowances (in yen), effective as of 1 November 1946, are as follows:

	<u>No. of Persons in Family</u>					Each Additional Person
	1	2	3	4	5	
Largest Cities	5.40	9.20	11.40	13.50	15.20	1.70
Intermediate cities	4.90	8.20	10.00	11.90	13.50	1.60
Town and Villages	4.20	7.20	8.90	10.30	11.90	1.50

The above allowances apply to persons both in and out of institutions. Increases up to 10% can be authorized by governors and up to 6% by chiefs of cities, towns, or villages. Higher increases require authorization from the Welfare Minister. Family income, except for small casual amounts, is to be deducted in determining allowances.

It is desired that Military Government welfare officers insure that (1) these standards are in effect (2) provisions are made for additional assistance in cash or kind, or both, when necessitated by cases of unusual hardship.

Reserve Relief Supplies

As of 1 November 1946, 2,544,649 kgs of biscuits and 4,773,851 kgs of canned foods have been distributed, according to a recent report of the Ministry of Health and Welfare. These figures represent 80% of the amounts authorized for relief distribution in 32 prefectures by SCAPIN 1713A, 13 July 1946, from former Japanese Army and Navy stocks.

Inspection of Reserve Relief Supplies

Precautionary instructions were issued by the Ministry of Health and Welfare in Tokyo suburbs on 5 November 1946, to all prefectures, as a result of a few mild cases of food poisoning from canned meats from former Japanese military stocks, held in reserve for relief purposes. In line with these instructions, Military Government Health and Welfare officers are requested to insure that these stocks are properly inspected for deterioration, and destroyed if found to be contaminated. Foods which are not injurious, but judged to be in imminent danger of spoilage may be distributed by the Japanese after prior approval is obtained from local Military Government officials.

Red Cross

Miss Edith Olson, a registered nurse with long experience in American public health and nursing programs, has been assigned as a Special Consultant on Nursing Services, to advise and assist the Red Cross Society of Japan, Korea, and China in the development of their nursing programs. Her first assignment will be in Japan where she will assist the Japanese Red Cross in the development of their extensive nursing and nurses' training programs. In this connection, she will work in close liaison with the Nursing Affairs Division and the other Divisions of the Public Health and Welfare Section of SCAP concerned with the development of improved standards of medical and nursing services. Miss Olson's initial assignment is to be for a period of three months and thereafter she will be available as a consultant to the other Red Cross Societies aforementioned.

The Japanese Red Cross will hold its 54th Annual General Meeting on 10 December 1946. Important business of the meeting will be the adoption of the revised statutes and plans for the reorganization of the Society. The Empress, as the honorary patroness, will present her annual address to the Society in ceremonies which SCAP, American Red Cross, and Japanese Government officials have been invited to attend.

SECTION II MEDICAL SERVICE

For the week ending 1 November 1946, the Japanese Civilian Hospital Strength Report shows 3022 hospitals with a bed capacity of 214,470 beds, 108,216 of which are occupied. There were 285,001 out-patients treated.

SECTION III

VETERINARY AFFAIRS

The Ministry of Agriculture and Forestry, Bureau of Animal Industry, reported that no new outbreaks of disease occurred during the period 1-7 December 1946.

SECTION IV DENTAL AFFAIRS

A meeting of the General Assembly of the Japanese Dental Association was held in Tokyo to discuss:

- (1) Dental Congress to be held in April.
- (2) Raising of membership fees.
- (3) Revision of budget.
- (4) Plan for forming a mutual aid association within the dental association.

SECTION V SUPPLY

General

During the recent Health Conferences in Kyoto and Sendai, it developed that Military Government Medical officers did not in all cases have information as to the supply points to which requisitions should be submitted for U.S. produced supplies and equipment for civilian use. This subject has been discussed with Eighth Army officials and additional instructions are being furnished each Corps concerning supply points for Military Government Teams. These supply points, as a general rule, will not maintain stockages and it will be necessary for them to forward the requisitions to other agencies for approval and supply. For this reason, supply requirements should be submitted in advance of actual need to allow for necessary processing time on requisitions and shipment of supplies.

Distribution

The Ministry of Health and Welfare issued an order to all prefectural governors, on 4 December 1946, to ascertain that the prefectural medicine distribution companies take immediate steps to distribute the controlled medicaments held in their warehouses, to the hospitals, doctors, dentists, and veterinarians in their respective prefectures. This action is necessary, not only to accelerate distribution to the practitioners, but for the prefectural distribution companies to reimburse the Central Medicine Distribution Company for their purchases. By this action, the Central Medicine Distribution Company will have sufficient funds to be able to purchase the controlled medicaments from manufacturers and maintain an even rate of distribution.

Production

A 50% increase in the production of anaesthetic ether was shown for the month of October over that of September. Although the increase of production shown falls short of the required amount, it is anticipated that the demand will be met in a short time.

A new program for production of microscopes with dark field attachments has been initiated for the first three (3) months of 1947. This program has been established as indicated below:

<u>Manufacturer</u>	<u>Jan-47</u>	<u>Feb-47</u>	<u>Mar-47</u>
Chiyoda Optical Co.	30	40	35
Fuyo Optical Co.	50	50	50
Monthly Total	80	90	85
Total - 255			

Prefectural health authorities should be instructed to submit requirements, for these microscopes, to the Pharmaceutical Affairs Section, Ministry of Health and Welfare, in order that production can be phased accordingly.

Allocation of textiles for production of sanitary materials has been made as follows:

Raw cotton (Units 1,000 lbs.)

	1st year Oct.46 to <u>Sep-47</u>	2nd year <u>(1947-48)</u>	3rd year <u>(1948-49)</u>
Bandage and Gauze	4,000	7,900	7,900
Absorbent Cotton	6,000	12,000	12,000
Total	10,000	19,900	19,900

Silk Yarn

14,540 pounds annually for production of sutures, habutai and for utilization in medicine manufacturing.
Production of DDT dusters and spraying equipment during period 25-30 November:

DDT dusters	1050
Sprayers, semi-automatic pump type	215
Sprayer, Hand Type 1/2 gallon	50

The following is a resume of total production to date, quantities for manufacture on current program and quantities established for new production program to be completed by 1 July 47:

<u>Item</u>	<u>Total Produced</u>	<u>To be Manufactured Current Program</u>	<u>New Program to be completed by 1 July 47</u>
DDT Dusters	27,379	12,621	100,000
Sprayer, knapsack, 3 gallon	10,000	0	50,000
Sprayer, semi-automatic, pump type	4,043	957	20,000
Sprayer, hand type, 1/2 gallon	50	9,950	50,000

Large scale production of sprayer, hand type, 1/2 gallon will begin on or about 15 December 1946. Large scale production of the new program for sprayer, knapsack, 3 gallon and sprayer, semi-automatic, pump type will begin during 1st week of January 1947.

Necessary action has been taken to remove electric power restrictions from manufacturers producing essential biologicals. The Ministry of Health and Welfare will send appropriate notification to manufacturers with instructions to contact local regional directors of the Commerce and Industry Ministry. The list of manufacturers concerned was published in Weekly Bulletin for period 17 November to 23 November 1946.

The following 20 companies are recognized by Public Health and Welfare Section Ministry of Health and Welfare as producer of penicillin. Attention of the Military Teams in the respective places is invited to these organizations, for the purpose of stimulating greater production, eliminating locally resolvable bottlenecks and checking penicillin output from the standpoint of discouraging possible blackmarketing of the product. Manufacturers should be reminded of the penalties for violations of these restrictions and that penicillin especially is of concern to authorities.

Factory names preceded by an asterisk are those reported, for the purpose of priorities on critical materials like electricity, coal, etc. as producing only penicillin. The others are manufacturing additional products.

Narcotics

The narcotic report for the month of October reveals that ten narcotic registrants, including eight doctors, were arrested during the month for violating the narcotic laws. There were fifty-six non-registrants either arrested or being sought for violations during the same period. Five registrants and thirty-five non-registrants were convicted and received sentences ranging from four years penal servitude to 1,000 yen fine. Thirty-five cases of theft were reported.

According to the report, stocks of narcotic formerly belonging to Dojinkai, a dissolved organization, and the Osaka Medicine Distribution Company, were transferred to registered central wholesalers. Stocks so transferred included 127 kilograms of Dover's Powder, 25 kilograms of morphine hydrochloride, and 3 kilograms of codeine phosphate, in addition to large quantities of other medicinal narcotics.

Narcotic stocks of local wholesalers were not materially reduced, although sales to doctors, hospitals, and registered druggists indicate these registrants are becoming familiar with the new procedure of purchasing narcotics by means of order forms since the quantities of morphine hydrochloride and codeine phosphate so purchased reached 20 kilograms and 43 kilograms, respectively. Excess narcotic stocks being returned to local wholesalers maintained these wholesale stocks at satisfactory levels.

A quantity of damaged former Japanese military medicinal narcotics now in the custody of Sankyo Company Tokyo, a SCAP approved wholesale house, was destroyed. Representatives of Tokyo-To and of Ministry of Health and Welfare Narcotic Division were instructed in the proper procedure to inventory and witness the destruction of the narcotics which were reported by Sankyo Company as not fit for medicinal use, as a result of cleaning and repackaging the former military narcotics received in July 1946. The Ministry of Health and Welfare has been instructed to follow the same procedure in disposing of damaged stocks held by other SCAP approved firms having custody of former military medicinal narcotics.

A commendation report from the Permanent Central Opium Board, which met in London from 15 October to 21 October 1946, has been received through the War Department. The report states in part that the American Occupation authorities "have taken great interest in the control of narcotics and have taken especial care to establish a strict controlled supervision".

A former Japanese naval officer was sentenced to three years at hard labor in Tokyo Provost Court, 4 December 1946, for illegally disposing of three tons of crude opium from the Monopoly Bureau in Korea, during the surrender period. Part of this opium eventually was smuggled into Japan and sold. Eight Japanese have been convicted and sentenced in Japanese Courts in this case.

SECTION VI PREVENTIVE MEDICINES

Venereal Disease Control

The following deficiencies have been noted so often in the clinics visited that their enumeration may be of benefit in the improvement of all in-patient and out-patient facilities:

(a) Unawareness that from 50% to 90% of prostitutes are always infected with at least one venereal disease. Clinicians are relying too much on laboratory procedures, and are not making a sufficient number of diagnoses on clinical grounds.

(b) Too much emphasis on diagnostic procedures (which are poor), rather than on treating patients adequately. Examinations are too stereotyped.

(c) Inspections are not thorough and minute. Many clinical lesions are being overlooked. Clinicians are working too fast.

(d) Examinations are too mechanical, as if every patient presented the same pathology in exactly the same area.

(e) Dark-field specimens in capillary tubes should be used for sending in samples, if a dark-field substance is not immediately available. Not enough of these specimens are being taken.

(f) Clinicians should be aware that in chronic gonorrhea, the gonococcus is not on the surfaces of the mucous membranes, but is buried down in the smaller mucous glands. If material from Skene's, Bartholin's and the endocervical glands is not expressed, the laboratory specimens will not show gonococci. The orifices of the glands must be cleansed first, and the cervical mucous plug removed before the specimens are taken.

Reception of patients is poor. Patients are noisy. Only one patient should be in the examining room at one time.

Too many nurses have been noted in the examining room. Some of these women could be better utilized by training them to do contact tracing and follow-up work on lapsed patients. Some of them could be utilized to keep order in the reception rooms.

Clinicians must wear a gown and gloves.

Patients must be draped and not exposed unnecessarily.

Lighting is generally poor. The clinician must have perfect lighting, even if it is necessary to use flashlights, to obtain adequate visualization of the field.

All prefectural venereal disease control officers are currently attending a three-day conference, in Tokyo, at which time public health and some of the clinical aspects of venereal disease control work will be reviewed.

Publicity was sent out to the people through the Japanese press during the current week.

Typhus Control

The Typhus Control Officer, Ministry of Health and Welfare, met with the Japanese press during the current week. He emphasized to the press the value of pictures and press items at regular intervals, as a means of making the Japanese people "SHIRAMI TYPHUS" conscious. He also gave out information on what the individual could do to help control lice and typhus. The press was encouraged to publish typhus articles at regular intervals, rather than sporadically.

An attempt is being made by Japanese health officials to have a national law enacted which will improve typhus control by requiring physicians to report all typhus cases promptly. This law would also require specific isolation and quarantine procedures and would place a time limit on the institution of these procedures.

A set of comic posters on the life of the louse and its role in typhus fever are being reproduced in large numbers and will shortly be circulated throughout Japan by itinerant KAMI SHIBAI (Paper Plays). In this way; it is expected that a large number of selected audiences will learn much about the louse, its relation to typhus, and control of this disease.

Sanitation

Plans have been formulated for demonstrating the organization and training of sanitary teams in each Military Government region. During December, such meetings will be held at Nagoya, Hiroshima and Kumamoto. Prefectural health officers and Military Government health officers will be in attendance. These meetings are primarily for the purpose of discussing and demonstrating typhus control procedures. However, sanitary teams and their functions will also be demonstrated.

Progress has been made in improving environmental sanitation in most prefectures. In some prefectures, improvement is outstanding. An excellent response to plans and suggestions formulated at the Kyoto and Sendai conferences has been noted.

Educational programs being carried out in the schools have resulted in a remarkable improvement in the mental attitude toward sanitation. Some prefectures have prepared posters and charts illustrating various phases of public health, with particular emphasis on personal hygiene and the part the individual can play in the insect and rodent control program. These are proving very valuable as an adjunct to community control programs. Their value has been clearly demonstrated by the fact that in certain areas where they are used, wide-spread clean-up programs have been carried out. Garbage and refuse containers have been built and placed on the streets. The open street have been cleaned and repaired. Accumulations of refuse and garbage have been removed.

SECTION VII VITAL STATISTICS

Month of October

Births The number of births reported in October totalled 190,727. The birth rate was 30.7 per 1,000 population; the preceding quarterly rate, 26.8.

Deaths Deaths totalled 93,588; the death rate (15.1 per 1,000 population) declined sharply, continuing the downward trend established in the three preceding months; the quarterly figure for which was 20.5.

Infant Deaths Deaths of infants rose to 10,087, causing the rate to rise to 52.9 per 1,000 live births, although still below the preceding quarterly rate of 60.7.

Stillbirths The number of stillbirths (8,206) reached its highest point during the four-months-period July-October, establishing a rate of 43.0 per 1,000 live births, thus exceeding the preceding quarterly figure of 41.6.

Marriages A marked reduction was recorded in marriages, the number being 37,654; the rate of 6.1 per 1,000 population decreased well below the preceding quarterly rate of 8.1. Further study of this reduction is necessary before an explanation of it can be made.

Divorces Just as in the case of marriages, the number of divorces (5,237) decreased to almost half of the September figure; the rate of divorce was 0.8 per 1,000 population compared with 1.6 for the preceding quarterly period. We must wait for further reports before we can interpret the sudden decrease.

SECTION VIII
LEGAL CONSULTANT

S. Kamiwade, former Japanese Naval Captain, was tried before a Provost Court for illegal sale of narcotics in Korea.

Ministry of Health and Welfare and Ministry of Finance were informed of the necessity of establishing and maintaining Medical Examiner offices in its principal cities.

SECTION IX
CONSULTANTS

Nutrition Surveys

Preliminary nutrition survey materials for November were received from the Japanese Metropolitan Bureau of Health Office. However, the data were not sufficient to predict any change that may have taken place. They do indicate a level at least as high as that of August.

Conferences

(a) The Nutrition Consultant attended, with representatives of the Supply and the Welfare Division, PH&W, and Licensed Agencies for Relief in Asia (LARA), a meeting on 3 December of prefectural officials to consider the school lunch program throughout Japan. This meeting was preliminary to a meeting to be held in January.

(b) The Nutritional Efficiency Committee of the National Research Council met 5 December. This committee is at present considering a desirable food pattern toward which the Japanese can work in developing their agriculture and imports.

SECTION X
INSTRUCTIONS TO THE IMPERIAL JAPANESE GOVERNMENT

On some occasions SCAP instructs the Imperial Japanese Government verbally on matters that it is desired to have executed. In order to keep Military Government officers informed as to what instructions have been given on public health and welfare matters, a listing of these subjects will be made in this bulletin as they occur.

Establishment of a Child Welfare Bureau in the Ministry of Health and Welfare (see Weekly Bulletin PH&W 17 Nov to 23 Nov 1946).

SECTION IV - Dental Affairs
SECTION V - Supply
SECTION VI - Preventive Medicine
SECTION VII - Vital Statistics
SECTION VIII - Legal Statistics
SECTION IV - Memoranda to I. J. G.

SECTION I WELFARE

Reserve Supplies Held for Relief Distribution

The Public Health and Welfare Section issued a Memorandum to the Japanese Welfare Ministry, dated 10 December 1946 on above subject, authorizing the distribution of remaining Japanese military reserve relief supplies. These supplies consist of some 2,873,700 kgs of biscuits, and 11,539,500 kgs of canned food, according to latest reports from the Ministry of Health and Welfare. The amounts to be distributed are specified for each prefecture, based on current estimates of numbers of needy persons and amounts previously distributed. Distribution is to be made as soon as possible, but not later than April, 1947 in accordance with policies established in SCAPIN 1713-A, 13 July 1946, in which authorization was given for distribution of party of these reserves. Exception was made in the case of 5,000,000 kgs of canned protein foods, included in current inventories, which are to be used specifically in the projected school lunch program.

To allow for changes in inventory (including changes due to discovery of stocks not yet reported), the Ministry of Health and Welfare was authorized to increase or reduce individual allocations up to 25%. Changes in excess of 25% require SCAP approval.

Copies of instructions from the Ministry of Health and Welfare to prefectures, listing specific allocations, transfers to be effected between prefectures, and amounts of canned protein foods to be used by various prefectures for the school lunch program, are to be furnished to SCAP.

MG teams are requested to maintain close liaison with responsible Japanese officials to insure that these instructions, implementing the Public Health and Welfare Memorandum, are properly carried out.

Public Assistance

The October Public Assistance Report submitted by the Ministry of Health and Welfare showed a decrease in persons assisted and an increase in grants, over the previous month. Comparative figures for both months are shown below:

	<u>September</u>		<u>October</u>	
No. of persons (not in institutions) assisted		2,787,390		2,636,392
No. of persons in institutions assisted by Government		65,521		67,047
Total no. of persons assisted		2,852,911		2,703,439
Net Cash Grants	Yen	118,691,725	Yen	120,410,112
Cost of grants in kind	Yen	8,915,362	Yen	16,585,715
Total grants	Yen	127,607,087	Yen	136,995,827

Chief reasons for dependency were listed as "children without support," "damaged property," "unemployment," and "health problems," in that order.

Red Cross

The Japanese Red Cross has appointed a member of its Nursing Staff to work with the American Red Cross Consultant on Nursing Affairs in the development of its varied nursing programs. This is the first step taken by the Japanese Red Cross indicating recognition of the need for participation of a professionally qualified nurse in planning and coordinating nursing services as they relate to their medical and hospital programs, and in the development of standards of nursing education within the organization.

Conferences were held with the President of the Japanese Red Cross concerning the need for maintaining close liaison with the Ministry of Health and Welfare. It was pointed out that the Ministry should be made aware of the possible assistance which might be rendered by the Red Cross Society in the development of programs with which the Ministry is concerned. The typhus control program is an example in which the Red Cross might be of very great assistance to the government authorities; first, by carrying on a program of education through its chapters, branches and various medical facilities, and, second, by working our plans with Prefectural health authorities by which trained Red Cross medical and nursing teams might be made available in the event of epidemic outbreaks.

The Japanese Red Cross Health Museum has developed a number of food exhibits showing the nutritional values of foods now available on local markets. The exhibits emphasize the nutritional values of foods which may be substituted for rice. American authorities interested in the development of visual health and education exhibits applicable to Japan have found the Museum and excellent resource.

SECTION II MEDICAL SERVICE

For the week ending 8 November 1946, the Japanese Civilian Hospital Strength Report shows 3022 hospitals with a bed capacity of 214,470 beds, 107,342 of which are occupied. There were 279,920 outpatients treated.

The First National Medical License examinations were held on the 29th and 30th of November at Nippon University. 262 doctors who have had an abbreviated medical course and 6 months internship were allowed to qualify for license by special permission of the Medical Education Council.

Public Health Training Program

The officials of the Public Health Institute were directed to reorganize the public health courses of instruction. This is being done in conjunction with representatives of this Section and Sub-committee on the Japanese Council on Medical Education. The inadequate number of properly trained doctors for public health work make this step mandatory. An over-all program was outlined to this group for re-organization of the Institute of Public Health as a teaching institution. The new Public Health Program in Japan is modern, and cannot be properly administered by the doctors with their present training. The teaching phase of the Institute of Public Health will be integrated with that of the Institute for Infectious Diseases and a new research institution on nutrition will be established. All phases of the program will be carefully coordinated by representatives of this Section. Separate courses will be given in all phases of public health work, sanitary engineering, nursing, veterinary affairs and general public health officers will all be trained.

SECTION III VETERINARY AFFAIRS

Reports from the Japanese

The Ministry of Agriculture and Forestry, Bureau of Animal Industry, reported the following new outbreaks of disease during the period 8 to 14 December 1946.

<u>Prefecture</u>	<u>Disease</u>	<u>Cases</u>
Kumamoto	Texas Fever	69
Chiba	Anthrax	1

SECTION IV DENTAL AFFAIRS

A meeting of the faculties from the prosthetic departments of all dental schools was held in Tokyo to discuss new teaching methods and techniques.

SECTION V SUPPLY

Production

Production of DDT Dusters and Spraying Equipment during period 2 - 7 December:

<u>Item</u>	<u>Produced 2-7 Dec.</u>	<u>Total Produced</u>
DDT Dusters	962	28330
Sprayer, pump type, semi-automatic	224	4267

Arrangements were completed for procurement and allocation of three chemicals vital for efficient penicillin production; namely, phenyl acetic acid, lactose and amyl acetate. This planning covers the year 1947.

A lecture conference designed to induce heavy industries to enter the penicillin manufacturing field was held attended by twelve manufacturers. Present manufacturers are considered unable to fulfill the requirements of the penicillin program within a reasonable time. Several of the latest scientific articles on the technical aspects of penicillin were released to the Penicillin Manufacturing Association.

A laboratory in which to construct the Central Pilot Plant was designated at Tokyo Imperial University. The Ministry of Health and Welfare is asking the Finance Ministry for 4,000,000 yen to meet the cost of the government penicillin program for 1947. A statement, warning the public of the health hazards of using black market penicillin, was formulated for publication in the Japanese press.

Narcotics

The Kato Pharmaceutical Company, a narcotic compounder, has made application, to prepare approximately 680,000 ampoules from tropococaine, which was processed before its classification as a narcotic derivative made it subject to restriction under the new narcotic regulations. The company has only 685 grams of tropococaine as yet not crystallized, according to the report, and this amount will be crystallized before 1 January 1947. It is estimated approximately five months will be required to have all the tropococaine available for marketing in ampoule form.

In an effort to prevent burglaries and thefts of narcotics, Tokyo narcotic officials assembled 48 narcotic addicts for photographing and for completion of addict forms. None of the addicts had a medical need for narcotics, and all stated they are not now using narcotic drugs. This is in line with the effort being made to collect data on all narcotic addicts in Tokyo-To.

At a meeting attended by Tokyo-To narcotic officials, representatives of the Japanese Government, and the Narcotic Control Officer, a narcotic association of all compounders, producers, central and local wholesalers of narcotics, in Tokyo-To, was organized for the purpose of studying and discussing narcotic problems and becoming better acquainted with the new narcotic regulations.

Tokyo-To narcotic officials, representatives from the Metropolitan Police Bureau, Tokyo Procurators and the Narcotic Control Officer formulated plans for better cooperation among Japanese officials concerned with narcotic law enforcement. Information derived from monthly and yearly reports of narcotic registrants, from which abstracts of purchases can be prepared, will be used in investigating and prosecuting registered dealers guilty of violations.

Japanese Government narcotic officials have been directed to immediately instruct prefectural narcotic officials to effect transfer of all 250 gram, 500 gram and 1,000 gram packages of narcotics to licensed producers for repackaging.

SECTION V PREVENTIVE MEDICINE

Typhus Control

Complement fixation tests of blood samples taken from persons diagnosed as typhus fever cases in Tokyo and Kobe, indicated the presence of murine typhus. It is requested that an effort be made to obtain complete case histories from each suspected case of typhus. This section is particularly anxious to determine if such cases are

recent arrivals in Japan. The date of entry into Japan and the locality from which they came should be noted; that is, Korea, Manchuria, China, etc., or from other prefectures in Japan.

Diphtheria Control

The nation-wide diphtheria immunization program which was started in September has not been carried out to the full satisfaction of this Section. It was anticipated that all children ten years of age and under would be immunized by 15 November 1946. Information from various sources indicates that the program has not progressed smoothly in some prefectures. The administrative machinery for notifying persons to report for inoculation and the actual inoculation of these persons has not been well handled in some cases. Although the diphtheria rate is approximately 40% of the rate in 1945, it is still far too high and does not reflect an adequate immunization program. Military Government health officers are urged to exercise surveillance in their respective prefectures to see that this program is fully completed without delay.

Smallpox Control

Smallpox is on the increase at the present time. Since a nationwide immunization program was completed during the spring and summer months, smallpox should not present a problem this winter. However, it is questionable whether all non-immune individuals were adequately vaccinated during the recent immunization program. In view of this fact, and in order to insure that adequate control measures are continuously enforced, Military Government health officers are urged to keep a very close check on all cases occurring in their respective prefectures and to exercise surveillance over prefectural health authorities to see that isolation, quarantine and local immunization procedures are properly carried out.

Venereal Disease Control

At the three day school for all prefectural venereal disease control officers held in Tokyo last week, physicians were informed of basic public health principles and modern treatment regimes were demonstrated.

The venereal disease reports from Military Government health officers are still coming in. Almost without exception they have been very informative so that when they are all summarized, there will be available a good picture of this work in Japan. The personal comments of the Military Government health officers are particularly helpful.

The Ministry has been given a sample of a venereal disease report card to be translated, reproduced and sent out to all prefectures. When these cards are available, every new case seen by a public or private physician will be reported on this form.

Four pamphlets on venereal disease information to the public have been given to the Ministry for reproduction and distribution to the public. Plans for radio publicity have been initiated. Lectures to physicians and to medical students are continuing.

The main difficulty seems to be getting the Japanese actually to set up and start operating clinics for the care of the general public.

SECTION VI VITAL STATISTICS

At the meeting of the Advisory Committee on Vital Statistics to the Cabinet Bureau of Statistics, which was held in Tokyo on Dec. 13 and 14, subjects including the Revision of the International List of Causes of Death, Joint Cause of Death Selection, Monthly and Annual Reports, Special Studies, Methods of Checking for the Completeness of Registration, and the Coordination of Prefectural and Statistical Offices were discussed.

SECTION VII LEGAL CONSULTANT

The ministry of Welfare was directed to establish a Medical Examiner's Office in the principal cities of Japan. The Ministry submitted a plan to establish and maintain a Medical Examiner in the following cities: Tokyo, Yokohama, Osaka, Kobe, Kyoto, Nagoya, Fukuoka.

SECTION VIII
MEMORANDA TO IMPERIAL JAPANESE GOVERNMENT

SECTION I WELFARE

Relief Food and Clothing for Japanese Earthquake Disaster

Immediately following the earthquake which occurred at 0425, 21 December 1946, action was taken to determine the extent of damage and to estimate disaster relief needs.

A conference was held with officials of the Welfare Ministry for the purpose of coordinating the activities of all agencies and organizations concerned. The Welfare Ministry were to dispatch two (2) representatives to each of the following prefectures at 0300, 22 December 1946, for the purpose of investigating and reporting to the Welfare Ministry disaster relief requirements of food and clothing in those areas affected:

Wakayama Prefecture
Tokushima Prefecture
Kochi Prefecture

The prefectural authorities in Hyogo Prefecture were requested to investigate conditions on the Island of Awaji-shima.

Mr. Mizuno, Chief, Supply Division, Social Affairs Bureau, Welfare Ministry was instructed to communicate with the Home Ministry and the Commerce and Industry Ministry concerning the utilization of stocks under the jurisdiction of these Ministries.

Prefectural Governors are charged with the full responsibility for relief in this emergency and are authorized to use all facilities at their disposal.

Note: This information is a brief on the initial steps taken as this bulletin goes to press. More details covering this operation will be given in following week's bulletin.

LARA (Licensed Agencies for Relief in Asia)

The first overseas shipment of LARA relief supplies, approximating 350 tons, which arrived from the United States on 30 November 1946 for distribution in Japan has been allocated. For details on the supplies included in this shipment, see Public Health and Welfare Section Weekly Bulletin, for period 24 November to 30 November 1946.

These supplies are now 70% distributed and the full amount will be distributed on or before 31 December 1946. The allocation (by weight) will approximate:

Tokyo Area	35%
Yokohama Area	8%
Nagoya Area	8%
Kyoto Area	6%
Osaka Area	18%
Kobe Area	6%
Hiroshima Area	2 1/2%
Nagasaki Area	2 1/2%
Other	14%

Note: Under the provisions of SCAPIN-1169, dated 30 August 46, the Imperial Japanese Government will assume sale responsibility for security, movement, allocation and distribution of these supplies from dock side to the using agency and will, prior to the distribution of the supplies, inform SCAP of the plan of allocation. The Imperial Japanese Government will also report monthly to SCAP on LARA supplies received and distributed.

Civic Public Halls

The establishment of Civic Public Halls was encouraged and endorsed by the Education Ministry to Prefectural Governors in an official letter (No.122) dated 5 July 1946.

The Civic Public Hall is to be a cultural organization, as well as combining an adult school, a library, a museum, an assembly hall, and a technical and industrial advice bureau. The initiative for the establishment of

Civic Public Halls in cities, towns and villages is not be taken by government officials, but left to the citizens themselves to cooperate with each other to determine the necessity and/or need for such civic halls and contribute from their own resources for its support.

Recently the Social Education Section, Education Ministry and Social Affairs Bureau, Health and Welfare Ministry submitted a proposed joint letter to the Prefectural Governors, to Welfare Division, Public Health and Welfare, for approval, relating to the use of Civic Public Halls for welfare activities. There were no objections to the letter as it was drafted in final form since any participation by the government (national or local) in the Civic Public Hall, as it relates to Welfare Activities, must be in conformity with SCAPIN 775 and the established policies regarding government subsidies to private welfare.

Any official governmental welfare activity within a Civic Public Hall is a legitimate expense providing it is totally an official governmental function and such expenses are in compliance with SCAPIN 775 and the Daily Life Security Law. Thus, no welfare funds are to be expended or dissipated in underwriting or assisting to underwrite the establishment of any Civic Public Hall or be its source of maintenance.

Central Social Undertaking Committee

This committee was recently organized and it will study, discuss and make recommendations to the Welfare Ministry on all matters relating to public welfare. The sub-committee is responsible for special studies and recommendations and is to meet weekly and make its report to the Central Social Undertaking Committee.

The president of the committee is Mr. Y. Kawai, Welfare Minister, and the other committee members include representatives from the House of Peers, House of Representatives, Welfare Ministry, Repatriate Relief Board, Tokyo Imperial University, and All-Japan Welfare Committee.

The committee currently is making a study on Child Welfare with the intent to assist in strengthening this program.

SECTION II MEDICAL SERVICE

For the week ending 15 November 1946, the Japanese Civilian Hospital Strength Report shows 3022 hospitals with a bed capacity of 215,044 beds. 106,936 of which are occupied. There were 280,679 outpatients treated.

SECTION III VETERINARY AFFAIRS

General

A representative of the division conducted a survey of veterinary affairs in Shizuoka Prefecture.

Ante-mortem and post-mortem inspection is being maintained in all slaughter houses. Post-mortem procedure is faulty in that the method of ineising lymph glands is not sufficient to detect possible pathological lesions. Faulty sanitation of equipment and disposal of waste products is apparent in the majority of the slaughtering establishments.

Pasteurization of milk is faulty due to an absence of thermometers and the re-contamination of the milk during the bottling and capping processes. Much of the dairy equipment is old, rusty, and in poor condition. Over-all sanitation of plants processing raw milk for resale purposes, is faulty due to improper cleaning methods employed. The bacterial examination of milk is partially neglected.

The tuberculin test of dairy cows is proceeding too slowly to complete a full test in a one year period.

The proper procedure for conducting milk and meat inspections were demonstrated to all Prefecture veterinarians at a meeting held in Shizuoka City in an effort to create uniformity of methods.

Officials concerned were instructed to institute necessary corrective measures.

Reports from the Japanese Annual Disease Report

The Ministry of Agriculture and Forestry, Bureau of Animal Industry, reported the following new outbreaks of disease during the period 15 to 21 December 1946:

<u>Prefecture</u>	<u>Disease</u>	<u>Cases</u>
Chiba	Anthrax	1

Monthly Annual Disease Report for November 1946

Following is a summary of the monthly animal disease report submitted by the Bureau of Animal Industry, Ministry of Agriculture and Forestry.

<u>Diseases</u>	<u>Number of cases</u>

Samples	60
Over bacterial standards (2,000,000 per cc)	10
Under butterfat standards (3.0 percent)	2

SECTION IV
DENTAL AFFAIRS

As office space becomes more difficult to obtain and dental equipment becomes more expensive fewer dentists are being rehabilitated. Only six dentists were re-established in practice during the past month.

SECTION V
NURSING AFFAIRS

1. The Demonstration School of Nursing has been recognized by the Japanese Ministry of Education as a College of Nursing; date retroactive to 29 June 1946.

Affiliation of two-weeks duration for fourth year students at Matsuzawa Mental Hospital was completed and was very satisfactory.

2. The second Graduate Nurses Refresher Course was completed 19 December and fifty received certificates. The graduates of the two groups are uniting and will assist in the plans for the next refresher course.

3. Four more prefectural surveys of schools of nursing have been completed.

To date this completes 31 prefectures.

4. The Directors meeting of the Japanese Nurses Association was held on 20 December in Tokyo to make organizational plans and budget for the Association and to prepare the program for the meeting to be held April, 1947.

SECTION VI
SUPPLY DIVISION

Distribution

Limited stocks of Japanese-produced Typhus Vaccine are now available. The Ministry of Health and Welfare is notifying all prefectures to submit requirements for Typhus Vaccine direct to the Ministry by telegram. Requests will be submitted to Public Health and Welfare Section for screening. Japanese vaccine should be used, when available, to supplement U.S.-produced vaccine in carrying out prescribed typhus control programs.

The Japanese public has been warned through the press concerning the dangers of purchasing penicillin through other than prescribed channels.

Manufacturers are required to report all penicillin production to the Ministry of Health and Welfare for distribution in accordance with recommendations of the Penicillin Allocation Committee. Manufacturing plants must keep a record showing disposition of all penicillin approved for sale. These records should be supported by a definite release from the Welfare Ministry showing quantities authorized for distribution. Physicians and hospitals must keep a record showing the names of patients to whom penicillin was administered.

Military Government Medical Officers should exercise close supervision over manufacturing plants and using agencies to insure that penicillin is not reaching the blackmarket. It is equally important that direct supervision be maintained over quantities of out-dated U.S. penicillin released to Japanese agencies.

Production

Production of DDT Dusters and Spraying Equipment during period 9-14 December:

DDT Dusters	1045
Sprayer, semi-automatic, pump type	530

Report of the Welfare Ministry indicates production of biologicals during November as follows:

Cholera Vaccine	#,600 cc
Plague Vaccine	38,400 cc
Typhus Vaccine	150,970 cc
Triple Typhoid Vaccine	757,000 cc
Smallpox Vaccine	1,410,000 cc
Diphtheria Antitoxin	124,000 cc
Diphtheria Toxoid	567,780 cc

Program for production of Hydrogen Cyanide for fumigation of Japanese shipping has been initiated. Requirements for a period of one (1) year have been estimated and order for manufacture has been issued by the Welfare Ministry, Japanese Government.

Results of comparative test experiments conducted by Central Research Laboratories showed the superiority of American molds over the Japanese and these were distributed to the manufacturers at the 20 December meeting of the Japanese Penicillin Research Association. All penicillin manufacturers complain that electricity and coal shortages curtail production and steps have been taken to insure high priority for such plants. Visits to six more plants in the Kyoto-Osaka area confirm previous observations that stimulation of the penicillin activities is greatly needed and that most manufacturers fail to consider penicillin a high priority rush program. They were duly edified on this score. Several valuable technical aspects of penicillin extraction under Japanese conditions already have been experimentally obtained and distributed by the Central Research Laboratories.

Narcotics

Medical Association meetings representing the doctors from three Tokyo wards were attended by the Narcotic Control Officer who outlined the duties and responsibilities of practitioners under the new narcotic regulations. Careful handling and dispensing of narcotics to permit their use only when necessary for medical treatment were emphasized. A recent theft of 4 five-gram bottles morphine reported by a doctor was cited with the additional statement that the narcotic inspector should first of all ascertain why the doctor had four instead of one 5-gram bottles. The only complaint made by the doctors was that small vials of morphine hypodermic tablets,

1-gram bottles of morphine, and 5-ampoule packages of morphine should be made available for purchase by doctors rather than the larger packages now stocked by local wholesalers.

Reports are being received of former Japanese military medicinal narcotics being shipped to the 5th Medical Depot. All such medicinal narcotics have been removed from the 5th Medical Depots, Yokohama and Kobe, and future seizures should be turned over to prefectural narcotic officials who will receipt for the narcotics and make proper disposition as directed by the Ministry of Welfare.

Increased security has been provided for narcotic according to a statement received from Tanabe Pharmaceutical Company, Ltd., Osaka. It is considered the reconstructed vault, as set forth in the statement, provides adequate security.

Destruction of damaged and adulterated narcotics at Takeda Pharmaceutical Company, Tokyo, completes the cleaning-up process undertaken for former military medicinal narcotics held by SCAP-approved wholesale houses in Tokyo. Repackaging of the narcotics has made large quantities available for release to central wholesale houses. One item of importance to be repackaged is approximately 7,000,000 cc of narcocon from 21 and 22 cc ampoules to 1, 1.1 and 1.2 cc ampoules. Although the wastage during this operation is expected to be from 20 to 30 percent, the large ampoules are not suitable for medical practitioners in civilian practice.

SECTION VII PREVENTIVE MEDICINE

General

A staff visit was made by the division chief to Military Government prefectural teams at Gifu, Shizuoka and Nagoya and conferences were held with the health officers thereof.

The epidemiologist of this division returned from a visit to the Hokkaido Regional Team and the prefectural team at Aomori. At the present time the situation, as regards acute communicable diseases, is generally very satisfactory. In Hokkaido, epidemic typhus fever, which had broken out to a considerable extent by this time last year, still remains at a low level of incidence. Smallpox, however, is occurring in somewhat larger numbers than typhus. Control measures were discussed.

There have been no cases of either smallpox or typhus fever in Aomori Prefecture for a considerable period of time. A somewhat greater problem is constituted by diphtheria. The Prefectural Health Officer has initiated a plan for investigation of diphtheria cases to determine whether they fall into the group which was to have been immunized, and if so, why the immunization was not performed. Such a plan is worthy of emulation by all Prefectural Health Officers.

The typhus consultants departed for Southwest Japan and Kyushu for the purpose of continuing instruction courses in typhus control. Courses are to be held at Nagoya, Hiroshima and Kumamoto.

The re-broadcasting of weekly Health Intelligence Reports received by radio from H.M. Special Commissioner, S.E.A. via the Singapore radio station has been re-established and was commenced during the present week.

Venereal Disease Control

The basic venereal disease control reports have now been received from approximately two-thirds of the Military Government health officers. As soon as the other reports come in, a summary will be made.

Education of the public was the main work this week. Lectures, followed by discussion and a motion picture, were given to women members of the Diet, labor union representatives, farm organization representatives, and to social workers and educators. The response shows that in these representatives at least, enthusiasm and desire for better public health facilities surpasses that of many government officials working in venereal disease control. Many of these public officials still think of venereal disease control in terms of periodic examination of prostitutes. It is suggested that the sooner the public is educated to demand good public facilities, the quicker a Venereal Disease Control program will be actually in operation. Developing your community venereal disease councils should be helpful in this regard. No program can succeed on a national level unless it is successful in the communities.

Port Quarantine Weekly Report

On 13 December 1946 a command letter was dispatched from the Chief of Staff to Commanding General, Eighth Army, establishing air and maritime ports of entry as follows:

Maritime

Otaru
Hakodate
Yokohama
Yokosuka
Nagoya
Kobe
Kure
Moji
Nagasaki

Air

Haneda
Iwakuni

The Commanding General, Eighth Army, was directed to set up health and customs control at the above named ports as provided for in the SCAP circulars governing entry and exit of persons, vessels and aircraft into and from Japan.

In connection with establishing quarantine at these ports, the port quarantine consultant has recently visited the ports of Nagasaki, Moji, Ujina, Kobe, Nagoya, and Yokohama, and the airports of Haneda and Iwakuni, in company with the quarantine officer assigned to 8th army Military Government Headquarters.

The first lift of 25,000 repatriates from the Soviet areas has been virtually completed. Plans to repatriate greater numbers of Japanese from those areas are now being put into effect under the terms of an agreement between the Supreme Commander for the Allied Powers and the Soviet authorities. These repatriates shall be routed into Japan through the ports of Hakodate, Maizuru and Sasebo.

SECTION VIII VITAL STATISTICS

The third conference of the National Advisory Committee on Registration of births, deaths, stillbirths, marriages and divorces was attended at the Justice Ministry, Tokyo, on 19 December 1946. Proposed changes in the Civil Laws of Japan and their effect upon vital registrations were discussed. Ways and means of securing more complete and accurate registrations were reviewed. The need for strengthening the Koseki offices, by obtaining a larger budget for their operation and better qualified workers, was discussed. Reference was also made to the problem of the confidentiality of the records which contain a statement of the cause of death.

On 20 December 1946, a meeting was attended at which the Koseki chiefs of the city of Tokyo met. At this meeting, the chiefs who had served long-periods of time, some as much as 22 years, were presented honorary statements of recognition of their services.

SECTION IX NUTRITION

Surveys

The Japanese Welfare Ministry report that data on the nutritional Survey for November of the cities Nagoya, Tokuoka and Sendai and the prefectures Ibaraki, Tochigi, Aichi, Shizuoka, Shiga and Kukuoka have been submitted, however, the final reports will not be available before the end of next month.

Conference

A meeting of the sub-committee members of the Japanese Institute of Public Health met on the 20 December in the Mitsubishi Shoji Building. Dr. J. Miki, of the Japanese Welfare Ministry represented the Nutritionist. Discussions followed on nutritionist requirements and the number that could be accommodated for the initial class.

SECTION X SOCIAL SECURITY AND INSURANCE

Personnel Assignment

With the assignment of George F. Pollock, War Department Civilian, to this Section, it is announced that he has been appointed Deputy Chief of the Social Security and Insurance Division, effective 7 November 1946.

Japanese Nationals on Duty With the Occupation Forces

Under provisions of the Employees' Relief Ordinance, as promulgated by Imperial Japanese Ordinance No.382, as amended, and in accordance with Vice Minister's decision of 31 May 1946, full responsibility and liability rests with the Imperial Japanese Government for Japanese Nationals on duty with the Occupation Forces, as to medical care, hospitalization, disability, and death benefits for accidents or illness incurred in connection with their duties. Those Japanese Nationals working in dependents' homes are also eligible for benefits under provisions of this ordinance.

The Central Liaison Office has been verbally directed to properly and with expedience disseminate full information regarding the Employees' Relief Ordinance to subordinate agencies with instructions that all Japanese Nationals on duty with the Occupation Forces be fully informed of their eligibility for benefits under provision of the said ordinance. The Medical Service Division concurred in the directive to the Central Liaison Office, and added that in compliance with the responsibility for radical care, suitable facilities will be provided and immediately established.

Interested Bureaus of the ministry of Welfare were also given the information regarding the instructions to the Central Liaison Office, for the purpose of coordinating and cooperating in making the benefits available for all eligible employees as a part of the health and social insurance program. The Central Liaison Office, branch for control in Tokyo, has designated six municipal hospitals as places for government employees to receive treatment under provisions of this ordinance. It is interpreted that similar procedure can be followed by the municipal government in the prefectures.

CRAWFORD F. SAMS
Colonel, Medical Corps
Chief, Public Health and Welfare Section

2 Incls:

1. Weekly Summary Report of Cases and Deaths from Communicable Diseases in Japan, week ending 7 Dec 46, w/Digest.
2. Venereal Disease Report for week ending 30 Nov 46.

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS

SECTION VII - Vital Statistics
SECTION VIII - Nutrition
SECTION IX - Social Security and Insurance
SECTION X - Memoranda to I. J. G.

SECTION I WELFARE

School Lunch Program

The school lunch program was inaugurated by the Education Ministry in cooperation with the Health and Welfare Ministry, on 23 December 1946, in Tokyo-To.

Representatives from the Education Ministry, Health and Welfare Ministry, LARA and SCAP (Civil Information & Education, Public Health & Welfare and Public Relations Office) visited the Nagato-Cho Primary School to observe the program in operation.

This first noon day meal was served in 389 primary schools to a total of 76,316 school children. Each meal consisted of 20 grams of stew, containing meat, potatoes, onions, cabbage, carrots and salt.

The food components for these lunches were obtained from normal ration sources, LARA supplies and other imported stocks. Powdered milk will be added to the school lunch menu within the next two-week period. The school lunch is food which is additional to that received by the children through normal rationing channels.

There is a nominal charge for the school lunches served to those children whose parents can afford such payments. The Japanese Government underwrites the lunch expense of those children whose families cannot afford such payments.

Disaster Relief (Southern Honshu Earthquake)

Immediately following the earthquake, the Public Health and Welfare Section, SCAP, called a conference with representatives of the Welfare Ministry to coordinate disaster relief for the sufferers.

Three two-man teams were dispatched to the area by the Ministry of Health and Welfare, to establish liaison within the area and to report the extent of damage to property, injured persons and loss of life.

At the same time, the Public Health and Welfare Section sent three representatives, one each from the Medical Division, Supply Division, and American Red Cross, to survey and coordinate the relief activities. An eight-car special train loaded with Civil Affairs medical supplies and relief materials left for the disaster area.

After the arrival of personnel in the field, it was discovered that in some places the disaster reports had been exaggerated due to the hysteria which naturally follows a disaster.

Reports as of 2300, 29 December 1946, the disaster had taken the following toll:

Deaths	1289
Injured	2364
Missing	30
Private Homes Completely demolished	9045
Private Homes Damaged	23374
Other Buildings Completely demolished	1141
Other Buildings Damaged	1058
Factories Completely demolished	33
Factories	19
Houses washed away	1541
Houses lost in fire	2497
Flooded Homes	25431
Fishing Vessels lost	2602
Bridges lost	48
River Banks broken	91
Roads damaged	155
Estimated homeless	94669

Areas most affected:

Wakayama Shikoku Tokushima Kochi Kagawa

All Japanese governmental agencies, Ministry of Health and Welfare, Agriculture Ministry, Japanese Red Cross, American Red Cross, and Eighth Army Military Government Teams are combined in administering relief under the coordination of Public Health and Welfare Section, SCAP.

Japanese Red Cross Society

The past week has seen the Japanese Red Cross engaged primarily in meeting the disaster needs of the recent earthquake.

The headquarters dispatched three (3) medical teams into the disaster area. Each team had the following personnel:

2	Doctors
1	Pharmacist
10	Nurses

A representative of the American Red Cross, attached to Public Health and Welfare, SCAP was sent into the area as a technical advisor, to assist the Japanese Red Cross meeting the emergency phase. This is the first opportunity for the newly reorganized Japanese Red Cross Society to participate in a disaster operation and to render disaster services, other than medical, as was the practice of the Red Cross in former years.

The Red Cross authorized a drive, to raise Earthquake Disaster Relief Funds, through its chapters in every prefecture. This drive was held for a three (3) day period in Tokyo (25, 26, 27 December 1946) and was on a strict voluntary contribution basis. The Tokyo "street contributions" during this three day drive will approximate 96,000 yen.

SECTION II MEDICAL SERVICE

The hospital strength report for the week 15 November-22 November is not submitted due to failure of the Ministry of Health and Welfare to furnish the requested date.

A meeting was held with the Ministry of Education and CI&E to reiterate the policy on medical education and to clear up any misunderstanding that exists concerning the policy. The medical "Semmon Gakko" in particular was discussed in its relationship to present and future educational systems. The following points were stressed: Semmon Gakko graduates during the coming spring (1947) will be required to pursue one full year of university level training to be eligible for entrance to the four year medical school course in 1948. Semmon Gakko students in their third year will be required to complete two years of university level training prior to entrance to the medical school. All others will be eligible for entrance into the medical school in 1947 without additional preparation.

On Friday, 27 December 1946, the Japan Medical Association held a meeting in the J.M.A. building. Problems concerning reorganization were discussed.

SECTION III VETERINARY AFFAIRS

Reports from the Japanese

Animal Disease Report

The Ministry of Agriculture and Forestry, Bureau of Animal Industry, reported that no new outbreaks of animal disease occurred during the period 22-28 December 1946.

SECTION IV DENTAL AFFAIRS

National Dental examination will be held in April.

Simultaneous written examination will be held in the six major schools. Practical examinations will be held in small increments as facilities will permit.

SECTION V SUPPLY

General

Request has been submitted to The Surgeon General for supply of certain professional journals to all Military Government Regions and Teams. The list includes 19 periodicals and request has been made that direct subscriptions be provided for each region and team. Upon receipt of information as to action taken by the Surgeon General, a list of the journals approved will be published to the field.

Production

Production report of the Ministry of Health and Welfare for the month of November indicates production of various types of medicines, dental materials, sanitary materials and biologicals as follows:

Controlled medicines	yen	27,607,081
Non-controlled medicines		68,554,069
Patent medicines		85,966,634
Sanitary materials		7,562,652
Dental materials		1,296,457
Biologicals		6,349,962

The above figures indicate sizeable increases in production of controlled medicines, non-controlled medicines and sanitary materials over the previous six (6) months.

Production of sulphadiazole was 11,745 kg's, the highest monthly production during 1946. Increase in the production of sanitary materials results from allocation of American raw cotton to this program.

Production of DDT dusters and spraying equipment during period 16-21 December:

DDT dusters	982
Sprayer, semi-automatic, pump type	165

Initial plans have been made for accelerating production of sulphathiazole, to provide a quantity sufficient for treatment of venereal disease and pneumococcal infections. Production for November was increased to 670 kg's. Planned production for December 1946 and 1st quarter 1947:

December	850 kg's
January	1200 "
February	2000 "
March	2000 "

Production of bismuth subsalicylate and mapharsen have been initiated. These drugs have never been produced on a large scale in Japan and production is expected to increase gradually to meet requirements.

Standardization of the vial and label of commercial penicillin was formulated, to be effective 1 April 1947. The Japan Iron & Steel Company signified their intention to enter the penicillin field.

Narcotics

Reports were received of shortages of narcotics, particularly codeine, in some areas in Japan. Monthly reports indicate the situation is much improved over that of one year ago, although in some cases levels of narcotic stocks have not been brought up to the desired level. When the levels of stocks in local wholesale houses fall below a normal working level, items needed should be purchased, by means of official order form, from central wholesalers in Tokyo and Osaka.

To maintain central wholesale stocks at the desired level, approximately 2,000,000 codeine tablets (0.03 gm) will be released from former Japanese military stocks. Repackaging of these narcotics in 25, 50 and 100 tablet packages is underway, and the stocks are expected to reach central wholesalers by 15 January 1947.

From the 5th Medical Depot, Yokohama, ten Basic Medical Units containing narcotics were consigned to Kagawa prefecture and three to Wakayama. The narcotics in these units should suffice for emergency needs arising out of the earthquake-devastated area.

Information received from the Ministry of Justice regarding current narcotic violations indicate medical narcotic stocks in varying amounts are held by unregistered persons in Japan. In addition, some registrants have failed to report inventories, probably contemplating diversion of the unreported narcotics to illicit channels. Vigorous action is being taken by the police and prefectural narcotic officials against these offenders, particularly in the Osaka area.

SECTION VI PREVENTIVE MEDICINE

General

The Division Chief spent the entire week in the area affected by the recent earthquake and tidal wave. Because of communication difficulties, detailed reports are not yet available; at the present time, however, there does not appear to be an immediate threat of any epidemic.

Venereal Disease Control

This office continues to receive reports of drug shortages. The chief of the Supply Division, Public Health and Welfare Section, SCAP, gives the following information regarding drugs used in the treatment of the venereal disease:

Mapharsen and Bismuth subsalicylate

Only available at present from U.S. Stocks which must be obtained through Military Government. There are sufficient quantities for public clinics. If the Military Government Health Officer wishes to release these drugs to private practitioners, it is recommended that the drugs be given to physicians who will report the case, follow the suggested treatment schedules, do contact tracing and treat the patient to completion. It is not recommended that these drugs be given to private physicians who will not follow directions.

Mapharsen and bismuth subsalicylate are now being manufactured by Japanese companies, but the quality has not been standardized, so that it is unlikely that Japanese made mapharsen and bismuth subsalicylate will be available for at least 60 days.

Neorsphenamine and old arsphenamine

Three drugs are sold to private practitioners through the Prefectural Medicine Control Company. This is a private company under prefectural control and acts as the commercial distributing agency for the entire prefecture. The prefectural venereal disease control officer should see that this company has sufficient supplies of these drugs available for sale to private practitioners. If stocks are insufficient, the Pharmaceutical Affairs Section in the Ministry of Health and Welfare should be informed of this fact.

Sulfonamides

Adequate amounts are available through Military Government channels for public clinics. Japanese stocks are becoming increasingly available and should be used. The prefectural government should ask the Ministry for information as to sources of supply. The governor will have to assign sufficient funds for the purchase of these drugs.

Sulfonamides are on sale to private practitioners at the Prefectural Medicine Control Company. The prefectural venereal disease control officer should act as a liaison officer between this company and the Pharmaceutical Affairs Section in the Ministry. He should assure himself that adequate supplies of drugs used in the treatment of venereal diseases are on hand at the Prefectural Medicine Control Company for both public and private use.

Finally, the prefectural government must learn to begin buying these drugs through the control company so that the use of Military Government supplies diminishes.

Typhus Control

The typhus consultants returned from a trip to Nagoya, Kure, and Kumamoto where typhus control conferences were held for the prefectural health officers in Tokai Hokuriku Region, Chugoku and Shikoku Regions and Kyushu Regions respectively. The interest and questions asked at these meetings indicate an improvement in the understanding of typhus control fundamentals.

SECTION VII VITAL STATISTICS

Births The number of births reported, (195,993) resumed its upward trend established since July; in the preceding month, the number was 190,727. The birth rate for November was 32.6 per 1,000 population.

Deaths Deaths continued to decline in number. A total of 38,425 deaths were reported; the rate was 14.7 per 1,000 population. This figure represents a slight decrease below the October rate (15.1) and a reduction of more than 30 percent below the July rate of 21.5. Following the sharp decline in the rate in the preceding month, an investigation was instituted and there is evidence that this reduction is more apparent than real. Contrary to official instructions, some of the local reporting offices were found to have included in their reports, deaths to Japanese Nationals which occurred outside of Japan. It is known that during the preceding months a large number of Japanese were repatriated and this resulted in many declarations of events occurring outside of Japan. Steps were immediately taken by Japanese authorities to notify all local government offices not to include events occurring outside of Japan in their reports. This may go far towards explaining the comparatively close agreement in the rates for October and November. The rates previously stated for the months of July, August and September are now considered to be approximately 30 percent higher than the true figure. Japanese authorities are continuing their study of registration practices regarding this matter.

Infant Deaths Infant deaths (11,390) increased more than 10 percent above the October figure (10,087). The infant death rate was 58.1 per 1,000 live births. This represents the second consecutive month of increase, although the rate is still considerably below the high point (74.0) established in July.

Stillbirths With one exception, stillbirths have increased in number each month since July. There were 8,682 stillbirths reported representing a rate of 44.3 per 1,000 live births.

Marriages Marriages (52,177) increased approximately 40 percent above the figure (37,654) in the preceding month; the marriage rate was 8.7 per 1,000 population. However, it is thought that the September figure (61,102) is abnormally high, and that for October (37,654), much too low.

A possible explanation of this may lie in the fact that a National, uniform declaration form was placed in use for the first time at the beginning of October. Unverified reports, which may explain this matter, would seem to indicate that many people who had not previously made a declaration of their marriage, received incorrect information which led them to believe that the marriage registration procedure was going to be made extremely difficult, beginning in October. Therefore, it is said that many persons who would normally have made the declaration of their marriage during October or in some later month, made it in September to avoid expected difficulties of later registrations. This tended to elevate the number of registrations in September, and to correspondingly depress it in October. It will be necessary to observe the number reported during the next few months in order to determine correctly the relative importance of the figure reported for the month of October.

Divorces The number of divorces (6,245) was nearly 20 percent higher than the figure (5,237) reported for October the divorce rate was 1.0 per 1,000 population. Just as in the case of marriages, the number of divorces reported for September (11,639) was abnormally high, and correspondingly low for October (5,237). The explanation given previously for this phenomenon in the case of marriages does not seem to be as plausible for divorces. It is possible that articles appearing in newspapers and other publications concerning expected changes in the civil laws regarding divorce, may have had some effect in causing people, who were already considering taking divorce action, to do so sooner than they might have done otherwise. However, this would not fully explain the sudden increase recorded for September. Another factor, which must be considered is the fact that following the return of many repatriates, a large number of marriages hastily entered into during the war resulted in separations. We must wait for further reports before an adequate explanation can be given concerning divorces.

Geographic sub-divisions When the above vital events are compared according to urban (places of 30,000 population or over) and rural (places under 30,000 population) areas, it would appear, on the basis of experience recorded over the five months period (July-November), that the corresponding birth, marriage and divorce rates are quite similar. On the other hand, the death rate is a little higher in the rural (gun) areas than in the urban (shi) and the infant death rate is considerably higher. Just the opposite is true regarding the stillbirth rates.

NUMBER OF BIRTH, DEATHS, INFANT DEATHS, STILLBIRTHS, MARRIAGES, AND DIVORCES
REPORTED ACCORDING TO PREFECTURE, NOVEMBER 1946

Area	Births	Deaths	Infant Deaths	Stillbirth	Marriages	Divorces
All Japan	195,993	88,425	11,390	8,682	52,177	6,245

SECTION IX SOCIAL SECURITY AND INSURANCE

The Insurance Bureau of the Imperial Japanese Government has been contacted on two particular subjects.

- (a) Are there any restrictions in the National Health Insurance or Health Insurance Laws which prevent medical care for certain communicable diseases? There are no restrictions except by budget limitations which apply particularly to the National Health Insurance, which is mainly for urban and rural districts. The Health Insurance which is for industrial areas, is in a better position, but has neglected the preventive medicine program because of numerous medical treatment requirements. A preventive medicine program is included in the revised plan for the social insurances.
- (b) Did the Imperial Japanese Government operator make available any social insurance for Koreans in Korea? It is reported that the Seamens' Pension Insurance (1940) was the only one which now is being investigated by this Section as to the extent of operations and benefits available.

SECTION X MEMORANDA TO IMPERIAL JAPANESE GOVERNMENT

PHMJG-6 24 Dec 46 - Partial Amendment of Operational Plan for Nutrition Surveys of Civilian Population.

CRAWFORD F. SAMS
Colonel, Medical Corps,
Chief, Public Health and Welfare Section

2 Incls:

1. Weekly Summary Report of Cases and Deaths from Communicable Diseases in Japan, week ending 14 Dec 46, w/Digest.
2. Venereal Disease Report for week ending 7 Dec 46.

**GENERAL HEADQUARTES
SUPREME COMMANDER FOR THE ALLIED POWERS
Public Health and Welfare Section**

WEEKLY BULLETIN

**For Period
30 December – 5 January
1947**

SECTION I - Welfare
SECTION II - Medical Service
SECTION III - Veterinary Affairs
SECTION IV - Nursing Affairs
SECTION V - Supply
SECTION VI - Preventive Medicine
SECTION VII - Nutrition
SECTION VIII - Social Security Division
SECTION IX - Memoranda to I. J. G.

SECTION I WELFARE

Housing

Building permits, for all of Japan, are now centralized at national level. The Board of Reconstruction has surveyed the need of housing and shortly will make available essential material and building permits based on this survey. Each prefecture will receive an allocation of controlled material and building permits which it is hoped will stop the waste and graft of materials being allocated to non-essential places of amusement, bars, etc.

Japanese Red Cross

The Japanese Red Cross was alerted for disaster work in the December 21st Shikoku earthquake. With the assistance of the Public Health and Welfare Section, SCAP, American National Red Cross and the Imperial Japanese Government, it went into action with investigating units, nurses, doctors, and trained disaster workers who were immediately rushed to the various affected scenes of the disaster. A 40-bed field hospital was placed at the disposal of the Japanese Red Cross by PH&W, and with the complete cooperation of all agencies, the Japanese Red Cross has shown its ability to take the initiative in its first real disaster. Units are in the field now making investigations, giving inoculations, and caring in general for the earthquake shocked victims.

Funds have been raised by The Japanese Red Cross from the Japanese people and the nation as a whole is conscious of their responsibility to the sufferers.

The American National Red Cross has cooperated through out the disaster by supplying trained disaster workers to assist in alleviating suffering.

In America, the Japanese residents of Los Angeles, California, have donated \$5000 for the relief of sufferers in Wakayama from where most of them originally lived. They will ship their supplies through LARA.

In addition to relief activities described above, the Imperial Japanese Government, through its Welfare Ministry, set up disaster investigating units at national level and released food, clothing, and medical supplies, to the victims.

The Public Health and Welfare Section, SCAP, acted as overall coordinator of the disaster relief measures and maintained night and day service to all groups.

All that has been described above would have been to no avail had it not been for the quick emergency measures immediately put into action by the Eighth Army and Military Government Teams. The plans made on a national level were projected to the prefectural level where they were immediately activated. Besides going through the 250 continuing quakes, the military personnel located in the stricken area took care of the dead and injured, fed the hungry, provided clothing, and reestablished communications. The short message "no military personnel of the occupation forces sustained loss of life or injury" speaks higher than word of the smooth team work of the Military Government forces. The forces of the British and Americans were unified in their activities, and the southern prefectures will remember their former enemies as their saviors in time of distress and disaster.

LARA (Licensed Agencies for Relief in Asia)

The second shipment of relief goods from LARA is due to sail from the United States on 7 January 1947. This shipment, it is understood, is larger than the first which was about 350 tons,

The first shipment was well received and distribution went smoothly to the allocated areas.

New allocations will be announced at later date in this bulletin.

SECTION II MEDICAL SERVICE

Japanese Civilian Hospital Strength Report for the week of 15 Nov to 22 Nov shows 2977 hospitals with a capacity of 214,334 beds, 105,792 of which are occupied. During the same period 277,087 out-patients were treated.

During the week, conferences were held with CI&E and Ministry of Education concerning the Medical Education Program. Prior recommendations were reiterated and clarified and the following basic principals were stressed:

1. In 1947, and thereafter, students may qualify for the National Medical Examinations only upon fulfilling the following prerequisites:
 - a. Three years of university (daigaku) study in liberal arts including certain prerequisite subjects considered basic to the study of medicine. (Except as noted in paragraphs 2a, 2b, 3 and 5.)
 - b. Four years of study in an approved school of medicine, of university (daigaku) level.
 - c. One year of rotating internship in a hospital providing adequate facilities for clinical training.

Upon the satisfactory completion of the National Examination, they will be issued a license to practice medicine by the Ministry of Health and Welfare.

2. Realizing the consequences of such a sudden and radical change, the following interim program has adopted.
 - a. 1947 graduates of the present government, university-affiliated, medical semmon gakko will be allowed to qualify for examination following completion of one additional year of study composed of liberal arts and certain basic medical subjects, followed by one year of rotating internship in a hospital. 1948 and 1949 graduates will be handled in the same manner.
 - b. Other medical semmon gakkko will be evaluated by the medical school inspectors appointed by the Ministry of Education and upon the advice of the Japan Medical Council and Public Health and Welfare Officers to determine if the standard of instruction is equal to, or better than that of the government, university-affiliated schools. If it is so, they will be afforded the same treatment as the students of the government university-affiliated schools.
3. All other students not treated in paragraph 2 will be required to meet the prerequisites for National Examinations as outlined in paragraph 1.

(Note: There is no provision in this interim program for those medical semmon gakko who entered as freshmen in 1946. They will be expected to discontinue present medical studies and be integrated into such courses of study as shall eventually permit them to choose any of the professional fields including medicine.)

4. Final Status of the semmon gakko, except those government, university-affiliated watch will be discontinued, will depend upon the ability of the school to convert to a medical school, satisfying the criteria laid down by the Japan Medical Council; or, they may convert to a liberal arts school of university (daigaku) level. Failing to convert to either the liberal arts university or the medical school of university daigaku level, they must cease to exist as schools for the preparation of, or graduation of physicians.

5. Koto gakko type schools which are now conducting a liberal arts educational course and graduating students in 1947, 1948, and 1949, may enter them directly to the University-type medical school. After 1949, Koto gakko students will not be admitted to the medical (daigaku) university.

SECTION III VETERINARY AFFAIRS

Reports from the Japanese Animal Disease Report

The Ministry of Agriculture and Forestry, Bureau of Animal Industry, reported the following new outbreaks of disease during the period 30 Dec 1946 – 4 Jan 1947:

<u>Prefecture</u>	<u>Disease</u>	<u>Cases</u>
Ishikawa	Anthrax	1

SECTION IV NURSING AFFAIRS

Press conference held 30 December 1946 at 1100 Radio Tokyo in connection with recruiting program for nurses. Subject was "Personnel Needs in Nursing in Japan and the need for high school graduates to enter the nursing schools, in April 1947".

Conferences have been held re: the Public Health Nursing Education Course at the National Institute of Health. Program has been planned and Health Centers in Tokyo-To and adjoining areas are to be inspected and set up for adequate practical training of the class of 50 nurses who are to enter the course in March 1947. It is felt that three months will not be adequate but four months as the minimum time will be necessary. In order to have supervisors ready to take over the leadership of the practical work, a class for instructors will be held for one month's duration prior to March. Dr. Kobayashi, Chief of Tokyo-To Public Health Division, and Dr. Koyama, Chief of Hygiene Section, have agreed to release 20 of the prefectural nurse for a one-month period to attend the course and to act as teacher-nurses in these health centers. Full cooperation has been promised from Tokyo-To office and Dr. Kusumoto, Ministry of Welfare, in the working out of this program.

SECTION V SUPPLY

The Welfare Ministry, Japanese Government has initiated mixing and milling of DDT products. Sizeable stock of 10% DDT dusting powder and typhus vaccine will be available through Japanese distribution channels in the near future. Central warehouse have been selected by the Japanese Government throughout Japan. All prefectural governors have been notified regarding the detailed distribution system. It is the responsibility of local prefectural officials to make requests direct to Pharmaceutical Section, Medical Bureau, Welfare Ministry, for necessary quantities to control communicable diseases. Military Government officers should determine that adequate facilities are provided by prefectural authorities for receipt, storage and issue of both DDT and typhus vaccine. Typhus vaccine should be stored at temperatures ranging from 35 to 50 degrees Fahrenheit. The overall program is not developed to a point that Japanese agencies may assume responsibility for issue of DDT and typhus vaccine at this time. Announcement will be made when this change can be made. Requisitions for DDT products for civilian use should be processed through present normal channels until receipt of this announcement.

Military Government officers have reported that stocks of Antu (rat poison) are not entirely adequate to accomplish an ideal rat extermination program. Production has averaged 21 1/2 metric tons for the past six (6) months. Requirements for 1947 as submitted by prefectures to Welfare Ministry total approximately 75 tons, which is less than four (4) months present production. These facts indicate reluctance on the part of the Japanese to purchase adequate quantities of Antu. Maximum production capacity is 41 tons monthly. The Welfare Ministry has been instructed to immediately increase production to the maximum. Encouraging Japanese to purchase Antu is indicated. Further study of requirements will be made.

Distribution

The Welfare Ministry has advised the Prefectural Governors to inaugurate the sales of former Army-Navy medical supplies in their prefectures by 6 January 1947.

Removal of excess medical supplies from National Hospitals still indicate processing of inventories and segregation of their excess supplies. The original directive issued by the Welfare Ministry in April 1946 has not been complied with in all instances. Excess supplies in National Hospitals are to be transferred to the prefectural health officer for distribution through normal trade channels or through the sales to be held on former Japanese Army-Navy medical supplies.

Narcotics

The November narcotic report lists 39 narcotic thefts during the period which is an increase over the previous month. While amounts of narcotics lost by theft, since the inception of the Narcotic Control Program, are comparatively small, each theft places an added burden on enforcement agencies. The small amounts stolen in each instance indicate addicts are largely responsible for the thefts. The Japanese Government has been directed to determine whether some registrants are diverting stocks to illicit channels and reporting thefts to cover up shortages in records. In addition, direction has been given to warn registrants it is their responsibility, to escape being penalized themselves, to adequately safeguard narcotic stocks.

During October seven doctors were arrested for violating the narcotic laws and nine doctors were convicted and sentenced for illegally possessing heroin. Forty-two unregistered persons were arrested and four were assessed fines and penal servitude. Three addicts were among the violators.

Stock reports show 50 kilograms of codeine and 22 kilograms of morphine, among other narcotics, were supplied to practitioners in October by local wholesalers whose stocks were not materially reduced since excess stocks continued to be received from retailers and practitioners.

To maintain central wholesalers stocks at desired levels, the Japanese Government submitted a request for release of specific amounts of certain former Japanese military medicinal narcotics to regular civilian channels of distribution. Release of the narcotics was approved which will make 1,000,000 ampoules of 1 cc morphine injection and 2,000,000 codeine tablets (0.03 grams), among other items, available for purchase by registrants as required.

In addition, release was directed of all former Japanese military medicinal narcotics now in the custody of SCAP-approved wholesale firms in Fukuoka, Kagawa, Okayama, Miyagi, Niigata and Hokkaido prefectures. All such narcotics that are in too large packages, in unsalable condition, or in amounts in excess of requirements of the areas concerned are to be shipped with proper security to central wholesalers, compounders, and producers in the Tokyo and Osaka areas for secure storage and repackaging necessary.

SECTION VI PREVENTIVE MEDICINE

Typhus Control

The Memorandum to the Ministry of Welfare, Imperial Japanese Government, subject: Rickettsicidal Spray Program, was officially presented to representatives of the Ministry of Welfare on 31 December 1946 in a conference with Public Health and Welfare Section, SCAP, officials.

Port Quarantine

The Hakata repatriation reception center has been closed to repatriation. The center is now inactive on a standby basis to be ready on 10 days notice if needed further in the repatriation program. The centers of Nagoya, Kagoshima, and Uruga have also been ordered to close during the month of January. The centers at Ujina, Sasebo, Maizuru, and Hakodate are to remain open indefinitely.

Two new medical officers have been assigned to Port Quarantine work and are now being readied for jobs in the ports recently opened and declared "ports of entry" by SCAP.

The weekly quarantine bulletin broadcast, originating in the regional health office, Singapore, is now being picked up and re-broadcast at 1800 Fridays in the clear in English over Japanese short wave channels.

Venereal Disease Control

The use of topical treatments, douches and irrigations in the treatment of gonorrhea are not recommended. Such treatment does no good and may do harm. It does not "keep the patient clean". Washing and irrigating apparatus should be removed from the clinics and discarded. As long as routine examinations of prostitutes are still being done, clinicians should examine patients remembering that all prostitutes are probably infected. Personnel is too inadequate to waste on useless washings and irrigations or other procedures of no medical value.

Serologic tests for syphilis should be taken more frequently. Isolation of the patients for further examinations when physical examinations or laboratory reports are inconclusive. Women known to be prostitutes or otherwise promiscuous should be diagnosed and treated for gonorrhea even on the slightest clinical evidence. Laboratory confirmation in the diagnosis of gonorrhea is desirable but not essential. Spreads and even cultures are notoriously unreliable in patients having chronic gonorrheal endocervicitis. The index of suspicion is too low. Much time is being wasted on routine examinations which are nonproductive exercises rather than means of finding cases.

Danger of Epidemics in Areas Devastated by the Recent Earthquake

Investigation of sanitary conditions in areas devastated by the recent earthquake revealed dangerous sanitary conditions in the flooded areas. In most places visited reports were received that instructions had been given to chlorinate wells and other water supplies or to boil drinking water. In some places there was evidence that chlorine was being used. Generally, the sanitary habits of the Japanese people are poor and for that reason it is

believed that the population as a whole probably possesses a considerable degree of acquired immunity to such diseases as typhoid fever and the dysenteries. For this reason it is expected that the incidence of these diseases will probably not increase to any great extent in the devastated areas. However, the threat of epidemic diseases dose exist and an added safeguard Military Government health officers were advised to vaccinate against typhoid fever and to enforce sanitary measures in the affected areas.

Due to the overcrowding of displaced persons under unsanitary condition in the devastated areas Military Government health officers were advised to dust with DDT and to inoculate with typhus vaccine all people in the devastated areas in order to avoid the dangers of typhus epidemics. Military Government health officers were advised that it was not considered necessary to vaccinate against smallpox and cholera unless a case should appear in a given devastated town, in which case all persons in the town would be immunized against the disease in question.

SECTION VII NUTRITION

Surveys

The results of the November nutritional survey are presented for Tokyo and the four cities of Nagoya, Osaka, Kure, and Fukuoka. February (Dec '45 for Tokyo), May and August date are given to summarize the results of surveys of past year.

RESULTS OF NOTRITION SURVEYS - JAPAN – 1946

Nutrients in grams and calories and grams of various classes of consumed per capita per day.

City of Tokyo

SECTION VIII
SOCIAL SECURITY DIVISION

Social Security Survey Committee

Received from the Ministry of Welfare, Social Insurance Bureau, a list of committee members who have been appointed to survey and study the Social Security Program for Japan. Forty-four individuals make up the committee composed of representatives of the Diet, Social Insurance Bureau, Labor Bureau, manufacturers, education, medical, pharmaceutical, and dental associations, life insurance companies, and employment bureaus.

The committee has for study and review the existing insurance laws and recommended changes, the unemployment insurance, and the general policies of the present social insurances with a view toward unification and coordination into an overall Social Security Program.

SECTION III - Veterinary Affairs
SECTION IV - Nursing Affairs
SECTION V - Supply
SECTION VI - Preventive Medicine
SECTION VII - Nutrition
SECTION VIII - Social Security Division
SECTION IV - Memorandum to I.J.G.

SECTION I WELFARE

Public Assistance

The English Edition of the Imperial Japanese Government Official Gazette, dated 20 September 1946, has been received and includes: Imperial Ordinance No. 438 (Ordinance for the Enforcement of the Daily Life Security Law) on pages 1 - 3 and Ministerial Ordinance No. 38 (Regulations for Enforcement of Daily Life Security Law) on pages 4 - 5.

Sufficient copies of the above English Edition have been procured for the information of all concerned and are being enclosed in this issue of the Weekly Bulletin.

Ueno Station Vagrant Problem

Unfavorable reports have been received regarding the vagrant population, which varies between 1500 and 2000 persons, at Ueno Station.

The most recent report was contained in the Stars and Stripes of 8 January 1947. This news item stated that according to the Tokyo Shimbun report of 7 January 1947, six (6) persons were found frozen to death in the passageway of Ueno Railroad Station. The sex of the dead was not revealed but it was reported that malnutrition and physical deterioration were observed.

Further investigation was requested regarding this report by PH&W, SCAP through Tokyo-Kanagawa Military Government District and autopsies were requested. The Tokyo Detachment reported that eleven (11) deaths have occurred in Ueno Station in January 1947 (7 January inclusive). Of these eleven (11) deaths, nine (9) autopsies were performed by the medical examiners, and two (2) cases were diagnosed as dystrophy at inquest without autopsy. The nine (9) autopsies gave diagnosis of: pneumonia - seven (7) cases (1 fibrinous, 2 broncho pneumonia, 4 lobar pneumonia), pulmonary tbc - one (1) case and dystrophy - one (1) case.

The vagrant population at Ueno Station has shown very little fluctuation since newcomers compensate for those who become institutionalized.

Tokyo-To officials in a meeting held on 7 January 1947 took action to remedy the conditions existent at Ueno Station. Beginning on 11 January 1947 vagrants will not be permitted to enter the area (passage-way) with resident vagrants being furnished temporary lodging and non-resident vagrants being returned to place of residence. Vagrants who are ill will be given medical aid.

Housing shortage is the principle cause for the vagrant condition at Ueno Station as surveys have shown that the majority of those seeking refuge in the passageway are not without funds.

Japanese Red Cross

Field Headquarters for Disaster Relief in the areas of the recent earthquake have been set up at Osaka with American Red Cross personnel being assigned to Military Government Teams in areas most affected. These areas are:

Wakayama
Kotchi
Ehime
Kagawa
Tokushima

The above operation during the rehabilitation stage is the outcome of an agreement made between the Japanese Red Cross, American National Red Cross (International Activities, FETO) and Public Health and Welfare Section, SCAP. As this operation is the first large disaster relief in the experience of the Japanese Red Cross, which in previous disasters has limited its activities to medical relief; it was believed advisable to make available to them the services of trained personnel of the American Red Cross as advisors.

SECTION II MEDICAL SERVICE

Japanese Civilian Hospital Strength Report for the week ending 29 November shows 3900 hospitals with a bed capacity of 218,014 beds, 107,847 of which are occupied. For this same period 285,021 out-patients were treated.

SECTION III VETERINARY AFFAIRS

During the week, conferences were held with CI&E and the Ministry of Education concerning the Veterinary Education program. Prior recommendations submitted by the Veterinary Education Council were clarified and the following program agreed upon:

At the beginning of the school year in 1953, no veterinary school shall accept students who have not successfully completed 12 years of preliminary education; 6 years' primary school, 3 years' lower secondary school and 3 years' upper secondary school.

At the beginning of the school year in 1948, the length of the veterinary course shall be extended to 4 years, and no student shall be accepted for admission to a school offering less than a 4-year course.

Students now undergoing training shall be allowed to graduate and be licensed to practice.

Animal Disease Report:

The Ministry of Agriculture and Forestry, Bureau of Animal Industry, reported the following new outbreaks of disease during the period 5 - 11 January 1947:

<u>Prefecture</u>	<u>Disease</u>	<u>Cases</u>
Nagano	Swine Erysipelas	1
Fukuoka	Anthrax	1

SECTION IV NURSING AFFAIRS

The first edition of the monthly magazine Health and Midwifery has been published by the Midwifery Association, edited by Dr. H. Kusama.

Education

At a conference regarding the status of the Red Cross and St. Luke's College of Nursing, approval was given by the Mombusho for the St. Luke's College of Nursing to continue to award diplomas to the students upon graduation as long as they remain in the Model Demonstration School of Nursing. A quota of 80 students for April 1947 was set and a ratio was allotted for general public, Red Cross chapters and St. Luke's College of Nursing.

SECTION V SUPPLY

Production

Monthly report of the Pharmaceutical Production Section, Welfare Ministry, indicates continuous effort is being made to increase production of medicines currently on import programs. Individual action on specific items is being taken in order to reduce current import programs to an absolute minimum. Production of the below listed medicines is not possible due to the fact that no raw material exists in Japan and cannot be obtained in Japan:

Ephedrine Hydrochloride
Pilocarpine Hydrochloride
Theobromine w/sodium salicylate
Hydrous wool fat
Ergot
Emetine Hydrochloride

DDT warehouses selected by the Welfare Ministry, Japanese Government for storage of DDT products in Tokyo area were inspected. These warehouses are considered adequate. They will be utilized for storage of DDT products released to the Japanese on import programs. Additional warehouses selected for this purpose, located throughout Japan, have been inspected by Ministry Government personnel.

Twenty (20) pounds of *Stephania Cepharantha* (crude drug) was forwarded to the St. Louis Medical Depot, St. Louis, Mo., by air mail. This action was taken in compliance with War Department request for 100 pounds of the crude drug to be utilized for Medical Department research. An additional 80 pounds will be shipped in the near future.

Investigation is being made to determine requirements, availability of present stocks and production capacity of necessary supplies required to accomplish anti-tuberculosis campaign for all children of school age. It is estimated that a chest X-Ray will have to be accomplished on approximately 18,000,000 children of school age. Preliminary reports on requirements have been received and production program has been initiated.

The number of individuals requiring prosthetic appliances in Japan has been estimated at 78,350 by the Welfare Ministry, Japanese Government. Production of artificial limbs for approximately 50% of this number has been accomplished. Approximately 90 factories are engaged in this production. The majority of these factories are extremely small and are accomplishing production by hand.

Distribution

Inventory reports from the Central Medicine Distribution Company indicated large stocks of controlled medicaments in their warehouses. Officials of the company were interviewed regarding the distribution of these stocks of controlled medicaments. Immediate allocation to prefectures was stressed, and final result of interview indicated accelerated action by the officials.

The Pharmaceutical Affairs Section, Japanese Welfare Ministry is taking a more active part in the proper distribution of medical supplies throughout Japan, and particularly the distribution of controlled medicaments, both on a national and prefectural level.

Narcotics

Destruction of all damaged narcotics, considered not fit for medical use, which were held by SCAP approved wholesale firms in Osaka was accomplished by the Narcotic Control Officer and Osaka prefectural officials. In addition approximately 168 kilograms of Ecogonine Hydrochloride, a semi processed narcotic, were segregated for removal to the 29th Medical Depot, Kobe, for storage. The Narcotic Control Officer and Osaka prefectural officials met with representatives from all the doctors' associations in Osaka prefecture. Duties and responsibilities of practitioners under the new narcotic regulations were discussed.

A meeting was also held with the procurators and judges of the Osaka district. The Narcotic Control Officer gave a resume of the progress of the narcotic control program in Japan to date which was partially attributed to the cooperation of court officials in exacting severe penalties for narcotic violations. The Japanese officials stated they realize narcotic violators must be punished for crimes committed against the welfare of the Japanese people rather than for the monetary value of the narcotics involved.

It is considered enforcement of the narcotic laws in Osaka has reached a new high level. Five of the Japanese narcotic control officials have been delegated police power as far as narcotic violations are concerned and are working closely with a group of seven Osaka policemen who act as a police narcotic vice squad.

Inspections made of narcotic repackaging operations in Japan show a marked change has taken place since the beginning of the occupation. Workers engaged in this activity are screened for their integrity and the repackaging is being done in well-equipped, strictly sanitary laboratories to which no unauthorized person is admitted. The firms repackaging these narcotics understand it is their responsibility to prevent any diversion of the narcotics during these operations.

SECTION VI PREVENTIVE MEDICINE

Port Quarantine

Two new medical officers have been assigned to Military Government Port Quarantine work. Both officers are newly arrived from the United States where they attended the Army Medical Department school at Fort Sam Houston and the Army Military Government School at Carlisle Barracks, Pa. These officers are spending a week in the Tokyo and Yokohama quarantine offices in preparation for taking up port assignments.

On Sunday, 5 January, a new method of cyanide fumigation was employed successfully to disinfest the J. M. Davis at Yokohama. The cyanide used in this method is carried in cans in impregnated clay. When the can is opened and the amorphous clay is spread in the compartment to be disinfested, hydrogen cyanide gas is liberated in known concentrations, the final dosage being easily predetermined by the number of cans used. This is similar to the "Discoïd" method used in the United States Quarantine service.

For the week ending 28 December, seven cases of smallpox appeared aboard the Repatriation ship, Eiho Maru in Sasebo Bay.

SECTION VII NUTRITION

Nutrition Survey-Week Ending 10 January

Summarized data for Tokyo area--the seven prefectures of Ibaraki, Tochigi, Gunma, Saitama, Chiba, Tokyo and Kanagawa, together with the Kure area data--two prefectures of Okayama and Hiroshima, are presented for February through November. Caloric increases are noted for November principally due to the availability of sweet potatoes.

SECTION VIII
SOCIAL SECURITY DIVISION

Personnel

Mr. Peter M. Sullivan having been assigned to this Section is appointed Social Insurance analyst effective 10 Jan. 1947 in Health Insurance, branch of Social Security Division.

Surveyed the Health Insurance activities in Chiba prefecture and visited the Chiba Health Insurance Sanatorium. The Sanatorium was found in excellent condition but with a small percentage of its bed capacity in use. The difficulty of obtaining food and transportation were the main reasons given for a low patient census. All patients in the Sanatorium were T.B. cases which seems to be the main illness given preference at this time. However, all insured members with any type of illness are eligible for admission to the Health Insurance Sanatoriums.

A conference has been held with the Chairmen (Mr. Shimizu) of the Committee for Investigation of Social Insurance System which has been established by Imperial Japanese Government Ordinance. National Health Insurance was indicated as the most urgent problem at the present time, in the Social Insurance program.

The difference in the two types of health insurances mentioned is that National Health Insurance is operated in rural and small urban areas, and the Health Insurance, sometimes called sickness insurance is operated in the industrial and city areas. The former receives contributions from the employee only while in the latter the employer and employee contribute equally. Both are supervised and administered by the Government.

SECTION VI - Preventive Medicine
SECTION VII - Consultants
SECTION VIII - Social Security Division
SECTION IX - Memorandum to I.J.G.

SECTION I WELFARE

General

The chief of the Welfare Division, returned from TDY in the United States where he attended the annual conference of the American Public Welfare Association which was held in Baltimore, Maryland. He also held conferences with the National Commission on Children and Youth (Washington, D.C.) and the American Council of Volunteer Agencies (New York City) which is the parent agency of LARA (Licensed Agencies for Relief in Asia). He also conferred with Social Security officials in Washington State on current administrative techniques and practices.

He reports that a review of pre-war, war time and post war activities of various public and private welfare agencies in the United States indicates continued concern in the field of the problems confronting American Children and many of the newly designed programs being discussed are being projected to afford greater security for the child in his own home. He further stated that the goal of American social planning as expressed by Mr. Arthur Altmeyer of the Federal Social Security Agency, is that the insurance type of Social Security be broadened and extended to provide protection for those groups and workers not now covered. This trend will reduce tax supported public assistance programs in favor of insurance programs in which financial participation will be by the individual, employer and government.

Public Assistance Report for November 1946

The Public Assistance Report for the month of November submitted by the Ministry of Health and Welfare showed a decrease in total number of persons assisted and a decrease in grants, over the previous month. Comparative figures for both months are shown below:

	<u>October</u>	<u>November</u>
Number persons (not institutions) assisted	2,636,392	2,577,884
Number persons in institution assisted by Government	67,047	80,885
Total no. persons assisted	2,703,439	2,658,769
Net Cash Grants Yen	120,410,112	115,222,049
Cost of Grants in Kind	16,585,715	15,686,330
Total Grants	136,995,827	130,908,379

Reserve Relief Supplies

The incomplete report covering former Japanese Army and Navy stocks distributed during November 1946 for relief purposes reflects that 39 prefectures (Aomori, Niigata, Wakayama, Fukushima, Hiroshima and Nagasaki Prefectures not included) distributed 168,912 kgs of biscuits and 538,496 kgs of canned goods. These prefectures also report a balance on hand as of 1 December 36 of 2,479,860 kgs of biscuits and 9,484,542 kgs of canned goods.

The balance of Japanese Military reserve relief supplies remaining have been authorized to be distributed (Public Health and Welfare Section Memorandum to the Imperial Japanese Government, dated 10 December 1946) not later than April 1947 in accordance with the policies established in SCAPIN 1713-A, 13 July 1946, in which authorization was given for distribution of part of these reserve supplies.

Note: 5,000,000 kgs of canned protein foods, included in current inventories, is to be allocated and used specifically in the projected school lunch program.

SECTION II VETERINARY AFFAIRS

Meeting of Council on Veterinary Education

The veterinary education council held a meeting on 15 Jan 1947 which was attended by representatives of all veterinary schools. Adaptation of veterinary education to the new 6-3-3-4 system was discussed and clarified.

Field Trip to Yamaguchi Prefecture

A representative of the division conducted a survey of veterinary conditions in Yamaguchi Prefecture. Accompanied by representatives of the Prefecture Government, dairy farms, milk plants, slaughter houses, experimental farms and schools were visited.

Ante mortem and post mortem inspection is being maintained in all slaughter houses. Faulty sanitation of equipment and disposal of waste is especially apparent in the Shimonoseki slaughter house.

Pasteurization of milk is faulty due to an absence of thermometers and the recontamination of the milk during the bottling and capping processes. The bacterial examination of milk is partially neglected.

Animal disease control measures are effective. The tuberculin test will be completed on all dairy cows in March. Blood testing of fowls for Pullorum disease is in progress.

In those instances where defects were found to exist, officials concerned were instructed to institute the necessary corrective measures.

In order to assure a better system of control over matters pertaining to veterinary affairs within the Prefecture the following changes in the Prefectural Government were recommended:

Transfer meat dairy inspectors from the Department of Economy to the Public Health Section, Department of Sanitation at both Prefecture and Gun levels.

Authorize Chiefs of Veterinary Sections to travel throughout the Prefecture in order to ascertain the true condition of affairs.

Require Chiefs of Veterinary Sections to report to the Military Government Health Officer on the first of each month and present a review of the work accomplished during the preceding month.

Animal Disease Report

The Ministry of Agriculture and Forestry, bureau of Animal Industry, reported the following new outbreaks of disease during the period 12-18 January 1947.

<u>Prefecture</u>	<u>Disease</u>	<u>Cases</u>
Kumamoto	Texas fever	9

Monthly Animal Disease Report for December 1946

Following is a summary of the monthly animal disease report submitted by the Bureau of Animal Industry, Ministry of Agriculture and Forestry:

<u>Disease</u>	<u>Number of Cases</u>
Anthrax	3
Trichomoniasis	2
Texas fever	9
Equine Infection Abortion	20
Swine Erysipelas	1
Strangles	201
Rabies	2
Equine Infectious Anemia	43
Pullorum Disease	2792

SECTION III DENTAL AFFAIRS

Nineteen dentists were re-established in practice during the past month.

SECTION IV NURSING AFFAIRS

Survey of schools of nursing in Shiga Prefecture was completed this week.

Assistance in the V.D. program was given by the division in the Central Health Clinic in Tokyo. Instructions in the operation of the clinic and care of patients was given.

SECTION V SUPPLY

Production

Detailed specifications for the control testing of penicillin are being worked out in conjunction with the sub-committees of Assay and Diseases preparatory to the issuance by the Welfare Ministry of a directive to manufacturers making these procedures mandatory. Included are the following tests: potency, sterility, pyrogenicity, toxicity, moisture, content, clarity of solution.

An assay training school for bacteriologists, one from each manufacturer, is being held the week of 27 January at the Medical College of Tokyo Imperial University under the tutelage of committee members already experienced in the theories and performance of cup assay procedures. The trainees in their respective laboratories will then be expected to train additional people.

Monthly report of the Welfare Ministry, Japanese Government, indicates production of biologicals during December 1946 as follows:

<u>Vaccine</u>	<u>Production</u>		<u>Stock on Hand 31 Dec.</u>	
	<u>Crude Vac.</u>	<u>Finished Vac.</u>	<u>Crude Vac.</u>	<u>Finished Vac.</u>
Cholera	-	-	819,730 cc	2,661,050 cc
Plague	-	-	-	562,800 cc
Typhus	-	1,942,200 cc	-	1,921,587 cc
Triple Typhoid	42,000 cc	400,500 cc	1,242,130 cc	2,109,458 cc
Smallpox	3,347,000 doses	2,069,410 doses	9,691,750 doses	97,720 doses
Whooping cough	-	187,600 cc	-	-
Diphtheria Antitoxin	-	144,820 cc	-	571,664 cc
Diphtheria Toxoid	-	104,600 cc	-	668,495 cc
Tetanus Toxoid	-	-	-	110,000 cc

The quantity of typhus vaccine represents an increase of approximately 500% over any previously monthly production. Adequate assay tests have not been accomplished and distribution will not be made until assay has been completed.

Officials of ESS informed this section that 364,331 square yards of gauze cloth were in stocks of the Nippon Orimono Tosei Kaisha, Ltd. Co. Necessary action was taken to freeze this stock for release to the Welfare Ministry, Japanese Government, for subsequent processing by sanitary materials factories into finished medical gauze and bandages.

Mixing and milling of 10% DDT Dust was started by the Welfare Ministry, Japanese Government, on 14 January. A total of 100,00 lbs., of DDT concentrate has been turned over to the Japanese Government for initiation of this program. Additional quantities on current import programs will be provided for active continuation of program. A total of 900,000 lbs. Of DDT concentrate has been approved on current import program.

Japanese mixing of DDT residual effect spray will be initiated at an early date. A plant for this production has been selected and will be ready for operation by 25 January. Release of DDT concentrate and kerosene, on current import programs, will be made for this production.

Production of 300 X-ray machines, necessary 35 mm film and chemicals for Anti-Tuberculosis program for children of school age has been initiated. It is estimated that approximately six (6) months will be required for accomplishing production of 300 X-Ray machines. Survey by the Welfare Ministry, Japanese Government, indicates that approximately 300 X-Ray machines are on hand in prefectural health centers which may be utilized for initiation of this program.

Distribution

Temporary allocation of the following surplus U.S. motor vehicles was made by the Transportation Ministry to the Health Bureau, Welfare Ministry. These vehicles will be utilized in hospitals and in carrying out prescribed public health programs:

450	4 x 4 Weapons Carriers, which will be converted into ambulances
100	Ambulances
35	1/4 ton Cargo trailers
130	1 " " "

The above allocation is below the original request calling for 1448 vehicles, however, additional vehicles will be allocated as they become available. It is contemplated that final allocation may reach slightly over two-thirds of the original request.

Reports from the Central Medicine Distribution Co., indicated that during the month of November 1946 3,498,113.0 yen worth of returned Japanese Army-Navy medical supplies were distributed throughout Japan. December and January should show a marked increase in the distribution of these supplies, due to the sales throughout all prefectures.

Narcotics

The Civil Property Custodian Section has been requested to direct release of all narcotics of Koeki Eidan, a dissolved organization, to the Ministry of Welfare who will transfer custody to central wholesale houses for further distribution under the narcotic regulations as the medical needs of the Japanese people require.

Inquiry was received regarding administering narcotics to an addict being questioned in connection with an investigation. Advice was given that supplying narcotics to an addict is prohibited under Japanese Narcotic Regulations and no exceptions are permitted.

Arrangements have been completed whereby former Japanese military narcotics released to civilian channels will be supplied to central wholesalers at producers' prices by the SCP-approved firms having custody. The cost of cleaning and repackaging the stocks, and other related expenditures will be deducted from the amounts paid to the Japanese Government by the licensed producers.

Repackaging 2,000,000 codeine tablets into 50 and 100 tablet containers has revealed many of the tablets became unsalable from storage in former Japanese army and navy medical supply points that were damp. Only tablets in good condition are being repackaged. The remainder will be segregated and salvaged if possible, Sankyo Company, Tokyo, has completed repackaging 130 kilograms of codeine phosphate into 5 and 25-gram packages. The repackaging was carried out with full security and with strict supervision.

SECTION VI PREVENTIVE MEDICINE

General

The epidemiologist returned from a visit to Fukushima, Yamagata and Miyagi Prefectures. In general, these, as well as other prefectures visited in recent weeks, appear to have an active and well conducted program with respect to the control of the acute communicable diseases and are remaining below the national average, particularly in the case of smallpox and typhus fever.

Typhus Control

A rodent survey was inaugurated in selected areas in the Tokyo area on 15 January for the purpose of determining the presence and degree of infections in rats, with special reference to murine typhus. Studies made on blood specimens obtained recently from typhus cases in Tokyo-to and Aichi-Ken show, by complement fixation test, practically all the patients to the suffering from murine typhus.

Venereal Disease Control

All prefectural health officers should have designated a full time prefectural venereal disease control officer who should be operating clinics for the diagnosis and treatment of venereal disease in health centers for the general population. The prefectural venereal disease control officer should be the best clinician and the best informed as to modern public health concepts. He actually examines and treats patients or instructs and supervises other clinicians in modern methods as directed by the Military Government Health Office. He meets with the Military Government health officer every morning or every other morning to state what he is doing and to receive further directions.

The position of prefectural venereal disease control officer is one that will require the full time of not only the chief venereal disease control officer, but of a staff of clinicians. He must understand that he is operating and conducting clinics for the general public and not just for prostitutes. The best clinicians who are doing work according to Military Government and SCAP direction should staff the public clinics. Poorly trained physicians or those not receptive to retraining can be left to work in the prostitute hospitals, since all the work done in these places is of dubious value to the public health. Probably the most that is accomplished is a penal job of keeping the prostitute from working during the isolation period.

In addition to setting up, operating and supervising in-patient and out-patient facilities in the prefectural health centers for the general public, the prefectural venereal disease control officer must initiate public information and education and collect data for his monthly report of venereal disease control activities to the venereal disease control officer in the Ministry.

Venereal Disease statistics on syphilis to date show more patients under treatment for syphilis and cured of syphilis than the amount of drugs used would substantiate. One questions how these patients are being treated and if they received 40 arsenicals and sufficient heavy metals.

SECTION VII CONSULTANTS

Legal

The first meeting of Council for Pure Food and Drug Legislation was held and preparatory measures taken to revise existing legislation on manufacture, packaging, sale and adulteration of foods and drugs.

Nutrition Surveys

Reports for average food intakes for 1946 nutrition surveys from 8 cities, 19 prefectures and 27 prefectures, are presented. The total caloric intake was increased in the cities mainly due to the increased ration of 2.1 go to 2.5 go of staple foods while in the prefectures the increase was due to the home production, especially the large crop of sweet potatoes.

RESULTS OF NUTRITION SURVEYS – JAPAN- EIGHT CITIES* - 1946

Nutrients in grams and calories, and gram of various classes of food consumed per capita per day.

SECTION VIII
SOCIAL SECURITY DIVISION

Social Security Program

The Social Insurance Investigating Committee established by the Imperial Japanese Government to study the general sociological program for Japan considers a National Health Insurance program as the most vital need in Japan today. Further studies will be directed toward coordinating all other Social Security endeavors with the health program.

National Health Insurance

Conferences have been held in Osaka and Kyoto with Military Government officers and Japanese officials concerned with the social insurance programs. The opinion of the central committee was presented and it was generally agreed that a national health program was necessary. The Japanese officials advanced the expression that a permanent health program seemed to be remote at the present because of the unstable economic condition, however, a temporary program should be emphasized at once with the Imperial Japanese Government providing a large subsidy for the administration, promotional and educational projects.

Health Insurance Hospitals

More adequate use of Health Insurance hospitals and medical personnel has been emphasized. Frequently hospitals and sanatoriums have been found to be operating at less than one fourth capacity with practically the same personnel and budget as needed for near full capacity. Some, however, are doing more out patient work than others. Hospital officials attribute the low patient census to the difficulty in procuring medical supplies and food. Lack of adequate transportation to and from the hospitals was also a factor.

SECTION IX
MEMORANDA TO IMPERIAL JAPANESE GOVERNMENT

PHMJG-6 24 Dec 46 – Partial Amendment of operational Plan for Nutrition Surveys of Civilian Population.

SECTION I WELFARE

LARA (Licensed Agencies for Relief in Asia)

The second overseas shipment of LARA relief supplies from the continental United States has arrived in Yokohama. This shipment, which approximates 380 gross tons, consists of food, clothing and medical supplies made up of the following items:

Flour (wheat)	79,400	pounds
Rice	29,952	pounds
Milk (powdered whole)	73,080	pounds
Cereal	60,000	pounds
Shoes	29,598	pounds
Clothing	142,643	pounds
Medical Supplies	1,720	pounds
Ether	250	pounds
Insulin	1,000	vials
Santarin	100,000	tablets
Aloin	100,000	tablets
Soap	4,999	pounds
Sugar	40,000	pounds
Peaches (dehydrated)	29,200	pounds
Canned goods	140,311	pounds
Potatoes (dehydrated)	530	pounds
Noodles	300	pounds
Vitamins	9,514	pounds
Meal (multiple purpose)	76,533	pounds
Milk (powdered skimmed)	54,520	pounds
Mending kits	1	crate

The above supplies will be centrally warehoused in Yokohama in the warehouse of Mitsui Bussan Kaisha Ltd., where they will be inventoried, allocated and distributed to the using agencies.

The Imperial Japanese Government is responsible for the security, movement, allocation and distribution of these supplies from dock side to using agencies. Before distribution, SCAP is to be advised of the allocation plan. (SCAPIN – 1169, dated 30 Aug 46)

Japanese Red Cross Society

The General Meeting of the Red Cross was held on 21 January 1947, for the purpose of electing officers and conducting other business that would be of concern to the meeting. Prince Tadatsuga Shimadzu was elected President; Mr. Taiichi Hara, First Vice-President and Mr. Tomoharu Akagi, Second Vice-President. The three new officers had been serving in “acting capacities” for the positions to which they were elected. The election was held under the revised statutes adopted by the Society in December 1946 and approved by the Imperial Japanese Government in January 1947. The Empress of Japan is the Patroness and Prince Takamatzu is Honorary President of the Society.

Tabulations on the amount of disaster relief funds raised by the Red Cross for the December earthquake disaster indicates that the receipts will approximate 1,000,000 yen. Disaster relief funds collected are being distributed to Prefectural Red Cross Chapters in the affected areas to provide food, clothing, medical supplies and other needs for disaster sufferers. The chapters are coordinating their disaster relief activities with local governmental welfare officials to insure the maximum use of limited resources and to avoid duplication of relief assistance. It is expected that the disaster relief operations will be completed at the close of this month.

SECTION II MEDICAL SERVICE

The hospital strength report for the period ending 6 December 1946 shows 3,040 hospitals with a bed capacity of 216,234 of which 106,277 are occupied. During this period 271,722 out-patients were treated.

Frequent inquiries are made of the various division of PH&W Section and Prefectural Military Medical officers, relative to the availability of professional literature and text books to Japanese professional men and educators. In order to bring this subject up to date, the following information is offered:

1. Due to currency restrictions, attempts to secure subscriptions to American journals by Japanese have been prohibited.

2. In November 1945, PH&W requisitioned through technical channels, a complete set of medical text books and obtained subscriptions to all professional journals. These text books were received in January 1946, and periodic issues of the journals have also been received since that time. In view of the fact that only one copy of each text book and journal is available, it is necessary to make arrangements for translation and republication through Japanese sources. Journals and text books have been made available through the Ministry of Health and Welfare to the Japanese for this purpose.

3. Beginning in August 1946, arrangements were made for the Nippon Medical Society which had funds and paper available to publish, in Japanese, a list of titles of articles in the American Journals. This was followed by a series of abstracts of medical articles appearing in current journals. The first of these series of abstracts appeared on the 10th of November 1946. 3000 copies were printed to retail at 7 yen each. The Nippon Medical Association is continuing with this work as long as paper is available to them.

4. In January 1946, an agreement was reached wherein MacMillan & Company authorized Japanese health officials to translate Smillies' "Public Health Administration" into the Japanese to be brought out by a commercial publisher for sale at established prices in Japan.

5. CI&E has added the following list to the Tokyo Information and Education library for use by Japanese nationals.

Collected papers on the Mayo clinic and the Mayo Foundation, V. 34-36, 1942-1944.

National Research Council

- Antimalarial drugs
- Blood plasma program
- Symposium on pediatrics
- Symposium on physical therapy
- Symposium on psychosomatic medicine; and clinics on other subjects
- Symposium on recent advances in medicine; and from the Pennsylvania hospital unit overseas
- Symposium on recent advances in gynecology and obstetrics
- Symposium on specific methods of treatment

Surgical clinics of North America

- Problems in surgery
- Symposium on abdominal surgery
- Symposium on anesthesia, and clinics on other subjects
- Symposium on cancer
- Symposium on common problems in general surgery, and Symposium on rehabilitation.
- Symposium on fractures and dislocations
- Symposium on management of the surgical patient
- Symposium on orthopedic surgery, and Clinics on other subjection
- Symposium on postoperative complication – prevention, recognition and treatment;
 - Symposium on gastro-intestinal surgery; and clinics on other subjects
- Symposium on recent advances in gynecology and obstetrics
- Symposium on recent advances in surgery

Recent Medical Books Received by the Library

- Symposium on reparative surgery
- Symposium on surgery of the biliary tract, and Symposium on surgical diagnosis

Keys to the mosquitoes of Australian region
Manual of clinical mycology
Primate malaria
Report on the medical treatment of Filariasis Bancrofti
Manual of tropical medicine
Spontaneous pneumothorax
Treatment of thermal burns

National research council Committee on medicine.

Manual of dermatology

National research council. Committee on surgery.

Abdominal and genita-urinary injuries
Burns, shock, wound healing and vascular injuries
Manual of standard practice of plastic and maxillofacial surgery
Nurosurgery and thoracic surgery
Ophthalmology and otolaryngology
Orthopedic subjects

Medical clinics of North America

Symposium on cardiovascular diseases; Symposium on diseases of blood and blood forming organs; and clinics on other subjects
Symposium on chemotherapy
Symposium on chronic diseases

Recent Medical Books Received by the Library

Symposium on infections and tropical diseases
Symposium on internal medicine in general practice; From the Hammond General hospital, Modesto, California; and symposium on rehabilitation
Symposium on medical emergencies, and clinics on other subjects
Symposium on medical emergencies on the home front
Symposium on neuropsychiatric diseases
Symposium on new developments in medicine
Symposium on surgical **technic**
Symposium on traumatic surgery
Symposium on war surgery

In addition, they have added the following U. S. Public Service pamphlet on health:

- a. Care of the Feet.
- b. Health Leaflet -- Whooping Cough.
- c. Standard Plans for Nurseries for Newborn, By Dunham, Shaffer and MacDonald, reprinted from Hospitals, April 1943.
- d. Planning for Integrated Service: A Health Center Unit, reprinted from Hospitals, May 1945.
- e. Health Center Designed for Rural Needs, by J. R. McGibony reprinted from the Modern Hospital, March 1945.
- f. A Plan for Centralized Stores in the Small Hospital, by Gorgas and Hospital Facilities Section, U. S. Public Health Service, reprinted from Hospitals June 1944.
- g. Elements of the General Hospital, reprinted from Hospitals, May 1946.
- h. Public Health Centers, reprinted from Architectural Record, July 1942.
- i. The Hospital, a Line Assembly for Medical Care, reprinted from Hospitals, July 1943.
- j. Planning for Integrated Service: A 50-Bed Rural Hospital and Health Center, reprinted from Hospitals, July 1945.
- k. Planning for Integrated Service: The District Hospital, reprinted from Hospitals, September 1945.

It is planned to extend this reference library facility to other cities of Japan at an early date.

6. In December 1946, a list of medical journals was requested from the Surgeon General's office for use by the medical officers of the Prefectural Military Government Teams. In addition, a number of standard texts are in the process of being approved for submission to the Surgeon General's office for distribution to Military Government Medical officers. The above mentioned journals and texts are for libraries of the Military Government

Teams and should be kept intact as such. Japanese professional men and educators should be encouraged to use these libraries for reference.

7. In a conference with Economic Scientific and Strategic Section, G-2, CIS, COD and PH&W Section on the 2nd of January 1947, it was decided that articles by Japanese scientists, including medical men could be published in American Journals, provided they meet the requirements of being factual, contain no criticism of occupation forces and not of a political nature. These articles will be submitted to Public and Welfare Section, GHQ, SCAP for approval and future action.

8. As a stimulus to scientific development, Japanese are urged to publish original articles in Japanese journals. However, these articles are subject to the same limitations as described in paragraph 6 above.

9. As further developments appear, Military Government Medical officers will be informed through this bulletin.

SECTION III VETERINARY AFFAIRS

Field Trip to Yamanashi Prefecture

A representative of the division conducted a survey of veterinary affairs in Yamanashi Prefecture. Accompanied by representatives of the Military Government Team and Prefecture Government, dairy farms, milk plants, slaughter houses, livestock farms and laboratories were visited.

Livestock Industry

Farm animals are decreasing due to concentrate feed shortage. Animal disease control measures are effective with the exception of Schistosomiasis Japonicum which is endemic in the valley surrounding Kofu and is the cause for rejection of many livers at time of slaughter.

Meat Inspection

Ante and post mortem meat inspection is being properly maintained in all slaughter houses and sanitation is comparatively good.

Daily Inspection

All milk is pasteurized by the high temperature method in autoclaves. Milk plants are poorly constructed and short of equipment but clean and sanitary. Sanitation on dairy farms is neglected, but the cows are in good condition. The Score Card method of inspection is in use. The 1946 tuberculosis test has been completed. In those instances where defects were found to exist, officials concerned were instructed to institute the necessary corrective measures.

Conclusions

Under the guidance of the Public Health Officer from the Military Government Team, the veterinary service in this prefecture appears to be functioning in an approved manner and rapidly approaching pre-war standards.

Distribution of Technical Bulletin

For the purpose of improving and standardizing daily inspection methods, Technical Bulletin TB - PH - Vet 2 has been distributed. Section 1 contains complete instructions concerning daily farm inspection, including the Score Card system. Section 2 pertains to daily plant inspection.

Animal Disease Report

The Ministry of Agriculture and Forestry (Bureau of Animal Industry) reported that no new outbreaks of disease occurred during the period 19-25 January 1947.

SECTION IV
DENTAL AFFAIRS

A meeting of the oral surgery faculties of all dental schools met to discuss new and better instruction methods.

Interim appointments for dental school inspectors were made by the Military of Education.

SECTION V
SUPPLY

Production

Monthly report of the Ministry of Health and Welfare indicates production of medical supplies for the month of December 1946 as follows:

Medicines (Production & distribution controlled medicines & non- controlled medicines in the Japanese Pharmacopoeia)	125,189,914 yen
Patent Medicines	75,411,772 yen
Sanitary Materials	4,208,318 yen
Dental Materials	1,574,802 yen
Biologicals	8,836,078 yen

The above figures represent a sizeable increase in production of medicines and a corresponding decrease in the production of patent medicines.

A total of 6,636 kg's, of sulfamine produced. Production of sulfathiazole was increased to 831 kg's.

Monthly report on production of insect and rodent control supplies during December 1946 indicates production as follows:

10% DDT Powder	119,340 lbs.
Antu (3 gm package rat poison)	2,837,242
Neikorazu (rat poison)	3,328 Kg
DDT Dusters	2,998
Sprayer, Knapsack, 3 gallon	43
Sprayer, Semi-automatic, pump type	595
Rat Trap, cage type	910
Rat Trap, Spring type	30,000

A total of 364,331 square yards of gauze cloth has been released to the Ministry of Health and Welfare for production of finished gauze. This quantity was obtained from a commercial company. A corresponding reduction of 63 1/2 bales of American raw cotton was made in the allocation for the 1st quarter 1947.

The below listed quantities of DDT dusters and spraying equipment were produced during 1946:

DDT Duster	31,846
Sprayer, Knapsack type, 3 gallon	10,000
Sprayer, Semi-automatic, pump type	5,000

Production program as indicated below is planned during the first half of calendar year 1947. This production will be started on or about 1 February 1947:

DDT Duster	100,000
Sprayer, Knapsack type, 3 gallon	50,000
Sprayer, Semi-automatic, pump type	20,000
Sprayer, hand, # gallon	50,000

Three companies (1) Toyo Rayon Company of Otsu, (2) Hodogaya of Tokyo, (3) Takeda Pharmaceutical Company of Osaka have virtually completed design, flowsheets and working drawings of penicillin pilot plant fermenters and continuous flow extraction systems. Blue prints from all companies were studied and analyzed in consultations with company engineers, and criticisms and alterations proposed on the basis of American experience. The engineering proficiency of the Toyo Rayon people in regard to this project is clearly superior to all others so far contacted. Toyo Rayon and Takeda stated construction will begin almost immediately.

The Japanese Diet approved a budget of 1,480,000 yen for penicillin research covering the first quarter of 1947. The bulk of this is earmarked for construction of the government pilot plant. The Ministry of Health and Welfare had sought the sum of 4,000,000 yen.

Distribution

Distribution of medical supplies, both civilian and returned Japanese Army and Navy is steadily increasing. Close supervision over activities of prefectural medicine control companies will be necessary to insure expeditious distribution of available stocks.

The Pharmaceutical Affairs Section of the Ministry of Health and Welfare is issuing directives to the prefectural governors, to insure that the flow of medical supplies to the consumers proceeds with the least delaying action possible. This subject will be followed up by the Ministry of Health and Welfare, and disciplinary action will be taken against the responsible officials in the prefectures who fail to comply with the directive issued pertaining to distribution of medical supplies.

Narcotics

Investigation of recent narcotic thefts conclusively shows that narcotics held by local wholesalers must be securely stored. Each theft provides quantities of narcotics for internal illicit traffic and for possible smuggling operations to Korea, Formosa and China in lieu of yen and of restricted goods which are more easily detected than narcotics. The Japanese Government has been advised every effort must be exerted by police and narcotic officials to prevent burglaries and robberies and to apprehend the perpetrators. SCAPIN 1319-A requires that SCAP be notified of each major violation promptly. This is to insure that the proper actions are promptly taken.

Osaka and Tokyo narcotic officials accompanied the Narcotic Control Officer on a tour of inspections in the Tokyo area for the purpose of instruction in narcotic investigative methods. One doctor was found addicted to morphine, taking fifteen morphine injections per day. The morphine was obtained from illicit sources. Another doctor, formerly in the Japanese Army, had a quantity of unreported narcotics. One hundred rounds of revolver ammunition were also found in his possession. When the investigations are completed, there will probably be five or six additional addicts involved.

The Narcotic Division, Ministry of Health and Welfare, appointed two additional pharmacists for narcotic control work in the Japanese Government. All such employees are carefully chosen, properly screened, and given orientation lectures in their assignments by the Narcotic Control Officer.

Another release of former Japanese military narcotics was approved. Additional releases are not anticipated during the next few months.

SECTION VI PREVENTIVE MEDICINE

Typhus Control

According to reports from the Ministry of Health and Welfare, a total of 612 cases of typhus have been reported in Japan since 1 October 1946. Up to 21 January 1947 cases have been reported from all but 8 prefectures during this period. Complement fixation tests on blood specimens taken from cases in several sections of Japan indicate the presence of murine typhus as well as epidemic typhus.

In the light of these findings, control measures should include the use of DDT 10% dust for flea control, applied along rat runways, around openings of rat-burrows and around rat harborages in homes and buildings near reported suspect typhus cases. This dusting should be followed by a well planned rodent control program.

The importance of the execution of a spray program in trains, stations, street-cars, theaters, etc., is emphasized.

Major T. O. Berge of the 406th General Medical Laboratory and Captain M. C. Gephardt are in the Nagoya area with a fully equipped laboratory car engaged in collecting blood specimens and pertinent data in an effort to determine the extent of murine typhus in that general region.

Rodent and Ectoparasite Study

The study dealing with the collection of rodents and their parasites in three selected areas of Tokyo began on 8 January 1947. This study is being made to determine:

- a. Species of rodents
- b. Species of ectoparasites
- c. Population density of ectoparasites (fleas in particular)
- d. If rodents and their ectoparasites are infected with rickettsiae of (a) murine typhus, (b) epidemic typhus and *P. pestis* of plague.

The rodent "take" is averaging about thirty-five animals per day from three hundred live traps. The flea index is low and only two species of fleas have been found—*Ctenocephalides canis* and *Nosopsyllus Pasciatus*. No *Xenopsylla cheopis* have been found.

No evidences of typhus or plague infections have as yet been demonstrated. The study will continue for an indefinite period.

Sanitation

The organization and training of sanitary teams for disinfestations work has taken top priority in the agenda of sanitation, due to the occurrence of sporadic cases of typhus. Efforts to prevent any widespread recurrence of typhus is being made by intense concentration on:

1. Early case finding, reporting and through disinfestations of all people who presumably could have been in contact with the foci of infection.
2. Residual spraying of railroad cars with a DDT – Pyrethrum – creosol solution is being done to prevent the spread and migration of the infection by the crowds habituating these facilities. Details appear under typhus control.

All prefectural Military Government medical officers and chiefs of the Japanese prefectural health departments have been thoroughly instructed in the measures to be taken to prevent a recurrence of last year's typhus outbreak.

Water Supply

A conference was held with representatives from ESS, Industry Division, Chemicals Branch, 8th Army Eng. L-5 Section, 8th Army GHQ Engineer, Sanitary Engineer Branch of the Preventive Medicine Division of the Public Health and Welfare Section of GHQ, SCAP, to discuss chlorine for water supplies. It was agreed that a 500 ton monthly floating surplus be maintained, half to be retained in Army stock piles and half at water works. The chlorine is to be procured from Japanese sources.

Venereal Disease Control

Military Government Health Officers should give the closest supervision to their major health center venereal disease clinic. The medical and nursing techniques used there, as well as the general handling and public health teaching of the patients must be according to modern public health standards. Archaic treatment methods and mechanical handling of patients without regard for possible pathology present, such as is seen in hospitals for prostitutes, should not be tolerated. Each patient must receive a complete study and individual care.

This venereal disease clinic in the major health center will be the place where additional physicians and nurses, who will staff other health center V. D. clinics, will be trained. These health center clinics eventually will be the places where senior medical students will receive their public health training in modern venereal disease control methods.

Laboratories doing the diagnostic work for the health center clinics should have their techniques checked, and receive as much supervision as is practicable from nearby U.S. Army laboratory technicians.

In so far as it can be done, the prefectural authorities should be encouraged to require a serological test for syphilis on all pregnant women.

If labor or agricultural unions are an important group in the prefectures, they should be called upon to play an important part in the community V.D. Council.

Port Quarantine

Repatriation from the Russian-controlled area continues at the rates which were agreed upon. For the month of February 60,000 shipping spaces have been requested by the Russian Authorities for the movement of repatriates from Dairen.

The ports of Genzan and Kanko in North Korea, Nakhodka in Siberia, and Maoka on Sakhalin are not out-processing any repatriates at the present time.

The Japanese Government has been instructed to carry out health and customs processing on the first group of German nationals to be repatriated to Germany. These people will be assembled at Uraga where they will board ship for their homeland.

The Repatriation Reception Center at Hakodate is soon to go on a standby basis. This will leave only the centers at Maizuru, Uraga, Sasebo and Kure on an active status. Uraga is being held open for the completion of repatriation to Germany.

Report of Quarantinable Disease at Ports:

Week Ending 11 January: Repatriation ship, EIHO MARU, from Genzan, to Sasebo; smallpox, 2 cases, no deaths. Date of diagnosis, 8 January.

Week Ending 12 January – Negative.

SECTION VII NUTRITION CONSULTANT

Nutrition Survey – Week Ending 24 January 1947

Presented are summarized tables on the average deviation of body weights of more than 10% together with percentage of individuals showing symptoms associated with nutritional deficiencies in cities of Japan.

NUTRITION SURVEY – NINE CITIES – 1946

Percentage of individuals showing symptoms associated with nutritional deficiencies. Along with the November results are shown the previous results to summarize for 1946. Cities included are Tokyo, “Four Cities” (Nagoya, Osaka, Kure, Fukuoka), “Eight Cities” (“Four Cities” plus Sapporo, Sendai, Kanazawa, Matsuyama) and “Nine Cities” (Tokyo plus “Eight Cities”).

NUTRITION SURVEY – NINE CITIES – 1946

Percentage of individuals showing symptoms associated with nutritional deficiencies. Along with the November results are shown the previous results to summarize for 1946. Cities included are Tokyo, “Four Cities” (Nagoya, Osaka, Kure, Fukuoka), “Eight Cities” (“Four Cities” plus Sapporo, Sendai, Kanazawa, Matsuyama) and “Nine Cities” (Tokyo plus “Eight Cities”).

Notes: 1. Three sets of data refer to the percentage of individuals within restricted age or sex groups as follows:

- a. Delayed Menstruation. Per cent of women 17 to 45 years of age.
- b. Impaired lactation. Per cent of lactating women whose children up to six months must be given mixed or artificial feeding.
- c. Bone mal-growth. Impaired growth of bone or rickets in children up to six years.

2. No symptoms. Per cent of individuals who showed no symptoms studied in the survey.

3. One or more symptoms. Per cent of individuals who showed one or more symptoms studied in the survey.

Source: Imperial Japanese Government

NUTRITION SURVEY – JAPANESE CITIES – 1946

Average deviation of body weights of more than 10% in cities in Japan from the Japanese standard weight for a given age, sex, height and weight in percentages of the number examined (shown in parentheses). Cities included are Tokyo, “4 cities” (Nagoya, Osaka, Kure and Fukuoka) and “8 cities” (4 cities plus Sapporo, Sendai, Kanazawa and Matsuyama). For November, the data are given complete for those underweight, overweight and within the 10% limit, but for May and August, only the underweights are shown. The February findings are not included as they were surveyed for deviations of more than 5%.

SECTION VIII
VITAL STATISTICS

Births The number of births reported (183,965) in December is the lowest number recorded in the last 4 months and represents a 6 percent decline from the high point (195,993) established in November. The birth rate declined 9 percent from 32.6 per 1,000 population in November to 29.6 in December. The decrease was slightly more pronounced in the non-city population than in the population living in cities or “shi”.

Deaths Deaths increased for the first time in 6 months but did not reach the high levels established from July to September. The number reported for December (102,103) represents a 15 percent increase over the November figure (88,425). In the previous summation it was pointed out that the registration for July, August and September were probably artificially high due to the inclusion of deaths of Japanese nationals outside of Japan. The increase in December, however, is in line with past experience and reflects the usual increase in deaths during the winter months when respiratory diseases are at a peak.

The death rate increased nearly 12 percent from 14.7 in November to 16.4 in December. Increases were recorded in all prefectural rates except those for Hokkaido, Aomori, Akita, Nagano and Nagasaki. In general, the greatest increases in rates occurred in prefectures in central and southern Honshu, Shikoku and Kyushu. Exceptionally high relative increases were recorded for the prefectures which suffered from the earthquake and tidal wave.

Infant Deaths Infant deaths (16,739) increased more than 45 percent above the November figure (11,390) to establish a new high for the last 6 months of 1946. Infant deaths accounted for nearly 40 percent of the increase in total deaths. The infant death rate was 91.0 per 1,000 live births. The infant death rate among the non-city or “gun” population (95.7 in December) has been consistently higher than among the city or “shi” population (79.7 in December), but the trends have followed very much the same pattern.

Stillbirths Stillbirths continued to increase. The number reported for December (9,350) was nearly 8 percent higher than the number reported for November (8,682). The December rate was 50.8 per 1,000 live births. Although the city rate (58.9) remained higher than the non-city rate (47.4) nearly all of the increase occurred in the non-city areas.

Marriages Marriages continued to increase and, in fact, reached a new high point for the 6 month period July to December. The number reported in December (64,393) was more than 20 percent higher than the number reported in November (52,177).

The marriage rate of 10.4 per 1,000 population was approximately 20 percent higher than the November rate of 8.7. The city rate increased only 7 percent from 8.4 to 9.0 and the non-city rate increased 25 percent from 8.8 to 11.0.

Divorces The number of divorces in December (6,627) was approximately 6 percent higher than the figure (6,245) reported for the previous month. The entire increase occurred in non-city areas and there was even a slight decrease in the number of divorces recorded for cities or “shi”. The divorce rate for all Japan was 1.1 in December compared with 1.0 in November.

Corrections November reports from 8 villages in 2 prefectures, which were received too late to be included in the November Summary are shown below:

	Birth	Death	Infant Death	Stillbirth	Marriage	Divorce
Total	114	69	11	6	36	6
Hokkaido	47	24	9	5	11	0
Yamaguchi	67	45	2	1	25	6

Because a fire destroyed the local office, no report for November or December has been received from Mizukami-mura, Tama-gun, Kumamoto prefecture. This is a small village which had only 17 births and 9 deaths in October.

SECTION IX SOCIAL SECURITY DIVISION

Health Insurance

The Insurance Bureau of the Ministry of Health and Welfare reported a conference has been held with insurance department heads from all prefectures in the Kanto Region and Tokyo-To, relative to increasing the patient census and emphasizing greater use of the Chiba Health Insurance Tuberculosis Sanatorium. Adjustments are being made to admit members of the National Health Insurance Associations in the Chiba Prefecture to the aforementioned sanatoriums on a reimburseable basis. The Sanatorium has adequate facilities and staff supplemented by a reasonable budget to operate at near capacity.

Postal Insurance

Post Office Insurance and Annuities are two programs administered by the Ministry of Communications which are comparable to the usual life and endowment or retirement commercial policies, but due to the extremely wide application (over 91 million policies with 26 million yen face value are currently effective) consideration must be given to these systems in appraising the social insurance.

SECTION X MEMORANDA TO IMPERIAL JAPANESE GOVERNMENT

- PHMJG-8 20 Jan 47 – Correction of error in Japanese Translation of Imperial Ordinance No. 421
- PHMJG-9 20 Jan 47 – Additions to list of Reported Diseases.
- PHMJG-10 21 Jan 47 – Application for Release of Certain Former Japanese Military Narcotics.

CRAWFORD F. SAMS
Colonel, Medical Corps,

Chief, Public Health and Welfare Section

3 Incls:

1. Summary Report of Cases and Deaths from Communicable Diseases in Japan – week ending 18 January 1947, with digest.
2. Weekly Summary Report of Venereal Diseases in Japan – week ending 18 January 1947.
3. Summary Report of Cases and Deaths from Communicable Diseases in Japan for 52 week period ending 28 December 1946 with digest.

SECTION IV - Dental Affairs
SECTION V - Nursing Affairs
SECTION VI - Supply
SECTION VII - Preventive Medicine
SECTION VIII - Social Security
SECTION IX - Vital Statistics
SECTION X - Medical Service
SECTION XI - Consultant
SECTION XII - Memorandum to I.J.G.

SECTION I GENERAL

Public Health and Welfare Technical Bulletins

Various divisions of the Public Health and Welfare Section are preparing technical bulletins. They will be designated "TB-PH (Technical Bulletin, Public Health and Welfare Section)" followed by the Division name and bulletin number and will be distributed to each M.G. team in Japan. Bulletins will be numbered consecutively by Division. A limited number of file copies will be maintained and may be secured from the Public Health and Welfare Section upon request. Certain of these bulletins will be turned over to the Ministry of Welfare for translation, reproduction and distribution to prefectural health officials.

T.B.'s entitled, "Duties of Military Government Health Officers"; "Duties of Military Government Welfare Officers"; "Duties of Military Government Veterinary Officers" and "Foreign Nationals" will not be translated into Japanese, nor will English translations be given to the Japanese. The purpose of the above mentioned bulletins is for the guidance of the Military Government Health and Welfare Officers only.

The remaining technical bulletins are for the guidance of Military Government Health and Welfare Officers and Japanese health officers. It is intended that they should serve to coordinate all Military Government Health and Welfare activities between the various Military Government teams and between the teams and the prefectural governments. They will be of great value in standardizing public health practices and procedures throughout Japan. They will also serve to facilitate instruction and surveillance of health and welfare activities throughout the nation.

Additional bulletins will be prepared and distributed from time to time as the need arises.

Two bulletins entitled, "Duties of Military Government Health Officers" and "Duties of Military Government Welfare Officers" were distributed on 10 January 1947. T.B.'s covering smallpox, tuberculosis, meat inspection and dairy inspection have been prepared and will be distributed in the near future.

SECTION II WELFARE

Public Assistance

The English Edition of the Imperial Japanese Government Official Gazette, dated 9 September 1946, has been received which includes Law No.17 - "Daily Life Protection Law" on pages 1-4.

Mimeographed copies of that portion of the English Edition dealing with the "Daily Life Protection Law" have been procured for the information of Military Government Teams and are being enclosed in this issue of the Weekly Bulletin.

Central Social Undertaking Committee

This committee was organized in December 1946 to study, discuss and make recommendations to the Health and Welfare Ministry on all matters relating to public welfare. (Reference: Weekly Bulletin, for period 15 Dec - 21 Dec, 1946 page 3 same subject.)

It is now known as the "Central Social Work Committee" and one of its first responsibilities was, to study and make specific recommendations on the vagrant child problem as requested by the Health and Welfare Ministry on 11 December 1946.

The Committee, after preliminary studies, realized the need of a welfare program for children in general and have presented to the Health and Welfare Ministry, in draft form, recommendations on a proposed "Children Welfare Law."

Children Welfare Law (Proposed)

Conferences are now being held with officials of the Social Affairs Bureau, Health and Welfare Ministry to study the recommendations on a proposed "Children Welfare Law" by the Central Social Work Committee.

The draft of the proposed "Children Welfare law" is in three sections, namely; (1) General Principles (2) Provisions for Health and Culture of Children and Pregnant Women (3) Provisions for the Protection of Problem Children and Waifs.

Considerable time will be necessary to perfect the draft of the proposed "Children Welfare Law" but it is anticipated that it will be in final form for presentation to the Diet, for their consideration, within two months.

School Lunch Program

The school lunch program which was inaugurated by the Education Ministry in cooperation with the Health and Welfare Ministry on 23 December 1946 is progressing satisfactorily.

The program is expanding in the larger urban centers and it is anticipated that over 2,000,000 city school children will be benefiting from this program at the close of this month.

It is reported that approximately 3,000,000 country school children are now included in local (village areas) school lunch programs which at present are supported entirely by local contributions and purchases.

Foreign Nationals

Complaint has been received from the American Consul at Yokohama that within the last few days his office has been swamped with birth certificates received through the mail from Nisei-Americans. Each Nisei who wishes to establish his American citizenship is required to bring his birth certificate in person to the American Consulate (Yokohama). Prefectural officials should be informed of this fact and Nisei who approach military government officers concerning this matter should be so informed.

Nisei, though American born, are not entitled to the Foreign Nationals' ration until certified as American citizens by a certificate issued by the American Consul.

Coordinating Committee for Young Women's Welfare

A national level "action" committee to be known as this "Coordinating Committee for Young Women's Welfare," was inaugurated in Tokyo this week to study the problems of young women (former factory workers and others) and to coordinate activities in this field to prevent young girls from falling into illicit relationships.

Represented at the organization meetings were the following: Japanese Red Cross, Salvation Army, W.C.T.U, Y.W.C.A., Y.M.C.A., All-Japan Religious Association, Catholic Charities, Welfare, Education, Home and Justice Ministries.

All of these agencies have been active in varying degrees in certain fields of social and welfare rehabilitation and now with intelligent and mutual cooperation between these public and private agencies real progress in this subject field is expected. Sub-committees have been designated in the following fields: rescue and protection; medical and mental treatment; housing and rehabilitation; vocational training and guidance and placement. Attention of the public is to be called to the problems of many young girls through news stories, editorials, movie shorts, and other media in an all out effort to gain national support.

SECTION III VETERINARY AFFAIRS

Animal Disease Report

The Ministry of Agriculture and Forestry (Bureau of Animal Industry) reported that no new outbreaks of disease occurred during the period 26 January - 1 February 1947.

Monthly Meat Inspection Report for November 1946

Following is a summary of the monthly meat inspection report for November 1946, submitted by the veterinary Hygiene Section, Ministry of Health and Welfare:

	<u>Sheep & Cattle</u>	<u>Calves</u>	<u>Goats</u>	<u>Swine</u>	<u>Horses</u>

c - 2,000,000 per cc.

d - 3.0 per cent.

SECTION IV DENTAL AFFAIRS

A conference of orthodontia instructors met in Tokyo to determine the curriculum of the new courses to be established in the dental schools.

SECTION V NURSING AFFAIRS

Education

The affiliation with the Matsuzawa Hospital has been changed as follows: The third year students will attend 1 April 1947 for a three week period. The next senior class of students will be sent in groups of 30, the first of

each month beginning June 1947, for a period of three weeks. Tuition fee of 300 yen per group will be paid by the school. Lecture fees will be paid depending on the number of lectures. The students will commute.

Demonstration School of Nursing

The hospital census (patients) as of 24 January showed a total of 206; as of 31 January, 234. There has been a gradual increase since the Demonstration school has been in operation.

Japanese National Association (Nurses and Midwives)

The Educational committee of the Clinical Nurses section of the Association have made plans for a one month course to be given to supervisors and superintendents of hospitals. This will be given in Central Red Cross Hospital in Tokyo in March 1947. This course is to help prepare the nurses, in charge of the training school programs of the many training school changes that will be taking place in the near future and for a better understanding of the problems of the students who will be going into the schools of nursing from the new programs.

SECTION VI SUPPLY

Production

Production program for mixing and milling 10% DDT Dust and DDT residual effect spray has been initiated. This program will provide sufficient quantities for civilian needs at an early date. Reports are reaching this section that Military Government units are requesting DDT products through Japanese channels. The program is not sufficiently advanced to permit a change in the normal supply system. It is expected that this change can be made on or about 1 March 1947. Announcement will be made in later weekly bulletins of the actual date for beginning of the distribution of these products through Japanese channels.

Production of DDT Dusters during period 20 - 25 January was 2618. No spraying equipment was produced during this period. New program of production for spraying equipment will be started on or about 1 February. Production of DDT Dusters and spraying equipment is sufficient to permit export of small requirements for Korea.

A total of 100 pounds of Stephania Cepharrantha (crude drug) was shipped to the St. Louis Medical Depot in compliance with request of the War Department. This crude drug is to be used for medical department research.

A complete survey of Japan, to determine the number of photoroentographic machines which may be utilized for anti-tuberculosis campaign, has been made. This survey indicates a total of 365 machines which are in excellent condition and 121 machines which require repair. Additional information is being obtained as to advisability of repairing these machines. Production of photoroentographic machines has been started. Large scale production will not be realized until the month of March. Production of 35 mm film for this program is delayed due to strikes, inadequate coal supply and fulfillment of orders for x-ray film.

Santonin, a widely used drug which hereto had been previously imported from the U.S. will be produced in such quantities in Japan as to take care of their needs in the future.

The production of anesthetic ether is steadily increasing. Present production schedule is 600 kilograms monthly.

Distribution

Plans are being prepared by the Japanese Central Liaison Office, in coordination with the Welfare and Finance Ministries, for the procurement and financing of medical supplies for Japanese Nationals employed for the Occupation Forces.

Narcotics

A Tokyo narcotic squad has been appointed by the Metropolitan Police Board as a result of conferences between police officials and the Narcotic Control Officer. The narcotic squad, composed of ten police investigators, will work in close liaison with Tokyo-To narcotic officials on narcotic thefts, burglaries and robberies and other related narcotic violations. An orientation lecture on the modus operandi of such a squad working with Federal

Narcotic Agents in the United States was given the officers by the Narcotic Control Officer. More effective enforcement in combating narcotic crime in Tokyo should result from the organization of this police squad.

Representative stocks will be in the hands of all central wholesalers within a few days as the result of large movements of cleaned and repackaged former military narcotics between Tokyo and Osaka. Arrangements for shipment by rail were completed by the Ministry of Welfare and the Transportation Ministry. The narcotics were shipped with an armed police guard and reached their destinations without mishap.

Some procurators in Japanese courts have failed to realize narcotic violators may be punished with penal servitude and 5000 yen. Heretofore a combination sentence was not possible. The Ministry of Justice is being directed to bring this to the attention of all procurators.

SECTION VII PREVENTIVE MEDICINE

General

A report was received of an alleged outbreak of food poisoning among school children in Osaka. Investigation showed the symptoms consist of urticaria only, no vomiting, diarrhea or fever being reported. Some 2500 of the approximately 28,000 children participating in the school lunch program were affected. The reactions, apparently a protein allergy, were said to have been traced to tinned beef used in the program. Laboratory examination and cultures failed to demonstrate any growth of organisms. An interesting phenomenon was the distribution of reactions by age, the frequency increasing progressively from the first through the sixth grade.

Typhus Control

Study of most of the cases of typhus from three prefectures confirmed by Weil-Felix test show a high percentage of murine typhus during November 1946, thru January 1947. This emphasizes the importance of rodent and flea control as an addition to the control measures designed for louse-borne typhus. The personnel dusting and spraying in the home of the suspect typhus case should be instructed to look for and dust thoroughly rat runs, rat burrows, nests, etc. in the immediate environs of the case.

Be on guard against public health officers who fail to report cases. An instance was recently found where cases occurring from September thru December were "hoarded". Forty-two cases were reported as a "lump sum" the first part of January.

Venereal Disease Control

Syphilis in Pregnancy

Pregnant women infected with syphilis offer one of the most important groups that can benefit by modern venereal disease control methods. One of the most satisfying experiences for the venereologist is to be able to assure mothers of a non-infected baby if proper treatment is taken.

Hospitals, private physicians, clinics, and midwives should be strictly enjoined to obtain at least one STS on every pregnant woman. Treatment begun before the fifth month of pregnancy will practically assure the mother of a baby free from syphilis.

In the treatment of these mothers, public facilities under the close supervision of the Military Government Health Officer should be offered free if necessary. Accepted treatment schedules should be followed and treatment should be continuous throughout pregnancy. These patients are deserving of penicillin mapharsen and bismuth.

Most pregnant women take treatment very well, but the clinician should be especially instructed to question the patients carefully at each visit for reactions to the previous treatment.

Pregnancy "dampens" the signs and symptoms of syphilis so that the majority of pregnant women are unaware of the existence of the disease.

Get a blood test on all pregnant women, Babies need not be born with syphilis.

Sanitation

Water Supplies

The following municipal supplies are being operated and chlorinated under the supervision of the Eighth Army and have been, or are in the process of being, placed on the list of supplies classed as "potable without further treatment":

Tokyo	Kyoto
Yokohama	Kawasaki
Yokosuka	Sendai

Information regarding the procedure to be followed to have a supply approved is being distributed by the water supply engineer, L-5 Section, Eighth Army Engineer, Headquarters, Eighth Army.

Sewers

Cleaning and repairing sewer projects have been going on in Tokyo-To, Yokohama, Kanagawa, Kofu, and several other prefectures with a varying degree of success. Generally, however, the accomplishments have far more than justified the expenditure of money and effort. Emphasis is being put on this type of work as being not only important for the health of the public, but an excellent way of utilizing unemployed labor.

Insect and Rodent Control

The chief function of the sanitary teams at the present time is disinfestations work and rodent control for the control of typhus. There are in each prefecture sufficient personnel that are trained in methods of disinfestations and other phases of insect and rodent control to carry on any program that might be necessary in the control of typhus.

Plans for the 1947 mosquito control program are being studied. The production of pyrethrum emulsion, creosote solutions and antu, is being carried on satisfactorily and it is thought that ample quantities of these materials are available at the present time and can be expanded to meet any future exigency.

SECTION VIII SOCIAL SECURITY DIVISION

Health Insurance

Recently a survey was made of a Health Insurance Office in Tokyo-To. This office serves as the collecting agency for all industries, in a certain area, who have more than 5 but less than 300 employees and are carrying membership in the Collective Health Insurance Association. This insurance area does not have a central hospital or clinic. Those desiring medical care are allowed to go to one of the listed insurance doctors of their own choice. The same privilege prevails as to hospitalization. It was reported that approximately 4% of the total membership is about the average requesting medical care. Representatives of the associations were of the opinion that a central clinic would not only be economical but more efficient in rendering adequate medical care and would increase interest in the general health program.

National Health Insurance

A survey of several National Health Insurance Associations in the vicinity of Tokyo revealed the information that each association would be operating at a deficit unless additional government subsidies are received. Plans are being made to request increased premium fees from members but it is the general opinion that additional government subsidies should be assured for meeting the inflation before increasing members contributions. An adjustment in the rationing of medical supplies is considered necessary in order for the associations in the rural districts to obtain an adequate supply of medical items.

SECTION IX VITAL STATISTICS

Registration problem in Kure and Hiroshima were studied. Tentative plans were made for testing the completeness of the registration of births and deaths in these cities.

The Advisory Committee on Vital Statistic to the Cabinet Bureau of Statistics had its tenth meeting. The Advisory Committee on Vital Registration to the Justice Ministry had its fourth meeting.

SECTION X MEDICAL SERVICES DIVISION

There were 3,081 hospitals reported for the period ending 13 December 1946 with a bed capacity of 216,206 of which 106,073 were occupied. During this period 265,396 out patients were treated.

In a meeting of all divisions of Public Health and Welfare Section, GHQ, SCAP, with representatives of Japan Council on Medical Education, Ministry of Welfare and officials of the Public Health Institute, the tentative curriculum for training public health officers was approved. Health officers who are to receive this three months' refresher course will be selected from the field by officials of the prefectures who will recommend them to the Ministry of Welfare for training by the newly reorganized Public Health Institute. Instruction will begin early in April.

SECTION XI CONSULTANTS

Nutrition

Nutrition surveys for families of special workers, covering coal mines, copper mines and railroad employees are shown in the attached surveys.

RESULTS OF NUTRITION SURVEYS - JAPAN - 1946

Nutrients in grams and calories, and grams of various classes of food consumed per capita per day.

Duties and Functions of Military Government Veterinary Officers Short Title: TB - PH - VED 1	14 February 1947

SECTION II
WELFARE

Reserve Relief Supplies

The incomplete report covering Reserve Relief Supplies (former Japanese Army and Navy stocks) for the month of December 1946 reflected that 241,621 kgs of biscuit and 1,242,221 kgs of canned goods were distributed, during the month, for relief purposes.

The balance of supplies remaining as of 1 January 1947 was reported to be 2,379,796 kgs of biscuits and 8,696,083 kgs of canned goods.

The above report did not include Ibaragi, Wakayama, Kochi, Fukuoka, Oita and Nagano Prefectures.

Children Welfare Law (proposed)

The "first reading" of the draft of the proposed subject law, which was referred to the Health and Welfare Ministry by the Central Social Work Committee, has been completed by representatives of Social Bureau, Welfare Ministry and Public Health and Welfare Section, SCAP.

The proposed "Children's Welfare Law" is a progressive move and provides, in its text, provision to better the opportunities for all children.

Foreign Nationals

The Netherlands Mission (Tokyo) has received 200 bundles of clothing from Batavia which will be distributed by the Health and Welfare Ministry to Netherlands subjects throughout Japan.

Each bundle weights 41 pounds and contains clothing which will fill a need now experienced by Netherlands subjects due to the shortage of suitable clothing within Japan.

SECTION III
VETERINARY AFFAIRS

Animal Disease Report

The Ministry of Agriculture and Forestry (Bureau of Animal Industry) reported the following new outbreaks of disease during the period 2 Feb - 8 Feb 1947:

SECTION IV DENTAL AFFAIRS

Schedules and plans for the inspection and classification of dental schools were completed at meeting held at the Monbusho Feb. 3. The Board of Inspectors will complete the task of classification during the current month.

SECTION V NURSING AFFAIRS

The formal opening of the Public Health Nurses one month course for Instructors was held at the Welfare Ministry Monday 3 February 1947. This group consisted of the Tokyo-To Public Health Nurses who are to act as Instructors in the course that will open in April. Classes are being held every day and practical experience is being given in the Health Centers, in Tokyo, Chiba and Saitama.

SECTION VI SUPPLY

Production

Almost all raw materials employed in penicillin production are beginning to become limited. War Department states n-amyl acetate import program for 1947 cannot be filled and n-butyl acetate manufacture in Japan is being promoted as a rather satisfactory substitute. Other critical items for which production and allocation programs are intended include lactose, soy bean meal, activated carbon and acetone, the last two being most critical at this stage. When sufficient butyl acetate is available there will be released about 120 metric tons of ether, the Welfare Ministry's estimate of consumption for the remainder of 1947.

A conference was held on February 5, 1947 to discuss a draft of an outline for adjustment of production and allocation of drugs, medicines, etc. that was presented for review. Representatives from ESS, Welfare Ministry and Public Health and Welfare attended. The culmination of this meeting resulted in the omission of several undesirable articles that were included in this draft; namely, 1- diet members included on advisory council, 2 - associations playing some part in the allocation of material, 3 - allocation fees. Strong support is being given in observing that this new allocation procedure is carried out and sufficient funds made available for its administration.

A report from the Welfare Ministry, Japanese Government, indicates production of 25 microscopes with dark field attachments during the month of January 47. Distribution of this quantity was made to prefectural health centers as indicated below:

<u>Prefecture</u>	<u>No.</u>	<u>Prefecture</u>	<u>No.</u>
Hiroshima	1	Saitama	2
Fukuoka	2	Toyama	1

Kanagawa	2	Gifu	1
Nagasaki	1	Mie	2
Fukushima	1	Tottori	2
Osaka	1	Miyazaki	2
Fukui	1	Kyoto	1
Nara	1	Kagoshima	1
Gumma	2	Nagano	1

Total - 25

Considerable difficulty is being encountered in conducting assays on Japanese produced typhus vaccine due to a shortage of guinea pigs. In an effort to improve this situation a meeting was called with officials of the Welfare Ministry, representatives of the Agriculture Ministry, Animal Growers Association and Natural Resources Section, SCAP. The Japanese were instructed to organize a committee, establish requirements of laboratory animals for assaying biologicals, determine sources of supply, supervise distribution to proper laboratories, increase production to meet demand, establish necessary liaison with transportation ministry officials and work out plans to provide feed and necessary cages. A report of the committee's activities to attain these objectives was requested not later than 19 February.

Distribution

Recommendations were submitted covering requirements of Korea for insect and rodent control supplies during the balance of the fiscal year 1947. From information available at this time, it appears that sufficient DDT powder is now on hand. Steps are being taken to provide additional spraying and dusting equipment together with 80,000 lbs. of DDT concentrate.

A report received from the Welfare Ministry indicates that over 2,000,000 yen of former Japanese Army Navy supplies have been disposed of through 31 December 1946, in Kanagawa prefecture, through direct sales to hospitals, physicians, dentists and veterinarians.

Narcotics

The December Narcotic report, the final 1946 report and the sixth received since the effective date of Japanese narcotic regulations, reflects much progress has been made by Japanese officials, both national and prefectural, under the Narcotic Control program. Directions implementing the program are now carried out in an orderly and effective manner as exemplified by the following.

As directed by the Narcotic Control Officer most excess stocks were returned to local wholesalers before the end of 1946. The following figures in the December report are indicative of the supplies thus made available to all retailers and practitioners in Japan:

Summary of Local Wholesalers' Reports (amounts in grams)

Name of Drug	Stock on Hand	Excess Stocks Received	Stocks Sold to Practitioners Retailers	Stock on Hand 31 Dec 46
Cocaine Hydrochloride	75,962	89,245	18,674	146,533
Tincture of Opium	609,554	316,638	157,252	768,940
Morphine Hydrochloride	131,446	85,558	24,762	192,242
Codeine Phosphate	107,728	48,041	32,693	123,076
Codeine Sulfate	84,568	17,868	18,048	84,388

The above stocks, as well as 114 other narcotic items, were accurately reported by 210 local wholesalers to prefectural narcotic officials throughout Japan, who forwarded the reports to the Japanese Government for consolidation and reporting to SCAP's Narcotic Control Officer.

Persons registered as narcotic dealers in Japan reached a total of 85,881 by the end of 1946. All dealers are required to re-register annually. From advance reports received it is evident practically 100% re-registration was effected during January 1947.

Thefts continue to be the greatest source for diversion of narcotics. While prefectural officials must investigate all thefts, police are able to give material aid in preventing the thefts and in apprehending the responsible persons. The Narcotic Control Officer met with representatives from every police station in Tokyo outlining the duties and responsibilities of police in narcotic matters and citing examples of successful investigations resulting from close cooperation between narcotic enforcement officers and the police. An immediate result was obtained the following day when a bicycle thief apprehended by the police was reported to Tokyo Narcotic inspectors as an addict.

SECTION VII PREVENTIVE MEDICINE

General

A report was received of another episode of reaction to tinned food similar to that which was reported in Osaka during the previous week. In the present instance 75 children were said to have been affected out of 800 participating in a school lunch program in Tochigi City, Tochigi Prefecture. Again, the symptoms, which were similar to those which occurred in Osaka, were alleged to be attributable to tinned beef taken from former Japanese Army stocks. Military Government health officers are requested to be on the alert for and to report immediately any similar occurrences, and are requested further to see that local Japanese health authorities make prompt and adequate investigations of such occurrences.

Typhus Fever

The Welfare Ministry, Imperial Japanese Government, in their report on 5 February 1947 on the incidence of typhus fever in Japan show a total of 330 cases since 1 January 1947, as compared to a total of 612 for the same period in 1946. It is not known how many cases are murine typhus.

In Tokyo only one case of a total of 61 reported cases has actually been proven to be louse-borne (epidemic) typhus based on complement fixation tests.

The comparative incidence figures are encouraging and indicates that Military Government Teams throughout Japan have well organized an effective typhus control program.

Port Quarantine

The Repatriation Reception Center at Otake has been officially closed. Ujina, the other center in the Kure area, remains on an active status. Since the opening of the repatriation program these two centers have processed 552,000 incoming and 47,000 outgoing repatriates. The only quarantinable disease reported during this time has been smallpox of which there were two cases in February and three cases in March 1946.

Quarantinable Disease at Ports of Entry

Week ending 26 January - Negative

Week ending 1 February - Repat. ship Yahiko Maru, from Dairen to Sasebo (5 February), smallpox, 1 case, no deaths, date diagnosis 27 January.

SECTION VIII SOCIAL SECURITY

A series of conferences have been participated in by officials of the Insurance Bureau of the Ministry of Welfare and representatives of the Labor Division of the Economic and Scientific Section and the Social Security Division, with respect to the proposed Workmen's Compensation Bill and revisions of the Seamen's Insurance Law.

Workmen's Compensation Bill

The Workmen's Compensation Bill is to be introduced in the Diet as companion legislation to the pending Labor Standards Bill to supplant the employers' liability provisions of the latter bill in certain fields. Two elements

which have been the subject of considerable discussion are the questions as to whether benefits should be paid directly to the injured worker or as reimbursement to the employer.

A new draft of the bill has been completed and is now in the hands of the translators. The operations of the Employers' Liability Act of 1931 have strongly influenced the Welfare Ministry in considering the Workmen's Compensation Bill as legislation similarly insuring the employer for his risks under the Labor Standards Bill. However, it is understood that the new draft of the bill will provide for payment of benefits directly to the worker. It is the current intention to provide in the Workmen's Compensation Law that the manner of payment, as to lump-sums or installments, is to be specified by ordinance. It is believed that the lump-sum payment will be employed in the beginning but that, when administrative experience has been gained and inflationary conditions have been overcome, a later ordinance will provide for payment in monthly or quarterly installments.

Consideration has been given to programs under the Insurance Bureau devoted to the promotion of safety and to vocational training and rehabilitation. Responsibility for these activities may be placed in bureaus of the proposed Ministry of Labor, however.

Seamen's Insurance Law:

The special legislation customary for seamen as compared to industry in general is reflected in the pending Seamen's Law, which is comparable to the Labor Standards Bill. Concurrently with the drafting of the Seamen's Law, attention is being given to the revision of the Seamen's Insurance Law provisions which now relate to compensation for occupational accidents and diseases.

Among changes suggested by the Ministry of Welfare in a preliminary draft of proposed revisions are the following:

The law now provides that benefits for disability due to accident or occupational disease shall be at the rate of 60% of the average daily wage and shall be paid for a period not to exceed three months. It is proposed that full wages be paid for four months, then at the rate of 60% of the wage while under medical care, plus one month, but not to exceed two years.

Single men have not been granted allowances while hospitalized and it is proposed to extend allowances to single men, as well as men with families, during hospitalization but only when hospitalization is necessary in a port other than the legal residence of the individual.

The "short-term benefits" (medical expenses and limited cash allowances, as compared to the long-term pensions) are not paid under the present law for care required Japanese territory, and it is proposed to make provision for such expenses and benefits regardless of where the disability occurs and care is needed.

It is proposed that the qualifying period of covered employment for eligibility for benefits as a result of an off-duty accident be reduced from three years to six months.

The law now bases benefits on the average of all wages received as a seaman in covered employment. In view of the fluctuating economic conditions, it is proposed to look to either the average of all such wages, or only the wage rate being paid on the date of the accident, whichever is the greater. ("Wages" include everything by "family allowances". The size of the family affects the amount of benefits only as to survivors' benefits payable after the death of the injured worker.)

SECTION IX MEDICAL SERVICES

The hospital report for the period ending 20 December 1946 showed a total of 3,047 hospital with a capacity of 216,354 beds, of which 102,842 were occupied. During this period 262,494 out patients were treated.

SECTION X CONSULTANT

Nutrition Survey

Nutrition surveys throughout Japan were begun 3 February 1947.

In Tokyo on 6 February, conduct of the surveys was observed by Colonel Sams, Chief of Public Health and Welfare Section, Colonel Harrison, and other members of the Food and Fertilizer Mission, Washington, D. C.

The results November 1946 for the additional eight prefectures by group are presented in the following tables.

SECTION	X	– Memorandum to I.J.G.

SECTION I WELFARE

Public Assistance Report for December 1946

The Ministry of Health and Welfare Public Assistance Report for December 1947 shows an increase in total number of persons assisted and a substantial increase in grants over November. The grant increase, (average of 75.10 yen per person in December as against 49.24 yen in November) is the result of the 50% allowable increase in daily relief grants as authorized by letter dated 21 November 1946 from the Ministry of Health and Welfare to the prefectural governors.

Comparative figures for the months of November and December are given below:

	<u>November</u>	<u>December</u>
Number of persons (not in institutions) assisted	2,577,884	2,744,429
Number of persons (in institutions) assisted by Government	<u>80,885</u>	<u>92,778</u>
Total number persons assisted	2,658,769	2,837,207
Net cash grants	115,222,349 yen	144,075,959 yen
Grants in Kind (cost)	<u>15,686,330</u>	<u>62,845,606</u>
Total Grants	130,908,379 yen	206,121,565 yen

Japanese Red Cross Society

Mrs. Audrey Bassett, Consultant on Junior Red Cross Services, American Red Cross has been assigned as a consultant to the Japanese Red Cross to assist in development of their Junior Red Cross services. Mrs. Bassett was a special consultant to the Philippine Red Cross during its reorganization immediately following the liberation and she has also had long experience in the domestic program of the American Red Cross.

The proposed budget of the Japanese Red Cross Society for the first six month period of 1947 anticipates sufficient income to meet the expected operational expenses. The budget covering estimated income and expenditures is shown below:

*Estimated income

Headquarters	yen	97,385.80
Chapters & Hospitals		7,541,709.00
Total		7,639,094.80

*Estimated Expense

Headquarters	yen	578,936.68
Chapters & Hospitals		6,772,281.00
Total		7,351,217.68

* (Computed on basis of income and expenditures for the last six months of 1946) .

SECTION II VETERINARY AFFAIRS

Field Trip to Okayama Prefecture

A representative of the division conducted a survey of veterinary affairs in Okayama Prefecture.

Livestocks

A gradual reduction is in programs due to concentrate feed shortage.

Dairy Inspection

Dairy farms and milk plants are being systematically inspected on a monthly basis improvement in sanitation resulting. Lack of modern pasteurizing equipment and a shortage of chemical reagents used for laboratory tests are lowering the standard. Where sanitary measures were improperly practiced, responsible officials were directed to initiate corrective measures. The Supply Division, Public Health and Welfare Section, GHQ, SCAP and the Ministry of Welfare, Japanese Government were contacted with reference to the release of critical items.

Meat Inspection

Veterinary inspectors are not adequately instructed in the procedure for conducting ante and post mortem inspections. Responsible officials were directed to make available all possible information on this subject.

Animal Disease Control

The tuberculosis eradication campaign will be completed in March 1947.

A program for the immunization of all dogs against rabies will be instigated in March 1947.

Education

A comprehensive program for the education of farmers concerning sanitary requirements and the improvement of dairy herds is now in progress. This program, initiated by the Meat and Milk Inspection Section of the Prefecture Government, has attracted considerable interest on the part of farmers.

Conclusion

Veterinary activities in Okayama Prefecture are receiving competent supervision by prefecture officials. An increase in the effectiveness of performance of veterinary duties can be expected after distribution of proper instructions and the addition of more equipment.

Distribution of Technical Bulletin

For the purpose of furnishing information and guidance to veterinary officers on duty with Military Government units and medical officers in the absence of veterinary officers, Technical Bulletin, TB-PH-Vet 1, subject: "Duties and Functions of Military Government Veterinary Officers" has been distributed.

Animal Disease Report

The Ministry of Agriculture and Forestry, (Bureau of Animal Industry) reported that no new outbreaks of disease occurred during the period 9 - 15 January 1947.

SECTION III DENTAL AFFAIRS

The Board of Education of Tokyo-To has responded the dental hygiene program in public schools with an appropriation of 1,010,000 yen for 1947.

The 726 primary schools will be furnished part-time dentists. All students of the primary school will be examined once each year, but treatment will be limited to first year students.

The mobile dental clinics are under construction for use in outlying districts.

SECTION IV NURSING AFFAIRS

Miss Elizabeth Pickens, Public Health Nurse Consultant has been assigned to Nursing Affairs Division.

Education

The Nursing Education Council met on 12 February to discuss the final draft of the now legislation.

SECTION V SUPPLY

Production

An additional ration of rice was granted the Pharmaceutical Workers in the Tokyo Area. This additional ration will coincide with that of other prefectures and should ease the unrest of the pharmaceutical worker caused by the feed shortage.

Owing to the unavailability of amyl acetate from America, the substitution of Japan available n-butyl acetate in the manufacture of penicillin has been initiated. Its use is only slightly less desirable than amyl acetate. Negotiations are underway to import the special penicillin stimulating ingredient, corn steep liquor. Arrangements are progressing for manufacture of penicillin bottles with rubber stoppers and aluminum caps, all similar to American bottles. First drafts of flow sheets and detail design drawings of the Government Penicillin Pilot Plant were completed and examined; alterations and criticisms are expected to be made and final drafts available in about one week, construction to commence immediately thereafter. Fermentation and extraction phases are included.

The DDT products production program by the Japanese Government is progressing satisfactorily. Sizable quantities of 10% DDT dust, DDT residual effect spray and typhus vaccine are now in Japanese stocks. Decision has been made to supply Japanese needs for DDT products and typhus vaccine from Japanese sources on and after 1 March 1947. Instructions covering distribution methods have been furnished all prefectures by the Welfare Ministry, Japanese Government. Military government officials must maintain close liaison with prefectural officials to coordinate releases of DDT products.

A complete survey has now been made to determine the number of photorcentographic machines available in Japan for utilization in the anti-tuberculosis campaign in children of school age. Additional reports have been received which indicate a total of 405 machines in good condition and 156 machines which may be repaired. Decision has been made to repair 95 machines and produce 100 new machines. This will provide 600 photoroentographic machines which is considered adequate for this program. Production of 6 new machines has been accomplished. Production of the remainder will be completed on or about 1 April 47. A small

2. Number of hectares under hemp cultivation showing number of plots or fields, by prefecture.
3. Quantities of matured stalks gathered, by prefecture.
4. Number and amount of transactions in marihuana seeds and plants, by prefecture.

The violations are to be reported in accordance with SCAPIN 1319-A, 23 May 1946, subject: "Establishment of an Effective System for Narcotic Control in Japan". Marihuana Control Regulations will be issued by the Ministry of Welfare within ten days. The penalties provided will be three years penal servitude and 5000 yen fine or both.

A narcotic investigation involving at least 19 persons has resulted in the arrest of 9 Japanese including three doctors, one dentist and one unregistered pharmacist. Tokyo narcotics officials, working with Narcotic Control officers, have seized 1,050 grams of codeine, 700 grams of cocaine hydrochloride and 500 grams of Narcocon. The narcotics were originally stolen from the Japanese Navy Meguro Medical Supply Arsenal, Tokyo, near the end of the war.

SECTION VI PREVENTIVE MEDICINE

Typhus Fever

Comparative Score: Typhus fever as reported by the Ministry of Welfare. (Includes figures of 12 February for both years.)

1946	-	984 cases
1947	-	360 cases

Education

1000 colored sets of 24 each of Kami-Shaibi posters on "Shirami Fufu" and 100 film strip copies in full color have been produced by the Ministry of Welfare and are being distributed to the prefectures of Japan by the Ministry of Education. These posters portray in a semi-comic manner the essentials of typhus control and were designed to reach the school children particularly.

On 16 January 1947 the Ministry of Education and the Ministry of Welfare jointly issued a letter of instruction to the prefectural governors requesting a training program for primary school on typhus and its control. It was suggested that at least one teacher from each primary school attend a meeting conducted for them by prefectural health office. They were to return to their respective schools and instruct the pupils. A following letter of instruction to the prefectural health officers, dated 20 January 1947 suggested the minimum subject matter to be covered. Both of these letters should have reached the prefectures by the first week in February 1947.

Venereal Disease Control

The health department is the proper agency primarily responsible for the prevention, and control, of communicable diseases in its area. No other public service has this primary function and it cannot be left to private operation. The health department, therefore, has the primary responsibility for the establishment of public clinics for the diagnosis and treatment of the venereal diseases. Until recently in Japan this responsibility for operating venereal disease diagnostic and curative clinics for the entire people was never acknowledged or assumed by the public health agencies. It is necessary therefore to stress the primary responsibility for this work to health department officials continuously.

In addition to curative venereal disease clinics in health centers, a number of Military Government health officers are supervising out-patient venereal disease clinics in municipal, prefectural and national hospitals. These out-patient clinics for the general public are to be encouraged but need extremely close supervision. No interference or direction by the "bosses" of the prostitute areas should be tolerated.

Prostitutes, promiscuous persons and other patients diagnosed as having venereal diseases in the course of a routine, periodic examination will be quarantined until not infectious.

In the case of gonorrhea and chancroid, this means until the patient is cured. It should be remembered that one course of sulfonamides probably does not cure 30% of females chronically infected with gonorrhea. Any clinical evidence of gonorrhea should be sufficient for another course of sulfonamides. Three consecutive negative Gram stained smears (or preferably cultures) must be obtained at daily intervals, and it is a good practice to obtain a smear following the next menstrual period. If all these laboratory reports are negative and the patient appears clinically cured, quarantine may be lifted.

If the diagnosis of syphilis is made on any of the patients listed above, the patient will be quarantined until at least 20 arsenicals and 20 heavy metals have been given. This is a minimum amount after which the remaining 20 arsenicals and 20 heavy metals may be given on an outpatient status.

Port Quarantine

The repatriation of German Nationals is now under way. The Marine Jumper, the first two ships engaged for this work is now loaded and ready to sail from Uruga Fort 15 February. Quarantine processing was carried out without event. A few cases of convalescent scarlet fever and a small number of whooping cough cases have been boarded and are being maintained in isolation.

A complete set of forms and declarations for use in quarantine operations has been designed and assembled by Military Government, Headquarters, 8th Army. It is expected that these forms will soon be available to those in the field.

The Port of Hakodate remains inactive due to the temporary stoppage in repatriation from the northern areas. The medical officer at that station has been called to Yokohama to assist in port operations there.

Report on incoming quarantinable disease: - No reports received this period.

SECTION VII SOCIAL INSURANCE

Budgets for the coming year present current problems, as it is considered of essential importance this insurance program be kept actively alive by adequate Government appropriation pending a more comprehensive study. The social security and insurance program will have considerable effect on the potential economic security of the low income class of people.

National Health Insurance

Considerable emphasis is heeded in order to keep this program active and efficient until the economic situation becomes more stabilized. The National Health Insurance is for the rural population where essential health facilities are needed in order to make adequate medical service available to all people. The establishing of clinics in localities which need them is considered necessary in providing preventive and curative measures for large groups. Additional Government subsidy has been requested by the Ministry of Welfare to assist in providing economical medical services and to establish a widespread systematic health education and examination programs for the purpose of detecting early health defects.

Welfare Pension Insurance Act

The Ministry of Welfare submitted translations of completed drafts of the new Workmen's Compensation Bill and proposed amendments to the Welfare Pension (Worker's Annuity) Insurance Act. The Ministry hopes to have both the Workmen's Compensation Bill and the Labor Standards Bill acted upon by this session of the Diet. Amendments to the Welfare Pension Act are concerned mainly with deleting from that law those provisions relating to occupational accidents and diseases which are covered by the Workmen's Compensation Bill, and in standardizing comparable requirements contained in these two measures and the Seamen's Insurance Law.

SECTION VIII MEDICAL SERVICES

Japanese Civilian Hospital Strength Report for the period ending 27 December 1946 shows 3,051 hospitals with a capacity of 216,416 beds, 101,868 of which were occupied. During this same period 254,691 outpatients were treated.

SECTION IX CONSULTANT

Nutrition

The data obtained from the nutrition surveys 1946, on the physical examinations and the consumption of nutrients and weight of food groups were assembled and reorganized for use by the Food and Fertilizer Mission examining the food situation in Japan. The information was of particular importance since it forms the background for the presentation of the nutritional status for the Japanese population.

SECTION X MEMORANDUM TO IMPERIAL JAPANESE GOVERNMENT

None

CRAWFORD F. SAMS
Colonel, Medical Corps,
Chief, Public Health and Welfare Section

2 Incls:

1. Summary Report of Cases and Deaths from Communicable Diseases in Japan – week ending 8 February 1947, with digest.
2. Weekly Summary Report of Venereal Diseases in Japan – week ending 8 February 1947.

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
Public Health and Welfare Section**

WEEKLY BULLETIN

**For Period
16 February – 22 February
1947
Number 8**

SECTION	I	– General
SECTION	II	– Welfare
SECTION	III	– Veterinary Affairs
SECTION	IV	– Dental Affairs
SECTION	V	– Nursing Affairs
SECTION	VI	– Supply
SECTION	VII	– Preventive Medicine
SECTION	VIII	– Social Security
SECTION	IX	– Medical Service
SECTION	X	– Consultant
SECTION	XI	– Memorandum to I.J.G.

SECTION I
GENERAL

Technical Bulletins

The following Public Health and Welfare Technical Bulletins was mailed with the weekly bulletin on 28 February 1947.

Title

Rickettsial Diseases in Japan and Korea
Short Title: TB-PH PREV MED 3

The following Public Health and Welfare Technical Bulletins have been turned over to the Welfare Ministry for translation into Japanese:

TB-PH-PREV-MED 1, 2 and 3
TB-PH-NURSING 1
TB-PH-VET 2 and 3

It is expected these translations will be distributed by the Welfare Ministry to all Prefectural Health Departments, Health Centers and to such other Japanese health workers as may be necessary in order to effect proper coordination of public health activities between the Military Government and prefectural health organizations.

SECTION II
WELFARE

Public Assistance

The present cash relief allowable, which was increased 50% in November 1946, is still not adequate to provide minimum living requirements on a rising (inflationary) market and an additional increase in relief grants is necessary. Therefore a new schedule of allowable daily grants is given below (in yen) which becomes effective 1 March 1947.

	Number of Persons in Family					Each Additional Person
	1	2	3	4	5	
Largest Cities	7.50 (7.70)	12.80 (13.10)	15.80 (16.20)	18.80 (19.30)	21.00 (21.70)	2.20 (2.40)
Intermediate Cities	6.70 (6.80)	11.30 (11.90)	14.00 (14.30)	16.70 (17.00)	18.70 (19.10)	2.00 (2.10)
Towns & Villages	5.80 (6.00)	9.90 (10.10)	12.20 (12.50)	14.50 (14.90)	16.30 (16.70)	1.80

Note: Amounts in () indicate increases allowable over basic grants by order of prefectural governors. Increases over these () amounts requires the approval of Health and Welfare Ministry.

The above allowances apply to persons both in and out of institutions. Family income, except for small casual, amounts, is to be deducted in determining allowances.

Food for infants, (under 1 year of age), will not be charged against the family relief grant.

School lunches, served to children who are members of families receiving relief grants, will not be charged against the family relief grant.

It is requested that Military Government personnel insure that (1) these standards are put into effect and (2) provisions are made for additional in cash or kind, or both, when necessitated by cases of unusual hardship or circumstances.

Private Welfare

It has been the policy, once each year, of the Health and Welfare Ministry to distribute lump sum cash grants to certain selected private welfare agencies under the provisions of the Social Work Law, Article 11, which

reads "The government within the limit of budget may pay subsidy to a person who manages a social work." The amount of subsidy paid has varied although prior to the end of the war certain selected private welfare organizations received amounts in excess of 50% of operating costs.

The last subsidy paid by the Japanese Government, through the Health and Welfare Ministry, in accordance with the provisions of the Social Work Law, was in February 1946 and amounted to 750,000 yen.

The Health and Welfare Ministry selected 896 private welfare agencies to share in a similar grant this year. The payment of this grant was not approved since it was reverting to the old system of paternalistic lump-sum grants which is contrary to SCAPIN 775 "Public Assistance" and the established "SCAP Policy on Subsidies to Private Welfare Institutions" transmitted to the Health and Welfare Ministry on 30 October 1946.

Clarification and interpretation pertaining to government financial support of private or quasi-official welfare agencies is contained in Memorandum from GHQ, SCAP, file AG 091.4 (7 Nov 46) PH, reference; Inclosure 3 to Operational Directive 9, Hqs Eighth Army, dated 14 January 1947.

Foreign Nationals

Tokyo-To in conjunction with the Meidi-Ya Co., Ltd., opened a new store, on 27 February 1947, to serve foreign nationals in the Tokyo area. The store is larger than the one previous and has added other features such as vegetables and meats.

SECTION III VETERINARY AFFAIRS

Field Trip to Aichi prefecture

A representative of the Division conducted a survey of veterinary affairs in Aichi Prefecture. Accompanied by representatives of the Military Government Team and Prefecture Government, Dairy farms, milk plants, slaughter houses and livestock farms were visited.

Animal Disease Control

Animal disease control measures are effective. The 1947 Tuberculin test is in progress. Plans are being made to immunize all dogs against rabies.

Meat Inspection

Ante and post mortem inspection is being maintained in all slaughter houses in a satisfactory manner. Sanitation and disposal of wastes are comparatively good.

Dairy Inspection

Dairy farms and milk plants are receiving a monthly inspection and the "Score Card System" is in use. Milk is pasteurized in autoclaves at a temperature of 95 degrees F. for 20 minutes and distributed hot. The bulk of this milk is being manufactured into powdered skim milk and butter. The bacterial examination is partially neglected due to destruction of laboratories and equipment in Nagoya and other cities.

Summary

In those instances where defects were found to exist, officials concerned were instructed to institute necessary corrective measures.

Under the guidance of Public Health Office of the Military Government Team, the veterinary service in this Prefecture appears to be functioning in an approved manner and rapidly approaching pre-war standards.

Animal Disease Report

The Ministry of Agriculture and Forestry (Bureau of Animal Industry) reported that no new outbreaks of disease occurred during the period 16-22 February 1947.

SECTION IV
DENTAL AFFAIRS

During the past month, 13 dentists were reestablished in practice. The total number rehabilitated since the termination of hostilities is 4886. This represents over 80% of those bombed out.

SECTION V
NURSING AFFAIRS

Members of the staff have assisted in the classes for nurse instructors being held by the Institute of Public Health. To date lectures and practical demonstrations have been given in Maternity Hygiene, Child Hygiene, Tuberculosis, Venereal Disease, Principles of Public Health Nursing and Supervision in Public Health Nursing.

SECTION VI
SUPPLY

General

The Chief of the Supply Division has been designated to represent Public Health & Welfare Section on the Controls Coordinating Committee, which has been organized at SCAP for the purpose of coordinating activities with respect to industrial controls and related economic problems.

A conference was held with interested staff sections of SCAP and Japanese ministries concerning stocks of relief clothing. The purpose of the conference was to clarify the status of stocks earmarked for relief. A definite decision was reached concerning the amount of clothing available to the Welfare Ministry and steps will now be taken by that Ministry to effect necessary redistribution between prefectures. In this connection it should be noted that only certain portions of former Japanese Army-Navy clothing have been set aside for direct relief. This is in accordance with the policy of SCAP, under which the Japanese Government is authorized to determine the amounts of former Japanese Army and Navy materials that are to be distributed for direct relief. Effective 1 April 1947, stocks of former Japanese Army-Navy clothing which are uncovered will be released to the Ministry of Commerce and Industry for distribution. The Welfare Ministry will prepare a yearly program of relief clothing requirements, and the Ministry of Commerce and Industry will supply stocks to the Welfare Ministry as required for direct relief. Under this procedure the inventory held by the Welfare Ministry will be kept at a low level, sufficient to cover only emergency requirements.

Production

The below listed releases of 10% DDT have been approved by the Welfare Ministry, Japanese Government, during the past week.

<u>Prefecture</u>	<u>Quantity</u>
Osaka	10,000 lbs.
Hiroshima	4,000 "
Ishikawa	2,000 "
Shizuoka	1,000 "
Kagawa	1,000 "
Nagasaki	5,000 "
Akita	1,000 "

Release of the below listed quantities of typhus vaccine has been approved by the Welfare Ministry:

<u>Prefecture</u>	<u>Quantity</u>
Nagano	250 vials
Aomori	50 "
Fukushima	500 "

The above releases represent initial releases of DDT products by the Japanese Government. These quantities are small and were approved by Public Health and Welfare Section in order to provide experience in handling these products and further to fulfil actual needs in prefectures indicated above. Production schedule for DDT products is progressing satisfactorily and stocks will be adequate to provide for all civilian needs by 1 March 47. The Welfare Ministry Japanese Government had advised all prefectures that requirements for DDT products and typhus vaccine will be fulfilled by the Japanese Government on and after 1 March.

A conference with officials of the Japan Injection Needle Industrial Association revealed that the current monthly production approximates 500,000 with an average sale per month of 250,000. A total of 52 factories are engaged in this production and 40 of the factories are located in the Tokyo area. No reports indicating a shortage of injection needles in Japan have been received by this section and it is assumed that current production is exceeding the demand. The Association reports a total of 500,000 needles in stock at present. Injection needles are not controlled and the entire output is sold on the open market. The possibility of increasing production sufficiently to permit export is being investigated.

Monthly report of the Pharmaceutical Affairs Section, Welfare Ministry, indicates production of Insect and Rodent control supplies during January 1947 as follows:

Antu (rat poison)	2,895,540 (3 gram packages)
Nekoirazu (rat poison)	1,944 kgs.
Rat traps, spring type	25,000
Rat traps, cage type	1,000
DDT concentrate	39,777 lbs.
10% DDT dust	454,200 lbs.
Mixing & milling of 10% DDT dust from American furnished	
DDT concentrate	74,580 lbs.
DDT dusters	7,842

The above production of 10% DDT dust by Japanese factories during the month of January was approximately a 300% increase over previous monthly productions during 1946. Production of other items remained approximately the same.

In order to provide laboratory animals for assaying potency of Japanese produced typhoid vaccine, request was submitted to the War Department for 300 females and 50 males of typhoid susceptible Swiss white mice. A production of sufficient typhoid vaccine to immunize all individuals in Japan over the age of 5 years is planned. Considerable time will be required to produce sufficient white mice from the small increment requested in order to assay large quantities of Japanese produced typhoid vaccine.

The monthly report of the Welfare Ministry, Japanese Government, indicates production of the principal biologicals during January as follows:

<u>Vaccine</u>	<u>Production</u>		<u>Stock on Hand - 31 January</u>	
	<u>Crude Vaccine</u>	<u>Finished Vac.</u>	<u>Crude Vaccine</u>	<u>Finished Vac.</u>
Cholera	-	-	628,500 cc	549,380 cc
Plague	-	-	-	562,800 cc
Typhus	-	1,839,154 cc	-	3,631,161 cc
Triple Typhoid	10,000 cc	121,780 cc	2,096,925 cc	1,735,218 cc
Smallpox Vaccine	45,550,600 ds.	17,996,800 ds.	23,981,050 ds.	1,713,950 ds
Diphtheria Antitoxin	-	156,800 cc	-	426,653 cc
Diphtheria Toxoid	-	14,800 cc	-	551,235 cc

Production of typhus vaccine continues to increase over all previous monthly outputs. However, the shortage of necessary laboratory animals to continue proper assay will delay distribution of this vaccine. Production of all vaccines is considered satisfactory. Production of approximately 180,000,000 cc of typhoid vaccine will be started on or about 1 April.

A Japanese committee comprising officials of the Welfare Ministry, Japanese Government, the Agricultural Ministry, Japanese Government, and the Laboratory Animals Producing Association had been formed

as a committee to alleviate the shortage of necessary laboratory animals (guinea pigs), rats and mice in all laboratories producing biologicals. A plan has been made by this committee to increase production to meet requirements during 1947, to provide sufficient feed for increased production of these animals and to conduct distribution in order to insure that biological laboratories are given first priority in distribution. Monthly meetings will be held with this committee to determine action of the committee in carrying out the objectives of the plan. Representatives of Public Health and Welfare Section and Natural Resources Section will be present at these meetings. A specific report will be submitted monthly by the committee indicating the following:

- a. Actual production of animals.
- b. Number of animals furnished each laboratory.
- c. Amount of animal food furnished.

Narcotics

Information has been received that several ships, engaged in smuggling operations with narcotics as part of the cargo, have been seized. It is imperative that the Narcotic Control Branch, Public Health and Welfare Section, GHQ, SCAP, receive the following information on all ships carrying contraband narcotics: Name and registry of the ship; port of departure, ports of call and port of arrival with dates; quantity and disposition of narcotics and other action taken. This information is the subject of reports compiled by the Narcotic Control Branch for International Narcotic Control Bodies.

An investigation involving three Japanese narcotic officials, one other government official, one druggist, one pharmacist and seven doctors has been completed in Yamanashi Prefecture. One of the narcotic officials who resigned a year ago removed a large quantity of narcotics from a former Japanese Navy Hospital. After dividing the loot with two other narcotic officials a large quantity was sold to various persons for thousands of yen. Registered doctors who received the narcotics failed to report them at time of registration. All of these defendants will be tried in Provost Court.

Recent investigations indicate that large quantities of narcotics were probably removed from Japanese Military Hospitals and Medical Depots near the end of the war and are now being sold and held illegally. Military Government Teams should insure that Japanese narcotic officials and police made every effort to determine if such diversions occurred and to apprehend the violators and seize the narcotics.

SECTION VII PREVENTIVE MEDICINE

Typhus Control

Comparative score: (Including reportings of 19 February)

1946	-	1,467
1947	-	408

Immunization of Commuter Groups

An extensive program for the immunization of commuter groups in the two greatest "danger zones" of Japan will be launched on 25 February 1947 in the Tokyo-Yokohama area and on 1 March 1947 in the Osaka-Kobe area. This program will include over one million persons. The plan calls for the administration of 1 cc. injections of Cox-type typhus vaccine to commuters holding commuter passes in the two areas mentioned. The Ministry of Welfare has issued a letter of direction to the prefectures concerned.

SCAP memoranda to the Imperial Japanese Government, AG 710 (21 Nov 45) PH, (SCAPIN 331) dates 21 November 1945, subject: "Prevention and Control of Typhus Fever in Japan; and AG 710 (29 Nov 45) PH, (SCAPIN 368) dated 29 November 1945, subject: "Prevention and Control of Typhus Fever in Japan" have been rescinded. A new memorandum, AG 710 (12 Feb 47) PH, (SCAPIN 1523) dated 12 February 1947, subject: "Prevention and Control of Typhus Fever in Japan" replaces the two memoranda as listed above.

Venereal Disease Control

It is necessary at this time to have certain information on diagnostic and treatment facilities. Each Military Government Health Officer is referred to enclosure No. 1 to this Bulletin. It is desired that he fill in the required information and return to Public Health and Welfare Section immediately.

Port Quarantine

Report on incoming quarantinable disease:

Week-ending 8 February - Negative

Week-ending 15 February - Repatriation Ship Tibadack from Batavia to Ujina (2 February)
Typhus Fever, 1 case, no deaths. Date of diagnosis, 13 February 1947.

SECTION VIII SOCIAL SECURITY

For the information and guidance of Military Government, Public Health and Welfare officers, the following organizational setup of the Social Security Division is published.

Mission and Function

The function of the Social Security Division is a continuous review of those activities of the Imperial Japanese Government which affect social security. Particular concern is with administrative procedures, policies, and the nature of benefits paid by insurance bureaus and government-sponsored insurance associations. Similar emphasis is placed upon the study of the relationship of social insurance programs to other welfare service agencies and public relief programs.

The Social Security Division maintains liaison with other Staff Section and with agencies of the Japanese Government in evaluating the soundness of existing social security programs and to assure the effective and continuing operation of the plan designed to relieve unnecessary dependency and to provide protection from the hazards of old age, illness, unemployment, accidents, and other conditions over which the individual has no control and which might result in social unrest prejudicial to the occupation.

The Division receives and compiles regular statistical reports from agencies and sources which may bear on the general welfare and economic status of the social security program. Representatives of the Division make periodic surveys on national, regional and prefectural levels to render technical assistance and guidance to welfare personnel of military government, lower echelons and Japanese agencies in their social problems and policies. Recommendations are made to higher authority on plans, programs, policies and procedures when necessary to coordinate and consolidate current social security systems or to eliminate such social security or insurance programs as may be prejudicial to the occupation.

The Division's operations are divided among three Branches, designated as: "Social Insurance," "Health Insurance," and "Economic Analyst."

Within the Division, the Social Insurance Branch is responsible for the appraisal of existing and proposed legislation in those social insurance programs planning security against risks other than illness and accident. This branch is charged with the development of an integrated social security program in which social insurance and public assistance programs are combined to meet basic needs of the population without major gaps or overlapping and with maximum simplicity of operation. It is responsible for the development and application of appropriate policies dealing with old age security, aid to the blind and to dependent children, and other measures, such as Seamen's Insurance and family allowances, to assure security of income. In addition, it reviews, and maintains liaison with other Sections in the consideration of such other programs as unemployment insurance, workmen's compensation, mutual aid associations, and postal insurance and annuities.

The Health Insurance Branch initiates, directs and supervises the application of policies in the field of insurance providing security against wage-loss resulting from disabling illnesses and accidents. It is concerned with aid for crippled children and maternal and child health, and ascertains needs for health insurance programs involving general and specialized care by physicians and surgeons, hospitalization, home nursing, medicines and dentistry.

The Economic Analyst Branch evaluates and integrates economic data obtained from governmental sources which is required to properly assay social security proposals in relation to (a) national income, (b) the extent and character of economic insecurity resulting from various cases, (c) the probable cost of contemplated changes in

the programs, and (d) the economic effect of various methods of financing. It prepares recommendations concerning the economic aspects of social security, covering such questions as the extent of employer and employee contributions, governmental contributions from general revenues, relation of benefit structures to wages, and effect of benefits on employment.

CONDITIONS AS FOUND UPON ARRIVAL BY ARMED FORCES IN JAPAN

Insurance systems created by the Japanese Government prior to the occupation, and which may be characterized as social insurance or related thereto, are the following:

Health Insurance (1922) - A compulsory system for certain industrial, mining, commercial and transportation employees; paying limited cash benefits during incapacitation and providing medical and dental care, maternity care, and funeral expenses. This type of insurance was further expanded in 1934.

National Health Insurance (1938) - A program in extension of "Health Insurance" and sponsoring voluntarily organized health associations which are supported by members' premiums and a government subsidy; providing medical care and hospitalization to the rural population.

Seamen's Insurance (1939) - A composite social insurance program for seamen with provision for medical care, limited cash benefits to the insured seamen for sickness, invalidity due to occupational accidents, and in old age, and to his surviving dependents, and funeral expenses.

Welfare Pension Act (Formerly "Workers' Annuity Insurance") (1941) - A compulsory system for practically the same group as are covered by "Health Insurance" and providing cash benefits for old age, permanent disability and aid to survivors on death.

Employers' Liability Insurance (1931 and revised in 1941) - A system of compensation for occupational disabilities, providing medical care and cash benefits to injured workers in engineering, construction and lumber industries, and assistance to survivors of such workers.

Post Office Insurance and Annuities - Two programs administered by the Ministry of Communications and which are comparable to the usual life and endowment or retirement commercial policies, but due to their extremely wide application (over 91 million policies with more than 26 billion yen face-value are currently effective), consideration must be given to these systems in appraising the social insurances.

Considerable revision of the laws governing the health, old age, and accident insurances are being drafted by the Ministry of Welfare. In addition, new legislation embodying principles of unemployment insurance and workmen's compensation are under consideration.

There is no possibility of giving an accurate picture of the number of persons who would be covered by these programs under "normal" conditions. Wartime figures reflect a peak in industrial employment that may not reappear in Japan for many years, while post war figures represent a period of abnormally low industrial activity and extensive inflation and are of only transitory value.

Review of Past Activities: Immediately following the activation of the Public Health and Welfare Section in October, 1945 the Social Insurance Bureau of the Ministry of Health and Welfare was directed to submit current statistics on coverage, contributions, benefits paid, reserve funds, and related subjects. From information obtained it was apparent that contributions paid into social insurance funds before the end of hostilities far exceeded benefits grants under any of the programs. The Ministry reported in January, 1946, that on 31 December 1945 there were 10,443 local insurance agencies and organizations administering the five social insurance programs and that 41,409,450 individuals were insured.

Attention was directed to the Health Insurance and National Health Insurance programs at an early date. Field studies indicated that insufficient transportation facilities and low fees for doctors in the face of inflationary prices were the chief underlying causes of the deficiencies in the operation of the programs.

The bulk of the preliminary study made of the social insurance programs was accomplished by Social Insurance Consultants of the Labor Advisory Committee and their recommendations led to the creation of the Social Security Division in May, 1946.

A series of conferences were held between representatives of the Labor Advisory Committee, the Public Health and Welfare Section, the Labor Division in the Economic and Scientific Section, the Bureau of Insurance in the Ministry of Welfare, and the Japanese Social Insurance Investigation Committee. This latter committee was created by the Japanese Cabinet with membership drawn from labor, employers, the faculty of leading universities of Japan, and officers of the Japanese Government.

Many tentative drafts of partial revisions and amendments of the social insurance programs were submitted by the Insurance Bureau and reviewed by the Labor Advisory Committee and the Public Health and Welfare and Economic and Scientific Sections. Difficulty has been encountered, however, in obtaining complete and accurate translation of existing laws and pertinent ordinances.

The Labor Advisory Committee prepared a detailed report of its studies and conferences and this has served as the foundation for the operations of the Social Security Division.

The Committee found that the legal framework of Japanese social insurance is of relatively recent date. Compulsory health insurance for industrial workers and miners, although introduced in 1922, was in its initial form very limited in scope and social value. Even more restricted in its coverage and in the level of its benefits was social insurance against industrial accident as established in 1931.

The broader development of social insurance legislation occurred largely during the period of preparation and prosecution of the war and, in many ways, was influenced by wartime objectives. It was found that modern Japan, in the field of social insurance as in many other fields, had taken over Western institutions without accepting their basic philosophies. The principles that the insured worker acquires the right to benefits and services as firm as any contractual right, and that he acquires the right to participate in the formulation of policies for and in the management of social insurance programs, were not in fact recognized. The paternalistic and authoritarian character of the Japanese regime had definitely influenced their social insurance program.

While the Labor Advisory Committee deemed it impossible to make detailed proposals for a comprehensive social insurance system until the policies with respect to Japan's economic future are more definitely formulated, it did reach conclusions with respect to implementing the existing structure and these findings now serve as a guide to the Social Security Division.

Current Projects: Based upon the surveys and recommendations of the Social Insurance Consultants of the Labor Advisory Committee, the current projects have centered around health insurance, workmen's compensation and unemployment insurance. Investigations and surveys of the health insurance program have brought forth such important factors as keeping the program alive during the inflation; adjusting finances to assure survival of the program; instituting measures to raise the standards of service; extending medical service to these groups not now covered and arranging for broader participation of the employer and the insured in the management of the program. Through consultations and conferences directions were conveyed for raising standards, improving methods, and emphasizing hospital and sanatorium use as a part of an extensive medicine program.

The low patient census in health insurance hospitals and sanatoriums caused a survey of procedures and operations. As a result, a revision in the hospital and sanatorium procedures has been directed in an effort to increase efficiency in the use of equipment, facilities, and professional personnel. Each institution surveyed was found to be well-staffed and sufficiently financed to render service to a larger number of people. Heads of governmental insurance departments have initiated a program to bring about a cooperative plan among all government insurance agencies in making efficient use of insurance hospitals and sanatoriums.

With problems confronting the unstable labor conditions, constant supervision has been exercised in the development of the Employers' Liability Insurance for employees in case of accidents. The program has been extended to many small organizations not previously covered under Health Insurance. Concerted efforts have brought about the inclusion of such provisions as the furnishing of artificial aids, rehabilitation programs, longer periods of benefit payments on the installment plan, paying direct to the employee by the insurance office rather than through the employer under the old procedure, and the providing of an easier appeal system.

The Post Office Insurance and Annuities, two programs administered by the Ministry of Communications, and which are comparable to the usual life and endowment or retirement commercial policies, have been surveyed due to the extremely wide application and the possible application they might have in the Social Insurance program.

Budget adjustments and requirements are under current supervision, with a view toward reallocating the use of the Welfare Pension Fund in the National Health Program. Government subsidy being essential in the over-all requirement, constant demands are made for increased allotments for improving health facilities for the benefit of the low income and unemployed class.

Future Programs: Social insurance is unavoidably weakened during a period of inflation. Therefore, the urgent need confronting the Insurance Bureau of the Ministry of Welfare is maintaining the present status for a limited time as necessary measures are taken to assure a higher degree of coordination in their activities and more adequate governmental supervision. There are some issues which clearly enough justify immediate recommendation, while others need further exploration before decisions are reached.

This Division sees the need for intensive study of the entire social insurance program, with the thought of readjusting and coordinating the coverages and benefits of the various types of insurances. Chief among these are the old age and survivors' insurance, family allowance and health benefits.

Administrative procedures seem to be a weakness in the Japanese system. A particular fallacy is that many provisions appear on paper, but few people are generally informed; another is the lack of adequate investigations, surveys and deliberations by a representative group of the people. Therefore, the leading point in the future program would be extending the scope, authority and public representation on the committee established by the Japanese Cabinet for investigation of the Social Insurance Program. Another point in need of emphasis, end of no less importance, is the administrative supervision of operations from the national as well as from the prefectural level. This will mean a more adequate staff of qualified personnel to serve as a field force so the whole process of supervision will include statistical reporting and standardization of procedures to assure complete and effective control.

Additional programs, which are immediate and future in character, include:

Added efforts in order to keep the social insurance program alive during the period of inflation.

Adjustments of financial measures to assure survival of the National Health Insurance and Sickness Insurance programs as to income and government subsidy.

To emphasize coordination and cooperation between the government insurance officials and the medical associations in raising the standards of medical services to the insured and fee-for-service allowance to doctors. Also, effecting a definite program for extending medical care to a larger group of people not now covered.

Encouraging broader participation by the insured in the social insurance program.

Developing the information, education and orientation program as to the value and benefits of social insurance.

Initiating the development of unemployment insurance with provisions to establish an adequate financial reserve for providing greater security to workers currently unemployed.

The establishing of a workmen's compensation insurance to assure security against industrial accidents and occupation diseases.

While appeal provisions appear in practically all schemes, they are hardly ever used, as no information is given that they are available. To overcome this weakness, the insured will be encouraged, by a simplified and non-partisan method, to make more use of the appeal privileges, which should increase individual participation in the program.

Even though special projects have been mentioned as a part of the future program, the entire field of social security and social insurance is in need of intensive study before a more comprehensive program can be announced.

- - - - -

Social Insurances

The social insurance program is a long range project and considerable emphasis and study is immediately needed to maintain active interest in keeping it alive. Health and pension insurances will be regulated in accordance with the industrial labor requirements.

Health Insurance

The Ministry of Welfare has prepared a revised Health Insurance (Industrial) Law to be presented to the Diet. The revised law was necessary with the development of the Workmen's Compensation Law. The original Health Insurance Law had covered illness and injuries incurred in the line of duty as well as off duty. With the enactment of the Workmen's Compensation Law all occupational injuries and illness will be the responsibility of this law. The Health Insurance Law will then cover only illness and injuries incurred which are not in the line of duty.

National Health Insurance

A partial survey indicates that approximately 10% of the associations have suspended operation during the past year. The principal reasons given, was the increased cost in medical care by private physicians, the deficiency of medical supplies, the neglect by government in rendering adequate assistance and the lack of a clinic for medical examination and group treatment.

Three associations which are functioning efficiently have been recently visited and it was found that each had a central clinic for rendering economical group medical care. Those which are functioning efficiently, however, are not free of difficulties. The opinions expressed were that these associations will have to meet the advancing costs by increasing premiums, however, this must be encouraged by improvement of government interest and assistance by additional subsidy for medical treatment and a more adequate distribution of medical supplies. The clinic seems to be the logical solution for rendering economical and adequate medical care.

SECTION IX MEDICAL SERVICES

Japanese Civilian Hospital Strength Report for the period ending 31 January 1947 shows 3,047 hospitals with a capacity of 215,755 beds, 98,565 of which were occupied. During this same period 233,640 outpatients were treated.

SECTION I WELFARE

Public Assistance

The following incomplete report (40 prefectures) covers Public Assistance statistics for January 1947.

Individual persons assisted (institutional & non-institutional)	2,364,601
Total relief cost (grants in cash and kind)	yen 210,942,465

Rehabilitation of Repatriates

Japanese governmental programs for "War Sufferers and Repatriates" include a number of special projects designed to meet the need of not only those made homeless by the war and its attendant destruction, but also for the millions of returning civilians, many of whom are coming to Japan for the first time.

Already 5,100,000 persons have been returned to Japan and it is estimated that 1,400,000 persons are still to be repatriated.

To meet the problem facing these persons a number of programs are in operation. Japanese reports include the following activities:

a. Reception centers at Hakodate, Uraga, Mizuru, Ujina, Otake, Nagoya, Hakata and Sasebo, and Kagoshima.

1. Money is exchanged in a sum not to exceed 1,000 yen; a certificate of repatriation is issued.
2. Free room and meals are furnished at the center, and a free ticket to destination and five days food there after is given; clothing and bedding if needed, plus a gratis issue of 500 yen if the repatriate is without funds is also allowed.
3. Free medical care is furnished including hospitalization at a national hospital as indicated by reception center doctor.

b. Enroute from reception centers to place of destination, usually the official residence of the respective family, the national and local governments provide places for rest and feeding, and medical treatment in the main stations along the route.

c. After the repatriate has reached the selected place of residence he either secures work in his profession or trade through the local employment bureau or through his family. If nothing is available locally he is advised of the location of work and assisted in reaching it.

If the repatriate is unable to find employment or otherwise to care for himself and his family, he receives care under the provisions of the "Daily Life Security Act" and also receives necessary cooking and household equipment, ration cards and sufficient relief funds to purchase food, and a free but limited issue of clothing. Distribution varies from prefecture to prefecture dependent in part on local resources. Through the local Social Affaire offices, housing is provided by the utilization of former factories, barracks and warehouses and similar large unused structures. However, by the end of 1947 only 15% of the repatriated will be so housed, the remainder securing shelter by "doubling up" with relatives and friends.

Business loans not in excess of 3,000 yen are available through the Peoples' Banks for use in establishing small business enterprises or in purchase of hand tools. These loans draw no interest for one year, 6% for the next four years and are due at the end of five years. Applications have exceeded the 1,000,000,000 yen loan fund and demands are now being made for additional funds, a larger loan limit figure and a longer term for the individual loans.

A repatriate wishing to settle on the land may purchase land through the Agriculture and Forestry Ministry and may borrow up to 10,000 yen for this purpose, or he may rent land from others and borrow from the ministry for farm tools, equipment, seeds and fertilizers.

A repatriate upon returning to his place of residence presents his certificate of repatriation and returns to full citizenship of the nation. Certain residence laws will not permit voting until he has lived in his ward or ku for six months, although this law has been suspended from time to time to permit large groups of repatriates to exercise their franchise. However, the repatriate who wishes to file for public office may do so the day he returns.

Japanese Red Cross Society

The American Junior Red Cross confirms the allocation of the following supplies, to be distributed to Japanese school children through the auspices of the Japanese Junior Red Cross and the Ministry of Education.

50,000	Gift Parcels
500,000	Pencil Tablets
500,000	Pencils
500,000	Erasures

Plans are now being perfected for the authority to ship these supplies, for supervision and control of their distribution and for warehousing and transportation.

The Japanese Red Cross has published the first issue of a Monthly Bulletin, devoted to an interpretation of Red Cross activities and subjects of general interest in the field of public health and welfare. The initial distribution will be limited to Red Cross organizations and selected government and private agencies. As additional resources and materials become available, the Japanese Red Cross plans to publish sufficient copies for general distribution to those individuals and organizations interested.

SECTION II VETERINARY AFFAIRS

Monthly Meat Inspection Report

Following is a summary of the monthly meat inspection report for December 1946, submitted by the Ministry of Welfare.

	<u>Cattle</u>	<u>Calves</u>	<u>Sheep & Goats</u>	<u>Swine</u>	<u>Horses</u>

Samples examined	77
Over bacterial standards (2,000,000 per cc)	3
Under butterfat standards (3.0 percent)	0

Animal Disease Report

The Ministry of Agriculture and Forestry, (Bureau of Animal Industry), reported the following new outbreaks of disease during the period 23 Feb to 1 March 1947.

<u>Prefecture</u>	<u>Disease</u>	<u>Cases</u>
Fukuoka	Anthrax	1

SECTION III DENTAL AFFAIRS

The value of dental materials reported produced for the month of January totalled 1,180,095,00 yen; dental instruments totalled 604,468,00 yen.

SECTION IV NURSING AFFAIRS

Prefectural surveys of the Schools of Nursing on Honshu, Shikoku and Hokkaido, have been completed. Six in Kyushu remaining to be surveyed.

SECTION V SUPPLY

Distribution

It is apparent that excessive stocks of medical supplies are held in the various echelons of distribution. This is due somewhat to the policy of control companies, both at the national and prefectural levels, of distributing only once each quarter. Close supervision is maintained over the central distributing company with a view to increasing the distribution cycle and thus provide a more rapid flow of materials to prefectures. Local distributing companies should be required to review inventories at frequent intervals and make distribution whenever available stocks warrant such action.

Complaints have been received of inability of physicians and hospitals to purchase medicines expect during regular distribution periods. All medicine distributing companies maintain reserves for emergency use and are required to sell medicines whenever required for actual treatment of a patient.

As previously announced, the Welfare Ministry assumed responsibility for distribution of DDT products and typhus vaccine on 1 March 1947. Under the plan as set-up, prefectural health officers will submit request for these items direct to the Ministry of Welfare, attention: Pharmaceutical Affairs Section. The ministry will advise prefectural health officers as to specific amounts approved for release and the source from which these supplies may be purchased. A similar notification will be sent to the designated wholesaler who will be authorized to ship upon request of the prefecture. Military Government officials should exercise necessary supervision in this connection to insure validity of request submitted to the Welfare Ministry and proper storage and distribution by operating agencies.

The number of controlled medicines has been reduced from 201 to 124. This action will relieve somewhat the financial burden of distribution companies, encourage free trade and permit greater concentration of effort in distribution of the more important medicines remaining in a critical supply status. The following is a revised list of controlled medicines and sanitary materials. All other medical supplies and equipment are being distributed through normal commercial channels:

M E D I C I N E S

1. ACETOPHENETIDIN - POWDER (Phenacetine)

2. " Tablets
3. ACRINOL (Rivanol)

3. Sanitary Cotton
4. Gauze
5. Bandages
6. Abdominal Bandage
7. Triangular Bandage
8. Absorbent Lint.

Production

The Welfare Ministry approved release of 10% DDT Dust and Typhus Vaccine as indicated below during the past week:

<u>Prefecture &/or Port</u>	<u>Typhus Vaccine</u>	<u>Quantity</u>
Maizuru		350 vials
Tokyo		50,000 "
Osaka		60,000 "
Kanagawa		6,000 "
Miyagi		1,000 "
Hyogo		12,5000 "
Kyoto		2,520 "

<u>Prefecture &/or Port</u>	<u>10% DDT</u>	<u>Quantity</u>
Miyagi		10,000 lbs.
Osaka		6,000 "
Ibaragi		3,000 "
Hakodate		10,000 "
Maizuru		20,000 "
Sasebo		20,000 "
Ujina		7,000 "
Hakata		2,000 "

The DDT products program shows continued satisfactory progress. Approximately 1,000,000 lbs. of 10% DDT Dust is now in stock.

Narcotics

Reports have been received that some Japanese National Hospitals are holding large stocks of narcotics. With it is realized National Hospitals could probably justify holding a ten to twelve months' supply, if the proper security is provided, it is imperative that all excess stocks, including those in National Hospitals, be returned to local wholesalers and become part of the working stock of narcotics in Japan. The Ministry of Welfare has been instructed to direct inspections of National Hospitals and to take the proper action. Ministry Government teams

should assure that prefectural narcotic officials have returned excess narcotic stocks to local wholesalers. Records of consumption held by all registrants since June 1946 should be a suitable basis for determining the amounts required for a six to eight months' supply.

Control Regulations governing the growing of Marihuana (*Cannabis Sativa L.*) for fiber purposes in twelve prefectures have been drafted by the Ministry of Welfare and should be promulgated within a few days.

SECTION VI PREVENTIVE MEDICINE

General

A staff visit to the island of Kyushu showed, the communicable disease situation to be satisfactory; the diphtheria immunization program had been brought to a good level; smallpox and typhus fever were at a low level and had so far not developed to a significant public health problem; the population had been revaccinated against smallpox during November and December. The majority of the prefectural health departments were already setting up plans for extensive typhoid vaccination and for measures to be undertaken against dysentery and cholera.

Tuberculosis Controls

At a meeting of the Japanese prefectural health officers, held in Tokyo, a lecture was given on the present status of the tuberculosis situation in Japan.

Maternal and Child Health

An inspection was made of the Imperail Gift Aiiiku Kai Foundation, in regard to its activities in maternal and child health. This is the only institution in Japan, so far as is known, which offers facilities related to the mental health of children.

Typhus Fever Control

Comparative Score: - (includes figures of 27 Feb.)

1946	-	2999
1947	-	449

In order to determine a more accurate incidence of typhus fever in Japan it is necessary that complement fixation tests be performed on serum samples taken from patients in the second or third week of illness or during convalescence or recovery. We would like to receive a 10cc blood sample from each reported case of typhus fever that has occurred since 1 January 1947. The blood samples should be sent to Major T. O. Berge, 406th General Medical Laboratory, APO 500 as expeditiously as possible through the RTO or by courier. Blood collected should be allowed to separate either by clot formation or by centrifugation; properly labeled and iced if possible. Date accompanying each blood specimen should include: -

Date case reported
Name of case - age - sex
Locality (city, town, village and prefecture)
Vaccination against typhus. Yes or No. and Date

Sanitation

Plans for mosquito and fly control should be made now. Estimates of material and equipment required, worked out and requests submitted through supply channels. Materials left from last season should be checked. Emphasis should be put on environmental sanitation. By systematically cleaning up block by block, burying garbage and refuse, opening and cleaning drainage ways, much unemployed labor can be utilized and permanent insect and rodent control effected.

Venereal Disease Control

The Venereal Disease Division of the Welfare Ministry has prepared REPORT CARDS which will be distributed to all physicians and clinics through the prefectural health departments.

Every physician making a diagnosis of a venereal disease will report the patient on this card. The cards will be sent to the local health centers who will then forward them to the prefectural health department. Every venereal disease patient whether under the care of a private physician or a public clinic will be reported.

Every patient's chart should have a space on it to indicate that a report card was forwarded. Data taken from these cards should aid the prefectural V. D. Control Officer in making out his monthly report of V. D. Control activities for the V. D. Division in the Ministry.

Port Quarantine

Port facilities in and around Yokohama were inspected to find a suitable location for the port quarantine activities of the Yokohama - Tokyo area. At the present time the Military Government Quarantine Officers at Yokohama operate from the Office of The Surgeon, Second Major Port.

90,000 repatriates are expected to be returned from Dairen in the month of March. To reduce the load on Sasebo, and to avoid the longer passage to Maizuru. The Hakata Reception Center is being reopened.

A program is under way to obtain chest plates on all incoming repatriates as a part of the current tuberculosis control campaign. The first of these units will use 35mm. x-ray film and will be put into operation at Sasebo within the near future.

A complete set of forms and declarations for use in Quarantine operations has been designed and assembled in Military Government Headquarters, Eighth Army. These forms will be released simultaneously with the Eighth Army Operational Directive covering SCAP Circular #10 "Foreign Quarantine Regulations for Japan" (28 Oct. 1946). Also available to Quarantine officers at that time will be detailed instructions regarding standard operating procedures at Air and Maritime Quarantine Stations.

The first of two lifts intended to complete the repatriation of German Nationals was made during the past month. One case of scarlet fever was reported among the 1200 repatriates sailing from Uraga aboard The Marine Jumper, 15 February 1947. A few cases of convalescent scarlet fever and whooping cough were also boarded.

Repatriation Stations now in operation are as follows:

Uraga	
Ujina	
Maizuru	
Hakata	(Reopened to process repatriates from Dairen During the month of March).
Sasebo	

SECTION VII SOCIAL SECURITY

National Health Insurance

Petitions and requests have been informally received from several sections of Japan expressing the desires and wishes of the people for additional governmental assistance in providing facilities for improving preventive medicine and medical treatment programs through insurance. This is an indication of the attitude of the people regarding their interest in the health insurance program. Additionally, reports have been received from two towns where industrial and non-industrial activities were so interwoven through out the population that a coordinated program has been effectively functioning, involving Health and National Health Insurance, on a mutual basis.

Pension and Workmen's Compensation

Tentative agreements have been obtained in coordinating the benefits received from Workmen's Compensation and Welfare Pension Insurance regarding occupational illness or injury. The arrangement will provide for continuous care for invalidity disability resulting from occupation. This in no way will affect the normal provisions provided by the Welfare Pension Insurance for old age or invalidity disability from cause other than Occupation.

SECTION VIII
MEDICAL SERVICE

Japanese Civilian Hospital Strength Report for the period ending 10 January 1947 shows 3,054 hospitals with a capacity of 216,864 beds, 97,195 of which were occupied. During this same period 253,432 outpatients were treated.

SECTION IX
VITAL STATISTICS

Births: The number of births (275,221) declared in January 1947 is the highest number recorded in the 7 months since the new reporting system went into effect, and represents an increase of approximately 50 percent over the number (183,965) declared in December. This, however, is in line with past experience. January was the peak month for births during the 10 year period 1934-1943, and the number ranged from 50 to more than 100 percent greater than the December number throughout this period. The birth rate per 1,000 population increased approximately 50 percent from 29.6 in December to 44.3 in January. The increase was general throughout the country and about the same in city and non-city areas.

Deaths: Deaths increased 15 percent from 102,103 in December to 117,489 in January. This too follows the pattern of previous years. The death rate increased approximately 15 percent from 16.4 to 18.9 per 1,000 population. The increase in the rate of city areas was nearly 25 percent and more than twice as great as in non-city areas where the rate increased only 11 percent.

Infant Deaths: The number of infant deaths (20,840) in January was nearly 25 percent greater than the number (16,739) in December. The infant death rate per 1,000 live births, however, declined approximately 17 percent from 91.0 to 75.7. This is explained by the fact that the relative increase in live birth was greater than the relative increase in infant deaths. The number of infant deaths in city areas increased more than 40 percent compared with an 18 percent increase in non-city areas.

Stillbirths: The number of still births increased 10 percent from 9,350 in December to 10,338 in January. The rate per 1,000 live births, however, declined more than 25 percent from 50.8 in December to 37.6 in January. This, too, is explained by the fact that the relative increase in live births was greater than the increase in stillbirths. As in the case of live births, the change in numbers and rates was about the same in both city and non-city areas.

Marriages: For the fourth consecutive month marriages increased and reached a new high point for the past 7 months. The number declared in January (72,760) was approximately 13 percent higher than the number (64,393) in December. The marriage rate per 1,000 population was 11.7 in January compared with 10.4 in December. The city rate increased only 7 percent from 9.0 to 9.6 and the non-city rate increased nearly 15 percent from 11.0 to 12.6.

Divorces: The number of divorces (6,649) in January remained about the same as in December (6,627). There was a slight decrease in divorces in city areas compensated by a slight increase in non-city areas. The divorce rates per 1,000 population remained the same; 1.1 for all Japan, 1.0 in city areas, and 1.1 non-city areas.

Corrections: Further November and December reports received too late to be included in the respective summaries are shown below:

SECTION X CONSULTANTS

Nutrition

The initial report on the February Nutrition Survey for the food consumption of Tochigi (rural) prefecture has been submitted by the Japanese Ministry of Welfare. Comparison with the November Data indicated a decrease in the sweet potatoes and leafy green yellow vegetables consumed.

Following are tables on the activity of members of Japanese families studied in the November Nutrition Surveys in terms of percentages of adult male unite for various degrees of activity for male and females. Included are nine cities, twenty-seven prefectures and coal mines.

Nutrition Survey in Japan - 1946

Activity of all members of Japanese families studied in nutrition surveys in terms of the percentages of adult male units for various degrees of activity for males and females of different ages based on the total number of persons examined. Adult male unit of 1.0 and 0.8 represent a moderately active degree of work for men and women respectively.

SECTION I WELFARE

Private Welfare

There continues to be instances of certain individuals or groups who call upon Military Government personnel, as well as other members of the Occupation Forces, to secure verbal and/or written approval to establish a private welfare organization or institution. These interested parties not infrequently request a written statement encouraging their endeavor, which they in turn use to influence Japanese officials.

It is contrary to the policy of SCAP, for any member of the Occupation Forces, unless duly authorized, to act as an intermediary between private individuals or groups and the Japanese Government in matters which pertain to the approval of establishing new private welfare agencies. This does not preclude continued and vital interest in the private welfare agency field but the actual licensing of such agencies must be through normal Japanese government channels, without any outside influence other than that of those individuals, other than occupation forces, directly interested in the enterprise.

There also appears to be some question regarding the use of Japanese Government funds in establishing private welfare agencies. Under SCAP policy, "no governmental funds will be expended to establish a new private welfare agency".

Extension of Restrictions on Civilian Population Movement

The Home Ministry requested an extension to 31 December 1947 on the restrictions of free movement of civilian population in Japan. The Home Ministry considered the extension necessary inasmuch as there is no appreciable change in the food and shelter situation within the urban areas.

The request of the Home Ministry was approved as presented, and an Imperial Ordinance revising Imperial Ordinance No.542 ("Urgent Measure Concerning the Control of Population Inflow into Urban Areas") will be issued.

Japanese Red Cross Society

The Japanese Red Cross, in an effort to meet the demands of personnel for increased salaries, has agreed to revise its pay scale on the same basis as revisions now being made for comparable classes of employees by the Japanese Government. The new salary scale will be put into effect following conferences to be held with Chapter and Hospital Directors at The National Headquarters (Tokyo), on 8 – 9 March 1947.

SECTION II VETERINARY AFFAIRS

Animal Disease Report

The Ministry of Agriculture and Forestry (Bureau of Animal Industry), reported no new outbreaks of disease occurred during the period 2 – 8 March 1947.

SECTION III DENTAL AFFAIRS

General

Out of the nations 22,288 primary and middle schools, 9693 have at least part dental attendance. This service consists of periodical examinations, limited treatment, and instruction in oral hygiene.

Only 260,000 yen was appropriated by the national government for this program in 1946, but this amount was supplemented by varying amounts from each prefecture.

SECTION IV NURSING AFFAIRS

The procedure manual for the Tokyo Demonstration school has been completed in Japanese. Publishing and printing privileges have been received from C.I. & E. Section and the publisher is ready to begin work as soon as paper is obtained. There will be 20,000 copies of the manual printed for the first edition and these will be made available to the schools of nursing.

The Communicable Disease Chart prepared by this Division has been approved by C.I. & E and is being printed now. These charts will be made available to Public Health Nurses of Japan. Two thousand are being printed by News Company as a “complimentary gift”, to the nurses.

SECTION V SUPPLY

Production

The Welfare Ministry approved release of 10% DDT Dust and Typhus Vaccine as indicated below during the week:

<u>Prefecture</u>	<u>Typhus Vaccine</u>	<u>Quantity</u>
Chiba		4,000 vials
Mie		1,440 "
Aichi		5,000 "
Kagawa		100 "
Okayama		2,000 "

	<u>10% DDT Dust</u>	
Chiba		20,000
Mie		3,000
Yamaguchi		10,000
Aichi		20,000
Saga		27,000
Kagawa		5,000
Shizuoka		4,000

A total of 6775 gallons of 5% DDT residual effect spray was released to the following prefectures for disinfection of jails: Tottori, Shimane, Okayama, Shiga, Wakayama, Fukuoka, Hiroshima, Yamaguchi, Mie, Tokyo, Hokkaido, Aomori, Iwate, Miyagi and Akita.

Weekly progress report of the Welfare Ministry regarding production of medical supplies for antituberculosis campaign indicates a total of 9 photoroentographic machines and 6900 rolls of 35 mm film have been produced. A total of 82 photoroentographic machines remains on production program. Production of this quantity together with machines now on hand will make a total of 600 machines which is considered adequate. Production of the remaining 82 is expected prior to 30 April. Production of 100,000 rolls of 35 mm film monthly from 1 April – September 47 is scheduled.

Monthly report of the Welfare Ministry regarding production of absorbent cotton from American imported raw cotton indicates the following factual data:

Production <u>during</u> period 19 Jan – 15 Feb:	72,801 lbs.
Total production to date:	355,952 lbs.
Stock of raw cotton in factories:	572,351 lbs.
Stocks of absorbent cotton 15 Feb:	355,952 lbs.

None of this production has been distributed. Distribution has been delayed because prices had not been established.

Prices have now been established and are as indicated below:

	<u>50 grams</u>	<u>100 grams</u>	<u>500 grams</u>
Manufacturers Price	3.34 yen	5.91 yen	26.35 yen
Wholesale Price	3.74 yen	6.62 yen	29.51 yen
Retail Price	4.49 yen	7.94 yen	35.41 yen

Penicillin program continues to gain momentum especially in relation to the development of the tank process. Designs and flowsheets of 9 different pilot plants have been examined in detail in consultation with engineers of the various companies. One company, Toyo-Rayon in Otsu has completed its fermentation pilot plant. Additional design studies are made daily in cooperation with various engineering staffs.

Detail design of first pilot freeze drying unit in Japan has been almost completed; installation will be in the Government Central Pilot Plant.

Request has been made for importation of American corn steep liquor to increase penicillin, output and to conserve critical foodstuffs and processing chemicals which otherwise would be necessary.

Distribution

The Ministry of Health and Welfare reports that approximately two million 1/2 gram sulfathiazole tablets have been distributed to prefectures during the past two months. In addition a small reserve is being held in Tokyo and Osaka by the Central Medicine Distributing Company. Although the overall supply of sulfathiazole is limited, there would seem to be no reason why Japanese physicians could not secure a sufficient quantity for treatment of seriously ill patients in cases where the use of sulfathiazole is particularly indicated. When sulfathiazole is not available locally, the Prefectural Health Officer should immediately contact the Pharmaceutical Section of the Ministry of Health and Welfare giving specific information as to amount required.

Narcotics

Marihuana Control Regulations which were drafted by the Japanese Government have been received and approved. Possession, planting, cultivation or growing of marihuana and import, manufacture, compounding, selling, dealing in, dispensing, prescribing, administering or giving away marihuana are prohibited except that production for fiber purposes or for the purpose of research, instruction, or analysis will be permitted by persons licensed by the Minister of Welfare.

The districts and areas for marihuana cultivation will be determined by the Minister of Welfare and the Minister of Agriculture and Forestry. Arrangements for the designation of marihuana producers in the twelve selected prefectures are going forward on the national level. Military Government teams should assure that personnel have been appointed and other necessary arrangements made for licensing the appropriate persons in the prefectures as stated in SCAPIN 3203-A, 11 February 1947.

SECTION VI PREVENTIVE MEDICINE

Typhus Fever

Comparative Score: (Includes figures of 5 March)

1946	-	5,272
1947	-	484

Commuters Vaccination

Vaccination of commuters against typhus in Tokyo and Osaka areas began on 1 March. The work will be completed within two weeks.

Venereal Disease Control

The Welfare Ministry has been informed of their responsibility for aiding and encouraging the prefectures in the development of a comprehensive program for the prevention, control and cure of venereal diseases for all the people of Japan. Visits to the prefectures show that the clinics established thus far have been placed in operation

solely on the initiative and interest of the Military Government Health Officer plus such dependable Japanese physicians that he can develop to carry out his instructions.

Using such national prefectural or municipal facilities as are available, the Military Government Health Officer should establish several venereal disease diagnostic and treatment clinics for the public. These should be set up according to our standards, closely supervised, take good histories, physical examinations, attempt to bring the contacts in for diagnosis and treatment, and follow our treatment regimes strictly. These clinics, when properly supervised, should use American drugs. Such drugs should be ordered through Military Government channels in the usual manner. Do not allow good drugs to be wasted by untrained personnel using improper amounts or improper schedules.

The main use of prostitute hospitals is to keep as many prostitutes out of circulation as long as possible. Since these patients continuously become reinfected, this would be a proper group on whom to employ Japanese drugs, although these drugs may have to be supplemented by American drugs.

Military Government Health Officers should remember that a SCAP directive changes pre-existing Japanese laws. No prefectural or municipal health official should be allowed to shirk his duty by disclaiming authority to carry out projects under former Japanese laws. SCAPINS 48 and 153 give sufficient authority for the establishment of public venereal disease diagnostic and treatment clinics in prefectural and municipal health centers and in national, prefectural and municipal hospitals.

Laboratory Activities

A series of conferences held in Tokyo on the 25th, 26th and 27th February culminated two months of intensive work for setting up a Laboratory Control Program in Japanese at the National level.

Eventually all phases of laboratory activity, both biological manufacture and clinical diagnostic, will be regulated under this program. Negotiations are being conducted to create a Japanese National Institute of Health, located in Tokyo and under the control of the Welfare Ministry.

Immediate efforts have been directed toward getting into operation a Biologics Control Program. A Laboratory Control Section will be under the Disease Prevention Bureau of the Welfare Ministry. This agency will carry out surveillance of laboratories to check for compliance with the official regulations through a system of inspectors, both local and national. As soon as these men are appointed, they will be given an intensive period of instruction in Tokyo. Upon their return to the peripheral areas, they will be directed to contact their respective Military Government Public Health officers to synchronize activities in this program. Public Health and Welfare's laboratory consultant will make frequent inspection trips to explain the details and to coordinate activities at the local level.

Every biological manufacturer in Japan had representatives attending the meeting on the 25th. The foregoing was explained in detail and was followed by an open discussion period. As soon as the Minimum Requirements regulating the operation of Biologics Manufacturing laboratories are completed, they will be distributed to each Military Government Public Health Officer.

On the 26th and 27th, meetings were held with the technical personnel working with typhus, typhoid and para-typhoid vaccines. The official minimum requirements for these products are being forwarded to Military Government Teams for the information and guidance of Public Health Officers. Shortly, through Japanese channels, each Ken Director of Public Health and each biologics manufacturer in Japan will receive both English and Japanese copies, identical to those forwarded to Military Government.

Eventually Minimum Requirements will be drawn up for every biological produced in Japan.

In the inspection of laboratories, particular attention should be directed at carefully examining their production protocols, checking for compliance with the official "Minimum Requirements."

Following is the map location of Biologics Manufacturers Laboratories in Japan:

<u>NAME OF LABORATORY</u>	<u>LOCATION</u>	<u>BIOLOGICALS PRODUCED</u>

SECTION VII SOCIAL SECURITY

Personal

Mr. Leonard R. Anton, has been assigned to Public Health and Welfare Section, as Chief, Social Insurance Branch, of the Social Security Division.

Social Insurance

Considerable effort has been exercised in coordinating the various types of Social Insurances which will be affected with enactment of the Workmen's Accident Compensation Law. Pension Insurance and Health Insurance are to undergo changes, the basic point to be the difference between occupational and non-occupational diseases and accidents.

National Health Insurance

Additional emphasis was exhibited in behalf of National Health Insurance when representatives from all prefectures in Japan met in Tokyo to place the unification of their pleas before the Government for increased financial support. There were 160 present representing more than 40 million people. Each brought the desires and wishes of many people in the rural communities who are in need of adequate medical care facilities. The names of those attending the meeting are being recorded for information and reference to the Military Government Teams.

SECTION VIII MEDICAL SERVICE

Hospital Report

Japanese Civilian Hospital Strength Report for the period ending 17 January 1947 shows 3,054 hospitals with a capacity of 216,462 beds, 94,641 of which were occupied. During this same period 256,369 out-patients were treated.

Medical Education

During and immediately prior to the war a large number (45) of second class medical schools (Senmon Gakko) were established in Japan to meet wartime medical requirements. These medical schools accepted large numbers of students directly from middle school (11th year of school) and were graduating them as licensed medical practitioners after a four year course of study. Some of these schools were attached to medical universities and others were established as separate and distinct private facilities.

The need for inspection and classification of these schools for purposes of evaluation of their present and future role in medical education was recognized early by the Japan Medical Council which recommended a group of inspectors to the Ministry of Education for the purpose of carrying out their plan of evaluation.

These inspectors were appointed by the Ministry of Education, completed their survey of the 2nd class medical schools of Japan and have divided these schools into Class A and B. PH & W, CI & E, the Japan Medical Council, Ministry of Education, and Ministry of Welfare recommended that class B schools cease to function at once, as schools for the preparation of, or graduation of, physicians, and that class A schools be allowed to graduate students until 1950 when they also will cease to exist as 2nd class medical schools.

The results of the inspection and the final decision of the Ministry of Education regarding an interim program will be distributed to schools concerned at an early date.

SECTION IX CONSULTANTS

Nutrition Affairs

The Japanese Government is attempting to obtain the results of nutrition surveys at an earlier date. During the past week nutrition survey reports from Saitama, Chiba, Shiga, Iwate and Gunma prefectures and Osaka city on the food intake and deficiency symptoms, of weight deviations for Nagoya city and Kyoto prefecture were submitted by the Japanese Ministry of Health and Welfare.

At a press conference with SCAP, nutrition problems and future plans were discussed concerning the Japanese school lunch program.

SECTION X MEMORANDUM TO IMPERIAL JAPANESE GOVERNMENT

PHMJG-13 30 Jan 47 – National Food and Nutrition Council for the Japanese

CRAWFORD F. SAMS
Colonel, Medical Corps
Chief, Public Health and Welfare Section

2 Incls.

1. Weekly Summary Report of Cases and Deaths from Communicable Diseases in Japan, week ending 1 March 47, w/Digest.
2. Venereal Disease Report for week ending 1 March 47.

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
Public Health and Welfare Section**

WEEKLY BULLETIN

**For Period
9 March – 15 March
1947
Number 11**

SECTION I – Welfare
SECTION II – Veterinary Affairs
SECTION III – Nursing Affairs
SECTION IV – Supply
SECTION V – Preventive Medicine
SECTION VI – Social Security
SECTION VII – Medical Service
SECTION VIII – Consultants
SECTION IX – Memorandum to I. J. G.

SECTION I WELFARE

General

Mr. Irvin H. Markuson joined the staff of the Welfare Division as Chief, Public Assistance Branch.

Public Assistance

The Ministry of Health and Welfare Public Assistance Report for January 1947 shows a small increase in total number of persons assisted with an appreciable increase in grants over December 1946 (average of 75.10 yen per person in December as against 87.05 yen in January).

Comparative figures for the months of December 1946 and January 1947 are given below:

	<u>December 1946</u>	<u>January 1947</u>
Number of persons (not in institutions) assisted	2,744,429	2,790,791
Number of persons (in institutions) assisted by Gov't	<u>92,778</u>	<u>100,545</u>
<u>Total number persons assisted</u>	2,837,207	2,891,336
Net Cash Grants	yen 144,075,959	yen 160,259,872
Grants in Kind (Cost)	<u>62,045,606</u>	<u>91,344,697</u>
<u>Total Grants</u>	206,121,565	251,604,569

Note: Considerable interest has been shown in the Prefectural Public Assistance Reports and for the information of Military Government personnel, a recapitulation of the latest available Prefectural monthly data will be included in the Weekly Bulletin. The Weekly Bulletin (16 March – 22 March) will contain Prefectural Public Assistance statistics for January 1947.

SECTION II VETERINARY AFFAIRS

The Ministry of Agriculture and Forestry, (Bureau of Animal Industry) reported the following new outbreaks of disease during the period 9 – 15 march 1947.

<u>Prefecture</u>	<u>Disease</u>	<u>Cases</u>
Kumamoto	Texas Fever	2
Nagano	Swine Erysipelas	1
Chiba	Anthrax	1

SECTION III
NURSING AFFAIRS

Education

The refresher course for Nursing Education Leaders (12 March – 10 April) at the Red Cross Central Hospital was opened. This is being sponsored by the National Nurses Association. All prefectures are to be represented in this group.

A radio program for recruitment of nurses began 15 March and is continuing through 31 March. Broadcasts are being made three times daily. This is an appeal to high school graduates who wish to enter schools of nursing.

Visitors: Personnel

Miss M. E. Tennant, Rockefeller Foundation Nursing Consultant for the Far East is a current visitor at SCAP and through her years of experience in the nursing education field is providing counsel and suggestions for the National Public Health Program for nurses and future nursing education programs.

SECTION IV
SUPPLY

Production

The first tank pilot plant for production of penicillin was completed by the Toyo-Rayon Co. at Otsu. Operation was begun 11 March. This significant event was attended by Col. Sams, Lt. Col. Riordan and Dr. Foster of GHQ, SCAP. While still not perfected, and while considerable operating difficulties are anticipated, this pilot plant marks a big stride in the penicillin program. A novel feature of the Toyo-Rayon process is the utilization of clams as a source of protein nitrogen for the mold. These shell-fish are harvested from Lake Biwa, adjacent to the plant, and are extracted by boiling with water.

The Welfare Ministry approved release of 10% DDT dust and typhus vaccine as indicated below during the past week:

<u>Prefecture</u>	<u>Typhus Vaccine</u>	<u>10% DDT Dust</u>
Tokyo	15,000 Vials	
Miyazaki	500 "	
Hiroshima	470 "	6,000 lbs.
Kumamoto	50 "	4,000 "
Hokkaido		44,000 "
Niigata		15,330 "
Osaka		50,000 "

Production of DDT products continues to be satisfactory. Approximately 1,500,000 lbs. of 10% DDT dust is now in stock. Production of 5% DDT residual effect spray is being increased and additional quantities will be available for distribution.

Current Japanese production of injection needles exceeds Japanese requirements. Japanese requirements are estimated at approximately 5,000,000 annually. Current production is averaging 1,000,000 monthly and manufacturing capacity is approximately 1,500,000. It has been recommended that all production over and above 6,000,000 annually be considered for export.

Distribution

The Welfare Ministry, Japanese Governments, has removed "sanitary goods" from control channels and they are now classed as "open market" items, allowing the using agencies more freedom in procurement of these supplies from wholesales of retail sources. Sanitary goods consist of rubber materials, such as rubber gloves, ice caps, hot water bottles, syringes and finger cots. This is another step towards competitive open market trade in Japan.

Recent trip by medical supply division representative indicated that the prefectural health officials in many prefectures have not carried out the provisions of a directive issued by the Japanese Welfare Ministry, January 1947 to conduct a bazaar or sale of the remaining returned Japanese Army-Navy medical supplies. The prefectures visited still had a fair quantity of the above mentioned supplies. Military Government officials should exercise supervision to insure that aggressive action is taken at the prefectural level to distribute remaining stocks of former Japanese Army and Navy medical supplies. The distribution of these supplies through the medium of a bazaar has proven to be very satisfactory.

The prefectural health officials in the prefectures visited seem to have no knowledge as to the sources of medical supplies, outside of medicaments, in their prefecture, causing them to be of little or no help to the practitioners or hospitals when they request aid from them in procuring medical supplies. The Japanese Welfare Ministry is making arrangements to publish medical supply sources and other information pertaining thereto in the new Japan Medical Journal soon to be published.

Narcotics

The January narcotic report from the Japanese Government shows a decrease of 8,987 registrants from the 85,881 registered in 1946. Local wholesalers were decreased by nine since re-registration was denied in some instances because of inadequate storage facilities. The number of retail registrants declined 1,979 and is attributed to the fact that Japanese doctors habitually dispense their own preparations rather than write prescriptions to be filled by pharmacies. This has resulted in many pharmacies not stocking narcotic drugs. Registered practitioners decreased 3,679 which is explained by the fact that many veterinary surgeons and dentists are not using narcotics in their practice and did not re-register, and by the fact that some doctors were registered twice in 1946 through misinterpretation of the narcotic regulations. It is not necessary for a doctor who is registered at his office to register at a hospital in order to be able to prescribe hospital narcotics for the patients of the hospital. Exempt Narcotic Dealers decreased 3800 since the number of exempt narcotic preparations is comparatively small under the new narcotic regulations as compared to the old Japanese narcotic law.

During the month of January twelve physicians and eighteen non-registrants were arrested for violation of the narcotic laws. Two of the doctors were addicts and five of the other doctors arrested were supplying narcotics to addicts. Three of the non-registrants were addicts. Two doctors were found guilty of violating the narcotic laws during the month and fines were assessed.

The number of reported narcotic thefts in Japan increased to 51 during January. Special emphasis is being placed on preventive measures.

SCAP Narcotic Control Officers met with narcotic and agricultural representatives of the Japanese Government and the twelve prefectures authorized to produce Cannabis Sativa L. for fiber purposes. Emphasis was placed on preparations for registering and licensing producers as expeditiously as possible so that planting may be carried out at the appropriate time. Prefectural officials received instructions regarding the marihuana control regulations and were advised to pass the information to registrants, thus holding technical violations to a minimum.

Twenty-seven narcotic investigations are now being supervised and directed by the new Assistant Narcotic Control Officer, Mr. W. F. Tollenger, who reported this week to the Narcotic Control Branch, Public Health & Welfare Section, SCAP, from the Bureau of Narcotics, Treasury Department.

SECTION V PREVENTIVE MEDICINE

General

The Japanese Government is now required to report tuberculosis, pneumonia, measles and whooping cough in addition to other communicable diseases already being reported. Although the initial response has been fairly good, reports are still not being received from all prefectures. Military Government Health Officers should check to see that these reports are being made in their prefectures.

Typhus Control

Comparative Score (Includes figures of 13 March)

1946 – 7219

1947 – 523

Education

During the week of 12 March to 17 March the Metropolitan Government, Bureau of Health, Tokyo-To in cooperation with the Bureau of Education, placed on display an exhibit of posters prepared by school children of the city. These posters depict all phases of typhus control and many are exceptionally well done. The five best posters were selected from each Ku in Tokyo for the exhibit. Following the final judging of the posters, prizes for the five winning posters were presented to the outstanding contestants. This and similar displays of posters demonstrates that the typhus educational program is progressing.

Sanitation

Sanitary teams organized and assigned to typhus control dusting and spraying that are not actively engaged in these operations should extend their activities to cover certain other phases of insect and rodent control. These should include:

- Residual house spraying with pyrethrum and DDT emulsion
- DDT dusting of rat harborages
- Rodent extermination programs using ANTU

Particular attention should be made to complete coverage of entire areas.
Clean up programs should also be carried systematically block by block to effect complete elimination of all fly and mosquito breeding places in specific areas. In order to be effective, this work must be started well in advance of the heavy breeding season.

Port Quarantine

The questions of food, medical supplies and medical treatment aboard repatriation vessels, have been analyzed to correct any existing deficiencies. As a result of this analysis the Quarantine Section of the Disease Prevention Bureau of the Welfare Ministry has submitted a four point corrective program which has been approved and is now being put into effect. This program includes special instruction on treatment methods, issued to the Japanese doctors working with repatriates.

In connection with this program a representative of SCAP will inspect the hospital ship Takasago Maru, returning from Dairen to Sasebo, Eta 15 March.

Tuberculosis case finding efforts are being increased at Repatriation Reception Center Medical Installations. Several 35 mm. x-ray "Screening" units are being installed at Sasebo as part of this program. There units will be ready for operation on or about 15 March, from which date, chest films will be made on all incoming repatriates. Tuberculin testing of all repatriates, B.C.G. injections of "Tuberculin Negatives" are other phases of this program.

SECTION VI SOCIAL SECURITY

National Health Insurances

The Insurances Bureau of the Ministry of Welfare reports an agreement has been reached with the Medical Bureau to initiate a program for effecting a more adequate distribution of medical supplies to the Health and National Health Insurance Association hospitals and clinics. Lack of medicines has been one of the main reasons given by the Insurance Bureau for the unsatisfactory condition of many National Health Insurance Associations. With improvements in the medical supply manufacturing and a better supervised system of distribution, more adequate supply for those in need of medical care should be provided.

Workers' Accident Compensation Insurance Bill

The Ministry of Welfare this week submitted to the cabinet the proposed "Workers' Accident Compensation Insurance Bill" with the recommendation this legislation be introduced in the current session of the Diet. The Ministry of Welfare plans to follow this bill with amendments to the Welfare Pension Law's provisions relating to invalidity pensions and allowances arising from occupational accidents and diseases. Further major revision of the Welfare Pension Law is concerned with a general revamping of the procedure for appeals by individual claimants. It is proposed that facilities be markedly decentralized and made readily available for prompt consideration of all appeals.

SECTION VII

MEDICAL SERVICE

Japanese Civilian Hospital Strength Report for the period ending 24 January 1947 shows 3066 hospitals with a capacity of 216,526 beds, 97,344 of which were occupied. During this same period 263,240 out-patients were treated.

The Scientific Congress of Japan will hold meetings in Osaka during 1 – 7 April 1947. The Congress is made up of sections including many fields of scientific endeavor and prior to the war held meetings every four years, inviting scientists from many countries to participate. Public Health and Welfare Section, SCAP has been very interested in the revival of the Congress, and their first meeting in Osaka. Several SCAP representatives will attend.

SECTION VIII CONSULTANTS

The Nutrition Sections of the Japanese Ministry of Health and Welfare and Tokyo-To were supplied samples of corn meal for their nutritionists to experiment on methods of preparing corn meal of 93% and 83% extraction into dishes adapted to Japanese tastes and methods of cooking.

The formation of a National Food and Nutrition Council under the Prime Minister was officially announced. The Council will collaborate with the Economic Stabilization Board in relation to food and nutrition.

Nutrition surveys. The following results on food consumption were obtained from nutrition surveys in February 1947 which are complete for the cities of Nagoya and Kure and their surrounding prefectures.

RESULTS OF NUTRITION SURVEYS - JAPAN - February 1947

SECTION IX – Medical Service
SECTION X – Consultants
SECTION XI – Memorandum to I. J. G.

SECTION I GENERAL

Technical Bulletins

The following Public Health and Welfare Section Technical Bulletin was mailed with the Weekly Bulletin on 28 March:

Title: Anthrax
Short title: TB PH VET 4

Public Health Courses

During the past few months Public Health and Welfare Section, SCAP, has been re-organizing the Institute of Public Health in Tokyo in an effort to utilize this Institute for teaching public health. The Institute Building was given by the Rockefeller Foundation for the purpose of teaching public health. The present building was constructed in 1937. The Institute during its early years was devoted almost entirely to research and in 1943 the Ministry of Welfare moved into the Institute building. Since that time both teaching and research have been at a standstill.

Through the efforts of Public Health and Welfare, plans have been made and curricula have been prepared for the following courses:

Public health officers (doctors)
Public health nurses
Public health sanitarians
Public health sanitary engineers
Public health nutritionists
Public health veterinarians
Public health pharmacists

The original plans called for the opening courses for the above public health personnel on 2 April 1947. However, arrangements for dormitories and class room facilities have not been completed and it now appears that the school for public health nurses is the only one that will open on 2 April as scheduled. The remaining courses, will be delayed until about 1 May.

The Ministry of Welfare will extend invitations to the various prefectures to send the best qualified personnel as students for the various refresher courses as outlined above. The courses will be short and intensive of approximately three months duration, with the exception of the engineering and nursing courses which will be of four months duration.

These courses will be repeated continuously in order to train as many public health workers as possible. When adequate facilities for dormitories and class rooms are provided, two or more courses will be conducted concurrently. The first students for these courses should be the best available personnel. Those selected should be leaders and the key personnel in each prefectural health department. By exercising good judgment in the selection of personnel to attend these courses, it will be possible to coordinate and stimulate public health activities throughout Japan. Additional information relative to these courses will be published in this bulletin from time to time.

SECTION II WELFARE

General

Father Flanagan, founder of "Boys' Town" in Nebraska, is to visit Japan in April. Father Flanagan will be accompanied by his secretary Mr. Byron Reed.

Father Flanagan's presence in Japan will create wide public interest and will be at an opportune time since the Health and Welfare Ministry will be developing the newly created Children's Bureau.

Child Welfare

The Japanese Cabinet officially approved on 20 March 1947 the reorganization of the Health and Welfare Ministry to include a Childrens Bureau. The Childrens Bureau will consist of three (3) sections (1) Planning (2) Foster (3) mothers and Childrens Health and Sanitation.

Japanese Red Cross Society

In order to be of maximum assistance to the Japanese Red Cross in the development of their national disaster program, Miss Isabel Auld, American Red Cross Consultant, has been assigned to devote full time to disaster preparedness and relief planning and operations.

Emphasis is to be given during the coming months in the development of the Inquiry and Message Service of the Japanese Red Cross. Consultant help has been assigned to assist the Society in the development of these services on basic social service principles.

Public Assistance

Public assistance statistics for January 1947 covering each prefecture are given below for information and comparison purposes.

PUBLIC ASSISTANCE Prefectural Reports – January 1947

PREFECTURE	No. of Persons Non-institutional	No. of Persons in Institutions	Cost of Assistance in Cash	Cost of Assistance in Kind
AICHI	96,401	4,280	Yen 5,149,914	Yen 1,114,878

SECTION III VETERINARY AFFAIRS

Field Surveys

Representatives of PHW, SCAP conducted the following field surveys.

SHIMANE PREFECTURE

Livestock

The dairy cattle population is decreasing and draft cattle increasing. Shortage of concentrate feed is the cause.

Animal Disease Control

Animal disease control measures are effective. The 1946 Tuberculin test is being completed this month and a program for the 1947 test has been initiated. Plans have been completed to immunize all dogs against rabies.

Meat Inspection

Inspection is being maintained in all slaughter houses, but inspection methods lack uniformity. Proper ante and post mortem procedure was demonstrated.

Dairy Inspection

Dairy farms and milk plants are receiving a monthly inspection and the "Score Card System" is being utilized. Pasteurization is faulty in that crudely fashioned autoclaves without adequate temperature controls are in use.

Summary

Where defects were found to exist, responsible officials were directed to take corrective action. The Public Health of the Military Government Team has inaugurated a satisfactory surveillance program with reference to veterinary affairs.

MIE PREFECTURE

Livestock

Native draft cattle are in good condition. However, dairy cattle are underfed due to grain shortage.

Animal Disease Control

Measures for the control of animal diseases are effective. The 1946 Tuberculin test was completed and plans are underway for the 1947 test. The immunization of dogs against rabies will commence shortly.

Meat Inspection

Inspection is maintained in all slaughter houses but ante and post mortem procedure is faulty because insufficient areas in the carcass are examined. Proper inspection methods were demonstrated. Sanitation is satisfactory except in the disposal of wastes. Many pits have inadequate walls and covers.

Dairy Inspection

The "Score Card System" is being satisfactorily utilized. Health examination of personnel is being practiced. Sanitation is satisfactory except in the matter of disposal of wastes. Manure piles and disposal pits are frequently neglected. Pasteurization of milk by means of autoclave method is universal.

Summary

The quality of native draft cattle slaughtered for meat is the best observed in Japan.

Where defects were found to exist, responsible officials were directed to take corrective action.

The Public Health Section of the Military Government Team is exercising excellent surveillance over the Prefecture veterinary service.

Animal Disease Report

The Ministry of Agriculture and Forestry (Bureau of Animal Industry) reported the following new outbreaks of disease during the period 12-22 March 1947.

<u>Prefecture</u>	<u>Disease</u>	<u>Cases</u>
Yamagata	Anthrax	1
Tokyo	Swine Erysipelas	3

SECTION IV DENTAL AFFAIRS

The total production of dental materials for the month of February amounted to 2,963,565.55 yen.

The value of instruments produced for the same period was 3,236,307.40 yen.

SECTION V NURSING AFFAIRS

Education

The model Demonstration College of Nursing will have its first graduation exercise 27 March 1947 at 0930 at the Central Red Cross Hospital. There are 71 candidates for graduation.

Two Institutes for nurse will be held in Kyusyu in May, one in Fukuoka 5 – 10 May and one in Kumamoto 12 – 17 May inclusive.

The four months course sponsored by the National Institute of Public Health to train 1500 Public Health Nurses in Japan will open 2 April 1947. This course is planned for the overall program in public health and is to prepare the nurse to be of greater value to her community and Public Health doctor. This course is arranged for 50 nurses the first month and each additional two months 50 more will come until the entire 1500 have received this training. It will give each nurse theoretical work, demonstrations and six weeks of field work in an urban or rural health center. The Institute of Public Health is asking for Public Health Nurses in key positions to be selected and sent in first. Only those who have met the qualifications set up by the Japanese staff are to be selected.

SECTION VI SUPPLY

Distribution

Korean civilian needs are currently being satisfied in three fields. First, a shipment is being prepared for air transportation of supplies to help keep the Seoul Dental College from discontinuing operation. Secondly, to enable the vaccine production program to be continued, phenol and peptone are being supplied by air, phenol from Japan and the United States, and peptone from the United States. Thirdly, four shipments of 40 CAD Reserve Medical Units will be enroute by the end of next week. Two of the total of four shipments has already left Japan, one is leaving this week, and one, the final, is to leave before the end of next week. All of these supplies are of an emergency nature to alleviate supply deficiencies until shipments are received under regular import programs.

Sanitary materials such as gauze, absorbent cotton and bandages, manufactured from cotton imported from the United States, will soon be distributed to all prefectures in Japan through controlled channels. The selling prices of the above have been agreed upon and will become official when published in the Japanese Official Gazette. It is contemplated that publication of the above will be made before 31 March 1947. Reports from the Sanitary Material Company indicate a fair distribution of sanitary materials produced from stocks of Chinese cotton remaining on hand.

Production

The Welfare Ministry approved releases of DDT products and typhus vaccine as follows during week 17 – 22 March:

<u>Prefecture</u>	<u>10% DDT</u>	<u>Residual Effect Spray</u>	<u>Typhus Vaccine</u>
Aomori	5000 lbs		
Akita	5000 "		
Iwate	15,000 "		
Kanagawa	32,000 "	1605 gallons	20,000 vials
Shimane	2,500 "	150 "	250 "
Ibaragi			1,000 "
Tokyo			10,020 "
Hokkaido		30,000 "	
Kagawa		3,700 "	
Nagano		700 "	
Transportation Ministry	6,000 "	30,000 "	

Quantity released to the Transportation Ministry will be utilized on rail-roads throughout Japan.

Decision has been made to provide Korea with the below listed quantities of X-ray film monthly from Japanese production.

<u>Size</u>	<u>Quantity</u>
14 x 17	7200
10 x 12	7200
1 1/4 x 1-5/8	600 (Dental film)
35 mm film	1500 rolls

The above quantities have been tentatively established as minimum monthly requirements for Korea. Japanese production is being stimulated to meet this demand. This plan will become effective for the month of May.

Monthly report of the Welfare Ministry indicates production of principal biologicals during February as follows:

<u>Vaccine</u>	<u>Production</u>		<u>Stock on Hand 28 Feb.</u>	
	<u>Crude Vac.</u>	<u>Finished Vac.</u>	<u>Crude Vac.</u>	<u>Finished Vac.</u>
Cholera Vaccine	544,000 cc	26,000 cc	1,321,730 cc	279,840 cc
Typhus Vaccine	0	2,450,664 cc	0	5,694,175 cc
Plague Vaccine	0	0	0	562,800 cc
Triple Typhoid				

Vaccine	1,734,000 cc	787,000 cc	6,025,525 cc	1,645,800 cc
Smallpox Vaccine	444,000 ds.	3,910,330 ds.	23,520,100 ds.	2,505,110 ds.
Whooping Cough Vaccine	0	427,180 cc	0	0
Diphtheria Anti-toxin	0	1,900 cc	0	560,239 cc
Diphtheria Toxoid	0	400,000 cc	0	429,010 cc

Production of all vaccines continues to be satisfactory. Typhus Vaccine production exceeded all previous monthly productions. Production of typhus vaccine during December 46, January, February and March 47 will approximate 8,000,000 cc. This quantity is almost adequate for annual requirements of Japan. Additional assay studies of Japanese produced typhus vaccine are being made and provided results are favorable, further importation will not be necessary.

Monthly report of the Welfare Ministry indicates yen value of production of medical supplies during February 47 as follows:

Distribution Controlled Medicines	yen	42,641,255
Non-controlled medicines		50,584,897
Patent medicines		93,740,732
Biologicals		10,366,022
Dental Materials		2,963,565
Sanitary Materials		1,793,195

These figures represent a small reduction as compared with December 46 and January 47 production. This is attributed to an acute shortage of electric power and coal throughout Japan during February. The production of Distribution Controlled Medicines during February was larger than any previous monthly production. This is an increase of approximately 26,000,000 yen over December 46 and approximately 12,000,000 yen over January 47. Continued emphases is being placed on increasing production of this category of medicines.

Monthly report of the Welfare Ministry indicates production of Insect and Rodent Control Supplies during February 47 as follows:

Antu (rat poison)	3,934,778 (3 gm packages)
Nekoirazu (rat poison)	2,723 kg
Rat Traps, spring type	30,000 each
10% DDT Dust (mixed and milled with American furnished DDT concentrate)	682,690 lbs.
5% DDT Residual Effect Spray (From American furnished DDT concentrate)	50,046 gallons
10% DDT Dust produced in Japanese factories from Japanese produced concentrate	175,000 lbs.
Pyrethrum Emulsion	0
DDT Dusters and Spraying Equipment	0

The production of rat poisons during February represents an increase of approximately 35% over January and the preceding six (6) months. This production was increased due to reports from Military Government personnel that shortages exist in prefectures. Military Government personnel must encourage local prefectural health officials to educate the populace in order that the people will understand the need for rat poisons and will accordingly purchase needed quantities willingly.

Production of DDT products from American furnished DDT concentrate represents a 1000% increase over January production. This program was initiated on 14 January and numerous difficulties were resolved during the remainder of January, hence the excellent production during February.

Production of pyrethrum emulsion will be started during April in order that larvaciding may be initiated during May. Extraction of pyrethrin content from pyrethrum flowers, the first process in manufacturing, has been progressing during the past three months and finished spray production will be started early in April.

The factories engaged in production of DDT dusters and spraying equipment are assembling raw materials for this production. Allocation of raw materials for a large production program, indicated below, has been made and production will be started during the month of April.

Production Program for 1947

DDT Dusters	100,000
Sprayer, Knapsack, 3 gallon	50,000
Sprayer, Semi-automatic, pump type	20,000
Sprayer, Hand, 1/2 gallon	50,000

Narcotics

A Japanese national who was reported during the latter part of 1946 and the early part of 1947 to be posing as a narcotic official for the purpose of obtaining narcotics from hospitals, was arrested 12 March 1947. The investigation showed the Japanese doctor had been wearing a GHQ shoulder patch and had a name card with "Public Health & Welfare Section GHQ" written thereon. The doctor was an addict and was not placed in jail, pending the completion of the investigation which involved several more registrants who had furnished him narcotics. On the night of 18 March, the doctor committed suicide at his father's home in Osaka. Military Government Teams should warn all hospitals that only those persons having with them official identification as a narcotic official should be allowed to inspect narcotic records and stocks.

A recommendation that morphine tartrate syrettes 1/4 and 1/2 grain and morphine sulfate tablets 1/2, 1/4 and 1/8 grain be substituted for bulk morphine hydrochloride on the import program has been accepted. Likewise codeine sulfate tablets 1/2, 1/4 and 1/8 grain and codeine hydrochloride powder 1/4 and 1 oz. bottles will be substituted for a portion of the codeine import program. Dihydrohydrocodeinone, which was formerly used in the preparation of Pavinal, a Japanese trade name for a codeine preparation, has been removed from the import program since codeine phosphate or sulfate, basic narcotic drugs, can be used in place of a highly advertised narcotic preparation. Tropococaine, which it has been determined can easily be substituted for by procaine as a lumbar anesthetic, has been likewise removed from the import program.

Annual Narcotic Statistical Report forms for Japan and Korea, which are being forwarded to Washington, clearly show the advantage of the Narcotic Control Program in Japan operating under new narcotic regulations. Consumption figures for the latter half of 1946 were easily determined, whereas prior to that time consumption figures were merely estimates.

SECTION VII PREVENTIVE MEDICINE

Tuberculosis Control

During the past month, the Welfare Ministry, Bureau of Chronic Diseases, presented a plan for the control of tuberculosis in Japan. This plan has been approved by SCAP and if carried out as planned, will augment and extend the work in the control of tuberculosis. It will include enlargement and improvement on both local and governmental levels with assignment of full time trained personnel in the Health Centers in control of tuberculosis, the establishment of lay organizations to assist in the care of the tubercular patient both at home and in the hospital, further refresher courses for the practitioners and nurses, public education and publicity on tuberculosis and revision of the anti-tuberculosis act.

Sanitation

Due to a general breakdown in the routine garbage and refuse collection services in Japan and subsequent indiscriminate dumping by the individual, official and semiofficial garbage collectors, there are wide spread accumulations of garbage and litter in the streets, public parks and vacant lots. With the coming of summer this material will afford an enormous amount of fly breeding. Sanitary teams should be started immediately on a city wide clean-up program, with emphasis on the removal and disposal of organic matter.

This can be accomplished in many instances by digging a pit in the area and collecting the material in baskets and dumping into the pit after which it is covered over. Particular attention should be paid to removing the trash and debris from ditches and drains.

This type of clean-up program should be supplemental to the regular collection and street sweeping services and used primarily to get rid of backlog of trash and refuse.

Venereal Disease Control

The following table is a summary of the information submitted by military government health officer in twenty-four (24) prefectures of Japan.

Location of Public Out-patient Clinics	Number of Venereal Disease Out-patient Clinics now operating Feb.1947	Additional Number of Public V.D Out-patient Clinics to be in operation by 1 June 1947
In Prefectural Health Centers	35	53
In Municipal Health Centers	26	17
In Municipal Hospitals	24	7
In Prefectural Hospitals	13	11
In National Hospitals	34	4
In Medical School Hospitals	17	3
In other locations (state where)	39	5

Medical schools will, of course, conduct clinics in this work. National hospitals have been conducting clinics for special groups even before the present program began. These hospitals should also operate their clinics being developed, although, in general, they are located in areas too remote to be useful as out-patient clinics. Private agencies cannot be entrusted with the entire responsibility for venereal diseases control.

Typhus fever

Comparative score: (Includes figures of 20 March)

1946 - 9,405
1947 - 546

Results of complement-fixation tests on serum samples taken from reported cases of typhus.

Prefecture	No. of Cases Reported since 1 Sept. 46	No. of Determinations	Results				Neg
			Epidemic	Murine	Doubtful		
Tokyo	137	55	2	19	7	27	
Aichi	128	70	2	51	3	14	
Hokkaido	77	24	22	0	0	2	
Hyogo (Kobe)	59	36	3	23	2	9	
Osaka	35	23	No. Lab. Report				
Niigata	28	9	"	"	"		
Gifu	19	5	0	3	0	2	
Nara	12	10	0	10	0	0	
Miyagi	12	1	1	0	0	0	

A letter of instruction concerning the collection of blood specimens from all typhus cases reported since 1 September 1946 has been sent to each prefectural health office from the office of the Ministry of Welfare in Tokyo. Blood samples from such cases will be sent in to Tokyo as soon as possible. Samples should be sent to Maj. T. O. Berge, 406th Medical General Laboratory, APO 500, by the most expeditious route.

SECTION VIII SOCIAL SECURITY

Health Insurance

Provided the recommended change in the Health Insurance Act are enacted by Diet, the length of time employees are eligible for benefits, after becoming unemployed, will be extended.

National Health Insurance

A recent survey revealed a prefectural insurance office had not contacted any of the suspended associations in an effort to ascertain the reasons for suspending operation, or to assist them in reorganizing, indicating erroneous reporting on non-active associations. Steps are being taken to obtain more comprehensive information on associations in this group.

SECTION IX
MEDICAL SERVICE

Japanese Civilian Hospital Strength Report for the period ending 31 January shows 3067 hospitals with a capacity of 216,851 beds, 96,619 of which were occupied. During this same period 277,168 out-patients were treated.

SECTION X
CONSULTANTS

Nutrition Affairs

The Department of Public Health and Welfare, Military Government in Korea is planning to conduct a nutrition survey in several of the Korean hospitals.

At present "low cost feeding" and "prison dietaries" are under study. A class of nurses are experimenting on the proper preparation in use of American released foods. A book will be published as a guide for use in Korea Hospital.

The Nutrition Consultant will present a paper on "Nutritions in Medicine" at the meeting of the Japanese Medical Congress in Osaka in April.

SECTION I
WELFARE

Public Assistance

The following incomplete report (41 prefectures) covers the Public Assistance statistics for February 1947:

Individual persons assisted (Institutional & non-institutional)	2,496,623
Total relief cost (grants in cash and kind)	159,768,673 yen

School Lunch Program

Children attending those schools serving school lunches are required to pay a small fee for each meal they consume. Children from families which are receiving aid under the Daily Life Security Law receive their meals under one of the two following plans:

- (1) Family cash relief allowance is raised in an amount to cover school lunch cost of each child participating and the child in turn pays for each meal.
- (2) School makes no charge for such lunches served and receives refunds covering these lunches, upon requisition, from the Prefectural Welfare Bureau.

Note: Either one of these plans is optional. However, all reports indicate that (1) is proving more satisfactory since it eliminates the school waiting a period of many weeks for refunds and the child (under the cash system) is not subjected to whatever stigma might develop from being in a free (charity) lunch category which would be obvious with segregation with in the school.

SECTION II
VETERINARY AFFAIRS

Monthly Meat Inspection Report

Following is a summary of the monthly meat inspection report for January 1947, submitted by the Ministry of Welfare:

	<u>Cattle</u>	<u>Calves</u>	<u>Sheep & Goats</u>	<u>Swine</u>	<u>Horses</u>

Partial	287	5	0	31	221
Viscera	5563	33	0	2574	630

Monthly Dairy Inspection Report

Following is a summary of the monthly daily inspection report for January 1947, submitted by the Ministry of Welfare:

Special Milk

<u>Farm Inspections</u>	2
Samples examined	2
Over bacterial standards (50,000 per cc)	0
Under butterfat standards (3.3 percent)	0
<u>Plant Inspections</u>	4
Over bacterial standards (50,000 per cc)	0
Under butterfat standards (3.3 percent)	0

Ordinary Milk

<u>Farm Inspections</u>	6292
-------------------------	------

Samples examined	8137
Over bacterial standards	277
Under butterfat standards	938
<u>Plant Inspections</u>	4765
Over bacterial standards	142
Under butterfat standards	551

Goat Milk

<u>Farm Inspections</u>	29
Sample examined	60
Over bacterial standards (2,000,000 per cc)	4
Under butterfat standards (3.0 percent)	5

Monthly Animal Disease Report

Following is a summary of the monthly animal disease report for February 1947, submitted by Ministry of Agriculture and Forestry.

<u>Disease</u>	<u>No. of cases</u>
Anthrax	1
Trichomoniasis	96
Brucellosis	2
Swine Erysipelas	1
Texas Fever	2
Rabies	1
Strangles	75
Equine Infectious Anemia	27
Pullorum Disease	2063

Animal Disease Report

The Ministry of Agriculture and Forestry (Bureau of Animal Industry) reported that no new outbreaks of disease occurred during the period 23 – 29 March 1947.

SECTION III NURSING AFFAIRS

Education

The Model Demonstration College of Nursing held its first graduation exercise 25 March at the Central Red Cross Hospital.

Sixty three received certificates for the four year course, 150 Red Cross Hospital Nurse received certificates for the two year course which is being discontinued. Of these 150, 80 are remaining to complete the four year course.

Surveys of the femning four prefectures in Kyusyu have been finished, which complete 44 of the 46 in Japan.

SECTION IV SUPPLY

Distribution

Since the Japanese Government assumed responsibility for distribution of DDT on 1 March 1947, releases from regional warehouses have averaged approximately 100,000 lbs. of DDT dust per week. Sizeable quantities of residual effect spray also are being released. It is essential that supervision be exercised by Military Government officials to insure that DDT products are not being disposed of through unauthorized channels and that prefectures do not accumulate stocks grossly in excess of requirements.

Production

The Welfare Ministry approved release of 10% DDT, Typhus Vaccine and 5% DDT Residual Effect Spray during the period 24 – 29 March as follows:

<u>Prefecture</u>	5% DDT Residual		
	<u>10% DDT Dust</u>	<u>Typhus Vaccine</u>	<u>Effect Spray</u>
Tochigi	50,000 lbs.		
Oita	4,000 lbs.	200 vials	
Saitama	40,000 lbs.	15,000 vials	15,000 gallons
Hokkaido		4,500 vials	
Agriculture & Forestry Ministry	970 lbs.		

Production and distribution of DDT products continues to be satisfactory. The following indicates total quantities now stored in Japanese depots and factories throughout Japan.

10% DDT Dust	1,768,141 lbs.
5% DDT Residual Effect Spray	150,059 lbs.
American Typhus Vaccine	180,805 lbs.

Preliminary investigation to determine manufacturing capacity of DDT concentrates in Japan indicates an assured capacity of 33 tons monthly. The actual production depends upon availability of necessary raw materials. A study is in progress with a view to increasing Japanese production to a maximum. Provided production is favorable, reductions will be made in current import programs. Assay procedures for DDT are concurrently being established.

Narcotics

The Osaka Appeal Court handed down sentences on twelve defendants in the Wakayama Opium Case (7.5 tons of smuggled opium seized in February 1946). Eight sentences imposed by the Wakayama Local Court were unsatisfactory to the Government and were appealed. Four defendants appealed from the decision of the lower court. In all twelve cases the Osaka Appeal Court imposed either the same sentences as the local court or heavier ones. No suspended sentences were imposed and all dependents were sentenced to penal servitude for periods varying from 6 months to 3 years.

Inspections of registered local wholesale houses by Narcotic Control Officers revealed that proper security is not being afforded narcotics in many instances. Large stocks are now held by most of these dealers who were warned that loss of narcotics by fire or theft because of failure to follow security instructions will probably result in the Japanese Ministry of Welfare canceling the dealer's license.

A field trip through Central Honshu revealed that Japanese narcotic inspectors are in many instances limiting their activity to superficial inspections of registered dealers' stocks and records. The Ministry of Welfare is being directed to issue the following instructions to all prefectural narcotics officials.

- (1) Inspections must be carefully made not only to instruct the registrant in proper procedure under the narcotic regulations, but also to obtain information for further investigations.
- (2) Narcotic addicts must be questioned or kept under surveillance for the purpose of obtaining information.
- (3) All possible sources of information must be the subject of careful investigation.

SECTION V PREVENTIVE MEDICINE

General

Recent receipt of several radio and telegraphic reports of serious epidemic diseases, upon investigation, have been found to be without basis. In some cases this has been found to be the fault of the transmitting agency, however, Health Officers should check the text of all such reports at their point of origin, so as to minimize the possibility of error.

Military Government health officers should investigate personally or directly supervise the investigation of reports of new outbreaks of epidemic diseases, particularly if the disease has not been reported for a considerable period or if there is a likelihood that the diagnosis may be erroneous or doubtful.

Typhus Control

Comparative Score (includes 27 Mar 47):

1946 - 12, 254

1947 - 569

During March over 2,500,000 persons were immunized in the commuters' vaccination programs approved for the Tokyo and Kobe-Osaka Areas. The response exceeded the initial estimates for the program considerably.

The Preventive Medicine Bureau, Ministry of Welfare, proposes to have a National Health Poster Contest in May on subjects of typhus and other public health diseases in which the primary school children have received instruction. The Prefectural Health Poster Contests (already held or to be held) will result in selection of about 10 of their best posters by the end of April. These local selections are to be forwarded to the National Contest. Appropriate prizes and perhaps trips are to be given the winners.

Port Quarantine

REPATRIATION: The Ports of Maizuru and Hakodate have been ordered reactivated to resume the repatriation of Japanese from Siberia and Sakhalin.

The lists of the Japanese in Dairen are now being embarked for Japan. With the completion of this phase of repatriation, Hakata will be closed.

Weekly Reports of Incoming Quarantinable Disease:

Week of 9 March to 15 March 1947

Negative Report

Week of 16 March to 22 March 1947

Negative Report

Tuberculosis Control

Reference is made to Section VII, Public Health and Welfare Weekly Bulletin Number 12, which announced SCAP approval of the Ministry of Welfare's plan for tuberculosis control in Japan. Approval of the proposed program was confirmed by memorandum for Ministry of Welfare, Imperial Japanese Government (PHMJG-14) dated 17 March 1947.

For the information of all concerned the full text of the outline for tuberculosis control, as presented, is quoted below.

Outline of Program for Tuberculosis Control in Japan (as presented by Welfare Ministry)

1. Strengthening the System of Tuberculosis Control.
 - a. Strengthening the Organization of Tuberculosis Control.
 - (1) Central Government
 - (2) Local GovernmentTo increase the number of the members in charge of T.B. control.
 - b. Advisory Council
 - (1) Central Government
 - (a) Central committee for tuberculosis control.
Sub-committee
 - (b) Liaison committee
 - (2) Local Government
Local Government for tuberculosis control.
 - c. Improvement and Expansion of System of T.B. control.
 - (1) Improvement of the functions of health centers.
 - (a) Stationing the full time members in charge of T.B. control.
A physician, two clerks and two public nurses in charge of T.B. control per 50,000 population will be stationed at health centers (or branches).

- (b) Branches of health centers.
 - (2) Establishment of T.B. Care Committee in a city, town and village. This committee will take charge of the following matters.
 - (a) Diffusion of knowledge of T.B. Control.
 - (b) Guidance in a mode of living for T.B. control.
 - (c) Help for entering sanatoriums.
 - (d) Care for T.B. cases at home and supply of nutrition.
 - (e) After care for T.B., cases released from sanatorium.
 - (f) Livelihood protection of T.B. cases.
 - (3) Strengthening the activities for T.B. control in a town and village.
 - (4) Establishment of close contact of health centers with sanatoriums and encouragement of the members of sanatoriums to do field work for T.B. control.
 - (5) Co-operation with Physicians Association, Dentist's Association, Pharmacist's Association and Public Nurse's Association.
 - (6) Co-operation with National Health Insurance Society, Farmer's Union, Labor's Union, etc.
 - (7) Mass Examination.
 - (a) Range of aged of the persons to be examined.
 - Young persons of 6 to 29 years of age.
 - 1. Tuberculin test.
 - 2. X-ray examination.
 - 3. Close examination.
 - (b) Materials
 - Remarks: X-ray machinery in health centers and X-ray automobile.
 - (1) Guidance and Observation of T.B. cases at home.
 - (2) Medical examination and instruction of the family of T.B. cases.
 - (3) Enforcement of notification of T.B. cases.
 - (For this purpose supply of nutrition to notified cases is to be considered).
 - (4) Close contact of health centers may be available by practitioners.
2. Improvement and Increase of Sanatoriums and their Accommodations.
- a. Beds
 - 80,000 beds are necessary.
 - (48,050 beds are granted by the budget for 1947).
 - b. Nutrition.
 - 2,400 calories should be granted per a day for a case in sanatorium.
 - (About 90 grams of protein and about 30 grams of fat are necessary for a T.B. case per day.)
 - c. Improvement of the patient's daily life in sanatorium.
 - d. Transportation of T.B. cases.
3. Improvement of the technique of the persons relating to T.B. control and treatment.
- a. Investigation of T.B.
 - (1) Fundamental investigation.
 - (2) Investigation of the methods of T.B. control.
 - (3) Investigation of T.B. treatment.
 - (4) Investigation of nutrition for T.B. cases.
 - (5) Study of social and economic problems of T.B.
 - (6) Establishment of model district of T.B. control
 - (7) Study of management of sanatoriums.
 - b. Providing manual of prevention, diagnosis and treatment of T.B.
 - c. Course for Retraining
 - (1) Administration and method of T.B. control.
 - (a) Central Government
 - Course for the prefectural medical officers in charge of T.B. control will be held in Tokyo.
 - (b) Local Government.
 - 1. Course for prefectural members (including physicians) engaging in T.B. control will be held in each prefecture by the medical officer in charge of T.B. control respectively.
 - 2. The medical officer in charge of T.B. control in health centers will held courses in T.B. control for the care committee.
 - (2) Treatment of T.B.
 - (a) Central Government
 - 1. Course for representatives of the physicians of principal sanatoriums in each prefecture will be held in Tokyo.

(b) Local Government

1. Course for the physicians and nurses in sanatoriums will be held in each prefecture by the above mentioned representatives.

2. Course for the members (including physicians) engaging in T.B. control will be held by the representatives mentioned in paragraph (a).

3. Courses for practitioners.

Courses for practitioners will be held by Physician's Association, with the Government subsidy.

Lecturers will be sent also from the Central Government.

a. Formation of leaders in T.B. control.

4. Publicity and Public Education.

a. Strengthening the Functions of Anti-tuberculosis Bodies.

(1) Strengthening and making the best use of Japanese Anti-tuberculosis Associations. The Japanese Anti-tuberculosis Association shall be the center of such bodies.

(2) Strengthening and making the best use of other anti-tuberculosis bodies.

(3) Formation of female anti-tuberculosis committee.

(a) Organization.

1. Central --- Central Female Anti-tuberculosis committee.

2. Local --- Local Female Anti-tuberculosis Committee in each prefecture and branch in a city, town and village.

(b) Aims.

Diffusion of anti-tuberculosis knowledge and application of the knowledge. Help for T.B. care committee.

b. Diffusion of Anti-tuberculosis Knowledge through Schools.

T.B. shall be included in teaching subjects of school. Anti-tuberculosis education of the families through school-children. Guidance of a made of living for T.B. control through older school children.

5. Inoculation of BCG

a. Range of ages of the persons to be inoculated. Persons of 6 to 29 years of age, showing negative tuberculin reaction shall be inoculated with BCG.

b. Production of BCG.

Manufactories of BCG will be increased, if necessary.

Remarks: Two manufactories at present.

6. Revision and Amendment of Anti-tuberculosis Act.

Venereal Disease Control Reports

The following is a summary of venereal disease control reports submitted by Military Government health officers throughout Japan. It represents the first compilation of such data for all of Japan.

The period covered, probably represents the situation during the last months of 1946, since most of the reports were received during December and January. This is the period during which the present program was just beginning. The majority of the reports used December 1946 as the current month described.

No distinction can be made between public and private patients, between prostitutes and patients in the general population, and between facilities offering just periodic examination and those also furnishing treatment.

At the time these reports were made there were very few public treatment facilities for the general population. Total population reported - - 72,344,384.

Hospital facilities for venereal disease patients

National Hospitals	40	Average beds occupied	790
Prefectural Hospitals	79	" " "	1855
Municipal and local hospitals	37	" " "	317

Out-patient facilities for venereal disease patients

National	9	Average beds occupied	77
Prefectural	214	" " "	3117
Municipal	45	" " "	515

Classification by Disease: (9 prefectures reported data not available).

<u>Disease</u>	<u>Previous Month</u>	<u>Month of the Report</u>
Gonorrhoea Acute	3444	7137
Chronic	3924	1875
Ophthalmia	11	4
Syphilis Primary	2442	1571
Secondary	1440	1376
Early Latent	1880	896
Late Latent	443	332
Late	131	102
Congenital	45	28
Chancroid	1156	1851
Lymphogranuloma Venereum	36	41
Granuloma Inguinale	12	10

Sex of Patient: (5 prefectures were unable to furnish this data.)

Males 15,878
Females 14,223

Occupation of Patients: (12 prefectures were unable to furnish this data.)

Prostitutes 4946
Entertainers 212
No Occupation 3177
Factory Worker 746
Clerks 1189
Farmers 2275
Sailors 145
Waitresses and Cooks 334
Fishery 325
Laborers 785
Railroad 140
Domestics 22
Others 561

Sources of Infection: (17 prefectures were unable to furnish this data. Eight of these started "prostitutes were the chief source".)

Commercial 6584
Clandestine prostitutes 1462
Friends 417
Husbands 1241
Wives 132
Congenital 18
Unknown 2000

The following are helpful comments of Military Government health officers which have been extracted from reports received by SCAP.

“Of the 141 cases reported in October only 3 voluntarily came for treatment. The police netted another 109; and the remaining 30 were referred by private physicians.”

“117 prostitutes, geishas, streetwalkers, waitresses, etc, were brought in for examination by Japanese doctors under the supervision of medical officers from - - - troops. Fourteen cases of lues were diagnosed and 74 cases of gonorrhea. Ten (10) girls had both, so the total number of infections was 78. These are all now under treatment.”

“Quite a few men are treated at the V.D. clinic in - - - and their occupations range from railway workers, farmers, truck drivers, etc. Most of the women are geisha girls, dancers, and waitresses in hotels, etc., though a minority of the women are wives that have been infected by their husbands.”

“It might be of interest to you to know that we have had radio broadcasts over the local - - - station about venereal diseases. They are in very simple language that the ordinary Japanese can easily understand. We have also published articles in the daily local newspaper in this prefecture and hope that these methods will help to enlighten the public.”

“An intensive orientation campaign aimed primarily at the medical profession to consider VD as a problem common to the entire population is my suggestion. Subsequently this campaign should filter down to the lay public liberally diluted with the local idiom.”

“I suggest a presentation of the actual medical aspects of the treatment and diagnosis of the venereal diseases to the medical profession based upon the assumption that one is dealing with a group which is completely unformed or misinformed. A sophomore medical school level is not too elementary; and a brief review of basic anatomy would not be amiss.”

“It is very difficult for the Military Government Public Health Officers to find time to adequately train the Japanese physicians in Venereal Disease Control. I would suggest that the Home Ministry set up a post graduate school in V.D. to be attended by one or two members from each prefecture.”

“There are 12 Health Centers in this Prefecture. At the present time none of these are being used as venereal disease clinics. Both from a financial standpoint, and strategic locations, I feel that Venereal Diseases clinics should be attached to these Health Centers. Such a plan is now contemplated in this Prefecture.”

“I don't believe the ordinary Japanese physician is aware of the prevalence of venereal disease in the lay population so they have no idea of the amounts of supplies needed in order to give everyone adequate treatment.”

“An interesting survey of known prostitutes was recently conducted under the supervision of the legal section of this headquarters. Out of over 400 women examined, the results so far tabulated show about 85% to have one or more venereal diseases. This rate is much higher than would appear from the results of the routine weekly examinations and gives an indication of the true picture of venereal disease in prostitutes and of what the Japanese diagnosticians are able to do if properly prodded.”

“One particularly bad situation, not local, is the matter of self-treatment due to the ability of the laity to purchase drugs, such as Japanese sulfonamides, without the advice of a physician. Also, in this connection, many private practitioners are inadequately treating these patient and claiming “cures” unwarrantedly.”

“This office feels that the only satisfactory way to cope with the V.D. problem here is to first get the prefectural health authorities interested in the control of these diseases by creating an awareness of their scope and potential dangers.”

SECTION VI SOCIAL SECURITY

Social Insurances

The former Naval Mutual Aid Insurance Association has requested the Insurance Bureau of the Ministry of Welfare to take over the administration of the Association and all of its assets. It was further requested that the provisions guaranteed by the association be assured by the Social Insurance Bureau of the Ministry of Welfare for the benefit of the insured members. There are a number of established and well equipped former naval hospitals

which may be absorbed by the unified national hospital system to be coordinated with the Social Insurance Health program.

Welfare Pension Insurance

Comments obtained from employees regarding benefit payments under provisions of this insurance were; the benefit seemed so far in the future, little thought had been given as to what they would actually receive. The present law does not begin pension benefit payment until 1955. Another comment came from a Japanese sociologist who has recommended, following recent statistical studies, that the eligible age for receiving pension benefits be changed from 55 years of age to 60 years, however, that payments begin now.

The prefectural offices have another problem in that they are short of personnel to adequately run the office. The reason given is that government pay is too low to attract qualified personnel.

Seamen's Insurance

The slowness in paying benefits is a complaint received from employers and employees. This matter is being given considerable study as to whether it exists in the prefectural office or in the government offices in Tokyo. Necessary changes will be accomplished based upon existing conditions.

Health Insurance

The complaint regarding the margin between the charges by doctors for medical services and the rate allowed by the association will be solved in the near future. With a unification of the various hospital systems, a cooperative agreement will be arranged to overcome the high cost of medical care group treatment.

SECTION VII MEDICAL SERVICE

Japanese Civilian Hospital Strength Report for the period ending 7 February 1947 shows 3073 hospitals with a capacity of 216,899 beds, 97,383 of which were occupied. During this same period 252,750 out-patients were treated.

Medical Education

A year of joint effort by SCAP and the Japan Council on Medical Education to establish higher medical educational standards, was culminated this month when the Ministry of Education presented a SCAP approved plan for the improvement of Medical Education.

Inspection was made of all existing medical Senmon Gakko (51 in number), using the university affiliated Senmon Gakko as a standard and grouping them into Class "A" and "B".

The "A" class Senmon Gakko will be allowed to continue its medical education program until its present students are graduated. After one additional year of study and one year internship, the graduate will be eligible to take national examination for medical licensure.

The "B" class Senmon Gakko will be refused the privilege of continuing medical education courses. Students of "B" class schools will be transferred to vacancies in "A" class schools, with a repetition of the year just completed and then continue their education as specified for "A" class students above.

In addition, students of "B" class schools may be absorbed by the Koto Gakko (university preparatory schools) in the following manner:

- (1) Seniors and Juniors of the Senmon Gakko will be admitted to 3rd and 2nd years of the Koto Gakko respectively.
- (2) Sophmores and Freshmen will be admitted to graduate and proceed directly to intern training.

Fifth year students, now enrolled in class "A" schools offering a five year course, will be permitted to graduate and proceed directly to intern training.

The inspections resulted in continuing the temporary operation of 45 medical Senmon Gakko as class "A" schools.

The over-all Medical Educational plan will be completed by 1950. After this date, Senmon Gakkos which have been raised to university standard will continue as medical schools. Others, which cannot meet the requirements of a university type medical school, will cease to exist as medical schools.

SECTION VIII VITAL STATISTICS

Visits were made to the local registration offices in Fujisawa, Omiya and Chiba to confer on methods of checking completeness of local registration.

SECTION IX CONSULTANTS

Nutrition Surveys

The attached nutrition survey consumption data for February 1946 is submitted for the four cities and nineteen prefectures.

RESULTS ON NUTRITION SURVEYS – JAPAN – 1946 - 1947

Nutrients in grams and calories, and grams of various classes of food consumed per capita per day.

SECTION X
MEMORANDUM TO IMPERIAL JAPANESE GOVERNMENT

None

CRAWFORD F. SAMS
Colonel, Medical Corps,
Chief, Public Health and Welfare Section

2 Incls:

1. Weekly Summary Report of Cases and Deaths from Communicable Diseases in Japan, week ending 22 March 47, w/Digest
2. Venereal Disease Report for week ending 22 March 47.

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
Public Health and Welfare Section**

WEEKLY BULLETIN

**For Period
30 March – 5 April
1947
Number 14**

SECTION I – Welfare
SECTION II – Veterinary Affairs
SECTION III – Dental Affairs
SECTION IV – Nursing Affairs
SECTION V – Supply
SECTION VI – Preventive Medicine
SECTION VII – Social Security
SECTION VIII – Medical Service
SECTION IX – Vital Statistics
SECTION X – Consultants
SECTION XI – Memorandum to I. J. G.

SECTION I WELFARE

Public Assistance

The Ministry of Health and Welfare Public Assistance Report for February 1947 shows a decrease in the total number of persons assisted with an appreciable decrease in grants over January 1947 (average of 87.05 yen per person in January as against 65.52 yen in February).

Comparative figures for months of January 1947 and February 1947 are given below:

	<u>January 1947</u>		<u>February 1947</u>
Number of persons (not in institutions) assisted	2,790,791		2,602,833
Number of persons (in institutions) assisted by Gov't	<u>100,545</u>		<u>98,837</u>
<u>Total number persons assisted</u>	2,891,336		2,701,670
Cash Grants	yen 160,259,872	yen	156,671,451
Grants in Kind (cost)	<u>91,344,697</u>		<u>20,365,204</u>
<u>Total Grants</u>	yen 251,604,569	yen	177,036,655

Note: The decrease in grants in kind accounts for the wide variances in relief costs between January and February. The decrease in number of persons receiving assistance was primarily caused by the suspension of casual grants in Osaka and Kochi. (These two prefectures had a decrease of 53,208 persons and 89,152 persons, receiving assistance, respectively over the previous month).

SECTION II VETERINARY AFFAIRS

Animal Disease Report

The Ministry of Agriculture and February (Bureau of Animal Industry) reported the following new outbreaks of disease during the period 30 March – 5 April 1947.

<u>Prefecture</u>	<u>Disease</u>	<u>Number of Cases</u>
Nagasaki	Blackleg	2
Chiba	Swine Erysipelas	1

SECTION III DENTAL AFFAIRS

The first written National Dental Examination to be given in Japan was held 1, 2, 3, April in Tokyo, Osaka and Fukuoka simultaneously. Twelve hundred applicants participated.

SECTION IV NURSING AFFAIRS

Publications

Four articles on nursing subjects, requested by the Japanese Journal of Nursing, were prepared, approved and now await publication.

SECTION V SUPPLY

Distribution

An emergency air shipment of 57 kgs., of peptone was made to Korea, from Japanese stocks, to permit continuation of manufacture of typhoid and cholera vaccine, pending arrival of shipments of peptone scheduled on the import program.

Sales of former Japanese Army-Navy surgical instruments and appliances amounted to 584,142 yen for February as compared to 98,961 yen during January.

The Welfare Ministry has notified prefectural officials of their responsibilities in connection with medical treatment, including prescribed physical examination, of Japanese nationals employed for the occupation forces.

Any supply problems, which cannot be solved locally, should immediately be reported to the Welfare Ministry by telegraph, marked for attention of the "Pharmaceutical Affairs Section".

Production

The Welfare Ministry approved releases of DDT Products and Typhus Vaccine as follows during period 31 March – 5 April:

<u>Prefecture and/or Port</u>	<u>10% DDT Dust</u>	<u>Typhus Vaccine</u>
Kagawa	1000 lbs	250 Vials
Hiroshima		1440 Vials
Gifu	9000 lbs	150 Vials
Tokyo	13000 lbs	
Maizuru Port	3000 lbs	
Shimane		1900 Vials

A total of 11650 lbs DDT Concentrate was released to the Agriculture and Forestry Ministry for utilization on agriculture crops.

The production control plan of the Welfare Ministry, implementing Economic Stabilization Board regulations on this subject has been approved. This plan provides for transfer of production allocation functions formerly performed by various control associations to the jurisdiction of the Welfare Ministry. The ESB will allocate to ministries on an industry basis and manufacturers will be issued allocation certificates by the responsible ministry.

Narcotics

A Tokyo hospital, which was inspected in October 1946 Narcotic Control Officers, was again inspected on 3 April 1947. In October, the hospital had used 71 grams of cocaine hydrochloride in 81 days and the doctors were advised to limit the use of cocaine to cases in which use is actually indicated and not to use stock formulas of narcotic preparations as means of relieving, but not treating, patients when non-narcotic mixtures would suffice. As a result of the October conference and discussion, the records now show a requirement of 15 grams of cocaine hydrochloride for approximately 180 days. In this large hospital the use of ethylmorphine hydrochloride (Dionine) has declined to one half gram during a six-month period. Since the hospital has a stock of 330 grams of Dionine, Tokyo narcotic officials are directing transfer of 320 grams to local and central wholesale registrants.

Reports have been received and investigation is being made of Allied Nationals demanding narcotics from Japanese doctors for Japanese persons. Physicians are not required to supply narcotics to any person on demand and will be prosecuted for doing so. Narcotics are administered or supplied only to patients of the physician according to the diagnosis of the patient by that particular physician. If any person demands narcotics of a physician or any other registrant, law enforcement officials must be notified and the person arrested.

Former Japanese military medicinal narcotics taken into custody by Occupation Forces and returned to SCAP-approved wholesale registrants for distribution under new narcotic regulations as the medical needs of the Japanese people require, have an approximate value of 10,394,018 yen. Since many of the items were prepared solely for military use and are not in suitable containers for civilian use, extensive repackaging operations have been underway since the beginning of the year.

SECTION VI PREVENTIVE MEDICINE

Japanese B. Encephalitis

The following is quoted for the information and guidance of health officers in regard to the collection and shipment of blood specimens from patients suspected of having Japanese B. encephalitis:

a. Blood samples for serologic diagnosis should consist of 25 to 30 cc. and should be withdrawn with a dry sterile syringe and transferred to sterile screw capped bottles or to sterile heavy glass tubes which can be stoppered tightly. Corks or rubber stoppers should be held in place by adhesive tape. If vacuum tubes are available, specimens may be forwarded directly in these tubes after breaking off the glass tubing at a point between needle and rubber stoppers. If freezing temperatures may be encountered during transit, serum should be separated from the

clot whenever possible using aseptic technique. The clot may then be discarded. If whole blood is to be sent, blood should be allowed to clot firmly at room temperature before being handled.

b. Specimens should be collected as follows:

- (1) At the time of onset of the disease or as soon thereafter as possible.
- (2) Ten to fourteen days after onset.
- (3) Twenty-eight to 30 days after onset.

c. Specimens should be prepared for shipment as follows:

- (1) Label each bottle or tube properly, using adhesive tape or paper label covered by transparent type.
- (2) Place bottle or tube containing specimen in a rubber covering tied at the top to keep out water. Pack carefully in a vacuum jar or suitable closed container filled with cracked ice.
- (1) Address and send specimen to 406th Medical Laboratory, Virus and Rickettsial Division, APO 500, Tokyo. Railway Express Service, Air Courier Service or Courier Service will be used. Ordinary mail will not be utilized for this purpose.

d. The first blood specimen will be accompanied by an abstract of the history, clinical finding, laboratory data, dates and type of encephalitis vaccination if any, and any other data which may be pertinent. Subsequent blood specimens will be accompanied by a summary of the progress notes. No serological work will be done on specimens which are not accompanied by such notes.

Typhus Control

Comparative Score (includes 3 April 1947)

1946	-	15,312
1947	-	586

Training of personnel for diagnostic laboratories is to start 14 April 1947 in the Government Infectious Disease Institute. One person from each of the following places is to attend the first course from 14 through 24 April 1947:

Sapporo
Niigata
Sendai
Osaka
Takamatsu
Kumamoto

They will be instructed in the theory and technique of performing Wail-Felix tests and the complement-fixation tests for typhus fevers. Following instructions the technicians will return to their respective laboratories and another technician from the same laboratories will be sent for instruction. As soon as these laboratories are ready to perform complement-fixation tests, their names will be announced.

Three railroad cars have been authorized for conversion and use as a mobile public health training unit. This unit will serve to help reach the more remote areas with basic public health information.

Sanitation

Instructions to start insect and rodent control programs have been issued to the prefectural health officials by Welfare Ministry. Training conferences are scheduled for both military and civilian health department officials. The schedule is:

Kyoto

Military Government Personnel	-	May 6 and 7th
Japanese Health Officials	-	May 8 and 9th

Sendai

Military Government Personnel	-	May 13 and 14th
Japanese Health Officials	-	May 15 and 16th

The organization and operation of control teams will be similar to last year. However, control measures of a permanent nature are to be accentuated; such as drainage filling, clearing debris, cleaning sewers, etc. Also residual spraying of house with DDT where cases of malaria, dengue, encephalitis, dysentery, typhoid, cholera and

plague occur is to be instigated. Insecticides are to be delivered to the prefectures starting 1 May, the cost of material and labor to be borne on the following bases:

Drugs and Insecticides

National Government 1/3

Local Governments 2/3

Personnel

National Government 1/2

Local Government 1/2

The cost of environmental sanitation programs of purely local house cleaning nature, will not be participated in by the National Government.

Venereal Disease Control

The following statistics are taken from a prostitute hospital. The hospital is considered about average in size, average or slightly above the average in operation, but in general illustrating problems common to all such hospitals.

Patients in hospital - - - 171

The total hospital staff is 59, divided as follows: - - Office personnel, 9; Nurses, 18; Physicians, 6; Laboratory employees, 5; Pharmacy, 2; kitchen Employees, 7; Janitors, 3; Guards, 9.

The number of patients treated in six months - - - 2,140

Of this number 232 patients were treated twice, 56 treated three times, 34 treated four times, 22 treated five times, 3 treated six times and one patient treated seven times.

Total syphilis patients - - - 593

Total syphilis patients who received 20 or more arsenicals - - - 36

Total syphilis patients who received 20 arsenicals and 20 heavy metals - - - NONE

Total gonorrhea patients - - - 1,484

Presumably the gonorrhea patients were all considered "cured", but in analyzing this figure, it should be noted that in chronically infected females (which includes most prostitutes) neither smears nor cultures offer reliable evidence of cure. Furthermore, sulfonamides are known to cure less than 50% of acute cases in males.

No patients received sufficient treatment for the cure of syphilis and no patient received even the minimum amount of therapy necessary for non-infectiousness.

Finally, it is noted that the more emphasis placed on the care of prostitutes, the less attention given to the provision of venereal disease clinic facilities for the general public.

Improvements in the medical standards in prostitute hospitals will only come about after diagnostic and treatment facilities for the general public are established and improved.

Port Quarantine

Present Telegraphic Health Intelligence Reports from Port Cities in Japan, through Japanese channels, cover only communicable diseases found aboard incoming vessels. Beginning this week, weekly telegraphic reports covering quarantinable disease will include Port Cities. These weekly report will be supplemented by detailed mailed reports and by special telegraphic reports as indicated.

Report of incoming quarantinable disease, week of 23 March to 29 March – Negative.

SECTION VII
SOCIAL SECURITY

Social Insurance

In the closing days of its Session, the Diet passed the Workers' Accident Compensation Insurance Law which, when promulgated, will supercede the Employer's Liability Insurance Law. Revisions in the Welfare Pension and the Health Insurance Laws were also passed which were necessitated by the passage of the Workers' Accident Compensation Insurance.

The Diet attached the following recommendations for guidance of the next Diet. They desire:

- a. That the reserve funds in the Welfare Pension Insurance be made available for the benefit of employees in establishing necessary Welfare institutions.
- b. That the reserve fund of the Health Insurance program be made available, from year to year, for the purpose of establishing hospitals and clinical facilities where most needed.
- c. That the Government realize its responsibility for the National Health Insurance program and that an extra subsidy be allowed for enlarging this program.

In superceding the Employers' Liability Insurance Law, the newly enacted Workers' Accident Compensation Insurance Law was extended to industry in general. This form of insurance, under the Employers' Liability Insurance Law, was limited to employees of civil engineering, construction, and forestry undertakings. There had been wider coverage for invalidity pensions and allowances under the Welfare Pension Insurance Law than in the Employers' Liability Insurance program, but the actual benefits were quite limited under the former and the worker as well as the employer was required to contribute. With the revisions of these laws more adequate compensation for disability due to occupational injuries and diseases will be provided under the workers' Accident Compensation Insurance Law. The Welfare Pension Insurance Law will continue to insure against non-occupational disabilities and will make provision on an extended benefit computation basis, for certain occupational injuries which are not covered by other insurance programs.

Health Insurance

The principle difference between the Workers' Accident and the Health Insurance Laws are the coverages for occupational and non-occupational, diseases and injuries, respectively. The types of industrial workers covered by the two insurances remain relatively the same. However, in Health Insurance the insured's family is eligible for medical care and hospitalization at one half the cost. The law does provide that the insured will not receive benefits from both insurances for the same disease or accident. However, Health Insurance may carry on if necessary, when the Worker's Compensation Insurance benefits cease.

National Health Insurance

The Ministry of Welfare's request for an increase in the appropriation for the operation of National Health Insurance was disapproved by the Minister of Finance. The increase requested was considered necessary in order to provide additional medical care and to enlarge the preventive medicine program for rural people. It is expected the next Diet will give more thought to this question.

Eligibility

Farmers and rural people are eligible for participation in the National Health Insurance Program (non-industrial). They are not eligible for Health Insurance (industrial) unless they are employed as an industrial worker in an organization that is covered by the Health Insurance law.

Employee's Relief Ordinance

This Ordinance provides benefits for Japanese Nationals on duty with the Occupation Forces for illness or injuries incurred in the line of duty. The Central Liaison Office, Tokyo, has made appropriations to the Prefectural Governments for the purpose of obtaining equipment and medicines necessary to establish a dispensary where there is a concentration of 500 workers or more. For additional operating and medical supply expenses, found necessary, the Prefectural Government can direct a request to the Accounts Division, Central Liaison Office, Tokyo.

SECTION VIII MEDICAL SERVICE

Japanese Civilian Hospital Strength Report for the weekly period ending 14 February 1947 shows 3072 hospitals with a capacity of 217,038 beds, 102,038 of which were occupied. During this same period 282,094 out-patients were treated.

SECTION IX VITAL STATISTICS

Following is a corrected table for January, showing the true count of declarations filed in January in Aomori and Miyagi Prefectures and corresponding changes in the totals for all Japan, all Shi, and all Gun. These corrections are necessitated by the fact that Aomori and Miyagi Prefectures included in their origin 1 reports not only all declarations filed in January but all declarations filed through 14 February for January events. With those corrections, both the January and February report for all prefectures include all declarations made in the respective month regardless of the month of occurrence.

Births The number of births (222,405) declined nearly 20 percent from the high of 273,527 established in January but remained above the number reported in any of the previous 6 months. This follows the pattern of past experience in Japan. The birth rate per 1,000 population per annum declined approximately 10 percent from 44.1 in January to 39.7 in February. The decline in the birth rate in the city areas (12 percent) was slightly greater than in non-city areas (9 percent).

Deaths For the third consecutive month deaths increased. The number in February (119,299) was only about 2 percent higher than in January (117,321) but the rate in February (21.3) was 13 percent greater than in January (18.9). In the 10 year period 1934 – 1943, the number of deaths in February was always less than in January. The non-city death rate increased somewhat more than the city rate.

Infant deaths Infant deaths (23,390) were approximately 12 percent greater than in the previous month (20,808). The infant death rate per 1,000 live births (105.2) was nearly 40 percent greater than in January (76.1) and was the highest rate recorded in the past 8 months. The tremendous increase in the rate was due to the fact that the number of infant deaths increased while the number of births decreased. For the first time in these 8 months the infant death rate in city areas (107.9) exceeded that of non-city areas (104.1).

Stillbirths Stillbirths (9,900) declined nearly 5 percent from 10,309 in January. The rate per 1,000 live births (44.5), however, increased nearly 20 percent over the January rate (37.7) since the decline in live births was so much greater than in stillbirths. The stillbirth rate in city areas increased much more sharply (approximately 25 percent) than in non-city areas (15 percent).

Marriages For the fifth consecutive month marriages increased to reach a further high point. The number (73,833) in February was only about 2 percent greater than in January (72,722) but the February rate (13.2) was nearly 15 percent higher than the January rate (11.7). The non-city rate increased somewhat more than the city rate.

Divorces The number of divorces (6,221) dropped approximately 6 percent below the January figure (6,648) but the rate remained the same (1.1). The decline in the number of divorces in non-city areas was approximately 8 percent with no resulting change in the rate but the decline in the number of divorces in cities was so slight that there was a 10 percent increase in the city divorce rate.

SECTION I
WELFARE

General

Monsignor Edward J. Flanagan of Boy's Town, Nebraska is expected to arrive in Tokyo on 16 or 17 April 1947.

As a consultant to SCAP, Father Flanagan will devote his full time to conferences with Japanese Welfare agencies active in programs involving the rehabilitation of orphans and abandoned children. It is also anticipated that his presence and work here will serve to call general public attention to the difficult position of orphaned and neglected children in Japan at the present time. Out of this interest, community organizations can be developed that will permanently serve to encourage local action for the betterment of the condition of orphaned and homeless boys and girls.

Licensed Agencies for Relief in Asia (LARA)

During the past few months, new personnel have been attached to Military Government Teams and the following statement on LARA is presented for their information and guidance.

Licensed Agencies for Relief in Asia (known as LARA) was organized in March 1946 by the Committees of Japan and Korea of the American Council of Voluntary Agencies for Work Abroad (ACVA) as a committee to coordinate all voluntary agencies seeking to do relief work in the occupied countries of Asia.

Contributions for Japan from November 1, 1946 - April 1, 1947 approximates one million dollars in value and consists of non-perishable food, clothing and medicine.

Two LARA representatives, Father Michael J. McKillop and Miss Esther B. Rhoads arrived in Tokyo June 1946. An agreement was reached with SCAP permitting the importation by LARA of relief supplies (up to 2,000 tons a months) to be distributed through "existing channels" by the Japanese Government.

The responsibility of administering the LARA program has been placed in the hands of the Social Affairs Bureau of the Ministry of Health and Welfare. This Bureau has in turn set up an advisory committees (called the LARA Central Committee) of 20 public and private welfare workers who meet with representatives of SCAP, 8th Army, LARA and the Ministry of Health and Welfare.

This committee has studied needs and selected certain projects. The lack of milk for babies whose mothers cannot feed them, the need of more food in orphanages so that the war waifs can be kept off the streets, the lack of food for Tubercular patients, the need of the handicapped, clothing for repatriates and other war sufferers and the school lunch program have all claimed the attention of the committee.

Geographic areas of greatest need have also been studied by this committee using the findings of SCAP and the Japanese Government.

All distribution is on the basis of need without respect to birth, religion or political affiliation. Most of the recipients are children under 13 years of age.

Because of the great danger of LARA goods getting into the black market, most of the supplies are distributed to institutions rather than to families or individuals. Each institution selected is recommended, by prefectural bureaus of welfare, as being able to administer the supplies impartially.

LARA Operations

The LARA representatives are notified that a shipment is on the way. The Japanese Ministry of Health and Welfare is, upon arrival of the shipment, solely responsible for warehousing and transportation and a LARA representative as consignee meets the boat, and turns the shipment over to the Ministry of Public Health and Welfare. The supplies are trucked to a special four story warehouse in Yokohama where they are classified and checked for loss.

The LARA Committee works out a general plan of allocation for approval by SCAP and the Ministry of Health and Welfare. The prefectures included in the allocation are then notified that they may recommend institutions to receive supplies. These recommendations are reviewed by the Central Committee and when approved, the shipments are made.

In order to maintain a unity of the programs a Japanese Welfare official of each prefecture has been called to a conference in Tokyo and the LARA program explained in detail. The agenda includes an explanation of LARA, the motivation of the sending agencies, program in Japan, and emphasis placed on security and proper use of supplies.

These Japanese officials return to their respective prefectural Welfare Bureaus and prepare the list of institutions for approval by the LARA Committee and the Ministry of Health and Welfare. Next, a conference is held in each prefecture where representatives of the institutions to receive supplies are called together for a conference and discussion of the program. An official of the Ministry accompanied by a LARA representative participates in these conferences and the local Military Government should be represented.

The LARA representative making such visits checks with the Military Government, allows time for consultation with the Welfare Officer, attends the conference, meets local Japanese welfare officials and workers, visits a few representative institutions and sees that warehousing is adequate.

The supplies are then distributed. To prefectures in the Tokyo-Yokohama area, supplies are sent direct by truck to the using agencies. To the prefectures more distant, they go by special sealed freight and are met by welfare officials and the warehouse company (Mitsui) representatives who have been notified by wire. The breakdown is then made at the local warehouse according to the plan worked out in advance and distribution made by the Mitsui Company on behalf of the Japanese Government. All expenses of distribution in Japan are borne by the Ministry of Health and Welfare.

Outline of LARA Projects

1. Social Welfare Institutions

a. Sustained Programs

1. Milk for babies whose mother cannot feed them. Distributed through carefully selected hospitals, clinics and institutions caring for abandoned or sick infants. Total of 6000 babies.
2. Supplemental ration of 500 calories a day to children in orphanages. Distributed once in 3 months with a review at the beginning of each period. Total 15,000 children.
3. Supplemental ration of 500 calories a day to T.B. Sanatoria emphasizing preventative and incipient care. Total 6,000 T.B. patients.

b. Special Programs

1. Gift of 5 lbs. of food and some clothing to war sufferers and repatriates living in hostels or camps where there is adequate supervision.
2. A slightly larger contribution to persons in selected leprosaria, homes for deaf, blind and aged.
3. Emergency relief supply grants made after clearance with other agencies to avoid overlapping, such as allocation of milk and clothing to earthquake area in January and similar grants to centers receiving repatriates at the parts of Sasebo, Maizuru and Hakkodate.

2. School Lunch Program

Allocation handled by Ministry of Education and combined with food from Japanese sources.

3. Distribution of Medical Supplies through about 40 selected hospitals and clinics in 8 cities.

4. Distribution of clothing to persons in projects listed above and through other authorized channels such as a distribution by the Tokyo Education Bureau of over 12000 pairs of underdrawers and socks to the neediest teachers of Tokyo.

Out of LARA Distribution

Note: Areas for distribution are divided into 4 groups, namely A, B, C and D on the basis of most urgent (A) to areas of less need (D).

December 1946

1st allocation of food to Group "A" areas

Tokyo	183 Institutions	22,535 Persons	207,237 Pounds
-------	------------------	----------------	----------------

Kanagawa	43	"	2,792	"	55,090	"
Aichi	58	"	7,200	"	55,090	"
Kyoto	35	"	2,461	"	48,259	"
Osaka	75	"	9,724	"	110,280	"
Hyogo	45	"	2,344	"	43,241	"
Hiroshima	20	"	1,663	"	18,153	"
Nagasaki	28	"	907	"	9,971	"

January-February 1947

1. Earthquake relief to Wakayama, Kochi, Tokushima (Milk and clothing about 9 tons)
2. Repatriate relief at ports Sasebo, Maizuru, Hakkodate (Milk and clothing).
3. Clothing distribution in Group A areas through nearby institutions.
4. School Lunch Program in Tokyo, Kanagawa and Chiba Ken. 220,000 lbs. to 820 schools feeding 669,521 children. This Supplemental ration is combined with food from Japanese sources.

February-March 1947

1st allocation to Group "B" areas

1. Hokkaido	4. Saitama	7. Ibaragi	10. Okayama
2. Niigata	5. Chiba	8. Tochigi	11. Fukuoka
3. Miyagi	6. Shizuoka	9. Mie	12. Kagoshima

Approximately 2,000 babies, 4,000 children in institution, 2,000 T.B. patients, 16,000 special. (Supplies total approximately 200 tons)

April 1947

School lunch allotments doubled for Spring Term (400,000 lbs)

Group C First allocation now being planned Delivery during April

1. Aomori	6. Gifu	11. Shiga	16. Ehime
2. Fukushima	7. Toyama	12. Wakayama	17. Kumamoto
3. Kochi	8. Ishikawa	13. Yamaguchi	
4. Gumma	9. Fukui	14. Tokushima	
5. Yamanashi	10. Nagano	15. Kagawa	

(Estimated total 100 tons)

SECTION II
VETERINARY AFFAIRS

Animal Disease Report

The Ministry of Agriculture and Forestry (Bureau of Animal Industry) reported the following new outbreaks of animal disease during the period 6-12 April 1947.

<u>Prefecture</u>	<u>Disease</u>	<u>No. Cases</u>
Fukuoka	Anthrax	1
Kumamoto	Blackleg	1
Kumamoto	Texas Fever	17
Chiba	Swine Erysipelas	1

SECTION III
DENTAL AFFAIRS

Recently formed the "Nippon Dental Dealers' Association" comprises some 600 members throughout the nation. The announced purpose of the organization is to assure equable and free distribution of dental supplies and to render a better service to the practitioners.

SECTION IV NURSING AFFAIRS

The one month refresher course for Nursing Education Leaders, held at the Red Cross Hospital was completed 10 April 1947. Certificates were issued to 41 of the prefectural representatives who completed the full course.

A representative of the Nursing Affairs Division attended the prefectural meeting in Tottori.

SECTION V SUPPLY

Distribution

The Welfare Ministry issued a directive No.146 Raku, Setsu, Kei, Go, from the Director of Bureau of Medical Treatment, to all Governors, 13 February, pertaining to the establishment of medical facilities and procurement of medical supplies for the treatment of Japanese Nationals employed for the Occupation Forces.

The directive in general provided for the following:

Medical supplies to be furnished each established dispensary.

Each established or, to be established dispensary, will be provided with a basic list of medical supplies and furniture. Items which are not on the basic list may be requisitioned if required.

Doctors will be furnished by the governor or his representative in the prefecture concerned.

Each dispensary or clinic will have a full time nurse on duty.

The recruiting and assigning of nurses will be the responsibility of the prefectural Governors, or his authorized agent.

Officials responsible for the payment of doctors, nurses and medical supplies will be the prefectural governor who is a disbursing officer, or the Director of the Local Liaison in the case of a local district.

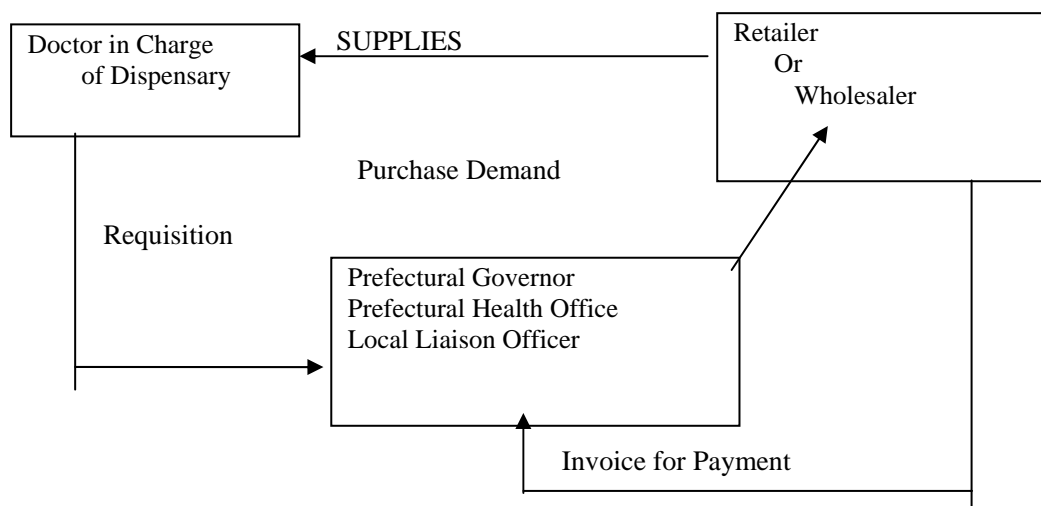

The expenditures will be made from the following:

Expenditures involving medical supplies will be drawn from Miscellaneous Equipment Expenses included in the Post-War Disposal Fund.

Doctors and nurses will be paid out of Miscellaneous Allowances included in Post-War Disposal Fund.

Doctors operating dispensaries will submit their requirements for medical supplies to the prefectural health office, who will procure them, and see that they are delivered to the requesting dispensary, and forward the invoice for payment to the Prefectural Government, or Director of the Local Liaison office for payment thereof.

The following drawing is the flow chart pertaining to the above:

Reports from the field indicate that the prefectural officials when reporting to the Welfare Ministry on matters pertaining to supply and narcotic control, are not always able to contact the proper officials and as a result, quite often do not accomplish their mission. Following are the supply officials in the Welfare Ministry:

- Mr. H. Kamiya - Chief Pharmaceutical Affairs Section (Distribution and manufacture of miscellaneous equipment)
- Mr. I. Keimatsu - Chief Drug Manufacturing Unit (Manufacture of medicines and insecticides)
- Mr. H. Kamiya – Acting Chief Narcotic Section (Narcotic Control)

The Welfare Ministry issued comprehensive instructions to Prefectural Governors on 20 March 1947(No. 22, S.B) on the subject of “Distribution of Former Japanese Military Clothing”. These instructions supplement Notification No.1,009 S.B., 2 December 1946 issued by Director, Social Bureau, Welfare Ministry and Director, Investigation Bureau, Home Ministry and set a target date of 30 April 1947 for completion of distribution.

Production

The Welfare Ministry approved releases of DDT products and typhus vaccine during week as follows:

<u>Prefecture</u>	<u>10% DDT Dust</u>	<u>Typhus Vaccine</u>	<u>5% DDT Residual Effect Spray</u>
Yamaguchi	2,000 lbs		
Akita	30,000 lbs		
Shizuoka		2,592 Vials	
Aichi			3,000 gallons
Hokkaido			15,000 gallons

Narcotics

Thefts of narcotics reported in Japan for the month of February show a decided decrease, from 52 thefts reported in January to 29 reported in February. This decrease is partially due to the emphasis placed upon the safeguarding of narcotic stocks by registered persons and hospitals, and of their purchase of narcotic supplies in small quantities as needed, rather than quantities for several months in a single order. Also, partially due to instructions issued to hospitals to allow their narcotic stocks to be inspected only by persons presenting the correct authorization to do so, thus eliminating inspections by bogus inspectors resulting in thefts from hospital stocks.

Violations and arrests of registered and non-registered persons indicates a trend from the registered to the non-registered persons, tending to show that physicians, pharmacist and hospitals are becoming more acquainted with the provisions of the Narcotic Laws and are complying with these regulations; and that the majority of future narcotic violations will be committed by addicts in efforts to relieve their addiction and by persons purchasing and selling narcotics for a monetary consideration. Records of narcotic violations indicate 31 registered persons and 18 non-registered persons arrested in January 1947 as compared to 18 registered and 45 now registered arrested in February.

SECTION VI PREVENTIVE MEDICINE

Typhus Fever Control

Comparative Score (includes cases of 10 April)

1946 -	17246
1947 -	626

Typhus Outbreak

A minor outbreak of typhus fever has occurred at a large poor farm in the Tokyo area. Twenty-seven (27) suspected cases have been reported – inmates were found to be louse-infested. Blood is being tested to determine if epidemic or murine typhus or both are present. No secondary cases have been reported outside the institution as yet!

This emphasizes the fact that we are still in the typhus season and that an epidemic of sizeable proportions is still possible. An excellent job has been done to date, but this recent outbreak in Tokyo should make all concerned realize that typhus control efforts should not be relaxed.

The Ministry of Welfare will, by telegram, remind all prefectures to carry out to the fullest extent typhus control procedures with emphasis on Poor Farms, Orphanages, Vagrant homes, jails prisons and similar institutions.

Blood Samples

The cooperation in the task of collecting and submitting blood samples for complement fixation tests for typhus fever is gratifying. Some lots have been completed. Other lots received are undergoing a screening process to rule out the negatives by use of a soluble antigen. Final results will be furnished at the earliest possible time.

Campaign against head lice in school children

Plans have been completed and the contemplated nation-wide campaign against head lice will soon be underway.

Venereal Disease Control

The Disease Prevention Bureau of the Welfare Ministry has agreed to support 118 venereal disease treatment clinics in existing health centers and 50 similar clinics in various public hospitals by 1 July 1947. Since we already have more than this number in operation, it indicates national support of this work.

The Osaka Health Department was assured 1,650,000 yen by the Ministry, which represents one-third of their budget for the next year for venereal disease control.

The Disease Prevention Bureau of the Welfare Ministry has been advised of the following salient features which should be included in a venereal disease control program for the nation. These points have been translated and will be distributed to the prefectural health departments.

NATIONAL PROGRAM FOR VENEREAL DISEASE CONTROL

The Welfare Ministry is responsible for planning and coordinating a comprehensive program for the prevention, control, and cure of venereal disease for all the people of Japan.

1. Provide financial support and professional stimulation, leadership and guidance to the prefectural health department authorities in the development of preventive and curative facilities for venereal disease control for the general public.

2. Initiate and direct education, information, and further training for public health venereal disease control physicians in order to raise professional techniques to modern acceptable levels, and to inculcate public health methods of venereal disease control.

3. Initiate, direct, and conduct a continuous campaign of sound public education in venereal disease control to tell the people what the venereal diseases are, how they are transmitted, how they can be prevented, and stressing the availability of free, public, diagnostic and treatment centers.

4. Provide capable laboratory personnel and adequate laboratory facilities for the laboratory diagnosis of these diseases, and to aid the prefectural health departments in the development of similar diagnostic laboratories.

Conferences were held with the branch managers in each office and there were many indications of the personal initiative, industry and interest of the managers in achieving progressive improvement of the social insurance program. Although serious problems exist as to medical care for insurance beneficiaries, the branch offices have taken original and active steps to remedy the situation in some degree. In an attempt to solicit the cooperation of the 271 doctors in his district, one manager urged them to form a committee or association to consider the problems of the doctors and the social insurance beneficiaries. Such an association has been formed by 80 of the doctors who meet monthly and evidence a genuine interest in the questions involved.

A large share of the permanent insurance records were burned during bombings but, in the course of a year, secondary evidence has been obtained from employers and the records are now virtually replaced.

Every branch office manager brought out the serious need for an adequate informational service to acquaint the public with the social insurance program. Numerous instances were cited showing almost all criticisms of the program were due to misunderstanding and misinformation. Representative meetings with employers' associations and labor unions, were said to result in general cooperation and support on the part of those to whom the principles of the laws were explained. It is known that many benefits are lost or forfeited through lack of knowledge and the cost of administration could be substantially diminished through well organized dissemination of headed information.

Mutual Aid Associations

The Mutual Aid Associations are a type of social insurance, but operated separately by the Government departments and restricted to their own employees. These Associations have not been under the supervision or control of the Insurance Bureau of the Ministry of Welfare, but have operated independently. The Salary Allowance Division of the Ministry of Finance is the only Government department to which the Associations make any financial reports. There are some Associations of a similar type being operated by municipal governments for their employees, in cities other than Tokyo. The mutual aid insurances provide health, pension and survivors' benefits. A study has been initiated with a view toward coordinating and possible unification of those various systems into an over-all Government employee insurance.

The former Naval Mutual Aid Association (Navy Department employees) is in the process of being dissolved. A request has been made by the Association that the Insurance Bureau of the Ministry of Welfare assume operational control of the Association for the purpose of continuing the benefits provided by previous contributions. This Association has a number of former naval mutual aid hospitals which are a part of its assets. It is possible that these hospitals will become a part of the coordinated national hospital system and associated with the Health Insurance program.

Health Insurance

The Health Insurance Law provides that a portion of the reserve fund may be used for establishing hospitals and clinics where there is a lack of adequate medical service facilities. For the past two years, this fund has been conserved, but it is possible that a part of the fund may be available during the year. Additional information is now being compiled as to where hospitals and clinics are critically needed for improving the Health Insurance program.

Conferences have been held regarding fee-foe-service rate to doctors serving insurance patients. An effort is being made to increase this rate with a view toward improving the relationship between doctor and insured patient. It may, however, be delayed due to the possibility of a change in the cost of medical supplies. A new rationing system now being developed for the distribution of medical supplies should greatly improve the medical service for members of the Health and National Health Insurance Program.

SECTION VIII MEDICAL SERVICE

Japanese Civilian hospital Strength Report for the period ending 21 February 1947 shows 3,089 hospitals with a capacity of 217,761 beds, 110,385 of which were occupied. During this same period 285,065 outpatients were treated.

Medical Education

At a recent special three day session of the Japan Council on Medical Education, the problem of premedical education was discussed at great length. The Council voted unanimously to present the following recommendations to the Ministry of Education reaffirming previous recommendations made in August of 1946.

(1) Minimum requirements for entrance into medical school should be three years of a university or college level liberal arts course, including certain science courses considered basic to the study of medicine.

(2) A school normally offering liberal arts education on a university or college level should prepare students for medical school. Preparatory courses set up for the purpose of satisfying only the minimum basic medical requirements should be eliminated.

SECTION IX VITAL STATISTICS

Conferences on Vital Statistics and registration problems were held in Takamatsu, Kochi, Matsuyama, Kure and Hiroshima with Japanese Government officials. They were attended by prefectural court, health and statistical representatives.

SECTION X CONSULTANTS

Legal

Action was taken to revoke the license of a medical impostor. He had been granted a medical license by the Welfare Ministry upon his representation that he was a graduate of Johns Hopkins University which was found to be untrue.

Nutrition

The Japanese Nutrition Conference held in Yamaguchi City, April 7-8, was attended by representatives of SCAP, and two Japanese members of the Ministry of Welfare, Tokyo.

Yamaguchi City and surrounding area, with the assistance of the Military Government officers, have undertaken a plan of supplying a school lunch to the children. They have also initiated nutrition surveys aside from those conducted by the Japanese Ministry of Health.

SECTION XI MEMORANDUM TO IMPERIAL JAPANESE GOVERNMENT

None

CRAWFORD F.SAMS
Colonel, Medical Corps,
Chief, Public Health and Welfare Section.

2 Incls:

1. Weekly Summary Report of Cases and Deaths from Communicable Disease in Japan, week ending 5 April 1947 w/digest.
2. Venereal Disease Report for week ending 5 April 1947.

**GENERAL HEADQUARTERS
SUPREME COMMANDER FOR THE ALLIED POWERS
Public Health and Welfare Section**

WEEKLY BULLETIN

**For Period
13 April -19 April
1947
Number 16**

SECTION I - Welfare
SECTION II - Veterinary Affair
SECTION III- Dental affairs
SECTION IV- Nursing Affairs
SECTION V- Supply
SECTION VI- Preventive Medicine
SECTION VII- Social Security
SECTION VIII - Medical Services
SECTION IX - Consultants
SECTION X - Memorandum to I.J.G.

SECTION I
WELFARE

General

The Japanese Government has submitted to PHW, SCAP for study and suggestions, a draft of a National Disaster Plan. The plan sets responsibility for action and will make funds available at the national government level. Further reports as to its progress and content will be reported in the Weekly Bulletin.

SECTION II
VETERINARY AFFAIRS

Animal Disease Report

The Ministry of Agriculture and Forestry (Bureau of Animal Industry) reported the following new outbreaks of animal disease the period 13-19 April 1947:

<u>Prefecture</u>	<u>Disease</u>	<u>No. Cases</u>
Nagano	Anthrax	1

SECTION III
DENTAL AFFAIRS

The Council on Dental Education established a Committee on Textbook Revision and a committee to study procurement of supplies for dental schools. A committee for improving the method of teaching the basic science subjects was also appointed.

SECTION IV
NURSING AFFAIRS

Surveys of Schools of Nursing

All 46 prefectures have now been surveyed.

New students arrived in Tokyo this week to take entrance examinations for the Demonstration College of Nursing.

SECTION V
SUPPLY

Production

The following releases of DDT products were approved by the Welfare Ministry during the period 14-20 April.

<u>Prefecture & Ports</u>	<u>10% DDT</u>	<u>5% DDT Spray</u>	<u>Typhus Vaccine</u>
Yamaguchi	2,900 lbs.	300 gal.	200 vials
Kagawa	10,000 "		250 "
Tochigi		3,975 "	
Nagoya			500 "
Ichikawa	3,500 "		
Hakodate, Maizuru, Sasebo, Ujina	76,417 "		

The following stocks of DDT products and typhus vaccine were stored in Japanese depots on 12 April:

10% DDT	1,566,930	lbs.
5% DDT Spray	94,060	gal.

Typhus Vaccine 163,478 vials

The below stocks are in transit:

10% DDT 437,940 lbs.
5% DDT Spray 16,600 gal.

Production of principal biologicals during the month of March was accomplished as follows:

<u>Vaccine</u>	<u>Production</u>		<u>Stocks on Hand 31 March</u>	
	<u>Crude</u>	<u>Finished</u>	<u>Crude</u>	<u>Finished</u>
Cholera	20,000 cc		861,000 cc	306,870 cc
Typhus		1,325,758 cc		6,506,733 cc
Triple Typhoid	2,222,000 cc	396,620 cc	4,319,900 cc	840,348 cc
Smallpox	1,828,000 cc	3,988,648 ds.	23,878,550 ds.	2,046,379 doses
Diphtheria Anti-toxin		59,000 cc		583,932 cc
Diphtheria toxoid		90,000 cc		461,675 cc
Tetanus Toxoid		15,000 cc		210,000 cc

Production of insect and rodent control supplies during the month of March was accomplished as follows:

Antu (rat poison) 3,945,431 packages 3 gram
Nekoirazu (rat poison) 2,627 kgs.
10% DDT Dust from American furnished
DDT concentrate 650,091 lbs.
5% DDT Spray 68,733 gal.

Production of pyrethrum emulsion was started on 1 April. The entire production for 1947 will be an emulsion requiring dilution with thirty parts water prior to actual spraying. Production of 23,950 gal. was accomplished by 10 April. A production of 198,750 gal. is planned by 25 April. A total production of approximately 700,000 gal. is planned for the 1947 program.

Distribution

A shipment of 180,000 one quarter pound cans of anesthetic ether arrived in Japan. This ether is part of the medical supplies on the import program for civilian use for 1946, and will greatly aid in bolstering the stocks of ether now available in Japan. Distribution thereof will be made to all prefectures in the near future.

Approval was given for the sale of U.S. surplus x-ray apparatus to Korea.

Narcotics

Using modern methods of investigation introduced by the Narcotic Control Officers, Japanese Narcotic Inspectors of the Narcotic Division, Kanagawa Prefecture, successfully pursued and completed an investigation relative to narcotic violations by the proprietor of a pharmacy. Purchasing narcotics from the defendant and seizing a considerable quantity of narcotics from his residence, culminated in his arrest.

The successful completion of this investigation marks the passing of another milestone in the march towards narcotic control in Japan and is the culmination of a concerted effort by Narcotic Control Officers, to indoctrinate Japanese Narcotic Officials to the use of modern investigating methods.

At a meeting of the Japanese Dental Association of Chuo-ku, Tokyo-to, on 14 April, Narcotic Division and Narcotic Control Officials clarified many points of the Narcotic Laws found troublesome to the association members.

An inspection trip through northern Honshu revealed narcotic inspectors are making numerous superficial inspections of registrants with the result that little good is being accomplished. Many doctors, hospitals and other registrants are being permitted to retain stocks far beyond the amount needed for a six to eight months' supply. Conferences with Japanese narcotic inspectors throughout Japan will be held in Fukushima and Nara prefectures on the 6th and 13th of May respectively, at which times instruction will be given in the proper procedure of making inspections and investigations.

First hand information was also obtained that sufficient preparation has not been made to license appropriate farmers with designated areas for cultivation of marihuana for commercial fiber purposes. In one prefecture it was planned to license 30,000 farmers to grow marihuana for home use of fiber. This cannot be done since the required records and control would be so voluminous as to cause a breakdown in the marihuana enforcement program. The Ministries of Welfare and Agriculture have been advised to limit the number of producers of marihuana for fiber to approximately 30,000 for all the area (5,000 hectares) authorized for such cultivation in Japan. Appropriate corrective action has been taken on the national level and Military Government teams in the 12 prefectures concerned should determine that the number of farmers licensed for the authorized cultivation is as nearly as possible in proportion to the national program.

Some local wholesalers have not carried sufficient levels of narcotics to supply the area concerned. It is again stressed that local wholesalers by use of order forms may purchase narcotics at any time from central wholesalers all of whom now have adequate stocks on hand.

The Ministry of Welfare has been advised to take appropriate action against any narcotic dealer who advertises narcotic items for sale. Narcotics will be furnished only as the legitimate medical needs of the Japanese people require but not as part of any sales promotion program.

SECTION VI PREVENT MEDICINE

Typhus Fever Control

Comparative Score: (includes figures of 18 April)

1946 - 19,646

1947 - 686

Outbreak of Typhus in Tokyo Poor House

As of 18 April, 57 suspect cases of typhus fever have been reported from the Oyama Poor House in Itabashi Ku. Results of Well-Felix and complement fixation tests performed to date are as follows:

	Positive			Negative	No Date	Total
	1:40	1:80	1:160			
Weil - Felix	14	17	21	2	3	57
Complement Fixation	No report					

Based on this outbreak, the Ministry of Welfare and the Ministry of Justice has issued instructions to all prefectures to execute a dusting program in poor houses, vagrant homes, orphanages jails, prisons and similar institutions to prevent a similar occurrence in other parts of Japan.

Training Course for Laboratory Technicians in Tests Relating to Laboratory Diagnosis of the Typhus Fever.

On 14 April 1947, a representative from each of six prefectures in Japan met in the Infections Disease Institute in Tokyo for the first session of the ten day course designed to train qualified selected laboratory technicians to perform Well-Felix and complement fixation tests in the laboratory diagnosis of typhus fever. Similar courses will be held during the coming months for other groups of selected technicians from other prefectures of Japan.

Poster Contest by School Children

A nation-wide poster contest emphasizing typhus fever is being sponsored by the School Hygiene Association; an association subsidized by the Japanese Government. Posters depicting other phases of public health may be submitted in this contest.

Laboratory Control

During the past four months officials from the Welfare Ministry have been devising a system to supervise and aid laboratories throughout Japan. Many conferences have been held with Japanese representatives which resulted in their submitting a plan for the "Establishment of a National Laboratory Control Program" to which SCAP had no objections. (Ref. PHMJG-17)

In brief, the Welfare Ministry is adding a Laboratory Control Section to the Preventive Medicine Bureau to attend to the overall administrative details. A National Institute of Health, staffed by skilled scientific men, is being created to carry out the practical assay work and undertake various research projects. This will be a relatively independent agency with an extremely wide range of latitude as regards the scope of its activities, which will be decided by the scientific director and his staff.

The highly technical assay procedures on biologicals and anti-biotics will be carried out here. Certain sensitive unstable diagnostic sera, reagents, and items such as plague and rabies vaccine which are technically difficult to make and infrequently used will be produced and distributed to peripheral ken health offices. Research will be undertaken on the etiology, pathogenesis, prophylaxis and therapeutics of infectious and other specific diseases. Vaccines will be produced for experimental evaluation only, and if improvements are noted, bulletins will be dispatched to all manufacturers in Japan.

National Institutes for Cancer, Tuberculosis and Cardio-Vascular Disease Research, etc. will be set up as component units of the parent organization.

A system of national and local inspectors to maintain surveillance over all biologics manufacturing and eventually all clinical diagnostic laboratories is being evolved.

On the 15th, 16th and 17th of April, the first group of laboratory instructors received the initial instruction course in Tokyo. The following kens were represented:

<u>Ken</u>	<u>Representatives</u>	
Aichi Prefecture	Dr. Minoru Yamamoto	Dr. Kazuo Tomoyama
Chiba Prefecture	Dr. Ren Ishikawa	Dr. Takeo Takano
Fukuoka Prefecture	Dr. Somaki Ono	
Fukushima Prefecture	Dr. Yukiyasu Maniwa	
Hiroshima Prefecture	Dr. Minoru Okinami	
Hyogo Prefecture	Dr. Taro Yamazaki	
Ibaragi Prefecture	Dr. Mizuho Henada	Dr. Masami Kawasaki
Ishikawa Prefecture	Dr. Takeo Kanedo	Dr. Ko Yoshida
Kagawa Prefecture	Dr. Korehiro Hamada	Dr. Hideo Okamoto
Kanagawa Prefecture	Dr. Takeshi Kodama	Dr. Kenjiro Yamada
Kumamoto Prefecture	Dr. Tateyoshi Tsuchiya	
Kyoto Prefecture	Dr. Tatsuo Yoshida	
Niigata Prefecture	Dr. Hiroshi Mizutani	Dr. Itaru Shinokawa
Oita Prefecture	Dr. Katsumi Ninomiya	
Okayama Prefecture	Dr. Tatsuo Kuwabara	Dr. Susumu Yamagami
Osaka Prefecture	Dr. Michinori Hori	Dr. Masao Matsubara
	Dr. Kyoji Yamaguchi	Dr. Shinji Nishimura
Shiga Prefecture	Dr. Mitsusaburo Kawashima	
Tokyo Prefecture	Dr. Akinori Tada	Dr. Fumihiko Morita
	Dr. Masao Nagai	Dr. Minoru Ishido
Yamaguchi Prefecture	Dr. Kinichi Yamaguchi	Dr. Y. Sato

The following regional epidemic Control Officers attended:

Tohoku	Dr. J. Matsui
Tokai-Hokuriku	Dr. K. Goto
Shikoku	Dr. T. Matsuura
Chugoku	Dr. K. Shimizu
Kyushu	Dr. K. Taise

The above individuals were instructed to render a complete report to the ken Director of Public Health when they returned to their respective kens; and then to visit the Military Government Public Health Officer and review the details of their instruction course, enumerating the responsibilities which the Welfare Ministry had entrusted to them.

This is the first time that such a system of inspectors has been organized in Japan. Another instruction course which is being planned for the second group of inspectors, will take place approximately two months.

Sanitation

Mosquito Control. In order to be successful, mosquito control must be carried on largely by the individual. By the use of posters, news articles, lectures in schools shorts on the radio and such, the public should be informed as to what the individual must do to assist in the overall program. It is of vital importance that this be done immediately as the mosquito breeding season has already begun.

Both the Culex and Aedes, important disease vectors and the source of greatest annoyance, are largely domesticated and breed in fire reservoirs, urns, ornamental basins and incidental water in and around human habitats. Containers that catch and hold rain water can often be emptied or filled with sand, reservoirs for night soil and irrigation water storage tanks can be covered, and clogged drainage ditches on private property can be cleaned out by the individuals.

If breeding areas found that cannot be corrected, these should be reported to the Ku Health Office.

The elimination of mosquito production is the fundamental requisite of mosquito control. This requires, in addition to full cooperation of the individual, a well-planned overall program consisting of:

1. Field inspection by trained personnel to locate mosquito breeding places and determine the type of control most applicable.
2. Well trained and equipped crews to carry out control measures.

Emphasis must be put on complete coverage of areas. The plan must not only include treatment of all breeding places but be continuous throughout the entire breeding season.

The prefectural governments must provide transportation for insect and rodent control teams and supplies, otherwise the program will not succeed. Surplus U.S Army vehicles have been made available to the Welfare Ministry for this purpose and it is expected that the Welfare Ministry will allocate these vehicles to prefectural governments for insect and rodent control purposes.

Post Quarantine

The immediate objectives of the plan to make cyanide fumigation facilities available to all ports of entry have been accomplished. Trained Japanese teams are now active in this work at the key ports of Yokohama, Kobe, Kure and Moji. These services are thus reasonably accessible to all but the two Hokkaido ports of Otaru and Hakodate. When the demand is great enough, cyanide will be available in that area. In the meantime, sulfur is being used for such fumigations as must be done.

Weekly report of incoming quarantinable disease:

Week ending 12 April – Negative (No telegram received from port of Nagoya)

SECTION VII SOCIAL SECURITY

Social Insurance

Recent investigations revealed that the Japanese Government has a procedure for providing pensions for government career employees, somewhat similar to that provided by the U.S. Civil Service Retirement Act. Some aspects of the law seem to have been inaugurated as early as 1871. The program is administered by the Government Pension Bureau, which is attached to the Office of the Prime Minister. A 2% deduction is made from the basic wage of each employee, except for teachers and policemen, from whom only one percent is deducted.

The benefits include ordinary, invalidity and survivors' pensions, with the qualifying period for ordinary pensions being seventeen years. Policemen, however, are qualified after 12 years of service. The pension provides one-third of the basic wage at the time of retirement, with an increased monetary increment for each year of service in excess of qualifying period. The maximum pension is payable after 40 years of service. The most any individual would be eligible to receive would be 50% of basic salary.

Worker' Accident Compensation Insurance

The new Labor Standards Law precludes complete administration of the Workers' Accident Compensation Insurance program by one ministry, therefore, it is necessary for the functions to be the responsibility of the Ministry of Welfare and the new Ministry of Labor.

Health Insurance

The Japanese Medical Treatment Corporation is in the process of being dissolved. The hospitals belonging to the corporation have handled some of the medical service for members of the Health and National Health Insurance Associations. Plans, however, have been proposed for reorganizing these hospitals under a national hospital system to be coordinated with the National Health Insurance program. The former Medical Treatment Corporation hospitals are continuing their operations pending disposition by Ministry of Welfare.

The Ministry of Welfare has appointed a Board of Council for Social Insurances to determine the rate of medical examination fee to be charged members of health insurance associations by doctors, hospitals and clinics. The council is composed of representatives of the Insurance and Medical Bureaus within the Ministry, also, representatives of the medical, dental, employers, and employees associations, and individuals engaged in sociological research.

National Health Insurance

Recent surveys have revealed that the All-Japan National Agricultural Association has approximately six hundred hospitals located in rural areas. These hospitals have, in numerous instances, participated in the administration and operation of the National Health Insurance Associations. The Agricultural Association is among those associations which are to be dissolved and will probably be re-organized into cooperative agricultural organizations. It is expected their hospitals will then be coordinated with the over-all national hospital system as a part of the national health program.

SECTION VIII MEDICAL SERVICE

Japanese Civilian Hospital Strength Report for the period ending 28 February 1947 shows 3131 hospitals with a capacity of 217,047 beds. 109,996 of which were occupied. During this same period 286,382 outpatients were treated.

SECTION IX CONSULTANT

Nutrition Surveys

The February Nutrition Survey results on the average deviation of body weights for the twenty-seven prefectures and families of special workers (Coal mines – copper mines and railway workers), are given in the attached tables.

NUTRITION SURVEY – FAMILIES OF SPECIAL WORKERS - 1946

Average deviation of body weights of more than 10% in families of Special Workers from the Japanese stand sex, height and weight in percentage of the number examined in each age group (shown in parentheses). Included in this group are 4 #### mines (Bibai of Hokkaido, Joban of Fukushima, Mitsui Miike and Mitsui Yamano of Fukuoka). Kosaka Conner Mine of Akita and Rail-way workers of Tokyo. Only the under weights are shown for May and August.

NUTRITION SURVEY-27 PREFECTURES-1946-1947

Average deviation of body weights of more than 10% in Japanese rural population from the Japanese standard weight for a given age, sex, height and weight in percentage of the number examined in each age group (given in Parentheses). For May, August and November 1946 only the under weights are shown while the complete findings are presented for February 1947. The February 1946 results are not given as they were examined for 5% deviation instead of 10%.

SECTION X - Memorandum to I.J.G.

SECTION I
WELFARE

General

The Rt. Rev. Msgr. Edward J. Flanagan arrived in Tokyo 23 April 1947. Father Flanagan is best known for his work at Boys Town, Nebraska.

Father Flanagan's purpose while in Japan will be to reawaken the interest of the Japanese people and Government in children. His interest will be devoted to all children with no greater emphasis on delinquency than on other problems concerning children.

Licensed Agencies for Relief in Asia (LARA)

Allocation and distribution of LARA relief supplies are based on 4 groupings of areas, namely A, B, C, and D; the most urgent, (A), to areas of less need (D). The first allocation was made to Group "A" areas in December 1946, reference; Public Health and Welfare Section, SCAP, Weekly Bulletin #15 for period 6 April-13 April, page 5.

The first allocation and distribution of LARA supplies to Group "B" areas began in March 1947 and will be completed in April 1947. The following chart shows the allocation and destitutions to institutions in Group "B".

Prefecture	Institutions (infants)		Institutions (children)		Institutions (tubercular)		Institutions (special)		Total

Recent Fire Disasters (Summary)

A series of serious fires during the past ten days was climaxed with a tragic conflagration at Iida on 20 April 47. The fires were in widespread areas as indicated below:

NAGANO PREFECTURE

Iida City: The fire started at 1215 on 20 April 47 and continued to rage until midnight. Two-thirds of city was damaged with 3,984 homes destroyed and 17,814 persons homeless. Casualties were; 1 dead, 10 serious injuries and 170 minor injuries. Homeless are receiving temporary shelter in school houses and in homes of friends or relatives in adjacent areas. Estimated property damage 1,200,000,000 yen. Prefectural Governor has established disaster relief headquarters with Prefectural Welfare Chief in charge of relief operations.

AOMORI PREFECTURE

Aomori: The fire started at 1510 on 18 April 47 and burned out at 1720 on same date. 500 homes destroyed with 2500 persons homeless.

Damaioka: (fire on 16 April 47) 42 homes destroyed with 552 persons homeless.

Towada: (fire on 15-16 April 47) 27 homes destroyed with 178 homeless (15 April) 68 homes destroyed with 346 persons homeless (16 April)

MIYAGI PREFECTURE

Uguisuzawa: The fire started at 1200 on 18 April and was put under control at 1610 the same date. 28 homes destroyed with 422 persons homeless. 30 other buildings also destroyed. Estimated property damage 9,320,000 yen.

Ryotu: The fire started at 1540 on 17 April 47 and burned out at 2030 the same date. 350 homes were destroyed with 1900 homeless.

Yokohama: Fire during the afternoon of 17 April 47. 250 homes were destroyed with 1900 homeless.

FUKUSHIMA PREFECTURE

Kagamiishi: The fire discovered at 1520 on 17 April 47 and brought under control at 1700 on the same date. 40 homes destroyed with 300 persons homeless.

AKITA PREFECTURE

Wada: Fire broke out at 1230 on 18 April 47 and extinguished at 1430 on the same date. 94 homes destroyed with 600 persons homeless. Casualties: 1 dead

TOCHIGI PREFECTURE

Arakawa: Fire of two hours duration on 17 April 47. 16 homes destroyed with approximately 100 homeless. 30 other buildings destroyed. Estimated damage to property 150,000 yen. Casualties: 1 injury.

All prefectures reported their ability to meet emergency relief needs and have expressed gratitude for guidance and assistance by Military Government Units.

SECTION II VETERINARY AFFAIRS

Field Surveys

Representatives of PHW, SCAP conducted the following field surveys:

Hiroshima Prefecture

Livestock

A gradual increase is in progress due to the trend of people toward farm life. There is a shortage of concentrate feed.

Animal Disease Control

Animal disease control measures are effective. The 1947 Tuberculin testing program was started on 1 April; rabies immunization will begin in May 1947; a Pullorum disease control program will be initiated in June 1947.

Meat Inspection

Inspection is maintained in all slaughter houses but inspection methods are faulty. Proper ante and mortem procedure was demonstrated.

Dairy Inspection

The "Score Card" system of dairy farm and milk plant inspection is being utilized.

Summary

Prefecture officials are exercising insufficient supervision over field inspectors. Where defects were found to exist, responsible officials were advised to take corrective action. The Public Health Section of Hiroshima Military Government Team has recently inaugurated a satisfactory surveillance program over veterinary affairs.

Gifu Prefecture

Livestock

Considerable grazing land is being utilized river bottoms in certain areas. Where grazing is not available, dairy cattle are underfed due to grain shortage.

Animal Disease Control

Animal disease control measures are effective. The 1947 Tuberculin test of dairy cattle and rabies immunization of dogs has been inaugurated.

Meat Inspection

Inspection is maintained in all slaughter houses, but procedures are faulty because insufficient areas in the carcass are examined. Proper inspection methods were demonstrated. Sanitation is satisfactory, except in the disposal of wastes. Many pits have inadequate walls and covers.

Dairy Inspection

The "Score Card System" is being utilized. Some dairy farms were scored too high. Sanitation is satisfactory except in the matter of manure disposal.

Summary

The first land on the island of Honshu actually being utilized for grazing purposes was observed. Approximately 300 cattle were scattered along a river bottom. The grass was plentiful and the animals appeared to be in good condition.

Where defects were found to exist, responsible officials were advised to take corrective action.

The Public Health Section of the Military Government Team is exercising excellent surveillance over the Prefecture veterinary service.

Animal Disease Report

The Ministry of Agriculture and Forestry (Bureau of Animal industry) reported that no new outbreaks of animal disease occurs during the period 20-26 April 1947.

SECTION III DENTAL AFFAIRS

There were 13 dentists reestablished in practice during the month of March. Manufacturers' price of dental instruments produced during March amounted to 402,322,100 yen, while that for dental materials amounted to 298,283,895 yen.

SECTION IV NURSING AFFAIRS

Personnel

Miss Thompson and Miss Collins left for U.S.A. 21 April 1947.

The first annual meeting of the National Association (Midwives, Public Health Nurses and Clinical Nurses) is being held in Tokyo 27,28, 29 April.

SECTION V SUPPLY

Field trips to prefectures in central Honshu reveal that the distribution of medical supplies leaves much to be desired. Particular attention was given to the distribution of former Japanese military medical supplies and controlled medicines. There is a general laxity on the part of prefectural health officials in supervising this distribution.

In regard to the former military supplies, it was found that there are still large stocks of these in the Medical Distributing Companies' warehouses and in the warehouses of National Hospitals. The Welfare Ministry has issued instructions to prefectural authorities to dispose of these supplies to consumers. These instructions have either been disregarded or have not been carried out completely.

Plans for the distribution of controlled medicines seem satisfactory as formulated, but in operation prove very unsatisfactory. Too much authority is delegated by the responsible prefectural officials to other agencies, such as the Medicine Distributing Companies and Doctors' Associations. The Doctors' Associations should be advisory, not operating agencies, but in practice they become operating agencies. Due to the lack of proper supervision of prefecture government officials, the individual practitioner is deprived of his due share of these vital medical supplies. He is thus very often forced to seek relief by purchases on the black market. The situation may be summed up by saying that the distribution warehouses are too full, the individual practitioner's cabinet too empty.

It is not necessary to dwell on the importance to public health of the adequate distribution of medical supplies. It is desirable that Military Government Health Officers make every effort to discourage this hoarding of supplies in warehouses, and make constant checks to see that these supplies are distributed promptly and equitable, according to the needs of the individual practitioner. Only the authorized emergency reserve level of 5% is to be kept at the Medicine Distribution Company's warehouse.

Production

The following tabulation indicates releases of DDT products and typhus vaccine during week 20 – 26 April:

<u>Prefecture</u>	<u>10% DDT Dust</u>	<u>5% DDT Spray</u>	<u>Typhus Vaccine</u>
Aomori	8,000 lbs		300 vials
Wakayama	1,980 "		
Saga	2,000 "	1,500 gal	
Okayama	3,300 "		
Aichi	50,000 "		
Kagawa	5,000 "	1,000 "	
Iwate	10,000 "		
Ibaragi	11,880 "	5,200 "	1,000 vials
Gifu	10,180 "		
Miyagi	10,000 "		
Ehime	1,000 "		
Mie	6,000 "		
Nara	2,500 "		
Hokkaido			77,200 vials
Ujina (Quarantine Station)			500 "
Nagoya	2,200 "	250 "	200 "
Kanagawa	50,000 "		
Gumma	3,000 "		
Saitama	3,700 "	7,000 "	
Toyama	20,000 "		
Total	200,740 lbs.	14,950 gal.	79,220 vials

Narcotics

An inspection trip through western Honshu revealed similar conditions as ascertained in northern Honshu, with the Japanese narcotic inspectors making superficial inspections of registrants resulting in little good being accomplished. Some physicians, pharmacists and hospitals still retain far more than the normal six to eight months supply; and some hospitals and local wholesalers stock far too little in the amounts and varieties of narcotics in general use. It was again stressed that excess stocks of narcotics should be transferred from practitioners and retailers to local wholesalers for normal distribution, and that practitioners and retailers may purchase necessary narcotics, by use of order forms, from the local wholesalers, who in turn may secure all necessary stocks from the Central Wholesalers.

The registration of farmers for the licensed cultivation of Marihuana (Taima) in the prefectures allocated Marihuana cultivation areas, is progressing in a satisfactory manner, with corrective action being taken relative to eliminating the cultivation of small patches for the farmer's own home consumption.

Special emphasis was given to the safeguarding of narcotic stocks, and especially to precautions against loss by fire of local wholesalers stocks.

Two narcotic officials in Yamanashi Prefecture who were charged with embezzlement of narcotics and malfeasance in office were sentenced in Provost Court on 24 April to 4 1/2 years penal servitude plus a 20,000 yen fine and 3 years at hard labor plus a 10,000 yen fine. A former prefectural official, charged with participation in the above narcotic violation, was sentenced in Japanese court to 2 1/2 years imprisonment at hard labor.

SECTION VI PREVENTIVE MEDICINE

Typhoid Fever

Triple typhoid vaccine is being manufactured and an immunization program is being developed in an effort to immunize as many people as possible throughout Japan. Originally it was planned that the entire population of Japan would be immunized against typhoid and the para-typhoid fevers this summer. The problems of supplying sufficient potent vaccine for this program have been great and it now appears there will not be sufficient vaccine to take care of the needs of the entire nation. The Welfare Ministry is preparing a plan for the proposed typhoid immunization program.

Typhus Fever

Comparative Score (includes figures of 24 April)

1946 - 21,975

1947 - 722

Typhus Fever in Tokyo

Reports through 24 April 1947 show a total of 62 suspect cases have occurred in the poor farm in Itabashi Ku. No cases were found on 20 and 23 April. The outbreak has been brought under control through the prompt action of responsible Military Government and Tokyo health officials. Complement-fixation tests performed on early cases demonstrated the presence of murine typhus.

Training Course for Laboratory Technicians.

The first in the series of 10 day courses being conducted in Tokyo designed to train Japanese laboratory technicians in the techniques of the Well-Felix and complement fixation tests was completed on 23 April 1947. The second 10 day course is scheduled for 12 May 1947.

The technicians have received a through training and have now returned to their respective areas to be of service in the laboratory diagnosis of typhus fever.

Technicians representing the following prefectures were present.

Miyagi Prefecture	Mr. T. Sakuraba
Tokyo "	Dr. K. Kuratsuka
Niigata "	Dr. T. Shinokawa, Mr. K. Toyama
Osaka "	Dr. Y. Hachiwada
Kagawa "	Dr. K. Yamaoka
Fukuoka "	Dr. T. Kawamura
Kumamoto "	Dr. T. Kaizuka, Dr. N. Ueno

Scrub-Typhus

The Ministry of Welfare submitted a plan of research dealing with scrub-typhus and its control. Work will begin on 1 May 1947 in cooperation with the Public Health and Welfare Section, SCAP, and the 406th Medical General Laboratory.

Sanitation

1. Environmental Sanitation

The following programs have been initiated in each prefecture:

- a. Cleaning of rubble, debris and garbage.
- b. Cleaning and repairing sewers and drains
- c. Filling unused war emergency water reservoirs, bomb craters and low areas subject to collecting and water.

A considerable amount of work has been done in the large urban areas. Public works programs utilizing unemployed labor are largely designed for this purpose, and inestimable value is being derived there-from. By proper coordination of these programs, effective results can be attained that would otherwise be lost.

2. Insect and Rodent Control

a. Mosquito Program.

Plans for 1947 program have been completed and are already underway in most of the southern prefectures. There are sufficient insecticides and insecticide equipment ready for immediate distribution to the prefectures. Training conferences have been scheduled for Military Government and Japanese Public Health Personal for 6 – 10 May at Kyoto and 13 – 16 May at Sendai.

A limited amount of transportation has been proposed for assignment by the Welfare Ministry to insect and rodent control work in the prefectures from U.S. Army surplus vehicles recently transferred to the Japanese Government.

Port Quarantine

On Okinawa, arrangements are nearing completion to receive 281 lepers now in Japan, whose homes are in Okinawa and Amami-Oshima. These people will be brought together at the Sasebo Repatriation Reception Center and embarked for Okinawa about the fifteenth of May.

Weekly Report of Incoming Quarantinable Disease:
Week ending 19 April – Negative

SECTION VII SOCIAL SECURITY

Personnel

Dr. Lee D. Janis has joined Public Health and Welfare Section as Chief, Health Insurance Branch, of the Social Security Division.

Health Insurance

Recent information obtained through prefectural surveys indicates there is a large decrease in the number of persons formerly employed by industrial organizations carrying Health Insurance and the number now employed.

Additionally, Insurance offices in the prefectures do not have sufficient information as to the disposition of those formerly employed by industrial organizations and how they are now obtaining Health Insurance benefits.

Social Insurance

A social Insurance Medical Examination Fee Council, appointed by the Minister of Welfare, increased the charge per point rates by doctors and hospitals in rendering medical care to insured patients. The council was composed of representatives of the government, insured, employers, doctors, dentists, hospitals and persons engaged in sociological research. The rates are divided into three classes; (1) large cities, (2) smaller cities, and (3) communities and rural areas.

SECTION VIII
MEDICAL SERVICES

The civilian hospital strength report for the week ending 7 March 1947 shows 3140 hospitals with a capacity of 217,992 beds of which 113,878 are occupied. Out-patients treated for this same period were 310,564.

SECTION IX
CONSULTANTS

Nutrition

Nutrition Survey in Japan – Feb. 1947

Activity of all members of Japanese families studies in nutrition surveys in terms of the percentage of adult male units for various degrees of activity for males and females of different ages based on the total number of persons examined. Adult male unit of 1.0 and 0.8 represents a moderately active degree of work for men and women respectively.

SECTION III

NURSING AFFAIRS

National Association

The National Association of Midwives, Clinical Nurses and Public Health Nurses held a 3 day meeting in Tokyo at which all prefectures were represented. The New officers were elected for the ensuing 2 years and committee appointed for the proposed programs. There are ##### active members enrolled at present.

Demonstration School

There are 59 new first year students enrolled at the Demonstration College of Nursing for classes which opened 2 May.

SECTION IV SUPPLY

Production

Concurrence was given to application of the following ##### ##### permission to negotiate a loan for ##### ##### production:

Mitsubishi Chemical Co., Ltd.
Mitsui Chemical Co., Ltd

1ページ原稿抜け

activities throughout the various prefectures. The total number of vehicles involved is as follows:

Truck 3/4 ton, weapons carrier	347
Ambulances	145
Command cars	58
Trailers 1 ton	175
Trailers 1/4 ton	145

The Ministry of Health & Welfare was requested to submit an informal quarterly report which will include general information as to the distribution and use being made of surplus U.S. medical equipment and supplies, except trucks, purchased by the Japanese Government.

The estimated yearly requirement of clothing required for direct relief purposes has been computed by the Welfare Ministry at 23,263,794 pieces. This estimate has been submitted to the Ministry of Commerce and Industry for planning purposes. In order to obviate holding large stocks of relief clothing in storage by the Welfare Ministry, it is planned that quarterly requests will be submitted to the Ministry of Commerce and Industry covering relief clothing requirements. In accordance with present agreement between the Ministries concerned, all stocks of former Japanese Army-Navy clothing uncovered in the future will be turned over to the Ministry of Commerce and Industry for disposition.

Narcotics

Conference with Japanese narcotic officials and representatives of the companies concerned resulted in the following preparations being classified as exempt narcotics:

<u>Company</u>	<u>Address</u>	<u>Preparation</u>
Tomimatsu Phar. K.K.	Tokushima	Opiel
Taisei Phar. K.K.	Osaka	Allinda
Taisho Phar. K.K.	Tokyo	Papaxin
Taiwa Phar. K.K.	Nagoya	Keshinol
Nakakita Phar. K.K.	Nagoya	Opinarco

The above companies held considerable quantities of the named preparations and the Ministry of Welfare is granting temporary compounders' licenses to them to permit marketing of the products on hand and to compound the preparations from the materials in stock.

The Taisho Company is being required to reduce the narcotic content of Pabron and Papaveraekisu, which they have in stock, to within the exempt narcotic level. All the companies were advised it is their responsibility to keep the preparations compounded within the allowable narcotic content which is to be shown on the labels. The preparations which are in the stocks of wholesalers and which contain more than the exempt narcotic percentage allowable, are to be sold as regular narcotics to registered practitioners and pharmacies.

Three out of four sizeable burglaries reported during the week were from National Hospitals. The Narcotic Section, Ministry of Welfare, has been advised this situation must be corrected and thefts curtailed. Narcotic agents are being instructed to prefer charges against and demand prosecution of registrants, under Article 48 of the Narcotic Regulations, who fail to keep narcotic stocks in a place considered reasonable safe from theft and burglary.

As a result of advice recently given in modern narcotic investigative procedure by Narcotic Control Officers to a group of Japanese narcotic agents, one prefecture has reported the arrest of a Korean with a large stock of illicit narcotics. The narcotic agents kept a known narcotic addict under surveillance to determine his source of narcotic. The trail led to the Korean. The surveillance is continuing and other arrests are expected as a result of the illicit trading being carried on by the addict.

SECTION V PREVENTIVE MEDICINE

Typhus

Comparative score 1 Jan to 2 May

1947	735
1946	24,234

Prophylactic Vaccination Programs

Hokkaido has started a louse-borne typhus vaccination program in the larger cities and coal-mining areas. Complete courses of vaccination are to be given this spring and a booster dose next November.

In Niigata, a limited number of scrub typhus vaccinations will be given in infected areas, as a field trial of the new scrub typhus vaccine.

Laboratory Activities

(Ref. PH&W Weekly Bulletin #10 and 16)

A series of conferences have been held by the Japanese Council on Cholera Vaccine. Military Government Health Officers will receive through the Weekly Bulletin English Translations of the Official Minimum Requirements which were drawn up during these sessions. As before, thru Japanese channels, the Welfare Ministry is forwarding identical English copies and literal Japanese translations to each Ken director of Public Health and to each biologics manufacturer in Japan.

It is suggested a check be made by 20 May to insure that copies have been received.

A complete list of biologics manufacturing laboratories is given in PH&W Weekly Bulletin #10, 2-8 March.

A recent inspection of laboratories in the Osaka, Kyoto, Kobe, Nagoya Area revealed that manufacturers had failed to initiate mass production of triple typhoid vaccine due to failure of the Welfare Ministry to notify them as to their quota. These notices were sent out by the Ministry on 21 April and should now have reached each manufacture.

The current TAB vaccine production program is an urgent one. In order to insure optimum production immediately it is suggested that:

1. The Military Government health officers check to see that all producing laboratories are making maximum efforts to meet production quotas.
2. Inform laboratories to store final diluted vaccines under refrigeration for a 3 to 5 day period and then have the local inspectors collect and send samples to the central assay laboratory in Tokyo.
3. Check the details of collecting samples with the local inspectors in your prefecture. (Ref. Min. Req. Typhoid Vaccine dtd 2-27-47, Sect. V par 2).

An increase in the price of the triple typhoid vaccine is now under consideration by the Welfare Ministry. As soon as it is approved by the Price Control and Rationing Board, the manufacturers will be notified of the new price through official Japanese channels.

Venereal Disease Control

A number of Military Government health officers have asked for suggestions in planning a prefectural V.D. control program. The following suggestions are submitted as a basis upon which each prefecture can make adaptations according to its own needs.

PREFECTURAL PROGRAM FOR VENEREAL DISEASE CONTROL

With the national support of the Welfare Ministry and with the local advice and recommendations of the Military Government Health Officer, the Prefectural Health Departments should:

1. Establish and maintain a Division of Venereal Disease Control, whose function shall be to conduct a comprehensive program for the prevention, control and cure of venereal diseases for all the people of the prefecture.
2. Appoint a full-time chief of the division of Venereal Disease Control who should devote his entire time to the duties of his office. The chief of this division should be a qualified doctor of medicine who is best informed as to modern public health methods of venereal disease control, and who is best able to teach these methods to other public health physicians. The chief of the division of Venereal Disease Control should be given such assistants as are necessary to carry out the provisions and purposes of this program.
3. The chief of the division of Venereal Disease Control (Prefectural Venereal Disease Control Officer) and his assistants, should perform and discharge all of the powers, duties, purposes and functions which are herein or may hereafter by law be vested in them to carry out effectively the national and prefectural programs.
4. Organize, establish and supervise, in national, prefectural and municipal hospitals and all health centers, such in-patient and out-patient diagnostic and treatment facilities as are necessary to furnish adequate services for the general population. Private facilities will not be used by government agencies where public buildings exist.
5. Provide, with the support of the Welfare Ministry, adequate laboratory personnel and facilities to carry on the program effectively.
6. Initiate, direct, and conduct a continuous program of sound public education which will tell the people what these diseases are, how they are transmitted, how they are diagnosed, and telling where the people can obtain free public diagnostic and treatment services.
7. Establish effective cooperation for modern venereal disease control with private physicians, local medical societies, scientific groups, and other agencies which will help in the development of the program. This can be done through conferences, provision of consultation services, distribution of helpful literature, provision of laboratory services, and such other assistance which will lead to more willing participation in the health department's program.
8. Organize and supervise contact tracing, effective treatment schedules and follow-up services. Study and supervise efficiency of these epidemiologic and clinical procedures.
9. Collect, record, consolidate, and forward to the Welfare Ministry, Division of Venereal Disease Control, monthly reports of venereal disease control activities.
10. Cooperate with other governmental agencies for the prevention, control and cure of venereal diseases.

Port Quarantine

An agreement was reached during the past week whereby the Welfare Ministry will provide the port authorities at Yokohama with Japanese personnel to assist in the work of Port Quarantine. This personnel will assist the USN Quarantine Officer in maintaining quarantine liaison through the Welfare Ministry. They will also handle the immunization of Japanese dock workers and assist in the port Rodent Control program.

Weekly Report of Incoming Quarantinable Disease

Week ending 26 April – Negative.

SECTION VI SOCIAL SECURITY

Social Insurance

Surveys reveal the Japanese Government did not foster social insurance programs in Korea.

No objections were made to proposed ordinances by the Ministry of Welfare incorporating features prescribed by the New Constitution into the administration of the Welfare Pension Insurance program. They included:

- a. Granting of equal status to all children involved as survivors instead of giving sole consideration to eldest male child.
- b. Participation of elected officials of prefectural government in administration of program.

The Insurance Bureau, Ministry of Welfare, has initiated a program for assembling data on industrial conditions with a view toward establishing an unemployment insurance program.

National Health Insurance

Representatives of the Visiting Nurses Association of the National Health Insurance Associations presented a request to the Ministries of Welfare and Finance that additional appropriations be made to the national health program in order that more adequate medical care can be provided in the rural areas.

An inquiry regarding the budget allotment for National Health Insurance during 1947 has revealed that a tentative amount had been approved, which may be increased by the Diet under provisions of the New Constitution.

The nurses further revealed that a majority of the people in the rural areas desire a national health program. Most of the Associations that had to suspend operation were in low income areas or small communities where finances and lack of clinical facilities are a problem.

SECTION VII MEDICAL SERVICE

Japanese Civilian Hospital Strength Report for the period ending 14 March 1947 shows 3,147 hospitals with a capacity of 218,641 beds, 102,174 of which were occupied. During the same period 307,034 out-patients were treated.

SECTION VIII CONSULTANTS

Nutrition

The Japanese Society of Food and Nutrition, recently organized, held its initial conference 1 and 2 May at Keio University, Tokyo. Membership in the Society included all individuals trained in the basic science of nutrition as well as those professionally interested in food.

The Chief of the Public Health and Welfare Section, SCAP, addressed the members on the opening day of the conference. The Chief Nutrition Consultant, SCAP, addressed the group on the topic, "Broadening the Field of Nutrition for National Health".

Nutrition Surveys

Scheduled for the May nutrition surveys were received from Miyagi, Tochigi, Kanazawa, Gunma and Chiba.

SECTION II VETERINARY AFFAIRS

Field Surveys

Representatives of PHW, SCAP conducted the following field surveys:

TOYAMA PREFECTURE

Livestock

Practically all farm work in this Prefecture is performed by horses, if the animals now in the fields are any indication. The condition of livestock is the best observed in Japan. Every animal was in good flesh which indicates the presence of ample concentrate feed.

Animal Disease Control

Animal diseases are being controlled. The 1947 tuberculin test of dairy cattle, rabies immunization of dogs and pullorum test of chickens are in progress.

Meat and Dairy Inspection

Ante and post mortem inspection is being maintained in all slaughter houses. A demonstration of proper procedure was made in each slaughter house visited.

The "Dairy Score Card" is being utilized for the inspection of dairy farms and milk plants.

ISHIKAWA PREFECTURE

Livestock

Some reduction in numbers is in progress due to feed shortage. This is especially true of hogs. Dairy cows are generally underfed, emaciated and poorly groomed.

Animal Disease Control

Animal diseases are being controlled. The 1947 tuberculin test of dairy cattle and rabies immunization of dogs and testing of chickens for pullorum disease are in progress.

Meat and Dairy Inspection

Ante and post mortem inspection is being maintained in all slaughter houses, but its efficiency could be improved by a more detailed examination. A demonstration of proper procedure was made in each slaughter house visited.

A large proportion of the milk production is being manufactured into powdered skim milk and butter.

Animal Disease Report

The Ministry of Agriculture and Forestry (Bureau of Animal industry) reported that no new outbreaks of animal disease occurred during the period 4-10 May 1947.

SECTION III SUPPLY

Distribution

The Welfare Ministry has notified all prefectural governors that they must assume responsibility for the distribution of drugs required for the treatment of venereal disease. This includes items that are being imported as well as Japanese production. Under the plan prepared by the Welfare Ministry, each prefecture will be notified as to the amount of drugs that are being allocated for venereal disease control. The allocation of these drugs within prefectures and the development of a distribution system, are the responsibilities of the prefectural health officers.

Prefectural governors have been advised that the present prefectural medicine distributing company has been temporarily designated as the agency to receive and distribute these drugs. Additional agencies may be designated as distributing outlets by the prefectural governor, if desired, but the central wholesaler will ship to only one dealer in each prefecture.

Public clinics are to be given preferences in allocations in accordance with the ministry instructions.

It is essential that prefectural health officers immediately formulate a plan covering the distribution of 220,000 pieces in 1947, as follows:

Sprayer, knapsack type	50,000 each
Sprayer, semi-automatic pump type	20,000 "
Sprayer, hand	50,000 "
Duster, DDT	100,000 "

The allocations to the prefectures are based on population. Instructions regarding this distribution plan are being forwarded by the Welfare Ministry to the prefecture government officials concerned.

Production of much of this equipment is still in progress. As quantities are made available by the manufacturers, they are to be shipped to the prefectures.

Emphasis is being placed on the speedy distribution of spraying equipment, since the season for intensive spraying of insecticides is at hand. There is a quantity of imported equipment which has recently been received, a back-log of previous import programs. This is being used to supplement the supply of Japanese produced apparatus.

Distribution has already started, and will continue until the program is completed. Some 3800 pieces have been shipped to a total of 10 prefectures, on requests from prefecture authorities.

On hand now, and in the process of being distributed are some 44,383 pieces, as follows:

Sprayer, knapsack type	9,383
Hand equipment (sprayers and dusters)	35,000

These are to be distributed to local prefecture authorities, and to the Transportation Ministry, by the end of May. The Transportation Ministry will make use of this equipment for disinfection of rolling stock and other transportation facilities.

In connection with the distribution of spraying equipment, a plan for wide distribution of pyrethrum emulsion is being carried out. Distribution to the prefectures has already been started, and under present plans, will be completed by the end of June. A total of 782,000 gallons will be shipped to the various prefectures under this program.

Production

The following releases of DDT products and Typhus Vaccine was approved by Welfare Ministry during period 5 - 10 May:

<u>Prefecture</u>	<u>10% DDT Dust</u>	<u>5% DDT Spray</u>	<u>Typhus Vaccine</u>
Hiroshima	3,850 lbs.		
Chiba	15,600 "		1,230 vials
Hakodate (Quar. Sta.)			1,800 "
Maizuru	"		1,440 "
Ujina	"		1,080 "
Moji	"		720 "
Nagoya			360 "
Kumamoto	6,000 lbs.		
Shimane		4,150 gals.	

Total stocks now in depots, factories and intransit are as follows:

10 % DDT Dust	2,222,896 lbs.
5% DDT Residual Effect Spray	285,845 gals
Typhus Vaccine	6,630 vials

The below listed companies have been authorized by the Ministry of Health and Welfare to manufacture penicillin for sale. The entire output continues to be distributed in accordance with allocations determined by the central committee established by the Welfare Ministry. Two (2) manufacturers have now completed pilot plants. Actual production is still very low averaging approximately 300,000,000 units monthly.

Companies authorized to produce Penicillin for sale

Morinaga Co., Ltd.	Mishima-City, Shizuoka Pref.
Wakamoto Co., Ltd.	Setagaya-ku, Tokyo-To
Banyu Co., Ltd.	Kamiora-machi, Okazaki-City
Yashima Co., Ltd.	Kitaurawa-machi, Urawa-City
Lion Co., Ltd.	Date-Gun, Fukukshima Pref.
Wakodo Co., Ltd.	Awa-Gun, Chiba Pref.
Meiji Sangyo Co., Ltd.	Kawasaki-City, Kanagawa Pref.
Gunze Co., Ltd.	Isuka-Gun, Kyoto-Fu
Taito Shokusan Co., Ltd.	Osawara-City, Kanagawa Pref.
Sanyo Yushi Co., Ltd.	Nishi-ku, Nagoya-City
Mitsui Co., Ltd.	Meguro-ku, Tokyo-To
Teikokusha Co., Ltd.	Tsurumi-ku, Yokohama-City
Osawa Milk Co., Ltd.	Kumagaya-City, Saitama Pref.
Tamagawa Inst.	Suginami-ku, Tokyo-To
Riken Eiyo Co., Ltd.	Itabashi-ku, Tokyo-To
Shinagawa Denki	Naka-kanbara-Gun, Niigata Pref.
Yamanouchi Co., Ltd.	Higashi-ku, Tokyo-To
Nihon Kako Co., Ltd.	Itabashi-ku, Tokyo-To
Meiji Milk Co., Ltd.	Nishi Yodogawa-ku, Osaka City
Nakajima Kagaku	Sarashina-Gun, Nagano Pref.
Kowa Med. Inst.	Chichibu-Gun, Saitama Pref.
Hokkaido Rakukno Co., Ltd.	Sapporo-City, Hokkaido
Hida Seiyaku Co., Ltd.	Yoshiki-Gun, Gifu Pref.
Toyo Jyozo Co., Ltd.	Takata-Gun, Shizuoka Pref.

Production of DDT Dusters and spraying equipment was initiated early in April and gained momentum during the latter half of the month. Actual production during April was accomplished as follows:

DDT Dusters	9,946
Sprayer, knapsack type, 3 gallon	1,800
Sprayer, pump type, semi-automatic	1,050

Production program of microscope with dark field attachments, initiated to provide all venereal disease clinics with required number, has progressed satisfactorily during 1947. Actual production of 85 has been accomplished from January through April and distribution has been made as follows:

<u>Prefecture</u>	<u>Quantity</u>	<u>Prefecture</u>	<u>Quantity</u>
Hokkaido	4	Nagano	3
Iwate	1	Gifu	3
Miyagi	2	Shizuoka	1
Akita	4	Aichi	2
Fukushima	2	Mie	2
Ibaraki	2	Kyoto	2
Tochigi	2	Tottori	2

Tokyo	3	Tokushima	1
Kanagawa	7	Kagawa	1

Niigata	3	Saga	4
Toyama	2	Nagasaki	4
Fukui	3	Kumamoto	2
Yamanashi	1		

Narcotics

A two-day conference was held in Fukushima prefecture with Japanese narcotic agents from seventeen prefectures comprising the eastern part of Japan. The narcotic and marihuana laws were explained by four Japanese officials from the Narcotic Section, Ministry of Welfare. The SCAP Narcotic Control Officer emphasized the progress made in narcotic control during the past year, the necessity of acquiring prestige for themselves and gaining the cooperation of other public officials and registrants through use of common sense, hard work, honesty and a through understanding of the narcotic and marihuana laws. Corrective action, considered necessary from personal field trips and reports received from the Ministry of Welfare, that must now be taken by prefectural narcotic officials to assure continued progress in narcotic control work was also stressed.

The Assistant Narcotic Control Officer gave instructions in modern narcotic enforcement procedure, citing as examples the results obtained in recent investigations conducted as directed by Narcotic Control Officers.

Narcotic officials from all the remaining prefectures in Japan will assemble in Nara prefecture 13 May 1947.

The Ministries of Welfare and Agriculture have instructed prefectural officials to authorize marihuana cultivators to plant the crop now in the areas authorized by registration, without waiting for the actual issuance of a marihuana producer's certificate, since the planting season is at hand.

The Ministries of Welfare, Justice and Home Affairs have been instructed to proceed with a plan to grant power of arrest, for narcotic violations only, to authorized narcotic agents as a result of a conference between the officials of the above Ministries and SCAP officials from the special staff sections concerned. Narcotic enforcement is a national problem rather than a local one and it is necessary that uniform procedure as directed by the Ministry of Welfare and supervised by Narcotic Control Officers, be followed to assure strict narcotic enforcement and control.

SECTION IV PREVENTIVE MEDICINE

Typhus

Comparative Score (Includes total figures from 1 January 1947 to 9 May 1947)

1947	762
1946	25,955

Thirteen prefectures reported programs underway for the delousing of school children's heads since 1st of May. Several others have not reported but are known to be working.

Venereal Disease Control

The following epidemiologic data is for March 1947.

	<u>Carried over from previous Month</u>	<u>March 1947</u>

SECTION V SOCIAL SECURITY

Social Insurance

The initial major recommendations were made to the Ministry of Welfare with respect to those projects believed necessary to incorporate democratic principles into the administration of the social insurance laws and to attain a comprehensive coordinated social insurance system. The recommended projects are as follows:

1. The establishment of a comprehensive informational and educational program at all administrative levels for conveying to the public full information on all aspects of the social insurance program.

2. The establishment of a system of reports covering statistical and financial information with reference to all the social insurance programs to be gathered and compiled by the Insurance Bureau of the Ministry of Welfare, with special emphasis on the regular receipt of reports from the prefectural governments and various mutual aid associations.

3. The initiation of a program of research and analysis for the development of an unemployment insurance program.

4. The development of a plan for the utilization of reserve funds of the Welfare Pension, Seamen's, and health Insurances.

5. The conducting of necessary research and giving consideration to the possibility of paying pension benefits at an earlier date than now prescribed by law and the possibility of revising the present high contribution costs.

6. The development of a supervisory plan for insuring proper administration of the various insurance laws at all administrative levels.

7. The study and consideration of the possibility of unifying the various health provisions of the social insurance laws into one national health program.

The Ministry of Welfare is responsible for the direct supervision of those sections of the prefectural governments administering the social insurance program and controls the appointment of the heads of such sections.

Discussions were held with Japanese officials relative to the administration and coverage under the social insurance programs of employees of concerns operated by foreign interests. It was finally determined that the social insurance laws are applicable to such concerns, and officials will formulate procedures to be followed by such employers for meeting their obligations under such laws.

No objections were made to a revised draft of an Imperial Ordinance which incorporates features prescribed by the new Constitution and Civil Code into the administration of the Seamen's Insurance Law.

SECTION VI MEDICAL SERVICE

Japanese Civilian Hospital Strength Report for the period ending 21 March 1947 shows 3162 hospitals with a capacity of 219768 beds, 106,299 of which were occupied. During this same period 279,694 out-patients were treated.

SECTION VII NUTRITION

Nutrition surveys were begun May 4 in the Tokyo area.

During the week, a meeting was held with the Japanese Nutritionists, conducting the surveys.

The nutrition surveys were observed by the Nutrition Consultant in the following Kus:

Shinziku, Adachi, Ushigome, Setagaya, Nabano, Shinagawa, Meguro, Toshima, Takinogawa, and Yadobashi

SECTION I GENERAL

Public Health Training Program

Reference is made to Section II, Public Health and Welfare Weekly Bulletin for period 8-14 December 1946 and Section I, Bulletin #12 for period 16-22 March 1947.

The inauguration of this program has been delayed, however dormitory facilities are now under construction and it is expected that facilities sufficient to accommodate 100 students will be available by 16 June 1947.

The first course for Public Health nurses began as scheduled on 2 April 1947. The course for Public Health officers (doctors) and a course for Public Health Sanitarians is scheduled to start on 16 June 1947. Each class will have approximately 50 students. Current plans call for the opening of two additional courses on 1 July 1947 and two on 1 August 1947. The two courses beginning 1 July will be for Veterinarians and Pharmacists. Courses beginning 1 August will be for Sanitary Engineers and Nutritionists.

These courses are intended to serve as refresher courses for those with some knowledge of public health practices and to teach modern public health methods to those who are not properly grounded in their respective public health specialities. By this means, it is hoped to provide the necessary training to effectuate a sound coordinated public health program throughout Japan. It is expected that the students for these courses will be selected largely from those personnel who are now actively engaged in public health work in the various prefectures. Each class will have at least one student from each prefecture.

The Institute of Public Health will extend invitations to each Prefectural Health Department in advance of the starting date of each class. Each military government Health Officer is urged to have the prefectural Health Officer notify him upon arrival of the invitations and to exercise surveillance over the selection of students for the various courses. It is believed that the first students selected for attendance should be the key personnel in each health department.

It is important that the prefectural Health Officer himself should attend the course for Health Officers. He should attend the first course, but if this is not possible then he should attend the second course. Courses will be repeated until such time as they are either no longer required or are supplanted by more appropriate training courses.

SECTION II WELFARE

Child Welfare Law

The second draft of the child Welfare Law is now under study by PHW Section, SCAP. Incomplete study indicates that several changes may be necessary in context as well as underlying philosophy.

Personnel

Mr. Don Wilson, formerly Public Welfare Officer, MG, 8th Army, has Joined PHW, SCAP as Social Work Training Consultant.

Summary Covering Recent Fire Disasters (Nagasaki & Ibaraki Prefectures)

Fire disasters have continued and between the period 21 April 1947 - 29 April 1947 there occurred six fires of major proportions which destroyed 1,598 homes and rendered 7,871 persons homeless. A brief summary report on these fires has been received from the Health and Welfare Ministry and is given below:

IBARAKI PREFECTURE

Itako: Fire started at 1420 on 21 April 1947 and was under control at 1740 the same date. 102 homes were destroyed with 570 persons made homeless. No casualties reported. Estimated property damage 35,000,000 yen. Immediate emergency relief measures were taken by the prefecture with 100 yen issued to each destroyed or seriously damaged household. Emergency feeding was accomplished through generosity of neighboring

towns and villages. 2 go of soy, 50 momme of miso and 2.5 go of rice as a daily ration in an amount for a period of 7 days distributed free to disaster sufferers.

Ishizuka: Outbreak of fire discovered at 1210 on 26 April 1947 and extinguished at 1400 on the same date. 158 homes were destroyed with 666 persons homeless. 3 persons were injured. Estimated damage of property placed at 82,000,000 yen. Emergency relief was provided by both prefectural and local officials. The prefecture made available; 250 blankets, 300 pieces of clothing and 17 cases of canned goods. The local officials provided cooked rice to all sufferers. Plans are now underway to construct 150 houses (barrack type) to house the homeless.

Nakaminato: Fire occurred at 1710 on 29 April 1947 and burned out at 2300 on the same date. 1,116 homes were destroyed rendering 5,580 persons homeless. No casualties reported. Estimated property damage 100,040,000 yen. The Chief of Education and Welfare was assigned the responsibility of supervising emergency relief operations. Temporary housing was provided in the schools and temples where food was also made available. The prefecture distributed 550 blankets, 730 pieces of clothing, 131 cases of canned goods and 50 cases of biscuits. Present plans are being made to construct 100 houses (barrack type). Neighboring towns and villages are sympathetic and assisting materially to alleviate the suffering.

Kanasa: Fire started at 1330 on 29 April 1947 and brought under control at 1500 on the same date. 52 homes were destroyed with 300 persons homeless. No casualties reported. Local officials are handling emergency relief problems and have furnished food, 300 blankets and clothing.

NAGASAKI PREFECTURE

Obama: Fire outbreak at 1300 on 22 April 1947 and extinguished on same date. 81 homes destroyed with 364 persons homeless. All homeless persons provided with temporary shelter through relatives and friends. All households in Takaku Country contributed 3 yen to relief which was disbursed to sufferers. Distribution of clothing, foodstuffs and cooking utensils is reported to be underway.

Shinchi: Fire occurred at 1330 on 24 April 1947 and extinguished at 1705 same date. 89 homes destroyed with 391 persons homeless. 1 person reported injured. All homeless were sheltered by relatives with the exception of 50 persons who were housed in Sufuku Temple and Jichu primary school. 100 yen per household was granted and each person was provided with a blanket, clothing, cooking utensil and a special distribution of rice sufficient for a period of 5 to 10 days.

SECTION III VETERINARY AFFAIR

Monthly Animal Disease Report

Following is a summary of the monthly animal disease report for April 1947, submitted by the Ministry of Agriculture and Forestry:

<u>Disease</u>	<u>Number of cases</u>
Anthrax	1
Brucellosis	2
Triohomoniasis	63
Texas Fever	22
Equine Infectious Abortion	22
Swine Erysipelas	3
Strangles	121
Rabies	5
Equine Infectious Anemia	52
Pullorum Disease	915

Weekly Animal Disease Report

The Ministry of Agriculture and Forestry (Bureau of Animal Industry) reported the following new outbreaks of disease during the period 11-17 May 1947.

<u>Prefecture</u>	<u>Disease</u>	<u>Number of Cases</u>
Chiba	Swine Erysipelas	2

SECTION IV DENTAL AFFAIRS

Sixteen dentists were re-established in practice during the month of April.

Three thousand dentists attended the first National Dental Convention ever to be held. Lectures and table clinics were given by American dental officers. The general Dispensary Dental Clinic was opened for the inspection of American equipment.

SECTION V NURSING AFFAIRS

Two, one week courses were held in Kyushu for the purpose of giving lectures and demonstrations to Japanese nurses. First course was held from 5 to 10 May 1947, at Kyushu Imperial University Hospital. Lectures and demonstrations on various phases of nursing were given by Japanese and American nurses.

The second week, 12 to 17 May 1947, the course was held in the National Tuberculosis Sanatorium in Kumamoto.

Both programs were very successful, well attended and considerable interest was shown by the prefectural authorities.

Prefectures represented:

Fukuoka	30	Saga	7	Nagasaki	8
Oita	8	Kumamoto	22	Miyazaki	12
Kagoshima	13	Total --	100		

A conference was held in Gifu with Prefectural nurses and doctors for the purpose of discussing their Prefectural nursing organization. Problems relating to the Public Health Nurses course in Tokyo were reviewed. Several hospitals were visited, programs for nurses training schools were discussed.

SECTION VI SUPPLY

Production

The allocation of coal and lignite for hospital use has been increased for the months of May and June by the Economic Stabilization Board, Japanese Government. A study is being made by the Welfare Ministry, to determine past consumption and requirements during summer and winter season for all hospitals throughout Japan. Blank forms have been forwarded to all prefectural governors requesting detailed data on this subject. This data will provide a basis for presenting requests for additional allocation of coal to meet actual requirements in hospitals. Military Government Officials should stress the necessity for high priority of coal for hospital use with local prefectural officials handling distribution. In addition a check should be made to determine that local officials are submitting the report mentioned above, to the Ministry of Health and Welfare.

Production of Insect and Rodent Control Supplies continued according to plan during April. April production of DDT Products was sufficient to provide a sizeable reserve stock of 10% DDT Dust and a small stock of 5% DDT Residual Effect Spray. Production of pyrethrum emulsion and spraying equipment, for mosquito and fly control program during 1947, was initiated and progress was excellent. Quantitative production of Insect and Rodent Control Supplies during April was accomplished as follows:

Antu (Rat Poison)	2,148,766 (3 gm pkgs)
Neikorazu (Rat Poison)	3,440 kg's
Rat Traps (Spring Type)	5,000 each
Pyrethrum Emulsion (x-30)	216,300 gal's

DDT Dusters	9,946 each
Sprayer, knapsack, 3 gallon	1,800 "
Sprayer, Pump Type, Semi-automatic	1,050 "
10% DDT Dust (Utilizing American Furnished DDT Concentrate)	121,510 lbs
5% DDT Residual Effect Spray (Utilizing American DDT Concentrate)	45,233 gal's.
10% DDT Dust produced with Japanese DDT Concentrate	80,000 lbs.
Sprayer, Hand, 1/2 Gallon	7,000 each

Produced of X-Ray film during April is considered adequate to meet minimum requirements and compares favorably with previous monthly production. Quantitative production was accomplished as follows:

<u>Size</u>	<u>Quantity</u>
4 3/4 x 6 1/2	6,292 Dozen
6 1/2 x 8 1/2	3,588 "
8 x 10	3,759 "
10 x 12	12,980 "
14 x 17	84 "
35 m/m film	21,417 rolls

The following releases of DDT Products and Typhus Vaccine were approved by welfare Ministry during period 12 – 17 May:

<u>Prefecture</u>	<u>10% DDT Dust</u>	<u>5% DDT Spray</u>	<u>Typhus Vaccine</u>
Akita	8,000 lbs.	300 gals.	
Kyoto	1,500 "	15,000 "	
Mie	1,000 "	75 "	
Nara	15,400 "	250 "	250 vials
Takamatsu	6,000 "	3,550 "	
Saitama	2,750 "		
Gumma	6,000 "		
Nagasaki	2,480 "	350 "	
Gifu	3,740 "		
Shiga	980 "	2,650 "	475 vials
Ehime	1,000 "		
Kagoshima		345 "	
Hokkaido	7,000 "		

Total stocks now in depots, factories and intransit are as follows:

10% DDT Dust	2,155,471 lbs.
5% DDT Residual Effect Spray	291,380 gals.
Typhus Vaccine	113,738 vials

Production of DDT Dusters and Spraying equipment decreased for the first ten days of May. Actual production accomplished was as follows:

DDT Dusters	1,000
Sprayer, knapsack type, 3 gallon	43
Sprayer, pump type, semi-automatic	600

The decided drop in the weekly production, especially in the case of the sprayer, knapsack type, 3 gallon is attributed to the temporary shortage of the necessary brass plate and brass pipe used in the manufacture of this sprayer. This shortage will be resolved in the very near future.

Distribution

Effective 15 May 1947, the Welfare Ministry assumes responsibility of distribution of all imported medicaments and medical supplies. Requisitions are submitted by the prefectural officials to the Pharmaceutical Affairs Section, Welfare Ministry for supplies coming under above mentioned category.

The Welfare Ministry has scheduled a distribution, 10 May 1947, of Mapharsen and Bismuth subsalicylate to prefectures having a V. D. population of 1000 and over.

The following is a breakdown as of 14 May 1947, of U.S. Surplus Vehicles sold to Japanese Government, which have been allocated to the Welfare Ministry for distribution to hospitals and government agencies engaged in public health and sanitation activities:

<u>Type of Vehicle</u>	<u>Allotted</u>	<u>Received</u>	<u>Distribution</u>	<u>To be Distributed</u>	<u>Due from Boeki Cho</u>
Weapons Carrier	347	92	51	41	255
Command Car	58	11	2	9	47
Ambulance	145	15	6	9	130
Trailer 1 Ton	100	100	54	46	0
Trailer # Ton	145	58	46	12	87
Trailer Water Tank	<u>75</u>	<u>75</u>	<u>51</u>	<u>24</u>	<u>0</u>
Total	870	351	210	141	519

During the week ending 10 May 1947 a total of 3,386 fifty-gallon drums of pyrethrum emulsion has been distributed to the prefectures for use in the insect control program.. Shipment was made as follows:

<u>Prefecture</u>	<u>Quantity 50 gal. Drum</u>	<u>Prefecture</u>	<u>Quantity 50 gal. Drum</u>
Hokkaido	50	Nagano	46
Miyagi	45	Kyoto	369
Akita	20	Osaka	264
Yamagata	30	Hyogo	50
Fukushima	76	Nara	15
Saitama	174	Tottori	55
Chiba	188	Shimane	73
Tokyo	691	Okayama	70
Kanagawa	130	Yamaguchi	114
Gifu	35	Tokushima	61
Shizuoka	45	Kagawa	48
Aichi	80	Ehime	182
Mie	40	Kochi	67
Niigata	40	Nagasaki	90
Toyama	42	Oita	40
Ishikawa	40	Kagoshima	76
Fukui	40		
		Total	3,386

Shipments to prefecture not listed above are planned for the near future.

Narcotics

Narcotics seized as a result of recent investigations indicate many repatriates are entering Japan with narcotics concealed in their baggage and on their persons. A report from a Military Government Team to the same effect shows that stern measures are necessary to curtail this activity. Custom Officials in the Revenue Bureau, Finance Ministry, and Narcotic Officials, Ministry of Welfare, have been requested to issue instructions to all officials concerned at ports of debarkation to rectify this situation. Close surveillance by Military Government Teams is considered necessary to assure thorough search of all repatriates and prosecution of any persons criminally

liable for either entering or leaving Japan with narcotics. Heavy penalties imposed on such persons will act as a deterrent to any person contemplating smuggling narcotics for monetary reasons in lieu of currency or other goods. Illegal narcotics entering Japan are being supplied to addicts. Prompt action must be taken to prevent such entry which is highly detrimental to the narcotic control program.

Marihuana grown in Japan for fiber purposes by licensed dealers will be analyzed at the following laboratories: Tokyo Imperial University for eastern Honshu prefectures; Kyoto Imperial University for Hiroshima and Shimane prefectures; and Kumamoto Pharmaceutical College for the three prefectures in Kyushu. What is considered to be an average specimen from each prefecture will reach the laboratories at four-week intervals during the growth of the plant, ending at maturity, according to instructions given to the Narcotic Section, Ministry of Welfare.

Japanese narcotic agents from 29 prefectures attended a conference in Nara prefecture to discuss narcotic problems and to receive instructions from Narcotic Control Officials, PHW, SCAP, and Narcotic Section Officials, Ministry of Welfare. This conference and the Fukushima narcotic conference held the previous week with representatives from the other 17 prefectures, were indicative of the progress made in the narcotic control program during the past year. Instruction in modern narcotic enforcement methods was given. A round-table discussion concerning evaluation of narcotic conditions in each prefecture made by Narcotic Control Officers as a result of personal inspection trips through the prefectures highlighted the proceedings.

According to the Narcotic section, Ministry of Welfare report for the month of March, narcotics are being supplied as required by registrants in an orderly and effective manner by use of order forms. Enforcement also made considerable progress as shown by the number of narcotic seizures and arrests of both registrants (27) and non-registrants (31). Sentences imposed as a result of convictions varied from 150 yen fine for a lesser violation to 1 year penal servitude, 4 year probation and 1,500 yen fine for a more serious violation. Reported thefts (26) continue as a matter of concern since these narcotics constitute a source of supply for narcotic addicts.

SECTION VII PREVENTIVE MEDICINE

Japanese B Encephalitis

Experimental work in the field and in the laboratory has conclusively shown that Japanese B Encephalitis is principally a mosquito-borne virus disease. This disease is of importance because of its high mortality rate. Susceptibility is greater in children than in other age groups and may be classified as a "children's disease" among Japanese.

In past years, outbreaks have nearly always been limited to the midsummer and early fall months. It thrives best in parts of the country which experience "hot summers, mild winters, less than average rainfall, low relative humidity and a high percentage of sunshine". Under such conditions, the mosquito vector(s) and mammalian and bird host-reservoirs find a favorable environment. The disease follows a northward wave of progression as summer advances – Okinawa in early July; Kagawa, Okayama, Hyogo in mid-July, and Tokyo and vicinity in August.

The distribution of the disease is wide spread throughout the island of Japan, having been reported from 40 of the 46 prefectures at some time during the past 16 years. Hokkaido in the north is apparently free from infection. The disease is most prevalent in the prefectures surrounding the Inland Sea, namely: Okayama, Hyogo and Kagawa. Outside of Japan proper Japanese B Encephalitis is consistently found in the Ryukus (Okinawa), Formosa, Philippines, China and Southern Korea.

Control measures should be concentrated in the areas of greatest expected prevalence and should be instituted well in advance of the expected encephalitis season. The prompt and compulsory reporting of any suspect case* is a measure of chief importance and must be handled in the most expeditious manner possible as outlined in Headquarters Eighth Army Circular No. 72, dated 3 May 1947, Section I, Japanese B. Encephalitis.

Control programs utilizing pyrethrum emulsion as a larvicide against mosquito larvae and 5% DDT spray in houses, etc, for residual effect of the killing agent in the control of adult mosquitoes, should be started at once, if not already underway. Proper application of residual effect DDT spray in houses and other buildings will serve as a control for flies, fleas, bed-bugs and other insect pests invading the household as well as adult mosquitoes. In order to conserve the DDT residual effect spray supplies, it is suggested that pyrethrum emulsion be used wherever

possible in the control programs. For quick-killing effect and residual DDT effect, a combination spray may be made by mixing one Liter of Pyrethrum (30x) emulsion to 29 Liters of 5% DDT residual effect spray.

(*The definition of a suspect case may be considered to be any person exhibiting clinical signs and symptoms of epidemic encephalitis – particularly if such cases occur during the months of July and August in groups of one, two or three or more within a square mile area.

Blood specimens from suspect cases and from neighbors of such cases should be sent to the 406## Medical General Laboratory, APO – 500 Tokyo.)

Typhus Fever Control

Comparatives Score: (includes figures of 15 May)

1946	26,398
1947	770

Head Lice in School Children

The Ministry of Welfare previously issued instructions to prefectural health offices to institute programs designed to eliminate head lice among school children by dusting with DDT powder. Many of these programs are underway at present, some having been completed.

The incidence of head lice is rather high, particularly among the school girls. In Tokyo, for example, results of a survey of one primary school was as follows:

		<u>Pos.</u>	<u>Neg.</u>	<u>% Pos.</u>
Boys Examined	411	0	411	0
Girls "	<u>427</u>	120	307	28%
	838			

In addition, many of the children were found to be infested with body lice as well. After two dustings at a 7 day interval, the incidence has been reduced to zero in this one school.

It is hoped that all Military Government teams in Japan will continue to push this dusting program during the summer.

Public Health "Train"

Any suggestions and ideas for exhibit material concerning public health and welfare, for use in this train, will be welcome. The cars are now in process of conversion.

Send any ideas for posters, models, etc., to Prev. Med. Div. P.H. & w. APO 500 - - Attn: Mr. C. Wheeler.

Smallpox Control

There have been several small outbreaks of smallpox in Japan during recent weeks. There has been no major epidemic during the current season; nevertheless, the disease is endemic in Japan and both sporadic cases and small outbreaks continue to occur. Vaccination with a viable vaccine is the only known measure of practical value in the control of smallpox. For details on control measures, military Government Health officers are referred to TB-PH-PREV. MED. 1 (Smallpox) dated January 1947.

The fact that a considerable number of smallpox continue to occur throughout Japan is evidence there are still large numbers of non-immune persons in the general population. Military government health officers are urged to exercises surveillance over Japanese health authorities in order to make sure that effective control measures are being carried out, particularly vaccination of the entire population of towns and villages in which cases occur. Checks should be made on vaccination technique and results of vaccination. If a viable vaccine and correct technique are used, vaccination will result in one of the following reactions: vaccinia, vaccinoid, or immune. If one of the above reactions are not obtained, these individuals must be revaccinated.

Military government health officers should also see that a maintenance smallpox immunization program is carried out in their respective prefectures. All children who were not of vaccination age last year, but have since reached vaccination age, should have been vaccinated in the interim.

The Committee on Therapeutic Procedures for Acute Infectious Disease and on Biologicals of the American Academy of Pediatrics recommends "vaccinations as early in life as possible - any time after the cord falls off and at least before 3 years of age". Due to the presence of endemic smallpox in Japan, all children should be vaccinated by the sixth month of life and certainly not later than the twelfth month of life.

Typhoid Immunization Program

Typhoid fever is a preventable disease for which effective preventive measures are available. Nevertheless, it continues to be a major public health problem in Japan. Good sanitary practices in matters of food, water, and waste disposal are the most important and most effective measures for prevention. Sanitation alone is not sufficient for complete control, however, and for this reason immunization is of utmost importance, particularly in Japan.

Vaccination with a good TAB vaccine will confer a high degree of protection upon those immunized, even under poor conditions of sanitation. Since the correction of sanitary deficiencies requires an extensive program of construction, education of the public, and a large budget extending over a long period of time, the only immediate effective control measure available for the general population is immunization. Before a nation wide immunization program could be put into effect, it was necessary to set up a most effective biologic control plan for production, assay and distribution. This plan has now been accomplished.

The Disease Prevention Bureau of the Welfare Ministry has prepared a plan for a nation wide typhoid immunization plan which has been approved.

a. The immunization program is scheduled to begin on or about 1 June 1947.

b. Persons to be immunized. All persons in Japan between the ages of 5 and 60 years with the exception of the sick and other persons in whom immunization is contra-indicated will be immunized during the current season. The program once begun will continue, as vaccine becomes available, until completion.

c. Order of Priority for Immunization. Due to the lack of sufficient stocks of vaccine to conduct the immunization program in all prefectures simultaneously, the following general order of priority will be followed.

First Stage: Persons in cities, towns (with a population of 30,000 or more) will be immunized first. Vaccine will be furnished to these cities and towns as rapidly as it becomes available. The total population to be immunized in this group is approximately 23 million. It is estimated that that will take two to three months to complete the first stage of the program.

Second Stage: When the immunizations outlined under the first stage have been completed, immunization of the remaining persons in the small towns, villages and rural areas in each prefecture will follow as vaccine becomes available. The order of priority for the 2nd stage will be governed by the incidence rate of typhoid during the year 1946, starting first with the prefectures having the highest rate and progressing in that order until finally the prefectures with the lowest incidence rate are reached. The number of persons to be immunized during the 2nd stage is approximately 50 million. The order of priority of prefectures to be immunized during the 2nd stage is: Tochigi, Kochi, Fukushima, Toyama, Tokushima, Hyogo, Mie, Hiroshima, Shimane, Wakayama, Kyoto, Kanagawa, Okayama, Saitama, Gifu, Hokkaido, Aomori, Yamagata, Kagawa, Chiba, Shizuoka, Miyagi, Niigata, Iwate, Nara, Tokyo, Ibaragi, Miyazaki, Fukui, Fukuoka, Aichi, Osaka, Yamagashi, Nagano, Shiga, Akita, Gunma, Ishikawa, Ehime, Nagasaki, Yamaguchi, Saga, Oita, Kumamoto, Kagoshima.

Venereal Disease Control

Syphilis is taken as an index for reporting purposes by the leading authorities, since it is the best reported of all the venereal diseases. The incidence of gonorrhoea is usually considered to be 4 to 10 times that of syphilis, but because it is subject to so much self-treatment as well as being so much shorter in duration than syphilis, many authorities think that the incidence of gonorrhoea is even more than 10 times that of syphilis.

From available information, venereal diseases probably occur in the Japanese population in approximately the following proportion: 10 cases of gonorrhea to 2 cases of chancroid, to 1 case of syphilis. It is therefore apparent that Japanese VD statistics show two outstanding errors. First, gonorrhea is reported as only occurring half again as frequently as syphilis instead of ten times as frequently. Second, chancroid is reported as occurring only one-third as often as syphilis instead of twice as often.

Using syphilis as an index of reporting, Japanese statistics, therefore, show that about eight out of ten cases of gonorrhea and five out of six cases of chancroid are being missed. Military government health officers should convey this information to the Japanese physicians in the prefectures so that health department clinicians and private physicians will place additional emphasis on finding and reporting such cases.

Port Quarantine

On Wednesday, 14 May, the members of the newly organized Japanese Quarantine Service convened at the Welfare Ministry in Tokyo to open a three day program of study sessions and conferences on quarantine procedures under the new quarantine regulations. The first assembly was opened with a short address by the SCAP port quarantine consultant.

Weekly Report of Incoming Quarantinable Disease:

Week ending 3 May – Negative
Week ending 10 May – Negative

SECTION VIII SOCIAL SECURITY

National Health Insurance

Recent surveys of prefectural insurance offices and Health and National Health Insurance clinics, indicate a definite need for closer supervision from the national and prefectural level for the purpose of coordinating policies and systems of operation.

Recent visits to several prefectures indicated that insurance officials are of the opinion the decrease in the National Health Insurance budget was approved by SCAP. A clarification of this opinion has been obtained from the Finance Division of ESS, SCAP; that, no objections were made to the total budget for 1947 as presented by the Finance Ministry. The budget is subject to change by the Diet under provisions of the new Constitution.

The Health and National Health Insurance directors in each prefecture should be encouraged to give strong justification in submitting requests to the Social Insurance Bureau, Ministry of Welfare, as to additional requirements during this year.

A military Government Team initiated a medical service cost survey in their prefecture, conducted through a questionnaire which covered approximately five-hundred doctors. Results will be published in a later bulletin. It is planned to conduct similar surveys throughout Japan.

SECTION IX MEDICAL SERVICE

Japanese Civilian Hospital Report for the period ending 28 March 1947 shows 3172 hospitals with a capacity of 219,677 beds, 105,474 of which were occupied. During this same period 293,048 out-patients were treated.

National examinations for medical licensure were held from 15 to 17 May 1947. Applicants were distributed as follows:

Kanto	615
Tohoku and Hokkaido	190
Chubu	177
Kinki	373

Chugoku and Kyusyu	315
Total	1,670

Results of examinations will be reported as soon as they are available.

SECTION X CONSULTANTS

Nutrition Surveys

Physical examinations in the nutrition surveys of the Tokyo-to area will be completed on 20 May.

During the week, the conduct of these surveys was observed by the Nutrition Consultant.

Japanese demonstration and explanation of methods used in the commercial processing of imported corn flour was given by the Ministry of Health. These are in extension of methods prepared by the nutritionists of the Ministry of Health and Agriculture in ordinary home cooking.

Social Work Training

The fourth and last of a series of training conferences for welfare officers of local Military Government teams was held by the Military Government Section, Eighth Army, during the week of 19 May. This last training conference was attended by the social Work Training Consultant of the Welfare Division. Subjects discussed during the week included organization of welfare administration in the Japanese government, public assistance and child welfare programs, the Japanese Red Cross Society and disaster planning.

Licensed Agencies for Relief in Asia (LARA)

Dr. G. Ernest Bott, representative of Church World Service, has been approved by SCAP as the third official representative of LARA.

The seventh and eighth overseas shipment of LARA relief supplies have arrived in Yokohama and consist of the following items:

USAT Aberdeen Victory (4 May 47)

Wheat Flour	80 tons
Clothing	<u>44</u> tons
Total	124 tons

President Madison (23 May 47)

Clothing	50 tons
Foodstuffs	50 tons
Soap	20 tons
Miscellaneous	<u>30</u> tons
Total	150 tons

Note: The amount of relief supplies now received by LARA, since their first overseas shipment, (received dockside at Yokohama on 30 Nov 46) totals 2222 tons.

SECTION II
VETERINARY AFFAIRS

Monthly Meat Inspection Report

Following is a summary of the monthly Meat Inspection Report for March 1947, submitted by the Ministry of Welfare.

	<u>Cattle</u>	<u>Calves</u>	<u>Sheep & Goats</u>	<u>Swine</u>	<u>Horses</u>

Weekly Animal Disease Report

The Ministry of Agriculture and Forestry (Bureau of Animal Industry) reported the following new outbreaks of disease during the period 18 – 24 May 1947:

<u>Prefecture</u>	<u>Disease</u>	<u>Number of Cases</u>
Kagoshima	Anthrax	1
Chiba	Swine Erysipelas	1

SECTION III DENTAL AFFAIRS DIVISION

The value of dental materials manufactured for the month of April amounted to 2,788,291.38 yen, and that of instruments to 3,659,297.30 yen.

SECTION IV SUPPLY

Distribution

The distribution of insect and rodent control equipment by the Welfare Ministry has begun, with emphasis placed on sprayers, knapsack type. Latest information (23 May 1947) shows the following shipments to prefectures were made, a total of 4,184 sprayers:

<u>Prefecture</u>	<u>Quantity knapsack Sprayer</u>
Hokkaido	200
Aomori	160
Iwate	160
Miyagi	160
Akita	160
Yamagata	160
Fukushima	160
Ibaraki	160
Tochigi	160
Gumma	160
Niigata	160
Toyama	160
Ishikawa	160

Nagano	160
Yamanashi	160
Shizuoka	160
Hyogo	304
Saitama	160
Chiba	160
Ishikawa	160
Fukui	160
Shiga	160
Tottori	160
Hiroshima	160
Yamaguchi	160

Shipments are continuing and equipment is expected to reach all prefectures in the near future.

Pyrethrum emulsion for use in the insect control program is also being distributed, and, as of 21 May 1947, a total of 5,170 fifty-gallon drums has been shipped to the prefectures by the Welfare Ministry. Shipments have been made to all but three prefectures. Miyazaki prefecture has not replied to Welfare Ministry request for shipping instructions. The cause for lack of shipments to Wakayama and Hiroshima prefectures is being investigated by the Welfare Ministry. An outline of shipments made through 21 May 1947 follows:

<u>Prefecture</u>	<u>Quantity 50-gal.drums</u>
Hokkaido	50
Aomori	27
Iwate	45
Miyagi	90
Akita	80
Yamagata	30
Fukushima	76
Ibaragi	77
Tochigi	25
Gunma	50
Saitama	174
Chiba	188
Tokyo	741
Kanagawa	240

Tottori	55
Shimane	15
Okayama	120
Yamaguchi	162
Tokushima	61
Kagawa	80
Ehime	182
Kochi	67
Fukuoka	198

Saga	70
Nagasaki	120
Kumamoto	45
Oita	120
Kagoshima	75

Production

Production of DDT Dusters and Spraying Equipment increased satisfactorily for the manufacturing period of 10 – 20 May. Actual production accomplished was as follows:

DDT Dusters	1,000
Sprayer, knapsack type, 3 gallon	360
Sprayer, pump type, semi-automatic	340

The temporary shortage of brass plate and brass pipe necessary for the manufacture of the sprayer, knapsack type, 3 gallon, has been relieved. Production, for this reporting period, was increased to 360 as compared to the previous reporting period's production of only 43 sprayers during the brass shortage.

The following releases of DDT products and typhus vaccine were approved by Welfare Ministry during period 19 – 24 May:

<u>Prefecture</u>	<u>10% DDT Dust</u>	<u>5% DDT Spray</u>	<u>Typhus Vaccine</u>
Kochi	3,750 lbs.	580 gals	135 vials
Osaka	8,000 lbs.	2,000 gals.	
Gifu	3,200 lbs.	500 gals.	
Miyazaki	10,000 lbs.		
Hiroshima	3,000 lbs.	500 gals.	
Fukuoka	800 lbs.	100 gals.	40 vials
Shimane	<u>24,000 lbs.</u>		
Totals	52,750 lbs.	3,680 gals.	175 vials

Total stocks now in depots, factories and intransit are as follows:

10% DDT Dust	2,240,911 lbs.
5% DDT Residual Effect Spray	248,180 gals.
Typhus Vaccine	81,218 vials

The program of the production of pyrethrum emulsion, to be diluted with thirty parts of water prior to spraying, for mosquito and fly control activities during 1947, has progressed satisfactorily since its initiation last year. Welfare Ministry reports, for the period up to 10 May, production of pyrethrum emulsion as follows:

	<u>50 gal. drums</u>	<u>Gallons</u>
Estimated Production for year 1947	17,000	850,000
Total Production to date (10 May)	7,503	375,150
Total amounts shipped	3,386	169,300

Total amount of pyrethrum flowers received was 556,083.94 kgs.

Narcotics

A recent inspection trip through Central Honshu showed that hospitals are cooperating with the program of narcotic Control efforts to eliminate thefts of narcotic stocks by storing their supply in regulation steel safes. This will also prevent loss of narcotics by fire. Narcotic stocks in some hospitals and local wholesalers were found to be depleted and in some instances this has been occasioned by the inability of Central Wholesalers to fill requisitions that are submitted on order forms. An investigation of these Central Wholesalers revealed that they have not maintained their stocks at a sufficient level and corrective action has been taken through conferences with the wholesalers and through instructions issued to the Welfare Ministry. Central wholesalers, by purchasing from registered producers, must keep their stocks representative and sufficient to meet requirements without any further instructions from the Japanese Government.

In order to place proper emphasis on narcotic enforcement by regularly appointed narcotic agents, the Narcotic Section, Ministry of Welfare, has been advised to require the following monthly reports from prefectural agents:

1. Number of inspections made.
2. Number of investigations begun.
3. Number of investigations being carried on.
4. Number of investigations completed.
5. Estimated number of violations.
6. Extent of illicit traffic.
7. General estimate of narcotic conditions.
 - a. Poor
 - b. Fair
 - c. Good
 - d. Very good
8. Prices of illicit narcotics.
 - a. Opium per kilogram
 - b. Morphine per gram
 - c. Heroin per gram
 - d. Cocaine per gram

A consolidated report from the above information will be completed by the Narcotic Section and forwarded to the Narcotic Central Branch so that proper evaluation of narcotic enforcement can be made.

As a further step to stop the introduction of narcotics into Japan by repatriates, the Ministry of Justice has been advised to inform all procurators that all persons involved in smuggling operations are to be prosecuted and heavy penalties demanded. This applies not only to repatriates but to any person entering or leaving Japan illegally with narcotics.

The order granting police power for narcotic offenses to narcotic agents should become effective within approximately two weeks. The Ministry of Justice and the Ministry of Welfare will issue instructions that such authority is to be granted only to regularly appointed narcotic agents who have no duties other than narcotic enforcement. It is not anticipated that there will be any exceptions to this provision.

A Korean living in Hachioji, Tokyo Prefecture, was apprehended for cultivation of opium poppies. Ninety-five plants were being cultivated and the case is being prepared for the local procurator. It was learned that such cultivation has been carried on by the Korean for the past two years. Military Government Teams should assure that narcotic agents and police make every effort to enforce the SCAP Directive and Japanese narcotic laws which prohibit the cultivation of opium poppies.

SECTION V PREVENTIVE MEDICINE DIVISION

Typhus Fever

Comparative Score: (includes figures of 23 May)

1946	-	816
1947	-	27,685

Summary of results of complement fixation tests:

The following table is a summary of the results performed to date on blood samples submitted to the 406th Med. General Laboratory. Other samples are under test. Detailed reports have been sent out to prefectures concerned. Some blood samples received have been badly haemolyzed through faulty technique in collection, thus nullifying the efforts made in collecting and shipping. Blood samples received from Shikoku show the need for improvement technique.

The column headed "Indeterminate" indicates samples in which the differentiation between Murine and epidemic typhus was not possible. This may mean that an "intermediate" form of typhus exists.

	Blood	Complement Fixation				
	Samples	<u>Tested</u>	<u>Epidemic</u>	<u>Murine</u>	<u>Indeterminate</u>	<u>Negative</u>
Hokkaido	25	22	0	0	3	
Miyagi	7	5	0	0	2	
Fukushima	1	1	0	0	0	
Todhigi	3	1	0	0	2	
Ibaragi	30	1	9	6	13	1
Saitama	11	0	8	2	1	
Chiba	6	1	3	0	2	
Tokyo	57	4	14	11	27	1
Ishikawa	6	0	5	1	0	
Gifu	5	0	3	0	2	
Shizuoka	49	1	31	9	8	
Fukui	8	0	3	4	1	
Aichi	79	0	48	12	18	1
Mie	5	0	3	2	0	
Nara	1	0	0	1	0	
Osaka	23	0	17	6	0	
Hyogo	36	2	21	4	6	3
Yamaguchi	9	0	5	3	1	
Total	361	38	170	61	86	6

Typhus Fever

Summary of results of complement fixation tests.

We are anxious to complete tests of all suspect cases reported since 1 September 1946. Send in blood sample (at least 10cc) from your suspect cases as soon as possible. We are especially interested in receiving blood samples from reported cases of "Takamatsu Fever" from Shikoku.

Cholera Control

During 1946 there were reported 1229 cases of Cholera in Japan. This does Not include cases that originated on repatriation ships while enroute to Japan or while in quarantine in reception ports. Most of these cases resulted from persons entering the country illegally though smuggling and illicit shipping from Korea and to a lesser extent from repatriation. There have been no cases of Cholera reported in Japan during the current calendar year. Nevertheless, this disease is over present on the Asiatic mainland and constitutes a continual threat to Japan.

Quarantine services other public health agencies did a splendid job last year of preventing the spread of the disease in Japan. The Cholera season is at hand and Military Government and Quarantine officer are urged to keep a close watch for suspects and to take appropriate steps to effect control.

Prefectural health personnel should be alerted for possible Cholera outbreaks by making provisions for vaccines, and isolation measures.

Venereal Disease Control

Contact reports indicate in some areas excellent results are being obtained by the contact tracing facilities initiated by the Military Government Health officer. In marked contrast to these prefectures, reports from other areas indicate that contact tracing is not receiving the serious attention of the civilian agencies responsible for this work.

Contact tracing is a new concept to Japanese public health departments. It is strictly a health department function that will be of increasing importance as a modern V.D. control program is developed. Even now, health department have the responsibility for finding as many cases of venereal disease as they can trace by epidemiologic methods.

The personal of contact tracing teams will vary in different prefectures, but will usually consist of public health nurses or Health Department inspectors. It is essential that these individuals understand the basic principles of the communicability of venereal diseases and something of the diagnostic procedures used. Tact and a real interest in V.D. control are necessary and personnel should be selected with these qualities in mind. These workers are health department employees who are tracing persons possibly infected; they are not police who apprehend violators of the law.

Contacts of gonorrhea patients who found and known to be promiscuous should be diagnosed clinically as having gonorrhea and treated, despite the absence of laboratory confirmation.

Every case that is found though contact tracing and treated may be the means of preventing many other cases.

Sanitation – Insect Control

Inventory should be made weekly of insecticides, and equipment on hand, and the number of control teams actually working. Spot investigations should be made periodically to determine the effectiveness of control measures. Local laws and regulations designed to prevent individuals from committing nuisances should be locked up and published. Routine inspections must be made by sanitary inspectors in order to uncover violations of these regulations and effect corrections.

The individual must be taught the fundamentals of fly and mosquito control, and what part he must play in community control. If it is to be successful, an insect control program must have good cooperation of the individual, the regular agencies that carry on garbage and night soil collection, and auxiliary agencies carrying out measures directed against specific problems, such as the sanitary teams being operated under the direction of the Health Department.

Laboratory control

Reference is made to Sec. VI, Public Health & Welfare Weekly Bulletin #16 dated 13 – 19 April 1947.
RE: National Institute:

Formal dedication exercises were held for the new National Institute of Health (NIH) at Shiba Ku in Tokyo. This was the culmination of five months of conferences and intensive negotiations between SCAP and the Welfare and Education Ministries of the Japanese Government.

The formal dedication exercises marked the beginning of an official governmental organization designed and dedicated to promote the national public health by controlling the production and assay of biologic products and conducting research on diseases and other problems affecting the public health.

The organization functions and aims of the new National Institute of Health are patterned after those of the National Institute of Health in the United States. The birth of the National Institute of Health is one of the major achievements in the promotion of public health in Japan.

The new National Institute of Health will be under the jurisdiction of the Minister of Health and Welfare however, it will enjoy freedom from political interference. It will be a relatively independent agency with an extremely wide range of latitude as regards the scope of its activities. These matters will be decided upon by the scientific director and his staff.

BCG Vaccine

In 1908 Albert Calmette and Alphonse Guerin reported the development of a strain of bovine tubercule bacilli which had lost its virulence by being passed through a long series of subcultures grown on glycerinated ox-bile media. In 1920, these scientists reported that the BCG culture was harmless to man and began the vaccination of newborn infants by feeding them the vaccine by mouth.

Since 1921, millions of vaccinations have been done, particularly in Europe and South America, and in the United States careful studies were made; but the use of the vaccine was not widely adopted. In 1930 Dr. Johannes Holm began his studies in Denmark, and since 1932, that country has used BCG vaccines extensively and feel that it is quite safe, and when carried out properly, few complications arise. In Japan BCG vaccine was developed from a strain given to Dr. Shiga in 1925 by Dr. Calmette, and since then, that strain has been maintained in the Government Institute of Infectious Diseases.

In 1933, the study of BCG vaccine was begun under the direction of the late Mr. M. Nagayo, succeeded by Dr. T. Kumagaya. This work was done on an experimental basis by the Anti-Tuberculosis Association and in the various universities. It was not until 1944 that the Japanese Government assumed charge of BCG vaccination programs and carried them out on a national scale. In 1944, the Government supervised the vaccination of 5,025,794; in 1945, 8,671,611; in 1946 approximately 6,242,710 individuals, with negative tuberculin reactions, were vaccinated with BCG vaccine. The Japanese reporting in the past left much to be desired and was inadequate in its follow-up. Consequently, study is yet necessary before the effect of BCG vaccination can be truly evaluated in Japan.

Professional Medical Journals

Public Health and Welfare Section, SCAP, recognizes the need for professional journals for the use of Military Government Public Health Officers and other technical medical personnel. Efforts were made to obtain subscriptions for a basic list of medical periodicals for each Military Government Team. Sufficient copies of the following journals are being received to supply one copy of each journal to each Regional Headquarters in Japan for circulation among the teams of the Region.

- *American Journal of Public Health and the Nation's Health
- *Journal of the American Medical Association
- *Annals of Internal Medicine
- Journal of Infectious Diseases
- Public Health Reports
- Venereal Disease Information
- *New England Journal of Medicine
- American Journal of Syphilis, Gonorrhea and Venereal Diseases
- American Journal of Nursing
- Water and Sewage Works Journal

*Journals marked with an asterisk are now being received by Public Health and Welfare Section, SCAP, and are being forwarded to Regional Headquarters for circulation within each region in Japan. The remaining Journals will be forwarded to each Region and District Headquarters upon receipt. Journals which have been received during the month will be forwarded to Regional and District Headquarters periodically about once each month. Military Government Health and Welfare personnel will find these periodicals of inestimable value in the prosecution of their health programs.

SECTION VI SOCIAL SECURITY DIVISION

Social Insurances

Mr. William H. Wandel, has been assigned as Chief, Social Security Division, Public Health and Welfare Section, SCAP, on loan from the Federal Security Agency, Washington, D. C.

All prefectural insurance officers met in Tokyo on 21 – 22 May for an orientation and instructional conference for the promulgation of the Workers Accident Compensation Insurance Law. Principal points discussed were, the medical fee costs; coordination with the Labor Standards Law; procedure for appeals; participation of employees in general policies and employers responsibility.

With the enactment of the **Workmens** Accident Compensation Law to be effective as of 1 July 1947, the Employer's Liability Accident Insurance System becomes inoperative and some disposition will be made of the reserve funds approximating 22,800,000 yen as of March 1946 accumulated under the latter law. The Ministry of Welfare is to submit a plan for the allocation of the fund to other social insurance programs.

The Insurance Bureau of the Ministry of Welfare conducted as of 21 May a sample survey encompassing questionnaires to be answered by 163,000 individuals distributed in 15 prefectures and 4,728 concerns from all parts of Japan. The survey was expected to give pertinent data relative to the employment and unemployment situation for possible use in formulating an unemployment compensation program. The results of the survey and conclusions reached will be submitted to the Social Security Division when available.

Health Insurance

In addition to the health benefits provided by the five major programs in the Japanese social insurance system, and by the Postal Insurance program, each of the 13 ministries in the Japanese Government independently operates on behalf of its employees one or more mutual aid associations, one of the main functions of which is to offer protection against the costs and losses of illness.

The result is an extremely complicated system of health insurance coverage, with numerous ordinances, rules and regulations governing the activities of the component parts. It is difficult to find a Japanese official who is thoroughly familiar with all the ramifications of the numerous health insurances. The man on the street, for the most part, is ignorant of the rights and privileges to which he is eligible.

The Japanese Government has been urged to unify these several health benefit programs into a comprehensive national health insurance system.

The first step in this direction has been the achievement of an agreement to place the activities and records of the various Governmental mutual aid associations, mentioned above, under the supervision of the Bureau of Social Insurance in the Ministry of Welfare; Prior to this agreement the Finance Ministry and the Transportation Ministry had insisted on retaining independent control.

SECTION VII MEDICAL SERVICE

Japanese Civilian Hospital Strength Report for the period ending 4 April 1947 shows 3177 hospitals with a capacity of 220,740 beds, 103,905 of which were occupied. During this same period 337,956 out-patients were treated.

SECTION VIII CONSULTANTS NUTRITION

Conferences were held with representatives of the Ministry of Agriculture (Ration Board) and Ministry of Welfare with regard to the problem of the preparation of imported foods such as green peas, soy flour, milo and soap powder in Japanese homes.

Plans were made to study methods of preparation. It was recommended that nutritionists in the Sanitary Bureaus of cities and prefectures advise the populace how to prepare these foods.

SECTION IX MEMORANDA TO JAPANESE GOVERNMENT

PHMJG-20 20 May 1947 Publication of Results of Nutrition Surveys of civilian Population for November 1946.

CRAWFORD F. SAMS
Colonel, Medical Corps,
Chief, Public Health and Welfare Section

Welfare Division

Public Assistance Report for April

The Ministry of Health and Welfare reports the following figures for April. Included for comparative purpose are figures for March 1947 and April 1946.

	April 1947	March 1947	April 1946
No. of Persons (not in institutions) assisted	2,650,272	2,773,603	
No. of Persons (in institutions) assisted	112,769	108,420	
Total No. assisted	2,763,041	2,882,023	2,685,723
Cash Grants	Yen 197,818,652	Yen 201,012,453	
Grants in Kind (cost)	36,642,044	51,951,732	
Total Grants	Yen 234,460,696	Yen 252,964,185	Yen 48,891,879

30 prefectures show a decrease in the number of persons assisted. Average grant per person Yen 84.86 for April.

Social Work Training

The fifth of a series of training conferences for Japanese Welfare personnel was held in Saitama Prefecture from 27 May to 2 June 1947. Previous short training institutes of this kind have been held during the past six months in Shiga, Nagano, Chiba and Fukushima prefectures. These institutes are sponsored jointly by the Welfare Ministry and the Japan Social Work Association (Nippon Shakai Jigyo Kyokai). Persons attending the conference are selected by the governor of the prefecture and include public officials, welfare workers (minsei-iin) and public health nurses. Plans are being developed for similar training institutes to be held in other parts of Japan in the future. The next institute is tentatively scheduled to be held in Kyusyu in June or July if arrangements concerning housing, food and transportation can be worked out.

School Lunch Program (Elementary Schools)

The following information has been received from the Bureau of Physical Education, Ministry of Education covering above subject for the period 1 January 1947 to 1 April 1947.

1. Approximately 200 cities have inaugurated a school lunch program, serving school lunches not less than twice a week, although not all schools within these cities have a school lunch program due to lack of necessary facilities. Effort is being made to provide facilities so as to effect a school lunch program in these schools, within these cities, who have not been participating and the progress has been encouraging as reflected in the table below:

School Lunch Program (200 cities)

	Jan.'47	Feb.'7	Mar.'47
Number of Schools Participating	92%	96%	97%

2. It is estimated, according to preliminary reports received as of 1 April 1947, that 3,548 schools (200 cities) have established a school lunch program with 3,270,436 children and teachers receiving the benefits of this supplemental feeding program.

3. The school lunch program in the villages has shown a continual increase. As of 1 April 1947, approximately 4,470 schools in village areas are participating with 2,216,182 children and teachers receiving the beneficial effects. Note: These schools have not received governmental or LARA aid (foodstuffs) although the government is to release salt at the rate of 2 grams a meal per head.

4. The scarcity of food has presented a problem in establishing a continuous school lunch program (1 lunch for each school day) however every attempt is being made to serve not less than 2 school lunches per school week

and increasing the number of school lunches as conditions warrant. The following chart reflects school lunch serving progress for city and village schools.

School Lunches Served

Lunches per Week	Jan.1947	Feb.1947	Mar.1947
2	61%	62%	69%
3-5	16%	20%	9%
6	23%	18%	22%

5. The actual expense of school lunches varies within different localities and from month to month but averages 1 Yen in larger cities and 65 sen in smaller cities.

6. Supplies for the school lunch program are divided as follows:

- a. LARA: Approximately 100 tons released to school lunch program and distributed in Tokyo-To, Kanagawa and Yokohama Prefectures.
- b. Former Jap Army and Navy Stocks: 5,000 tons distributed to prefectures to inaugurate school lunch program.
- c. Imported Canned Goods: 14,000 tons of canned goods (chiefly juices) are expected to be made available for period March 1947 to March 1948 as released by Memorandum (SCAPIN 22-A) dated 14 March 1947.
- d. Fuel is necessary and it is contemplated to distribute 16,850 bundles of firewood each month, Nine (9) prefectures will receive a proportionate share of 101 tons of coal each month. The fuel program is to begin 1 April 1947 after consultation and agreement with the Ministry of Agriculture and Forestry and the Ministry of Commerce and Industry.
- e. Salt is being distributed, for seasoning purpose, at the rate of 2 grams a meal per head in the elementary schools in the 200 cities having school lunch program. The Monopoly Bureau is being requested to release sufficient salt for distribution, on the same basis to the elementary schools in those villages having a school lunch program.
- f. The Ministry of Agriculture and Forestry have made available whale meat, acquired recently from Antarctic Expedition, to the school lunch program sufficient for a 7 to 10 day supply on the basis of 30 grams per meal per head.
- g. 4,000 tons of "miso" is to be released through the Ministry of Agriculture and Forestry and will be distributed in the 6 largest cities having a school lunch program.
- h. Approximately 583,180 kan of powdered fish is to be distributed to schools in village areas having a school lunch program and necessary arrangements have been arranged with the Fishery Bureau, Ministry of Agriculture and Forestry.
- i. Prefectural Governments, city authorities and school authorities are making a sincere effort, within the limit of circumstances, to secure and make available other items of foodstuffs to bolster the program.

7. A short course, sponsored by Ministry of Education and Prefectural Governments, was offered in each city to emphasize management of a school lunch program. The course covered; effect of a school lunch program, foodstuffs, fuel, equipment, menu preparation, cooking practice and school lunch measurement (nutritional accounting).

8. School lunches, within each school, are served the same and equally to each child. Children whose families are receiving relief assistance, shall receive their lunches (expense of same) over and above the regular relief (cash and kind) allowance to the family.

9. Measures have been taken to inspect all former Japanese Army and Navy canned beef allocated to the school lunch program to detect spoilage or contamination. The Director of the Bureau in charge of the school lunch program in each prefecture is charged with this responsibility by joint instructions from the Ministry of Education and the Ministry of Health and Welfare.

SECTION II Veterinary Affairs

Weekly Animal Disease Report

The Ministry of Agriculture and Forestry (Bureau of Animal Industry) reported no new outbreaks of animal disease during the period 25-31 May 1947.

A physical examination was made 21 May 1947 on 50 head of horses being shipped to Korea from the Moji Animal Quarantine Station.

SECTION III Supply

Distribution

The supply of laboratory animals continues to be critical. Production is increasing slowly, but it will be necessary to exercise closer supervision over distribution. The Welfare Ministry is making a study of requirements and will assign distribution priorities based on essential needs until such time as total production is sufficient to meet all requirements.

The Ministry of Health & Welfare has been advised there is no objection to the plans submitted covering distribution of surplus U. S. produced medical equipment and supplies purchased by the Japanese Government. The plan provides for handling through normal commercial channels with control of distribution at national and prefectural levels. The Welfare Ministry has designated a group of central wholesalers who will purchase the material and distribute to prefectures in accordance with instructions. At the prefectural level, distribution will be made on a ration basis in accordance with detailed plans to be prepared under direction of the prefectural governor.

The Welfare Ministry has submitted paper requirements to the Economic Stabilization Board for publication of medical textbooks, magazines and manuals. The paper sub-committee of the SCAP Requirements Committee has been advised of these requirements.

Additional shipments of pyrethrum emulsion have been made to the prefectures by the Welfare Ministry for use in the control of insect pests. A total of 6,841 fifty-gallon drums have been shipped, as of 27 May 1947. A breakdown of total shipments to date follows. Prefectures, the names of which are preceded by an asterisk (*), have received their allotted supply. (figures represent 50 gal. drums)

Hokkaido	100	Aichi	155
Aomori	77	Mie	105
*Iwate	87	Shiga	50
Miyagi	90	Kyoto	453
*Akita	50	Osaka	491
Yamagata	30	Hyogo	475
Fukushima	76	*Nara	15
*Ibaragi	77	*Tottori	55
Tochigi	25	*Shimane	15
*Gumma	163	Okayama	120
Saitama	174	Hiroshima	7
Chiba	213	*Yamaguchi	368
Tokyo	1142	*Tokushima	61
Kanazawa	283	*Kagawa	80
Niigata	80	*Ehime	182
Toyama	42	*Kochi	67
Ishikawa	80	Fukuoka	434
*Fukui	40	Saga	70
Yamanashi	20	Nagasaki	215
Nagano	46	Kumamoto	45
Gifu	80	*Oita	152

Production

Production of DDT Dusters and Spraying Equipment continued satisfactorily for the manufacturing period of 19-24 May. Actual production accomplished was as follows:

DDT Dusters	1,000
Sprayer, knapsack type, 3 gallon	350
Sprayer, Pump type, semi-automatic	200

Initial shipments of the dusters and sprayers were made during this reporting period. Shipments made were as follows:

DDT Dusters	1,967
Sprayer, knapsack type, 3 gallon	315

Information received from Japanese prefectural health officials indicate these officials may make plans to dispose of some quantities of their allocation of DDT dusters and spraying equipment for 1947 by sale to commercial organizations. This method of disposal will divert equipment being produced for public health programs in Japan. The percentage of breakdown in this equipment is high and new equipment will be needed constantly to replace broken parts, in order that the spraying program may continue uninterrupted. Close check should be maintained by Military Government personnel to assure usage of this equipment for public health programs.

The following releases of DDT products and typhus vaccine were approved by Welfare Ministry during period 26-31 May:

Prefecture	10% DDT Dust	5% DDT Spray	Typhus Vaccine
Hiroshima	3,616 lbs.		
Miyagi		10,000 gals.	
Aichi	101,000 lbs.	5 gals.	150 vials
Gifu	10,710 lbs.		
Nagasaki	5,500 lbs.	3,000 gals.	
Fukuoka	50,000 lbs.		250 vials
Hokkaido			51,200 vials
Ibaragi		5,000 gals.	
Aomori	20,000 lbs.	1,500 gals.	
Osaka		<u>2,000 gals.</u>	
Total	190,826 lbs.	21,505 gals.	51,600 vials

Narcotics

Memorandum number (PHMJG-24), 28 May 1947, was issued to the Narcotic Section, Ministry of Welfare, stating there is no objection to the request for release of certain former Japanese military narcotics as submitted. Under the application for release, all codeine phosphate, codeine sulfate, and tincture of opium now held in former Japanese military narcotic stocks by SCAP-approved wholesalers, will be released to regular civilian channels of distribution under the new narcotic regulations. The release of these items is considered necessary because of reported shortage in wholesalers' stocks.

Information obtained from the Ministry of Welfare indicates that severe penalties are being assessed for narcotic violations in some prefectures, whereas in others the penalties are relatively light and in some cases the charges are being nolle prossed even in cases of willful violation. Close liaison is being maintained at the national level with the Ministry of Justice and the Ministry of Welfare in an effort to determine that any person who wilfully violates the narcotic laws in properly punished. Prior to the promulgation of the present narcotic regulation, people of influence were able to traffic in narcotics with never more than a small fine being assessed when apprehended. Such a procedure is considered highly detrimental to the narcotic control program and Military Government Teams

should assure through proper instruction of and close liaison with Japanese officials that prefectural officials are properly educated to the prevailing worldwide opinion, namely that narcotic violators should be punished more for their crime against humanity than for the monetary value of the narcotics concerned. United Nations reports indicate that severe punishment for narcotic violators in Japan is viewed satisfactorily as a definite means of stamping out trafficking in narcotics.

SECTION IV Preventive Medicine Division

Dysentery Control

Previous years' experience indicates the "dysentery season" is present. A review of 1946 emphasizes the urgency of the situation. Over 87,700 cases of dysentery were reported. The national rate started to rise slowly in April, May and June. In 1946, August was the seasonal high point with a rate of 415.2 per 100,000 per year. Rates for July-207.9, September-377.8, and October 259.9 were nearly as high. It was not until December that reports indicated a return to the lower rates.

The various enteric diseases are largely transmitted by direct or indirect fecal contamination of food or water that is ingested. There are no vaccines for the dysenteries. The only preventive methods available are sanitary and personal hygiene procedure aimed at preventing ingestion of the etiologic organisms.

Basic procedures for the protection of food and water are well understood by Military Government Health Officers. What is known must be imparted to the Japanese at all levels i.e., individuals, communities, city governments, prefectures, etc. Equally as important as imparting the knowledge, is to sell the Japanese on the urgency of the situation. The sanitary situation, as it now exists, is not inevitable and need not be tolerated. They should realize that much can be accomplished with the facilities available. Coordination of the activities and responsibilities of each individual with their waste disposal services, water services, food handling services, and special programs must to be stressed.

As in other public health program, the success of this "anti-dysentery" campaign will largely depend on the initiative, interest and resourcefulness of Military Government Health Officers in each prefecture.

Typhus Fever

Comparative Score: (Includes figures of 27 May 1947)

1946-	28,057
1947-	838

Typhus Vaccination Program in Hokkaido:

The typhus vaccination program in Hokkaido is now in operation in the ten largest cities and coal-mining areas of the prefecture. The work should be completed by 1 June 1947. A booster dose of 1 cc will be administered in late October.

Fleas and Typhus

In several instances recently, cases of typhus have been reported following rat control programs conducted in various cities on Japan. The occurrence of such cases indicates that no especial precautions were taken to prevent the fleas, normally found in rats, from migrating and attacking human beings.

Before undertaking a rat control program, particularly if such a program is to be done in the buildings on poor farms, in orphanages, theaters, etc., the proper procedure is to thoroughly apply 5% DDT residual effect spray or 10% DDT dust in and around rat harborages, along rat runways, inside burrows and around burrow entrances. This procedure will kill many wandering fleas as well as a great number of the rats themselves. After the DDT has been spread, proceed with the rat control program. As the rats die, fleas will leave the dead rats, come in contact with the DDT powder and be killed before they can do any harm.

Fleas are notably long-lived even without food and, if allowed to live, will continue to harbor and spread the rickettsiae of typhus to humans and to new rat hosts.

Tuberculosis Control

In the approved plan for the control of tuberculosis in Japan, it is planned to establish a Tuberculosis Care Committee in every city, town and village. The first problem of this committee is health education. It is by diffusion of this knowledge concerning the basic principles of tuberculosis control, both generally and specifically within the home, that this education is to be acquired.

The second function of this committee is to assist patients to enter the sanitoria, and when there must be delay in their entrance, to assist the patient and family to so plan their living conditions that they can occupy the same quarters under safe conditions, and the patient himself will be trained in protecting his associates from his infection.

The third function of this committee will be to assist the family in maintenance of their home during the patient's period of hospitalization and to assist both patient and family in making the necessary adjustments within the home upon his return from the hospital. They will also encourage him in maintaining the necessary follow-up examinations to remain in good health.

The fourth function will be assisting the patient to find an occupation of such type that he can support his family without danger of recurrence of his infection.

These phases of tuberculosis are governed in the United States by the medical social service departments of the hospitals. However, there are no such services or trained workers in this field in Japan and it is necessary that the committee assume these responsibilities. This is an entirely new conception for the Japanese because the basic responsibility for individuals began and ended with the family group. The Japanese need to be helped to realize that tuberculosis extends its activity far beyond that group and includes the entire community. To control the spread of this infection requires the cooperation of all the family groups within that community.

Consequently, from the standpoint of preventive medicine as well as education, this is a very important committee.

A second step in the plan for tuberculosis control which is new, is the formation of a Women's Anti-Tuberculosis Committee. This is a very sound idea because illness is so definitely a problem affecting the home, which is the main field of women's activity. It is through these women's committees, both on the levels of central and local governments, that diffusion of knowledge of tuberculosis control can do its effective work.

It is these women's committees who, working with the tuberculosis care committee, can help each community to realize the importance of maintaining medical supervision of their families and to realize the pressing necessity of immediate and adequate treatment of all early cases.

It is through these committees working within the home that basic principles which prevent the spread of infection can be infused. Such basic principles, as training the children and adults to cover their mouths and noses when coughing and sneezing must be taught. Promiscuous spitting is widespread throughout Japan and approved methods of disposal of sputum, such as its collection in tissue and the placing of such infective tissues in paper bags and then burning, is certainly a portion of home training. If a sputum cup is required, it should be a covered cup similar to a tea cup. The cup with its infected contents should be dropped in a 5% Lysol solution, permitting the cup remain there for 1/2 hour, and then it should be washed in very hot water and soap. It is the care of dishes and eating utensils from which a tuberculosis patient has eaten that will prevent spread within the home. These should be washed with hot water and soap separately from those used by the family and the use of the common cup, the common food bowl and the common chop sticks should be discouraged. It is through the interest of the women's committees that the necessity for individual towels, wash cloths, tooth brushes and toilet articles and keeping them separate from those of the rest of the family can be taught. The fact that hands should be washed always before eating and after coughing or sneezing would help to reduce the spread of infection from the respiratory to the alimentary tract.

It is based upon the ingenuity of the woman within the home that close intimate contact between the infected individual and others not infected can be prevented, plus not sharing a common bed and bedding. These are steps which they will understand. Realizing that young children and adolescents need especially to be protected from contact with members of the family with open tuberculosis, it is women working in the home who can assist much in this particular field.

It is these simple principles which the Japanese people need as a basic from which to work in the establishment of control of tuberculosis. They are practical starting points based upon “dos and don’ts” and these simple principles can be used by the Military Government medical officers for discussion groups among the women’s organization in the various prefectures.

“Ekiri” Commission

Plans are being made to receive the “Ekiri” Commission from the United States. The Commission is composed of: Dr. Katherine Dodd, who will carry out the clinical and epidemiological studies, Dr. John Buddingh, who will do the bacteriological, virological and pathological work and Dr. Samuel Rapoport, who will carry out the biochemical studies. Offices and laboratories will be located in the newly dedicated National Institute of Health in Tokyo. The Commission will work with the Japanese for approximately three months. Details of the project are not yet available, but will be published at a later date.

Venereal Disease Control

Report cards should now be in the hands of all prefectural health departments. These cards are to be distributed to all public and private facilities doing V.D. work. A card should be filled out on every patient on whom diagnosis of venereal disease is made. Cards should be forwarded to the prefectural V.D. Commanding Officer. Prefectures not having sufficient cards can request them from the Welfare Ministry.

Prefectural V.D. control facilities are more advanced in some prefectures than in others. As a visual demonstration of physical setup of clinics, conduct of clinics, and how histories, physical examinations and contact tracing are done, Military Government Health Officers should encourage their prefectural V.D. officials to visit other prefectural V.D. facilities.

SECTION V Social Security Division

Social Insurance

The Social Insurance Bureau, Ministry of Welfare, has rescinded the decision made in December 1946 to postpone indefinitely the formulation of an unemployment compensation or assistance program and will formulate draft legislation based on the recommendations of SCAP and the Committee for Investigation of Social Insurance.

The Ministry of Welfare will draft legislation and administrative plans for consideration by the New Cabinet. The responsibility for preparing such material has been delegated to the Miscellaneous Affairs Section of the Insurance Bureau.

Health Insurance

Representatives of the Social Security Division, PH&W, SCAP, attended the All-Japan Federation of the Health Insurance Associations convention on 30 May at Nara. Eight hundred delegates were present, representing more than 500 organizations. The convention was held to celebrate the twentieth anniversary of the date the Health Insurance law went into effect and the tenth anniversary of the establishment of the Federation. The Health Insurance law provides for the organization of a health insurance association in any establishment employing three hundred or more workers. These associations carry out the Health Insurance law, by collecting premiums or contributions from the employees (which must be at least matched by the employer) and providing the benefits required by the act for cases of disability. The benefits include medical care, cash payments for temporary disability, maternity, nursing, and funeral allowances. About 500 associations covering approximately 2,000,000 employees have been formed.

Representatives from PH&W, SCAP, in addressing the convention, emphasized the need to reform the Health Insurance program in terms of changed economic conditions the close relationship of the social insurance programs to the attainment of economic stability, the need to improve service available under the health insurance program and of securing greater employee understanding and participation in the program. Also the need for equalizing the premium payments and making more uniform insurance benefits through a mobilization of all social insurance resources.

SECTION VI

Medical Service

Japanese Civilian Hospital Strength Report for the period ending 11 April 1947 shows 3,173 hospitals with a capacity of 220,952 beds, 107,218 of which were occupied. During this same period 336,660 out-patients were treated.

SECTION VII Consultants

Nutrition

A committee has been formed by the Ministries of Health and Welfare, Agriculture and the Ration Board to study methods of utilizing imported foods, particularly corn, dried peas, soy flour and milo, in Japanese cooking. The committee of nutritionists will report weekly to the head of the Ration Board.

Plans are being fostered to send the Japanese nutritionists in prefectures to various coal mines to demonstrate the use of imported food.

An official announcement was made of the formation of the National Food and Nutrition Council under the Prime Minister. The regulations governing the Organization of the Council was also published in the Official Gazette.

SECTION VIII MEMORANDA TO JAPANESE GOVERNMENT

PHMJG-22 20 May 1947 Publication of Results of Nutrition Surveys of Civilian Population for November 1946

Total	2,650,272	112,769	197,818,652	36,642,044

*These figures represent the total monthly cost and does not reflect repayments during the month. (36,793 yen)

L.A.R.A. (Licensed Agencies for Relief in Asia)

LARA will soon extend its program to include Okinawa. The resident agent selected is Rev. Everett W. Thompson (Methodist Missionary) who for years has resided in Nagasaki as a missionary.

Rev. Thompson is now in Tokyo awaiting transportation to Okinawa and will supervise the distribution of Okinawa's first shipment of supplies which will consist of the following:

- 116 Bales of cotton clothing
- 40 Bales of bedding
- 148 Cases of assorted canned food
- (Approximately 11.47 tons or 22,940 gross pounds)

Foreign Nationals

Chinese Nationals are so certified by the Chinese Mission, Tokyo as to their eligibility to receive the allied nationals ration of foodstuffs from the Japanese Government. Once certified, Chinese Nationals should receive renewals of their ration direct from the prefectural officials of the Japanese Government.

Social Work Training

JAPAN SOCIAL WORK ASSOCIATION (Nippon Shakai Jigyo Kyokai)

Purpose of Association

One of the oldest and most important welfare organizations in Japan is the Japan Social Work Association (Nippon Shakai Jigyo Kyokai) which has definite responsibilities in the field of private welfare work and close relationship to the Welfare Ministry (Koseisho). The activities of the Association include the followings:

1. Coordinate activities of all social welfare agencies.
2. Carry out research and investigations including the compilation of statistics in the field of social welfare.
3. Publish books and magazines and maintain a central library.
4. Develop and carry out welfare training and educational programs.
5. When requested, provide information to the Welfare Ministry concerning private welfare work in Japan.

Historical Background

The organization of the Social Work Association apparently resulted from the first national welfare conference held in Osaka in 1903 when it was recognized that a permanent central welfare organization was needed. The formation of such an association was delayed however because of the Russo-Japanese war. The Central Charity Association (Chuo Jizen Kyokai) was created in October 1908 with the purpose of coordinating the work of all charity organizations in Japan. In 1921 the name of association was changed to the Central Social Association (Chuo Shakai Jigyo Kyokai) which was the name used until March 1947 when the present name was adopted. The association was formally incorporated in March 1924. In March 1947 the association effected a reorganization but the main phases of the work remained the same.

With the establishment of the Welfare Ministry in 1938, the Social Work Association was granted larger responsibilities under the provisions of the Social Work Law (Shakai Jigyo Ho) which became effective in 1 July 1938. At that time, the private social welfare agencies of Japan were having difficulty in financing their programs and the government developed an extensive plan of subsidies. At times the subsidies to local associations were handled through the Central Association.

National Organization

The national office of the association is located at 1 Sannen-cho, Chyoda-ku, Tokyo. The work of the association is carried out through the following sections:

1. General Affairs:
 - a. General supervision of the work of the association including personnel.
 - b. Finances - accounts and audit.
2. Activities:
 - a. Guidance of all social welfare activities.
 - b. Education of the public concerning social welfare.
3. Research:
 - a. Research and investigation of social conditions and social problems.
 - b. Research and study concerning theoretical and practical aspects of social welfare.
 - c. Publication of periodicals and books.
4. Library: The association maintains a library in Tokyo containing about 20,000 volumes concerning welfare programs in Japan and other countries, collection and classification of books and other materials concerning welfare matters.

There is a Committee of Representatives which is a part of the national organization. This committee consists of one or more representatives from each prefecture proportionate to the number of regular members in each prefecture. The committee is scheduled to meet at least once a year in Tokyo to establish the budget of the Association and approve proposed expenditures. This committee also approves the plans for future programs of the association which are submitted by the Executive Director. Officials of the association are elected by this committee every three years.

Affiliated Organizations

There are six of the largest national welfare organizations in Japan which are affiliated with the Japan Social Work Association. These organizations are: Japan Red Cross Society (Seikijuji); New Life Association (Saiseikai); National Relief Association (Doho Engo Kai); Welfare Workers Federation (Mensei-iin Renmei); Blind Persons Welfare Association (Mojin Fukuji); Mother and Children Welfare Society (Boshi Aiku Kai).

In addition to these national agencies there are approximately 5000 other welfare organizations and institutions which are members of the Social Work Association. Each of these agencies pays an annual membership fee of 100 yen, half of which goes to the national office and half is used by the prefecture branch.

Local Organization

In each prefecture of Japan, there is a local association which is reported to carry on a program in the prefecture similar to the National program. As in other organizations, the prefecture governor is the honorary president of the prefecture association while the other offices may be held by other prefecture officials or persons not connected with the government. The office of the local association is usually located in the prefecture office (kencho).

The name of the prefecture association is not the same in every prefecture. The usual name is the Ken Shakai Jigyo Kyokai (Prefecture Social Work Association), but other names used in some prefecture are Kosei Jigyo Kyokai (Welfare Work Association), Koseikai or Kosei Kyokai. According to the records of the national office each prefecture association has one or more full time employees.

Finances

The association secures funds to carry on its activities from following sources:

1. Membership payments and donations.

2. Payments from the Welfare Ministry for services performed, such as the operation of specified training programs for employees of the Welfare Ministry.
3. Income from enterprises such as the publication and sale of books and magazines.
4. Payments from patrons and foundations.

Education and Training Activities

The association has for many years been responsible for carrying on training and educational programs for persons engaged in private and public welfare work. From 1927 to 1944, the association conducted a training school in Tokyo which was attended by approximately 200 persons. The school was discontinued because of the exigencies of war, but was reorganized and opened again in the fall of 1946.

One Year Curriculum: When the present school opened in the fall of 1946 a total of 50 students entered, including four women. The second term of the school began in April 1946 when 30 additional students entered. These 80 students are enrolled for a one year course of study.

Three Year Curriculum: Plans have been developed for a three year curriculum which will begin in June 1947. Over 100 applications have been received and it is expected that 50 of these applicants will be accepted.

Publications

a. The Association attempts to publish a monthly magazine called Social Work (Shakai Jigyo), but the shortage of paper has made it impossible to publish each month.

b. For many years the Association published the Japan Social Work Year Book (Nippon Shakai Jigyo Nen Kan). A total of eight such volumes have been published but was discontinued during the war. The lack of paper and necessary funds has prevented resumption of publication.

c. The association also compiled and published in 1937 a list of social welfare agencies and institutions in Japan, classified by prefecture and types of work.

SECTION II Veterinary Affairs

Animal Disease Report

The Ministry of Agriculture and Forestry (Bureau of Animal Industry) report the following new outbreaks of disease during the period 1-7 June 1947:

<u>Prefecture</u>	<u>Disease</u>	<u>Number of Cases</u>
Tokyo	Swine Erysipelas	4
Nagano	Swine Erysipelas	1
Kanagawa	Swine Erysipelas	1
Saitama	Swine Erysipelas	5
Iwate	Swine Erysipelas	5
Gumma	Swine Erysipelas	1
Iwate	Swine Plague	3
Hyogo	Blackleg	1

SECTION III Nursing Affairs

National Association

The Japanese Midwives, Clinical Nurses and Public Health Nurses Association was registered as a juridical person 4 June 1947 at the Welfare Ministry.

Education

The six months course for training in T.B. nursing that was sponsored by the National T.B. Association had its graduation exercises 5 June and 24 nurses received certificates.

Demonstration School

The third year students began their 3 weeks affiliation at Matsuzawa Hospital the 2nd of June.

SECTION IV Supply

Distribution

Authorization has been given the Japanese Government to manufacture 300 motor trucks, 300 small passenger vehicles, and 50 large-sized passenger vehicles annually. Sale for official use can be made only to the following: Hospitals, doctors, police, government agencies, public organizations, business firms and taxi-cab companies.

Distribution of 785,080, 1/4 lb cans of foot powder, and 2,342 five gallon cans of ethyl alcohol, formerly U.S. surplus medical supplies has been planned by the Welfare Ministry, and actual distribution will start in the near future.

Insect and rodent control equipment has been shipped to all prefectures by the Welfare Ministry. Four types of equipment have been distributed. The following figures represent total quantities shipped as of 4 June 1947:

Knapsack Type Sprayer	7,809
DDT Duster	11,003
Foot Pump	126
Hand Sprayer	14,116

Shipments by prefecture follows:

<u>Prefecture</u>	<u>Knapsack Spray</u>	<u>DDT Duster</u>	<u>Foot Pump</u>	<u>Hand Sprayer</u>
Hokkaido	200	312	6	240
Aomori	160	216	6	240
Iwate	160	216	6	240
Miyagi	160	216	6	240
Akita	160	216	6	240

Kagawa	160	216		120
Ehime	160	216		120
Kochi	160	216		120
Fukuoka	160	312	6	1240
Saga	160	216		120
Nagasaki	160	216		240
Kumamoto	160	216		240
Oita	160	216		120
Miyasaki	160	216		120
Kagoshima	160	216		120
Total	7,809	11,003	126	14,116

In addition to figures quoted in previous issues of this Bulletin, the following shipments of a total of 1,425 fifty-gallon drums of Pyrethrum Emulsion were made, as of 31 May 1947:

Prefectures	Quantity 50-gal. Drums
Hokkaido	80
Miyagi	45
Akita	1
Yamagata	36
Tokyo	241
Kanagawa	160
Niigata	40
Toyama	85
Ishikawa	40
Aichi	255
Mie	40
Osaka	90
Shimane	58
Fukuoka	77
Nagasaki	77
Kumamoto	50
Miyasaki	50
Total	1,425

Shipments of both emulsion and equipment will continue until a complete distribution is accomplished.

Production

Production of DDT Dusters and Spraying Equipment continued according to plan. Actual production for the manufacturing period of 26-31 May was accomplished as follows:

DDT Dusters	1,000
Sprayer, knapsack type, 3 gallon	350
Sprayer, pump type, semi-automatic	340

The following releases of DDT products and typhus vaccine were approved by Welfare Ministry during period 2-7 June:

<u>Prefecture</u>	<u>10% DDT Dust</u>	<u>5% DDT Residual Effect Spray</u>	<u>Typhus Vaccine</u>
Akita		5,000gals.	
Ishikawa	6,100lbs.	1,000gals.	
Niigata	40,000lbs.	10,000gals.	
Tottori		3,000gals.	
Wakayama		500gals.	
Hyogo	10,000lbs.	2,500gals.

Yokohama Quar. Station			320vials
Nagoya Quar. Sta.			320vials
Kobe Quar. Sta.			320vials
Moji Quar. Sta.			320vials
Nagasaki Quar. Station			320vials
Maizuru Quar. Station	18,178lbs.	200gals.	
Welfare Ministry (For use by Saitama Lab. Animals Producers Association)	22lbs.		
Iwate	15,000lbs.	1,600gals.	
Saga	4,000lbs.	750gals.	
Fukuoka		1,000gals.	
Tokushima	400lbs.	30gals.	200vials
Transportation Ministry		30,000gals.	
Total	117,640lbs.	83,480gals.	4,240vials

Narcotics

According to the Japanese Government's narcotic report for April, seizures made as a result of investigations, included 862 grams of smoking opium, 680 grams of cocaine, 150 grams of codeine, 44 grams of morphine, and 21 grams of heroin. No crude narcotics were seized during the period. Thirty-two registrants and 43

non-registrants were arrested for narcotic violations. Sentences varying from 200 yen fine, to six months penal servitude plus one year probation were imposed on four physicians. Twenty other narcotic traffickers were assessed penalties ranging from 300 yen fine, to five years at hard labor and a 15,000 yen fine. Forty-five were reported including a hospital which lost nine kilograms of morphine and several other narcotic items in much smaller quantities. The Narcotic Section, Ministry of Welfare, has been requested to investigate the circumstances of the burglary to determine the persons responsible for holding such a large quantity of morphine in a hospital for which there is absolutely no justification as nine kilograms of morphine are sufficient stock for a large wholesaler.

Details of the investigation are not yet available relative to the recent seizure of five marihuana cigarettes in Central Honshu. Military Government Teams should determine every effort is being made by police and narcotic officials to squelch any traffic in marihuana, by apprehending and demanding severe punishment for violators.

SECTION V Preventive Medicine Division

Typhus Fever Control

Comparative Score (include figure of 6 June)

1946	28,928
1947	877

Hokkaido Vaccination Program

The typhus vaccination program in Hokkaido is now underway. The Ministry of Welfare reported that up through 28 May approximately 160,000 persons had received the initial course. Plans call for vaccination of over one and a half million people.

Permanent dusting stations in Japan

Reports from the Ministry of Welfare show that permanent dusting stations are being established in the more crowded centers of Japan. These will perform a very valuable function in the control of lice and the prevention of typhus.

Public Health Train

The blue prints for conversion of railway coaches for this train are now completed. Some valuable material for use in preparation of exhibits has been gratefully received from some of the Military Government Teams. Any ideas, suggestions or actual models you may have, will be appreciated.

Tuberculosis Control

The Ministry of Health and Welfare recognizes that the control of Tuberculosis is a paramount problem, and it aware there are inadequate personnel in the health centers throughout Japan. The Ministry realizes the control of tuberculosis through the health centers activities in a full time job both for physicians and public health nurses; also the extension of the work in the centers into the outlying communities is both necessary and imperative, and that transportation difficulties and distance both play a role in making it difficult for the patients to reach the centers and the workers in the centers to reach the patients. They also appreciate that both medical and nursing personnel are not as thoroughly trained in the control of tuberculosis as they should be. Therefore, the Ministry has made plans to reinforce such training, some of which has begun. It is necessary in the interim, however, to use the personnel they have and to do "on the job" training rather than lose all contacts with the problem. Both the Ministry and the private physicians realize the war has broken contact with the scientific opinions of the world and that the Japanese have not as yet had the opportunity to know and apply the latest procedures.

Japan has tried, in the past, to jump ahead rather than proceed by regular steps in their effort to catch up with the modern science of the world and now both the Ministry and the profession must fill in those gaps. Much help can be given to these men and women, from an advisory and supervisory standpoint, concerning the simple basic procedures which are never mentioned in the more advanced literature.

All these problems require financial support and are dependent upon the budget for public health work. The budget at the present time is in the hands of the Ministry of Finance, hence there must be expected some delay until it is established June 30, 1947, and this full program can proceed along the lines as planned.

Sanitation

Sanitary Associations were organization composed of house holders in areas corresponding to wards. They were called voluntary organizations because original expenses for the work carried on by the association was borne by the members. The purpose was to have some agency to carry on community projects involved in epidemic disease control. Actually, they were not voluntary in that there was compulsory membership and payment of fees stipulated by the officers and directors. Due to this feature and their close relationship to the Tonari-gumi (in some cases they were one and the same), they were ordered to be dissolved along with the Tonari-gumi in the plan to decentralize the central government.

Among other things, these associations were used to negotiate contracts for the collection and removal of waste material, garbage, refuse and night soil. They were also used for the distribution of controlled materials much as insecticides and rat poison. The dissolution of these associations has left the sanitation programs generally drifting with no control or direction.

It is necessary to ascertain that the responsibility for sanitation programs is understood and carried by the Prefectural Health Official, the city, Machi-officials and on down to the Ku and block organizations.

At the present time, the Japanese Government is working on plans for a suitable organization to replace the sanitation association, but until such time as they do these responsibilities must be carried by the prefectural office.

Port Quarantine

The formal dedication ceremonies of the Nagahama Quarantine station were held on Saturday 31 May. Col. Crawford F. Sams, Chief, PHW Section, GHQ, SCAP, was the principle speaker. He congratulated the Japanese Quarantine Officials for their success in preventing the entry of Cholera and Plague during the summer of 1946 and encouraged those present to continue their vigilance through the coming season.

Weekly reports of incoming quarantinable disease:

Period 18 May to 31 May - Negative.

SECTION VI Social Security Division

Social Insurances

A series of conferences is being held with the Ministry of Welfare's Committee on the Investigation of Social Insurances. This Committee is composed of professors of social insurance from various Japanese universities and of present and former officials of governmental and voluntary social insurance organizations. Effort will be made to establish coordination of all social insurance systems into unified program.

Representatives of PHW Section, GHQ, SCAP, attended a meeting in Otsu of the General Secretaries of all the Prefectural Federations of National Health Insurance Associations of Japan. These Federations, although voluntary organizations, work very closely with official social insurance agencies at all levels - local, prefectural, and national.

SECTION VII Medical Service

Japanese Civilian Hospital Report for the period ending 18 April 1947 shows 3,179 hospitals with a capacity of 220,176 beds, 105,557 of which were occupied. During this same period 334,754 out-patients were treated.

Medical Education

At a meeting with CI & E, GHQ, SCAP, and Japanese Ministry of Education, Public Health and Welfare Section, GHQ, SCAP, concurred in plan to designate some existing medical Semmon Gakko (junior colleges) as Daigaku (University) of the old type. This does not indicate in any way that the schools meet the standard of Daigaku (university) or will continue to exist as Daigaku. The plan as proposed by CI & E merely allows these schools to be designated as Daigaku for the purposes of establishment of attached premedical preparatory schools as an interim measure. When the new type Daigaku form is established, they will be examined very carefully by an accreditation board established to evaluate schools of university level. It has been agreed that the Japan Council on Medical Education working in close liaison with Public Health and Welfare, GHQ, SCAP, will have the deciding voice in the accreditation council in matters concerning accreditation of medical schools.

Public Health officers of the Military Government Teams are requested to make certain that students entering the medical preparatory schools attached to these newly elevated schools are adequately informed of the above by the deans of the schools prior to their enrollment.

SECTION VIII Nutrition

The Nutrition Consultant conferred with representatives of the Price Control and Rationing, ESS, Information Division, CI & E, Imported Food Section Ration Board (Japanese) and Economic Section CLO (Japanese) with regard to committees to consider use of imported foods. A Food Utilization Committee was formed to consist of two sub-committees, Research and Information. This committee is to report directly to the Imported Food Section of the Ration Board. The Research sub-committee is to supply technical information and study the ways and means of utilization of imported food by the Japanese and help on the preparation of imported material. The Information sub-committee is to develop educational material and consider dissemination of information.

The Research sub-committee held a meeting at which various nutritionists showed methods of preparing corn meal, soy flour, and soy meal. Pictures were taken by the Signal Corps under the supervision of CI & E and PH & W for use in publicity.

There is a special problem in the education of the families of coal miners in the use of imported foods in place of rice. The material of the sub-committee is to be transmitted to prefectural nutritionists for their use in demonstrating the use of imported foods to the women of coal mining villages.

SECTION IX Memoranda to the Japanese Government

PHMJC-24 28 May 1947 Application for Release of Certain Former Japanese Military Narcotics.

CRAWFORD F. SAMS

SECTION I
WELFARE DIVISION

Public Assistance Report (Medical) Oct1946 - Mar1947*

	No. Persons Treated	Patient Days	Total Cost	Average per Case
Delivery Assistance	10,138	10,910	Yen 495,475	74.97
Medical Treatment	240,272	7,525,519	56,425,410	234.83

* Corrected report submitted by Welfare Ministry. (This is a quarterly report. These figures are not included in the monthly public assistance report.)

Red Cross

Tentative plans have been completed by which the American National Red Cross will turn over to the Japanese Red Cross 40,000,000 sheets of surplus paper for use in the publication of a Junior Red Cross Handbook for Teachers, and for use by the CI&E Section in the publication of a Social Studies Supplement for primary schools.

Preparations are being made for the inauguration of an adult course in Home Nursing to be conducted by the Prefectural Chapters of the Japanese Red Cross. A group of graduate nurses are being called into National Red Cross Headquarters for the purpose of developing an Instructor's Course. On the completion of the Instructor's Course, the nurse will conduct Instructor's Courses in regional centers and supervise the development of Home Nursing Instruction course within their areas. The course will follow, so far as applicable, the American Red Cross Course in Home Nursing.

SECTION II
VETERINARY AFFAIRS DIVISION

Animal Disease Report

The Ministry of Agriculture and Forestry (Bureau of Animal Industry) reported the following outbreaks of disease during the period 7-10 June 1947:

<u>Prefecture</u>	<u>Disease</u>	<u>Number of Cases</u>
Shizuoka	Swine Erysipelas	2
Aichi	Swine Erysipelas	1
Toyama	Swine Erysipelas	1
Kumamoto	Texas Fever	16

Field Trip

A representative of Veterinary Affairs Division, PH&W, GHQ, SCAP surveyed Japanese veterinary conditions in Nagano Prefecture during the period 10-14 June 1947. Animal disease control measures and meat and dairy inspection activities were found to be functioning in a satisfactory manner under the guidance of Military Government Officials.

SECTION III
DENTAL AFFAIRS DIVISION

Sixteen displaced dentists were re-established in practice during the month ending May 15.

SECTION IV
NURSING AFFAIRS DIVISION

Education

Curriculum committee was set up by the Welfare Ministry to meet and discuss the National Curriculums for Midwifery, Clinical Nursing, Practical Nursing and Public Health Nursing Courses. There have been two meetings to date of this group.

Personnel

Miss J. Kaser, (P.H.N.) has been assigned to PH&W, GHQ, SCAP, and will supervise the program of the National Public Health Nurses which is being held at the Institute in Tokyo.

SECTION V SUPPLY DIVISION

Distribution

Several informal requests have been received from the Military Government agencies in the field for the assignment of motor vehicles for temporary periods to carry out special projects. Problems of this nature will have to be settled by pooling vehicles available in prefectures for medical and sanitary use. Although the surplus U.S. Army vehicles allocated to the Welfare Ministry have been assigned to specific agencies, it is the intention of the ministry that these vehicles be pooled, under supervision of the prefectural health officer, to carry out special projects. If an agreement cannot be reached at the prefectural level, request should be made to the Ministry of Welfare, attention: General Affairs Section, for assistance in coordinating the particular problem at hand.

The distribution of pyrethrum emulsion and spraying equipment has reached the point where no difficulty should be experienced, from the supply standpoint, in initiating and carrying out insect and rodent control programs. Sufficient DDT also is available in the hands of regional wholesalers and may be secured by the various prefectures upon direct application to the Welfare Ministry, attention: Pharmaceutical Affairs Section. Concerning pyrethrum emulsion and spraying equipment, attention is invited to the fact that these materials have been manufactured without financial assistance from the Central Government and that manufactures will sell to prefectures on a commercial basis. Prompt payment for the items will insure success of future programs. Under present fiscal policies, prefectures may expect subsequent reimbursement from the National Treasury in varying percentages averaging approximately thirty percent for the various commodities.

Shipments of both pyrethrum emulsion and spraying equipment to the prefectures have continued. The Welfare Ministry has shipped 1,274 fifty-gallon drums of pyrethrum emulsion, and the following equipment, in addition to the quantities reported in previous issues of this Bulletin:

DDT Duster	13,339
Knapsack type Sprayer	3,188
Semi-automatic Sprayer	3,490
Hand Sprayer	1,296

Shipments by prefectures follow (as of 11 June 1947):

<u>Pyrethrum Emulsion:</u>	
<u>Prefecture</u>	<u>Quantity 50 gal. Drum</u>
Yamagata	59
Fukushima	43
Tochigi	45
Tokyo	240
Kanagawa	130
Yamanashi	34
Nagano	50
Gifu	45
Kyoto	70
Osaka	227
Hyogo	75
Hiroshima	40
Fukuoka	91
Miyazaki	61
Kagoshima	64
Total	1,274

Equipment:

Prefecture	DDT Duster	Knapsack Sprayer	Semi-automatic Sprayer	Hard Sprayer
Tokyo	9,339	1,688	1,990	
Kanagawa	4,000			1,296
Osaka		1,500	1,000	
Hyogo			500	
Total	13,339	3,188	3,490	1,296

Production

In developing a production plan for anthelmintic drugs, it was found the low price that has been set for Artemisia Mibu was one of the limiting factors. The price of 10 yen per kilogram is not comparable to similar products, and as a result, farmers are not particularly interested in cultivating the plant. Recommendations have been submitted for an increase in present fixed prices.

Production of DDT dusters and spraying equipment continued according to plan. Increases in production for the manufacturing period of 2-7 June were made with actual production accomplished as follows:

DDT Dusters	1,000
Sprayer; knapsack type, 3 gallon	600
Sprayer; pump type, semi-automatic	400

The following releases of DDT products and typhus vaccine were approved by Welfare Ministry during period 9-14 June:

<u>Prefectures</u>	<u>10% DDT Dust</u>	<u>5% DDT Residual Effect Spray</u>	<u>Typhus Vaccine</u>
Akita	13,000 lbs.		
Tochigi	25,000 lbs.		
Miyagi			250 vials
Aichi			600 vials
Yamaguchi	5,044 lbs.	1,325 gals.	1,267 vials
Toyama	10,000 lbs.		
Yamanashi		6,000 gals.	
Maizuru Quar.Sta.		1,300 gals.	
<u>Kagawa</u>	<u>10,000 lbs.</u>	<u>5,000 gals.</u>	
Totals	63,044 lbs.	13,625 gals.	2,117 vials

Narcotics

The sentencing of a black-market operator in a Japanese district court to 3 years 6 months penal servitude highlighted the progress made in narcotic enforcement in Japan. The trafficker was apprehended as a result of his pickpocketing 900 yen from a tram-car passenger. In the course of the investigation, 10 grams of morphine and 25 grams of codeine were found in his possession. Formerly no notice would have been taken of the narcotics, but in the present instance the case was reported as a narcotic violation.

Memorandum #PHMJG-27, 13 June 1947, was issued to the Narcotic Section, Ministry of Welfare, stating there is no objection to the request for release of all former Japanese military medicinal narcotics with the exception of powdered morphine, cocaine, medicinal opium and Narcopon. Narcotic reports and accounting procedures have reached such a satisfactory level that all of the remaining Japanese military medicinal narcotics may be released at an early date.

The Ministry of Transportation, Ministry of Welfare, Tokyo station masters and Tokyo police assigned to the large railway stations, agreed to furnish rapid and safe conduct to trains to any courier of a sizable quantity of narcotics. These couriers will be properly identified through liaison with officials of the Ministries of Transportation and and Welfare.

A request was received that certain narcotics be released to the Sanitation Bureau of a prefectural government for sale. There is no provision in the narcotic regulation for any government agency to deal in narcotics. Sales may be made only by registered compounders and producers and wholesalers. The Ministry of Welfare was advised to inform all prefectures their sole responsibility under the narcotic regulation is to supervise and inspect narcotic transactions and to investigate narcotic violations.

SECTION VI PREVENTIVE MEDICINE DIVISION

Ekiri

The Ekiri Commission composed of Dr. Katharine Dodd, who will carry out the clinical and epidemiological studies; Dr. John Buddingh, who will do the bacteriological, virological and pathological work; and Dr. Samuel Rapaport, who will carry out the biochemical studies, arrived on 8 June 1947. This project will be under the auspices of the newly dedicated National Institute of Health in Tokyo. On 9 June, the Commission conferred with Drs. Kobayashi and Kojima and arrangements were made for a meeting with the Pediatricians and the chiefs of the isolation hospitals in Tokyo. Bed space for patients with diarrhea including "ekiri", will be made available at the Institute and in other hospitals.

The most important immediate problem is the differentiation of "ekiri" from dysentery and other forms of diarrhea. In order to do this, they must become intimately acquainted with the clinical aspects of acute diarrheal disease in Japan. Therefore, it is essential that the Commission be immediately notified of cases of severe diarrhea, dysentery and "ekiri".

Military government health officers are requested to communicate with the Preventive Medicine Division of Public Health and Welfare Section, GHQ, SCAP, by telephone as soon as cases are discovered.

Sanitation Regulations

The Japanese have been cognizant of the importance of environmental sanitation and have in existence adequate laws to cover the prevention of nuisances. The basic law controlling the actions of the individual and the community is the "Law for the removal of foul matter" passed in 1900.

The following extract contains the main points of this law:

"Summary of Law for Removal of Foul Matters

1. Foul matter is defined as rubbish, ashes, mud, foul water and night soil.
2. Occupant of premises is primarily responsible for removal of foul matter. He must provide adequate receptacles, and maintain adequate gutter for its removal.
3. Cities shall provide for central collection of foul matter collected by private individuals. It shall also construct and maintain public gutters to lead off foul matter from private premises. City shall determine method of accomplishing above, and secure approval of local governor.
4. Cities shall appoint inspectors to enforce removal of foul matter. They have right of entry during daylight hours for purposes of inspection. Violators of law are to be given written notice of failure to comply and thereafter are subject to imprisonment (10 days) and fine for continued violation of instructions of inspectors.
5. Where private persons do not make required repairs, or do not construct necessary facilities, the city may do so, and collect cost from private persons in some manner as delinquent taxes are collected."

Law may be cited as follows:

Law No. 31, 1900--Law for Removal of Foul Matter.

Home Ministry Ordinance No.5, 1900 Regulations to Enforcement of the Law for Removal of Foul Matter.

Virus & Rickettsial Disease Control

Comparative Score 1 January to 13 June.

1946	30,016
1947	931

Scrub Typhus Vaccination

About 2000 persons were given 1 cc booster doses of tsutsugamushi vaccine in selected endemic areas of Niigata. This is a continuation of the program to evaluate the new vaccine and to control scrub typhus in endemic areas.

Tuberculosis Control

The first step in the SCAP program in the control for tuberculosis was the return of patients, with the opening of the National Sanatoria from their homes to which they had gone because of inadequacy of the hospitals diets.

Available food in Japanese supplemental ration was obtained upon a joint order of the Ministries of Welfare and Agriculture. By 15 April 1947, 43 of the 46 prefectures had increased their staple rations by an average of 130 grams.

The available reports were as of April 1947 and showed a slight increase in the number of cases which were hospitalized.

Because of the shortage of food, it is difficult to maintain a steady flow and this will require a monthly check to determine its maintenance.

SECTION VII SOCIAL SECURITY DIVISION

Unemployment Insurance

The first of a series of meetings was held with representatives of the Labor Division, ESS, GHQ, SCAP, to formulate basic SCAP policies with respect to the Japanese unemployment compensation program. General agreement was reached relative to the following:

1. Early adoption of an unemployment compensation system should be encouraged.
2. One integrated system should be established though different eligibility and payment procedures may be evolved for the various categories of covered workers.
3. The choice of the method of payment, whether by check or cash, should be left to the discretion of the Japanese.
4. 4. The Japanese will be encouraged to increase the payment in excess of their proposed limitation of sixty percent of the weekly wages and to include all remuneration in determining the weekly wage.

Seamen's Insurance

The series of conferences held with Japanese officials relative to proposed amendments to the Seamen's Insurance law were completed. The following major changes were suggested by this office and adopted by the Japanese:

1. A representative Seamen's Insurance Advisory Committee is to be established.

2. In determining the basic wage used in computing the amount of benefits, the higher of the two amounts, the average basic monthly wage over the entire insured period or the average monthly wage for the three months immediately preceding disability, will be used.
3. The minimum coverage necessary to qualify for invalidity or retirement allowance has been reduced from three years to six months.
4. Benefit payments are to be paid even though accident resulted from contributory negligence of the worker.
5. Local appeal referees are to be provided with sufficient authority and direction to give the insured an opportunity for a fair hearing.
6. The period to file a protest to a decision of the insurance office has been extended from thirty to sixty days.
7. Miscellaneous amendments to conform with SCAP directive to eliminate use of word "imperial" with respect to governmental matters and to conform with the new Constitution.

National Health Insurance

National Health Insurance was the subject of a press conference held with CI&E, GHQ, SCAP, and Japanese correspondents during the past week. It was emphasized at this conference that National Health Insurance is definitely in need of considerable rehabilitation and financial aid in order to prevent collapse of the program. National Health Insurance is an important part of the over-all social insurance program because of its effect on the economic stabilization of Japan. The following points were indicated as necessary for keeping the program alive and to increase its efficiency for the benefit of the Japanese people.

1. Substantial increase in the central government's subsidy.
2. A long term, low-interest loan from the Welfare Pension reserve fund.
3. Establishment of dispensaries or procure existing dispensaries, including those of the All-Japan Medical Treatment Corporation.
4. Coordination and standardization of all health insurance benefits of the various social insurance schemes with the view toward a unified system.

The possibility of achieving an immediate coordination and cooperation between the Health and National Health Insurance programs was clearly shown in a plan now operated by a factory in the vicinity of Tokyo. This factory had built a rather large hospital at the beginning of the war which now far exceeds its requirements. In order to utilize the facilities of the hospital, the National Health Insurance Associations of eight nearby towns and the Health Insurance Association of the factory have organized a cooperative association. The members come to this hospital for their treatments as out-patients as well as for their hospitalization needs, for which their respective Associations reimburse the hospital at the standard insurance rate. Each Association involved has elected representatives to a council which meets with representatives of the hospital and company in formulating the over-all policies.

SECTION VIII MEDICAL SERVICE DIVISION

Japanese Civilian Hospital Strength Report for the period ending 25 April 1947 shows 3,181 hospitals with a capacity of 220,208 beds, 110,758 of which were occupied. During this same period 339,439 out-patients were treated.

Although the Japan Council on Medical Education has strongly advocated a three premedical course, the Japan Educational Reform Council has recommended only two years of preparation for medical schools.

SECTION IX
VITAL STATISTICS DIVISION

On 11 June 1947, instructions were issued jointly by the Director of the Food Administration Board and the Director of the Bureau of Civil Affairs of the Justice Ministry, requiring the presentation of official evidence of birth registration when applying for rations for the new-born.

The local Koseki officials, on acceptance of a declaration of birth are required to certify, without charge, to the fact of the birth registration by placing their official seal on the ration application form or by issuing a separate certification blank.

No registrations for rations for the new-born shall be made without presentation of the certification of birth prepared by the local Koseki office.

These requirements will be of great benefit in increasing the completeness and promptness of birth registration, and at the same time assist the ration authorities in the issuance of rations only to persons entitled to receive them.

It was the previous practice of the local ration boards to require a certification by the attending physician or midwife.

SECTION X
CONSULTANTS

Nutrition

Data on the May 1947 Nutrition Survey are beginning to come in. The following prefectures and city have submitted reports on food consumption: Akita-Copper Mine, Fukushima-Coal Mine, Hiroshima, Gumma, Hyogo, Shizuoka, Okayama, Iwate, Saitama, Tochigi, Kanazawa and Kure City (Hiroshima). Areas reporting on physical examination are: Fukushima-Joban Coal Mine, Saga, Shizuoka, Okayama, Toyama, Iwate, Tochigi, Saitama, Gumma, and Hyogo.

WELFARE DIVISION

Licensed Agencies for Relief in Asia (LARA)

Two additional shipments of relief goods were received by LARA. These shipments are the 12th and 13th received from overseas since the beginning of LARA operations.

The relief supplies arrived on 14 June 1947 at Yokohama and are as follows:

<u>via President Jefferson</u>	
70 cases salmon(canned)	28,000 lbs.
 <u>via Willamette Victory</u>	
Medical Supplies	13,791 lbs.
Blankets	<u>1,624 lbs.</u>
Total (net) weight	43,415lbs.

NOTE: The medical supplies arriving aboard the Willamette Victory included, 4000 lbs. cod liver oil, mercury, zinc oxide, sulfa drugs, tannic acid, ammonium chloride, pento-barbital and boric acid.

Red Cross

The Japanese Red Cross has received a contribution of 129,450 yen for use in its Disaster Relief program. The National Society is developing plans by which it hopes to bring about a closer coordination of its disaster services with the National and Prefectural Governments.

The National Public Health Museum of the Japanese Red Cross in Tokyo is bringing its exhibits up to date in the important fields of Public Health. The only Public Health Museum in Japan, it is widely used by the schools in the Tokyo area in their health education program for children.

The Japanese Red Cross has published the first of a planned series of health pamphlets. Written by an authority in the field, the first pamphlets deals with tuberculosis. Other pamphlets are planned in the fields of infant and child care, nutrition, venereal disease control, etc. The pamphlets are sold at a nominal cost to cover the expense of their publication. The pamphlets will be available through prefectural Red Cross Chapters.

SECTION II
VETERINARY AFFAIRS DIVISION

Monthly Meat Inspection Report

Following is a summary of the monthly Meat Inspection Report for April 1947, submitted by the Ministry of Welfare:

	<u>Cattle</u>	<u>Calves</u>	<u>Sheep & Goats</u>	<u>Swine</u>	<u>Horses</u>

Epizootic Lymphangitis	1
Pullorum Disease	444

Animal Weekly/Disease Report

The Ministry of Agriculture and Forestry (Bureau of Animal Industry) reported the following new outbreaks of disease during the period 15-21 June 1947:

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Mie	Swine Erysipelas	1
Shizuoka	"" ""	2
Oita	Texas Fever	1

SECTION III DENTAL AFFAIRS

The value of dental instruments produced for the month of May amounted to 10,160,935.50 yen while that for dental materials amounted to 4,208,121.38 yen.

SECTION IV SUPPLY

Distribution

Recent field trip throughout the Island of Shikoku revealed the prefectural officials in charge of distribution of medical supplies, are being influenced by the Doctors' Association in the allocation of controlled medicaments. This practice is proving a great delaying factor in the distribution of medicaments to the hospitals and doctors. Visits to distributing company warehouses and distributing points revealed a fairly large amount of controlled medicines stored therein, and if properly distributed, would be of great help to the doctors and hospitals. The prefectural officials should be encouraged to supervise and to carry out their functions without interference of the Doctors' Association.

There still remains a fair stock of former Japanese Army and Navy medical supplies to be disposed of. Effort must be taken by the prefectural officials responsible to carry out the directives issued by the Welfare Ministry covering distribution through the medium of bazaars which has proven to be the most expeditious method of distribution.

Tokyo-To has been conducting a number of bazaars to dispose of former Army-Navy medical supplies to hospitals and doctors. The latest bazaar was held from 20 to 30 May 1947 at which time 834,122.24 yen worth of medicaments were sold to 4,558 doctors; of that amount 1,564 dentists purchased 134,071.56 yen.

Additional shipments to the prefectures made by the Welfare Ministry, distributed 1,289 fifty-gallon drums of pyrethrum emulsion and 4,862 pieces of equipment for use in the insect and rodent control program. There are in addition to quantities recorded in previous issues of this Bulletin, and carry the records to 18 June 1947. Shipments by the prefectures follow:

Pyrethrum Emulsion

<u>Prefecture</u>	<u>Quantity 50-gal. Drum</u>
Miyagi	87
Saitama	37
Tokyo	237
Kanagawa	125
Niigata	87
Ishikawa	43

A shipment of 50 kilograms of chaulmoogra oil was made to Okinawa by air from Japan 20 June 1947. This will help to implement the dwindling supply of drugs for the treatment of lepers in the Ryukyus, until the arrival of those requisitioned from the United States.

Production

Production of DDT dusters and spraying equipment increased for the manufacturing period of 9-14 June. Actual production was accomplished as follows:

DDT Dusters	1,200
Sprayer, knapsack type, 3 gallon	2,250
Sprayer, pump type, semi-automatic	1,930

The marked increases in production of the two types of sprayers can be attributed to the fact that the Hatsuda Industrial Co., in addition to the Shikutani Manufacturing Company, have initiated production in June.

The following releases of DDT products and Typhus Vaccine were approved by Welfare Ministry during period 16-21 June:

<u>Prefecture</u>	<u>10% DDT Dust</u>	<u>5% DDT Residual Effort Spray</u>	<u>Typhus Vaccine</u>
Yamagata			2,840 vials
Maizuru Quarantine Station			7,200 vials
Gifu		500 gallons	
Nara	4,000 lbs.		
Osaka	11,500 lbs.	1,500 gallons	
Communication Ministry	5,000 lbs."		
Fukuoka	50,000 lbs."		
Kagawa	50,000 lbs.	1,000 gallons	
Oita	10,000 lbs.	5,000 gallons	
Total	130,500 lbs.	8,000 gallons	10,040 vials"

Narcotics

A narcotic preparation in ampoule form with the trade-name of "Spasmohin", has been given a laboratory analysis, due to a marked discoloration of many ampoules. The Tokyo Hygienic Laboratory finds that only 10% of the ampoules are fit for medicinal use. The Ministry of Welfare reports approximately half a million ampoules now held in custody in Tokyo, will be destroyed. Approximately this same number of ampoules are held by wholesalers in other sections of Japan, and Narcotic Section officials have been requested to advise all wholesalers there is a probability that stocks of "Spasmohin" held by them are unfit for medicinal use, and either the stocks should be destroyed or tests made to determine fitness for medical use.

Further thefts of narcotic stocks from hospitals have been reported recently, and prefectural officials should have the safeguards of every hospital investigated, relative to their narcotic stocks, in efforts to eliminate this source of supply for narcotic addicts. Regulation steel safes, and concrete strong rooms with steel doors, have proved to be the best safeguards, and all hospitals should be requested to make arrangements to store their stocks of narcotics in such a place.

SECTION V PREVENTIVE MEDICINE

General

Preventive Medicine and other Public Health activities will suffer a severe shock as a result of a majority of Military Government Health Officers leaving this theatre in the near future. This is especially true because replacements will not arrive for some time after present officers leave their posts. This shock can be reduced to a great extent if the present incumbents will take the necessary action to see that their files are left in order, up to date and as complete as possible. Health Officers are also urged to indoctrinate their enlisted assistants as thoroughly as possible, in order that they may carry on the health work uninterrupted until the new Health Officer arrives and gets oriented on his new job.

Japanese B Encephalitis

Attention is invited to the Weekly Bulletin #20 of PH&W Section, GHQ, SCAP, Preventive Medicine Division, for the week ending 16 May 1947, concerning Japanese B Encephalitis.

The mosquito-encephalitis season is rapidly approaching and mosquitoes are breeding in greater and greater numbers with each passing week. To date, no reported suspect cases of Japanese B Encephalitis have been confirmed. The fact that a few suspect cases have already been reported, indicates the alertness of Military Government Team officials, Japanese doctors and health officers in respect to the possible presence of this disease.

Mosquitoes are known vectors. Continue to push mosquito control operations to the fullest extent.

Tuberculosis Control

The Ministry of Health and Welfare in their plans for the control of tuberculosis are initiating a new procedure among the majority of the Japanese medical profession. This group of individuals is still passing through a difficult phase of development because of its traditional background which has existed for centuries. Medicine in Japan has been the practice of "every man for himself", but in the control of tuberculosis it must be every man for everyone else if this problem is to be solved.

Cooperation between members of the profession for the common health of Japan is still in its infancy; but in the control of tuberculosis, it is of vital importance that this problem shall be adequately handled on a wide basis. The physician in the health center must cooperate with the physician in the sanatorium in the reference of cases to and from each institution; and it is equally necessary that there shall be cooperation between these institutions and the practitioners, the dentists, druggists, nurses, various health insurance companies and unions.

It is a problem of education and cooperation for the common health of the Japanese people which needs careful explanation and encouragement to establish inter-professional confidence and integrity.

Typhus Fever

Comparative Score: (includes figures of 20 June)

1946 - 30,548

1947 - 966

Personnel

Captain M. C. Gephardt, M.C., Typhus Consultant, Preventive Medicine Division, PH&W, GHQ, SCAP, has been ordered relieved from duty with this headquarters for return to the United States and subsequent processing for separation from the A.U.S.

Head lice and Body Lice in Children

Recent reports of surveys in a few of the prefectures in Japan indicate that louse infestation among school children is higher than the initial reports showed. In some schools in Niigata prefecture, louse infestation was 100% - the girls showing a higher percentage of head louse infestation than the boys, while the boys showed a higher rate of infestation with the body-lice.

The Welfare Ministry has been urged to spur the prefectural health officers to greater efforts in louse control during the summer months. There are large stocks of 10% DDT powder now on hand (approximately 3,000,000 pounds) for use in Japan. No louse should be permitted to live.

It is hoped Military Government Team health officials will continue to point out to the Japanese authorities that lice are absolutely unnecessary in this day and age and every effort should be made to reduce the louse population during the summer in order to circumvent a possible epidemic this coming typhus season. Do not let the Japanese health officers lapse once more into the "It can't happen here - again" attitude.

New Vector of Murine Typhus

In a recent report from China, it has been reported rat mites, Liponyssus bacoti, (the tropical rat mite) were found to be infected with the rickettsia of murine typhus following the occurrence of several cases of murine typhus in an orphanage. This report brings to light what has been suspected for some time by many workers in the field and emphasizes the need for employment of thorough insect and mite control operations prior to any rodent control program.

At the moment, 5% DDT residual effect spray appears to be the most effective material for use in the control of wandering rat mites and fleas. This spray should be applied to rat burrows, rat runaways, around entrances to rat burrows, in and around rat harborages and up to two or three feet on the walls of buildings where rats are found.

Venereal Disease Control

Reference is made to addenda to Public Health and Welfare, GHQ, SCAP, Weekly Bulletin #24 for the period 8 to 14 June, relative to the supply and distribution of V. D. drugs. Many health officers have communicated with PHW, GHQ, SCAP expressing grave concern over the future of their V. D. programs because of the supply problems resulting from the change over of the drug distribution channels from Eighth Army to Japanese channels. While it is realized that certain difficulties are to be expected with this change, it is believed that the situation can be handled satisfactorily, provided the Military Government Health Officers will work closely with the Prefectural Health Officers in the distribution of these drugs once the drugs have arrived in the prefectures.

It is emphasized the Prefectural Health Officer has absolute control over the distribution of these drugs once they have arrived in the various prefectures. Therefore, if Military Government Health Officers will exercise supervision over the Prefectural Health Officers in these matters, all the V. D. drugs can be channelled to approved hospitals, clinics, etc., as in the past.

Insect and Rodent Control

Educational and Publicity Program

The Welfare Ministry, with the cooperation of PH&W Section and CI&E Section, GHQ, SCAP, is undertaking an intensive and extensive, nation-wide, educational and publicity campaign during the next few

months concerning insect and rodent control. Emphasis is being placed on the prevention and control of “filth diseases” such as dysentery and typhoid, etc. and the part each individual can play to help eradicate these diseases.

The first round will be leveled at the “fly” and its control through environmental sanitation. All means of transmittal to the public will be utilized. Prefectural Governments are being urged to join in this program to reduce the incidence of the “filth diseases”. Military Government team officers will be of inestimable value in the counsel and stimulation they can give in the conduction of this program.

SECTION VI SOCIAL SECURITY

Social Insurance

At a meeting with representatives of the Welfare Ministry, a review was made of the plans of the Ministry for determining and requesting a supplemental government subsidy for National Health Insurance. An understanding was also reached that the Welfare Ministry would postpone rate adjustments for Welfare Pension and Seamen’s Insurance until the possibilities of coordinating these adjustments with other changes in the social insurance programs could be more fully explored.

A meeting was held with Japanese officials regarding the utilization of Welfare Pension reserves for loan purposes. In general, it is proposed that 500,000,000 yen be loaned to organizations providing welfare and social insurance facilities with proper safeguards as to the security and earning rate. Among the organization are:

1. National Health Associations.
2. Companies covered by the social insurance laws.
3. Federation of organizations covered by the government operated Health Insurance program.
4. Social Welfare Association.
5. Construction Welfare Association.

The plan presented by the Social Insurance Bureau of the Ministry of Welfare included utilization of the Welfare Pension fund on a loan basis by the National Health Insurance Associations. The purpose of this loan would be establishing clinics in rural areas that are not now equipped with adequate medical facilities.

Officials brought in a draft cabinet order for establishing social insurance committees with regard to the Health Insurance, the Welfare Pension, and Workers’ Accident Compensation laws. It was recommended that the following features be added:

1. That the committee member be appointed in overlapping terms.
2. That a minimum number of meetings be prescribed and written annual reports be required.
3. That a similar committee be established for Seamen’s Insurance.

UNEMPLOYMENT INSURANCE

A continuation of a series of conferences with representatives of the Labor Division, ESS, GHQ, SCAP, for formulating basic SCAP policies with regard to the proposed Japanese unemployment insurance program was held during the week. It was agreed that:

1. A special inter-governmental committee should be appointed to formulate the unemployment compensation program.
2. Coverage should be as broad as practical and to include government workers. The seamen may need special study and consideration.
3. The total wages should be taxable, and no exclusion from coverage should be made because an individual’s income exceeded a certain amount.
4. A minimum and maximum weekly benefit amount should be established with consideration given to the minimum wage laws in determining the minimum and with variance between prefectures permitted with respect to both the maximum and minimum amounts.

5. Same principles of qualification and payment should be used for day workers as for others. A special record-book procedure will probably be necessary for processing claims of day workers.

6. The qualifying period should be a year, with a required proportion of insured work measured in terms of time instead of amount of wages.

7. An acceptable formula for determining the weekly benefit amount could be: $WBA - 60\% \times \text{Average Daily Wage} \times 7$. The weekly benefit amount could be reduced by one-fifth for each day of work to cover part-time unemployment.

8. The amount of weekly benefits could be expressed as four days' pay for each week of compensable unemployment.

9. A benefit year concept could be considered with the possibility of adjusting the benefit rate upward during such year, if most recent employment is of sufficient duration and at a higher wage rate.

Officials of the Welfare Ministry described the unemployment compensation program for day workers that was operated by the city of Kobe from 1924 to 1941.

In general, each worker contributed five sen for each day of employment, which sum was matched by the employer. An unemployed worker served a two day waiting period and then received sixty sen for each of the following three days of unemployment. He was then given a job as replacement of another insured worker in employment. The success of the program depended on sufficient employment to assure adequate income to cover those unemployed, and control of the hiring and firing to assure a distribution of the employment. The employment office did exercise such control, and the average rate of unemployment approximated five percent for the period. The program was discontinued in 1941 when the war effort absorbed all available workers into employment.

Similar program were attempted in Osaka and Nagoya in 1928-9 but failed because the employers would not relinquish their control of the individual worker to be hired and laid off. Therefore, there was only a limited sharing of employment by the available manpower.

Health Insurance

The Wage and Allowance Division of the Central Liaison Office has submitted a new wage and allowance scale for Japanese Nationals on duty with the Occupation Forces. In this new allowance there has been incorporated a clause which will provide sickness compensation up to a period of ninety days. This applies either to occupational or non-occupational disease or injuries. In addition, there were plans being formulated to establish a mutual aid program for these employees.

SECTION VII MEDICAL SERVICE

Japanese Civilian Hospital Strength Report for the period ending 2 May 1947 shows 3,170 hospitals with a capacity of 217,918 beds, 105,817 of which were occupied. During this same period 311,209 out-patients were treated.

SECTION VIII CONSULTANTS

Nutrition

Result of food consumption obtained in the May nutritional survey for Tokyo, Nagoya and Osaka and the surrounding rural areas, Kanto, Tokai and Kinki respectively, were as follows:

SECTION X - Memoranda to Japanese Government

SECTION I
WELFARE DIVISION

Public Assistance

The Welfare Ministry is placing into effect the following public assistance plan as of 1 July 1947 - or retroactive to that date. Previous increases have been approved in November 1946 and March 1947. The present plan is based on the increase in the cost of living plus a more realistic attitude on the part of the Ministry in attempting to meet the needs of persons not able to provide for themselves.

	Number of persons in Family					Each Additional Person
	1	2	3	4	5	
Largest cities	10.80 (11.40)	18.40 (19.40)	22.80 (24.00)	27.20 (28.60)	30.40 (32.00)	3.20 (3.40)
Intermediate cities	9.45 (9.95)	16.10 (16.95)	19.90 (20.95)	23.70 (24.95)	26.50 (27.90)	2.80 (2.95)
Towns and villages	8.10 (8.50)	13.80 (14.50)	17.10 (17.90)	20.40 (21.30)	22.70 (23.80)	2.30 (2.50)

Note:

- a. Amounts in () indicate increases allowable over basic grants by order of prefectural governors. Increases over these amounts () with exceptions noted below, must have the approval of the Health and Welfare Ministry.
- b. Money for school lunches may be given over and above basic allowances without governor's approval.
- c. Food for infants under one year of age will not be charged against the family relief grant.
- d. Charges for individual persons in institutions will be based on the number of persons times the allowance for a single person. Allotments for families in institutions will be based on the regular family allowance.

Red Cross

Junior Red Cross in selected schools in Japan and the United States will be permitted to resume International School Correspondence in accordance with plans approved by SCAP. Prior to the war Japanese school children, through the Japanese Junior Red Cross carried on School Correspondence with school children of some 50 foreign counties.

Plans are being developed by the Japanese Red Cross for the formation of Red Cross Special Services Associations as a means of enlisting voluntary participation in Red Cross sponsored programs. The associations will be responsible to the Prefectural Chapters of the Japanese Red Cross. The Associations, according to the proposed plans, will develop socially useful programs in the fields of health, and welfare. They are to have an

important part in the Japanese Red Cross programs of disaster relief and will be given major role in its national fund raising organization. An American Red Cross consultant will shortly be assigned to the Field Service Section of the Japanese Red Cross as an advisor in the development of its Chapter Services and the Red Cross Associations.

STATUS OF PRODUCTION FUND LOANS - REPATRIATION RELIEF BOARD AS OF 30 April 1947*

Total	97,583	212,178	100	907,630,540	100

Notes: Loans are made for a period of 5 years to be paid off at 6 months intervals. They bear 6% interest with the first 6 months interest free. Two months repayment experience indicates default on 20% of the loans. Ministry officials predict eventual default will be nearer 10%.

SECTION II VETERINARY AFFAIRS DIVISION

Weekly Animal Disease Report

The Ministry of Agriculture and Forestry (Bureau of Animal Industry) reported the following new outbreaks of disease during the period 22-28 June 1947.

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Fukushima	Anthrax	1
Tottori	Swine Plague	1
Saitama	Swine Erysipelas	4

Veterinary Biological Production

The Veterinary Laboratory Section, Ministry of Agriculture and Forestry has submitted the following biological production report for 1946.

<u>Anti- Sera</u>	<u>Production (unit co)</u>	
	1945	1946
Anthrax	555,200	459,800
Blackleg	10,500	22,000
Swine Cholera	43,850	30,500
Swine Erysipelas	109,700	231,500
Tetanus	33,010	90,400
Fowl Cholera	30,000	34,800
Fowl Diphtheria	120,000	112,300
Strangles	434,300	1,659,950
Canine Distemper	24,000	5,150

Vaccines

Anthrax	20,700	44,830
Blackleg	236,900	561,700
Rabies	50,100	32,150
Swine Cholera	821,650	575,000
Swine Plague	0	149,600
Swine Erysipelas	0	113,000
Brucellosis	0	47,700
Strangles	0	266,950
Fowl Cholera	0	13,350
Fowl Diphtheria	0	96,700
Fowl Pest	0	10,000
Fowl Pox	0	21,930
Trichomoniasis	0	61,900
Tetanus	0	6,450

Diagnostic Agents

Tuberculin	17,330	14,040
Mallein	560	600

SECTION III
DENTAL AFFAIRS DIVISION

The Japanese Education Reform Council approved the 6-3-3-2-4 plan for dental education.

SECTION IV
NURSING AFFAIRS DIVISION

Education

Representative of Nursing Affairs Division, PHW, GHQ, SCAP, attended the following meetings and gave lectures on subjects indicated:

1. At the request of CI&E, two lectures were given to high school students on the subject, "Human Liberty and Sex".
2. A lecture was given to Public Health doctors attending the National Institute of Health on, "The Responsibility of the Public Health Nurse in the Program".
3. At a meeting of 200 Midwives, representing 12 prefectures in Japan, a speech was presented dealing with "The Midwife in Japan and Her Responsibility".
4. The Public Health Nurse program in Japan was explained at a meeting of Chief Nurses, U. S. Army, in this theater, held in Yokohama.

The 50 Japanese Public Health Nurses who have been studying in the National program in Tokyo, are now doing their practical field work in the 14 health center that have been assigned for this program.

31 students assigned in 9 Tokyo health centers.
12 students assigned in 3 Saitama health centers.
6 students assigned in 2 health centers in Chiba.
1 nurse is unable to be assigned because of illness.

These nurses will complete the six weeks field practice as planned.

SECTION V
SUPPLY DIVISION

Distribution

The following is a list of x-ray film manufacturers, their branch offices and the districts to which they supply x-ray films:

Name of Company	Address	District
Fuji Photo Film Co., Ltd.	3, Nishi 2-chome, Ginza, Chuo-ku, Tokyo	Hokkaido, Tohoku, Kanto, Chubu
Osaka Branch Office	33, 1-chome, Kyomachi-bori, Kamidori, Nishi-ku, Osaka	Kinki, Chugoku, Shikoku, Kyusyu
Konishiroku Photo Industrial Co., Ltd.	1, 3-chome, Nihonbashi, Muromachi, Chuo-ku, Tokyo	Hokkaido, Tohoku, Kanto
Nagoya Branch Office	3-chome, Hirokoji, Naka-ku, Nagoya-shi	Chubu
Osaka Branch Office	26, 1-chome, Tenzinbashi-suji, Kita,ku, Osaka	Kinki, Chugoku, Shikoku
Kyusyu Branch Office	31, Kaminishi-machi, Fukuoka-shi	Kyusyu

The following table is a breakdown of distribution of U.S. produced Sulfadiazine Sulfathiazole and Penicillin for V.D. and other diseases as prepared by the Welfare Ministry for all prefectures. The sulfadiazine and sulfathiazole will be distributed to all prefectures by 30 June 1947, and the Penicillin will be distributed by 10 July.

<u>Prefecture</u>	<u>1000 Tab. Sulfadiazine</u>	<u>1000 Tab. Sulfathiazole</u>	<u>100000 un. Penicillin</u>	<u>unit 8 tab Sulfadiazine</u>
Hokkaido	46	64	650	40
Aomori	13	18	200	11
Iwate	4	7	700	4
Miyagi	15	21	240	13
Akita	11	15	170	10
Yamagata	10	15	170	9
Fukushima	33	45	510	28
Ibaraki	16	24	260	14
Tochigi	15	21	240	13
Gunma	11	16	180	10
Saitama	15	21	230	13
Chiba	26	36	400	22
Tokyo	42	58	1380	36
Kanagawa	61	85	960	53
Niigata	20	27	310	17
Toyama	13	18	200	11
Ishikawa	21	44	320	18
Fukui	6	8	90	5
Yamanashi	7	10	120	7
Nagano	16	22	240	14
Gifu	12	17	190	11
Shizuoka	15	20	230	13
Aichi	83	119	1210	74
Mie	15	21	230	13
Shiga	12	17	190	10
Kyoto	55	76	800	48
Osaka	94	134	1350	84
Hyogo	43	59	670	37
Nara	9	13	140	8
Wakayama	17	24	270	15
Tottori	10	13	150	8
Shimane	10	13	150	8
Okayama	23	32	360	20
Hiroshima	37	51	500	32
Yamaguchi	10	14	160	9
Tokushima	5	8	80	5
Kagawa	12	16	180	10
Ehime	23	33	370	20
Kochi	5	8	80	5
Fukuoka	107	153	1550	95
Saga	32	44	500	28
Nagasaki	47	65	660	41
Kumamoto	23	32	360	20
Oita	23	32	360	20
Miyazaki	4	7	60	4
Kagoshima	16	23	260	14
Total	1143	1619		1000

Additional shipments of insect and rodent control equipment and pyrethrum emulsion to the prefectures have been made by the Welfare Ministry. During the period since the report in the previous issue of this Bulletin, the following were distributed to the prefectures listed, as of 24 June 1947:

<u>Prefecture</u>	<u>Quantity Pyrethrum Emulsion 50 gal. Drums</u>	<u>Quantity DDT Duster</u>
Tochigi	29	
Chiba		192
Tokyo	275	
Toyama		240
Aichi	28	
Mie		240
Shiga		240
Kyoto	45	
Osaka	148	360
Hyogo	20	
Wakayama		350
Okayama		310
Hiroshima	5	310
Yamaguchi		288
Total	550	2530

An emergency shipment of 3,000 doses of smallpox vaccine has been made by air from Japan to Okinawa, for use in southern Ryukyus.

Production

Substantial increases in the production of DDT dusters and spraying equipment can be reported for the manufacturing period of 15-21 June. Actual production was accomplished as follows:

DDT Dusters	1,100
Sprayer, knapsack type, 3 gallon	3,100
Sprayer, pump type, semi-automatic	3,250
Sprayer, hand type, 1/2 gallon	1,450
Total	8,900

The increase in production (3,520) during this period over that reported for the 9-14 June period can be attributed to two things: 1) the initial production of 1,450 of the sprayer, hand type, 1/2 gallon capacity, 2) adequate supplies of brass plate and brass pipe have been made available for successful completion of spraying equipment production schedules.

The following releases of DDT products and typhus vaccine were approved by Welfare Ministry during period 23-28 June:

<u>Prefecture</u>	<u>10% DDT Dust</u>	<u>5% DDT Residual Effect Spray</u>	<u>Typhus Vaccine</u>
Tokushima	3,000 lbs.	300 gallons	
Tottori		2,000 gallons	
Gunma	9,000 lbs.		
Shimane	150,000 lbs.		
Fukushima	3,050 lbs.	750 gallons	50 vials
Fukui		2,000 gallons	
Kanagawa	130,000 lbs.	13,000 gallons	
Yamaguchi	20,000 lbs.		300 vials
Nagano	11,000 lbs.	550 gallons	
Miyagi	10,000 lbs.		
Total	346,050 lbs.	18,600 gallons	350 vials

The supply of laboratory animals in Japan is becoming increasingly important due mainly to increasing demands to meet revised assay standards and for research projects. Shortage of food for breeding farms has been one of the production bottlenecks. In anticipation of increased requirements for laboratory animals, Public Health & Welfare Section, GHQ, SCAP, in coordination with Natural Resources Section, GHQ, SCAP, and the Ministries of Welfare and Agriculture, several months ago, set up a committee of interested Japanese officials to study this subject and take the necessary action to insure minimum supply of laboratory animals.

Results accomplished by the committee have been quite satisfactory. Production has increased during the last two months and further increases may be expected. Actual production accomplished for May was as follows:

	<u>No. Produced</u>	<u>No. Died</u>	<u>Number not Adequate Size</u>	<u>Number Furnished to Laboratories</u>
Guinea Pigs	4,568	206	382	3,980
Rats	1,552	61	73	1,418
Rabbits	1,130	16	44	1,070
White Mice	34,625	1,086	3,532	30,007

SECTION VI PREVENTIVE MEDICINE DIVISION

General

There appears to be wide variation in the interpretation of PHMJG 15, subject "Physical Examination, Immunization and Medical Care of Japanese Nationals Employed for the Occupation Forces", dated 18 March 1947, as well as in the disposition of the individuals examined, particularly in cases of helminthiasis or positive blood serology.

A uniform set of criteria and an interpretation of the requirements of subject memorandum are now in preparation.

Use of Penicillin

Although production is increasing, the amount of penicillin available to the Japanese health agencies and medical profession is insufficient to supply more than a small fraction of the demand. The penicillin available is now in the hands of the Japanese drug trade and is under the control of the Welfare Ministry at the national level and the prefectural health department at the local level. The prefectural health officers have complete control over the penicillin allotted to their prefectures. Ministry Government Health Officers must exercise surveillance over the distribution and use of penicillin if maximum benefits are to be derived from its use. It is recommended that the purposes for which it is used be confined to two general categories of patients.

First, those cases in which the use of penicillin is indicated as a "lifesaving" measure.

Second, cases of sulfonamide resistant gonorrhea. Due to the small amount of penicillin available, it should not be used for the treatment of syphilis or new cases of gonorrhea at this time. As production of penicillin increases, its use can be expanded to include other types of patients.

Typhus Fever

Comparative Score (Includes figures from 1 Jan. to 26 Jun.)

1946	30,870
1947	998

Typhus in Yamagata Prefecture

To remind everyone that typhus is far from being a dead issue, the results of complement fixation tests on serum samples drawn from reported cases in Yamagata Prefecture are of interest. These cases had onset dates in May and June.

No. of samples tested	24
Positive Epidemic	22
Positive Murine	0
Indeterminate	2

Scrub-typhus

The vaccination program against scrub-typhus in Niigata Prefecture was completed with the drawing of the final blood samples during the week 23 June to 27 June.

Insect and Rodent Control

Some misunderstanding has developed in the Prefectures as the Welfare Minister in their directive omitted the use of 5% DDT solution as one of the materials to be used in this year's control program. This has been corrected and the prefectural chiefs have been notified this material is available, and should be obtained at once. It is to be used for residual spraying of theaters, bathhouses, public latrines, hospitals and other public buildings where adult insects present a hazard. It is also to be used for residual spraying of private houses in areas where abnormal occurrences of insect borne diseases take place. This is independent of the railway car and station spraying program which is done by the Transportation Ministry with materials allocated directly to them.

Finances for the program have been distributed by the Welfare Ministry to the prefectures. This money is given the prefectures on a matched fund basis and is not to be used to replace regular agencies having the responsibility for garbage, refuse and night soil collection or other sanitation functions, but is to be matched by the prefectures in May. The Governor and the officials handling these funds will be held strictly responsible for their expenditure.

Tuberculosis Control

There is a need for simple basic information on the control of tuberculosis in the home, which material can be placed in the hands of lay organizations and Public Health Nurses. In the manual for Diagnosis and Treatment of Pulmonary Tuberculosis, there are, on the last 20 pages, suggestions for control in the home which can be offered to these groups. This material can be rewritten in a popular and illustrative form, and made applicable for various situations, by various educational groups as a basis for training talks. It is necessary to emphasize that B.C.G. vaccine is merely an adjunct in the control of tuberculosis, and not the panacea for this condition, as seems to be a wide spread impression throughout hospitalization of all open cases, with emphasis on getting early cases under treatment in the sanatoriums, plus continuous education in control of the infection in the community and home.

SECTION VII SOCIAL SECURITY DIVISION

General

Mr. George F. Rohrlich arrived to assume his position of Chief of the Economic Analyst Branch, Social Security Division, PHW, GHQ, SCAP.

An example of public interest in Social Insurance was clearly indicated when a prefectural newspaper sponsored a conference on the current problems and future program of social insurances. The conference included representatives of Social Security Division, PHW, GHQ, SCAP, Social Insurance Bureau of the Ministry of Welfare, prefectural insurance officials, prefectural medical association, National Health Insurance Federation, and the Committee for the Investigation of the Social Insurances. National Health Insurance was the Subject of considerable discussion. The need for increased public interest and informational services in social insurances, the integration of all existing health benefit schemes into a unified National Health Insurance system, and the coordination of this integrated health program with all other social insurance programs into a comprehensive social insurance system with a possible universal coverage was emphasized.

The Ministry of Welfare has prepared the final draft of the Cabinet order for establishing the Social Security Advisory Committee, which includes desired democratic principles.

Conferences have been started with the Insurance Bureau officials, Ministry of Welfare, with regard to proposed amendments to an ordinance effectuating the recent amendments to the Welfare Pension Law.
